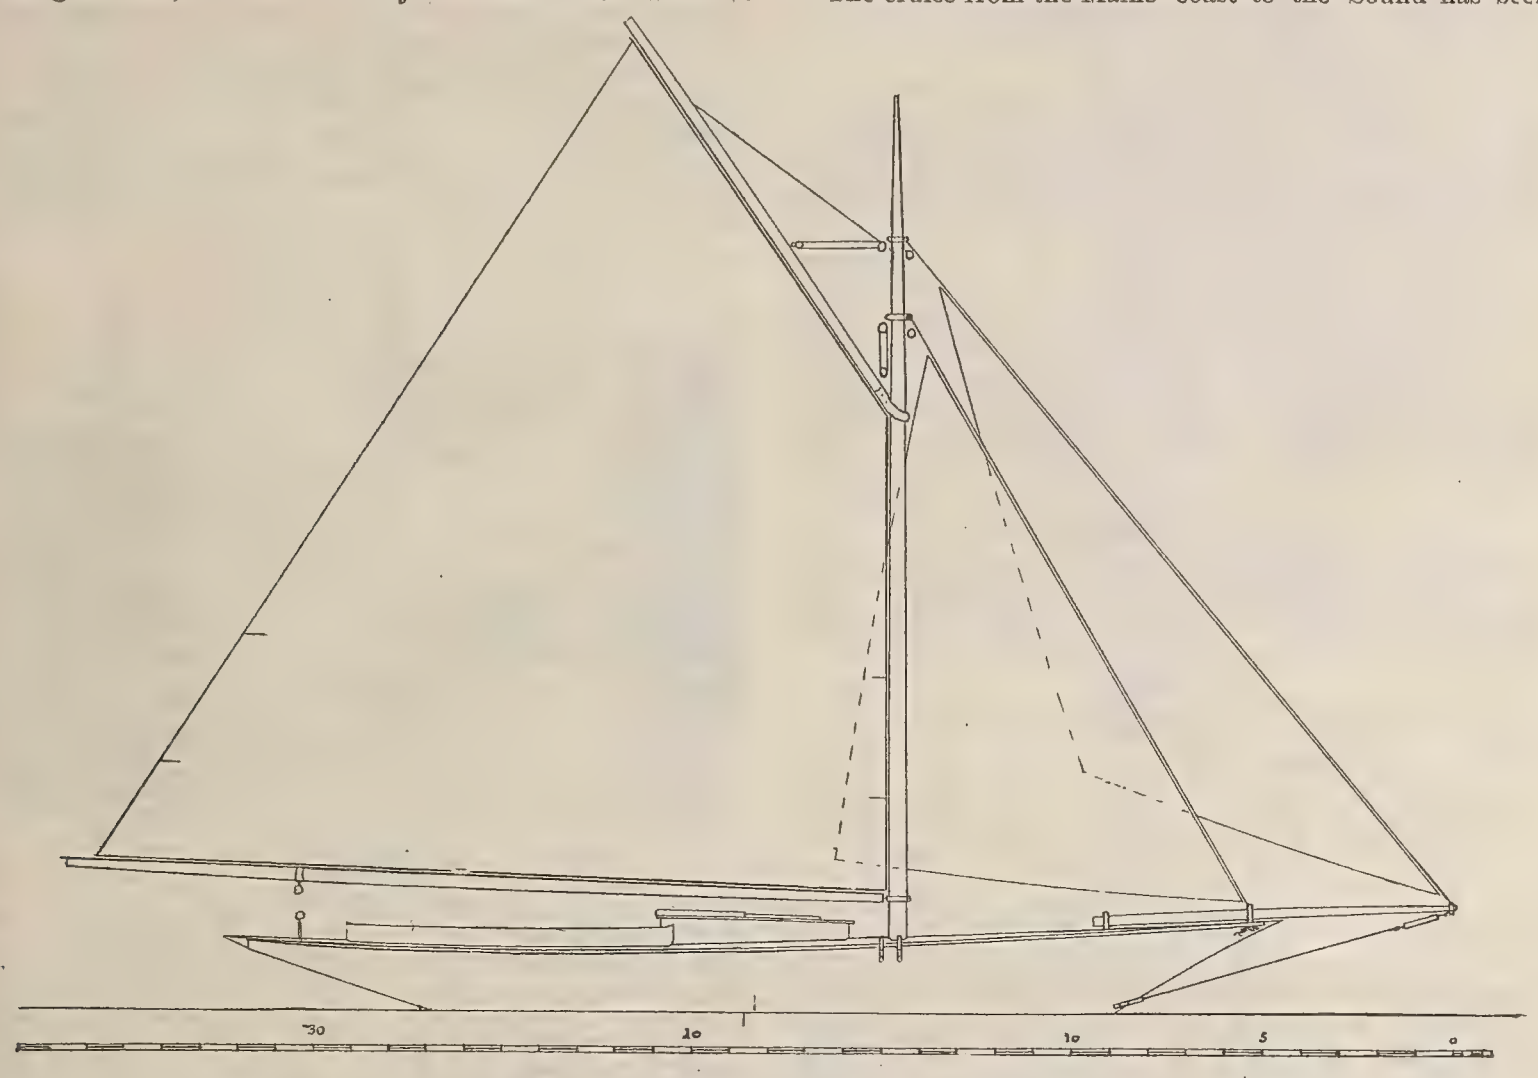
Recently I tried the experiment of riding through a portion of this woodland on my bicycle and found that it was possible to do so, though harder than riding across a newly mown pasture field.

At first glance the ground was apparently perfectly level, but as an actual fact it was full of hollows and inequalities that made very choppy riding. The smooth burnt surface was also very soft and crackled, and gave way as the bicycle passed over. On a down grade things went very well, but when there was the slightest rise to climb the pedaling was hard. It was necessary to take a very circuitous course to avoid the worst inequalities and pass around fallen trees or branches. But despite all these drawbacks it was surprising how quickly I passed through that piece of woodland as compared with previous trips on foot. I suppose there was considerable danger of punctures from the half-consumed sticks that lay in my course, but fortunately I had no trouble from this source.

There are a few squirrels left in these woods, but not nearly so many as there should be in view of their abundance at the close of the first half of the open season, Sept. 30. They have been persistently gunned during October, which was close season (the second part of the open season began Nov. 10), and last Sunday a number of men were hunting them in defiance of the statute, which forbids shooting on that day, as well as in defiance of the game laws. J.

The FOREST AND STREAM is put to press each week on Tuesday Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Yachting.



A FIRST ATTEMPT AT YACHT BUILDING.

BY E. P. MORRIS.

(*Concluded from page 396.*)

TIME of launching approached. Those fears which no doubt many a builder of boats has felt beset me by day and by night. By day there was the horrible dread that a mistake in addition might have misplaced the ballast or that some radical defect in the plan would turn my work into ignominious failure. By night I dreamed of her, and I rose feverish one morning after having seen a vision of her in the water turning slowly over, lifting her ton of iron lightly into the air and fairly waggling it in my face before collapsing into a mass of splinters. It is, I think, just here that the amateur designer wishes for a kind of information which the books do not, perhaps cannot, give. He would like to know that a boat whose lines and sail plan are before him on a certain day, with a wind of twenty-five miles an hour, went to windward under jib and single-reefed mainsail and heeled down to within 3in. of her deck; or that another boat, also fully described, was found to roll her boom under in running before a heavy sea. In other words, if to the immense service which the designers have already done us they could add the further service of more precise data as to the performance of boats it would be a great relief to the anxious beginner. My relief came, however, when we got the boat into the water and she actually floated; and when I heard a friendly shout from the shore, "Her waterline's all right," I was triumphant.

She was tried for a few days around Pemaquid, and about 500lbs. of ballast put inside to bring her fully down to her designed lines, but she was really an unknown boat when we started, on the morning of Sept. 2, from Pemaquid bound for New Haven.

LAPWING. DESIGNED AND BUILT BY E. P. MORRIS, 1895-6.

Safety, comfort and speed, in that order, were the qualities I had aimed at. I wish I could give such accurate data as I have just been calling upon the writers of books to furnish, but our tests were made in actual sailing, not as experiments under known conditions. I ought to say, also, that we were towing a 14ft. dory, which I wanted to bring to New Haven. My companion, M. B., was a fisherman of twenty years' experience on the Maine coast and the best boat sailor I ever saw. As to safety, I think the boat could not be capsized, though this is rather an inference than a matter of direct knowledge. Just out of Portland Harbor and off the Highlands of Cape Cod, she took some heavy puffs without becoming in the slightest degree unmanageable. We crossed from Scituate to Provincetown on Sept. 8, as the easterly gale of Sept. 9-10 was beginning, sailing with sheets a little off, under two-reefed mainsail and jib or staysail. The sea was heavy, the heaviest I have ever seen, and, what is more to the purpose, the heaviest M. had ever met in a small boat. She took this sea very easily, shipping not more than a pailful of water and keeping under perfect control. As the sea rose we thought of running for Plymouth. I am quite sure that she would have rolled her boom under in the heavy sea, but M. felt sure that she would ship no water if we ran under staysail alone.

As we drew under the shelter of the cape the sea decreased to a surface chop, but the wind seemed to rise, making a very high note in the wire rigging and blowing off the heads of the waves, as it does in a fierce puff. I have not had experience enough to estimate the velocity, but the boat carried staysail and two-reefed mainsail—about 210sq. ft.—without heeling down to the deck.

On the evening of Sept. 19, just after the second squall, we worked her to windward under staysail alone. Her motion in a sea is very buoyant and easy, a fact which I attribute to the freeboard and the easy body lines. On the coast between New York and Maine, where one is never more than fifteen miles from a port except in rounding Cape Cod, I do not think a sea could rise high enough to overpower her before she could make a harbor. As to safety, therefore, I feel well satisfied.

On the other hand, as might be expected, she heels more than a wider and shoaler boat. We were not at any time in the company of boats as small as ours, so that comparisons were somewhat to our disadvantage. Twice we were under two reefs when other boats of 25 to 30ft. were carrying a single reef. Once we had a single reef when a boat near us had full sail. In general, though she is not tender, I think I shall need to reef somewhat sooner than others. But this slight disadvantage is inseparable from the other good qualities of a low powered boat.

Speed is a relative thing, and in putting it into the list of desired qualities I meant only that I did not want to be at the tail of the procession which moves down the harbor every pleasant afternoon. Speed in comparison with a racing fin-keel was of course impossible. The tests to which we were able to put the boat in cruising from Maine to New Haven were necessarily accidental and inconclusive, but they showed in a general way that she would not be left behind even by much larger craft of the kind one meets in an afternoon's sailing. In one harbor, where we lay for some days, we tried conclusions with two larger boats, about 24 to 28ft. waterline, and easily beat them in going to windward. Before the wind they beat us, but very little.

On Sept. 4 we ran from Portland Harbor to York, forty nautical miles, between 5:35 A. M. and 3:05 P. M., a little over four knots an hour, part of the time with light wind. We left Provincetown at 3:40 and passed Nausett Beacons at 10:10, twenty-six miles in 6h. 30m., part of it to windward. We got up anchor in Newport Harbor close to the small stone beacon at 5:35, reached down to Point Judith and sailed close-hauled to the red buoy off Watch Hill, twenty-eight and one-half miles, at 12:10, having made three short tacks inshore. We made seven runs of thirty-eight to forty and one half miles, nautical, anchoring always before dark and only once being more than twelve hours under way.

Four knots an hour looks small to people who do not measure distances on a chart, but for an average of a day's sailing in an 18ft. boat I think it satisfactory, though certainly not remarkable. I have no doubt that some of the fast catboats in New Haven Harbor will beat me very nicely, but I feel sure also that my little boat will not be at the tail of the procession.

The cruise from the Maine coast to the Sound has been made so often that it is not worth while to copy the log of one who was making it for the first time. We started on Sept. 2 and reached New Haven on Sept. 20, eleven days under way. In some respects the weather could hardly have been worse. It rained in seven of the ten harbors; but, happily, not once while we were under sail. We were held at Provincetown Sept. 9 to 14 by the heavy gale and the thick weather which followed it. It was during this time that the Italian bark came ashore on Peaked Hill Bar and the captain and two sailors, with a despair which is almost incomprehensible to Anglo-Saxons, killed themselves in preference to taking the slender chance of rescue. When we passed inside the bar a few days later only a few ribs were left, and the beach was still strewn with wreckage.

My companion, M. B., knew the coast as far as Provincetown, and I knew something of the Sound; and with a full set of charts we found no difficulty in getting along. Our only mishap was a slight one, though it had an unpleasant look at the time. We were running for the breakwater at Duck Island on the afternoon of Sept. 19, hoping to get in before the squall which was threatening in the west should come down. By my careless reading of the chart, we ran aground on the gravel spit which puts out from the N.E. end of the island. The tide was running fast, fortunately the flood, and it was evident that less than half an hour would float us free. But it was also evident that less than half an hour would bring the squall, and in fact we were still hard and fast, broadside to the wind, when the storm broke upon us. Those who were out in that squall, which did much damage along the southern New England coast, will know that our position was disagreeable. But all things come to an end. During the first dash of wind and rain we floated off, but the tide still held us broadside on through the second and larger edition of the squall. Before the third puff, however, we sailed her up under staysail to a comfortable berth behind the breakwater.

One must indeed be dull to the beauty and pleasure of life if he does not retain from such a cruise pictures and memories which become a permanent possession. We got up one morning in Provincetown Harbor long before daylight, hoping for a westerly wind to carry us around the cape. We had a dead calm instead and the disappointment was great, for I was obliged to be in New Haven before Sept. 22; but I sat on deck from 3 o'clock to 5 watching a sunrise, which seemed to me the most splendid spectacle I had ever seen, It was well worth the two days of waiting which the calm cost us.

Our sail across the bay from Scituate was a lonely one, with not a vessel in sight. The boat had never been tried in such a sea, and I was at first nervous about her behavior, while M. was afraid that I had laid out a wrong course, which would carry us to leeward up the bay. We were both keeping a somewhat anxious lookout for the end of the cape, and we sighted first the stand-pipe of the Provincetown water works. Neither of us knew it, and my picture for that day is of that town on the horizon, looking very far away over heavy seas against a dark gray background.

At Gloucester we got in just before a hard squall, and went into the small basin called the Cowyard. As we lay there the big fishing schooners, as fine in their models as yachts and with an air of power which few yachts have, came rushing into the harbor under reefed sails or mainsail and jib. One of them came into the basin where we lay and put out warps to stop her way. Somehow one of the men, who was handling a warp, was dragged overboard, and I can still hear the sharp, quick orders and see the almost furious haste with which the men launched a dory and pulled around to the stern. It was a fine exhibition of skill and experience, working at high pressure, and I could watch it the more calmly because I could see the man hanging on to the bight of the warp that had dragged him overboard, perfectly serene all the time.

Even our Duck Island squall is pleasant in the retrospect. A tug had come in with some barges and perhaps had seen us aground; at any rate, they steamed slowly over toward us after the barges were anchored, and I am glad to believe that it was with the kindly instinct to offer help which one meets so constantly among sailors. With every sharp flash of lightning the tug stood out like a black silhouette against the grayish white water, while the waves in the momentary flash seemed scarcely to be in motion at all, and over to the west the barges were huddled together as if in terror. When the flash was over nothing could be seen but the red and green lights of the tug, near enough to look down into our little cabin.

It is perhaps too optimistic to consider a cruise of 375 miles in an 18ft. boat an easy and simple matter. A wider experience may lead me to regard it with other feelings, but with my present light I should say to any one who was disposed to try it under like conditions—that is, with a safe boat and a good boatman—that it was an easy cruise. A delightful one it certainly is, and I am hoping to go back next summer with my wife as my only companion.

A One-Design Class.

THE following regulations for a one-design class have recently been adopted by some yachtsmen at Bembridge, Eng., the first home of the half-rater class. Special classes of this kind are admirably adapted to many localities in this country.

RULES.

1. A one-design small boat class has been established in the Solent, with the object of affording class racing that is not expensive, and giving the owner of a boat an opportunity of exercising his skill in designing her sails and rig. Sail area is limited to 200sq. ft., actual measurement of sails only. No spinakers are allowed in class racing as separate sails, but jibs may be boomed out.
2. Each owner will be provided with the sheer plan of the boat, with the C. L. R. marked.
3. Each owner will have to pay £1 a year to defray necessary expenses, any balance being devoted to the prize fund. There will be an entrance fee of £1 after twelve boats are ordered, which will also go to the prize fund. Applications for boats and for membership are to be addressed to the hon. secretary, and the names of applicants will be submitted to the members of the class for election. In such elections one black ball in five to exclude; five owners of boats to form a quorum, one vote one boat.
4. In all cases of voting there shall only be one vote per boat, except in committee, and no alterations or additions to these rules shall be made without a two-thirds majority.
5. A captain of the class shall be elected annually, who shall undertake the duties of hon. secretary.
6. The committee of management shall consist of seven owners or joint owners of boats; two to retire annually, who shall not be eligible for election for one year. They shall be responsible for the entire management of the class, and their decisions shall be final and binding on all owners. Two shall form a quorum to decide minor questions which may arise, and all vacancies shall be filled by general meeting.
7. There shall be no limit to the number of persons on board, but no paid hands are allowed in class racing.
8. The committee shall be responsible for the measurement of sails, and also that the sails are made of uniform material, which has been selected by the committee and is of red cotton; the hon. secretary wil give information as to where it may be obtained.
9. No boat is allowed to have any alteration made to her hull or bal last, and any alteration rendered necessary by change of rig must be notified to the captain of the class.
10. No boat shall be allowed to start unless her sail area is certified by the committee.
11. Each boat shall carry when racing an anchor weighing 20lbs., and not less than twenty fathoms of 2in. grass rope cable and sufficient life-saving apparatus for her crew.
12. The following form the committee: Col. Moreton, Mr. F. Hardcastle, Capt. du Boulay, Mr. Gerald Fitzgerald, Mr. G. H. Harrison, Mr. H. C. Sutton. Mr. B. O. Cochrane, captain and hon. secretary, "Oakleigh," St. John's Park, Ryde.
13. The ownership of boats will be decided by lot.

SPECIFICATION OF BOATS.

Planking, yellow pine, ½in. full when finished.
Keel, English elm, 4in. thick, about 8in. wide.
Stem, English oak, 4½in. moulded, 3in. sided.
Stern timber, English oak, 3in. moulded, 4in. sided.
Bent timbers, American elm, ¾in. moulded, ⅞in. sided.
Clamp yellow pine, 3½in. moulded, 1½in. sided.
Beams, white pine, 2½in. moulded, 1½in. sided.
Cockpit carlines, 2¼in. moulded, 2in. sided.
Coamings, English elm, 4in. above deck, fitted with outside capping.
Stern finishing chock, pitch pine. Covering boards, teak, ½in. thick.
Deck, white pine, ½in. thick, painted, and covered with unbleached calico painted two coats.
Six wrought iron galvanized floors.
Twelve oak beam knees, mast partner 3ft. long, and all timbers in this length to be 1in.×1¼in., to take chainplates where required. One knee to be fitted where required for chainplates.
Rudder, English elm, blade with wrought iron straps and stem working in iron tube. Galvanized tiller fitted to head of rudder stem, with nut and screw.
Cast iron keel, 10cwt., fitted with 1in. and ¾in. through bolts, with nuts inside. Topsides and inside to be painted three coats, and bottom black varnished. All fastenings of copper.
White pine platform to be fitted where required.
Eyebolts each end of keel for hoisting out.
Boats to be delivered afloat in Portsmouth Harbor.
Length over all 22ft. 1in., length l.w.l. 16ft., beam 5ft. 5in., draft 2ft. 11in. Price £45.

The Society of Naval Architects and Marine Engineers.

THE fourth annual meeting of the Society of Naval Architects and Marine Engineers was held, as per programme, on Nov. 12-13 at the house of the American Society of Mechanical Engineers, in New York. President Griscom occupied the chair, and a number of members and associates were present from various parts of the country. The proceedings began with the annual meeting of the Society, President Griscom being re-elected for the fifth term, and Naval Constructor Francis T. Bowles being re-elected sec'y-treas. The reports showed a very satisfactory condition of membership and finances, and a number of new members and associates were added to the roll.

The papers and their order were as follows:

THURSDAY, NOV. 12.

1. Test of an Experimental Turret of the U. S. Battle-ship Massachusetts, by Com. W. T. Sampson, U. S. N., Chief of Bureau of Ordnance, Navy Department, Washington, D. C.
2. Steel Canal Boats, by Lewis Nixon, Mgr. Cresent Shipyard, Elizabeth, N. J.
3. Trial Performance of the Grand Duchess, by S. N. Smith, Mgr. Newport News Ship-Building and Dry Dock Co., Newport News, Va.
4. Naval Practice in Ship Rivets and Riveting, by Naval Constructor J. H. Linnard, U.S. N.

5. American Fire-Boats, by H. DeB. Parsons, Marine Engineer.
6. Corn-Pith Cellulose, by H. W. Cramp, Vice-Pres. Wm. Cramp & Sons, Philadelphia, Pa.

FRIDAY, NOV. 13.

7. The New Battle-Ships, by Chief Constructor Philip Hichborn, U. S. Navy.
8. Speed Trials of a Screw-Propelled Ferryboat, by F. L. Du Bosque, Engineer Floating Equipment, Pennsylvania R. R.
9. Hydraulic Sheers for Lifting One Hundred and Twenty-five Tons, by Frank B. King, Marine Engineer and Naval Architect.
10. A Method of Calculating the Stability of Ships, adapted to the use of Standard Curves of Stability, by Hugo Hammar, Naval Architect.
11. Stability of a Ship in Damaged Condition, by James Swan, Massachusetts Institute of Technology.
12. Damaged Conditions as Affecting the Stability and Fighting Efficiency of Battle-ships, by Assistant Naval Constructor T. F. Ruhm, U. S. Navy.
13. Screw Propellers, by Prof. Geo. R. McDermott, Cornell University, Ithaca, N. Y.

Owing to delay in the completion and trials of the ship, Mr. Smith's paper upon the Grand Duchess was not read; the others, however, were read in order, with the discussion filling completely the four sessions of the two days. As will be seen, they covered a wide range of subjects connected with both naval and commercial work. All of them showed care in the preparation and were listened to with interest.

The papers evoked a fair amount of discussion, but it was by no means so general or so thorough as is desirable in a case of this kind. In nearly all cases, as in preceding years, the preparation of the papers has been delayed until the last possible moment, so late, in fact, that they were only printed in time to be distributed on the morning of the meeting, and were not sent out in advance. Valuable as the meetings now are, they would be more so if it were possible to secure the papers from the writers in season to permit them to be printed and sent out to members at least a couple of weeks before the meeting, in order that those specially familiar or interested in any of the subjects treated might be able to make arrangements to be present and to prepare themselves thoroughly for the discussion. Unless this is done the discussions must be necessarily limited in extent; the nature of a paper is not known until it is read in the meeting, and there is then no time for its careful consideration and the preparation of material for its discussion. A thorough discussion is hardly less valuable than the technical excellence of the papers themselves, and it is desirable in the extreme that the time of the meetings be devoted more to the discussion than the actual reading, to attain which end it is necessary that the papers should be read and studied by the members in advance of the meeting. There were indications at the present meeting of results that were clearly attributable to the discussions of previous years.

Apart from its technical merits, the paper of Chief Constructor Hichborn was most important in that both in the text and plates it treated fully and openly of the various features of the new battle-ships of the Alabama class. The information disclosed by it is probably no more than is already in the possession of foreign governments and other interested parties, and its open publication now can do no harm, and at the same time is likely to prove of interest to many who would otherwise have no access to it. At the same time, it is the almost universal practice in connection with this same sort of information, both among governments and private firms, to maintain a pretense of secrecy, which is merely farcical so far as actual rivals are concerned; and merely keeps the information from the general public. The question of the free and voluntary publication of this class of information was discussed during the meeting, the general opinion being that no possible harm could result, and only good could come, from a reasonable and liberal policy.

The annual dinner of the society was held at Delmonico's in the evening of Nov. 13, the large dining hall being crowded. The chief guest of the evening was the Secretary of the Navy, who came from Washington for the occasion, returning the same night. A number of speeches were made and the affair passed off very pleasantly.

That everything ran smoothly during the two meetings and the dinner as well was due to the labors of Secretary-Treasurer Bowles. Very fortunately, as it happened, the former secretary-treasurer. Naval Constructor Capps, now stationed at San Francisco, is in the East on a short visit, and was present during the entire meeting. In the enforced absence of Mr. Bowles during the docking of the Texas on Friday Mr. Capps took charge of the affairs of the society with his old-time energy and enthusiasm.

Seawanhaka Corinthian Y. C.

THE regular fall meeting of the Seawanhaka Corinthian Y. C. was held on Nov. 10, and was in an informal way a house-warming, the new house, at 19 East Twenty-second street, being thrown open to the members for the first time. For nearly ten years the town house has been an important factor to the prosperity of the club, and last winter the need of one was felt severely. The one so long occupied in Thirty-second street was given up in May, 1895, on account of the refusal of the owner to make necessary repairs; and though several schemes for a new and better house were at once set on foot, it was found impossible to provide other than temporary quarters in the old Jockey Club building for last winter. These quarters failed to afford the necessary conveniences and were but little used by the members. Within a month past it became possible to secure a fine old-fashioned city house that from its arrangement and the size of its halls and parlors is specially adapted for the uses of a club house; and by some rapid and energetic work on the part of the house committee this house has been fitted up in time for the meeting. With a frontage of over 33ft., the house has two large parlors and in the rear of them a specially large dining room, the three being thrown into one when desired for lectures and entertainments. On the second floor is a committee room and a billiard room, and abve are chambers that will be leased to members. Next door to the house is an excellent restaurant, and arrangements have been made to furnish meals to the club, a window having been cut between the kitchens of the two buildings. Breakfast and lunch will be served through the day and a *table d'hote* dinner at a very reasonable price will be ready every evening. In this way the club avoided the expense' risk and trouble attendant upon fitting up a restaurant service of its own, and much room is saved in the house; all the cooking being, of course, done next door.

Arrangements have already been made to revive the navigation and rigging classes that were so popular and successful in the old house, the former under the able instruction of Capt Howard Patterson. The terms for the course are specially low. Classes will be held both in the afternoon and evening if found more convenient to members. The entertainment committee will also arrange for a series of lectures during the winter.

In the absence of the flag officers ex-Com. G. H. B. Hill presided, Com. Rouse being represented by a telegram from the South, congratulating the club upon its new home. The trustees announced the election of the following members: George J. Gould. Ernest Flagg, Edward Wetmore, James A. Stillman, John O. H. Pitney, Robert F. Ballantine, Caius C. Bragg, William Allen, Samuel T. Hubbard, Jr., George Ogden Gordon, William G. Boyle, Dr. Walter B. James, Stephen H. Tyng, Jr., William Crittenden Adams, Clifford Richardson, Horatio W. Adams, Otto Ahlmann, Henry C. Hopkins and Dr. Morton R. Peck.

The race committee reported informally on the recent proposals and changes of racing rules in other clubs and the subject was discussed, but no action was taken. The club voted to confirm the challenge issued in its name by Com. Rouse, the yachts to be of 20ft. racing length, with a limit of 500sq. ft. of sail and 5ft. extreme draft of keel or fin. The arrangements with the holders of the cup, the Royal St. Lawrence Y. C., have not been fully completed, but both parties are agreed to the above limits. Other regulations proposed are that the mainsail shall not exceed 80 per cent. of the measured sail area, the head triangle shall be measured instead of the windward jib, the spinaker shall not exceed twice the area of the head triangle, and the spinaker boom shall not be lashed or guyed over the stemhead, nor shall the tack of any sail be set forward of the forward point of measurement.

The subject of a bridge across Mill Creek, to shorten the land route from Oyster Bay to the Center Island Club house, was discussed and referred to the trustees.

The Lake Yacht Clubs.

A VERY important meeting was held in Buffalo on Nov. 7, there being present Com. Brower, of Buffalo; G. T. Bliss, of Erie, Pa, and E. W. Radder, of Cleveland, representing the Interlake Yacht Racing Association; President Æmilius Jarvis, of Toronto; J. E. Burroughs, of Rochester, and E. H. Ambrose, of Hamilton, Ont., representing the Lake Yacht Racing Association of Lake Ontario.

The meeting was called for the purpose of forming a union of the many clubs on the fresh-water lakes; a matter that has been very favorably discussed since the races between Canada and Vencedor last summer. Representatives were expected from Lake Michigan, but none were present. However, it is hoped and expected that the action taken will be ratified by all the lake clubs. The representatives decided that it would be advisable to retain, as nearly as possible, the classification now used on Lake Ontario, with a uniform code of rules in harmony with those of the Yacht Racing Union of Long Island Sound. The proposed classes will be 50ft. or 48ft. R. L., to include the largest of the new Chicago boats, Vanenna, Siren and Vencedor, 42ft., 37ft., 32ft. and 27ft. It is also proposed to place a limit to the area of the midship section, which must be at least 35 per cent. of the product of beam and draft. The various proposals were put in definite form and will be submitted to the lake clubs for adoption. The meeting was in session from 7:30 P. M. to 4:15 A. M.

Royal St. Lawrence Y. C.

A VERY large special general meeting of the Royal St. Lawrence Y. C. was held on Nov. 11, in the Windsor Hotel, Rear-Com. Fitzgibbon occupying the chair, and Secretary W. A. C. Hamilton ready with his minutes. The objects of the meeting were to consider the advisability of holding a ball during the winter. There was very little discussion and it was unanimously resolved on motion of Mr. De Sola, seconded by Mr. Richardson, that a ball be given. The question of date caused some discussion, but it was eventually decided to name the second Monday in January in the Windsor Hall. The executive committee were empowered to add to their number as they thought proper.

The next question had relation to the International Seawanhaka Cor. Y. C. Challenge Cup. Mr. Duggan, in explaining the question, pointed out that the Seawanhaka men had been very generous. They were willing to sail in any class above 15ft. and less than 25ft. It was therefore decided to work on the 20ft. class, with some slight differences from previous rules, viz.: limited sail area, 500sq. ft.; draft, 5ft. Measurement of waterline to be with crew on board, or 450lbs. to represent crew.

Mr. Duggan thought it was high time that those members who intended to build should come forward immediately and place their orders. There would probably be fifty or sixty antagonists to pick from, and the Royal St. Lawrence would probably only have twelve or fifteen. The date that had been decided on was some time during the full moon of July. The rest of the matters were of minor detail, and Mr. Duggan thought they could be arranged without any difficulty whatever.

The question next discussed was that of accommodation for the visitors from the Seawanhaka C. Y. C. This matter is still in embryo, but it was made apparent that there would be no lack of accommodation. Mr. Duggan thought that a new club house was most desirable, but that an adjournment be made until the commodore should return from Europe.

YACHTING NEWS NOTES.

Josephine, steam yacht, P. A. B. Widener, is at Harlan & Hollingsworth's yard, Wilmington, where her bulwarks will be raised and other alterations made.

The announcement is just made that J. Gardner Cassatt, of the New York Y. C., has ordered a steel steam yacht of large size from Mr. Watson, and the vessel is now building by Ramage & Ferguson. Leith, Scotland. Mr. Cassatt has for some time been a part owner of the steam yacht Anita with S. M. Prevost.

Mr. John R. Purdon, the Boston designer, has now in hand the designs of two yachts of 24ft. l.w.l., one for racing and one for general work. The former is for A. H. Higginson, of Manchester, owner of Exit. She will be 32ft. over all, 8ft. 6in. extreme beam, 7ft. 6in. beam at l.w.l. and 7in. draft., with a centerboard of 400lbs. The construction will be very light. The other yacht will be a keel boat of the new type, with reduced midship section, her dimensions being: Over all 36ft. and draft 5ft. 6in. The sail plan will be of the knockabout type.

The executive committee of the Massachusetts Y. R. A. has overruled the decision of the judges in the Dorchester race of June 20 in the Katydid-Elsa protest, which was appealed as allowed by Association rules. Elsa was defaulted by the judges for non-appearance at the hearing. It was shown to the committee that notice of the hearing was given too late for appearance, so the default was removed and the protest heard on its merits. The final decision was in Elsa's favor. This gives her the Association diploma for the yacht winning the highest percentage in any class, her average being 72.5 per cent., as against 68.2 for Gleaner, the next best boat.—*Boston Globe.* [Elsa is owned by D. H. Crane, the "crew" of El Heirie.

A. C. A. Membership.

APPLICATIONS for membership may be made to the purser of the division in which the applicant resides on blanks furnished by purser, the applicant becoming a member provided no objection be made within fourteen days after his name has been officially published in the FOREST AND STREAM.

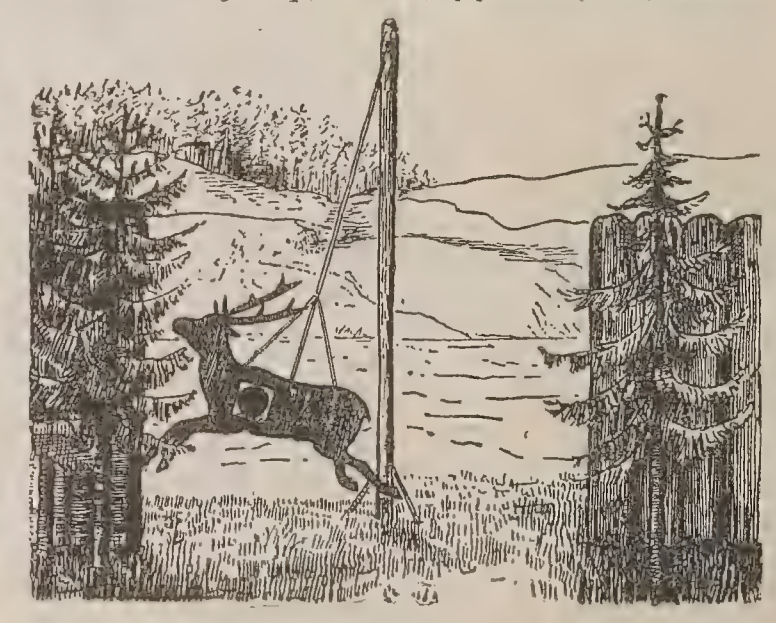
Rifle Range and Gallery.



RIFLE MATCHES IN THE TYROL.

[*Concluded from page 357.*]

THE money in the pool was divided among those shots only that hit the bull, and here again the nearness to the mathematical center rewarded the closest shots. Thus the fourth best shot (the three prize shots never shared in the pool) received generally about four times as much as the shot had cost, while the worst pool shot, just grazing the bull, received less than half what the shot had cost. Shots outside the bull did not receive anything. This division of the pool, of course, favored the crack shot, none of whose six shots would, we may be sure, be outside the charmed black circle; indeed they probably would be well within the "two" ring, or within a circumference of 3½in. He would thus receive his entrance money back three or fourfold, though possibly all the prizes, or one or two at least, had been won by some lucky young chaps who had fluked one of their six shots into the very center, while against the other five an ominous row of "0" was marked on the scoring sheet. The monetary value of his prize would in such cases hardly cover the cost of his six chief shots and the other outgoings, but the delight of winning that longed-for prize made him forget the sad hole in his slender purse. At the dance, which in the old days almost invariably concluded the day's revelry, his prize would be proudly pinned to his best girl's hat or dress, and from thence on no rifle match in his own home or in any of the adjoining valleys would come off without his being among the competitors. From thenceforth his dearest ambition would be centered upon an exchange of his grandsire's antiquated arm for one of the new-fangled small-bore rifles shooting the conical bullet of which mention has already been made. In a word, the rifle-shooting fever had in its irresistible grip another victim, but before that youngster would be able to hold his own in the pool shooting, and could slap his breeches pocket covering the proof, in the shape of hard cash, that his skill with the rifle was above the average, many a week's hardly earned wages, or the returns of months of hard toil in the forest, would melt away in smoke. But withal, that man's substance, earned in nine cases out of ten very literally in the sweat of his brow, was not wasted; for a more useful and patriotic form of national pastime it would be difficult to introduce. How many of the defeats suffered by our pioneer armies, one might ask, would have been turned into victories were more attention paid to the marksmanship of the British forces? Certainly such disasters as occurred at Majuba Hill would not have stained the flag.

So far I have spoken of the chief event, where the number of shots was limited. The second event, where this last restriction did not prevail, was the *Schlecker*, or unlimited target. There the shots cost a mere trifle, generally a halfpenny each, which went to mine host, the giver of the shoot, who, in consideration of it, provided also the prizes for this event, generally five or six in number, though slightly inferior in money value to the chief prizes. They were also won by the shots nearest the center, and as the distance as well as the bull was exactly the same as in the chief event, one used to practice first at the unlimited before moving to the principal range. Very often there was an arrangement which permitted the good shots to indulge also in pool shooting at the unlimited target, in which case the shot cost 4d. or 6d., which formed the pool. This, at the termination of the shoot, was divided, according to the total number of rings of the combined score. Thus, if six men competed, firing 100 shots at 6d. each, so that 50s. were in the pool, the total score or number of rings would be added together. If there were say 150, each ring would get 4d. Or in other words, to hit at every shot the $5\frac{1}{16}$in. circle of the bull was not enough to put money in one's pocket, This was called *Würgen*, or "choking off," not an inappropriate term, for, of course, only good and sure shots would compete and the tyro was effectually choked off.

The arrangements for marking at such village rifle matches were of a most dangerous simplicity for the unfortunate marker. The two targets would be about 20 or 30ft. apart; in the middle between them there was the marker's hut, duly provided with a stone wall facing toward the roofed-in rifle range from whence the shots were fired in as quick succession as the marking permitted. As signal for the marker there was either a wire with a bell at the end out to the marker's hut, or, what was far more frequent as well as dangerous, a cowbell stood in each "stand" from whence the men fired. This bell the marksman would vigorously toss after delivering his shot, and the tone of the two bells being different, this was all that indicated at which target his services were required. To do so he walked perfectly unsheltered and in the open to the target, where, during his search for the bullet hole, he would stand right in front of it, so that his body covered for the time being the bullseye. I have shot at very many of these matches, where not even such essential precaution as screening the target at which one was not shooting was taken. In consequence of this, and the fact that the difference in the tone was the only thing that guided the marker, fatal mistakes on the part of the marksman shooting at the wrong target, or equally disastrous errors on the part of the marker going out to the wrong target at the moment a shot was being fired at it, were lamentably frequent. Every year two or three such

THE DEER TARGET.

accidents occurred at one or the other of the hundreds of these Tyrolese rifle ranges. So numerous did they finally become that the Government took steps to obviate such careless sacrifice of life by prohibiting all unprotected marking at rifle ranges. The marker was compelled, generally very much against his wishes, to remain invisible in his hut and mark the shots from thence on the targets, which for this purpose were moved close up to each side of the shelter. This did away with many of the quaint old customs that heretofore had given color and life to the scene. Thus, it was the custom that the marker, who was dressed in a clown-like dress, should cut the funniest capers in front of the target when the "four" ring was hit. On perceiving where the shot had struck, he would creep back to his hut and fetch a huge pair of wooden spectacles, and after fastening them on his nose he would return to his target and institute a make-belief search for the shot, which he would finally mark in the usual way, and dance four times round the target. If the centrum itself was hit he would turn somersaults and cut the strangest capers till the lucky marksman could send him by the *Kellnerin* a flask of the country wine or a foaming beaker of beer. If, on the other hand, some shot hung fire, or from other cause the unfortunate man missed the target altogether, the frolicsome monkey tricks of the marker were equally amusing; his great spectacles would come out again, and he would look about the heavens as if trying to find whither the straying bullet had wandered. That such gambols and offerings of liquor, if often repeated, did not tend to make the marker or, for the matter of that, the marksman more careful, can be imagined. High time as it was that safer means of marking should be introduced, one's satisfaction was not unmingled with regret at the unavoidable disappearance of the many amusing incidents which had made these country rifle matches such pleasant meetings.

Rifle shooting is to-day far more neglected in Tyrol than it used to be even ten or fifteen years ago. One cause of the waning interest I have just touched upon; the other was the general introduction of breechloading rifles, against which the old-fashioned muzzleloaders, particularly at the increased distances which the Government attempted to force upon the people, could no longer compete. To purchase new breechloading rifles as well as the more expensive ammunition was beyond the frugal minded Tyrolese peasant's purse, and so it has gradually come to pass that the old village range is less and less used. The effort of the Government to revive this pastime by distributing army rifles and ammunition was also less of a success than might be wished, for the coarse sights and heavy pull-off of the military arm, as well as the long ranges at which they had to be used, were all conditions to which these exceedingly conservative mountain people could not accustom themselves.

In the towns where the wealthier burghers enjoy the

means to provide expensive breechloaders, rifle matches are still quite frequent, but for many reasons their surroundings are less attractive and picturesque than at the old village shoots, to which I shall always look back with sincere pleasure, while the seventy odd prizes I managed to capture at such meetings will always form a pleasing memento of scenes that have gone never to return. Not the least cherished among these often very trumpery prizes is the very first one I ever gained. It rewarded one of those lucky flukes into the centrum that have lured so many young shots into the marksman's guild. It happened at the very first Tyrolese match I attended, and it was the very first shot at the chief target. Needless to say, my unexpected success made me so nervous that I had as clean a string of ducks' eggs alongside my name after that as ever befell the first trial of a tyro. More honest success came by and by, and, with almost proverbial luck, that pin's point of the centrum fell to my flukes no doubt much oftener than I deserved.

Between the inhabitants of the larger valleys of Tyrol there existed a healthy spirit of rivalry, which came to the fore at the great annual matches held in the capital of the country, which lasted a couple of weeks, and at which prizes, given by the Emperor, worth hundreds of pounds, came to be shot for on these occasions. Our English principle of rewarding the best string of shots had necessarily to be enforced, but not for all events, some of the most important prizes being won by the best centrum shot, however difficult it might be, even with the finest mathematical instruments, to decide which of the hundreds of centrum shots that had been obtained was really the best. At these great shoots the professional crack shots made a rich harvest. Of these there were quite a number, and I can recall the names of at least nine or ten who were to the fore during the ten or twelve years that I competed at Tyrolese matches. Their steadiness of hand was simply wonderful. Their rifle seemed as if screwed into a vice, so perfectly tremorless was it held, and as these men made their living by rifle shooting, and generally turned gunsmiths when once their reputation as first-class shots was made, their arms were, of course, exceedingly true. I have seen one of them—Prem by name—hit the sixpenny bit of the "four" in the bull six times running at 142yds., shooting a new rifle he had turned out off a rest. And, indeed, I have seen this man accomplish very nearly the same feat without a rest, two "threes" being the worst shots in a string of eight shots I once saw him make off the shoulder. As rifle matches were open to all comers, such "pirates of the rifle range," as they were called by the populace, were of course dreaded visitors, and the larger the prizes the greater was their number. In little village shoots, such as I have described, there was generally "too little money" to tempt pirates living at a distance. Many an ambitious young marksman's heart would be set trembling when, after getting a centrum early in the day, and thus having a good chance of winning a prize, the news would spread that Prem or Ritzel was to be seen in the distance approaching the village, the rifle over the shoulder. To have at the last moment wrested from those eager young hands that dearly wished for prize was only too often the result of such unwelcome visits. These professionals were invariably very quiet men, who observed great abstemiousness, and, what was perhaps a more curious coincidence, their eyes were invariably of that peculiar light gray-blue color that is said to mark the crack rifle shot all over the world.

Hitherto I have referred only to stationary target shooting, which, as I have said, was the usual form. In some parts of Tyrol, however—chiefly in the mountain country adjoining the Bavarian Highlands—running-deer target shooting was popular among a people who were ardent sportsmen themselves. The skill some of these people attained, considering how limited were their chances to practice, would have done credit to the best marksmen in any part of the world. A friend of mine who takes great interest in rifle shooting at home, and who has often visited the region I am alluding to, has suggested to me that I should give some details of one of these running-deer shoots to illustrate how simple and cheaply such a target can be improvised.

In carrying out this suggestion I cannot do better, perhaps, than give details of a running-deer match which I gave in 1876, and of which I happen to have put by the scoring sheet and some of the actual targets used at it. They will serve the purpose as well as any I could lay my hands on. In the first place, it is necessary to rectify the term "running-deer target." As will be seen from the accompanying sketch, the target did not move as does the deer at Bisley, and formerly at Wimbledon, but simply swung pendulum fashion from a high mast firmly set into the ground. The target was made out of two 1½in. thick planks of sufficient width, upon which the life-size outline of the deer's body was drawn in charcoal, and then cut out by the village carpenter. Four legs and rough antlers of equally primitive construction, and a coat of brown paint, finished the job at a cost of a few shillings for each of the four stags I had provided, but of which only two were in use at the same time, one serving as chief, the other for the unlimited event, with which latter was combined, for the more practiced shots, the "choking off" pool precisely as described for the stationary target. To make it more interesting, I gave a special prize for the best average, *i. e.*, the most rings in fewest shots. I must still mention the dimensions of the target. In order to enable a fresh bull to be inserted when needed, I had a square a trifle larger than the bull cut out in the wood to a depth of ¾in. Into this depression fitted a panel of wood upon which the target was pasted. The target measured 12in. across, and, as will be seen from the accompanying reduced facsimile, was subdivided into the usual four spaces, the value of which began with four for the innermost circle (3in. in diameter), three for the next, and so on, as shown in the sketch. The distance was 130 meters, or 142yds. The screens consisted of stout beams, in front of which some young firs were stuck into the ground. The deer was hung up when at rest some 4ft. from the ground, and it was released by a simple mechanical contrivance connected with a wire with the stand where the marksman stood. He released the target himself by treading on a pedal, a movement which increased the difficulty, for it disturbed one's steadiness of aim. The shot had to be fired at the first swing of the target, otherwise a cruel duck's egg disfigured the scoring sheet. The boards of which the target was made being fairly heavy, the speed of the swing was about that of a running deer.

The number of competitors was, on this occasion, not great, only twenty-one; for, of course, only those who had some practice at this kind of shooting attended. They fired 416 shots, the total of the rings being 362. Some of the better individual scores may be mentioned to show the class of shooting, though in fairness to the other marksmen I have to acknowledge that probably none of them had quite so much practice at this kind of shooting as I had enjoyed. Prem, then by far the best shot at the stationary target in Tyrol, but almost untried at the swinging deer, fired sixty shots and got just 100 rings. Holzer, an older shot, pulled off in eighty-nine shots ninety-four rings; while a young fellow, Fried. Karl, obtained in eight shots fourteen rings, when, unfortunately for him, a mishap to his rifle threw him out of the competition. My own score, by which I secured the "best average" prize, was fifty-five rings in thirty shots, out of which I missed the bull four times. Luckily for me, some of the "fours" I made were closer to the centrum than others, and so I carried off the first chief and the second, third and sixth unlimited prizes, but this was less a matter of skill than of luck. These details will have shown that a few pounds suffices to rig up in private grounds such a swinging-deer target, and though it is not as useful for the game shot as the running deer at Bisley, it nevertheless affords a useful chance to practice at movable objects. Very useful did I find my practice when, not long afterward, I was asked to compete in an "England *versus* America" rifle and pistol match at Salt Lake City, where I happened to pass some of the winter months after a shooting expedition to the Rockies. Six of the thirteen events in this match were at moving targets, and as the Americans beat us hollow at most of the stationary targets it was an uphill fight, though we eventually triumphed by our superiority at moving objects.—*W. A. Baillie Grohman in London Field.*

At Calumet Heights on Halloween.

CHICAGO, Ill., Nov. 1.—Below you will find the scores of rifle contests made on the rifle range of Calumet Heights Club on Oct. 31, the same being a part of our Halloween programme. Some sixty-four persons were in attendance, quite a number of whom, both ladies and gentlemen, participated in the contests. Unusual interest was manifested in the competition for prizes; also in the contest for the medals which are shot for weekly, on account of the closeness in the scores of some of the contestants. The following is the programme:

The regular medal contests will take place in the morning under the usual conditions. Class A, 200yds., 9 A. M. Class B, 100yds., 10 A. M. Following this the programme events will be shot.

Event 1: Ladies only; 10 shots, 100yds, .22cal. rifle, any position; open sights allowed 2 points; entrance fee 50 cents; 3 prizes.

Event 2: Open to all; 10 shots, 200yds., any caliber rifle, off-hand; open sights allowed 2 points; entrance fee 25 cents; 3 prizes.

Event 3: Open to all; 5 shots, off-hand, any caliber; open sights allowed 1 point; shooter to advance 20yds. from shooting stand and fire his 1st shot at 180yds.; 2d at 160yds.; 3d at 140yds.; 4th at 120yds., and 5th at 100yds.; score to be counted after last shot; one man up; entrance fee 50 cents; 3 prizes.

Event 4: Ladies only; 5 shots, .22cal. rifle, 100yds., off-hand position; open sights allowed 1 point; entrance fee 50 cents; 3 prizes.

Event 5: Open to all; 15 shots, 200yds., off-hand position, any caliber rifle, open sights allowed 3 points; entrance fee 50 cents; 3 prizes.

Event 6: Open to all; revolvers, any caliber, 20yds., off-hand position, 10 shots; entrance fee 25 cents; 2 prizes.

Event 7: Open to all; revolvers, 5 shots, 30yds., any caliber, off-hand; entrance fee 50 cents; 2 prizes.

Ties will be determined by shooting 1, 3 or 5 additional shots, at the discretion of the committee.

The Revolver Championship.

WE have received the following announcement under date of Nov. 9.

"An open competition for the revolver championship of America will be held under the auspices of the Knickerbocker Revolver Club at the Athletic Club Range, Madison avenue and Forty-fifth street, New York city.

"The contest will begin on Nov. 30, 1896, at 10 o'clock A. M., and will close at 11 o'clock P. M. on Dec. 5, 1896.

"Any revolver, of which barrel and cylinder do not exceed 10½in. in length; any ammunition, any trigger pull, may be used.

"Distance shall be ten (10) and twenty (20) yards. Total of the best two 6-shot targets at each distance to count.

"Targets shall be Standard American Decimal, reduced for each distance. Bullets must visibly touch the line to count.

"Entrance fee shall be $1 (one dollar) and a charge of 25 (twenty-five) cents for each target shot. Re-entries unlimited.

"Silver cups will be awarded to the three contestants making the highest scores. The competitor must sign his name to each target before shooting. Every shot fired shall count. Targets shot shall be the property of the club, and shall remain in the hands of the keeper. On receipt of entry, a card of admission to the range during the shooting week will be issued. Competitors present must shoot in rotation, one target each.

"No competitor shall be allowed to load his revolver until he arrives at the firing point; and no person shall be allowed to annoy or talk to the competitor.

"When loading, the revolver muzzle must be pointed toward the target; and when firing, the revolver must be held in one hand only and with arm extended.

"In case of a tie it must be shot off; six shots at 10yds. and six shots at 20yds.; total to count. All disputes shall be settled by the shooting committee, whose decision shall be final. The contestants may use the gallery ammunition free of charge or furnish their own.

"By order of the shooting committee.

"DR. H. E. WESTBAY, Chairman."

This will do well enough for a shooting match except in one particular—that it is ridiculous to call it a competition for "the revolver championship of America." There is already "the revolver championship of America," won in open competition against all comers in the FOREST AND STREAM'S Winans trophy match, by Wm. E. Petty, of this city. Champion Petty's possession of the title is as clearly recognized as is his undisputed ownership of the well-won trophy itself. Before the Knickerbocker Rifle Club can assume to confer the championship title upon any one else it must first, in fair fight, wrest that title from the man who now holds it. In other words, the Knickerbockers cannot give something they have not got to give.

If the promoters of this Madison avenue enterprise want to do the square thing by the competitors who shall pay their dollars to shoot in it, let them entitle the series of matches an Open Competition to Determine a Candidate who shall Challenge Champion Petty for the Revolver Championship of America.

San Francisco Riflemen.

SAN FRANCISCO, Cal., Nov. 8.—The riflemen of San Francisco turned out in force to-day at the Shell Mound ranges. Taken as a whole the light was good, but in the earlier part of the day there was a stiff west wind blowing that kept the marksmen busy shifting their wind gauges. The scores made by members of the

COLUMBIA PISTOL AND RIFLE CLUB

in the different club competitions were as below:

Rifle, 200yds., Unfried diamond medal, 3 shots, re-entry: A. Strecker 10, D. W. McLaughlin 10, Dr. L. O. Rodgers 12, F. O. Young 15.

Military rifle, Glindemann medal, 10 shots, re-entry, Creedmoor count on Columbia target: F. O. Young 45, F. H. Bushnell 45, A. H. Brod 43, P. Robinson 43.

Rifle, record medal, 10 shots, re-entry: Dr. Rodgers 57, H. R. Crane 66, D. W. McLaughlin 68, A. B. Dorrell 73.

Club Class contests, for members only, 10 shots, champion class: D. W. McLaughlin 52, A. H. Pape 67, F. O. Young 69.

First Class: F. E. Mason 66, A. B. Dorrell 71, H. Hellberry 85, O. A. Bremer 89, H. R. Crane 102, G. Schultz 111.

Second Class: J. E. Gorman 77, E. Jacobson 96, M. J. White 102, G. Barley 112, F. H. Bushnell 118.

Pistol, 10 shots, 50yds., club contests for members; Champion Class: J. E. Gorman 47, F. O. Young 53, C. M. Daiss 57, A. H. Pape 27 (withdrawn).

First Class: Dr. L. O. Rodgers 54, M. J. White 58, F. E. Mason 72, D. W. McLaughlin 73, A. B. Dorrell 76.

Second Class: G. M. Barley 61, E. Jacobson 66, H. J. Wicker 81, O. A. Bremer 92, F. H. Bushnell 93.

Re-entry pistol matches, open to all comers, Blanding medal (three shots to score): C. M. Daiss 4, 7; A. H. Pape 6, 7; J. E. Gorman 7, 7; F. O. Young 7, 8; F. H. Bushnell 17, 17; H. J. Wicker 15, 17.

All comers, .22cal. rifle, 50yds., 5-shot medal: E. Jacobson 10 11, Mrs. L. J. Crane 12 18, Mrs. M. J. White 15 18, Mrs. C. F. Waltham 16 17.

Glindemann ladies' trophy, .22cal rifle, 10 shots: Mrs. L. J. Crane 33, Mrs. C. F. Waltham 34, Mrs. M. J. White 42.

GERMANIA SCHUETZEN CLUB.

The class medal winners of the Germania Schuetzen Club, together with their scores for 20 shots each on the German ring target, were:

First champion class: F. P. Schuster, 422 rings. Second champion class: L. Bendel 417.

First of the first class: G. Alpers 435. Second of the first class: R. Finking 377.

First of the third class: F. H. Bushnell 392. Second of the third class: A. Jungblut 387.

First of the fourth class: E. Salfield 339. Second of the fourth class: Wm. Garms 319.

Best first and last shots: G. Alpers, 25 rings.

SAN FRANCISCO SCHUETZEN VEREIN.

The winners in medal contests of the San Francisco Schuetzen Verein, together with their scores for 20 shots on the German ring target, were:

Champion class: A. Mocker 435 rings.

First class: F. P. Schuster 425.

Second class: Not filled.

Third class: Frank Koch 394.

Fourth class: J. D. Heise 385.

Best first shot, F. Koch 24; best last shot, Otto Lemke 25.

Revolver Shooting in London.

LONDON, Eng., Nov. 1.—The revolver championship of the North London Rifle Club has again been won by Mr. Walter Winans, this being his fourth win of that title in as many consecutive seasons. Corp. Carter, who finishes in second place, with Trooper C. Knapp, both scoring a total of 363, met with a serious accident in the middle of August, and has been unable to attend the ranges since that time. The report of the committee of the North London Rifle Club in regard to the revolver championship above mentioned reads as follows:

"Mr. Walter Winans has again secured premier honors with the revolver, winning the club championship for the fourth consecutive year. His total is less than last year, but he has nevertheless finished an easy winner by 31 points, his aggregate being 394 points out of a possible score of 420 points. Although he has been unable to attend the ranges so frequently, he has had no difficulty in upholding his reputation as the finest revolver shot of the present day. As a matter of fact he was only able to put in just the requisite number of shoots in Series I., viz.: six, so that he had no score to count out in that series.

"The full details of prize winners and their scores are now appended, and cancel all that have appeared before."

REVOLVER CHAMPIONSHIP.

	Series I.	Series II.	Series III.	Series IV.	Total.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Nov. 21,—WORCESTER, Mass.—All-day shoot of the Worcester Sportsmen's Club. Targets.

Nov. 21.—ELKWOOD PARK, N. J.—Blackbird shoot, commencing 1 P. M. Events to suit contestants.

Dec. 1-3.—TRENTON, N. J.—Proposed contest for live-bird championship; 100 live birds per man, $100 entry. Under the management of Charles Zwirlein.

Dec. 22-23.—ELIZABETH, N. J.—Ninth bi-monthly tournament of the Elizabeth Gun Club. First day, targets; second day, live birds.

1897.

Jan. 4-5.—PRESCOTT, Arizona.—Fourth annual tournament of the Arizona State Sportsmen's Association, under the auspices of the Prescott Gun Club. Roy Hill, Sec'y.

January.—SAN ANTONIO, Tex.—Second midwinter tournament, under the management of Oscar Guessaz, etc.

February-March.—HOT SPRINGS, Ark.—The Arkansaw Traveler's first grand annual live bird tournament; $10,000 in purses and added moneys. Souvenir programmes ready Jan. 1. Address all communications to John J. Sumpter, Jr., Box 111, Hot Springs, Ark.

March 23-25.—NEW YORK CITY.—The Interstate Association's fifth annual Grand American Handicap at live birds.

April 15-17.—SAN ANTONIO, Tex.—Tournament of the San Antonio Gun Club. Open to amateurs only. Willard T. Simpson, Chairman Ex. Com.

May 11-14.—OIL CITY, Pa.—Seventh annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Oil City Gun Club. Targets and live birds. Black powder barred. Special event: 25 live birds per man, $25, $1,000 guaranteed. Send entries to H. C. Reeser, Sec'y, Oil City, Pa.

June (third week).—CLEVELAND, O.—Fourth annual tournament of the Chamberlin Cartridge and Target Company.

June 16-17.—FARGO, N. D.—Third annual tournament of the North Dakota Sportsmen's Association. Targets. W. W. Smith, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

In reply to a query from us as to the status of Winston's challenge to the winner of the Claridge-Roll match, Mr. H. P. Collins, of the Du Pont Powder Company, writes us as follows, under date Nov. 13: "Replying to yours of the 11th inst., Winston is the next aspirant for the cup. Before the match between Claridge and Roll was called, acting as referee and representing Messrs. Du Pont & Co., I informed each of the contestants privately that Winston had posted his forfeit with *Shooting and Fishing* challenging the winner, and that under the precedent established in the case of Roll's challenge, the winner of their match would have to entertain Winston's challenge under the usual conditions. I consider, in view of the precedent established in the Roll challenge, that Winston has complied with all the requisite conditions, and that his challenge is in good form."

By special invitation of the New York Athletic Club, a three-men team race will be shot on the club's grounds, Traver's Island, on Saturday next, Nov. 21. Invitations have been issued to certain clubs to be represented by teams on this occasion. The idea is a new departure in trap-shooting circles in this vicinity, and should be the means of providing a good day's sport for the members and their guests, as well as creating fresh enthusiasm among the trap-shooters of New York and her suburbs. The New York Athletic Club's shooting committee deserves special commendation for the sporting conditions of this race.

In regard to the apparent run of luck in the matter of easy birds that fell to the lot of Roll in the recent match for the Du Pont trophy at Baltimore, the Baltimore *Herald* of Nov. 11 has the following note: "The birds were an easy lot of duffers in the main, though those that made any attempt at swift flying usually got off. There is a peculiar kind of luck attached to trap-shooting. One man will draw a lot of easy birds, while the man shooting beside him will draw all difficult birds. This run of luck seemed to be against Claridge yesterday, and to his sorrow, though he made many beautiful kills."

Referring to a Driver and Twister in our last issue, anent the "absolute" professional and an *Ultima Thule*, Elmer Shaner writes us from Pittsburg as follows: "What shell, powder, wadding and shot (chilled or soft) would you recommend me to use on *Ultima Thules?* Am I right in my supposition that they are some new target, or is it the name of some new nitro powder? Old Hoss and I have been discussing the question and as usual we cannot agree."

Charlie Budd is shooting live birds out West in something like his old form. During the Dayton, Ia., Gun Club's tournament, Oct. 27-28, Charlie took part in 6 live-bird events, the number of birds in each being respectively 5, 10, 15, 7, 7 and 7, or a total of 51 birds all told. He killed straight in all but the last, losing 1 bird, making his score for the two days 50 out of 51. Fred Gilbert was clean out of form, losing 12 birds out of 51 shot at.

George Roll, the champion from Blue Island, Ill., won the Du Pont trophy on Nov. 10 by scoring 48 to 45, made by B. W. Claridge, the holder. The shoot took place on the grounds of the Baltimore Shooting Association, Claridge being a member of that organization. In Claridge, Hood, Waters and Hawkins, the Baltimore Shooting Association has a trio of young shooters hard to beat in any company.

The race between Charles Smith, of Plainfield, N. J., better known as Dutchy, and W. H. Wolstencroft, of Frankford, Pa., for the Austin tri-State championship cup has been postponed from Wednesday, Nov. 25, to Friday, Nov. 27. The time and place are left the same, viz., 2 P. M. on the Climax Gun Club's grounds, Fanwood, N. J. A call to serve his country as a juryman caused Billy Wolstencroft to ask for the postponement of two days.

Charlie Hebbard, of the W. Fred Quimby Co., and of the Empire Target Co., is back again at his desk "chained to business," after a delightful trip in Maine. The privations (!) of camp life have not caused him to loose much flesh; he looks better than ever. His temper too is excellent, provided you don't mention "moose" to him. He did, however, score two deer.

Neaf Apgar will sever his connection with the shell-loading department of the W. Fred Quimby Co. on Saturday of this week. On Jan. 1, 1897, he will blossom out as a full-blown representative of the Austin Powder Co., of Cleveland, and will attend all the important shoots in '97 as representative of that company. With Jack Winston and Neaf Apgar booming things, the Austin Co. ought to make a straight score.

Elmer E. Shaner was unable to take charge of the running of the Vicksburg, Miss., tournament, as previously announced, owing to sickness. We are glad to say that one or two letters received quite recently from Mr. Shaner are written in his old vigorous style and with the familiar blue ink that he affects; we augur from this that he is fast becoming convalescent.

What rules do they shoot under in Minnesota? A correspondent from that State writes: "Of the principal winners at nearly all the tournaments in this State last year there were four men, residents of the State, using 10-gauge guns, who won more than any other four men in the State when the whole thing is averaged up, and they stood at the same distance as the 12-gauge men in every shoot."

Bob Snyder, of Schoverling, Daly & Gales, is a deer hunter. The deer of Long Island have recognized that fact and have paid him tribute, a fine doe falling to Bob's gun on Wednesday, Nov. 4. His party secured six deer that day—three bucks and three does.

Jack Halstead and Richmond, both members of the Peekskill, N. Y., Gun Club, were in this city on Monday, Nov. 16. Jack did not have much to say about ruffed grouse or woodcock, but he knew something about "live birds and targets."

Mr. C. E Robbins, President of the North Dakota State Sportsmen's Association, sends us the following notice of that Association's annual gathering for 1897: "Third annual tournament of the North Dakota State Sportsmen's Association, at Fargo, N. D., June 16-17. Targets. W. W. Smith, Secretary."

The contest for the E. C. cup at the New Utrecht Gun Club's grounds, Woodlawn, L. I., on Saturday last, Nov. 14, was the 23d competition for the same. As C. Furgueson, Jr., had prior to that shoot 4 wins to his credit, his victory on that day gave him absolute ownership of the cup and a purse of $50.

The result of the last medal shoot of the Joplin, Mo., Gun Club shows that W. G. Sergeant is shooting all right. The scores in this event, which is at 100 targets, unknown angles, were: Sergeant 95, H. T. Leeman 89, C. M. Sumner and Taylor Cox 80 each.

On Saturday, Nov. 21, a live-blackbird shoot will be held at Elkwood Park, N. J. The shoot will commence at 1 P. M. Phil Daly, Jr., will have 500 blackbirds on hand for the occasion. Events will be shot to suit the contestants.

The Elizabeth, N. J., Gun Club announces its ninth bi-monthly tournament, Dec. 22-23. First day, targets; second day, live birds. The tournament is open to all.

George McAlpin defeated John L. Winston by 2 birds in their match last week. The scores were 93-91.

The Worcester, Mass., Sportsmen's Club will hold an all-day shoot at targets on Saturday next, Nov. 21.

Nov. 17. EDWARD BANKS.

The "Vena-Contracta" Guns.

THE London *Field* had lately made an exhaustive test of the merits of the Vena-Contracta guns manufactured by an English firm. The results of these tests it has just given to its readers, and without doubt American shooters will be just as much interested in the statistics given as our English brethren of the gun.

At first sight, reducing a 12-bore gun at the breech to a 16, 18 or 20-bore gun at the muzzle is rather a startling innovation. As a matter of fact the bore of these guns is reduced from its original gauge—12—to its final dimensions of 16, 18 or 20-gauge in the first 6in. of the barrel from the end of the chamber; from that point to the muzzle the barrel is similar in all respects to that of a 16, 18 or 20-gauge gun. Thus the wads and the shot are compressed in the early stages of their departure from the barrel when the velocity is comparatively slow.

The *Field* says: "The *raison d'être* of the contracted method of boring is to provide strong guns of light weight without shortening the barrels, as is often done with light-weight guns. By reducing the size and weight of the barrel forward greater thickness of metal can be at the breech and less weight is required in the stock in order to balance the gun."

In considering the figures given below it will be well to call attention to the fact that the size of shot used in the trials was the English No. 6, 1oz. containing 270 pellets, and an 1⅛oz. containing 304 pellets.

Summarizing the results of its series of trials, the *Field* says:

"When the Vena-Contracta was first brought out it was suggested that the reduction of the bore as it proceeded up the barrel would considerably increase the pressure of the powder gases. This seemed a not unnatural conclusion; but some experiments then carried out in our own 12-bore crusher-gauge (with certain modifications made therein to adapt it to the alteration of circumstances) did not show that there was any material increase in the pressures as compared with those of ordinary 12-bore barrels. We have been glad, however, of the present opportunity of investigating the subject more thoroughly, as Messrs. Joseph Lang & Son, the makers of the three guns, have placed at our service three new crusher-gauges, which they had constructed for their own use, and these have been made in exact accordance with the interior of the guns, viz.: 12-20, 12-18 and 12-16-gauges respectively, their internal parts having been bored with the same tools as were used for the guns. That is to say, the barrel is reduced to its final dimensions in the first 6in. from the end of the chamber; so that the shot and wads are gradually compressed, while their velocity is comparatively low; and thence forward the barrel proceeds to the muzzle in similar form to that of an ordinary gun of 16, 18 or 20-bore, as the case may be.

"The records obtained by firing ten rounds in each of the three new crusher gauges with 1⅛oz. of shot, and the pressures given in our own 12-bore crusher-gauge with some of the same batch of cartridges, were as follows:

Bores.	Pressures in Tons per square inch.									
12-20	1.79	1.91	1.91	2.10	1.79	1.87	1.95	2.00	1.79	2.14
12-18	2.00	1.78	1.73	2.00	1.88	1.73	1.63	1.88	1.92	1.73
12-16	2.00	1.88	1.68	1.92	1.83	2.04	1.63	2.04	1.78	1.96
12-bore	1.63	1.78	1.53	1.92	1.53	1.88	1.92	1.76	1.73	1.53

"The charge of powder used in the 12-20 gun was 38grs., but in the other three guns it was 1gr. less. The reason of this difference was that 37grs sufficed to give the standard velocity of 1,160ft. per second in the 12-18 and 12-16 bores, but was not enough in the more contracted barrel, and consequently 38grs. were used.

"As may be seen above, the most contracted barrel exhibited the highest amount of pressure, and the ordinary 12-bore showed the least amount; but the facts are not quite so apparent in the foregoing tables as in the following summary, where we give the lowest and highest rounds in each series of ten, together with the averages. We also state the pressures with 1oz. of shot as well as with 1⅛oz., except in the 12-bore, in which the smaller charge was not tested. With the 1oz. of shot the powder was reduced by 1gr.

PRESSURES IN TONS PER SQUARE INCH.

Bores.	With 1⅛oz. Shot. Lowest round.	Highest round.	Average of ten.	With 1oz. Shot. Lowest round.	Highest round.	Average of ten.
12-20	1.79	2.10	1.92	1.62	2.10	1.82
12 18	1.63	2.00	1.82	1.53	1.96	1.70
12-16	1.63	2.04	1.88	1.47	1.96	1.74
12-bore	1.53	1.92	1.72	....	....	....

"The averages of pressure in the Vena-Contracta guns are a little higher than in the ordinary 12-bore, but the difference between the highest average and the lowest is not nearly so great as the variations that occur with successive cartridges fired from the same gun, and which variations are apparently due merely to differences in strength of the caps.

"Next we give the patterns. Here it may be observed that the three contracted guns differ somewhat in their boring. The 12-20 is a cylinder in the right barrel and medium choke in the left; the other two are medium choke in both barrels. The ordinary 12-bore record is copied from a trial of the same powder published in the *Field* of the 4th of July last. The gun is a rather full choke in the left barrel, which alone was used, and one wild shot will account for the small pattern in the lowest round; the rest were pretty regular.

PATTERNS IN 30IN. CIRCLE AT 40YDS.

Bores.		With 1⅛oz of Shot. Lowest round.	Highest round.	Average of ten.	With 1oz. of Shot. Lowest round.	Highest round.	Average of ten.
12-20	R.	102	137	127	105	149	135
	L.	143	165	154	145	168	159
12-18	R.	140	177	165	126	158	145
	L.	144	170	161	122	145	138
12-16	R.	128	192	172	118	170	159
	L.	142	226	183	134	171	162
12-bore	L.	76	230	193	...	...	...

"Now we come to the velocities, which are as follows:

VELOCITIES IN FEET PER SECOND.

Bores.	With 1⅛oz. Shot. Lowest round.	Highest round.	Average of ten.	With 1oz Shot. Lowest round.	Highest round.	Average of ten.
12-20	1136	1167	1151	1132	1172	1154
12-18	1149	1186	1168	1145	1190	1170
12-16	1132	1186	1166	1146	1190	1169
12-bore	1141	1195	1171	....	....	....

"In these records the velocities do not vary so much with the contracted guns as with the ordinary 12-bore. But we do not think that any importance is to be attached to this circumstance, as we believe that variations of velocity from round to round depend not so much either upon the gun or the powder as upon the strength of the caps. There is one remarkable fact, however, in connection with the most contracted gun—the 12-20—and that is, that although it had 38grs. of powder, instead of 37grs., as in the other three guns, this increase did not bring the velocity quite up to the standard of 1,160ft. per second; and when the powder was further increased, there was practically no increase in the velocity.

"The recoil records also show some interesting results. At the first glance it would appear as if the recoil with the .12-20 bore is much the same as that of the ordinary 12-bore, but the fact has to be taken into consideration that the weight of the 12-bore is 7lbs., whereas that of the .12-20 is but 6lbs. 5oz., and the other two are unfinished guns that have not been reduced to their ultimate weight, which will probably be about 6lbs. In order to compare the results fairly the weights should be alike, and we have therefore recalculated the records on the supposition that the four guns weigh exactly 6lbs. each. The *raison d'être* of the contracted method of boring is to provide strong guns of light weight without shortening the barrels, as is often done with light-weight guns. By reducing the size and weight of the barrel forward greater thickness of metal can be given at the breech, and less weight is required in the stock in order to balance the gun. But a light gun must necessarily give more recoil than a heavy one, when charges and velocity are the same; and to test these guns on their merits it is requisite to show what is the full amount of recoil with their regular weight. Accordingly we have taken 6lbs. for all four guns, whatever the bore, and on that basis the recoil records stand as follows:

RECOIL IN FOOT-POUNDS (GUNS, 6LBS. EACH).

Bores.	With 1⅛oz. Shot. Lowest round.	Highest round.	Average of ten.	With 1oz Shot. Lowest round.	Highest round.	Average of ten.
12	28.6	31.3	30.3	24.7	26.1	25.5
12	28.9	31.0	29.9	24.7	27.2	26.2
16	28.4	31.0	30.1	24.9	27.5	26.5
12-bore	31.8	33.9	33.2	....	....	....

"Here it will be seen that the ordinary 12-bore gave about 10 per cent. more recoil than either of the Vena-Contracta guns with the 1⅛oz. charge of shot. (There was no trial of the smaller charge in the 12-bore. The three contracted guns gave results which were close together; and although the 12-20 showed a little more recoil than its two *confrères*, that may be accounted for by its having a rather large charge of powder. With the 1oz. charge of shot, the 12-20 gave least recoil; and it may be inferred that the higher recoil with the other two was due to their barrels being less contracted, as the greater the amount of friction, and consequent check to the forward movement of the shot, the greater would be the retardation to the backward movement of the gun.

"The general conclusions which we draw from the foregoing records are that, taken on the whole, the results are very good, especially with the 12-18 bore. These trials have brought to light the fact that the original 12-20 bore is rather too small in gauge. The friction in the barrel necessitates the expenditure of an additional grain of powder, and even then the velocity is not quite so high as in the 12-18 or 12-16; and the patterns also are not so good as in Messrs. Lang's modifications. Besides in the 12-18 there are all the advantages of the Vena-Contracta system, viz.: extreme lightness of the barrel forward and massive breech ends, thereby insuring great safety and a very handy weapon.

"Ordinary wadding may be used in these guns with good results, but the best shooting is obtained with wadding as follows: Card over powder, ⅜in. felt, then the shot and a card over the shot. There is no need for a greater amount of wadding than this, because the felt wad is compressed in the contracted part of the bore and by itself acts as a thoroughly effective gas check. We may also mention that, although upward of 500 cartridges have been fired from these guns, not the slightest sign of leading in the barrel or balling of the shot has been perceived."

Another Effort to Find the Champion.

WITHIN the past few days we have received a letter from the Missouri State Game and Fish Protective Association through its president, Mr. J. L. Porter, that will be of interest to many of our readers. The communication, which, by the way, "has been forwarded to all of the well-known wing shots in America," deals with a proposition on the part of the Association for a big live-bird event to decide who is the champion live-bird shot of the United States.

Just at present we are overwhelmed with both claimants of that title and schemes for finding out who has the best right to it. The suggestion made by the Missouri State Association is worth considering, and could be made practicable without in any way conflicting with Mr. Zwirlein's efforts in the same direction. The trophy to be given to the winner at Trenton, N. J., next December could be the trophy referred to in the second paragraph of Mr. Porter's letter.

We thoroughly agree with the Missouri State Association's plan for having the trophy and title contested for each year in open competition. Such is the method pursued in many other branches of sport, and we believe such an idea would be welcomed by shooters in general. In this respect we would suggest that it would not be necessary for the holder of the title at the time of such annual competition to shoot in such a contest. The competition would be rather for the purpose of selecting some shooter, the winner of the competition, who would shoot against the then champion for the trophy and the title as in an individual match. The letter of the Missouri State Association will surely attract lots of attention to this vexed subject, and it is quite within the bounds of probability that something tangible may result. The latter itself is as follows:

"KANSAS CITY, Mo., Oct. 20.—*Editor Forest and Stream:* The directors of the Missouri State Game and Fish Protective Association are at work formulating a programme for their twentieth annual tournament, which is to be held here during the month of May, 1897.

"Among the events proposed is one to be known as the 'American Championship Event' on live birds, provided we can get the coöperation and the good will of the several shooters of the United States who have a trophy which has been offered by some publisher, manufacturer or dealer, and which at the time of being contested for was known as an American championship trophy. It is our desire to have all claims of this character relinquished; in other words, we propose, in order to settle this question, to make an event, the money to be guaranteed, not less than $3,000 and not more than $5,000, and in addition to have a gold plate, say 4×6in., suitably engraved to be emblematic of the American championship, the conditions of which have not yet been formulated. One of the plans suggested is to have this plate contested for in open contest once each year, and at such time and place as may bid and offer the largest purse for competition. The contests to be at 50 live birds, entrance $50, including the price of the birds.

"Our object in addressing you is to ask: Are you willing to relinquish all claims you may have to the title of American champion and participate in this proposed shoot? What suggestions have you to offer as to the number of birds an event of this kind should be contested for? We would also appreciate any other suggestions or information on the subject.

"As to our sincerity, we wish to say that our Association now has over $1,000 in cash on deposit in the First National Bank, of this city, and that the movement is in the hands of a class of gentlemen who will vouch for its successful termination. Kansas City being almost the geographical center of the United States, and situated in a territory where a majority of the pigeons used in live-bird matches are raised, and having the distinction among sportsmen of being as large a live-bird center as any city in the United States, we feel warranted in asking that our claim for the final settlement of American championship honors be recognized.

"A copy of this letter has been forwarded to all of the well-known wing shots in America, and if you have in mind any one that should be notified, that perchance may have been overlooked, we would thank you for the information.

"Kindly let us have your reply at as early a day as possible, as we desire to close this matter and make our formal announcement not later than Nov. 15. Awaiting your early reply, and in order that your letter may not be miscarried, we inclose you a self-addressed and stamped envelope for answer. Yours very truly,

"J. L. PORTER, President."

A Tie Match at Pittsburg.

PITTSBURG, Pa., Nov. 6.—A live-bird match between two well-known local experts, who conceal their identities under the assumed names of Rickey and Wawa, drew a large gathering of shooters to the grounds of the Herron Hill Gun Club to-day. The match was at 100 live birds per man, $100 a side, loser also paying for a banquet for eight and the price of the birds. Rickey conceded his opponent 8 misses as kills, a handicap that was entirely too heavy for him to-day. Wawa shot like a veteran and actually tied Rickey's high total of 92; this score with his handicap gave him a clean score of 100 kills! Rickey looked like a possible winner when the match was half over, as he had scored 49 out of a possible 50, and was still at work with an unfinished run of 43 straight. In the last half, however, he fell away, and Wawa improving and leading him by 3 birds on the 50, their scores were a tie at the close of the match. Rickey's single double-figure run was 49; Wawa made the following runs of over 9: 28, 19, 14, 10 and 10. Scores:

Rickey	2221220121112122212112222—24	
	1221122112222222122222222—25

Elliott Defeats Riley.

KANSAS CITY, Mo., Nov. 6.—Jim Elliott defeated J. E. Riley, of this city, this afternoon in a contest for the cup donated last May by the Kansas City *Star*. Elliott shot in good form, scoring 92 out of 100 on birds that were above the average, six of his lost birds falling dead out of bounds. Elliott's double figure runs were: 11, 15, 20, 14 and 23 unfinished; Riley's single double figure was 27, made on his first 27 birds. Elliott shot a Winchester repeating shotgun, 48grs. E. C., Leader shell; Riley shot a Greener gun, 3½drs. Schultze in a Trap shell. Scores were:

The Limited Gun Club, of Indianapolis, will have an all-day sparrow shoot Thursday, Nov. 26, Thanksgiving Day.

ROYAL ROBINSON, Sec'y.

The FOREST AND STREAM is put to press each week on Tuesday Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

PROGRAMMES AND TOURNAMENTS.

ROGER VAN GILDER SPEAKS TO THE POINT.

KNOXVILLE, Tenn., Nov. 2.—It was with great interest that I perused in your issue of Oct. 24 the best article ever published in the trap columns of the FOREST AND STREAM on "Programmes and Tournaments." In the following remarks on that article I do not pretend to attempt to set forth any brilliant or new ideas, but rather to arouse others to think about such matters for the development of something that will induce results for the up-building of the sport of the trap.

Gun clubs have been organized during the past two seasons all over the country. They are new workers in the field. Whether they "cometh up as a flower and are cut down," or flee "as a shadow," will depend largely upon the true sportsmen's feelings of loyalty to a worthy cause, inducing them to work in their labors upon a basis of unity.

HOW THE KNOXVILLE GUN CLUB GREW.

To all new clubs thus organized a short history of the Knoxville Gun Club might be of interest. Also a brief mention of how the club conducted its tournaments and became "the inaugurator of large added money shoots," as your trap editor says in compliment to the club.

The Knoxville Gun Club was organized in the spring of 1881 by a few enthusiastic lovers of rod and gun. Its first president was Dr. Matt G. McClung, than whom no truer sportsman and lover of rod, gun and dog ever lived. The club beginning with great enthusiasm numbered some thirty members, meeting once a week. The medal contest at the Ligowski clay target was a source of much pleasure and excitement. The writer well remembers a contest of special interest at a match of 25 Ligowski clay targets between its first president, Dr. McClung, and its present president, Col. S. B. Dow, resulting in the score of 20 to 25 straight in favor of our now honored and venerable president. Twenty-five straight in those days was considered phenomenal shooting, as all the other boys were well pleased to make 16 to 20 out of 25.

INTEREST BEGAN TO WANE.

Like all organizations of a similar character, the interest in shooting began to wane, until at the present time only some half dozen of the old guard are left in the present club. During these past years the club has had its vicissitudes of contentions, disputes and cliques, the most unfortunate conditions that can assail any club. But there were a few sober-minded members to take the reins of the runaway horse, and by gentle persuasion and good counsel for unity and concert of action the club was held together by the faithful few, reorganized, blossomed, bloomed and bore fruit. It has gradually developed from the small club of '81, unknown outside of its immediate neighborhood (as many other clubs just born), into one of the leading and foremost gun clubs organized for the pleasures of the sport of the trap.

BY-LAWS ARE IMPORTANT, AND MUST BE LIVED UP TO.

Past experience demonstrated the fact to the faithful few that to succeed as a club they must have a complete set of by-laws to move under, and must make the members live up to them. "Unity of purpose and concerted action in all things" was their motto. The drones of the club were killed by the live working bees and the hive prepared to store the honey for winter use. The working force of the club was and could be relied upon to do what was apportioned it upon any and all occasions, under the direction of an executive committee with full power to act, consisting of president, vice-president, captain, secretary and treasurer.

Thus organized, it bought a full and complete equipment, with the latest improved traps and targets. It selected its grounds to give a background of sky for the flight of targets. As the marches of improvement continued the grounds were changed several times, until at last the club leased the present area of ten acres, reached after a delightful ride on a street car line that runs near it, thus avoiding walking and the carrying of shells and guns.

THEY GAVE SMALL TOURNAMENTS AT FIRST.

Here the Knoxville Gun Club labored and overcame seemingly insurmountable difficulties in the work of building up the sport of trap-shooting. Many small tournaments were given to the neighboring clubs, with more or less degree of success. No elaborate programmes were issued then, only very simple statements of a club tournament of such a date with special contests to *suit the views of* the attending shooters. Medal shoots were the great inducement. Championship medals, both team and individual, for all sorts of things were the rage, but, like all prize contests, these soon lost their attraction and the meetings began to dwindle in attendance and the 50-cents-entrance sweeps at 10 targets were little incentive to produce a gathering of the clans. Then a 10-straight was rare indeed, but the 6, 7 and 8 holes were always full, while a few 9 men were the heroes of the hour.

HOW THEY CAME TO "ADDED MONEY."

Matters progressed thus until the executive officers said that some radical change must be made if the interest in trap-shooting was not to be buried. What was required to create new vitality? The idea flashed upon us suddenly; it was *added money*. The idea was "cussed and discussed" in all its bearings upon the question that a rupture in the family seemed imminent. Past experience had demonstrated the fact that to draw together the trap-shooters of the country it was necessary to offer some inducement in place of the old system of prizes and guaranteed purses. The members of the other clubs could shoot targets then at 2 cents each, and were sickened of medal contests. There was no reason or incentive for them to go away from home and shoot the same old string and the same old system.

Thus it was with much earnestness of purpose and some timidity at the audacity of the enterprise that the club fired a big salute and invitation to the shooters of the country at large to chase dull care away for a while and enjoy the pleasures of a good, *first-class* meeting and divide out among themselves *the then* enormous sum of $500 in cold cash added to the purses. The club had held one or two meetings with *guaranteed purses*, but the actual adding of cash to the purses was theretofore an unheard of undertaking.

THE "$500 ADDED" TOURNAMENT.

"How can we get out?" exclaimed the members. "We will be bankrupt and a disgruntled club when this shoot is over," seemed to be the prevailing opinion. A few nervy brethren in the good old fold were put at the helm to steer the old ship through (as Brother Banks has it). Three members, tried and true, with full power to act, were chosen by the club. A neat, simple invitation, without advertising matter, announcing so many events of so many targets, and so much cash added to the purse of each event, were sent out to the shooters of the country. The cover stated prominently that $500 in cash would be added to the purses by the Knoxville Gun Club.

One set of traps, an old wire pull and "Knoxville blackbirds" (the beginning of the now developed bluerock and empire) were used. They were manufactured here, and at a former exhibition were wondered at largely.

The arrangements to entertain the visitors were simple; nothing then that suggests the present elaborate arrangements; the club and shooters taking the chances of the weather, old 10 gauge guns at 18yds. and black powder, with a few using "wood" powder "that cracks like a rifle," as the boys said, but smashed the target the same as the old cannons with the smoke of 5 drams of FFFG and 1¼oz. of No. 9 chilled shot from the 32in. barrels of the 10-gauge guns. What changes meet the eye and ear at up-to-date meetings of to-day!

THE CLUB CAME OUT AHEAD.

Among the shooters from abroad are recalled Mr. Perry, of Boston, shooting a 10-gauge 32in. barrel gun and black powder, dubbed the Rain Maker, and others of equal shooting caliber. The meeting was a success both in attendance and pleasure, and also financially. The club came out whole as to the cash added, a small balance in the treasury showing a nest egg for future meetings. This meeting gave the club members renewed life and fresh enthusiasm, and a new feature had been carried out to a successful issue. The success of the club was assured from this on, as all who attended the shoot went away pleased with the business conduct of the shoot, the fairness displayed and the treatment received at the hands of the club members.

THE TOURNAMENT OF 1893.

Now we come on to the tournament of 1893, when the club took upon itself the task of adding $1,000 in cash to the purses. A committee of "the old guard" was duly chosen, consisting of three men, with full power to act. Dates were claimed well in advance, so as not to conflict with other shoots. The time was chosen to give the nicest season, when rain was less abundant and early vegetables were in their prime! A neat programme was gotten out (elaborate programmes do not pay); a shooter will read everything, anyway, in a programme—a few chosen friends among the shooters were written to to "talk up" on their travels this tournament of ours. The manufacturers, ever alert to their interest, and seeing the enterprise of this club, cheerfully added their dollars when solicited for advertising.

A modified handicap was finally chosen. It was left to a man's honor as to whether he should shoot known traps and angles or known traps, unknown angles. The expert, so-called, stayed in his class, while the amateurs, based on a sliding scale, 85 per cent. (17 out of 20), went as their scores indicated for each succeeding event.

Two sets of five traps with electric pulls were used. Rapid fire, squad shooting was adopted. Several improvements introduced in handling the squads and in the cashier's office were successfully tried. These are detailed later. Those who attended this meeting went home satisfied with the successful conduct of this great meeting. The sporting papers had special reports of the shoot, and every shooter in the country was aroused to action. They began to cast around in the cities for good timber out of which to organize a club and give added money tournaments. So much good was done by the meeting that clubs began to be reorganized and new ones to organize—in fact, a new era in the shooting world began, and the Knoxville Gun Club had assumed by hard work and enterprise a high standing among shooters for business conduct of its affairs and fairness to all, with courteous treatment.

ANOTHER BIG SHOOT IN '94.

Then the season of '94 opened up, and the club decided again to add $1,000 in cash at its tournament. The sliding handicap was dropped; the shooters of the country were improving both in quality and quantity, so that after much deliberation it was determined that all who came should shoot on some basis that was no handicap at all in any way. Each man should be the judge of his ability, and all stand up "flat-footed" and shoot on their merits.

Experience in the previous tournaments had taught the club a few new desirable changes in the management of shooters. A simple programme was gotten out, and, as formerly, the manufacturing friends of the club (some even unsolicited) came forward and bought advertising space, as they desired to show in a liberal way that the enterprise of the club was appreciated. It had instilled new blood into some almost defunct clubs, and had, by its example of progressiveness, created unbounded enthusiasm in new club members to reach out and hold national meetings in place of local ones.

KNOXVILLE'S EXAMPLE FOLLOWED.

May 23, 1894, dawned bright and beautiful. The congregation of shooters from all over the country was ready for the events and eager to measure their skill. The club had previously invited as their guests the trap editors of FOREST AND STREAM and other sporting papers. They came, they saw, and were conquered. Never before in the history of trap-shooting had such a gathering of the "cracks" been gotten together. All those who were present at this great tournament can attest its unqualified success.

Then it was that other clubs, their members being present and seeing and knowing the success, financial and otherwise, attending such meetings, began to realize that they too must add cash as an inducement if they wanted to hold large national meetings. Hence the "fixtures" in the papers for the season of 1895-96 showed larger added money than ever before in the history of the trap. This was due to "the inaugurator of large added money meetings," as your trap editor calls us. Small local affairs will not incite that degree of enthusiasm like the larger ones. A shooter can stay at home and shoot targets at 1 cent and small sweeps without the attendant extra expense of a trip from home.

RECOMMENDS SMALL SWEEPS AT HOME WITH HIGH GUNS.

Just here I would advise more home sweepstake shooting, if only 10 cents entrance and high gun to win. Get used to shooting for money and to shoot high guns all the time; then when you do go away you will not think about "that $2 and the purse I will win if I make a 20 straight," nor lose simply because you try too hard and get into an unnatural condition and position. Shoot just like you did at home and don't think about anything but "break that target." You will be astonished at your improvement in shooting.

A NEW IDEA IN 1895.

A new idea was talked of for the season of May, '95. It met with the instant favor of both manufacturers and shooters. It was as follows: The club added $1,500 in cash. The manufacturers were given a full advertising space as supporters in the programme; there were twelve of them and they added $600 in cash. Then all the shooters who attended put in an extra $10, which made a total purse of cash added to the meeting of $3,000. The sum was large indeed, and there passed through the cashier's office in entries and added money about $15,000; divided out among the winners at this the greatest meeting ever held and the greatest assembly of the best shots the country could produce. First money in some of the events ran as high as $150. Glancing over the record of some of the fortunates who struck it all alone (oh! mamma!) I find: McDonald, of Dayton, $150; Glover $140, Budd $117, Maury $85, Noel E. Money $86, Trimble $134, Easton $83, Mitchell $83, Heikes $126, Wagner $69, McKelden $69, Bartlett $68, etc. Many divides of anywhere from $20 to $60 each man. (Those were great days at a great shoot).

SHOULD IT BE HARD SHOOTING WITH BIG CHANCES?

The question now arises: Would a shooter rather take chances at hard shooting to win large money? For example, take the events in which McDonald, of Dayton, won $150 on 24 out of 25; Glover $140, first on 25, and Budd $117 on 24 out of 25. The purses were as follows: First money, $140; second, $117; third, $93.95; fourth, $58.72, and fifth, $58.72, making grand total $468. More in one single event than some clubs add in two days! This is a question which I believe is open to debate, but with a preponderance of weighty facts that a shooter would rather shoot to win a large purse than divide out a small one and get less than his entrance. Of course in the fourth and fifth classes ties will occur that brings the premium low, but if the added money is none and entrance small he has no chance "to get even," while the above gives him that chance. The shooters who attend trap shoots to-day are those *who think they have a chance "to get even."*

Formerly they had this sort of feeling: "Well, here it costs so much money to attend that shoot. If I 'get even' all right; but I will have a good time and see the boys anyway."

THE OLD CONDITIONS NO LONGER EXIST.

The meetings of to day are run under changed conditions. A few go for the sport, but the majority go for *both* sport and to win and get even, with thoughts of "would like a little more." They know they must shoot well to get even, and the consequence is at home they keep up their practice and their clubs have regular contests for such purposes, and in fact offer premiums to the members. Keep your home club talent practicing by *added money* premiums and see how it brings out the boys the same as at tournaments. The large sum of $3,000 added money brought them from all over the country to our tournament of 1895, and there were assembled on our grounds the finest lot of fellows ever gathered together—gentlemen all in all, and one toward the other. How to handle such a crowd was a serious question. Many days of thought developed the plans now practically used at the large gatherings that followed those in '95 and '96.

HOW "THE COMMITTEE OF THREE" DID ITS WORK.

The committee of three, with its chairman as chief promoter, was chosen. The questions before it were many and varied, and were considered in about the following order: Get reduced rates on all railroads on the certificate plan; meet the shooters at the train and conduct them to the hotel where special rates and headquarters had been assigned and post them how "to get around town;" introduce them to the citizens of our home; select a caterer for his known ability to furnish a good meal at 50 cents and provide comfortable means to rest the shooter while eating; give the caterer the privilege free to furnish a good meal (please a shooter internally and he is yours forever); issue a programme *inexpensive, but neat*, as it is a waste of money to put out elaborate programmes; give it to the purses if you have it to squander; state plainly that the shoot will commence at such an hour (and mean it in execution and they will be there); advertise nothing but what you can do and carry it out to the letter; state to whom to send your shells; how to get to the grounds, and if on a car line, where the cars run.

EQUIPMENT OF THE GROUNDS.

Now comes equipment of the grounds. Locate your traps for a sky background and in one continuous line; place them down to stay with large screws or bolts; select men for traps, and appoint the middle trapper captain and make him responsible for good work and pay a premium for same. Trappers should take their lunches in the pit with them; provide a water boy for each set of traps. Select a paid referee for each set of traps to call dead or ring a bell if lost to attract shooter's attention to it and also scorers. Erect in plain view a public double score board, end to end, spaced for 25-target events—ruled and numbered for same, and in blank "Event —, Squad No. —." This is the record board and no change can be made from same. Have at the board a scorer, also on the platform a table and *pad scorer* who takes the duplicate scores, calling one to the other each man's score. Also have one man who takes these pads, checks them by the board score, turns them into the office, gets a new pad (several) in advance of squad entries, puts them on the *other end* of the board ready for next change. Thus checked the record is very accurate and complete, even in so great a number of scores.

Pay your men well. Don't let as a rule club members or visitors score, as trouble may arise and cause unpleasantness.

LOOK AFTER THE COMFORT OF THE SHOOTERS.

The shooter should stand on the ground, as it is easier to shoot from. Either a canvas or wood awning should protect shooters from sun in hot weather and rain if any should come up; thus the shoot could go on without interruption. Now place 6ft. in rear of each score-peg chairs *tied* to a stake that is driven into the ground and covered with large wagon umbrellas (good sign places for sale!) Rail off all this, including score-boards, etc., to keep shooters and spectators away, and allow no one inside this inclosure but contestants shooting and waiting.

STARTING THE SHOOT.

To start the shoot having three sets of traps and 100 entries: Number the sets 1, 2 and 3 respectively. Commence on set No. 1 with squad No. 1 at the score to shoot and squad No. 2 *in the chairs ready for their turn.* Shoot through four full squads on set No. 1. When squad No. 5 commences to shoot (on traps No. 1) have squad No. 1 commence event No. 2 on No. 2 set of traps, and squad No. 2 in the chairs waiting their turn and continue as before. When squad No. 5 comes to the score for event No. 2 on No 2 set of traps, then squad No. 1 begins to shoot event No. 3 on set of traps No. 3. Thus they follow around all day and each man shoots in the same event on the same set of traps, and has enough shooting to keep him going and does not wait around half a day. The squad hustler should be a man popular and good-natured, but firm. He should see that the shooter is in *his chair* without exception. To make 100 men wait on one man who is not ready is simply bosh. He must be there and ready to shoot when his turn comes.

SOME GOOD HINTS FOR CASHIERS.

The office work should be attended to by a quick-figuring and pleasant, level-headed fellow—a combination hard to find. The cashier should take in and pay out all moneys. The entry clerk should take the name and issue a squad ticket properly numbered as to squad and position of the holder in that squad. The shooter getting such ticket shoots there all day. He then *knows* when to shoot and where to shoot by watching the public score board, which is a duplicate of event and squad number. The cashier should take *all-day* entries from each contestant. Any event not contested can easily be refunded on application; this greatly simplifies matters, and each contestant when he does *not* shoot must report to the office and get his credit ticket. The entry clerk can easily tell from duplicate pad scores in the office who shoots. No event should be paid off until after the 3d event is shot. This will give the office work a chance to get ahead, and no time is then lost. The shooters would all do well to follow the example of a great many and leave their accounts standing, settling up that night or next morning. If they have made or lost, check out or pay up extra for the next day's entry.

DUTIES OF THE ENTRY CLERK.

The entry clerk should be a very careful accountant, as upon him depends a great deal for errors in paying out purses to winners. He should have a paper or small book marked *each one* Event No. 1, Event No. 2, etc., separately, ruled into columns (if shooting say 20 target events) numbered 20, 19, 18, 17, etc., etc., at the head of each column. As each squad pad duly checked comes in he places A in column 20, 19 or 18, as his score shows on the pad, and so on for all the shooters. This gives a complete record to figure daily on three days' averages. If shooting class shooting, 5 moneys, it shows at once how 20s or 19s, etc., are in for 1, 2 or 3 money, and so on. Over each column place the net purse in the event; at the bottom of each column, each shooter's *pro rata*.

PAYING OFF THE WINNERS.

To pay off, either use envelopes or shooter's ticket showing his score and his *pro rata*. He can compare with his own record, or else merely call it off and figure it up and pay him in money. If the Rose system is used, the FOREST AND STREAM has ably set forth how to work it in detail. By following these outlines, with changes to suit other ideas, we believe a shoot can be made a success. Remember one thing, the shooters make or mar a shoot just as much as the management. Get the shooters interested as if it were their own shoot, and see how much better things move off and how smoothly it runs. Good feelings are, beyond question, much to be desired, as your future meetings will depend upon how the majority were treated. There always will be a disgruntled few. Treat these as gentlemen and they will be ashamed of themselves. It is human nature for the winner to be jovially inclined and the loser grumpy—all cannot win, but *all hope* to win.

EXPENSES REGULATED BY THE SIZE OF THE SHOOT.

The expenses attendant on giving a large meeting are proportionately increased; actual ground fixed charges means $350 *extra money*, so that a charge of 3 cents on targets is only right to help pay this, as all who shoot are deriving the pleasure and benefit. Besides, say you pay the extra 2 cents above cost of trapping on 20 targets for seven events, it amounts to each one individually only $2.80; but if 100 men pay it, it equals $280 per day. Divided into five moneys means that for first money, say 30 per cent.=$84, one has a chance to *divide or win $9* per event for the putting in of *only 40 cents*

Now figure a little more. Say you have 100 men *average* for three days, shooting six events at 20 targets each; this would equal 12,000 targets per day at 2 cents=$240, or three days=$720, or just enough to pay twice expense, leaving say $400. Now add $2,000 or $3,000 cash, less *this profit;* that is $1,600, or $2,400. Where is your money coming from?

RAISING ADDED MONEY.

This brings up the question of raising added money. I believe in a proportionment to all who derive the benefit. The club, the shooters, and the manufacturers and dealers—all should contribute. Tournaments are not given for fun. They are now reduced to a business basis. If there were no tournaments to incite practice shooting, clubs would die with the exception of some one or two members who would go out "just to see how it goes." The manufacturers and dealers would soon feel the loss in trade. There is no doubt about this idea, as the enormous increased sales of ammunition and guns of the last few years show.

The club, of course, will gratuitously give its share and do all the labor for love of the sport and entertainment of the visitors. I unhesitatingly affirm that the dealers and manufacturers are the large gainers and the poor shooter is the loser. A shooter is a guest of a club upon its invitation to come and shoot, the club making all arrangements. *He* pays all his own expenses, pays all his entries and takes all he wins, and stops at a public hotel. He is not a guest in the sense we understand it by receiving one into one's home, but at the same time he is or ought to be treated with all courtesy due from one gentleman toward another. Hence we say that a shooter or manufacturer can be solicited to help on the cause for their own pleasure or profit in all good taste and all due propriety.

DON'T GIVE MIXED TOURNAMENTS.

One word more and we are done. Don't make the mistake of giving both merchandise and added money. Do one or the other, but not both. More trouble can arise and more enemies made over merchandise events than in any other way. A shooter likes to take something tangible home to show his dear wife and boys how he beat them all. But alas! for the money. "Are you there, Moriarity?" and "Thus the world goes round and round."

KNOXVILLE MAY SURPRISE US IN 1897.

The Knoxville Gun Club may have a surprise in store for May, '97. Do the shooters want a shoot? How would they like to put in each $20 to get up the daddy of them all? I would like to hear from them by private letter on the subject.

R. VAN GILDER,
Sec'y Knoxville Gun Club.

Roll Takes the Du Pont Trophy.

BALTIMORE, Md., Nov. 10.—The shoot for the Du Pont trophy took place to-day on the grounds of the Baltimore Shooting Association. As a result of the shoot the trophy again goes West, George Roll, the champion from Blue Island, Ill., defeating B. Claridge by the score of 48 to 45.

Roll shot in great form, losing only two birds, his 12th and 32d birds, making runs of 11, 19 and 18 straight. Claridge drew somewhat the hardest birds, but shot a good game race, scoring 24 out of the last string of 25. He made runs of 10 and 17. The official score was kept by Dr. Samuel J. Fort. Below in detail is the complete score of the match:

Trap score type—Copyright, 1896, by Forest and Stream Publishing Co.

	1	3	5	4	5	2	3	5	2	2	5	1	5	3	5	5	1	3	3	4	2	2	4	3	5

Saccarappa Defeats Westbrook.

WESTBROOK, Me., Nov. 7.—An interesting team shoot took place this afternoon on the grounds of the Westbrook Gun Club between teams of the home club and the Saccarappa Gun Club. There is considerable rivalry between the two clubs in this city; the shoot this afternoon was, in consequence, interesting from start to finish. The weather was perfect for trap-shooting. Scores:

Saccarappa.	
E T Mayberry	1000111111111101011101111—19

E. T. MAYBERRY.

In New Jersey.

A BIG TEAM RACE AT NEW BRUNSWICK.

Nov. 7.—This was a field day at the grounds of the Brunswick Gun Club, of New Brunswick. The occasion was the four-cornered team race between teams representing the home club and the clubs organized at Freehold, Dayton and Keyport. The conditions were nine men to a team, 50 targets per man, unknown angles, entrance $10 per team, winning team to take 60 per cent. of the purse, second team to take 40 per cent. A stong wind was blowing across the grounds, but nevertheless some good scores were made. Sperling, of New Brunswick, was high with 48; Ferd. Van Dyke, of the Dayton team, being second with 47; Campbell and Burtis, both Freehold men, tied for third place on 45 each. The teams finished in the following order: Brunswick 371, Freehold 346, Dayton 338, Keyport 312. The team averages were: Brunswick 82.4, Freehold 76.8, Dayton 75.1, and Keyport 69.3. Scores:

Brunswick.		
Sperling....48	Oakley....42	Pettitt....38
Hoagland....44	Blish....41	Voorhees....38

BERGEN COUNTY GUN CLUB, OF HACKENSACK.

Nov. 7.—To-day the members of the Bergen County Gun Club, of Hackensack, competed for the E. C. cup, donated by the E. C. Powder Co. This was the second shoot for the cup, the winner on the first occasion having been L. H. Schortemeier. In to-day's contest T. Bell, the president of the club, was the winner. Sweeps were shot during the afternoon as below:

Events:	1	2	3	4	5	6	7	Events:	1	2	3	4	5	6	7

CLIMAX GUN CLUB, OF PLAINFIELD.

Nov. 12.—The monthly shoot of the Climax Gun Club, of Plainfield, was held this afternoon at the grounds of the club, Fanwood, N. J. In addition to the club event, a 25-target event, club handicap allowances, was shot for a silver keg donated by the Laflin & Rand Powder Co., one of its W-A kegs. Dutchy Smith won it from scratch with 23 out of 25, none of the others being able to tie him if they broke all their allowance. The scores were: Dutchy (0) 23, Brantingham (1) 22, Manning (1) 20 out of 24; Henry (2) 18 out of 25, Herrington (3) 16 out of 25, Scott (5) 12 out of 20, J. Darby (7) 15 out of 25. The scores in the club race were:

THE ENDEAVORS DEFEAT THE BERGEN COUNTYS.

Nov. 14.—The teams which represented the Endeavor Gun Club, of Jersey City, and the Bergen County Gun Club, of Hackensack, this afternoon on the grounds of the Bergen County Club were mere apologies, so to speak. The conditions of the series of three tournaments as originally made called for 10 to 12-men teams. The cold north wind that swept across the Hackensack Meadows had no doubt a good deal to do with keeping shooters from the traps, but the pleasures of a day or two in the woods after ruffed grouse, quail and a few belated woodcock had a good deal more to do with the mustering of only 7 men on a side.

The Endeavor team was the strongest, the veteran Uncle Billy Hughes and Duff being the only ones whose names do not regularly appear on the score sheets of team races in which that clnb takes part. Mr. Hughes is one of the oldest live-bird shooters in the vicinity of New York, being over seventy years old, and his target-shooting is only of comparatively recent growth. Mr. Duff is an active member of the club, and only needs more practice to crawl up into the company of the top-notchers. To-day's conditions as regards weather, etc., were very hard on beginners. The wind blew a gale and caused the targets to take all sorts of flights, besides varying the elevations very much. This made quick and accurate work a necessity if a good score was to be made. In addition to the wind, the club trapped a lot of black targets that were very hard to see when the wind made them fly low. The average of targets painted yellow as against "all black" was about 20 per cent.; at one time there were only 4 with yellow on them out of 25 by actual count. Is it any wonder that high scores did not prevail?

The home club were hard put to it to make up a team of even 7 men, and as a consequence it suffered defeat by 19 targets out of 210 shot at. The conditions handicapped the home team even more than it did the visitors, the latter having more men of experience on its team. This meant a good deal to-day. W. Ricardo played in hard luck, shooting well up to the 10th round, when the right barrel of his gun became useless through the breaking of some of the mechanism; this drove him to use the left barrel, and the consequences were fatal to his chances of a good score. Rhodes shot a capital race, breaking his last 15 straight.

The conditions of to-day's race were: 7 men to a team, 30 targets per man; the first 15 to be shot at unknown angles, the last 15 at known angles. Scores were:

The annual meeting of the Richfield Springs Gun Club was held on Nov. 9. The officers elected were: President, Walter Yeoman; First Vice-President, I. D. Peckham; Second Vice-President, C. B. Wilder; Secretary-Treasurer, M. E. Barker. The Richfield Springs *Mercury*, in commenting on the above annual meeting, says: "The club is in the most prosperous condition in its history. It has a membership of twenty-five, possesses a comfortable shooting house, a good set of traps and has money in the treasury. New wire pulls are being added to the trap equipments and coverings are to be erected for shooters and trappers. Several friendly matches are being arranged with neighboring clubs, and a committee, consisting of Messrs. E. E. Cole, C. E. Caney and I. D. Peckham, appointed to arrange for a turkey shoot about Thanksgiving." We understand that the above committee has decided to hold the "turkey shoot" on Monday, Nov. 23, all members of the club being handicapped according to their records.

Don't forget that entries for Charlie Zwirlein's big shoot, Dec. 1-3, close on Nov. 20.

On Long Island.

ROCKAWAY PARK GUN CLUB.

Nov. 9.—The second monthly shoot of the Rockaway Park Gun Club was held to-day on the club's ground. Ten members of the club put in an appearance, and a pleasant day's sport resulted. In addition to the scores given in the following table, Jo Blotz and E. Dudley shot a series of little matches, all at unknown anglea, Blotz winning the series by three out of five. The scores in these matches were: No. 1, 10 targets: Dudley 9, Blotz 8. No. 2, 30 targets: Blotz 27, Dudley 24. No. 3, 10 targets: Blotz 8, Dudley 7. No. 4, 25 targets: Dudley 23, Blotz 21. No. 5, 10 targets: Blotz 9, Dudley 7. The other scores were:

M'ALPIN DEFEATS WINSTON.

Nov. 10.—The match shot to-day between G. S. McAlpin and John L. Winston resulted in a defeat for the Western man by the score of 93 to 91. McAlpin lost 3 birds dead out of bounds, Winston losing 4 in the same way. The high runs were: McAlpin, 26, 24, 16 and 15; Winston, 36, 19 and 17. After losing his 1st bird and giving McAlpin the lead at the start, Winston ran straight up to the 38th round; during this long run McAlpin lost 3 birds, his 5th, 30th and 33d, the last 2 dead out of bounds. Below is the score:

PARKWAY ROD AND GUN CLUB, OF BROOKLYN.

Nov. 11.—So bad was the weather to-day that only four members of the Parkway Rod and Gun Club, of Brooklyn, made the trip to the club's new grounds, foot of Miller avenue, this afternoon. The scores in the club event at 7 live birds per man were as below:

James Bennett (30).....2112112—7 Lee Helgans (30).....22222•2—6
Henry J Selover (25).....1112122—7 Henry Bramwell (30).....12002•1—4

ERIE GUN CLUB, OF BROOKLYN.

Nov. 11.—The members of the Erie Gun Club, of Brooklyn, celebrated the club's return to the Dexter Park grounds by turning out in good force at to-day's club shoot, notwithstanding the wretched condition of the weather. The scores in the club shoot at 7 live birds per man were as follows:

Chas Plate (AA, 29).....1111121—7 Fred Gref (B, 27).....1202021—5
W H Lair (AA, 29).....1215212—7 H Janowsky (B, 27).....2101102—5

UNKNOWN GUN CLUB.

Nov. 13.—The Unknown Gun Club held its regular monthly shoot this afternoon at Dexter Park, fifteen members taking part in the club event, at 7 live birds per man. Four men tied for first place with 7 straight. Of the six men who scored 6 Henry Knebel won second money on the shoot-off, miss-and-out. In the shoot-off, miss-and-out, for third place, John Bohling withdrew, leaving Dr. Schwartz and Dr. Moore to fight it out. This was Dr. Moore's first attempt at live-bird shooting from traps, and to the surprise of everybody he shot out his veteran antagonist in the eighth round, scoring 8 to his 7. Scores were:

Isaac Hyde (30).....2112121—7 W J Skidmore (25) .. ...2220111—6
J B Voorhies (28).....2112212—7 A C Rankin (23).....2111210—6

Howard Houseman (28) 1211201—6 John Radecke (21).....0101010—3
Robert Smith (25).....1112201—6

HAPPY DAY GUN CLUB.

Nov. 12.—To-day the Happy Day Gun Club held its initial shoot at Woolsey's Point, L. I. This club is only a reorganization, and is an off-shoot of the Hell Gate Gun Club, but is not in any way opposed to that club; the cause of the organization of the younger association was a desire on the part of certain members of the Hell Gate Gun Club to indulge in their favorite sport oftener than once a month. The club shoots at both live birds and targets. To-day's scores were:

Charles Rieger.....12111112—8 Louis Boehme.....1•212212—7
Dr Richter.....11211222—8 Fred Passe.....02222011—6
Emil Weiss.....11201111—7 George Moyer.....20020021—4

An event at 15 targets for practice resulted as follows: C. Rieger 11, E. Weiss 9, G. Moyer 9, Dr. Richter 8, F. Passe 7.

A three-men team race was also shot, the conditions being 15 targets per man; score: Rieger's team: C. Rieger 10, Weiss 8, Richter 8 —26. Moyer's team: Moyer 7, Boehme 7, Passe 6—20.

NEW UTRECHT GUN CLUB.

Nov. 14.—To-day proved to be the last on which a contest for the E. C. Powder Company's cup will be held at Woodlawn, L. I. The American E. C. Powder Company donated the cup many months ago, the conditions being 10 live birds per man, handicap rise, 5 wins to entitle to possession of the cup. Prior to to-day's contest C. Furgueson, Jr., and T. W. Morfey were each credited with 4 wins; if either won to-day the cup became his property. It was Cornelius Furgueson, Jr.'s, day; he couldn't lose a bird in either the club event or in the E. C. shoot. The consequence was he took away with him the E. C. cup. Morfey was close up with 9 kills, his lost bird being his second, which fell dead out of bounds. Scores were:

	Club Shoot.	E. C. Cup.
C Furgueson, Jr (A, 30)	2222222222—10	(AA, 30)..2222222222—10

Miss-and-out: C. Furgueson, Jr., 3, Money 2, Morfey 1.

Election Day at Audubon Park.

BUFFALO, N. Y., Nov. 3.—The Election Day shoot held to-day by the memoers of the Audubon Gun Club was very well attended, 32 shooters taking part in the target events. Nos. 1 and 2 were at 10 and 15 targets respectively; No. 3 was the club shoot at 25 targets. In this event E. W. Smith won the Class A badge, P. G. Myers was high gun in Class B, Don C. Sweet capturing the badge in Class C. No. 5 was a contest at 25 targets for one of the W-A (Laflin & Rand) silver kegs of powder. L. W. Bennett, who shot consistently well all day, won this trophy with the score of 23. Below are the results in the target events and also the scores made in the different live-bird events shot during the afternoon:

Tournament at Dayton, Ia.

DAYTON, Ia., Oct. 28.—The tournament of the Dayton Gun Club closed to-day, after a successful shoot. About 30 shooters were present, among the number being: S. A. Tucker, of Parker Bros.; Hirschy, the representative of the Robin Hood Powder Co.; C. M. Grimm, C. W. Budd, Fred Gilbert, the Kibby Bros., Densel, Abbott, Allison, Peterson and Bradley.

The weather was rather unpleasant on both days, a strong wind blowing across the grounds. The club's grounds are first-class; the background is clear sky, with no tree or building of any kind to prevent a fair view of either targets or live birds. The live birds trapped were an extra good lot; many of them fell out of bounds after being hit hard with both barrels. The members of the Dayton Gun Club laid themselves out to give the visiting sportsmen a good time, and they certainly accomplished what they were after, all the boys present on this occasion being ready to attend their next annual gathering. Below are the scores made on live birds and targets, events of both kinds being on the schedule for each day:

DES MOINES.

Cobweb Gun Club.

NEW YORK, Nov. 12.—Below find score of the monthly club shoot of the Cobweb Gun Club, held to-day on the Baychester grounds. The inclement weather caused a poor attendance. Miller won Class A medal, McDonnell won in Class B, Dittmar in Class C and President Bage in Class Z. In the sweep (handicap) shot after the club race Knight and Zorn divided first money with 5 straight; Miller and Dittmar tied for second place, McKeon and Brady tieing for third. Scores:

	Tie.	Sweep.
Class A, 30yds.		
E P Miller.....21211—5	112	(32) 02111—4
Brady.....12112—5	210	(32) 20022—3
Zorn.....10011—4	...	(30) 11222—5
Hendricks.....01111—4	...	.....
McKeon.....20011—3	...	(30) 12020—3

Annie Oakley, who is at present making acquaintance with the natives and visitors, feathered and unfeathered, at Hot Springs, Ark., is going to give an exhibition of what she can do with shotgun, rifle and pistol on Thanksgiving day, Nov. 26. In addition to a programme of interesting events, Annie Oakley and Jno. J. Sumpter, Jr., will shoot a race at live birds against G. W. Hughes and A. U. Williams; the conditions are 50 live birds each (one can scarcely say "per man").

ANSWERS TO CORRESPONDENTS.

S. A. B., Mingo Junction, O.—Is our common pheasant—or, as I claim, ruffed grouse—identical with the same bird in the Eastern States? My friend claims they are not the same as the birds he saw exposed for sale in the Eastern markets as ruffed grouse. Also, in a few words, your interpretation of the law in Ohio this year on the same bird. Ans. 1.—The bird is the ruffed grouse, identical with the Eastern bird. 2. There is no specific provision of close season for shooting ruffed grouse in Ohio, but the law forbids possession except between Nov. 10 and Dec. 15. This amounts to a close season, for if it is not lawful to have in possession it is not lawful to shoot them.

PUBLISHERS' DEPARTMENT.

Map of the United States.

A LARGE, handsome map of the United States, mounted and suitable for office or home use, is issued by the Burlington Route. Copies will be mailed to any address on receipt of 15 cents in postage by P. S. Eustis, Gen'l Pass. Agent, C., B. & Q. R. R., Chicago, Ill.—*Adv.*

CINCINNATI, Indianapolis, St. Louis reached quickest and most comfortably by the superb Southwestern Limited of the New York Central.—*Adv.*

ON the New York Central you travel in perfect security, protected every foot of the way by Block Signals.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2. | NEW YORK, SATURDAY, NOVEMBER 28, 1896. | VOL. XLVII.—No. 26. No. 346 BROADWAY, NEW YORK.

For Prospectus and Advertising Rates see Page iii.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

AUDUBON BIRD PLATES.

The reproductions are to me most satisfactory; they lack color, of course, but in every other respect are the best we have ever seen, and I think I may say that those of the Audubon family still remaining are much gratified with the first of the series. M. R. AUDUBON.

THE FOREST AND STREAM'S reproductions of some of Audubon's famous bird portraits in half-tone from the rare first edition are as follows, with dates of those already printed: That of the Willow Ptarmagan will be given in the issue of Dec. 19.

BLACK DUCK, Sept. 26, 1896.
PRAIRIE CHICKEN, Oct. 24.
CANVASBACK DUCK, Nov. 21.
WILLOW PTARMIGAN, Dec. 19 (to come).
SHOVELLER DUCK.
REDHEAD DUCK.
AMERICAN WHITE-FRONTED GOOSE.
PURPLE SANDPIPER.
AMERICAN GOLDEN PLOVER.

THE YELLOWSTONE PARK IN 1896.

THE last report of Capt. Geo. S. Anderson, the acting superintendent of the Yellowstone National Park, gives a very clear idea of the condition of things in the Park during the past summer. Captain Anderson has now been in charge of the Park for more than five years, during which time he has managed its affairs with remarkable discretion and judgment. For a number of years his efforts were to a great extent baffled by the failure of Congress to enact any legislation to protect the Park, but since the passage of the act of 1894 his task has been easier, though this passage came almost too late to save the buffalo.

The travel to the Park each year is very small in proportion to the number of persons who might naturally be expected to visit it, and the increase in this travel from year to year is very small. Of those who go there, by far the greater number are "campers," or persons who travel with their own or hired outfits, and do not patronize the hotels, but camp along the road when night overtakes them. Many of these are ranchers or farmers from the neighboring country. The light travel of the past summer is attributable in part to the financial depression and in part to the political campaign.

There are two manifest causes for the neglect of the National Park. One is the expense connected with a trip there, which in view of the distance at which the Park lies from thickly-settled regions is considerable; the other is the ignorance which prevails—even among well-informed people—of the wonders of the Park and the comfort with which it can be seen. This ignorance must account for the failure to go thither of people who visit Europe each year by hordes, and who at a less expense of time, trouble and money could see here in their own country natural wonders far exceeding in beauty and interest anything in Europe. The American people are said to be quick to grasp new ideas, but their appreciation of the attractions of the Yellowstone Park has been slow.

The summer of 1895 was the driest known there for a long time. By July the grass was completely dried up, and it was feared that destructive fires might occur. The unceasing vigilance of the patrols, however, and the constant watching and warning of camping parties, prevented any serious fires. In a few cases, campers who had been careless about extinguishing their fires were arrested, brought before the United States Commissioner, tried and sentenced, and the effect of this on others was most excellent. This year the rainfall has been greater than usual, and no important fires occurred. The United States Forestry Commission visited the Park and requested the superintendent to inform them as to his methods of preventing forest fires. This he did.

But one plant of fish has been made in the Park within the year. It consisted of 1,000 rainbow trout, which reached there in December, when the thermometer was near zero, and there was deep snow on the roads over which they were transported. They were deposited in De Lacy Creek, from which they would naturally make their way into the deep waters of Shoshone Lake. The lake trout placed in that body of water in 1889-90 have thriven and are abundant, as are also the brook trout put in Shoshone Creek two years ago. Nothing has been seen of the black bass planted here, although they were looked for last July. But as the plant numbered only 500, and they were distributed over four large lakes, the failure to find them proves nothing. All the streams stocked by United States Fish Commissioner McDonald are now full of fish, their abundance being very great. Capt. Anderson, however, wisely suggests that there ought to be a size limit fixed, and suggests six inches as a minimum length.

The story of the destruction of buffalo this year by the Henry's Lake poachers, which has already been given in FOREST AND STREAM, is told here at length. Although Courtenay was acquitted, his prosecution had an excellent effect, as the trial was so expensive to Courtenay that neither he nor his neighbors care to run the risk of another. The fines of $50 each imposed on four men convicted of killing elk in the two-mile strip north of the Wyoming line also had a very good effect on the lawless element in Montana. It is gratifying to learn that the authorities in Wyoming and Montana now appear desirous of co-operating with the superintendent of the Park in the matter of game protection. In Idaho nothing has been done, though high officials of the State have promised to secure the passage of proper laws.

Except the bison, game of all kinds seems to be increasing in the Park. Elk are extremely abundant. Deer wander through the military post, often passing close to the men who are at their work. As usual, mountain sheep and antelope winter on Mt. Everts, and their numbers are increasing. With the protection of other animals there has been a great increase in the number of the carnivores, such as the bears and the coyotes, as earlier stated in these columns. The coyotes especially have become so numerous that Capt. Anderson has caused some of them to be destroyed by the Government scout. Little is known of the few remaining buffalo in the Park, though individuals and tracks accounting for about thirty specimens have been seen during the summer.

At the request of Capt. Anderson, the War Department detailed an officer of the Corps of Engineers to the work of surveying and marking the boundaries of the Park, and this is now being done. Capt. Anderson recommends the appropriation of at least $100,000 per year until the road system that he has laid out is completed, and the continuance of this appropriation until the roads shall have been macadamized; the extension of the military post at the Hot Springs to accommodate another company, and the completing of the survey and marking of the boundaries of the Park. All these matters are of prime importance, and the superintendent's recommendations ought to be favorably acted on.

DEER AND LILYPADS.

THE somewhat protracted discussion in our natural history columns respecting the deer and the lilypad is interesting, chiefly because it affords an example of a negative assertion stoutly stuck to in the face of overwhelming direct evidence. Our Michigan correspondent, Julian, has declared that deer do not eat the pad, stem, bud, flower, seed or root of the water lily. His contention appears to be based not upon personal testimony, but upon what has been told him by Michigan hunters and woodsmen, in whom he has such confidence that he has been ready to accept their denials as an offset to the positive statements of quite as many others who aver that they have seen water lilies that had been cropped off by deer, and deer eating the water lilies, and had found water lilies in the deer after the deer had eaten them and been killed. The evidence collected and printed to-day must impress a candid mind as of such convincing nature as to leave no further room for discussion. That deer do eat lilypads is established.

One would think that for ascertaining facts in such a simple matter as this resort would be had to practical test; that is to say, if the question were, as here, whether or not deer would eat lilypads, the simplest thing in the world would be to take a deer to the lilypad or to take the lilypad to the deer, and note what followed. This is precisely what was done by the FOREST AND STREAM last week. Procuring some pads and stems of the water lily, we presented them to a white-tail buck and saw him eat them—take them in his mouth, chew them and swallow them. The pad and stems were eaten also by the European fallow and red deer in the deer paddocks in Central Park.

SNAP SHOTS.

Prof. D. G. Elliot has returned from his expedition to Somaliland, whither he went for the purpose of collecting African mammals for the Field Columbian Museum. He reports very gratifying success, having obtained specimens of the wild ass and of Swaine's hartbeest and Clarke's antelope; both the latter are now very rare, and their acquisition by the Field Museum would in itself well repay the enterprise of Prof. Elliot. There are in the collections brought back for Chicago more than three hundred specimens of birds, fishes, insects and reptiles.

The condition of the New York game law with respect to ducking on Long Island is nothing less than an outrage. The fowl are being killed in wholesale by netters who set their nets expressly for the purpose of capturing ducks, and not as in former times under the subterfuge that they were intent upon netting fish only, and that they were not to be blamed if the ducks would get into their nets. The birds are killed also by gunners who approach them in naphtha launches and steam craft, and there is under the existing law no way of stopping this practice. Shooting for sportsmen who like to take their ducks in a decent way has been ruined for this season. Whether the law as it now stands is a result of the slovenly carelessness which characterizes so much of the legislation that comes from Albany, or whether the statute was with deliberate intent made ineffective we cannot say; but there should be no delay in remedying the existing condition of affairs at the next session of the Legislature.

An interesting contest is going on in the waters of Meacham Lake, in the Adirondacks, where Mr. A. R. Fuller is waging a warfare against the pickerel which some years ago invaded the lake and threatened the utter ruin of the famous trout fishing. Provision was made at Albany empowering the Commissioners of Fisheries to license the netting of pickerel in specific cases in trout waters. Availing himself of this dispensation Mr. Fuller made war upon the water vermin, and while it was beyond his hope to exterminate them he has so far succeeded in lessening their numbers that the lake and brook trout fishing has improved, and until now it is reported as unusually good.

Strictly speaking, there is no age which may be set apart from all others as heroic, for every age has its heroes and its heroism. And yet, as the present is always prosaic, not until the lives and deeds of men are seen through the magnifying glamour of the receding past do we recognize clearly the heroic qualities of their doing and achieving, and come to count their age heroic. Measured by the daring of individuals who had part in it, the life even of such humble characters as the wolf trappers on our Western frontier in the Indian days had in it the true elements of heroism. Some insight into such lives is afforded by the chapter taken out of one of them which we print to-day.

The twenty-third annual banquet of the Cuvier Club, of Cincinnati, was held at the club house, on Longworth street, on Friday evening of last week. President Alex. Starbuck welcomed the guests. One hundred and sixty-three sat down to a feast which was not less notable for the elaborate menu than for the sparkle of wit and flash of sentiment which played about the board.

The official election returns of New York on the forestry amendment, so far as received up to Tuesday of this week, showed for fifty counties an adverse majority of 271,827. The (unofficial) majority in Kings is estimated at 71,000, which would make a total of 342,827. Nine counties were yet to be heard from.

The Sportsman Tourist.

STORIES OF AN HEROIC AGE.

I.—IN THE WAR BELT.

SANDY was a Missourian of about forty years of age, red-bearded, freckled-faced, blue-eyed, and with that undefinable, gentlemanly instinct and breeding that comes from courting nature and resenting guile and selfishness.

It was a winter's day in 1875, at a little trading post on the upper Missouri River, that I first saw Sandy. He was going about with his arm in a sling, telling whoever would listen the story of the night attack of the Sioux the time he was shot in the neck with slugs and George Horn was killed. It had happened as I shall relate:

North of the Missouri River the broken plains of Montana extend to the foot of the Little Rockies (an isolated group of mountains), and beyond to the Bear's Paw. This region formed a sort of debatable ground between the Sioux and the Crows. It was a famous game country, the resort of buffalo, deer and antelope, and fairly swarmed with big gray wolves. It was dangerous territory for white hunters—for the Sioux kept watch from their mountain fastnesses against the inroads of Crow war parties from the camps south of the river. The Sioux was an enemy to be fought or avoided. The Crows might not kill you, but it was a part of their religion to set you afoot. As the tribesmen rarely trespassed upon this territory except by stealth or at night, the buffalo and other game increased and waxed fat upon the rich bunch grasses of the foothills.

Sandy had a great eye for wolf pelts. So had his partner. They knew the best places to lay out a buffalo carcass to attract wolves, the proper amount of strychnine to salt a bait, and all the smallest details of disposing of the frozen wolves and thawing them out in the spring. In short, they were experienced wolfers.

They decided to invade the "war belt," as they termed the region, and to string out a line of baits a few miles apart from the mouth of Cow Creek to the Bear's Paw, thence back by the Rockies to the river. Having perfected their plans, they one morning saddled their riding and pack ponies and struck up the river for the mouth of Cow Creek. Their destination reached, the two hunters redoubled their caution. No shot was to be fired except to put out a bait. Camp was to be made after night by leaving the direct course and going up some side ravine into the hills.

As they proceeded up the creek they noticed that the buffalo were very numerous, also that there were many old war houses. These are built by war parties for accommodation in cold weather, and are made of poles and slabs in the shape of a lodge; the lower part chinked tightly, the top being left open for egress of smoke. The houses are not only comfortable to camp in, but the light from the fire cannot be seen more than 30yds. away. Hunters sometimes occupy them when assured there are no hostile Indians in the neighborhood.

Soon they saw a band of cows feeding on a side hill close to the creek, and decided that it was a favorable location for "wolf medicine." Riding a little closer, they allowed the ponies to graze while they crawled to the edge of the hill to reconnoiter. Sandy thought it was close enough for a shot, so after waiting a moment George Horn raised his Sharps rifle and after a quick aim fired. The band stampeded at the shot, but it was noticed that one cow "bucked" a little and ran wild. Getting their horses together, they soon found the cow (a two-year-old) stretched out near the main trail. Now this was not exactly what the hunters wanted. It was a good location for wolves, which infested the main trail, but was too easy of discovery by traveling war parties. Nevertheless they concluded to poison the carcass. Taking the packs off the ponies, they quickly took the tongue and some choice pieces of meat for their own consumption, and then proceeded to prepare the bait by putting into it the necessary amount of strychnine. Then the two hunters packed the ponies and resumed their journey.

The bait was ready for the wolves, which, like the ravens, had probably scented it from afar. In cold weather hunters generally flag the bait the first night, in order to give it a chance to freeze solid. It sometimes happens that a wolf receives a weak dose of medicine and recovers from it. He is apt to be a trifle "shady" on baits ever after. He will snuff suspiciously around a bait with a can't-fool-me air, and then perhaps devour some miserable coyote that has had the temerity to eat of food that was placed for his larger and more valuable kindred. If he touches the meat in the coyote's stomach it is his last meal. It was not uncommon to find twenty or more dead wolves around a bait, besides a few coyotes, foxes, an eagle or two, ravens and magpies.

Cow Creek runs between rugged, cedar-clad ridges, covered with scant grasses. Where the valley opens a glimpse may be had of the gloomy mountains, the source of the stream. As they proceeded on their way a fresh moccasin track was discovered on the trail which had not been wholly obliterated by the herds of buffalo passing along. In winter the Sioux usually go to war afoot. It is not only saving of horseflesh, but economical as well, as they ride home on horses belonging to the enemy.

Along toward evening they halted near an old war house which showed signs of having been occupied recently. The doorway was contrived to overlap the main structure, affording in this way protection while leaving between the walls a tortuous passageway, through which the Indian effected an entrance. Peering in through the aperture, Sandy discovered some strips of fat buffalo meat stretched over some poles to dry, and pretty conclusive evidence that four Indians had occupied the place the night before.

They noted the fact of the meat as proof that the party intended to return. Not a sign of a track could be found 10ft. away from the house, so thoroughly had the passing buffalo wiped out all sign.

The two hunters unsaddled, built a fire and made preparation for a quick meal. In addition to his skill as an all-round hunter and fisherman, Sandy prided himself as a breadmaker, and he always had the bread ready before the coffee was boiled. As soon as the fire was under way Sandy had flour in pan with baking powder and salt, and mixed to as soft consistency with water as could be easily handled. The long-handled frying-pan was then placed on the coals for a moment, a pinch of flour sifted in it and a cake of dough ¼in. thick placed therein. The pan was then propped up at an angle in front of the fire with coals behind it, and as soon as the dough had "set" it was whisked out of the pan and propped up by itself in the heat, while another installment was being prepared. "Hurry up with that coffee!" he would cry, and then turn his attention to the cooking of a steak.

After dark the hunters saddled up again and, going a short distance, turned abruptly to the left into the hills, and, selecting a retired spot in a little valley, made preparations for an all-night camp. The ponies were turned out to shift for themselves, and after cutting an armful of cedar boughs and dried grass the tired travelers spread their blankets, piled saddles and packs at the head, were soon wrapped in slumber undisturbed by the yelping of coyotes and deep-mouthed chorus of wolves that at intervals gave voice to the night.

At dawn they were on their way again, and early killed and poisoned two more buffalo. The Bear's Paw was now close at hand, and later in the afternoon they stopped near the head of the creek, unpacked and turned the horses loose, and started for the foot of the mountain with the intention of putting one bait on high land, an experiment they had not yet tried north of the river. Mountain lions were numerous, and they calculated that if they did not catch any wolves there was a chance of lions and cross foxes.

A light snow was falling as they started up the ridge. Arrived at the foot of the mountain, they did not have to skirmish long to find a desirable cow for bait, near a a point where several game trails crossed each other from various water holes. The shot was fired, the sound echoing with a sullen boom along the damp cliffs and rocky cañons.

It was dark before the hunters finished their work and turned their footsteps toward camp. They did not suspect that a war party of Yanktonnai, returning from an unsuccessful foray against the Crows, had noted the running buffalo, and later the shot, and were waiting for complete darkness in order to follow the plain footprints in the snow.

Sandy and his partner made their way in a bee line for the little hollow where they had left ponies and packs. They reached the place hungry and tired, and ill disposed to make their usual move to a secure camp.

They found that the ponies had strayed away in search of grass, and the hunters proceeded at once to light a fire and make themselves comfortable for the evening meal.

The hollow was near the creek. Just back of the campfire stood a huge dead cottonwood, upon whose white

THE PICTOGRAPH.

surface some Indian had sketched in bold outline with a piece of charcoal a rude pictographic story representing Lean Wolf and Running Antelope attacking Slow Bear, a Crow.

After supper Sandy said: "George, there is no use in moving camp; if there are any Indians in the country they can track us in the snow. I propose that we build a fire to see to shoot by, and have a pleasant night of it for once."

"All right, Sandy," said George, "if you can stand it I can." So they rolled a pine drift log on to the fire, put a couple of buffalo tongues in a pot to boil and seated themselves on another log in front of the fire, with their backs to the tree.

It will appear plain from the above disposition of the hunters, the camp and surroundings, that a certain war party of Sioux, returning home empty-handed, would not be slow in availing themselves of the opportunity presented to count a coup.

Leaving Sandy and his partner smoking their pipes and discussing their prospects in seeming careless ease by the camp-fire, yet within reach of their rifles, we will turn our attention to the Sioux.

This party of seven had been on a horse-stealing raid. Traveling in the Crow country at night, they had stumbled upon a camp and were discovered before they could get away. Considering it the part of wisdom to retire from that particular territory until things had quieted down, they had traveled all night, and about daylight doubled a short distance on their trail and lay concealed in a gulch until late in the afternoon, when they resumed their journey along the timbered ridges. They saw the buffalo stampede, as the hunters, though not showing themselves, approached the mountain. Later they watched with considerable interest the elaborate preparation of the wolf bait.

It was long after dark when the leader of the party knocked the ashes from the red stone pipe that had been in circulation for some time, arose and, placing the pipe in the beaded sack attached to his belt, said simply, "*Won-ah*" (now), and strode silently down the slope, followed in single file by the others. With their robes turned hair side out they looked, a short distance away, very much like buffalo. Following the trail of the hunters, they had not proceeded far before they distinguished the glow of the camp-fire reflected on the trees in the creek bottom. Consulting together a moment, they turned suddenly to the right, striking the creek some distance above the camp. Here they ran across the tracks of the ponies, which they followed, and finally secured the stock without much difficulty, as they had been hoppled before being turned out.

Driving the ponies into a gulch, the Indians turned their attention once more to the hunters' camp. The fire was burning very brightly as they approached it, and from a little ridge the position of the hunters seated on the log was clearly made out. After satisfying themselves that there were only two white men in the party they stole silently in the direction of the big cottonwood that stood back of the hunters, at less than 50ft.

Sandy was relating to George some incident of the troublous times in Missouri during the war period, when a flash, followed by a report of firearms, seemed to knock them both over. But the two men instantly recovered themselves, and springing up with rifles in hand fired point blank at the Indians, who at once took to ignominious flight as soon as they saw the result of their fire.

George Horn fell back helpless after firing one shot, for he had received a bullet through the body ranging through the lungs. Sandy, although shot in the neck with roughened pieces of bullets, continued firing and advancing in the direction of the Indians until George Horn called to him, when he desisted, and returning to his companion assisted him to a place near the fire, making a bed of blankets and giving all the care possible, risking his life of course by remaining exposed near the fire.

The war party had kept on going, taking the ponies with them. Sandy did not know this, however, and was in constant apprehension of being fired on again. His wound did not hurt him any as yet on account of the numbing effect of it, and the excitement prevented him from paying much attention to it. His partner now complained of feeling cold, and his voice grew fainter and fainter. Soon he was dead. Sandy covered him up with the rest of the bedding, cached as well as he could the extra rifle, and prepared for a quick retreat from the locality. Putting a piece of bread and meat in his pocket, he stepped quickly away from the firelight, and stopped in the shadow of some brush for a moment to ponder on the situation. "No use to look for the ponies," he soliloquized, after listening intently awhile, "the best thing I can do is to pike out of this while I am able to travel."

Suiting the action to the word, with his trusty rifle resting on his arm he strode down the creek and disappeared in the gloom of the night.

Break of day found him nearing the Missouri River. It was snowing lightly, which made travel more difficult, added to which his wound now pained and weakened him. Fortunately, about the middle of the afternoon, he met a couple of men with a sled traveling on the ice, going after supplies. They carried him to the trading fort, where his wounds received attention. A party was formed headed by "Liver-eating" Johnson, who went after and brought in the body of George Horn.

LUTHER SAGE KELLY.

NEGATIVE SOUP.

THE immortal Shakespeare tells us:

> "Oft expectation fails, and most there
> Where most it promises."

Columbus set sail for the Indies and discovered a new world; Ben Franklin toyed with a kite and tamed the lightning.

The story of our adventure has nothing in common with either, and yet it was as truly the unexpected. The consequences may or may not be as momentous, but this the future alone can determine, as sufficient time has not elapsed since the occurrence to permit of more than very indefinite generalizations.

The bright, sunny days of a not distant June threw their enchantment around a trio of congenial spirits, who left the cares of business and the perplexities of life behind and hied them to the mountain peaks and sylvan retreats of northwestern Maine, where grosbeak and Canada thrush trilled their sweetest notes, and kindly nature perfumed the air with the fragrance of summer flowers.

Dainty trout rods of split bamboo and feathered lures of most seductive hue ministered to their pleasure, and taught many a lordly trout the folly of dallying with temptation. As in every well-regulated sportsman's outfit, so in this, a camera occupied distinguished prominence. As a moral agent it is indispensable in this doubting age. It not only serves to while away many a pleasant hour, and secure prized remembrances for future inspection and pleasure, but it also authenticates the story of the big fish with all the force of "Sworn to, signed, sealed and delivered in the presence of."

All this on the supposition that you do not make negative soup in transit.

We had taken unusual precautions on this trip to get good results. We carried a large camera of high quality and four dozen plates, instead of the uncertain but more convenient films.

We had taken the grave and its surroundings in the wilderness at the Chain of Ponds, near Mount Pizgah, of the Indian girl Natanis, who was brutally murdered there by a deserter from the Union army during the late war of the rebellion; we had followed Indian Stream to its mountain source and captured many of its glistening cascades in their forest home, where they unceasingly break over huge boulders and send up clouds of finest spray as they dash themselves down the mountain side; the dams of beaver, the lean-to of the trapper, the camp of the tourist, the iron post, where none should be, which proclaims that different flags float over contiguous territory; these and many other choice tidbits of mountain lake and sky were already ours, the plates carefully packed and jealously guarded against mishap when the day of our departure dawned.

We had planned to make the trip out to the settlements in canoes, and a thoughtful member of the party had obtained permission from the owners to hoist the gate in the dam on the headwaters of the Dead River, which materially augmented the volume of water as it went seething and surging onward over the rapids and boulders to its confluence with the Kennebec.

Our guides, being expert canoe men, proposed to run over Scammous Falls rather than portage, as nearly everyone does, and while they were making ready for our departure, which would take about thirty minutes, having two unexposed plates left, I took the camera and hastened down the trail so as to have everything in readiness for a snap as the three canoes shot over the falls. I had covered about half the distance and arrived at a point where the river makes a bend at nearly a right angle to its former course and flows directly toward the trail. Looking upon this beautiful panorama, I saw a splendid doe quietly feeding upon the lilypads about 30yds. away. She was to windward of me and facing up stream, and as my moccasined feet softly touched the ground she was undisturbed by noise or scent.

Quickly setting up the camera in such protection as a

convenient bush afforded, I waited anxiously for her to afford me a better view. She greedily snapped the succulent food, first here, then there, eyes and ears constantly on the alert for danger. Finally she turned and advanced toward me, and suspecting or perceiving danger she threw her head high in air, posing in such artistic manner as would rejoice any photographer's heart.

Instantly the click of the shutter was heard on the still morning air, a splashing in the water, a white streak vanishing in the bushes—and another prized plate was secured.

Hastening on, I had just focused the camera when the three canoes shot around the bend, each stalwart guide standing erect and looking a veritable Triton; and, oh, the beauty of the picture as they shot over the falls in the morning sun!

Another click and another prize—worth hardship and toil to secure, and that would be the envy of many a less fortunate mortal.

The canoes were soon beached, loads readjusted, and away went the expedition as light and graceful

"As a painted ship upon a painted ocean."

A tremor of trepidation took possession of me at first, but having one of the very best canoemen in Maine, with whom I had made many a hazardous trip without mishap, I was soon lost to all sense of danger, and minutes of superlative pleasure ran quickly into enchanted hours.

The guides had but to use the paddles to keep the frail canoes in mid-stream, and let them shoot onward with the swollen and quick-flowing current.

A keen eye and skilled hand was at all times needed to steer the craft clear of derelict logs and concealed boulders which made powerful eddies that would quickly swamp a canoe in unskilled hands. Rapidly traveling without effort, the oscillation of the canoe as it rode the swells and smoothly glided to lower levels, it seemed as if we were borne through space in the kindly arms of some mighty giant, and unconsciously I reveled in the many pleasant sensations evoked by the varied experiences of the past few weeks, and exulted over the many and varied picturesque and novel subjects which my forty-eight plates would enable me to share with my friends at home.

Again my thoughts would turn to other days and other themes, and pleasure came in recalling the fact that down this very stream plowed the canoe of the red man bearing the sainted Fr. Druillette on his mission of Christianity and civilization to the Abenakis 250 years ago.

Persecution born of ignorance and fanaticism had destroyed the missions along the coast and driven hence the devoted missionaries, and the dusky sons of the forest were unconsolable. A deputation was finally sent to Quebec in 1646, which returned with the beloved black gown, who erected his mission cross at Norridgewock where he made his home for several years. He was the first white man who ever crossed the trackless forest from Quebec to central Maine.

His ascetic form seemed to rise before us, and the soughing of the summer breeze in the tree tops seemed as the dying cadence of his Ave Marie Stella.

And anon the martial music of fife and drum, the stern command and noisy bustle of the forces of the Continental army under Benedict Arnold, which laboriously urged their crude batteaux against this self-same current *en route* to attack Quebec, seemed to break in as a note of discord as it must have done more than 100 years ago.

And again the words of Byron seemed wedded to the scenes and surroundings:

"How often we forget all time when lone,
Admiring nature's universal throne,
Her woods, her wilds, her waters—the intense
Reply of hers to our intelligence."

Onward we sped as a feather through space and pleasure kept pace with our speed. Delight grew with our progress, little dreaming we that

"Violent delights have violent ends."

I noticed that the canoe some 100 or 150yds. in advance made a detour and hugged the shore, and soon the reason was obvious. A huge boulder lay concealed beneath the surface, and the water foaming about and above it made great eddies on either side. My guide did not make sufficient allowance for their volume and force, and soon we were caught in the trough, and over we went in an instant.

"Look out!" shouted the guide, but before a sound fell on my ears we were floundering about in the water—duffle, camera, plates and all!

"Hold on to the canoe! Hold on to the canoe!" shouted I, while making a desperate effort to secure the fly-rods and camera; but my plates, alas! the prizes of the trip went quickly to the bottom!

My guide secured the wearing apparel, but away shot the canoe down stream, as if glad to get rid of its burden. Our noise attracted the attention of those in the other canoes, and they came quickly to the rescue, our canoe being captured and returned to us by those in advance.

We soon reached shore, wrung the water from our clothes and resumed our journey, but our thoughts were diverted from the fascinations of our environment, its history, poetry and sentiment. Our spirits, like our bodies, were dampened, imagination refused to undertake a lofty flight, so we reconciled to the utilitarian and prosaic. Would *Salmo oquassa* or *Salvelinus fontinalis* know the value of their find and turn it to good account? Would their sages assemble in intellectual convention and with becoming condition discuss the action of light upon a sensitized plate? Would they take them to a dark room in the depths and develop them only to have some old croaker of their number with more stomach than brains break in with *Cui bono?* Would the intellectual triumph over the base and selfish? Would the future angler, when doing his best for distance, delicacy and accuracy, be startled in his pleasure by seeing in the waters before him a camera fiend in the act of taking a snap shot? or would he be able to relate to his wondering friends on his return how he captured and landed a swimming photograph gallery? Or would all their possibilities sink to the level of the gormandizer and be swallowed simply as so much negative soup? Who can tell?

GEO. MCALEER.

WORCESTER, Mass.

The FOREST AND STREAM *is put to press each week on Tuesday Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

Natural History.

DEER AND LILYPADS.

THE habits of deer with respect to feeding on lilypads have been discussed at some length in these columns. The question was brought up by the assertion of a Michigan correspondent, Julian, that deer do not eat water lilypads. To quote his statement, as reiterated after several writers had recorded their observation of deer eating the lilypads, Julian's contention is this, in his own words:

"They do sometimes pull off a stem perhaps, but not often, and when they do pull off a stem or leaf it is by accident, and the leaf or stem always comes up with a mouthful of other tender water weeds that they feed upon. They never swallow a lily leaf or lilypad or a stem of a lily plant. They sometimes take them into the mouth with other food, but they spit them out, and never swallow the pads or any part of the lily plant."

In further comment upon the statement of a correspondent who wrote that deer ate the root of the lily, and the testimony of Dr. Robt. T. Morris, of this city, that he had found partially digested fragments of water lilies in deer killed by him, Julian writes as follows:

LANSING, Mich.—*Editor Forest and Stream:* I was in hopes that I had so far established the fact that deer do not eat lilypads that I would not be obliged again to trespass upon your space or weary your readers by an overproduction of proof upon the subject. Mr. Cook, of Boston, however, has entered the field, and states that the root is the part of the lily plant eaten by deer. Mr. Cook is mistaken; or, to state it better, he has been imposed upon by his guide. Deer do not eat the root of the lily, and you cannot starve a deer and make him eat it; nor can you fix up a root, or any part of it, and entice a deer to eat it. Audubon states that moose will eat the root of the lily, but no man on earth ever before set up the claim that deer eat the lily root. During the past week I have talked with at least twenty of the most experienced woodsmen in Michigan regarding the subject, and every one of them states positively that deer do not eat the root of the lily or any part of the lily plant. On any lake where lily plants abound you can find plenty of pieces of the root of the lily floating on the surface of the water at any time of the year, and more particularly so in the fall of the year. Nature in plant life has a way of casting off portions of unnecessary root growth; and aided by aquatic animals of high and low degree the work of root exfoliation is oftentimes carried on to a considerable extent. But deer are not root eaters, so far as the lily plant is concerned. They never assist in this work of root pruning, nor in any way manifest a desire to disturb the growth of the lily plant, except accidentally when engaged in feeding upon water weeds, which always grow abundantly among the lily plants. You cannot get a deer to eat a piece of a lily root in any way, shape or manner that you can fix it. Mr. Cook may be honest in his statement, and actually believe what his guide has told him; but he and his guide are both mistaken in the matter.

Dr. Morris, of New York, is a gentleman for whom I have the greatest respect. I know that he would not make any statement he did not believe, and only then after a very careful investigation. If Dr. Morris will take his microscope with him when he again visits the woods and will make a study of the lily plant, fresh from the water, and will compare the lily leaf with what he finds in the stomach of the deer and now believes to be fragments of the lily plant, he will at once see the mistake that he now labors under. He will at certain seasons of the year find plenty of water plants in the stomach of the deer, and if taken when the deer are feeding there is no great difficulty in determining the plants that they are feeding upon. The plants will not be chewed so fine nor the contents of the stomach sufficiently changed to render identification by the microscope impossible. If he will dissect a lily plant, fresh from the water, under a glass of low power and compare the lily plant with the contents of the stomach of a deer that has been killed while feeding among the lily plants, and do this immediately after the deer is killed, he will see at once that what he now believes to be fragments of the lily plant are really of some other plant.

JULIAN.

DARTMOUTH MEDICAL COLLEGE, Hanover, N. H., Nov. 9.—*Editor Forest and Stream:* In the "Deer and Lilypads" discussion it would seem as though the disinterested testimony of even a few witnesses who say they have seen deer eat lilypads ought to outweigh the testimony of any number of persons who declare to the contrary, for the simple reason that deer are not constantly, nor even for a series of meals, under observation in the wild state. How can any one be sure deer do not eat lilypads?

It has been the writer's good fortune to meet Dr. Henry Skinner, of the Academy of Natural Sciences, of Philadelphia, referred to by one of your correspondents in FOREST AND STREAM of Oct. 31, and the opinion formed of him while in camp in the Maine woods was that he is a remarkably well informed man, and a very careful and accurate observer.

If more witnesses were needed to establish the fact the writer would like to add that in the summer of '93 he watched a doe wade into a small pond from the opposite shore at a distance of not over 200yds. from him and feed on the leaves and stems of the yellow water lily. She was in sight for at least fifteen minutes, and fed from the surface of the water about her for about a third of that time. In this instance the deer did no immerse her head.

GRAPHO.

THE ACADEMY OF NATURAL SCIENCES, OF PHILADELPHIA.—*Editor Forest and Stream:* I notice in FOREST AND STREAM of late issue that the gentleman under the name of Julian contradicts everything I said about deer eating lilypads. His remarks read like a papal bull in the sixteenth century, or the vaporings from the oracle of Apollo at Delphi. When the oracle was to be consulted the priestess sat upon a tripod which was placed over a chasm in the ground, from which a certain gas or vapor ascended which affected the brain, and the words uttered in this excited condition were supposed to have great authority, but were really equivocal or obscure. The credit of the oracle continued long unimpaired.

Mr. Julian assumes the position that what he has not seen no one has. He must think that Dr. Robt. T. Morris did not really find fragments of lilypads in the deer's stomach, but what he saw were buckwheat cakes. The gentleman also says: "There are many things in this world which pass for facts, but which have no foundation whatever, and one of the greatest errors is this mistaken notion about deer eating lilypads. If one should say that the deer feed among the lilypads, that would express the matter as it actually is, but to say that deer eat lilypads or any part of the lily plant is misleading and such a statement is not correct." Just under these lines Mr. C. S. Cook says: "Deer do not eat lilypads, but they do eat the tuberous root of the water lily and are exceedingly fond of it." Does Mr. Julian also assume that Mr. Cook mistook eels for lilypad roots and that the deer were eating them?

Our gentleman also says: "When lilypads are in a condition to be snipped off the deer is in his short coat, and when he is off his feet in the water he has something else to think of besides feeding; he has all he can do to keep his head above water." Now, there are many readers of FOREST AND STREAM that know something about the swimming capabilities of deer and probably mildly doubt that "he has all he can do to keep his head above water." In Maine in June and July the ponds are veritable natatoriums for deer, and in the small lake in which I saw a doe and a fawn swimming and feeding sixty deer have been seen during the middle hours of a single day.

Mr. Julian can see about three miles of water and lilypads in the long box at Spencer, Me. I would advise Mr. Julian not to attack credible witnesses who have no desire to distort the truth, and also learn that one man does not know or see all the facts of nature.

Now, to sum up, I have seen deer eat lilypads, Dr. Morris has found them in the deer's stomach and Mr. Cook has seen them eat the roots. Doubtless others of your correspondents have also published similar facts. Have we all been hypnotized and is Mr. Julian correct, or what is the matter?

HENRY SKINNER.

HOLLYWOOD, Adirondacks, N. Y.—*Editor Forest and Stream:* I saw in the FOREST AND STREAM of Oct 31 a statement by Dr. Henry Skinner, of Philadelphia, that he had seen where deer had fed on lilypads along the bank of a river for a long distance, and that they would go in the water and swim and feed on the pads. Later, a gentleman signing himself Julian claimed that the statement was untrue. I would state that it is true. I have watched them for hours at a time feeding on lilypads, and have seen them swim out in a lake and eat pads for an hour at a time. Julian says it is impossible for a deer to swim and eat pads. They seem to do it very easily. They commence to feed on pads about June 1, according to the depth of water where the pads grow, and continue to feed on them until November. Late in the fall I have cut acres of pads, and let them drift ashore with the wind for the deer. If any man who thinks deer do not eat lilypads will call on me in June, July, August, September, October, or the first ten days in November, he can see them eat lilypads.

HENRY DAY,
Supt. Kildare Club.

PHILADELPHIA, Nov. 16.—*Editor Forest and Stream:* It seems rather strange that there should be any contention on this subject, as the matter is one of such general knowledge among people of experience that it is hard to imagine that it can be doubted for a moment. It is always unfortunate to have inaccurate information given on subjects of this character, especially those so susceptible of solution. If our friend Julian will hie himself to one of our beautiful lakes any time during June, July, or the early part of August, and watch the timid subjects of this controversy feed, all doubt will be dispelled from his mind. In an experience gained from ten successive seasons in the Adirondacks and the Maine woods, I have never failed to find indubitable evidence that proved beyond all peradventure that deer do eat lilypads. Not only have I seen the pads partially eaten, and also the stems entirely denuded of leaf; but on numerous occasions I have actually seen the deer tear the pad from the stem, either partially or wholly, and masticate it. I have seen them feeding in the shallow water on the edges of the lake, and watched them for many minutes nipping the pads and chewing them.

I have also seen large and small deer swim out into the comparatively deep water feeding as they swam, with apparently very little effort to keep afloat, this being in places where the pads in the shallow water had been devoured and nothing but the stems remaining sticking up above the water. I remember one bright moonlight night seeing two fawns swim out into the lake, all the time feeding on the pads exclusively. They did not discover our presence and kept on feasting until fully satisfied, then swam back to shore and we lost sight of them.

In the course of my travels I have, of course, met many sportmen and professional guides, and never heard one of them question that deer eat lilypads.

Toward the end of August the pads become tough and then the deer cease to eat them, but do feed on a short bright tender grass that grows on the bottom, and in pulling this grass up I have frequently noticed the lilies pulled out by the roots, but otherwise untouched. Indeed, when looking for "signs," the first search is among the pads, and if you do not see evidences of their being eaten, there is very little chance that deer have been there. I could name lake after lake and bog after bog, covering miles, where it would be impossible to go during the summer and not find absolute proof of this question by ocular demonstration. Of course, the feeding of all animals is dependent somewhat on the locality in which they are found, and conditions have some influence on their habits. The statement that deer do not eat lilypads (where lilypads are abundant) can only come from a lack of experience and observation.

C. H. GUILBERT.

BLUE MOUNTAIN LAKE, Adirondacks.—*Editor Forest and Stream:* I do not profess to be an authority as to what deer do or do not eat in Michigan, as I have never hunted them nor studied their habits in that State; but, from observation during thirty years of hunting, trapping and guiding in the Adirondacks, I am prepared to state as a fact that our Adirondack deer do eat lilypads—both kinds—and also a certain fine grass which grows on the bottom of certain lakes and ponds near the shore. I have often seen deer while in the act of eating them both by night and by day, and if any person in this region should dispute the fact it would be taken for granted either that

his opportunity for investigation had been neglected or that he never had had any. C. W. BLANCHARD.

KEENE VALLEY, Adirondacks.—*Editor Forest and Stream:* Those who hold that the deer eats lilypads of the yellow water or pond lily are right; unless they allow Julian to hold them technically to the broad leaves that lie on the surface of the water being pads. I cannot say they eat those, but I do know that deer eat the blossoms and stalks of the yellow pond lily, as I have killed them feeding on them, and their stomachs were filled with them. I have known it for years as a sign of deer having been there a short time before, new or old signs of cropping.

Now, you may tell your correspondent that old Mountain Phelps says that deer feed on yellow pond lilies quite profusely the latter part of June and most of July (leaving pads out of the question). ORSON S. PHELPS.

EUSTIS, Me.—*Editor Forest and Stream:* Will say in regard to deer, they do not eat the pad, but they do eat the bloom and also the roots of the water lily.

A. S. DOUGLASS.

BREWER, Me.—*Editor Forest and Stream:* Regarding deer eating lilypads, one to be sure must either examine the contents of stomachs or else be very close or have a strong glass. As I never approved of killing deer to waste in warm weather, I have never even tried to kill one when feeding in the water, and never was near when one was so killed; but to the best of my knowledge and belief deer do eat pads.

My son (now nineteen years old and a very close observer) was this summer away from me in the woods four days on an up-river trip. In this time he saw some fifty deer. On his return he told me of seeing deer eat pads. I asked him yesterday if he was certain. He says that he was close to one and saw her pull and chew and swallow lilypads. That she did not spit them out, nor have anything else in her mouth. Also that another deer, which they came upon suddenly just as she had pulled a leaf, ran ashore, carrying it in her mouth with the long stem dragging.

I can speak more decidedly from personal knowledge regarding Julian's statement that a deer cannot swim and eat lilypads. He says, "This is too absurd even to call for an answer." This shows that he does not know his A B C's about deer. A deer can swim and feed just as well as a muskrat. He says that a deer when in the short coat has all he can do to keep his head above water. If he had chased them in a light canoe as much as I did for fun this July he would think differently, and they were old bucks, with large, heavy horns to weigh them down. I have seen a deer in October when the water was cold lie out in the middle of a lake with only head and rump showing for at least an hour. A deer when shot in the water almost always floats. Of many hundreds I have known killed in the water I have never heard of but two sinking, and both these were bucks having large horns, and both were wounded and took in water. One of these rose and was recovered the same afternoon; perhaps only kicked under and rose again and was not seen till afterward.

I know surely that moose both can and do swim and feed on lilypads when swimming. Moose wade a great deal, and when so doing feed both on pads and also on the immense roots of the yellow water lily, which they tear from the bottom and eat as cattle eat turnips, leaving great pieces which drop when eating. But when they swim and feed they only crop the pads.

It is foolishness for Julian or anyone else to state that a deer cannot swim and feed. I will also state positively, what many will dispute, that a deer can dive and swim under water. The hounds of my old friend Rod Parks drove a deer in near the foot of Phillips Lake, nine miles east of here. The deer swam down toward the boom at the outlet, and on reaching the boom dove and swam under the boom, and was seen when he did it.

Moose often when wading deep and reaching down after lily roots are entirely under water for quite a while. In your last issue Henry Braithwaite speaks of this and he is correct, as also when he tells of bear killing moose. I have for many years had sure proof that both of these things were done. MANLY HARDY.

BREWER, Me.

TWIN DAM, Me.—*Editor Forest and Stream:* I have seen deer pull up the roots and eat the small branches from the roots. I have also seen them eat the buds before the lilies blossom, and I have seen them eat the flowers when in blossom; but I have never known them to eat the pads. As a proof, we find so many of the pads lying in the lakes and the roots and flowers gone. I have asked some old guides who have hunted, trapped and guided for the last thirty years, and they all confirm my statement. L. M. GERRISH.

LOWELL, Me., Oct. 30.—*Editor Forest and Stream:* In your issue of Oct. 31 I notice the statements made by Julian, that if Dr. Skinner has seen what he says he has he has seen what no other man ever saw before and what no man will ever see again. I do not like to squarely contradict Julian, but in this case I can't help it, for I have seen lily stems sticking out of the water, the pads having been nipped off by deer, and have seen deer feeding on them, and I have seen deer swimming and feeding at the same time.

I have just returned from my camps on the Sebois Lakes. While I was there the dead water streams froze over. After they thawed out I was paddling my canoe up one of them when I saw what I at first thought were ducks, but on getting closer I saw it was three deer. They were in the middle of the stream, which was some 40ft. wide. Their backs were a little out of water, and I think their feet were on the bottom most of the time. I watched them but a short time, when they went near the shore and their bodies came out of water. They were feeding on lilypads and I noticed the new stems that they took the pads from. I know that at least one of them was surely a deer, for I took him into my canoe and carried him to camp. JONATHAN DARLING.

BETHEL, Me.—*Editor Forest and Stream:* I have always found it a difficult job to approach a deer while feeding in the water in daytime near enough to make a successful shot, let alone seeing what he was eating; still I am persuaded that the lilypad is part of the diet of the red deer in summer—I mean the yellow pond lily, "spatter dock (*Nuphar advena*). I have never noticed their eating the white water lily, as that plant is not so common in the Maine woods.

The lower Richardson Pond—situated about one mile north of the head of the Mollychunkemunk Lake (one of the Rangeleys)—is a famous place for deer to feed, and it is covered with the yellow lilypad, almost obscuring the water, and it is easy to see where the deer have fed the tops off; and it is just as easy to see that no other animal did it, as a sand beach reaches the whole length on the east side of the pond and no other tracks have we ever seen there except of deer; and they have deep trodden paths leading to this pond from various directions.

Again, all woodsmen and hunters know that deer frequent that part of lakes and ponds where there is abundance of lilypads, and not so much where there are only grasses.

And such has been my observation in all my hunting life of twenty-five years in the woods of northern Maine; and when I wanted a deer, before we had game laws, I went where there was abundance of lilypads, not dreaming of such an absurdity as that deer did not eat lilypads and lilies too. J. G. RICH.

NEW YORK, Nov. 20.—*Editor Forest and Stream:* In looking for deer signs early in the season when traveling through the woods I always examine the cut ends of yellow lily stems sticking out of the water. If the pads and flowers have been cut off by muskrats the end of the stem is torn and rather ragged. If a deer has cut them off the end of the stem is clean-cut. One soon learns to tell at a distance of several yards whether a deer or a muskrat has been at work among the lilies.

I have often seen deer eating lilypads and flowers, but do not remember to have seen a deer do this while swimming along, as one correspondent states. A deer could do it easily enough, for he is nearly as much at home in the water as a muskrat is. Muskrats are fond of the large, fleshy root of the yellow water lily, and they often depend largely upon this food supply in winter when ice covers the water. Some of the land rats and mice swim out to the lilies in summer and cut off the buds and flowers, which they eat after towing them ashore.

ROBERT T. MORRIS.

PHILADELPHIA, Nov. 20.—*Editor Forest and Stream:* I have frequently found lilypads in the stomachs of deer, as it has been my practice to examine the stomachs of all deer killed by myself, or by others when I have been present. These deer were mostly killed at Tupper Lake, in the Adirondacks. D. N. MCCADDEN, Taxidermist.

MASTODONS IN ALASKA.

Editor Forest and Stream:

Our honored friend, Mr. Charles Hallock, judging from a recent article in your paper, apparently takes considerable stock in the stories of miners and Indians relative to the existence of the mastadon in the interior forests of Alaska.

I sincerely trust that these rumors showing that the animal still exists may not prove unfounded, and that we may be enabled to add this noble beast to our list of American game.

I would not, however, advise a general exodus of our sportsmen to Alaska with the sole object of bagging a mastodon, as I imagine that disappointments would be many and successes few and far between. I do not believe that there is the slightest probability that any of the giant proboscidians living or extinct would thrive or even exist in any portion of Alaska (some of the islands perhaps excepted), under the climatic and other conditions that obtain there at this time, and would quite as soon expect to encounter a plesiosaurus in an Alaskan stream as to find a mastodon in an Alaskan forest. While there are undoubtedly instances where the remains of this mammal have been found under conditions that would seem to indicate that man was "in at the death" and possibly took a hand in the killing, it is also quite as evident that the game had been bagged very many moons prior to our grandfathers' days. Admitting that the mastodon was one of the last of the giant mammals to leave us, the date when the last one took his departure from the shady groves of Alaska may be safely placed at thousands of years ago. The flora and fauna of Alaska in the days when the mastodon was in the flesh were wholly unlike those there at present, and the structure and habits of this animal were such that it could probably exist only in a warm or at least temperate climate and corresponding environment.

The excellent state of preservation in which many mastodonic remains are found in the Arctic regions is no proof of a recent demise of the animal, but is rather accounted for by the conditions and surroundings that have prevented decay. However, it is not proof positive that the missing link does not or did not exist, because we have not yet discovered it or its remains; and the same line of reason may be adapted to the problem of the existence at this time of the mastodon in Alaska. A careful study of existing conditions will, I believe, incline ninety-nine out of every hundred of us to the negative side of the question in this Alaskan case; nevertheless, in the interest of science, let us hope that the Stick Indian upon whose story the existence of at least one mastodon depends may have been of the George Washington order in the matter of veracity. If it should transpire that this one, as the sole survivor of his race, still roams the wilds of Alaska, may the kindly offices of FOREST AND STREAM be invoked to counsel sportsmen and Alaskan hunters to spare that beast, touch not a single limb, nor hew a chip from its trunk. S.

TROY, N. Y., Nov. 14.

An Early Snowy Owl.

LOCKPORT, N. Y., Nov. 12.—*Editor Forest and Stream:* To-day a Mr. Whitcomb, of the town of Somerset, this county, brought to me a live snowy owl (*Nyctea nyctea*); this I think is an early arrival for this species. I have a number of records, the earliest of which is Nov. 29. Noticing that the bird did not seem to be hurt, I asked Mr. Whitcomb if he caught it in a trap, and was surprised when he told me that it was sitting on the fence and that he walked up behind and caught it by the legs. The bird seemed to be in good condition and Mr. Whitcomb assured me "that it eats freely of meat and scraps from the table." As he wished to sell the bird, I gave him the address of three zoölogical associations.

Mr. W. thinks that he can make more picking owls from the fences than picking apples and driving them to market to sell for 50 cents per barrel, when he has to pay 28 cents for the barrel he puts them in.

Nov. 17.—Mr. C. L. Westerman, of Royalton, just brought to me another snowy owl alive, but with broken wing, and like all others wants to sell it. I will not encourage them to shoot the birds by buying when they bring them to me. They often ask how much it would cost to "stuff them," and when told $5 or $6, but that I do not do it, they think that is more than they would care to pay.

I saw a Northern shrike (*Lanius borealis*) this morning, which is also earlier than any record I have.

J. L. DAVISON.

Game Bag and Gun.

WHERE TO GO.

ONE important, useful and considerable part of the FOREST AND STREAM'S service to the sportsmen's community is the information given inquirers for shooting and fishing resorts. We make it our business to know where to send the sportsman for large or small game, or in quest of his favorite fish, and this knowledge is freely imparted on request.

On the other hand, we are constantly seeking information of this character for the benefit of our patrons, and we invite sportsmen, hotel proprietors and others to communicate to us whatever may be of advantage to the sportsman tourist.

AN INDIANA SQUIRREL SHOOT.

REPEATED frosts, rains and a succession of windy days had stripped most of the trees of their leaves, and kept the squirrels pretty closely indoors, but as yesterday morning the day came with bright sunshine and promise of no wind, it was sure to be a good squirrel day, and the squirrels were sure to be good for a Sunday breakfast too, if they could be brought to bag. So after the frost had melted from the sunny spots and the sunshine began to feel a little warm, I drove a couple of miles to a patch of woods that were known to be good squirrel country. There were 100 acres of the woods, level, except that along one side and across the corner ran a little creek, and where the land was sloped toward the creek it was divided into ridges by a number of ravines. This made an excellent lay of the land, for by walking along the ravine it was easy to get close to any game that might be just over the ridge. But this morning they were not there. It was plain that they were not on the ground now, for none were to be seen, and if there had been any they could have been heard for 100yds. rustling the newly fallen leaves. A sharp lookout was also kept for squirrels running in the tree tops. A half hour's quiet stalking did not show one.

Knowing that these squirrels were very shy from being hunted so much, and also knowing they have no fear of a stationary object even though it be a man with a gun, I sat down and kept motionless. Now it is a squirrel peculiarity, that if he sees a man moving, and the man sits down and keeps still, the squirrel wonders what has become of the man, and often expresses himself by barking. It was so in this instance, for in less than five minutes one set up a vigorous barking a hundred yards away. Then I began a very stealthy approach toward the barking. It ceased before half the distance had been covered, but I kept on until near where the noise had been and waited again.

In a few minutes one was heard running over the rough bark of a nearby ash. There were two, and they seemed to have forgotten about me, for they were chasing each other over the big limbs. They were within fair range, and presently one of them offered a fair shot, which I took advantage of and missed, or at least did not kill, for the squirrel instantly ran down to the ground, keeping on the further side of the tree. The other one came to my side of the tree and a snap shot killed it. By this time the first one was on the ground and running away. The ejected shell was no more than thrown out of the gun till a fresh one was in, and I was trying to shoot the running squirrel, but so many bushes and bodies of trees were in the way that no shot was possible before the squirrel was on a rail fence 50yds. away. It jumped from the fence to a tree and quickly made its way up the other side and into a hole.

Walking forty rods further, I sat down on a log near to and overlooking the creek valley, a hundred yards wide, covered with grass, with here and there a tree, but no underbrush. Presently a fox squirrel began barking in a suppressed way and not far off; but some beech trees with lots of leaves were in the way, and nothing could be seen. While cautiously trying to get nearer, I caught a glimpse of one running up the body of a tree within 20yds. I dropped upon a nearby log and kept still, but not long, for another squirrel began barking within 50ft., but could not be seen. The barking put confidence in the one up the other tree, and he ran out on a dead limb and squatted there for a sun bath, but instead got a shower bath of lead. Keeping perfectly still after this shot soon restored confidence in the one that had been barking, and he began it again. He was still invisible, but a third one now ran up to the top of a broken limb, and squatting on the end of the limb proceeded to adjust his tail so it would show to good advantage. This one was promptly brought to bag. The barking one jumped on to a shell bark hickory and scurried up its further side. I could hear his sharp nails scratching the bark and see small pieces of bark falling, but got no glimpse of the squirrel. After waiting fifteen minutes, and having no sight nor sound from the squirrel, I took out the opera glasses and carefully scanned the tree. Away up yonder, 80ft. high, could be seen a foreleg and just a little glimpse of a hindfoot as he lay on a horizontal limb. Thinking a club thrown on the other side of the tree might bring him in plainer view, I tried it, but it only drove him into a hole.

I walked away and along the rail fence that ran through the woods, going very slowly and quietly, hoping to find some just over the little hill ahead of me. But none were visible, so I turned off across the woods at a right angle to the fence, and had got 100yds. when a fox squirrel began to bark, apparently just where I had

left the fence, and I presently saw him lying on a little beech limb not half so thick as his body. He was stretched at full length, his tail hanging down, and his barking was of the quiet, lazy sort that denotes a full stomach and a nice, comfortable morning. The foot of the tree was hidden by bushes, and as I tried to get nearer he ran down the tree and was seen no more. So I strolled through the woods toward the buggy, not caring very much whether any more were seen or not, for I was a bit lazy and had three as nice young squirrels as ever climbed trees. Beech nuts impart a finer flavor to squirrel flesh than any other food does, and these fellows had had abundance of these nuts and but little else for six weeks past. We found them "complete eatin'."

It was 10 o'clock when I got home. Old Joe stood round and growled at the waiting cats while I skinned the squirrels. If they came too close, he would make a savage lunge at them and they would retreat; but they knew he would not hurt them, and were back almost as soon as he was. In cool weather he lies on the grass, and the cats get on top of him and lie there to get the warmth from his body, and he and they drink new milk together from the same pan twice a day. At noon we had dinner. Fried squirrel, bread and butter that was never excelled, sweet potatoes, and boiled apple dumplings with thick cream "dip." There may be better dinners, I know there are worse, but the man not satisfied with this one is hard to please. After dinner we went to the post office, and from there Mrs. H. drove me to a patch of woods that has lots of squirrels in it, but the brush is so thick it's no use to hunt them; have just to sit down and keep quiet. If one comes along you get him. If he doesn't come along you don't get him. I sat there three hours and saw a dozen or more, and got five of them. O. H. HAMPTON.

WHO OWNS THE GUIDE'S GAME?

WHEN a sportsman hires a guide, and the guide takes part in the shooting or the fishing, to whom does the game or the fish secured by the guide belong? The question has just come up in a case related by a correspondent who returned last week from a ruffed grouse shooting trip. He tells us that he cut short his intended stay, although birds were abundant, because of a misunderstanding respecting the disposition of the birds killed by his guide when in company with him in the field. The guide being in his employment and being paid by him, he had assumed that in conformity with the unvarying custom followed elsewhere throughout his shooting experience of thirty years the birds killed by the guide would belong to the employer. It appears, however, that this was not the understanding held by the host, who advised his guests that the birds killed by the guides belonged to the house and would be sold at so much a pair if the sportsmen wished to retain any of them for taking home.—*Forest and Stream, Nov. 14.*

Editor Forest and Stream:

In my opinion a man who hires a guide to help him shoot ruffed grouse with the intention of gobbling up and counting as his own all the birds they both kill is not entitled to call himself a sportsman at all. A man who has been shooting for "thirty years" ought to have learned that hiring a market-hunter guide to do his shooting, or any part of it, is outside of genuine sportsmanship. I belong to two first-class shooting clubs, and a rule in each, rigidly enforced, is that guides shall not be allowed to shoot at all except at wounded birds. In one of them a prominent member, who persistently refused to obey the rule, finally resigned to avoid expulsion. SHAGANOSS.

PITTSBURG, Pa.

Editor Forest and Stream:

Seeing an article in FOREST AND STREAM of Nov. 14 where certain guides claimed that game killed by them (when in the employ of sportsmen) belonged to the guides reminds me of a dodge which guides in some parts of the Adirondacks tried to work some twenty years ago on my first trip to the Adirondack region. Our party learned that the guides in that section from where we went into the woods claimed that all game, whether killed by them or their employers, belonged to the guides. Fortunately one of our party had been on quite a number of similar hunting trips, and he cautioned us to make no agreement with our guides as to any game we might kill.

We were in the woods something over a month, and each one of the party had a guide. When we left the woods we were some three days' journey from where we went in. We had killed five deer, and when we settled with our guides we allowed so many days extra to allow them to get back to our starting point. We used our guides well and paid them well, and they all said it was the best trip they ever made. We made them each a few presents of clothing, hunting knives, etc., and said: "Now everything is settled." The oldest guide began to wriggle about (we expected what was coming) and said: "There is one thing we have not settled. You men have killed five deer while we were with you, and you have the skins. Now, those skins belong to the guides, and if you want to take them home you must give us $2 for each skin."

I said at once, "I have one deer skin in my pack, which is the only deer I shot at on this trip; and if my guide thinks he has not been paid enough for his time he can go home thinking so." The rest of the party said the same; and when the guides found it would not work they dropped it, and we parted good friends.

While on this trip I met a young man in camp who was expecting to spend two or three months in the woods, and had a guide engaged for the whole time. The guide had an easy time of it, and he had impressed upon his employer that all game belonged to the guide and was to be paid for when settling. Now this guide was getting the regular guide's wages, but his employer thought that what the guide said about game was the regular thing, and that all hunting parties did the same. I told him he could if he liked to be imposed upon, but that our party did not agree to any such arrangement.

Some years later, while in Florida, I went out with a party after deer. We hired a guide who furnished a pack of hounds and a horse for each member of the party. As we were starting, something was said about the deer we expected to kill, and the guide said, "All the deer belong to me." Now as we were each paying him a pretty good price I objected to his arrangement, saying that should I kill a deer it belonged to me. As it happened, I killed the only deer of the day. That night I told the guide he could have it, but made him understand it was because I had no use for it and not because I considered he had any claim.

The instances I have mentioned happened a number of years ago, and I did not suppose that anything of the kind would be tried by guides of the present time. The Micmac Indians of the Provinces will "work a sucker" for all they can when they get a chance, but I never heard of any of them trying to claim the game that was killed by parties that they worked for. Possibly such a thing never occurred to them.

For my part, I do not believe in a guide's carrying a rifle or doing any shooting while in a sportsman's employ. When I have hired a guide, it was to find the game; if there was to be any shooting I proposed doing it. I cannot see why a man calling himself a sportsman should go after game, and hire a guide to shoot it for him. It would be fully as satisfactory to me to stay at home and write and engage a guide to kill a certain amount of game, and to give me the credit of it.

C. M. STARK.

DUNBARTON, N. H.

SHOOTING TRESPASS AND LOW WATER MARK.

WE find in the Vermont Fish and Game Commission report the text of the decision in the case of Charles McBurney *et al* vs. James Young for trespass. The question of trespass turned upon the meaning of the term low water mark in its application to Lake Champlain. We quote:

The plaintiff was the owner of marsh lands upon the border of Lake Champlain, and had posted notices upon such lands prohibiting shooting, trapping or fishing on said lands, in accordance with No. 79, Acts of 1884. The defendant Young was camping upon the shores of Lake Champlain, and was at the time in question in a boat in company with McCarty for the purpose of shooting and fishing. McCarty was rowing the boat and the defendant Young shot at a flock of ducks flying over his head. The plaintiff claimed that the place where the boat was when the shot was fired was upon his land, while the defendant Young contended that it was upon the waters of Lake Champlain, and this was the question.

The referee reported that the water at that point was about 8in. deep at the time; that the bottom underneath the boat was a firm mud bottom; that the bottom at that point was at all times of the year covered with water to a depth of at least 6 or 8in. in ordinary seasons, and that therefore it was below ordinary low water mark; that in the season of 1882, which was an exceptionally dry one, the water so far receded that the bottom of the lake at this point was uncovered, and that therefore the point was above low water mark in exceptionally dry seasons; that the plaintiff had sowed wild oats and wild rice in that vicinity, upon which fowls, both tame and wild, and the cattle pasturing upon the adjacent lands fed to some extent.

The referee found that the plaintiff was entitled to recover of the defendants, if anything, the penalty of $10 and nominal damages, which he assessed at 6 cents.

The case went to the Supreme Court on appeal. Young's counsel contended that Lake Champlain is a public water, and the title to the land below low water mark is in the public and is not subject to private ownership. By "low water mark" is meant the ordinary low water mark (Am. and Eng. Enc.). For the plaintiff it was argued that "low water mark" means the lowest point to which the water recedes.

THOMPSON, J.—The plaintiff's land is bounded by the waters of Lake Champlain. Both parties concede that by the law of this State the plaintiff's land does not extend beyond the low water mark. Such is the law of this State. The contention is over the meaning of the term "low water mark" as used by the courts and law writers. The plaintiff insists that it means the lowest point to which the water has ever receded. The defendant says that it means ordinary low water mark.

By the common law, all that portion of land on tide waters between high and low water marks, technically known as the shore, originally belonged to the crown, and was held in trust by the king for public uses, and was not subject to private uses without a special patent or grant. In Maine the common law was changed by an ordinance of 1641, which declares that proprietor of land adjacent to the tide waters "shall have propriety to the low water mark, where the sea doth not ebb above a hundred rods, and not more wheresoever it ebbs further." In Gerish vs. Proprietors of Union Wharf, the court was called upon to define the meaning of low water mark as used in that ordinance, and in passing upon the question said:

"It evidently contemplates and refers to a mark which could be readily ascertained and established; and that to which the tide on its ebb usually flows out would be of that description. That place to which the tide might ebb under an extraordinary combination of influences and of favoring winds, a few times during one generation, could not form such a boundary as would enable the owner of flats to ascertain satisfactorily the extent to which he could build upon them. Much less would other persons employed in the business of commerce and navigation be able to ascertain with ease and accuracy whether they were encroaching upon private rights or not by sinking a pier or placing a monument. It would seem to be reasonable that high and low water marks should be ascertained by the same rule. The place to which tides ordinarily flow at high water becomes thereby a well defined line or mark, which at all times can be ascertained without difficulty. If the title of the owner of the adjoining land were to be regarded as extending, without the aid of the ordinance, to the place to which the lowest neap tides flowed, there would be formed no certain mark or boundary by which its extent could be determined. The result would be the same if his title were to be limited to the place to which the highest spring tides might be found to flow.

"It is still necessary to ascertain his boundary at high water mark in all these places where the tide ebbs and flows more than 100 rods for the purpose of ascertaining the extent of his title toward low water mark. It is only by considering the ordinance as having reference to the ordinary high and low water marks that a line of boundary at low water mark becomes known, which can be satisfactorily proved, and which having been once ascertained will remain permanently established."

Sir Mathew Hale in his treatise De Jure Maris, c. 4, says "the shore is that ground that is between the ordinary high and low water mark." He remarks also:

"It is certain that that which the sea overflows, either at high spring tides or at extraordinary low tides, comes not as to this purpose under the denomination of *littus maris*, and consequently the king's title is not of that large extent, but only to land that is usually overflowed at ordinary tides."

This treatise has been received by judicial tribunals and by distinguished jurists, both during the earlier and latter years of the law, with unqualified approbation and commendation. The authorship of this work has been questioned, but it has often been recognized in this country by the courts, and has become a text-book. Houck on Rivers, s. 30.

In Storer vs. Freeman, 6 Mass. 435, 4 Am. Dec. 155, it was in effect held that low water mark as applied to the seashore is ordinary low water mark.

In Canal Coms. vs. People, 5 Wend. 423, cited in Gould on Waters, s. 82, Chancellor Walworth, while holding that the common law rule was applicable to the navigable fresh rivers of New York, said:

"The principle itself does not appear to be sufficiently broad to embrace our large fresh-water lakes, or inland seas, which are wholly unprovided for by the common law of England. As to these there is neither flow of tide or thread of stream, and our local law appears to have assigned the shores down to the ordinary low water mark to the riparian owners, and the beds of the lakes with the islands therein to the public."

In Sloan vs. Bienviller, 34 Ohio St. 492, low water mark is defined to be ordinary low water mark; and in Seaman vs. Smith, 24 Ill. 521, it is said to be the line where water usually stands when unaffected by any disturbing cause. The question of what is meant by low water mark as a terminus of boundary was discussed and passed upon in Stover vs. Jack, 60 Pa. St. 339, 100 Am. Dec. 566, and it was held to be the ordinary low water mark. While the opinion of the court disclaimed the application of any law except that of Pennsylvania to the question, the reasoning of the court is very satisfactory. It said:

"To adopt any other rule than low water mark, unaffected by drought, as the limit of title, would carry the rights of riparian owners far beyond boundaries consistent with the interests and policy of the State, and would confer title where heretofore none has been supposed to exist. * * * Ordinary high water and ordinary low water each has its reasonably well defined marks, so nearly certain that there is not much difficulty in ascertaining it. The ordinary rise and fall of the stream usually finds nearly the same limits. But to bound title by a mark which is set by an extraordinary flood, or an extreme drought, would do injustice and contravene the common understanding of the people."

The suggestions as well as the others quoted apply with great pertinency to the case at the bar. Lake Champlain is a public, navigable water. It does not appear that at any other time in its history its waters have receded to the point to which they did in the exceptionally dry season of 1882. We think that upon reason and authority low water mark as a terminus of boundary must be held to mean ordinary low water mark. This being so, defendant Young did not enter upon the premises of the plaintiffs, as the referee finds that Young's boat, from which he fired at the ducks passing overhead, at the time of such firing was at a place in the lake below ordinary low water mark. To dispose of the case it is not necessary for us to determine what right, if any, the public has to sail over lands bordering Lake Champlain between ordinary high and ordinary low water marks, when such lands are covered with water; nor is it necessary to decide in respect to the right of the inhabitants of this State under ch. 11, s. 40, of our State constitution, in seasonable times, "to hunt and fowl on the lands they hold and on other lands not inclosed," nor in respect to the constitutionality of St. 1884, No. 79, and we do not consider either of these questions.

Judgment reversed as to defendant Young, and judgment that he recover his costs.

WATER KILLING DEER.

Editor Forest and Stream:

"Most deer killed in the Adirondacks are killed by hounding. The same is true of Maine. And yet in both regions the game is on the increase."

The above is a verbatim quotation from Deerslayer's last letter. He also says no arguments have been offered to show why the Legislature should forbid the hounding of deer in the Adirondacks, advancing the assertion that game is on the increase there in support of his arguments.

Any fair-minded sportsman will at once concede the falsity of his position in regard to hounding deer in Maine, and if the increase in the Adirondacks is from the same causes as that in Maine that fact of itself is argument enough why hounding should be forbidden, as hounding in Maine is a thing of the misty past, as is well known by all who are conversant with the state of affairs there. Bad luck to skin butchers and pot-hunters.

CAMPEROUT.

HAVERHILL, Mass., Nov. 20.

CLEVELAND, O., Nov. 21.—*Editor Forest and Stream:* In your issue of this date the individual who calls himself Deerslayer, but who should be named Deerbutcher, refers to the fact that I took with me into the Rocky Mountains on my trip recently described 200 cartridges, and seems to regard this as in some way an argument in his favor.

I did take 200 cartridges on a journey into the mountains which lasted three weeks, and to a camp which was at least two days' journey from any source of supply. I used many of these cartridges in sighting my new rifle, target shooting, trying to cut the heads off of grouse, etc., and brought back 125 of them unused.

The chorus of reprobation and denunciation which this person's original letter has aroused is trifling compared with the general abhorrence which it created. His second letter shows him to be so ignorant of the feelings of a sportsman and so bigoted in his ignorance that discussions with him would only be wasted. We can only hope that his "good old 10-gauge" may shortly burst and blow his head off, or that some one of his gang in the "half a dozen boats heading for the same deer" will providentially put his charge of buckshot where it will do the most good. Certainly the possibilities of accident in D.'s expeditions are extremely gratifying to all true woodsmen.

A. ST. J. NEWBERRY.

What Happened.

THE pack of hounds were soon on the trail of a "cottontail," who wearied shortly after the chase, and hied himself to the depths of Smithfield soil. When the hunters came up a ferret was brought into requisition and the rabbit was soon ensconced in the depths of a hunting-jacket pocket.—*Providence Journal.*

In other words: The dogs holed a hare, the ferret drove it out, and the hunter put it into his pocket.

SOMETHING ABOUT THE .22.

Editor Forest and Stream:

Having made a discovery that I consider well worth making a record of, I resort to words which are hereby tendered to FOREST AND STREAM and after times.

The discovery I have made has undoubtedly been made before; but that doesn't greatly matter, for even Christopher Columbus only found this side of the world some ages after it had been inhabited and explored. I am inclined to think that either any one can make a discovery or that no one can. Discoveries are, after all, something rarer than they seem. When the North Pole is found probably there will be an Esquimau, a Chinaman or a native of the aurora borealis astride of it.

However, permit me to record that the modern .22cal. rifle is one of the things not thoroughly known and comprehended. The .22 is quite too generally looked upon as a toy gun or a sort of pea-shooter, suited to pistol galleries or parlor target practice. The .22, if its merits and virtues are to be recognized, has a large and obese future directly in front of it.

In my domain I have been annoyed with hawks, ground squirrels and gophers; gray squirrels, grouse and quail, jack rabbits, jays, skunks and numerous other small deer. When I had occasion to deal harshly with them I have had to resort to such weapons as an ordinary shotgun or Winchester rifle. My present haunt is in a wooded scope of mountains, and it is not often possible in such localities to get wing shots at either birds or skunks or rodents, while it seems like driving nails with a pile-driver to fire the guns of ordinary caliber at small game in the trees or on the ground.

I cultivated the acquaintance of a .22 and made it my own. The one I selected is a Marlin, shooting the rim-fire cartridges, short and long. I had it fitted with Lyman peep sight and bead, and I am now able to break a squirrel's neck at 50yds. and not make much noise about it either. I can surprise a hawk at 50 or 75yds. so that he never gets over it. Gophers, skunks, etc., just simply manifest their astonishment with a handspring or two and a few kicks at the sky.

My greatest satisfaction, however, is in the scientific style in which I can gather a quail or two in out of the wilderness, and do it in a sportsmanlike kind of a way. It is something of an achievement to any one who aspires to accuracy in shooting to break a quail's neck with a single pellet from a .22, and it is further a very satisfactory thing to know that the bird is either killed instantly or escapes uninjured.

I have merely touched upon a few of the good qualities of this model little gun, and in order to be brief I will make the sweeping assertion that it is the best arm in existence for genteel and proficient sportsmen, hunting for game smaller than bears or elk, and shooting distances under 100yds.

In open country, at wildfowl larger than a quail, an expert should kill three out of five birds a-wing. He should be able to kill further than with a shotgun, and he would rarely lose a cripple. To my mind the use of a shotgun, after using a .22 rifle, is much like catching trout with dynamite or exterminating ducks with a yacht cannon.

I venture to predict that what we now cherish as true sportsmanship—say the quality of being a good wing-shot with a shotgun, putting 1,000 pellets into a circle 1yd. in diameter at 40 or 50yds.—will be considered barbarous twenty years hence. In 1917 the genteel gunner will bring in ducks, grouse, squirrels, deer and the other trophies of his skill; but they will not be filled with pellets of No. 6 or No. 8 shot, or bear the fearful evidence of a .44 or .45-caliber rifle ball. If now and then such a gunner shows up, he will be looked upon as a pot-hunter from some backwoods swamp or the bad lands.

Sportsmanship is bound to keep pace with the times, and the true element of true sportsmanship is likely to crystallize into skill and accuracy rather than in the destructiveness and annihilation of game. Isn't it about time that our crack clubs should shoot bluerocks or live birds with a single pellet? RANSACKER.

SHASTA MOUNTAINS, California, Nov. 1.

THE MAINE MOOSE SUPPLY.

LOWELL, Me.—*Editor Forest and Stream:* I noticed the statements of your Bangor correspondent Growler about what would be asked for at our next Legislature in regard to putting a close time on all moose in Maine for a term of years. He says that this matter has been discussed for years, that moose will soon become extinct, etc. At the same time our moose have been on the increase, and I think his own statements show it.

He says that large moose are getting scarce in Maine; that all the large males are so easily called in the love-making season, at which time they lose all fear and rush out to give battle to railroad trains, etc. I never but once saw a bull moose show signs of giving battle, and that one was with a cow when I came upon him. I shot him down on the start, so I can't say what he might have done. They can be called to the hunter quite readily through September; the first half after the 6th is the best, as then they have not many of them got a mate. But even then they are very cautious how they advance, and if they scent the hunter he loses his game. If this moose calling business can be well looked into it will be found that most of the moose called out and shot have been killed in September. October, as of late years, is a hard month to call out a bull moose. The principle reason is this: There are without doubt more cows than bulls, but not so many as some may suppose. A cow moose and a doe deer in most cases have two young at a birth, and in most cases a male and female.

Let us now see what he says about Game Warden Cummings, who has spent most of his time the past season in the Chamberlain Lake region. He actually counted nearly 500 moose. Does this look as though moose were nearly exterminated? Seventy-five bulls he counted (which were enough for the cows), but he did not see the average p oportion of the bulls; for, as a rule, while their horns are growing they keep on higher open grounds, the same as the male caribou and deer. He also speaks of Beal. Fowls, of Milo, one of the oldest and most experienced guides in Maine, seeing herds of moose the past season from fifteen to thirty. Then again several hundred moose this season have migrated from this section southeast and into Hancock and Washington counties.

From what I have seen and learned, the parties of hunters that went into the moose regions in September came out early in October with big moose heads, and I believe that if the State can send wardens into our moose sections in September and ahead of the hunters, it will make a big difference in regard to so many moose being killed the first part or first day of October. If the law we have can be enforced I believe it is well enough as it now is.

About my camps and the headwaters of Aroostock River the moose signs are as plenty as they have been for several years. Two bulls were killed near Grand Lake and two more wounded. None were called out, but were still-hunted, and the prospect is good for tracking when snow comes.

I think moose every season come to Maine from the Northwest. J. DARLING.

P. S.—In making a reply to Growler's statements about Maine moose, I thought I would not mention what he said about Dr. Weld, ex-Mayor of Old Town, Me., making an examination of eleven cow moose, where the Doctor found only four of the eleven that had promise of producing offspring in the spring. It is a foolish statement that a doctor examined dead moose after being dressed by the hunters and brought to market. When a hunter dresses a moose he removes everything that would show signs of offspring at that season of the year.

J. D.

BOSTON MEN IN MAINE WOODS.

BOSTON, Nov. 20.—The Harry Moore party is out of the woods with reports of good luck and a fine time. In the party were Messrs. E. Noyes Whitcomb, David McIntosh, Leroy S. Brown, George C. Moore and Harry B. Moore. They went to Camp West, St. Croix, Me., 388 miles from Boston, leaving that city Friday, Nov. 6, and getting back Saturday evening, Nov. 14. They had for guides Louis Bell, Robert S Porter, Fred. Shoulder and Jim Ireland. Much stormy and unpleasant weather was experienced, 2in. of snow falling on the night of the 11th. The log says that the party arrived at camp Saturday, the 7th. George C. Moore shot an owl, and Harry B. Moore jumped a buck; otherwise no hunting would have been done by the party that day. The next day, Sunday, "devotions" were held at the camp by a part of the company. George C. and Harry B. strolled fourteen miles, with Louis and rifles, to see the woods. They were much impressed by the density of the virgin forest. Neither would fire his rifle to break the stillness of the Sabbath. E. Noyes W. and Leroy S. B. sauntered out four miles with their rifles for defense. Monday a general survey of the forest was made by all of the party; saw many signs of deer and caribou. George C. M. and Harry B. M. walked up the track six miles. E. Noyes W. returned to camp with a portion of a rabbit. David McI. and L. S. B. also returned. Tuesday, Nov. 10, the party saw nine deer. Two were shot at and one was killed. Those seen were many miles from camp, hence only one was killed. Snow fell the next day. David McI. shot a doe, and a fat doe was killed by George C. M. He was also given an opportunity to kill a large buck, but politeness on the hunter's part lost him the chance. Three other deer were shot at, making seven seen that day. Thursday, Nov. 12, two deer were seen, but none killed; too much crust and too much noise. E. Noyes W. saw fresh moose signs. Friday, Nov. 13, five deer were seen and two killed. Leroy S. B. killed a magnificent buck with five horns. It dressed 183lbs. B. was naturally hilarious, but actually quiet. He fired two shots at the buck, only one of which was necessary. The first took effect in the buck's kidneys, located 65yds. away; the other in a log. This was the day that H. B. M.'s doe was shot, and she was too small to make much mention of. Dressed, she weighed 108lbs. The last night in camp the house cat had not returned. She disappeared Tuesday; sausage nearly every meal since. Saturday, the 14th, all took departure for home on the 8:05 train, with the exception of David McI. He had decided to stay until either a moose or buck fell to his rifle. E. Noyes W. suggests sending him all his winter clothes. The trip home was uneventful, except that the reporter of a daily paper came on at Bangor. He took the names of the party and their luck. His paper came out the next day with Leroy S. B.'s name down as "Annie S. Brown, one buck deer." The boys suggest that the deer must have been killed by Brown's aunt.

Nov. 23.—Tracking snows have not yet been much of a feature in favor of the Maine big game hunters. A few inches have fallen in some sections, giving fair hunting for a day, but followed at night by freezing and the consequent crust. But the slaughter of deer is great enough, doubtless all the supply can stand. The number can be accounted for only under the fact that the number of hunters has been much greater. Then the idea with certain guides to hunt about all the time during the open season and have deer ready killed for their patrons is being practiced more than ever this season. Legislation will have to stop this hunting if the game supply is to be kept up in that State. I have talked with sportsmen who have been into the Maine woods a good deal of late, and it is suggested that at least seven deer out of every ten have been killed by guides this fall.

Among the latest successes of Boston sportsmen may be mentioned H. S. Wilson, two deer, from Eustice; Dr. H. Kimball, two deer; H. M. Adams, one deer; C. A. Sanborn, one deer; H. Hallett, one deer; W. H. Butler, one deer; Dr. R. W. Tinker, one deer; Mrs. S. J. Maxton, one deer. SPECIAL.

LEDGE HOUSE, Dead River, Me., Nov. 18.—Mr. Fred. G. Feldhus, with a party of fourteen, have been here for the past week. They had very good success, getting a dozen deer and a big bull moose. Frank Place and B. L. Fowler, of Long Island, also got their deer and went home well pleased. Fred. Ash, with a party of five, are here now. They have got eight deer, some very fine bucks. Mr. W. H. Barns had very good luck, getting two nice deer. Mr. J. D. Wilkens while out hunting last week with Ed. Donahew, guide, got a big bull moose. He reports seeing seven other moose the same day.

Four times as many moose and deer have been shipped from the Ledge House this season as ever before, and all the guides report them far more plenty than ever before.

J. G. HARLOW.

The FOREST AND STREAM is put to press each week on Tuesday Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

THE MASSACHUSETTS ASSOCIATION

BOSTON, Nov. 20.—*Editor Forest and Stream:* Once more we count the season for outdoor sports and camp life over; to be sure, many sportsmen are yet in the woods trying for big game, but to a large majority the season of 1896 has gone into history. Of course we haven't ceased to talk over our experiences, good, bad and indifferent, and so far as I am concerned I am continually reminded that I wasn't alone in experiencing poor bass fishing in Lake Winnepisaukee last summer. I have heard of several experiences very like unto the one I explained in FOREST AND STREAM several weeks ago. They also all agree with my conclusion as to the cause for the poor fishing there—the abundance of natural bait in the lake, filled as it is with smelt, shiners, etc., giving the bass all food he wants without depending upon shiners, hellgramite, grasshoppers or any other lure that may be attached to a hook. So that it is perfectly natural that as others, no doubt better fishermen than I, didn't get many bass, I am more reconciled to my poor luck.

The first regular monthly meeting of the Massachusetts Fish and Game Protective Association after the summer holidays was held at the Copley Square Hotel on the evening of Wednesday, 18th inst. It was also a subscription dinner and there were about fifty members seated around the well-filled tables, including President B. C. Clark, Secretary Kimball, ex-President George W. Wiggin, ex-President E. A. Samuels, Dr. Heber Bishop, Dr. E. M. Branigan, Warren Hapgood, Ballin Jones, J. S. Duncklee, E. E. Small, Charles G. Gibson, Loring Crocker, Dr. W. G. Kendall, W. B. Hastings, Walter Brackett, A. W. Robinson, J. Russell Reed, Dr. J. T. Stetson, H. B. Reed, Dr. W. A. Morris, George O. Sears, Dr. Wm. A. Read, Albert N. Parlin, Walter C. Prescott, Dr. B. B. Howe, Dr. A. R. Brown, J. Q. A. Field, D. C. Heath, Louis Prager, Wm. Reed, and others. After an excellent dinner President Clark spoke briefly, expressing the hope and belief that the members had passed a pleasant summer and were ready to take hold of the work of the association with renewed vigor. Several new members were elected and half a dozen names were proposed and referred to the committee on membership. The following committees were appointed: To nominate officers for the ensuing year: Dr. E. W. Branigan, Charles Stewart, Dr. J. W. Bull, Alexander Pape, Ivers W. Adams, W. B. Hastings, Loring Crocker. On annual dinner: Dr. Heber Bishop, Walter M. Brackett, C. J. H. Woodbury, Robert S. Gray, Charles F. Sprague, George W. Wiggin, Wm. B. Smart, Secretary Kimball. Dr. Bishop, for the committee, at once reported progress by saying that he had recently returned from Maine and that the best parts of a bull caribou were in the cold storage waiting the annual event. He also said he had located a couple of moose which he was going after later. Mr. Charles H. Ames was then introduced and gave a most exhaustive and interesting address upon "The Preservation vs. Extermination of Animal Life." He referred to the rapid decrease of wild game in the forests of the country; many specimens are already practically extinct and others are becoming so very rapidly. He knew that the slaughtering instinct in man was strong, and he also knew from personal experience that it could be repressed. This with a proper enforcement of wise and stringent laws would do much to save what game we have and encourage its increase. Mr. Ames's address was interspersed with instances of his personal experiences with the big game in almost every part of this great country, and held the closest attention of an audience entirely in sympathy with his conclusions. WM. B. SMART.

CHICAGO AND THE WEST.

Beagles and Grouse.

It has always been one of the earnest ambitions of my life to become a dog man, although the inner circles of that cult have been barred against me for many years. The chief objection to my success is alleged to exist in the fact that I don't know anything about dogs, though there are a good many dog men who have none the best of me in that respect. Such are the inequalities of life. Well, anyhow, I was going to report the beagle trials this week up at Columbus, Wis., and I had me a new note book and a very knowing pair of leggings, and was on hand at the break of day on the appointed date. Consider the inequalities of fate yet again! The instant that it was discovered I was to report the trials the management declared the trials off, and not a beagle man was there. So I turned the affair into a grand *chasse au pied* and went rabbit hunting and squirrel hunting and grouse hunting in company with Ed. Graut and Geo. Berry. We had two beagles, one Irish setter and a rattling good time; and barring the failure of my ambition I was very much content with the arrangement.

We killed a few rabbits and a number of squirrels, and, best of all, got into some good grouse country, so that I had a touch of sport of most interesting sort. We hunted in a country which has been settled for forty or fifty years and which is highly cultivated and thickly inhabited. Here and there over this farming land we found strips and patches of woodland, some of it second growth, perhaps thirty, forty or fifty acres in a body, and in a number of these bits of woodland we found these magnificent game birds, the ruffed grouse, sometimes two or three, sometimes five or six. On our second day we put up about a dozen birds in all, and by hard work managed to bag six of them during the day, to say nothing of something like a dozen squirrels and three or four rabbits which got in the way while we were chasing the grouse around and tiring them down so we could accomplish their undoing. The merry little sawed-off hounds made our grouse shooting harder, as they put the birds up into the trees, where we could not see them till they were off like a flash from above or behind us. If a man can kill a ruffed grouse going out of a tree through scrub oak and a thicket, he can kill any animate thing that flies. Both my companions did this, but none of us did it all the time, and I think each bird cost us an average of a half dozen shots. I never got mixed up with more exciting sport. Each bird brought to bag meant a triumph after long effort, and even my friends, who were old and callous grouse shots, exulted with me over each bird as we picked it up.

One old cock afforded us especial trouble. We started him no less than six times during the day, and each of us had from three to six shots at him. It was well toward evening when Graut and I got him up again, and marked

him down closely near the edge of the wood. We thought we had him sure then, and arranged to meet him when he rose with a salvo rapid enough to stop him, but try as we might, we could not start him for a long time. At length the wily old fellow sprang out directly at my feet, where he had lain while we walked all round and over him. He went like an arrow for the open, and I shot at him before he had gone 10ft., but did not touch him. Inside of 20ft. he was around behind a big oak which was covered with heavy leaves, and there I could only guess at his whereabouts. To make the story complete I should say that I killed him anyhow, but the fact is I didn't touch him at all, and only shot a hole through the leaves, to show him there was no coldness.

Graut did not get a shot at him that time, and we both marked the bird, as we thought, across the road and into a bit of open wood, where we were sure he would take to a tree, as there was no cover on the ground. With more or less profane admiration for the old veteran who had fooled us so often, we followed on, feeling sure we would get him this time. Yet though we spent three-quarters of an hour looking in the trees and kicking brush piles we could not put him up. He had vanished! We could not believe that the bird had departed from the one foolish custom the ruffed grouse has, that of flying in a straight line nearly always, but at length gave him up as a spirit bird. A little later we blundered over him within 20yds. of the place where we had first found him, and then knew that he had circled far around to the left and gone back on his own trail, crossing the road and then coming back again out of our sight. Berry got a shot then, but could not stop him, and again we lined him up and followed after. This time the cunning of the old cock forsook him and he flew straight. In a thicket we found him once more, as full of fly as ever. Out he went with a roar, and Graut called out "shoot" to Berry, who was nearest. The latter did so, and so did Graut, who had a side shot at about 40yds., Berry being further than that when he fired. As the guns cracked, three barrels in all, I saw the old cock pitch forward, bounding clear of the ground as he struck, and tearing off a bunch of feathers with the soundness of his impact. One big pellet of No. 6 shot from Berry's gun had caught him in the back and killed him stone dead. He was a handsome bird, and we made a group of admirers about him, but we could not help feeling sorry we had killed the gallant creature which had made so good a fight. Indeed, it was a shame to do so, and in a way unsportsmanlike; for I am satisfied that if it had not been for that stray pellet of shot the bird would have afforded us several days more of shooting, and might perhaps have lasted over till next year. I am sure I should have been entirely contented to hunt him all the rest of the season, for a warier quarry never was pursued by man. If each shooter of the United States had one of these indestructible fowls to shoot at as he liked, I am sure we should hear less of the big bag butchers, and less of complaint about poor shooting at the end of long trips. A bird like that is a useful member of society.

In extenuation of the unfortunate ending of our pursuit of him, I should like to add that it was not my hand which slew him, and that I consider his death to have been accidental. I had shot at the bird a number of times, but had not injured it in the least, and we were having a good time together and understanding each other perfectly, until Berry ended the fun by killing the chief actor in the play. This is the way we held the beagle trials, and I submit that they were very successful in every respect this year. But we nearly ruined two beagles by going away after ruffed grouse and leaving them to run rabbits patiently and tunely by the hour, with no game killed ahead of them to give them a bit of encouragement. We saw nothing in the club rules forbidding the use of ruffed grouse as the game upon which the beagles were to be tested. E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Some Non-Residents in Wisconsin.

PORTLAND, Ind., Nov. 2.—*Editor Forest and Stream:* I have word from the east section of Wisconsin through some of our men just returned from Wausaukee, on the C., M. & St. P. R'y.

A party of eight left here at noon on Oct. 21, expecting to camp on the Menominee River, the boundary line between Wisconsin and Michigan. When they arrived at Wausaukee they were advised that hunters were hounding deer all along the river. They therefore took the advice of a guide and located on Bass Lake, sixteen miles from the station. They were either illy advised or did very poor work, for they got neither fish, fowl nor flesh. They saw a camp of native hunters, who had several deer strung up which had been killed before the open season was changed by the recent decision of the Supreme Court of Wisconsin.

There is hardly a question but what the Legislature at its next session will pass a game law similar to that of Michigan. The result will be to deprive the railroads of considerable revenue from parties who make a trip for the recreation, men who are not hunters, who never kill anything but pine squirrels and rabbits. The men who can and do kill deer will pay the license fee and then woe to the game that shows itself, for the non-resident will feel that he has been discriminated against, and human nature is human nature the world over. However, the number of deer taken in the Northern States by non-residents is a small item. I have seen enough to know that it is the men who hunt out of season, and those who hunt with dogs, that will be responsible for the destruction of the deer supply in these United States of America.

Nov. 10.—The remnant of the hunting party that went to Wisconsin from here came home this morning. They got one buck—a party of eight, at an expense of about $240. So much for the destruction of deer by non-residents. G. W. CUNNINGHAM.

Off for Maine.

LAST Friday a party consisting of Dr. G. H. Wright, of Plainfield, N. J.; C. M. DuBois, of Essex, N. Y.; W. A. Hoisington, of the Page Fence Co., Adrian, Mich., and J. B. Burnham, of FOREST AND STREAM, left New York for a two weeks' hunt in northern Maine.

They entered the woods from Patten, which is now connected with the B & A. R. R. by a short side line, and went into camp north of Katahdin and no great distance from Sourdnabunk Lake, at a point selected by Jock Darling.

Notes from Illinois.

CHICAGO, Ill.—*Editor Forest and Stream:* In your issue of Nov. 14 I notice that there are a good many who have the same opinion of Deerslayer that I have myself. There is only one fault in their criticism: they do not bear down half hard enough. I remember that when I was quite a small boy, living on a farm with my parents about fifty miles southwest of Chicago, it was no uncommon sight to see in a ten-mile drive from ten to fifty deer. Now we have nothing larger than the prairie chicken.

Chickens are fairly plenty this fall, but are very wild and but few are shot. I have had a little experience that surprised me. My son and I started about sunrise for a day's fishing. We also took a Stevens .32 rifle. When about half way we saw some chickens sitting on a fall plowing about 160yds from the road. I told my son to watch where the ball struck the plowed ground. I expected the ball to fall a little short, for I had only the short cartridges. The rifle cracked; no dust flew; but the chickens rose to a standing posture, but did not fly. Slipping in another cartridge, I raised the sight to shoot about 2in. higher. When the gun cracked, the chicken rose straight up for about 40ft. and in a wobbling way flew about 75yds. and dropped in a cornfield. After some time we found it stone dead. One leg was broken about 1½in. below the thigh at the first shot; there was also a bullet hole as near the center as possible. When we got home I was surprised to find that the last shot had passed through the heart about ½in. from the small end and the liver was torn to mince-meat. Now, I have heard of bears being shot in that manner and making a good fight for fifteen minutes after; but a bird living long enough to fly after being shot through the heart is something I cannot understand, and I suppose I have shot 1,000 chickens in my lifetime. L. P.

Some Tennessee Bird Notes.

GRAND VIEW, Tenn., Nov. 18.—*Editor Forest and Stream:* The folks have gone over to Possumtrot, and I improve the opportunity to write you a few lines.

This has been a very warm day, and the song birds are jubilant in the thickets. This ridge (which is a span of the Cumberland Mountains) seems to be a favorite resting place for many of the migratory birds. About the 6th of October the house cat brought in a meadowlark. I did not at the time know that it was a migrant, but it appears that these birds do not remain here during the summer months, but merely pass back and forth. Since the time when I saw the first one they have been moving southward in small flocks of five to twenty-five, and for about a week none have been seen.

The robin's first note was heard Oct. 24, but we saw none—in fact, I have seen not one. Yet they were said to be in the woods Oct. 31 in large numbers. I am told that they usually move southward in detached flocks, but come north in February or March, when they feed on the berries of the holly—probably also on seeds, etc. A good many of the smaller birds—warblers, etc.—have passed over us high in air within the past ten days, and there are many little finches about the clearings.

Ducks and geese were reported a week ago as coming into the Tennessee River. I have seen several nuthatches about of late. Antler says they used to be very numerous here, but that he has seen but few in a long while.

KELPIE.

Posting in New Jersey.

ASBURY PARK, N. J.—*Editor Forest and Stream:* The observant man has but to take such a trip to realize how greatly the sphere of the sportsman is narrowing. Everywhere the warning signs against trespass meets the eye, even on grounds where I have tramped since my early boyhood and which have always been free the proscription is general. While the owner of real estate has the right beyond question to regulate the matter to his own liking, prompted in many cases no doubt by gross carelessness on the part of gunners, who, disregarding all property rights, break down fences and otherwise destroy property, still there is no excuse for conspiracy which at present is a matter of common comment. Certain sportsmen band themselves together, wait upon the farmers and agree to pay for the printing and posting of the notices provided that they, the sportsmen, shall have the sole privilege of shooting over his grounds. Many of the farmers are men of liberal minds and care but little in reference to the matter, but are easily pursuaded, especially as Mr. Jones on the right and Mr. Smith on the left are willing. I hope this is true of but a small territory and that such a custom will never become prevalent. LEONARD HULIT.

Ducks on the Ithaca Marsh.

ITHACA, N. Y., Nov. 20.—Snow and a rattling strong wind blowing stiff and ugly from out the north ushered in Saturday, Nov. 14, and it witnessed a splendid flight of ducks sweeping over the Ithaca Marsh. Wildfowl gunners regarded it as one of the best flights in years. An army of shooters occupied every available inch throughout the big stretch of marshland and enjoyed the fast cannonade. A local daily credits the best individual score as consisting of thirty-five ducks. Cayuga Lake is at present occupied by a good-sized army of wildfowl which the storms from the North will promptly set in motion. And then list you to the boom of the guns!

M. CHILL.

A North Carolina Quail Center.

MOUNT AIRY, N. C., Nov. 20.—There are more birds this year in this vicinity than have been known for several years. I have been driving through the country adjacent to Mt. Airy and have seen many large coveys of full-grown, fat birds. Mr. Fred G. Johnson went out about a week ago and killed thirty-two in one day. You can get out in the morning from three to five miles from town and find plenty of birds, have all the sport you want to have, bag from twenty-five to fifty birds and get back to town by 6 o'clock in the evening. Fine open fields for shooting in. SAMUEL G. PAGE.

Game Laws in Brief.

THE *Game Laws in Brief*, current edition, sold everywhere, has new game and fish laws for more than thirty of the States. It covers the entire country, is carefully prepared, and gives all that shooters and anglers require. See advertisement.

Sea and River Fishing.

MEN I HAVE FISHED WITH.

XXII.—We-nen-gway.

AFTER a while we got into a swampy region which was frozen, or we couldn't have run lines through it. Lakes were frequent and we saw many wigwams where there were high frames for drying fish. Crotches about 10ft. high held poles, and across these were laid others, forming a rude platform, on which the fish were dried for winter use. As near as I can remember the fish were whitefish, lake trout and either pike or mascalonge, for I then knew as little of the differences between the two latter species as an Adirondack guide or the average fish dealer does. Now I could trade bread, flour, pork or sugar for an occasional fish, but McBride always wanted to be assured that they had been thoroughly scrubbed, for he was a little shy of eating anything which an Indian had handled.

Our old friend, whom we had named He-who-takes-so-much-at-a-mouthful, still followed us up, and I had become more than tired of him, and was wondering how he could "be shook." Some little things had been missed, such as forks and spoons; there was no evidence that he had taken them, but when I once left a jackknife sticking in a log where I had been using it and it was gone an hour afterward I suspected Mouthful because he was the only man around camp besides myself. I said nothing about it, but resolved to keep an eye out for him. If, after feeding him for over a month, and sharing my tobacco with him, he would steal from me I wanted to know it. I began to hate him, and he soon saw that he was not welcome; but he rejoiced when Gibbs was in camp. One day when Gibbs stayed in I put a new handle in a little belt axe and then began sandpapering a handle for the larger camp axe, for we had extra ones. The little axe lay by the fire and I was sitting in the door of the tent when old Mouthful came up and grunted his salute, and sat down so that his blanket covered the axe. I noted that fact and said to Gibbs, "Go talk to him, give him a pipeful of tobacco, anything to keep his mind off his appetite, and when I smooth up this axe helve I'll play you a game of euchre."

While we were playing cards old Mouthful arose, wrapped his blanket about him, and walked off. The belt axe was gone. I called after him, "Nidgee!" several times, but he didn't look around, and I grabbed the axe helve and started after him. He was in a well-worn path, bordered with prickly ash, and when he found me close behind him he sprang into the bush, but not in time to escape a whack on the shoulders with the hickory helve, and he dropped the hatchet. When I returned to camp Gibbs was indignant. Said he: "If I was where I could get out of these woods I'd go. You are always knocking the Indians around, shoving them out of the way if they crowd around the fire, and now you've struck one of them and we may all be murdered. These Indians are revengeful, and that man will remember you if he meets you ten years from now."

"You think he will remember me as long as that?"

"Yes, he will; he'll treasure that up against you as long as he lives, for their memories are long and they never forgive an injury."

"Well, Gibbs," said I, "when I ask him to forgive me it will be time for him to do it. Just now I'm not asking any favors of him, and as for his remembering me, that's all right. I hope he will, and I'll remember him, and if he ever comes to this camp or I meet him in the woods I'll lick him again. I'm just as mad as he is, and I've suspected him of stealing from us all winter and now I've caught him in the act. I don't want to argue this case, but what I've told you is just what I'll do, and you can bet on it."

"Suppose a dozen of his friends take this thing up, and come down on us in the night and kill us all. What can six men do in such a case?"

"I tell you," said I, "the case is not a supposable one. You know that their head chief, Hole-in-the-day, lives near Crow Wing, and that he told McBride, through an interpreter, that if any of his men molested us in any way he would punish them, and every Indian from this place to Lake Superior has been notified of this. There is a whole mass of stuff in your head about Indians that I don't suppose you could get out with a fine-toothed comb; but you will never find that fellow around our camp again; he is a lazy, thieving beggar, who can't have any standing among his people"

Just how far this satisfied Gibbs is a question. His mind was filled with romantic ideas of the red man which he had obtained from books, and he had no idea of the degraded ones who hang around a trading post, too lazy to hunt, trap or fish. I saw many Indians that winter who were too proud to beg, and this only proves that the red man is human and differs in mental make-up as other men differ. A very different man was We-nen-gway, whom I met on the border of one of those immense cranberry marshes which were common where we then were. Some of these marshes might have contained a thousand acres, and were red with frozen berries. As we had sugar in plenty you may imagine what an agreeable sauce we had with our boiled pork, roast pork, baked beans, etc. His name meant Dirty-face and he looked it. I wondered if he took pride in his name and kept his face in that condition by some vow to abstain from washing, but on closer acquaintance it was evident that the dark spots were birth marks, for which he was not responsible. He watched me gather a quart of berries and accepted a piece of tobacco in a dignified sort of way. He was evidently a superior man to Mouthful and one not disposed to look too favorably on the invasion of his ancestral domain by the white man, but his tribe had sold this land to the long knives and that settled it. I took a fancy to this man; here was the ideal man that Gibbs had read of!

Some days afterward he visited our camp, which was moved a few miles most every day to one of the cardinal points of the compass, and he brought me a fine lake trout. It was a fresh one and I was interested at once. There was no game in the country and my rifle was a useless burden in moving camp, but there must be fish near by.

I asked Dirty-face to eat, and set out some cold boiled pork and cold beans, as well as hot coffee. This was a treat to him, but it was evident that he had eaten during

the previous week and was not filling up for the week to come. We naturally talked about the fish, and he told me that over by his wigwam was a lake with plenty of fish; and as our move next day would bring our camp near his, he would show me where and how to catch some o-gah. This was a new name, and after drawing pictures of fish as well as I could on a piece of birch bark, I drew a pike or pickerel and said "Ken-o-shah;" he said it was the same. "O-gah" I never met before as a name for pike; but kenosha, kenoje or kenozha was the more common name for the fish. If those who wish to trace the derivation of the names of fish as used in popular nomenclature will take down their volumes of FOREST AND STREAM and look at the articles on the name of mascalonge, maskinonje, etc., they will find all that is known of the Indian name from which the various spellings are derived. See Vol. XXVI., page 149, March 18, 1886; and Vol. XXVI., page 268, Oct. 28, 1886.

From our new camp on the shore of a nameless lake I could see the wigwam of my new friend on the other side, about half a mile off; and after getting things in shape I went over to him. His wigwam was a typical Ojibwa residence, made of skins laid over many poles which came together at the top, where there was an opening for the smoke to go out. It was circular in form, much like the cumbrous Sibley tent which some of our troops used in 1862. On the outside there were records of hunts or fights in black and red pigments, which could be read by those versed in their pictorial histories, but which were a huckleberry beyond my persimmon. A skin flap kept out the cold, a small fire in the middle diffused all the heat it had to spare, and a goodly portion of it went out with the smoke. They made small fires of twigs and squatted over them, freezing one side while warming the other, and said that ours were so hot that a man could not get near them to warm himself; but I noticed that many nights our big fires were patronized by traveling Indians to sleep by, instead of making small ones for themselves. Did you ever notice that man is the only animal which lies with his feet to the fire? If you haven't observed this, just look at your dog bake his head under the stove.

I was invited inside. Besides the flavor of smoke from burning wood there were several other perfumes which you never smelled in a barber's shop. Mentally I quote a couplet from Tennyson's "Maud" as I recall the combined odors:

"The woodbine spices are wafted abroad
And the musk of the roses blown."

The family consisted of Mme. Dirty-face and two girls of sixteen and eighteen, and three young boys. By a most convenient arrangement the parlor, sitting-room, bedroom, dining-room and kitchen were all on one floor, with no partition nor stairs to climb when the head of the house came home with a load. I took this all in at a glance—the architectural beauties, I mean—the odors came in through a different sense. When I described it to Henry Neaville I could only compare it to a flavor met in boyhood days when I dug up a nest of young woodchucks.

"Yes," said Henry, "I've been in a wigwam in winter, but the flavor, as I remember it, was more of an ornithological character and seemed to resemble that of a nest of young woodpeckers."

Dirty-face took down a couple of spears and an axe, and we went up the lake to an open air-hole where it was probable that a spring boiled up from the bottom and kept the ice from forming over its warmer waters. He advanced cautiously and sounded the ice with the poll of his axe until it broke; he chipped off the edge which would not bear us and we had firm footing at the margin of the water. His spears were not like the gig which Guyon and I used in sketch XV., but were made with a single point with two barbs, like an arrow-head; they appeared to be made from saw blades and were fastened in clefts in the handles, which were of some heavy wood. Our ice cutting had scared away any fish which might be near, so we waited and smoked. The snow on the ice prevented our seeing into the water except where it was open, and it also shielded us from being seen by the fish. Once I stamped a foot and my friend said "Kego," and as the word means both "fish" and "don't," it was a caution either way. Soon we could see an occasional fish of good size in the clear water, but too deep to be reached with a spear.

His patience exceeded mine, and it began to be monotonous to see the fish swimming below out of range in the clear water, and I said to him: "Kego-de-me," the fish are very deep. He grunted an assent and pulled out a thin white stone not unlike a fish in general shape, and tied it to his spear with a few feet of string. This he moved gently about and several fish gave it respectful attention without being impertinent, and then a large lake trout rose and I struck and missed it; its tail was toward me, and my spear went on one side. I knew that my friend must be more expert, and I took his spear and played the lure in the water, drawing it near the surface if a fish rose. Soon he plunged his spear into a fish which stood broadside and was about to seize the decoy. The cord ran out rapidly, but the flight was soon checked and a fine nay-may-goos lay upon the snow. I spell the name as I learned to speak it. Scientists call the lake trout *Salvelinus namaycush*, softening the original word. Dirty-face insisted that I should try it again and I did, for I wanted to learn how to handle this new kind of spear; a large pike came up to the lure and I sent the steel into it and secured it. We took three more fish, and then it was time for me to go to camp to get things in shape for the return of the linemen. I went back by way of the wigwam and stopped awhile and gave Mrs. Dirty-face some tobacco, and she ordered the girls to clean the fish for me. I took two—enough for our supper with the rice and beans—and would take no more. I have always been in doubt whether her action was genuinely generous or not, for the whole party visited me next day, and again when we moved to the upper end of the lake, and if a balance was struck between those two fish (which may have weighed 12lbs.) and an unknown quantity of bread, beans, rice, coffee and sugar—really, I don't know if there would be any balance.

I have remarked on the absence of game and other animal life. The snow which fell in September and had lain without addition or melting had become too hard to record the passing of small animals such as mink, rabbits or even the heavier coons, but I saw a mink and a fox and heard the great gray timber wolf several times. The Canada jay and the raven were the most common birds, and I saw the little chickadee and a bird which I did not know, but now think might have been the shrike, or butcher bird. I never ceased to be surprised at the absence of life in this wilderness.

December came and the cold increased. One morning the trees were bursting with a sound like rifles and Gibbs thought we were attacked. He and Crosby jumped up out of bed before daylight, but soon returned when the rest of the party laughed at them, for we knew what the noise meant, having heard it before. After reaching Crow Wing we learned that the thermometer had been 40° below zero on several occasions. There was no wind in the heavy timber and we were warmly clad and could hardly realize how cold it was. Coats were discarded, but no man knew how many flannel shirts he had on; and as long as the body part of a pair of trousers held together the legs of them were reinforced by cylinders made of bed ticking fastened at top and bottom; these were not removed when worn out, but other reinforcements were added outside them until a cross section of a leg might have shown half a dozen strata of bed tick above the original deposit of trousering.

We had now reached the northern line of our survey at its eastern end, over by Mille-lacs, and were working the upper tier of townships toward the Mississippi. One day I was out with my rifle in the hope of finding game when I came across a wigwam by a small stream. I entered without ceremony, in accordance with Indian etiquette, and found a party of perhaps a dozen, bucks and squaws, seated on the ground around a small fire in the center, over which a sheet iron camp kettle was boiling and sending forth a savory odor. I was hungry after the tramp, although I had bread, pork and beans in plenty, but had not eaten. After giving the mixed French and Indian salute which they commonly used, I invited myself to sit down, and this was also correct Ojibwa form. There was an oppressive silence, oppressive to me at least.

"The silence of the place was like a sleep,
So full of rest it seemed; each passing tread
Was a reverberation from the deep
Recesses of the ages that are dead."

How different these people were from a party of white men waiting for a feast. There was no chat, jest, song or story. For idle men they take life seriously, and yet they are like children in many of their moods. I could never learn to live their way; that impassive, self-contained manner seems to be a continual sort of dress parade, so to speak, for they can be roused to enthusiasm by war or the hunt. I can't say that I like such people; they are not cordial, and seem to be sitting in cold and unsympathetic judgment on not only you, but every other thing on earth. During the winter it had been evident that I was not a favorite with the native American. He-who-takes-so-much-at-a-mouthful evidently preferred Gibbs to me, and some others whom I had bounced out of camp because of persistent begging had no great love for me, and so there was no amount of love lost between us. I stood, as the commissary of our party, the custodian of its supplies, which would have melted away in a week if all comers had been regaled as our friend Gibbs would have entertained them. They would have stayed by him as long as the provisions lasted; they liked Gibbs.

In this party in the wigwam I recognized Dirty-face and others who had been at our camp and had eaten of our pork, their great dainty which they called koo-koosh; but there was no cordial handshake, only a nod and a grunt, which is their limit of welcome. A squaw arose, thrust a stick into the kettle and brought up meat; she was satisfied that it was sufficiently cooked, and took the kettle from the fire and went outside with it. I had curiosity enough to get up and follow. She put the kettle in the snow and scraped up snow about it to cool it. I asked her what meat she was about to serve to her guests, at the same time giving her what pork I had. We were friends! Pork was good, and she had only muskrat to offer. Muskrat was not fat like pork and bear meat, but it was warm and she hoped I would like it.

Away back in the fourth article of this series I told of Bill Fairchild's experience with the muskrat as food, as he related it at a seance in Port Tyler's cabin, in Greenbush. If you remember, Bill could follow the Frenchman's advice—could "skin da mus'rat, bile him a leetle, den fry a-heem an' eat him, an' oh!" Also that Bill said he could come it all but the "oh!" Right here I wish to record my first experience with the musquash as an epicurean dish. I ate it years afterward from choice while camping with Mort. Locke, John Fish and Wm. Downey on Cayuga Lake, N. Y., as the two last named, now living at Honeoye Falls, N. Y., will testify, if they have any regard for the truth; but that is another story, and there's no use telling how we played it on one of the party for something else in the way of game.

When the contents of the camp kettle were cool, the squaw brought it in and a group formed around it on one side of the fire. I was not only hungry, but was curious to taste muskrat, which is a very clean feeder; but somehow the cook and the surroundings were not conducive to much appetite, but they asked me to join and I joined. They dipped their hands in the kettle, and it is doubtful if they had been manicured recently. Dirty-face handed me a piece, and I wondered if any in the party might be named Dirty-hand. I wasn't hungry now and said so, but felt a delicacy about refusing to eat with these friendly folk, and also felt a delicacy about eating food served in this manner. They omitted napkins and finger bowls, and somehow didn't seem to miss them. I ate a little, very little, said it was good, but I wasn't hungry just then and went out. The air outside was excellent.

I could have said with Petruchio:

"Where is the rascal cook?
How durst you, villains, bring it from the dresser,
And serve it thus to me that love it not?"

Gratiano, in "The Merchant of Venice," asks a question to which he evidently expects no answer:

"Who riseth from a feast
With that keen appetite that he sits down?"

I pungled off and ate my little cold luncheon beside a spring on the lake side. There were no napkins nor finger bowls there, but there was that satisfying knowledge that the hands which handled the food had been bathed since they skinned the last muskrat. On relating this to Henry Neaville he remarked:

"I don't care what any of these writers on health say about too frequent bathing being injurious, I believe that a man ought to wash his hands once a month, whether they need it or not."

Our surveys were nearly finished and nothing was left to be done but to meander the river and figure the fractional sections which it cut, and to do a little work around Crow Wing. Henry Neaville and I were to pack up and get back to the trading post and meet the party there. An Indian, a stranger, came to camp and begged for whisky. I told him we had none, but he saw the molasses keg and kept on begging until Henry said: "Give him some pepper sauce." I had put the liquor from several of the bottles into one and had thrown away the peppers, and taking up the bottle Henry and I pretended to drink, and then he was wild for some. I showed him with my thumb on the bottle how much or how little he must drink, and he grunted assent, seized the bottle with both hands, and such swallows as he took before it burned him I never saw. If one swallow doesn't make a summer, those he took made it hot enough for him. He drew a long breath and snorted "woof," like a bear, and started for the river. Three times he stopped and snorted and then ran out of sight. Henry roared, rolled over and roared. When he got his speech he said, between spasms: "Golly, but that Injun thinks there was more fire than water in that 'scutah-wawba; oh, dear! he's gone for a doctor; he thinks you've poisoned him. Oh, if Gibbs was only here to tell you how Mr. Lo will remember that drink!"

We stopped a couple of days at Crow Wing, and I became acquainted with the brothers who kept the trading post. I think their name was McDonald, but am not sure, and Mr. Davies isn't. They told of an Indian who died there some winters before when the ground was frozen too hard to bury him, and how they stood him up all winter against the north side of the house and buried him in the spring, and some other cheerful stories of dead Indians. A Mr. Morrison lived there, one of the leading men of northern Minnesota, for whom the county below Crow Wing is named. He had married an Ojibwa woman and had two grown-up daughters, who had been educated in St. Louis, and they played the piano for us and our visit was an event in Crow Wing life. Bishop McElvaney was there and preached on the birth of Christ in Morrison's house, while Davies and others sang. I didn't sing; when I sing the police always pull the house, thinking there must be a dog fight in the back room.

I went up to see Hole-in-the-day and he showed me a Colt's rifle, made like a revolver, inlaid with gold, which was given him by President Franklin Peirce a year or two before. I understood that it was taken from the Patent Office by consent of Col. Colt. He talked about trading it for my rifle, if I added enough dollars to suit him. He was poor, or pretended to be, and I wanted that rifle very much, but thought best to consult with the brothers at the post. One of them said: "It's against the law to trade with these people without a license, and if you trade with him for the gun he can send a man after it, and you will lose both rifles and all you've paid, and then may have some trouble with the law." That settled the trading, but when I saw the old chief again he wanted to know, in confidence, if we had any whisky left. I doubt if a single Indian believed that six white men who had so many things they thought to be luxuries spent half the winter in the woods without whisky. To them it seemed an absurd proposition. The Indians who hung around trading posts were not of the best class, and had readily copied all the vices of the white man from a class whose virtues were not so apparent. They had not then adopted the white man's dress except the calico or the flannel shirt. The wore the breech-clout and leggings, a shirt and the invariable blanket.

When we were up along the river we were near the great northern trail from the Red River of the North, and Henry said that the mail was due in a day or two, so he had heard from a half-breed. "This mail," said he, "comes down in a dog sledge, and if we can put out some pieces of pork in the snow you'll see some fun."

That did seem the proper thing to do, and in fact it was the only way possible to extract any fun out of a dog train, and we planted pieces of pork at intervals of 100ft., more or less, and waited. It was next morning before we heard the driver calling to his dogs a long way off, for sound travels far in the cold and over snow. On he came, with five wolfish-looking dogs harnessed tandem, with rawhide traces and soft collars, to a flat-bottomed sled make of thin birch boards turned up in front and lashed together with thongs and covered with a skin tied over all, and without runners. The driver ran beside the team, touching a dog here and there with a long lash fastened to a handle about 1ft. long. The leader struck a piece of pork, and in a moment four dogs were on him fighting for it and the harness was all tied up. He plied the whip and made appropriate remarks while doing it. Some dog bolted the meat, for the fighting stopped and there was no pork in sight. The half-breed muttered something, evidently not a prayer, while he put each dog in its place and on he went in no pleasant mood, and the scene was soon repeated. He was near us this time and we could see that the second dog won the prize, while the rest had to be contented with a bite of or from his neighbor. It was fun for the dogs and for us, but from what the half-breed said I doubt if he enjoyed it. If he had seen us he might have indulged in more oratory, but he had to waste his eloquence on the dogs. It was fun to do this at that time, because we thought it fun. To-day we wouldn't do it, because there would be no fun in it. Thus we view things at different periods of life. The fire-crackers we shot off half a century ago don't sound as joyful as they did and we go into the country to avoid them; so we go.

McBride sold our provisions—I think there were two barrels of flour and one of pork left—and if memory serves he got about $20 per barrel for the flour, and twice that for the pork. Long prices; but transportation from St. Paul over 100 miles away over a winter road, and no way of getting from St. Louis to St. Paul except by teams when the river was frozen, made things come high. The wagon was sold and a bob-sleigh bought, the box filled with straw and blankets, and on Dec. 22 we started for home. Two days later we stopped just outside St. Paul. It did seem good to get in a bed again, but we couldn't stand a room with windows closed. We had slept in the pure, cold air too long for that. We left the river at Red Wing and took the west side, avoiding the hotels in the large towns, stopping at country taverns, and we had

what Henry called "dead loads of fun." At these rural hostelries we struck a dance most every night. At a small place not far from Rochester, Minn., the fiddler didn't show up and some country roughs proposed to wreck the hotel, and the landlord appealed to us for protection. We were at a late supper, and Tom Davies finished first and went out and talked with the turbulent spirits; but he was only one man, and he came back for reinforcements. We went out in a body at the landlord's suggestion, and after he had said a few words in a conciliatory way I winked to Henry and he came; we took the leader of the gang one side and I said to him:

"This party of ours has just come out of the woods, and they're peaceable enough if there isn't any fighting going on; but if there's any fighting you can't keep 'em out. We don't know any of the people here, but the landlord is a white man, and if a fight is started we're with him. Do you see that dark man over there? Well, he's a Welshman; look at the build of him, he can kill a steer with one blow of his fist," and I pointed to Tom Davies.

"I've seen him do it three times down in Wisconsin," said Henry.

"It's just here," said I. "There isn't going to be any fighting in this house to-night unless we all take a hand in it, and if we do I tell you as a friend to keep away from that Welshman."

"Buried was the bloody hatchet;
Buried was the fearful war club;
Buried were all warlike weapons,
And the war cry was forgotten;
Then was peace among the nations."

Just what delayed the fiddler is lost in memory's fog, but the lads and lasses were impatient; a thought struck my old bosom-block Henry. Could the landlord get a fiddle? The landlord could, and did. Behold Henry seated on a chair on top of a table, tuning up! Such tuning and such playing! He was not Ole Bull, but he came as near to him as he could. I can see him now, beating time with his boot—which had been cut open to allow his frozen toe to expand—and calling off: "First two forward!" etc. After a while the missing fiddler arrived and relieved Henry without any perceptible improvement in the music, but there was an era of good feeling, and it was

"On with the dance!
Let joy be unconfined!
No sleep till morn,
When Youth and Pleasure meet."

We went through Pleasant Grove, where we met Hiram Gilmore, of Potosi, who gave us late news of our families, and on the 28th we stopped at Decorah, Ia.; we struck the Mississippi at Clayton City, with sick horses; they would neither eat nor drink, and what the matter was I don't know, only that we were delayed. From there we took the ice to Cassville, Wis., where we stopped all night and then struck out for home, which we reached just after sundown on the last day of the year, and, as the King says in Hamlet:

"At night we'll feast together:
Most welcome home."

FRED MATHER.

ALVAH DUNNING.—Can any one tell where a letter will reach Alvah Dunning, the old Adirondack guide? His headquarters have usually been about Racquette Lake and the Fulton Chain. On Oct. 13 I mailed a letter to him at Old Forge, with a request to the postmaster to forward it. This is a common thing to do in the case of well-known Adirondack men, and letters are taken in the woods by the first guide going that way. The letter was returned to me last week, unopened. I wish to write Alvah up some time. Few men in that region are better known than he, and no doubt some kind angler will see this and put me on his moccasin tracks, if he is still in the land.

F. M.

Concerning a Bull.

THE PACIFIC-UNION CLUB, San Francisco.—*Editor Forest and Stream:* For a double-distilled "bull" please see Fred Mather's article in your issue of Nov. 7, third column, where he says Biron wrote "Love's Labour's Lost." It's a good thing, perhaps, that Byron and Shakespeare are dead! Always your reader, nevertheless, but in pain,

[Mr. Mather does not say that Byron wrote "Love's Labour's Lost." He quotes something said by Biron, one of the characters in "Love's Labour's Lost." The San Francisco writer appears to have heard of Byron and of Shakespeare, but to be insufficiently unfamiliar with the latter to set up in business as a critic.]

Codfishing Near New York.

CODFISHING, the like of which has never before been known to exist in this vicinity, is at its height at the present time. Never before in the memory of the proverbial oldest inhabitant have the cod been caught in such large numbers or so near inshore. In former years the boats went to the Fishing Banks or beyond for cod; this year they are caught in immense numbers from rowboats in Rockaway Channel, less than half an hour's row from Sheepshead Bay and Rockaway, while at Broad Channel and the other fishing stations on the Rockaway trestle a few can be picked up.

This unusual fishing has attracted many fishing parties to these waters. One party of six came all the way from Peekskill, N. Y. They were out with Jerry Greenwood on the Annie C. last Thursday, and in less than two hours caught 79 cod and a number of ling. On Wednesday, with a party of two, Jerry got 61; and on Sunday, with five in his party, he caught 41. On Election Day, while J. R. Keatinge, Will Fox and myself were shooting from a rowboat, the Greenwood boys fished less than a quarter of a mile away, and in about one hour caught 39 cod. These fish were all caught in Rockaway Channel, east of Rockaway Shoals, easily reached by row or sailboat from Sheepshead Bay and Rockaway.

Skimmers are used for bait, and a good way to keep the fish around a boat is to smash a few skimmers and throw them overboard. This attracts the fish and keeps them around. Codfishing is not bad sport at all if one is warmly dressed and on board one of the fishing boats, which are large and comfortable. These boats can be hired at Sheepshead Bay for $8 per day.

Considerable shooting can also be had here, if one is not too particular. Enormous flocks of gulls fly from one bar to another, and occasionally flocks of ducks can be seen.

G. F. DIEHL.

SHEEPSHEAD BAY, L. I.

ANGLING NOTES.

"Getting Even."

A WEEK or two ago I referred in this column to the desire of game law violators, when convicted, to "get even" with those who bring them to justice. There have been cases where barns have been burned and farm stock mutilated in the process of getting even with some faithful officer who has done his sworn duty; but never in the wildest flights of my imagination did I dream that a grand jury could be prostituted and used as a vehicle in an attempt to get even with a faithful, efficient and honest game protector.

The Grand Jury of Warren county, New York, last week handed in the following recommendation:

"LAKE GEORGE, N. Y., Nov. 14, 1896.—The Grand Jury of the County of Warren, by a majority vote of its members present at the November term of the Supreme Court for said county, recommend that William H. Burnett be removed from all public office in the county of Warren.

"GEORGE W. BRAYTON, Foreman."

For the first time in my life I am ashamed to admit that I live in Warren county, if such a recommendation can be handed in by its Grand Jury without a protest from the people, who know the history of affairs leading up to the recommendation.

A newspaper editor asked the clerk of the court what the recommendation meant, and the reply was "that it was an old grudge of the foreman against Burnett."

Who is Wm. H. Burnett and what has he done that the foreman of the Grand Jury should have a grudge against him?

Nineteen years ago Burnett was elected game constable of his town, qualified by swearing to do his duty, and from that time to this he has been doing his duty honestly and conscientiously as game constable, deputy sheriff, agent of the Society for the Prevention of Cruelty to Animals, special State Fish and Game Protector, etc. Before his day no one dared to attempt to enforce the fish and game laws in his town, and the first arrest that he effected showed the stuff he was made of, for his prisoner assaulted him with a gun; but he brought the man and gun to justice's court, where the prisoner was convicted and fined.

From that day to this the fight has been going on—Burnett and law and order on one side, the game law violators and disorder on the other side. Among the first of the game law violators to fall into Burnett's hands for taking black bass on their spawning beds out of season was George W. Brayton, whose name is signed to the above recommendation as foreman of the Grand Jury. Brayton pleaded guilty before Justice Runger and promised to obey the law in future, whereupon he was fined $10 instead of $40, as he might have been; and according to his own declaration to officer Burnett, repeatedly made, he has been breaking the law ever since and assuring Burnett that he is not smart enough to catch him in the act. Burnett has come so near catching him on two or three occasions that Brayton has escaped only by the skin of his teeth. A year ago last spring Burnett found Brayton fishing on the shore of Canoe Islands in Lake George. At least he saw somebody through his field glasses, and from the position of the boat he concluded that it was Brayton, for his favorite method of breaking the law is to snatch bass from their spawning beds, the most contemptible of all game law violations. Burnett, with assistants in another boat, reached the island and rowed around it in opposite direction to catch whoever might be between them. The boat they were in search of proved to be Brayton's and Brayton was in it, but he rowed away rapidly as soon as he saw the first of his pursuers.

Where Brayton's boat had been, a bamboo fishing pole was found bobbing in the water with a 4½lb spawning black bass on the end of the line. The bass was unhooked and released by the protector. From the bank a similar pole projected, the line hanging near a bass bed and the hook baited with a mass of worms. Burnett captured the fishing tackle and was morally sure that it belonged to Brayton, but he could not swear to the fact, as he did not see it in Brayton's hands. Brayton's boat was the only one anywhere near where the tackle and hooked bass were found. Only this last season Burnett saw Brayton's boat anchored near a bass bed and rowed to him; Brayton rowed away. That morning Burnett had seen two big bass on a spawning bed at the point where Brayton's boat had been, and after Brayton departed he looked for the bass and they were gone too. The officer had no power to search Brayton's boat, and once more he escaped.

Several times Burnett has chased Brayton to his cottage in his boat, positive in his conviction that Brayton had bass in his possession illegally (once he threw the bass overboard and Burnett got the fish as he followed, but he did not see them leave Brayton's boat), but he lacked the power to search the boat. At the landing Brayton called to his cottage to have hot water brought, that he might scald Burnett. His usual method of threatening Burnett is with a club—but Burnett would care neither for clubs nor hot water if he had the legal right to search Brayton's boat when he found him fishing in the close season.

Brayton has other methods than the one adopted as foreman of the Grand Jury. Norman Brown, a Lake George guide, complained to Burnett that he saw Brayton take bass from the spawning beds and carry them away in a bag. Brayton heard of it, and calling Brown to his dock as he was rowing past, he denounced him as an informer and struck him in the face with his fist. Brown is over sixty-five years old, but he returned the compliment by striking Brayton over the head with an oar, felling him to the ground.

Burnett's offense consists in doing his sworn duty as a special officer of the Lake George Fish and Game Protective Association. He is absolutely honest, conscientious in the extreme, would not misrepresent for all the wealth of the world, a model, fearless, faithful officer, who has done his duty all these years as no other man could do it under the circumstances, absolutely just to all and enforcing the law as he finds it, and this is his reward at the hands of the Grand Jury—to further the malice of its foreman, who has been a persistent game law violator.

How is it possible that such a recommendation could be spread on the court records? We do not know the secrets of the Grand Jury room, but we do know the witnesses called to see if something could be raked up against Burnett, and all, with but a single exception so far as known, were men that Burnett has at some time or another arrested or had trouble with in connection with the game laws. A fine lot of witnesses to call to testify concerning an officer! Burnett will continue to do his duty as a special game protector, for this is only a new phase of the annoyance he has been subjected to for years because he fearlessly enforces the laws without favor. I have often told him that figuratively he takes off his hat and makes a salute every time he mentions the laws of the State, so great is his respect for them. He has been threatened with all sorts of bodily injury, and perjury has been resorted to in order to disgrace him in the eyes of the people; but to-day I doubt not that he stands higher in the estimation of all law-abiding people in the community than those who have attempted to besmirch him, although one of them happens to be foreman of the Grand Jury. I have treated the matter at considerable length, that those who are not familiar with the rough road that our fish and game protectors are obliged to travel may see that it is not a path of roses.

This particular case is an outrage, pure and simple. Burnett is not in the least vindictive, and never bears malice for those who try to injure him because he does his duty. Once the law is vindicated, he will treat game law violators to the best he has, and employ them and aid them in every way when, as he says, "they have turned from the errors of their ways." There is no man living with whom life, property or reputation would be safer if placed in his keeping than with William H. Burnett.

The foregoing had been written when I met ex-District Attorney H. A. Howard (six years district attorney of Warren county) as I was going to the post office. He asked me if I was going to take notice of the outrage upon officer Burnett, and I replied that I had written an account of the recommendation and what led to it for FOREST AND STREAM. I returned home and soon Mr. Howard sent me the following letter. I have no doubt if I should take the letter to every prominent business man in this town he would read and indorse it. Also since writing the note about Burnett a judge of one of our courts informs me that the recommendation of the Grand Jury is a criminal libel, and the foreman has by his act subjected himself to indictment therefor.

GLENS FALLS, N. Y., Nov. 16.—*A. N. Cheney, Esq.*—Dear Sir: I have been personally acquainted with William H. Burnett for nineteen years last past, during which time at different periods he has held the office of game constable, deputy sheriff and an officer in the Society for the Prevention of Cruelty to Animals. During these nineteen years I have had occasion to employ him in a great many civil and criminal cases and have ever found him earnest, honest and fearless in the discharge of his duties. In my judgment we never had a more upright, able and hard-working official in Warren county. Respectfully, etc. H. A. HOWARD, ex-District Attorney Warren Co.

An 8lb. Brook Trout.

The last big brook trout from New York waters that I recorded in this column was one of 7¼lbs. from a pond in Essex county.

This fall a trout of 8lbs. was picked up dead on Loon Lake, in Franklin county. The fish had been killed evidently by an animal, probably a mink, as a hole was eaten in the side of its head. The trout has been sent to be mounted, and will then be placed in the Loon Lake House, where there is now a mounted trout of 6½lbs., also picked up dead on Loon Lake. This last-mentioned fish was for some years the record trout of the State.

Sunapee Smelts.

Last week I was at Sunapee Lake, New Hampshire, the home of the Sunapee trout, landlocked salmon, brook trout and landlocked smelts. Walking on the beach with Commisioner Wentworth, we picked up a number of smelts thrown up on the sand by the high winds and water. There were two sizes, one from 1¼ to 2in. long, the others 3 to 3½in. long. The first seemed to be fish hatched last spring, and the others hatched the spring of 1895. The latter had undeveloped spawn, and they would have spawned next year or when two years old.

A. N. CHENEY.

Speckled Trout in California.

SAN FRANCISCO, Cal., Nov. 10.—*Editor Forest and Stream:* In 1890 Mr. Geo. Stiles obtained some Eastern brook trout (*Salvelinus fontinalis*) fry from the Nevada Fish Commissioner. They were planted in Webber Lake and Lake of the Woods, in Sierra county. Another plant was made in the latter lake by the California Fish Commission in 1891.

Some of these fish weighing 1½ and 2lbs. were taken in 1893, and in 1895 specimens weighing 5lbs. were taken.

The California Fish Commission sent a messenger to Lake of the Woods in September last in order that large specimens of this variety might be obtained for the aquaria of the Home Products Exposition, held in this city at that time. He was assisted in taking the fish by Capt. S. F. Burton, of Webber Lake Hotel, a seine being used for their capture. Forty-five fish were taken, averaging over 4lbs. each. No small fish were taken. The largest specimen was a male weighing 6½lbs. and measuring 19½ in. This large male and four females were transported to San Francisco and shown at the exposition.

Lake of the Woods is a small body of water, covering only a few acres. It is located one and a half miles from Webber Lake, at an altitude of 7,000ft. The lake is fed by springs, the only overflow being a small stream during the early summer months. There are no other fish in this lake.

The Eastern brook trout have been generally introduced in Nevada and California. They have not thrived in the immediate coast streams of this State, but have done very well in the mountain lakes and streams of both States. They seem to have done especially well and afford the best sport in the waters of the Yosemite National Park.

H. F. EMERIC, Pres.

New Jersey Coast Fishing.

ASBURY PARK, N. J., Nov. 21.—Surf fishing still attracts a great number of anglers daily. No matter how inclement or boisterous the elements, the more enthusiastic of the fraternity are sure to be on hand. Although the season is extremely late, still-fishing for plaice, ling and codfish is good. What matters it though hands become numb and noses red, the assurance of the presence of the finny tribes is sufficient stimulus to keep the boys in line. Two nights during the present week I, in company with others, have fished until after midnight, with the pier glistening in the bright moonlight with frost till as long

as the tide served right and fish were on the feed. Not a man left his post. On both occasions we made fine catches of codfish and ling, neither of which is to be despised when taken with rod and reel. How long the sport will continue is of course mere conjecture; one thing, however, is certain, they will receive our best attention as long as they shall consent to favor us with their presence.

FIXTURES.

BENCH SHOWS.

Dec. 1 to 4.—City of the Straits Kennel Club's local show, Detriot, Mich. R. H. Roberts, Sec'y.

Dec. 8 to 11.—Augusta, Ga.—Georgia Poultry and Pet Stock Association. J. W. Killingsworth, Sec'y.

Dec. 15 to 18.—Central Michigan Poultry and Pet Stock Association's show, Lansing, Mich. C. H. Crane, Sec'y.

1897.

Feb. 2 to 5.—New England Kennel Club's annual show, Boston.

FIELD TRIALS.

Dec. 14.—Athens, Ala.—Dixie Red Fox Club's second annual trials J. H. Wallace, Sec'y, Huntsville, Ala.

1897.

Jan. 11.—Tupela, Miss.—Continental Field Trial Club's quail trials. P. T. Madison, Sec'y.

Jan. 18.—West Point, Miss.—U. S. F. T. C. winter trials. W. B. Stafford, Sec'y, Trenton, Tenn.

Nov. 8.—Carlisle, Ind.—Union Field Trials Club second annual trials. P. T. Madison, Sec'y, Indianapolis, Ind.

E. F. T. CLUB'S TRIALS.

THE annual trials of the Eastern Field Trials Club began on Nov. 14 at Newton, N. C., the public competition coming after the Members' Stake, and therefore commencing on Monday. There was an encouraging awakening of interest in the competition, the latter itself being exceptionally good considering the unfavorable weather conditions, which affected all details of the competition up to Thursday night.

The judges were: Col. A. Merriman, Memphis; Secretary S. C. Bradley, Greenfield Hill, Conn., and Mr. Theodore Sturgis, New York. The judges managed the competition admirably, and in particular there was noticeably absent the undignified and harmful scrambling of handlers and stampeding of judges which so often mar field trial competitions. When the handlers perceived that a proper observance of deliberation was absolutely required they fell into line nicely and the result was that the competition was orderly, free from hustling, wild deportment, furious riding and undue excitement. When handlers find that they must go a certain course and conduct their duties in a proper manner or be ignored, the most fractious soon learn what is demanded by their own self-interest. It was the quietest and fairest professional trial ever run in the States.

The club held its annual meeting Wednesday evening, Nov. 18. Eight members were present. The Board of Governors was re-elected, namely: C. H. Phelps, Jr., W. A. Coster, E. Dexter, H. B. Duryea, F. A. Hodgman, W. S. Bell, Bayard Thayer, Theo. Sturgis, F. R. Hitchcock, Joseph H. Hunter, Pierre Lorillard, Jr., S. C. Bradley, Edmund H. Osthaus, J. E. Orr and W. B. Meares, Jr.; President, P. Lorillard, Jr.; Vice-President, C. H. Phelps, Jr.; Secretary-Treasurer, S. C. Bradley. New members elected: George C. Crocker, California; Edward A. Burdett, Chicago, and Hobart Ames, Boston. Next year's trials will be held beginning the third Monday in November, the other conditions, stakes, place, etc., being same as those this year. The treasurer's report showed that after paying all indebtedness there would be still a good balance on hand in the treasury.

There was a good attendance, some new acquisitions to the ranks, most all the others were the regular following which has never wearied with the years. There were present Dr. J. S. Brown and wife, Montclair, N. J.; A. C. Waddell, Waverly, Miss.; Prof. Edm. H. Osthaus, Toledo; F. H. Fleer, S. Murray Mitchell and Col. H. K. Nichols, of Philadelphia; J. Corbett, Lynchburg, Va; F. R. Hitchcock and Maj. J. M. Taylor, New York; H. T. Payne, editor of *Field Sports*, San Francisco; J. E. Orr and J. F. Schmadeke, Brooklyn; W. Tallman, Thomasville, N. C.; Edw. A. Burdette, Chicago; W. B. Meares, Linwood, N. C.; John White, Mount Vernon, N. Y.; W. B. Stafford, Trenton, Tenn.; C. W. Zimmerman, Mobile; D. E. Gould and wife, Boston; Pierre Lorillard, Jr., New York; Dr. R. T. Mead, Manistee, Mich.; Irving Hoagland, Franklin Park, N. J.; Dr. Delano Fitzgerald, New York; Joe H. Wilson, Lowersville, S. C.

The Eastern Subscription Stake.

This stake was open to all setters and pointers. First prize $300, second $150, third $50 subscription was $50, payable Oct. 1, 1896. Each subscription entitled the owner to start any dog, whether his property or not, and it was transferable to any person not objectionable to the club. The heats of the first round were of two hours duration, afterward the running was at the discretion of the judges.

There were eight starters. All but three of the dogs ran in the All-Age Stake, and their descriptions, etc., are given therein.

Of these three, Tony Boy, black, white and tan, is by Antonio—Ruby's Girl, and was handled by D. E. Rose. He proved to be the winner after an extraordinary display of sound field work, his range being wide, speed fast and judgment excellent. He showed rare ability in finding and pointing, all his work had reference to the gun and he was most pleasingly obedient. He is a dog of rare ability.

Del Monte Kennels' Tick Boy (King of Kent—Bloom), black and white in color, won second. He was handled by C. Barker. His first heat was an excellent one, so good indeed that he had a good competitive chance for first, but his second heat was of a much lower grade than was his first.

Marie's Sport, winner of third, made a good competition, though he was not so finished in his work as the other winners, and being lost twice in his last heat did not add at all to his chances.

Charlottesville Field Trials Kennels' pointer dog Delhi (Rip Rap—Queen III.), handled by C. E. Buckle, was the other of the three dogs whose description is not given in the All-Age Stake.

Friday.

The weather had turned much cooler, much to the improvement of the work in general, and in particular the comfort of men, horses and dogs. A gentle easterly wind prevailed throughout the day. The competition was so even and excellent that it maintained its interest throughout the day, and at the end of the day there was much room for speculation as to the winner.

SAM T. AND VON GULL were cast off at 8:21. Von pointed a bevy in a hollow and was steady to shot. Of the scattered birds Sam pointed one in pine woods. Sent on, Von pointed a bevy at the edge of woods, and on the singles Sam pointed one; Von called up to back pointed one. Sent on, Von in the open pointed a single and was steady to order, and afterward made one or two points on singles, and Sam flushed one. Sent on, Von took a cast in the field and pointed a single bird well. Both dogs were not precisely loafing at this period, but they were not showing the industry they should, though Von Gull was rolling up a good score on bird work. Next Sam pointed up wind of a bevy some 60yds., whether on footscent or something else is not known. However, if he was on footscent he had ample time to locate the birds. Von pointed a single nicely. Sam pointed several times on footscent or false scent while the heat was being run, and he beat out his ground with poor judgment, though often directed by his handler. Von Gull was not so steady to shot and wing as he should be, though not breaking away from control. His point work was sound. His range and sustained industry could have been improved upon, though he displayed good, useful searching power.

TICK BOY AND MARIE'S SPORT were started at 10:28. Sport apparently flushed a bevy in a ravine and Tick made a good point on the scattered birds. The flush is presumptive, as sport was out of sight in the ravine when the birds came out, and rests on that circumstance. Tick was sent in on the scattered birds and made a point. Sent on, Sport pointed nicely a bevy in a hollow, and on the scattered birds Tick made three points and a flush, Sport two points. Sport next pointed in dense briers, and Gray cried out that he thought the point was on a possum, which caused a stampede of negroes and hasty scrambling through the painful briers to be first to win the treasure. It suddenly sprang up and ran away. It was a house cat, and joyful anticipation ended in blank disappointment. TICK pointed a bevy in corn; good work. On dry leaves in woods Tick seemed to be careless and flushed three times. Sport made a good point on a single. Tick made two finds and points on bevies and a point on a single. Both dogs ran an excellent heat, their range and pace were well sustained, conducted with good judgment, and they showed training, experience and bird sense to a pleasing degree. Tick's work was the superior, and had he been more precise in work on singles it would have been excellent.

A few brief minutes were devoted to lunch.

TONY BOY AND DELHI began at 1:00. Tony pointed a bevy in corn. Delhi pointed and was backed; probably larks, as several had flushed close by. In pines Delhi pointed a bevy and was backed. Tony next pointed, moved forward to locate better and the bevy flushed; good find, inaccurate point. On the scattered birds in pine woods Tony made two points on singles, Delhi three; then Delhi sent on, made a point on a bevy in the woods. Tony Boy had the wider range, and speed enough to cut out the work, both going fast. They covered a great area of ground in their two hours' run.

ODD SIDES AND HAROLD SKIMPOLE started at 3:04. Odd soon found and pointed a bevy in corn, Harold backed or pointed. The birds were marked down on a side hill in weeds. Sent on, the dogs went quickly to them and pointed them; then Odd pointed nicely two birds, and made a flush on a single. Sent on for another bevy, Odd found and pointed it. Harold pointed in a cornfield, nothing found; next he pointed a single. Odd drew nicely to a point on a bevy at the edge of woods. On the singles Odd pointed three times, Harold twice. Sent on, Harold pointed a bevy in pine woods; Odd backed; Harold showed a disposition to break in when the bevy flushed. Soon thereafter the heat and day's work ended.

Saturday.

There was a stormy weather appearance in the morning, the sky being solidly overcast with clouds, and there were indications of rain. A tinge of rawness was in the atmosphere, all of which was more favorable for the competition.

Second Round.

Four dogs were kept in, and this round ended the stake.

TONY BOY AND TICK BOY began at 9:09, and it was apparent a few minutes after the start that the setter was making much the stronger of a strong competition. Tony pointed a bevy, making a good find on it; Tick not backing so promptly as he should, drawing close up instead and stopping to caution. The work on the scattered birds was ragged. Each pointed, Tick moved on, roading, and the birds flushed. They were sent on to find another bevy. In open field Tony found and pointed one nicely. Sent on, Tick found and pointed a bevy in open weeds. Tony next pointed, roaded in open cornfield skilfully and by a brier run pointed a bevy; at the same time Tick had come up and pointed near by across fence, Tony having completely outworked him on this bevy. In pine woods Tick pointed twice on singles and Tony once; as Tony came up to Tick on one of his points Tony steadied to back, caught scent, feathered, drew up and joined in the point. It was claimed by many that he refused to back, but no intelligent dog backs when he catches scent. Tick flushed a bevy, and soon afterward Tony flushed a bevy also, though his birds went rather easily, seeming to be wild. In hedge Tick pointed a bevy. Each pointed single birds. Sent on, Tony found and pointed a bevy nicely, and secured another good point in woods on the scattered birds. Tick Boy's heat was inferior to his first one. Up at 10:18.

MARIE'S SPORT AND DELHI were cast off at 10:35. Sport took a cast and pointed a bevy. On some scattered birds Sport pointed, Delhi backing or pointing, and the dogs were steady to wing. On single birds Delhi made two points, Sport one. The heat was lacking in finished performance. Sport was lost some minutes during the race. Up at 11:55.

The Derby.

This stake had sixteen starters, a fairly good showing considering the unfavorable conditions affecting field trial matters; that is, the lack of the old-time support, a condition in part attributable to the hard times.

The stake had an exceptionally good lot of puppies to contest for the honors, though they were cramped in their performances by the warm weather. The temperature was high and there was the gentlest of breezes at best, and most of the time none was perceptible. The range and speed of the dogs were excellent, and the indications were that this Derby would have rated very high had the weather conditions been nearer those of fall than of the summer time.

Hurstbourne Zip added another win to his list, his success being due to his superior point and bird work, superior in showing judgment and knowledge, excelling in the qualities called "bird sense;" but withal his point work abounded with errors, and was good only as compared with that of the others; still his greater knowledge was apparent. He has fairly good range and speed, beats out his ground with judgment and is under good control.

Pinmoney, second, was the most pleasing ranger in the stake, going wide and fast in a merry manner, working faithfully to the gun and was easily controlled. She pointed some of her birds prettily and sharply, but was puppyish, therefore lacking in the mature "bird sense" of Zip, and she was better on bevies than on singles. Though a fast ranger, she uses her nose constantly, and only lost to Zip by his greater experience. She is a bitch of excellent promise, and will improve with time.

Count Gloster, third, improved steadily as the trials progressed, and was going stronger and better every way at the finish than at the start. On the score of better knowledge on bevies and singles he was superior to Pinmoney, though she far excelled him in speed and range and natural possibilities. Nevertheless, while he showed experience, his locating and pointing were far from being free from errors and were short of the opportunities offered.

In all these matters it is but what is justly due to keep in mind the unfavorable weather conditions.

Following is the order of drawing:

Hobart Ames's b., w. and t. setter bitch Guenn (Blue Ridge Mark—Lou R.), D. E. Rose, handler, with Del Monte Kennels' b. and w. pointer dog Tony Works (Tick Boy—Lulu K.), C. Barker, handler.

S. P. Jones's b., w. and t. setter dog Hurstbourne Zip (Tony Boy—Dimple II.), D. E. Rose, handler, with F. R. Hitchcock's b., w. and t. setter dog Tory Rustic (Count Gladstone IV.—Rhoda Rod), J. M. Avent, handler.

P. Lorillard, Jr.'s, b., w. and t. setter dog Count Gloster (Eugene T.—Gloster's Girl), C. Tucker, handler, with Charlottesville F. T. Kennels' b., w. and t. setter bitch Pinmoney (Count Gladstone IV.—Daisy Croft), C. E. Buckle, handler.

P. Lorillard, Jr.'s, b., w. and t. setter bitch Luta L. (Eugene T.—Beryl), C. Tucker, handler, with Charlottesville Field Trial Kennels' liv. and w. pointer bitch Rupee (Delhi—Selah), C. E. Buckle, handler.

P. Lorillard, Jr.'s, b., w. and t. setter bitch Merry Maiden (Eugene T.—Maiden Mine), C. Tucker, handler, with W. J. Love's liv. and w. pointer bitch La Dolle (Love's Kent—Fritz's Fan), N. B. Nesbitt, handler.

F. W. O'Byrne's b. and w. pointer dog Moerlein (Rip Rap—Belle of Ossian), N. B. Nesbitt, handler, with Del Monte Kennels' b. and w. pointer dog Tick's Kid (Tick Boy—Lulu K.). C. Barker handler.

Avent & Thayer's b., w. and t. settler dog Peconic (Count Gladstone IV.—Hester Phryne), J. M. Avent, handler, with F. W. O'Byrne's liv. and w. pointer dog Redskin (Love's Kent—Fritz's Fan), N. B. Nesbitt, handler.

Hobart Ames's b. and w. setter bitch Christina (Blue Ridge Mark—Lou R.), D. E. Rose, handler, with G. Ubank's b., w. and t. setter dog Rodstone (Cinch—Rod's Flounce), N. B. Nesbitt, handler.

This stake was for all setter and pointer puppies whelped on or after Jan. 1, 1895. Three prizes: First $300, second $200, third $100. First forfeit $10, additional forfeit $10, $10 to start.

Monday.

Although the start was late, there were stretches of white frost to be seen everywhere, in the shadows of the trees and in the valleys, though where the clear, bright sun had touched there were only remnants of it on the vegetation, which glistened brightly. There was hardly a breath of air stirring, and the calm prevailed throughout the whole day. The hot sun soon dissipated the coolness of the morning, and the weather became oppressively warm. There was much discomfort to man, horse and dog from the heat. The horsemen had the flushed appearance and heavy movements of summer time. Birds were difficult to find and still more difficult to point, all no doubt due to the warmth and stillness of the day. With but few exceptions all the puppies showed excellent range and speed, and the competition was so indecisive on birds that many of the dogs needed to be run again. The start was made at the Sherrill place, and the course was toward Conover, where the work of the day ended. The competition was conducted skillfully.

First Round.

GUENN AND TONY WORKS ran 1 hour and 14 minutes without finding, starting at 8:36. Guenn had a fairly good range and much the better judgment in beating out the ground, and was more diligent. They were taken up to have a chance later on birds.

HURSTBOURNE ZIP AND TORY RUSTIC were cast off at 9:53; down 51 minutes. Zip pointed nicely a bevy in open weed field and Tory backed; a good piece of work. On the scattered birds in weeds and bushes on side hill Zip pointed some birds well; good work again. Zip pointed a single which flushed wild. Working on some other marked birds in woods, Zip pointed indecisively, moved on, and a single was flushed to the rear of the point. Tory pointed a moment, moved on, and handler and dog flushed the bird, and Tory was steady to shot. Zip had much the better of the heat in all particulars.

COUNT GLOSTER AND PINMONEY started at 11. Down 46 minutes. Count had been in field work some days before the trials and ran stale, and besides he had a sore ear. Pinmoney on the other hand was a merry, free worker, skimming over the fields cheerfully and fast, ranging wide and staying out at her work constantly. She did not beat out the ground with the best of judgment at times, but this was from youth and not from a desire to pick the easy routes for comfortable running, as is too often the case. Count pointed a bevy and the birds were followed into woods. Count half-pointed on some scattered birds

and the others then flushed wild. Pinmoney pointed a single sharply and was steady to shot and wing. Next she made game in weeds, pointing and moving on, and a single flushed behind her; then the rest of the bevy, which seemingly was scattered about feeding, flushed right and left. On the scattered birds in woods Count pointed indecisively, a single flushing, then others also.

An intermission was taken for lunch.

LUTA R. AND RUPEE began at 12:55. A bevy was seen coming along a ravine from Luta's direction and was marked down in the same ravine. The dogs were worked toward the bevy and Luta pointed it. Sent on, in the open field Luta flushed a bevy and Rupee had made game near the same place, but did not locate. Rupee on the scattered birds pointed a single, moved on and unintentionally flushed it, and a moment later flushed another. Across a creek Luta pointed a single, held her point some time, then moved on and the bird flushed. In open weeds Rupee pointed nicely, but wiggled on to locate and the bird flushed. Luta, though showing puppyish ways of work, had the better judgment in beating out her ground and her point work was better and more accurate. She had a merry, pleasing manner and good range. Rupee's nose seemed to be dull, and she fell short of taking advantage of her opportunities. She too ranged wide and fast, though using but indifferent judgment.

MERRY MAIDEN AND LA DOLLE were cast off at 1:57, and ran one minute over an hour. Maiden drew to a point in weeds and briers; nothing found. Next she pointed near the edge of a hollow and a single flushed afterward some yards away. She roaded and pointed, at last securing a true point on a single. La Dolle showed little ability on birds and poor judgment in beating out her ground. She showed signs of weariness before the heat ended. Maiden was over-fond of pointing, yet she had the better of the heat.

MOERLEIN AND TICK'S KID started at 3:04. Kid pointed; nothing found. Kid pointed a single in the open and was steady to shot. In woods he pointed a single. Moerlein failed to take advantage of several opportunities, and his performance on birds was therefore poor. He had good speed, but his range was irregular and conducted with poor judgment, and there were moments when he loafed a bit. While Kid did some good work, it too fell short of the opportunities. The heat of the run had lessened and the weather conditions were more favorable during this heat.

PECONIC AND REDSKIN started at 4:12. Peconic crossed over to the opposite side hill about 200yds. away, pointed, roaded accurately, and located the bevy nicely with the assistance of his handler, and was steady to shot, a fairly skillful piece of work, and his best by far. Next he flushed a bevy in corn. On the scattered birds in woods he pointed a single nicely. Redskin had opportunities, but showed little sign of knowing of them. Peconic pointed in woods; nothing found. In crossing a fence in order to take a new course, Redskin in a few steps came across a bevy and pointed it. As a find it had no merit; as a point it was well done. He was but fairly steady to shot. The birds were marked down in open corn and followed. Peconic made a stanch point. No bird. Next Peconic drew 5 or 6yds. straight and close on a bird and stopped the instant it flushed; a stop to wing, though some thought it a point. Peconic was far better in point work, was diligent and a fair ranger. Redskin seemed to have no settled purpose in ranging, and was sloppy on singles. Up at 4:55.

CHRISTINA AND RODSTONE ran from 5 till near dark. Rodstone ran fast, but did not seem to use his nose at all. He flushed a bevy and on the scattered birds Christina made three points on singles. Christina was much the better in every way save the one matter of range.

Tuesday.

The day opened clear and pleasant, with indications of another unfavorably warm day. It was exceedingly warm till noontime, when light clouds and a haze modified the temperature and improved the conditions for work in the afternoon. Many more birds were found than on the previous day, and the character of the work was of a higher grade.

GUENN AND TONY WORKS were put down again to display their ability on birds, something they had not done in their first heat. They were started at 12:22, and though they had ample opportunities on birds they made a poor showing.

Second Round.

TICK'S KID AND LUTA L. started at 8:51. Some horsemen flushed a bevy which Kid had passed near to without recognition. In woods Kid made an inexcusable flush and behaved badly to wing. He was recklessly rank. He flushed twice more on the scattered birds and lost several opportunities to point besides. Next he pointed stanchly in the open and Luta refused to back; nothing found. The same performance in another place was repeated a few minutes later. Sent on, Kid pointed up wind of a bevy; Luta was near one which flushed, and the bevy then flushed. On the scattered birds in the woods Kid was lawless and hard to handle. Up at 9:28, with no possible chance for either in the winning.

PINMONEY AND REDSKIN ran from 9:36 to 10:11. Pinmoney pointed a bevy at the bank of a ditch, and Redskin refused to back, and though passing close by did not catch scent. On some scattered birds marked down in woods Pinmoney made three points, the pointer two points. Pinmoney was far superior in range, speed, style and finding and pointing ability. The pointer's work was ordinary.

HURSTBOURNE ZIP AND COUNT GLOSTER started at 10:19. Zip opened the work by pointing a bevy nicely, and was steady to shot. On the birds in pines Gloster pointed a single and made a point to which there was nothing found. Zip flushed a bevy in sedge down wind. Next Gloster in woods pointed a bevy, and was steady to shot. Gloster was running in decidedly better form than he was on yesterday. He flushed a bevy. On scattered birds in woods both pointed about 40yds. apart, but no bird was found. Zip next wheeled prettily to a point on a bird which flushed wild an instant afterward. Up at 11:13. The heat was a close one, though the point work was much less than the opportunities. Both ranged fairly well.

PECONIC AND CHRISTINA started at 11:21. A bevy was marked down in open weeds. Christina flushed a single, then pointed some tail birds. Sent on, Peconic made a point and two flushes, and Christina made two good points and was steady to shot. Up at 12:15. Christina was the better in every particular, though not up to winning form.

The party went to lunch.

Four were kept in the third round.

Third Round.

PINMONEY AND HURSTBOURNE ZIP started at 2:50. Pinmoney soon flushed a bevy, and Zip pointed some remaining birds. In weeds in open Zip pointed a bevy and was backed; both steady to shot. Sent on, each pointed a single. Zip made two points, apparently on footscent. Zip flushed a bevy. Pinmoney flushed a tail bird, then pointed and the bird flushed wild to one side; she next flushed a single. Zip pointed a single and next roaded to an excusable flush. He pointed a bevy by the edge of a creek. Sent on after the birds, and Pinmoney pointed them; Zip backed. Zip made three more points on birds, doing good work, and was ordered up at 3:38, and Pinmoney was sent on alone to work on some scattered birds. She flushed some and failed to score on others. Up at 3:45.

CHRISTINA AND COUNT GLOSTER started at 3:56. Count pointed on the bank of a creek about 200yds. away; nothing found. Christina in the open pointed a bevy. On the scattered birds Christina flushed one and the rest flushed close about her. In pines each pointed a single. In the open Gloster next pointed a bevy and was backed. The birds were followed. Gloster again pointed a bevy and was backed; both were steady to shot. Up at 4:49. Christina fell off in speed and range, and her point work was lacking in accuracy and diligence. Gloster was running in better form steadily.

This heat ended the stake.

The All-Age Stake.

This stake contained some excellent dogs, ones of superior abilities in respect to range and speed; no poor ones of the really poor sort, such as generally appear in every field trial. The hot weather, however, materially changed the possibilities, for the sultriness and the dry grounds required that a successful dog should have specially good endurance and physical powers of resistance to the heat, and he should possess a delicate, rare nose. If he did not possess the former he could not sustain his speed and range, or sustaining them he might become so heated and blown that he could not recognize the scent of birds; and if he did not possess the delicate nose the other powers would accomplish but little toward successful competition. It therefore was a specially difficult competition.

The winner, Odd Sides, is colored with heavy patches of liver color on one side and liver ticked on the other. He made an admirably sustained competition, ranging fairly wide at good speed, running well within his powers and exercising good judgment in beating out his ground, in drawing to his birds and in pointing them, the latter not possible to other than a nose of most delicate sensibility and training, combined with a good disposition and intelligence. He worked nicely to the gun and was easily handled.

Marie's Sport made an excellent competition, ranging well and fast, finding fairly well, but was not of the uniform ability in bird work as first-prize winner.

Tony Gale's strongest features of work were excellent speed and range and good judgment in beating out his ground, but his work on birds was not extensive. He, however, was a good third.

The dogs were drawn as follows:

D. E. Rose's (agt.) b., w. and t. setter dog Greenway (Antonio—Ruby's Girl), D. E. Rose, handler, with A. L. Shonfield's b., w. and t. setter dog Leo Noble (King Leo—Minnie T.), N. B. Nesbitt, handler.

Ashford & Odom's liv. and w. pointer dog Von Gull (Kent Elgin—Fannie V. Croxteth), D. E. Rose, handler, with H. R. Ledbetter's b., w. and t. setter dog Marie's Sport (Gleam's Sport—Marie Avent), George Gray, handler.

H. R. Edwards's b., w. and t. setter dog Harwick (Topsy Rod—Opal), George Gray, handler, with Fox & Byth's b., w. and t. setter dog Tony's Gale (Antonio—Nellie G.), J. H. Johnson, handler.

George Crocker's b., w. and t. setter dog Sam T. (Luke Roy—Bettie B.), C. Barker, handler, with W. H. Beazell's b., w. and t. setter dog Harold Skimpole (Whyte B.—Nettie Bevan), George Gray, handler.

W. A. Wimsatt's liv. and w. pointer dog Odd Sides (Lap of Pearl—Graceful II.), Luke White, handler, with Charlottesville Field Trial Kennels' b., w. and t. pointer dog Nabob (Rip Rap—Dolly D.), C. E. Buckle, handler.

Dr. G. G. Davis's Irish setter bitch Lou (Finglas—Currell Bell), E. O. Whittle, handler, with F. R. Hitchbock's liv. and w. pointer bitch Tory Jessamine (Duke of Hessen—Westminster Blonde), J. M. Avent, handler.

Fox & Blyth's b., w. and t. setter dog Forzando (Gath's Mark—Countess Rush), J. H. Johnson, handler, with Manchester Kennel Co.'s b., w. and t. setter bitch Gleam's Ruth (Count Gladstone—Gleam's Maid), N. B. Nesbitt, handler.

E. A. Burdett's b., w. and t. setter dog Cincinnatus Pride (Cincinnatus—Albert's Nellie), Frank Richards, handler, with Irving Hoagland's b., w. and t. setter bitch Ranee II. (Gladstone's Boy—Buena Vista), W. W. Boyce, handler.

This stake was for all setters and pointers that had never won a first prize in an All-Age Stake at the Philadelphia, United States or Southern trials. First prize, $300; second, $200; third, $100. Forfeit, $10; $20 additional to fill.

Wednesday.

The sun followed its course through a cloudless sky, and till afternoon there was a dead calm. A mild breeze improved the conditions after lunch. It again was a day of the summer time, and this no doubt was the cause of the ragged point work displayed by some dogs of known excellence. Nevertheless more birds were found than on preceding days, birds enough for all field trial purposes. There was a good exhibition of range and speed considering the performance as a whole, good success in finding, but imperfect exhibitions of locating and pointing were many times conspicuous.

First Round.

GREENWAY AND LEO NOBLE started at 8:57. Leo flushed a bevy in the open field. On scattered birds marked down in weeds they were worked. Leo half pointed, moved on and both pottered on footscent. Leo roaded awkwardly to a flush. Sent on, Greenway pointed a bevy in open weeds and was steady to shot. Sent on, he pointed another bevy, and Leo called up to back flushed an outlying bird and dropped to wing. Up at 9:36 Leo was a weak performer.

VON GULL AND MARIE'S SPORT started at 9:43. Von made a good find and point on a bevy in the open. The dogs were then worked on scattered birds in dense briers, in which Sport made a point, but his handler could not force his way through to flush. A single, however, flushed in the open a few yards away from the point. Von near the same place pointed a single. Von pointed a single, but Rose failed to flush. Von was ordered on; he took a small turn back to the same place and the close-lying bird was then flushed to the point. Sent on. Soon in the open Von pointed, drew on and pointed again; a few yards away in the sedge Sport was then seen on point; both were pointing the same bevy. On scattered birds in woods each made three points, and their competition was very even. Both had good range, speed and judgment, and their bird work was superior in accuracy. Up at 10:32.

HARWICK AND TONY GALE, starting at 11:14, made a fine exhibition of wide, fast, well sustained ranging, covering a great deal of ground. Harwick pointed; nothing found. Tony was lost for a few minutes in pines where some birds were flushed, but whether by handler or dog is not known. Harwick pointed near a creek; Tony joined in the subsequent roading, and both shared the point on the bevy; a good piece of work, with the advantage of the find in favor of Harwick. Each next made a single-bird point, and Harwick next flushed a single.

Further running was in abeyance till after lunch.

SAM T. AND HAROLD SKIMPOLE began at 12:52, and the warmth was oppressive. Sam pointed a bevy inaccurately in open sedge. Harold refused to back, but pointed the bevy accurately. On the scattered birds in woods Sam made two flushes, and whirled to a point on a single at the moment the bird flushed. He was very much blown and was too warm for good performance in pointing. Harold was less distressed, but did not succeed in scoring on birds. Both were swift, wide rangers, covered a great deal of ground. Up at 1:41.

ODD SIDES AND NABOB, the latter suffering from bowel trouble, started at 1:55. A gentle breeze was rising, which was refreshing and also a better condition for work. Nabob started fast and wide; Odd Sides going out to the former's lead. Odd Sides found and pointed a bevy, and Nabob backed. On the scattered birds Nabob pointed a single; next he pointed at the same instant a single flushed, and next he flushed one. Odd Sides flushed a bevy in open. On the marked birds Nabob pointed two singles. Up at 2:34. After the first few minutes Nabob gradually fell off in range and pace till at the finish he was going slow and close. Odd Sides maintained his range and pace well to the finish.

LOU AND TORY JESSAMINE began at 2:43. Lou flushed two bevies. Jessamine did not succeed in making any showing, good or bad, in respect to points or flushes on birds. Their range and speed were fairly good. Up at 3:20.

FORZANDO AND GLEAM'S RUTH commenced at 3:45. Ruth pointed a bevy; Forzando refused to back. Sent on, Forzando pointed on a side hill in woods; moved on roading, but failed to locate. A bevy was afterward flushed close by where this flush was made. Ruth in the valley at the same time pointed a bevy. Up at 4:35. Ruth ran a fair heat; Forzando made a poor showing in every way.

CINCINNATUS PRIDE AND RANEE II. were cast off at 4:52. Pride pointed a bevy and Ranee coming up backed or pointed. Nothing found. Sent on, both ranged well, Ranee the better, the latter going wider. At the same time some yards apart each pointed a distinct bevy by the side of a ditch. The heat ended about 5:33.

Thursday.

Though the previous days had all been hot, they were better for work by comparison than was this day. The morning opened warm and calm and clear, and there was a burning, sweltering heat to the sun seemingly more like August weather than that of November. Considering this unfavorable circumstance, one which affected alike the endurance, nose and performance of the dogs, the latter did well. Undoubtedly, had the weather conditions been cooler, the whole results of the trials would have been changed, for the heat affected some good dogs far more than others, and, moreover, there were not many noses which could stand the test of overheating and light scent.

Second Round.

Eight dogs were kept in, and of these Sam T. could readily have been spotted out, and if kept in Harold Skimpole, with better judgment and range, and nearly as good speed and more endurance, and Gleam's Ruth, a pleasing bitch, worked not so speedy nor wide in range as Sam, but sounder in bird work, should both have been kept in.

TONY GALE AND SAM T. started at 8:47. Sam pointed a bevy, Tony not near to back, and a moment later about 200yds. away he pointed; footscent probably; nothing found. On the scattered birds both lost opportunities, Sam flushing a single. Sam ran too hard and fast, extending himself to his utmost, so that when he came on birds he was so blown he was off his nose. Up at 9:30.

HARWICK AND ODD SIDES started at 9:42. After ranging a few minutes, Odd disappeared and was soon found stanchly pointing on a bevy; he was steady to shot. The dogs had separated, and at the same time Harwick pointed a bevy. On the scattered birds Harwick pointed a single and was backed nicely; the flushed bird passing over Odd, he broke shot mildly. Harwick pointed a single, and on another on rather bare ground in pine woods he pointed, moved on, and the bird was flushed afterward. At the same time Odd pointed, roaded, and his handler, leading, flushed the bird. Sent on, Harwick next bolted and was lost some minutes, and when found was self-hunting, all of which injured his chances. His point work lacked accuracy, he pointing too often without satisfactory results. Odd Sides's work was strong in all details, though not brilliant. Up at 10:45.

VON GULL AND CINCINNATUS PRIDE began at 10:05. Von pointed; nothing found. Pride pointed a bevy in a cornfield. Von flushed a single down wind excusably. Next he pointed twice on scattered birds in woods; Pride pointed once, all of which for both was a very good bit of work. In open Pride pointed, then moved on, roading, and flushed several birds. Up at 11:33. Von fell off in range and was going at a more comfortable rate of

speed, though not loafing. Pride was industrious, but did not maintain a uniform range and was going but fairly fast. The sun was shining with burning intensity, and while it was uncomfortable to the horsemen it must have been still more trying to the dogs, running as they did in the grass and cover near the ground.

MARIE'S SPORT AND RANEE began at 11:47. Sport by good searching found and pointed two bevies nicely—a most creditable performance in the severe midday weather. His range, speed and endurance were superior. Ranee ranged wide and fast, maintaining her search well, but seemed to be unsuccessful in finding. In open weeds a bevy was seen to flush near where she was at the time, but whether or not she was the cause of the flush no one could tell. The heat ended at 12:35, and the party then went to lunch.

Third Round.

TONY GALE AND HARWICK were cast off at 2:12. Tony made a good point on a bevy in a cornfield and behaved well to shot and wing. Both ranged well, Tony the better. Harwick worked badly to the gun, being out of sight too much and not beating out his ground with sufficient reference to his handler. Up at 3:03.

MARIE'S SPORT AND ODD SIDES were started at 3:12 to run for first and second places. Odd pointed a bevy and was backed by Sport, then moved on to locate; both joined in the roading and both pointed, though the credit of the find clearly belonged to the pointer. On the scattered birds Odd pointed one nicely, and excusably flushed another which he had pointed a moment before, but was cautiously trying to locate better. Sent on, Odd pointed nicely an outlying single of a bevy, and all the birds flushed wild to the flush of the single. At the same time Sport was on the trail and pointed 20 or 30yds. away. Odd made another good point on a single, and the heat soon thereafter ended. Up at 3:54. Sport was going better at the finish than was the pointer, but the latter had thoroughly outworked him in locating and pointing birds.

SAM T. AND CINCINNATUS PRIDE were cast off at 3:59, though it was difficult to perceive the drift of the judge's purpose in running them further, as they had no chance in the money. A bevy was seen to flush, but the cause was unknown, both dogs being out of sight at the time. Both behaved badly on the scattered birds, each flushing twice and each pointing presumably on footscent. Both were blown too much for point work. Sam ran too fast for his nose, he being much blown from the exertion.

VON GULL AND RANEE began at 4:26. Down 25 minutes. Ranee again ranged well, but she had no success in finding. Von Gull worked diligently within a limited range, though making it easy for himself by slacking his speed.

This heat ended the stake. B. WATERS.

THE INTERNATIONAL TRIALS.

CHATHAM, Ont., Nov. 20.—The season of 1896 has thus far been one of disappointments in field trial matters, the entries running very light and the attendance small. In these latter points alone can it be said that the seventh annual meet of the International Field Trials Club, of Chatham, Ont., follows the trend of dog matters for the year. The entry might have been larger, but it could hardly have been better, and the same should be said of the attendance. The trials as run were a success of unqualified sort, and very well worth the emulation of clubs of more pretentions. It is to be doubted if in any all-age trials of the country a higher average of performance was ever seen. There were only ten starters, but out of the ten there was not a duffer, and hardly a dog which would not be a killing bird dog. The character of the breaking was high, the handling was quiet and pleasant, and the whole spectacle of the trials was one exhibiting high-grade dogs in the act of finding birds and working to the gun. The "speed and range' fallacy seems about to die the natural death which has long been due, and while each of these dogs had all the range that should be asked, there seemed a pronounced leaning toward the more rational and practical features of dog work whose absence has been a curse to the trials and to the dogs of the country, inasmuch as it has led to false standards, false qualities and false theories of what a hunting dog should be. It would seem that we have had quite enough of that professional side of trials work which seeks to distinguish the good field trial dog from the good shooting dog, and which puts stud fees and the sale of puppies quite above the question of finding birds for shooting, which latter is the real use and purpose of hunting dogs. It would seem, to a plain man, that the proper purpose of a field trial should be not to find the dog which can run fastest for an hour, but to select out of the whole entry that dog which would be the pleasantest and most effective servant for the amateur shooter in the field. The art of judging should, in the opinion of a plain man, be that of weeding out the poor dogs, the rattle-headed dogs, the weak and foolish and unintelligent dogs, and getting at the best bird dog of the lot. This is about what the judges did at Chatham trials. They picked out the four best shooting dogs in the lot. At the close of the trials I shot over two of these dogs, and will say that better meat dogs a man never saw. And this I conceive to be the highest praise that can be given a bird dog, setter or pointer, in a field trial or outside of it.

The trials thus had a distinct and valuable amateur character, and seemed rather like a party of gentlemen out for a few days of mutual enjoyment in the field. Not the slightest thing occurred to destroy this pleasant illusion, and if all trials were run as nicely as these the dog world would be one of peace and good will. The judges, Messrs. T. Guttridge, of Chatham, and Tom Hallam, of Smithville Flats, N. Y., did their work carefully and well, hurrying none and slighting none. They gave each brace a chance in the open and in bevy finding, and then a trial on the singles, and left nothing to guesswork. The result of their conscientious and careful efforts was satisfactory to all, and not a murmur was heard. There was a unanimous belief that they got out the four best dogs, and the only difference of opinion was in regard to their award of first and second. Some thought that on the showing of work done Cleopatra, Mr. Wells's game little bitch, should have had first, and Dash Antonio second. A careful review of the runnings inclines me to this belief, for the scale of points for the brilliant little one is clearly larger, and her heat of Thursday morning was far and away the best of the trials. I am openly prejudiced against so small a dog, however, and our prejudices blind us in spite of all. It was very likely a personal admiration for the size and "sand" and determined courage of the dog Dash Antonio which led me to overlook the mistakes he made—which latter should be laid rather to a faulty training than to the dog himself. He is so headstrong and stubborn—traits which I like in a dog—that his handler has had to keep him down a great deal, or in the attempt to steady him has made him over cautious. The fault of false pointing, or of not going directly on to his birds, is a serious one in a bird dog. I believe we should attribute to old John Davidson the wise remark, "I have often killed birds over a flush, but I never have killed one over a false point." Devoid of charitable extenuations, Dash Antonio did some rank false pointing. Yet I should rather own him for a shooting dog, day in and day out the year round, and in all sorts of weather and conditions, than any dog at the trials, and therefore the decision of the judges jumped well with my prejudices, though one must admit it did not tally with the record of the work done here. A short time before the trials Dash Antonio was badly bitten in the foreleg by an angry sow, and he ran a cripple, but had abundant courage to go. This quality is all too rare in the latter-day setter, and it should be recognized in common sense if not in the rules, even though we be unable to logically connect false pointing with a sore leg.

Mr. Bangham, of Windsor, Ont., the owner of Dash Antonio, Lock, and the gallant puppy Millbrook, is an accession of the most valuable sort to any club. He is the type of a quiet and pleasant sportsman, able to accept either a victory or a defeat. Mr. W. B. Wells, the mainstay of the International Club, was of course on hand all the time. He is a good wheel horse to have, and most of the success of the meet depends upon his enthusiasm, his care for details and his thorough knowledge and belief in good bird dogs. Mr. Wells trains and handles his own dogs, and does both well. The only criticism which could possibly be offered upon his handling is that his legs seemed about 3ft. too long for the majority of the field party who followed him as he strode over the country. Mr. Wells never notices a log or a fence, and braided cornstalks are to him a joy and pleasure. A practical sportsman and the best shot of his town, Mr. Wells is not only an owner and fancier of setters, but also a user of them. He is a consistent shooter, and nearly always has a bit of game on hand in season. On Monday evening Mr. Wells handsomely entertained the field party and other friends to the number of twenty-five at a game dinner in town, which was a very pleasant affair and one much appreciated.

The trials were run off on grounds near Mitchell's Bay, about sixteen miles from Chatham, the party stopping at the post office, store and hotel of Mr. C. W. Raymond, who made all comfortable. This was far better than a long ride in and out daily, though it cut down the attendance of spectators somewhat. The field party, all of whom followed the good, sturdy, Canadian fashion of going on foot, numbered in all from fifteen to twenty-five, among whom one noticed besides the gentlemen above mentioned: Messrs. Chas. Allen, of Bothwell; Jos. Spracklin and son, of Sandwich (the latter handling, as was also James McGregor, of London,); Chas. Stone, of Toronto; Geo. Kime, Alphonso Wells and Dr. J. Kime, of Chatham. Mr. T. G. Davey, of London, was of course in the proceedings at every stage, for this club is with him a home institution and bound to receive his loyal support. One regrets to state that Tommy this year blinked a bit of the walking, and sneaked off home after his own dogs were done with their running.

The weather was suitable and birds quite numerous enough for all purposes. It was matter of general comment that everything was extraordinarily satisfactory and pleasant throughout. The result of this fall's meeting cannot fail to have beneficial effect for the club next year. Nor is it a negative significance which should be attached to this season's meet of the International Club. It has distinctly a character of positive interest. This club is working on the right lines. It is time that field trials ceased in the persistent effort to find the wrong dog, and followed the example of the semi-amateur international organization, which sought to find the right dog, namely, one which should be a practical day-to-day shooting dog, suitable for the service of a gentleman sportsman and not for the purposes of a dog merchant. Such a type should naturally have traits and constitution to transmit to its offspring, and its offspring should sell on this account, not on account of the meretricious and fortuitous circumstance of a winning in an hour's race of ill-directed effort. The winners of the Chatham contests were practical shooting dogs, and to repeat, there can be no higher praise adduced in their favor or in favor of the club which bred and trained and ran and selected them.

Tuesday—International Derby.

Of the twelve nominations there were four starters, drawn as follows:

Mr. S. Holmes's (Chatham) l. and w. pointer dog Spotted Star (Lord Graphic Star—Spotted Girl) with Mr. R. Bangham's (Windsor) b., w. and t. English setter dog Milbrook (Dash Antonio—Patty).

Mr. T. G. Davey's (London) b. and w. pointer dog Joe (Plain Sam—Beppo's Mollie) with Mr. H. Marshall Graydon's (London) b., w. and t. English setter bitch Heather Bloom (Dash Antonio—Bly).

Very mild and pleasant weather marked the opening day of the trials, and it was a pleasure to be afield. The party walked out from Mr. Raymond's hotel at Mitchell's Bay, and needed to go only a mile or so before work was begun. Birds were abundant (seven bevies being found), and the country proved in every way suitable and pleasant for field trial purposes. The Derby entry was not imposing in numbers, but included good timber, the work of the nine-months' puppy Milbrook being of exceeding high class for a dog so young. Mr. Bangham could not ask so youthful a dog to win first, but if the young 'un comes on as fast for the next year he will prove dangerous company for his sire, Dash Antonio. Moreover, he is a very handsome puppy, with great promise for his mature appearance. The first brace down were:

SPOTTED STAR—HEATHER BLOOM.—The latter was handled by Joe Spracklin. She proved faster and better in range. Star soon slowed up and came to heel. Heather flushed a partridge a couple of times and then flushed a bevy of quail. She flushed a single and failed to score several points which were natural. Down 35 minutes.

MILBROOK—JOE.—Spracklin handled Milbrook, J. McGregor handled Joe. Tried on stubble. In cover Joe put up a partridge. At a creek he pointed a single. He pointed again, but no bird could be found. On a weed field he pointed footscent of a bevy. Milbrook came up, flushed and chased. Milbrook broke after a single. Milbrook in range and speed and quality of action astonished all through a heat of over one hour. His bird work was of course crude, as he was still a puppy and short of experience.

JOE—HEATHER BLOOM.—They were tried out over stubble, and drew to a hedge row. Joe got a bevy point, and later made two single points and two flushes. Heather Bloom could not handle her singles and was scored several flushes. Down 30 minutes.

MILBROOK—HEATHER BLOOM.—Several fields blank, and at length Milbrook pointed in the corner of a cornfield. He left his point, went back, then returned, and roaded on to a bevy point. Heather Bloom seemed deficient in nose. Down about 25 minutes.

The judges announced their decision to be: Joe first, Milbrook second, Heather Bloom third, Spotted Star fourth.

Joe is of fair range, a fair bird finder and a useful puppy. Milbrook showed phenomenal determination and dash, and has a good though uneducated nose.

Wednesday—The International All-Age.

Mr. H. Marshall Graydon's (London) b., w. and t. English setter bitch Misfortune (Cincinnatus—Canadian Queen) with Messrs. W. B. Wells and A. Wells's (Chatham) b., w. and t. English setter bitch Daphne (Toledo Blade—Cambriana).

Mr. R. Bangham's (Windsor) b., w. and t. English setter dog Dash Antonio (Antonio—Lady Lucifer) with Mr. W. B. Wells's (Chatham) b., w. and t. English setter bitch Cleopatra (Mingo II.—Cambriana).

Mr. W. B. Wells's (Chatham) b., w. and t. English setter dog Luke (Toledo Blade—Cambriana) with Mr. T. G. Davey's (London) blue belton English setter dog Brighton Dick (Brighton Tobe—Brighton Maud).

Mr. R. Bangham's (Windsor) b., w. and t. English setter dog Lock (Locksley—Liddersdale) with Mr. T. G. Davey's (London) l. and w. pointer bitch Lucy (Ridgeway Faust—Peggy).

Mr. W. B. Wells's (Chatham) b., w. and t. English setter bitch Iris (White B.—Luna) with Mr. T. C. Stegman's (Toronto) b., w. and t. English setter bitch Maud (Banker—Belle).

The weather on Wednesday, the first day of the running in this stake, was extraordinarily warm for the season, indeed almost oppressively muggy, so that man and dog were somewhat distressed with the going. As before, the party walked afield from Raymond's place and got to work at 9 A. M. The first down were:

MISFORTUNE—DAPHNE.—The former was handled by Spracklin. Mr. Wells, of course, handled his own dog, and also of course kept the field party in a free perspiration in following his slashing walk. Both dogs showed abundant range and both were under good control. Daphne needed the less handling, and went about her work in an independent and experienced style, seeming a level-headed and steady field dog, of not so much style as reliability. The brace had 30 minutes blank, and were then led 10 minutes over to better country. On a naked field Daphne pointed, Misfortune backing nicely, but the birds had left. In the bush Daphne made a good bevy point at a brush pile, Misfortune backing or pointing irresolutely and suffering in the comparison in bird work. Both steady to wing. On the singles Daphne was first to stop, but was hurried on, the birds having scattered over dry leaves. Misfortune could not establish a point, and indeed both dogs might have done better here, though they were given too little time to work out the puzzle. Daphne pointed after they were ordered up. Down 1 hour and 8 minutes.

DASH ANTONIO—CLEOPATRA.—The former was handled by Spracklin. Mr. Wells handled Cleopatra. They were tried out on stubble, and both showed abundant range and speed. Dash showed a wide and independent range with a head of his own, and Cleopatra evinced the sense of the true bird dog. Hunting diligently at the edge of a thicket, Cleopatra was making game when Dash, fully 300yds. away, was casting over an open meadow toward a bit of bush. While still away from the fence he caught scent and worked rapidly up to a bevy point. Spracklin fired and he was steady. Dash was now brought over to Cleopatra and at once began stopping and roading in tall weeds, followed and cautioned by Spracklin. Not establishing a point, he was cast back, as the birds were evidently running. At this moment Mr. Wells fired from a point in the bush, and Dash dropped to the shot. Meantime Cleopatra had roaded rapidly 75yds. down wind and had established her point on the bevy in a very businesslike way, Dash having stopped at this back scent. It was at this bevy rise that Mr. Wells had fired, some 80yds. from Dash. While Dash had showed great range and sagacity on bevy work, he lost by comparison in the work on running singles, seeming if anything over cautious or overtrained, perhaps the latter. On the singles Dash pointed, probably on footscent, but the bird went out. Further on in open wood Dash pointed again, but no bird was found. For a third time he pointed firmly, but no bird could be materialized. Cleopatra also stopped, but went on, then pointed firmly at a brush heap, but no bird was put up. On these running singles neither dog got much glory. They were down 50 minutes. Cleopatra kept to her work, but seemed distressed. One could not avoid admiring the courage of Dash, who ran without paying attention to his crippled foreleg, which was in bandages.

LUKE—BRIGHTON DICK.—Mr. Wells handled Luke, Mr. Davey Dick. The judges put them on stubble and both showed range and independence enough, Luke under better control. As they crossed stubble and ragweed, Luke put up a bird just as he jumped into a bevy point. Dick was aside, but dropped to wing. At a ditch, both roaded. Dick came up and jumped into a point just as a bevy went up, all the judges and handlers being close in a bunch. On the singles, Luke pointed and moved on to locate, two birds going out. Dick pointed and moved on at command, and a bird rose. Luke pointed and moved on, and Dick did also, locating a bird which was put up in the bush. Dick was now plainly growing wild and was out of control, his handler using whistle and voice very much. Luke made game and recognized his bird, but did not stiffen, though the wind favored him. At the rise, Mr. Wells fired; both steady, Luke dropping. Dick flushed a bird at a log as he sprang over it. This was on leaves,

and neither dog was too brilliant. Dick stopped and moved on, and again did so, but not pointing. At a fence, where part of the earlier bevy had gone down, four birds went up, disturbed as the party got over the fence. The dogs were hardly at fault here, and both were steady. Along the fence Mr. Davey called a point for his dog, which was at a distance. The judges demurred, and he asked, "Do you want me to go and put the bird up?" This caused a laugh, for it was pretty plain to all that there was no bird there. He whistled hard for the dog, which came back, no bird being found. Down 1 hour and 3 minutes. This heat was by no means a startling one. Luke showed himself what he has long been known to be—a consistent shooting dog, of regular quality, always up to himself. Dick was said to have been a grand dog last year, and he went in with many admirers this year; but candor compels one to say he ran a rotten heat to-day. He was wild and intractable, and quite out of control, stubborn, hard-headed, and not productive of results when allowed his own way of working.

A good lunch was served in the woods by Mr. Raymond at noon, and at 1:21 P. M. the next brace was put down.

LUCY—LOCK.—Mr. Davey handled Lucy, and Joe Spracklin Lock. Both dogs showed speed, independence and obedience in the open. At a hedge row Lock made a bevy point, Lucy rose too steady to wing as she came running up, possibly flushing. In a dense thicket Lock pointed and Lucy came up. Just as she was about to stop her handler called to her to steady her, and she, so to speak, blinked her back, falling to the rear some yards and stopping, not with much quality of positiveness. On the stubble Lock ranged out and pointed a single, Lucy not seeing him in the tall weeds. The party now had a long walk. At a ditch and fence Lock drew up on a running bevy and stopped, but Lucy drew ahead and got the bevy. She had passed the bevy twice within 12ft. with the wind in her favor, and though she had made game there once, had run 100yds. beyond. Lock had really done better, for he showed that he would have located his bevy at the first draw along this likely cover. When Lucy was called back to try for a back she found the bevy, which was a few yards ahead of Lock. Thus Lucy technically got a point, though she had showed far less bird sense and generalship than Lock. Brought around to back, Lock did so handsomely, his tail trembling. The bevy was large and strong. The brace were taken up. Down 1 hour 20 minutes.

IRIS—MAUD.—Mr. Wells handled Iris, J. McGregor handling Maud. These dogs made the most unsatisfactory heat of the day. They showed the much-vaunted field trial quality of speed, but this without method or intelligence, Maud evidently racing about without any understanding of her duty. She was three years old before she ever saw a bird and can hardly be blamed for a lack of education. The judges followed their previous wise course and put the dogs first on the open, wishing each brace to find their own bevy. The dogs were led three-fourths of a mile, and then had a long and tedious run. Finally on a strip of ragweed Iris pointed. Mr. Wells ran up and Iris moved on, trailing badly. Maud meantime located these birds, which had gathered into a bevy. McGregor ran up. Maud was evidently scared, but McGregor walked in with her and the bevy went up. Iris was far behind and still roading as the birds went up. The singles went down in an open meadow, and though the footmen flushed several here, the handlers wisely declined to risk their dogs on such dangerous cover, and so passed on. No work of merit was done, though both dogs seemed to get trace of a bevy which was walked up on some stubble a quarter of a mile further on. Down 1 hour 20 minutes. This was the poorest work yet seen, and it was evident that neither of these would get further on in the runnings. Their heat ended the first series.

Second Series.

LUKE—DASH ANTONIO.—It was 4:12 when they went down, and there was a rapid tramp till dusk. They ran a bit on stubble, but no work was had of decisive quality till they crossed into a bare field near a barnyard. Here, on a plain, hard road, Dash came to a magnificent, stylish point, with his head high up. Luke, who was distant 50yds. or so, ran toward him a few yards and then stood in an equally stylish back, both dogs facing each other. It made a very pretty field scene, but alas! there was no bird to make the necessary character, and it was forced upon the judges that Dash was probably pointing the foot-scent of barnyard fowls, though not even one of these could be found. The dog seemed far too quick to stop at scent, and seemed weak here, though strong in every other quality. Moving on across slashing and corn some way further on, Luke pointed at the edge of corn. He here displayed a quality useful in actual shooting, though perhaps not fully appreciated in field trial work. He knew the birds were running, and so he left his point and ran around to head them off, as he does in hunting partridges, on which bird he is accounted a grand performer. As Luke thus cast to the left into the corn to pick up his trail further on, Dash came up and pointed in the ditch near the fence, the wind being against him and in favor of Luke, who now ran in a step or so from the left, caught the scent and fell into a grand point. Spracklin came up, put his hand on the dog after the English fashion of training, and then put up the bevy. After this there was a long walk over slash and meadow and dry marsh. In a little ditch both dogs divided the honor of a bevy point, both being a trifle out of view at the time. At 5:10 they were taken up and the party went home. They were down an hour and had a hard run, but both kept up their range perfectly. Luke is a muscular and well-seasoned dog of much field work, and is always good on his legs and even in his work. Dash did not let down in his work on account of his bad leg, and his pluck won him much admiration. The day's running throughout had averaged of very high character indeed, and rarely indeed will one find together ten dogs of equal quality with these. Especially noticeable was the perfection of breaking shown. The handling was pleasingly quiet and clean, and the day was quite free of the noisy and disagreeable features too often attendant upon running fractious and ill-broken dogs in field trials. It was a model trials day, and on the record of it alone the club might feel very proud. Birds were abundant, eleven bevies being found.

Thursday.

A sharp change in the weather took place during the night, and Thursday morning dawned sharp and cold. The weather was clear and not stormy, however, and really better for dogs and men than the warmer weather of the preceding day. Running was resumed in the second series of the All-Age Stakes, the first brace going down at 9:10 A. M.

BRIGHTON DICK—LOCK.—Cast loose on a small stubble, both went out well, and Lock soon located birds, pointing a small bevy at a brushy fence. Dick backed, dropping flat, both dogs steady to wing and to shot. Dick now broke out again and continued stubborn, handling very badly. On a few of these single birds which were on leaves in the open bush, Lock flushed a bird and dropped to wing, two other birds going up as he faintly and confusedly acknowledged them near his nose. As these birds had just alighted and had probably not run, it is likely they gave out little scent. A long walk followed this. At a ditch Dick pointed, head down and squatting, possibly on fur. Lock backed and moved up. Dick left his point. No bird was found. Further on a bit of tall ragweed was met, where both dogs made game, Dick the earlier, he trailing along the hedge. Lock hit the bevy scent better, pointed and moved up. Cautioned back by Spracklin, Dick then left the hedge and came out into the weeds near Lock, where he also pointed. It is possibly a fault of Spracklin's handling, if he will allow the suggestion, that he seems not to have confidence sufficient in his dogs to turn them loose and let them go to their birds themselves. He fairly called Lock away from his point, Lock turning back and backing him or pointing, his tail quivering and he plainly feeling the birds. Both dogs were now in the bevy, which went up about then to Spracklin's flush. The dogs here did quite as skillful work as their handlers. Moving on, at a fence, Mr. Davey claimed a point for Dick. Lock backed. Dick moved on. Lock jumped the fence and thus flushed the bird. The dogs were here taken up. Down 1 hour. Not a brilliant heat, and Lock made a less favorable impression than on the day previous. Dick was very much of a disappointment, and seemed out of training. This may be due to the fact that he has been used by his owner part of the time and part of the time left with his trainer.

CLEOPATRA—DAPHNE.—Mr. Wells handled both his dogs, if they could be said to need handling. The two had hunted together ahead of him often before, and they gave the field a touch of practical bird work all too foreign to many field trials, where it seems a demerit for a dog to be guilty of finding and pointing a bird to the gun. This was by all means the banner heat of the entire trials, and rarely indeed at any trials would one see it equaled by any dogs whatsoever. A curious reversal of form was apparent as between these dogs. On the day previous Daphne had shown much to one's fancy, and Cleopatra had not made so favorable an impression. To-day the reverse was the case. Daphne continued at about her consistent level, whereas Cleopatra outclassed her earlier performance and was fairly brilliant, showing in speed, style, dash and positiveness all that a field trial dog should be and all that a shooting dog also should be. On any rational basis the standard should be the same for both, and history will yet see it so.

Both dogs went away merrily over the open stubble, their work being both brisk and intelligent. On the stubble both made game. Cleopatra pointed and Daphne backed. Cleopatra worked up cautiously and Mr. Wells put up the bevy, shot and killed; both dogs steady. On the singles along a hedge Cleopatra got the first point, jumping into it in a most handsome, stylish manner, Daphne again backing when she came up. The bird was walked up on the other side near Daphne, who was steady to order. Daphne got the next point, and three birds were walked up. Cleopatra pointed again further down the hedge, and a bird was found, both dogs remaining steady. This keen single-bird work was the snappiest and best seen so far in the trials, and the party grew enthusiastic over it Cleopatra was the favorite, owing to her snappier and more stylish work.

The dogs now cast wide in the stubble and were lost to sight in the tall ragweed. Mr. Wells hunted for them in the wrong direction and it was some minutes before the judge found them. Cleopatra was standing rigid in as handsome a point as one ever saw, old Daphne backing her mate solidly and sturdily, sitting down in the stubble some yards away in her characteristic fashion. As the dogs had stood thus for some time, the birds had run, but Cleopatra now rapidly cast off to the right. Daphne was first to point, but not snappily, Cleopatra backing. In a thicket near by both pointed, face to face, on a bevy under a grapevine, making a pretty bit of work of it. They were then tried out further on the open to see how they would stand a longer run, but their range remained unbroken. At a grassy ditch Daphne pointed, sitting on her haunches with her head high, as usual. Cleopatra backed, trembling. They stood there for 5 minutes while the judges and Mr. Wells were talking. The reporters and the rest of the footmen were back of a hedge and were called up to see the dogs. Mr. Wells then put up the birds, shot and killed, both dogs perfectly steady. The judges now took the dogs up, they having been down 50 minutes. The heat was a grand one, high class in each particular, more especially for Cleopatra, whose stock was now at premium.

Third Series.

DASH ANTONIO—BRIGHTON DICK.—These cast into the bush and made game, but materialized nothing. They were put on leash, and while walking along a field road near a grassy ditch the party walked into a big bevy, which scattered well over adjacent stubble and were followed. Dick again needed abundant handling. On the singles Dash got the first point in a hedge row, Dick at one side. The latter came galloping by, turned his head and glanced at Dash, not 10ft. away, but declined to honor his point, and going on after one of his own. Spracklin put the bird up and killed it, Dash steady. Further on Dick made game, but moved up, putting up his bird. Dash now came over into the stubble and pointed and both stood pointing. Dash moved off a bit and dropped in the middle of a bunch of birds, five going out, close about him, Dick being then beyond and ahead of the birds, and none too sober and steady. Dash had located the birds, it is true, but the work of neither dog was brilliant here, and both suffered in comparison with the work done in the heat just previous. Down 25 minutes.

DASH ANTONIO—CLEOPATRA.—The judges were now evidently nearing a decision, for they asked for Dash Antonio for the fourth time and Cleopatra for the third. They were cast off in the stubble last mentioned, and Dash shrewdly went back to the old trail and pointed, and Spracklin put up the bird. On this point Dash was none too positive and steady. Moving on, at a fence Dash came to a decided point, Spracklin again cautioning him. He moved around and again came to an irresolute point. There may have been birds about, yet Cleopatra came bustling by, got no scent, and declined to back so uncertain a point. No bird could be found. It was further made clear that false pointing was Dash's worst fault, and again it seemed that this was the fault also of a too restraining system of handling. The dog is naturally a slashing, self-confident fellow, and has a good nose, and if let alone would soon get in the habit of going to his birds and pointing only when he did get to them.

No bird work was had by these of consequence, though birds were evidently running along the hedge. Cleopatra took the trail and swiftly roaded into a point. Dash backed when brought up, but the bird had apparently run on. Cleopatra pointed again further along the hedge, but no bird was put up, the dogs being hurried on. They were soon ordered up, being down only 10 minutes. As they were led away in leash they both tugged at their collars, whirled and pointed in the stubble near the hedge, Dash thus pointing twice.

LUKE—LOCK.—These had a long, hard go, and for a long time without results. It was clear they were down for a decision as to third place, but they made an even enough showing. Luke got a faint scent at a fence and stopped, Lock backing, but no bird was found. An hour of blank work over fields and slashing followed, until finally in a heavy slashing Luke came to a point at a brush heap, pointing in the singular fashion of holding up one hindleg, and so standing some moments. Lock backed, and though no bird could be found at once Luke moved on, again pointed, and Mr. Wells put up a bevy at a log within 20yds. of the first point. Mr. Wells shot, feathering a bird; both dogs steady. A few minutes' time was given the birds to run, and the dogs were taken on into the slashing where the birds had been marked down. They did little enough here. Luke flushed a bird at a log, it going out behind him. Another bird went up wild, put up by footmen. Lock pointed a bird at a brush pile, where it had been marked down on a short flight; probably the bird crippled by Mr. Wells. Luke also stopped here, but was called away. The bird was not gotten out of the brush heap, but was heard chirping inside the heap. Down 1 hour and 22 minutes.

The judges now announced their decision: Dash Antonio first, Cleopatra second, Luke and Lock a divided third.

Dash Antonio, first (Antonio—Lady Lucifer), is a grand, up-standing dog, a belton, marked black, white and tan, weighing 52lbs. He is of a heavier, larger-framed type than is ordinary to-day among English setters, and shows in head and frame the determined, courageous, sturdy dog he is. It is very likely that had most of his competitors suffered the injury he did they would have quit in the first heat instead of running through four heats at undiminished speed. When the bandages were taken from his leg it was seen that a deep hole was in the upper part of the forearm muscle, the ankle joint was much puffed and swollen, one dew claw was bitten loose and a toe nail was loose, while above the ankle-joint a deep, unhealed wound was sunk into the leg. He showed the highly desirable quality of grit in running so well when thus crippled. Mr. Bangham may well be proud of him.

Cleopatra, second (Mingo II.—Cambriana), is the reverse in type of Dash Antonio. She is a highly modern vest-pocket English setter, weighing less than 30lbs. (27lbs. when last weighed) and is a bundle of wire and nerve. Not always the same, when she is at her best she is a stinger, and well nigh enough to convert one to the belief that no dog can be good unless exactly of her weight and sort. She is extraordinarily stylish and snappy in her work.

Luke, divided third (Toledo Blade—Cambriana), is a big little dog, high-headed and very muscular, a day-to-day dog which one can depend upon. In color he runs more to black than most English setters. He stands inspection as a running machine, and trial as a shooting dog. He would weigh about 40lbs.

Lock, divided third (Locksley—Liddersdale), is a handsome fellow, well furnished and of about 45 to 47lbs. weight. He is of good, free action and of endurance. We should hear further of him.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

POINTS AND FLUSHES.

The E. F. T. C. meeting closed with a smoker on Saturday night last, the secretary, Mr. S. C. Bradley, Prof. Edm. H. Osthaus and Mr. Theo. Sturgis doing the honors. Nearly all the handlers were present and were unanimous in their satisfaction with the decisions, and bestowed much praise on the skill and industry of the judges. Mr. Bradley made twenty-one speeches of introduction, besides others in spare moments, and Dr. Luke White was but a speech or two short of a tie with him. It was one of the pleasantest gatherings ever held at a field trial and did much to promote a good understanding between all present, and also a general good-fellowship.

Tony Boy and Tick Boy never ran so well in their public competitions before. Both are greatly improved dogs.

Messrs. P. Lorillard, Jr., and F. R. Hitchcock left Newton on Friday night for a shoot on Mr. Lorillard's preserve at High Point, N. C.

Mr. W. S. Bell, Pittsburg, arrived on Saturday night, and Mr. Jos. H. Dew, of Tennessee, arrived on Sunday morning, the 22d inst., on time for their duties as judges of the U. S. F. T. C. trials. There will need to be a third judge engaged to fill the place of Mr. A. M. Young, Manchester, Tenn.

Mr. A. C. Waddell, manager of the Del Monte Kennels, the oldest of field trial men, was an interested spectator throughout the trials. He was at the first field trial held in America and was actively engaged in promoting and managing it.

CENTRAL BEAGLE TRIALS.

SHARPSBURG, Pa.—The inaugural field trials of the Central Beagle Club were held at Waynesburg, Pa., beginning Tuesday, Nov. 10, and continuing until Thursday, Nov. 12.

The best of harmony reigned from first to last; not a word of dissatisfaction was heard. The hunting ground was very good; but it was hard to follow the dogs and handlers on account of the hills, which made it difficult for the judges.

The judges were: Dr. W. E. Johnston, of Etna, and Harry Lewis, of McKeesport. The decisions were well received, though the task was a difficult one. The number was not so large, but there was not a poor beagle started. Most of the winners are already known from previous records made at other trials.

Among those present and interested in the trials were: D. T. Summers, A. C. Peaterson, Dr. W. E. Johnston, Frank Golla, James McAleer, C. Klock, J. W. Simpson, Dr. J. A. Phillis, Dr. S. W. Hartt, J. A. Schaum, Theo. Bolji, H. Lewis, L. O. Seidel, J. F. Bell, J. Phillips and quite a number from Waynesburg.

At the annual meeting, Nov. 10, these new members were elected: D. T. Summers and James McAleer. It was voted that these same officers remain for the next year: Dr. S. W. Hartt, McKeesport, President; A. C. Peaterson, Homestead, Vice-President; L. O. Seidel, Sharpsburg, Secretary-Treasurer. Dr. W. E. Johnston, of Etna, was elected delegate to the A. K. C.

Tuesday was clear and cold in the early morning, with a heavy frost and some ice; it became pleasant by noon. We left the hotel at 6:30 and were on the grounds at 7:20 A. M. First on the list was the membership cup, with four entries in the 15in. All-Age class.

SAILOR—RAMROD.—Went down at 7:30. Sailor, owned by A. C. Peaterson, handled by J. F. Bell. Ramrod, owned by Dr. George Gladden, handled by J. Phillips. Sailor (run as Taylor in the National Beagle Club Trials last year, winning second in Derby class) was out of condition, lame with a sore foot and in bad shape. Both handlers urged their dogs too much to do good work and got them rattled. A rabbit was started by one of the handlers and both dogs were called to where it started. Sailor took the trail first, but both lost in a brier patch. Up at 8:10.

BIRDIE S.—DOC WELLER.—Second brace was called. Birdie S., owned by Dr. S. W. Hart, and Doc Weller, handled by owner, Frank Golla. Both done some cold trailing. Birdie S. was giving tongue on cold trails. Doc Weller would harken; took quite a time to find her out. A rabbit was started in the high weeds, and was driven to a hole. Ordered up at 9:45.

DOC WELLER—RAMROD.—Down for the second series at 9:15 in the edge of the woods. It was not long before there was a rabbit on the go. Doc Weller was doing the best trailing; both were doing some very nice work. Three rabbits were started and holed in this heat. Up at 11:05. The judges awarded the membership cup in this class to Doc Weller.

BLOSSOM—MOLLIE DEAN.—In the 13in. membership cup there were only two entries: Blossom, owned by Dr. S. W. Hart, handled by J. A. Schaum; Mollie Dean, handled by owner, L. O. Seidel. Down at 11:25. In the last run a rabbit had been caught by one of the handlers, and was let loose in the large field. Mollie Dean sighted it first and caught it. They were then cast off into a thicket, but could not find, Blossom doing the best work. Ordered up at 12:05 until after lunch; down again at 12:55 at the edge of the woods. It was very warm, and Mollie Dean was too fat and worked slow. Ordered up at 1:15. Blossom was awarded the cup.

The Derby.

MCKINLEY—MADGE were called, Class B, 13in. and under. McKinley, owned by A. C. Peterson, handled by J. F. Bell, and Madge, owned by Dr. S. W. Hartt, handled by J. A. Schaum, were only put in by the owners to fill the class, and they did some great work considering that they were only a little over six months old. Down at 1:17. McKinley took the trail and carried it like a dog twice his age. There is surely a great future for this dog; his work was phenomenal; one could hardly believe that a puppy could do the work he did. They were ordered up at 1:30. McKinley first, Madge second. Class G was called for bassets and dachshunde.

JAY S.—BISMARCK K.—Jay S., handled by owner, L. O. Seidel; Bismarck K., handled by owner, C. Klock. Put down in the edge of the woods. A rabbit was started by a spectator, and dogs called up to where it started. After a few minutes of careful searching by both dogs they took the trail. Jay S. being the speedier of the two, drove the rabbit to a loss in a dense brier patch. Moving on to new grounds, it was very difficult to find game, and the judges were much confused by terms and words used by the handlers, as "*Such, geh, Bismarck, such, such.*" The judges, believing that the handlers were taking undue advantage of each other, ordered the dogs up at 2:20, awarding the heat to Jay S. It was explained through an interpreter afterward that the terms are used by handlers of these hounds in their native land. This brace created quite a favorable impression, and no doubt next year's meet will have many entries of this gamy little dog.

The Derby—15 to 13in.

BELLE S.—LADY.—Belle S., handled by owner, D. T. Summers, and Lady, handled by owner, Theo. Bolji, went down at 2:30. A rabbit was soon started that proved a runner. Belle S. at once took the lead at a fast clip and worked the turns quickly without loss of time, driving the rabbit far from its feeding ground. Lady was doing very nice work, but the pace was fast and seemed to surprise her at first. Judges and handlers were run to a standstill following this pair. At last bunny threw them off a while in a large tree top. Lady pushed him out, and Belle S. being some distance away was only able to catch up with Lady when she had driven the rabbit to earth in full view of the judges, handlers and spectators. This was decidedly the best race so far in the trials. Dogs ordered up at 3:20.

MINNIE S.—SUMMERS'S FLY.—Both handled by owner, D. T. Summers. Down at 3:25 near a weed field, where a rabbit was soon started and driven in and through this field to the woods, where a nice exhibition of trailing was seen. Fly, driving the rabbit in a large log pile, brought up to the field again. A rabbit was soon started, but good trailing was impossible, owing to the density of the grass and weeds and the number of rabbits; there seemed to the judges and handlers a dozen going at once. Dogs were ordered up at 4:20, Fly having the best of the race.

Second Series.

BELLE S.—LADY.—Owing to the superior work done in the first series, the judges decided to run them in this series for first and second places. Down at 4:30; Belle S. showed superior ability to hit off the turns. This was a pretty race, Belle S. having the best of it; up at 5:30. First prize was given to Belle S.; second to Lady; third, Summer's Fly; reserved, Minnie S.

Wednesday opened with a driving rain, but at 7:30 the clouds began breaking and a start was made for the grounds. All were anxious to see a start made in the All-Age Class C, 15 to 13in., between such well-known dogs as those drawn for the first race, as both had won honors in the National and Northwestern beagle trials.

PANIC—LUCY S.—Panic handled by owner, Jas. McAleer; Lucy S. handled by owner, D. T. Summers. This brace was cast off at edge of woods at 8:35; a rabbit was soon started by Panic. Both dogs took the trail; scent seemed to lay poor owing to the extreme dampness of the ground, and the innumerable brush piles in the vicinity prevented good trailing. Both dogs seemed rattled by the short runs of the rabbit from one brush pile to another, but bunny, at last, was driven from cover to open woods and here began a very close and exciting race. Panic settled down to business, running fast and catching the turns well, although inclined to use her eyes as well as her nose. Lucy S. was now doing better work than at the beginning, trailing fast and true. Both abandoned their jealous desire to be in front. They were ordered up at 9:55.

DOC WELLER—KITTY.—Doc Weller, handled by owner, Frank Golla. Kitty, handled by owner, James McAleer. Down at 10:05. A high wind with a little rain and snow now began, but did not last long. A rabbit was started by one of the handlers and both dogs called on. The work of both dogs on this rabbit was slow, owing to the high grass and weeds, and the game was finally driven into a log pile. Moving to the woods, another rabbit was started, which offered to those who were able to see part of it the hardest race of the trials; both dogs hit off the trail together, and from that to the end a harder killing race has not been witnessed, down through the woods on a steep hillside to a small stream. Here the rabbit turned up creek, the dogs losing no time catching the turn, and away like mad far beyond hearing distance. Both handlers and judges, who were completely outdone, took a position on a high ridge, hoping they might come back that way. After a short wait the faint and far-away sound of the hounds could be heard growing louder, faster and faster; soon the rabbit was seen coming up the slope with both dogs neck and neck, not 50ft. behind, through the fence and to the earth in a dense weed field. This was the fastest race of the meet and both dogs seemed glad that it was over. Ordered up at 11:45.

BLOSSOM—MOLLIE DEAN.—Owing to the absence of the next brace the 13in. All-Age class was substituted. Only two filled: Blossom, owned by Dr. S. W. Hartt, handled by J. A. Schaum, and Mollie Dean, handled by owner, L. O. Seidel. Down at 11:48. A rabbit was started by one of the handlers. Called up to where bunny started from, both dogs picked up the trail and carried it well, Blossom having greater speed, doing most of the leading, Mollie being too fat for fast work. The rabbit, after trying several times to throw off the dogs by running through water, was finally driven to a ground hole. Ordered up at 12:30, and the heat awarded to Blossom; Mollie Dean second.

SAILOR—BIRDIE S.—After lunch the third brace in 15in. All-Age class was called. Sailor, owned by A. C. Peaterson, handled by J. Bell; Birdie S., owned by Dr. S. W. Hartt, handled by J. A. Schaum. Down 11:26. A rabbit was started in a brier patch, and both dogs were called up by their handlers. Sailor, catching scent first, did some nice work, and had he been feeling well, and not lame, would certainly have been well up for place. Sailor did most of the leading in this race, both finally losing in a cornfield, Sailor having the best of the heat. Up at 2:29.

RAMROD—KITTY.—The bye dog Ramrod, owned by Dr. Geo. Gladden, handled by J. Bell, and Kitty, handled by owner, James McAleer, went down at 2:32. Dogs worked up to where a rabbit had been seen by a spectator. Ramrod hit off the trail at once and dove into the woods to a loss. Kitty worked carefully, and picking up the turn drove singly to cover. Moving on, another rabbit was finally driven to earth. Ordered up at 3:12.

LUCY S.—DOC WELLER.—After a conference the judges decided to run Lucy S. and Doc Weller for place. Down at 3:15. A small rabbit was soon started, but as quickly lost. Moving on for some time, a rabbit was at last started. Both dogs caught on, when another of those killing races to dogs and judges began; up through a steep wooded hillside out of hearing, so quick none could follow; back again and into a high grass field, where bunny hoped to throw them off; but it was no use. Both dogs seemed determined to do their best, although Weller was over fat and lacked work. They drove back to the woods again and into an old, unused field, in full view of all, back and forth among the whitethorn brush, and do all he could the rabbit could not throw them off; and soon he sought his city of refuge, the dogs but a few feet behind, so far exhausted that as they passed the judges and handlers Summers said, "Lucy, you haven't enough wind to bark." Ludy S. did most of the leading, reaching the hole 3 or 4ft. ahead of Weller; both too far gone to growl at each other. Dogs ordered up at 4:23. The judges then awarded Panic first, Lucy S. second, Doc Weller third, and Kitty res.

PANIC—KITTY.—In brace stakes the first down were Panic and Kitty, owned by James McAleer, handled by owner. A rabbit was soon started by Panic, and both the bitches worked well, trailing true and fast. The rabbit was soon driven to a tree, from which it was taken uninjured and started ahead of the dogs. They again caught on and the rabbit made several large circles, and after being hard pressed entered a ragweed field; but there was no escape for him there, for Panic was after him, and before he could emerge again Panic caught him. This pair of bitches can hardly be praised too much. Their work was excellent as a brace, and any man should feel proud to be their owner.

LUCY S.—BELLE S.—On Thursday the second brace was put down at 7:58; Lucy S.—Belle S., owned by D. J. Summers. This was altogether the nicest work seen; trailing was good and the rabbit ran well, almost too well, and though down only five minutes with three long chases, they holed three rabbits, marking each hole. Ordered up at 8:55.

BIRDIE S.—BLOSSOM.—Third brace, Birdie S.—Blossom, owned by Dr. S. W. Hartt, handled by J. A. Schaum. Down at 9. After quite a while a rabbit was started, Blossom doing most of the driving, and her work was creditable considering her size, and her mate, Birdie S., giving tongue at all times and places, which I think worked an injury to her running mate. Blossom finally drove the rabbit into a tree and the brace was ordered up at 10:05.

There was another brace, but owing to Sailor's condition he was not run. The judges awarded D. T. Summers first, James McAleer second.

All hats went up and three cheers were given for the judges. This ended the first field trial of the Central Beagle Club. S.

A Late Continental Entry.

INDIANAPOLIS, Ind., Nov. 20.—*Editor Forest and Stream:* I am in receipt of a communication from Mr. T. T. Ashford, of Birmingham, Ala., dated Nov. 10, asking why I had not acknowledged the receipt of and forfeit on the entry of Mr. F. W. Dunham's lemon and white pointer dog Elgin's Dash, in the Continental F. T. Club's All-Age stake, Tupelo trials, sent in Oct. 1. I also received by same mail the entry and forfeit above mentioned, the check covering forfeit being dated Oct. 1. Both envelopes bear the postmark date Nov. 16. P. T. MADISON, Sec'y-Treas.

The Bull Terrier Club Entries.

PITTSBURG, Pa., Nov. 16.—*Editor Forest and Stream:* The secretary of the Bull Terrier Club respectfully calls the attention of the secretaries of the various kennel clubs to the fact that in the event of their holding bench shows they can without prejudice to themselves accept entries from members of the Bull Terrier Club with the exception of Mr. J. O. Horne, acting president of the Bull Terrier Club, and Mr. W. D. Brereton, secretary, who have both been illegally disqualified by the advisory committee of the American Kennel Club.

The United States Field Trials.

NEWTON, N. C., Nov. 23.—*Special to Forest and Stream:* The United States Field Trial Club's Derby for setters had ten starters and was finished to-day. Winners: First, Charlottesville Kennels' Pinmoney; second, P. Lorillard's Count Gloster; third, F. R. Hitchcock's Tony Rustic. Weather raw. Competition inferior. Pointer Derby next. Judges, S. C. Bradley, W. S. Bell, Joseph H. Dew, Nashville. B. WATERS.

Wheeling.

Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is particularly desirable.

RUBBER FOR TIRES.

THE London *Evening Standard* gives some interesting statistics regarding the India rubber trade in its special bearing on the tire industry:

The cycle boom, which has given such an impetus to the rubber trade, may wax or it may wane—the former is the more likely—but the demand for India rubber will, in all probability, go on forever, like Tennyson's "Brook," only more so. Already every up-to-date cabby has his rubber-tired hansom, and in the silent time coming, when Jehu will manipulate a handle instead of driving a "gee," the motor cars and brakes and broughams will be tired with rubber—if the supply holds out. For aught we know, the twentieth century coster will hawk his vegetables from a rubber-tired motor barrow, and the trains roll along on rubber wheels. There isn't much doubt about the demand, but will the supply be equal to it?

At present the bulk of imported rubber may be called "wild." It is collected in the forest and jungles. The cultivated plantations may almost be counted on one's fingers. In Chontales, Nicaragua, there is a small one, visited by the writer in March, last year. Mexico can boast of two or three, worked by American and English companies. A species of rubber tree (Manihot) has been introduced into India and Ceylon from its South American home, but it is not being cultivated, except on a small scale. In Brazil there are said to be a few plantations, but the produce of these is a mere drop in the ocean.

The outer tube of a cycle tire may be "Mbungu" rubber, from East, Central or West Africa; "Hule," from Central America or Mexico; "Mangabeira," from Pernambuco; or it may have come from Madagascar, or Borneo, or Perak. But the inner tube is almost invariably made of the best Para rubber, obtained from various species of Hevea, in the great forests which border the river Amazon and its many branches. Brazilian rubber-gatherers go into the woods with proper utensils, comprising axes, bowls, paddles and a small stove. When a tree is discovered, circular incisions, extending from the branches to the ground, are made in the bark, and the white milk runs down the channels into a bowl at the bottom of the trunk. It is then poured over the blade of a paddle held in the smoke of the stove, when the milk coagulates and forms the black rubber of commerce. The Huleros, or rubber-gatherers of Nicaragua, generally Indians or Caribs, aim at getting rubber with as little trouble as possible. Instead of using bowls, they dig holes for the milk at the foot of the trees, and, in a happy-go-lucky Nicaragua way, leave the necessary evaporation of water for nature to perform. Consequently, rubber derived from the *Castillo elastica* in Central America is commonly mixed with grit, and is worth from 6 pence to 8 pence a pound less than Para rubber from Brazil.

It is in the systematic cultivation of rubber trees, however, that huge fortunes are to be made. The Mexican Minister to the United States calculates that each six-year-old tree will have cost 4d. for land and cultivation, and will produce, in its sixth year, 4lbs. of rubber, worth 2s. 4d. per pound. Every year, for an indefinite time, the yield increases. In Nicaragua, where the writer has made a special study of the subject, a bounty of 10 cents, native currency, is paid by the Government for every tree

planted, and land may be purchased at 5s. an acre. Each acre will bear 193 trees planted 15ft. apart. But the trees should not be tapped until the eighth year, by which time, according to the writer's calculations, they will have cost 9d. each, and will yield 5lbs. of rubber, worth 11s. 8d., or 14s., if the milk is gathered and coagulated, as in Brazil. For the sake of convenience, let us value the rubber at 2s. per pound, and see what will be the profit on a plantation of 100 acres. The land will cost £25; surveying, £20; clearing, £200; collecting seed and planting, £100; eight yearly weedings, at £40 each. £320; implements, £60; cost of living for eight years, at £50 per annum —ample in Nicaragua—£400; gathering the eighth year's crop, £300; total, £1,425.

Now for the profit. Government bounty on 19,300 trees, £252; produce at 2s. per pound, £9,650. Deduct the capital invested, and the net profit is £8,477. The average increase is 1lb. of rubber for each year of the tree's life. so that the ninth year's profit would be. roughly, £9,870; the tenth, £11,500; the eleventh, £13,160; the twelfth, £14,800, and so on. It is pretty clear that if the demand for rubber should continue to increase, and the area in cultivation were judiciously extended, the planter would soon be able to write himself down "millionaire." At present the demand shows no sign of falling off; quite the contrary. During 1895 the imports of rubber into the United Kingdom aggregated 17,077 tons, of the value of £3,766,643. In the first five months of 1896 the imports increased by 1,300 tons, owing, doubtless, to the cycle boom.

TOO MUCH OF A GOOD THING.

EXCESS in anything is to be avoided, whether it be excess in eating, drinking or bicycle riding.

Judging from casual observation, it would seem that most riders at times do more than is good for them, and it is the exception to find a wheelman who knows enough to stop when he is tired. After one is healthily fatigued additional riding is sure to do harm, and the lassitude and irritability and disordered digestion that follows is good evidence that too much has been attempted. To be benefited by bicycle riding one should feel brighter and fresher the day after the ride than the day it was taken.

After a long ride a bath is often very refreshing, but judgment should be used in determining its character. Hot baths are enervating, and cold baths dangerous under conditions where a speedy reaction does not follow. If one is very tired a warm bath is perhaps best—especially if taken just before retiring.

If one expects to go out after a warm bath it is, of course, advisable to finish with a hasty sponge over with cold water to close the pores, as a precaution against taking cold.

Cold water alone, however, has a tonic power and should be used in cases where the rider is not too much fatigued and where the bath is taken immediately after the ride. Either a very quick bath or a shower with the water as cold as can be borne will do, and in either case it should be followed by long and vigorous rubbing with rough towels.

If water with a little salt or alcohol in it is used the advantageous results are increased. It is not necessary to plunge entirely into the water, a thorough sousing with a large sponge being sufficient. The cold water and subsequent rubbing tones and refreshes the skin, while the feeling of exhilaration that follows lessens, if it does not entirely remove, the sense of fatigue.

Men who have been carefully trained or who are naturally endowed with strong systems may safely continue their exertion long after it would be injudicious for others to do so. Each man must judge for himself when his limit has been reached, and, if wise, he will keep his riding well within that limit.

Professionals when racing are not exempt from the bad results of over-exertion. These results are naturally most pronounced when the effort is of long duration. Rivierre, the winner of the Bordeaux-Paris and Bal d'Or races, broke down when he came to meet Huret in a twenty-four-hour competition, Oct. 11, as a direct result of the strain of the previous contests, and Arthur Linton lost his life as a consequence of too continuous application to the cinder path. Linton was a man of tremendous pluck and stamina, and he did not know what it was to stop pedaling in a race while consciousness and the physical capacity to move his limbs remained. He began the season in fine physical condition in March with a six days' race, and continued racing without a week's rest from long-distance competitions till the time of his fatal illness. In most of these contests he rode till he was completely exhausted. At the Bal d'Or twenty-four-hour race in Paris he was compelled to stop from illness. He disregarded this warning, however, and with no rest for recovery returned to England and took part in the race for the Catford gold vase, in which he rode extremely well on the first day but was compelled to stop on the second by the onset of the illness which had so unfortunate a result. Linton seemed unable to realize that while his muscles were capable of any demand made upon them his vital system could refuse to respond, and so he kept at it till he had burned his candle and died like any drunkard dies from excess.

Dr. E. B. Turner has contributed the following opinion of Linton's death, which we take from the *Australian Cyclist*. He says:

"I write this in ignorance of the precise symptoms of his malady, which is stated in the press to have been enteric (or typhoid fever); but one thing is certain, and that is that for weeks his whole system must have been poisoned by the 'ptomaines' engendered by his all but continuous exertions. The blood of any man who has competed in a distance race on foot or on a cycle is found afterward to be full of poisonous substances, produced by the forced combustion of his tissues, and this poison is gradually excreted from his system during the next few days, but it takes a more or less long time to get free from it. Now if a man before he has recovered from these effects of one race rides in another, he adds a fresh dose of poison to the dregs of that remaining in his tissues, and in a short time he simply becomes a storehouse of waste material. This is the condition of young, unseasoned soldiers in a hard campaign, who die like flies after forced marches from fatigue fever, an illness whose early symptons directly simulate those of typhoid. Now poor Linton gave himself no rest to get rid of this poison, and whether his fatal ailment was true enteric, or acute fever from long-continued over-evertion, which (writing in quasi-ignorance) seems to me possible, it is certain that being full of poison he was in no case able to resist the onset of any serious illness, and his death may be directly attributed to over-racing. In an experience of twenty-six years of all kinds of sport, this is the first instance in which I can attribute a fatal result to athletic competition, and I hope it may be the last.

"Man is not a machine; he must rest after prolonged exertion, and to trade on his pluck, and compete again before he has recovered, is simply to court disaster. I write this not as an anti-athletic faddist, but as a man who has a strong and firm belief in training and racing, and the good it does when properly indulged in; but I wish to point out the danger of excess, and warn the modern school of distance racers that nature must be obeyed, and that one twenty-four hours' race in a year is about enough for most men, and I address this warning particularly to those riders who have their living to make out of the sport, lest in the present pursuit of fame they may ruin their whole future health, or even put an end to their lives by thoughtless over-competition."

Squirrel and Bicycle.

"IN a recent issue of the L. A. W. *Bulletin*," says a correspondent, "a rider in or near Philadelphia told how he was thrown from his bicycle by rabbits running between the wheels at night. I do not doubt it, as I had a similar experience one morning riding through a little wood in Montclair, N. J. A squirrel started across the road and ran through my front wheel. I expected to see it killed and to be upset myself, but it was only caught in the wheel enough to throw it about 10 or 12ft. in the air, brushing my ear as it described a circle, landng on same side of wheel. A little ahead it again ran through the wheels and up a tree on the other side of the road—by no means a dead squirrel."

For a Tonic.

IRON has long been considered an excellent tonic, but it has remained for the fag end of the century to demonstrate the tonic qualities of steel. Taken in the form of a bicycle, steel has a power for regenerating run-down humanity that no other tonic has ever approached.

Yachting.

MASSACHUSETTS YACHT RACING ASSOCIATION.

NO BETTER evidence of the good work done in a short time by the Massachusetts Yacht Racing Association is needed than the pamphlet recently sent out by Secretary Bliss, containing the records of the season's racing. The book gives a most interesting summary of the season's work, the complete record of each race sailed under the auspices of the Y. R. A., and the tabulated record of each yacht in each class, showing the starts, the places down to third, and the percentages as calculated by the Association method, as follows:

First place, 100 per cent.; second place, 50 per cent.; third place, 25 per cent.; the total amount of percentage to be divided by the number of starts, the result giving the championship percentage. Only open races scheduled under the Y. R A. rules to count; at least 50 per cent. of the total percentage to be won within limits indicated on the Association chart; no percentage to be allowed to a yacht which has not defeated a competitor, and every yacht to be assumed to have started in at least ten races. With this system of computation of performances a championship diploma is given for the highest percentage in all classes, and also a championship medal and pennant to the yacht with the highest percentage in each class.

The winners of the year are given on the first page of the book: Diploma, Elsa, H. M. Crane, in the 15ft. class, Mr. Crane being also the "crew" of the champion of the 15ft. R. L. class in New York. The winner in the first class is Ida, J. F. E. Beekman; second class, Gleaner, F. O. Wellington; third class, Arab, W. F. Scott; fourth class, Alpine, C. J. Blethen; fifth class, Elsa, H. M. Crane; knockabout class, Cock Robin, Chas. S. Eaton. A record such as this and the accompanying lists of the yachts in each class in the order of their percentages is of far more value in encouraging racing than any amount of money in cash prizes under the old haphazard system. From the beginning of the season each racing owner is now working not for a few valuable prizes, or for empty honors in walkovers or in a class with little against him, but for the first place in percentage in a large class of racing yachts. The official record shows percentages for 11 yachts in the first class, 17 in the second, 18 in the third, 18 in the fourth, 6 in the fifth, and 11 in the knockabout class.

Accompanying the book is a sheet containing the recent changes in the racing rules, already published. Most of these are decidedly for the better, and should result in increased interest in the racing of 1897. Considering the widespread—in fact, almost universal—use of the Seawanhaka rule throughout the country, and the fact that it has given better results than any other rule ever tried, and that its disadvantages are equally shared by other rules, it seems unfortunate that the Massachusetts clubs could not retain it and remain in unity with the New York and Sound clubs, especially as these now form a strong union It is quite certain that in New York waters a simple waterline measurement, such as was so long in use, has at best no advantage whatever over the length and sail area rule; and it has not yet been shown how the conditions about Boston differ from those in so many other localities. No proof seems necessary of the desirability of one common rule throughout the country, and the rule now generally used is at least better than anything proposed to replace it.

The naming of the Asscciation classes is also of a haphazard description: First class, special class, second class, knockabout class, third class and fourth class.

Taken altogether the Association has done wonderful work in but two years, not only bringing excellent order out of what was little better than chaos, but making good rules as well as uniform rules. The measurement of the actual waterline with crew on board, the abolition of time allowance, the establishment of the percentage system, simple and manifestly good as they all are, seemed hardly possible but three years ago.

The following notice is sent out to all clubs with the book:

"The success of the Yacht Racing Association of Massachusetts having been established, through uniform rules and the support given it by the yacht clubs comprising it, the executive committee would call attention to the amendments to sailing rules (copies of which please find herewith), which rules will be changed as little as possible in the future.

"While this Association does not presume to dictate in club matters, it would recommend the revising of club sailing rules to conform, as nearly as possible, to the Association's rules, as a matter of convenience to themselves, regarding measurements, etc., to prevent yachts being forced out of their usual classes, and that they may sail their club races on up-to-date rules, which cannot fail to benefit the club's racing.

"As it is an established fact that open races are more interesting and beneficial to the sport than club races, it is hoped that clubs will give a liberal share of their appropriations to open races."

THE CRUISE OF THE CRICKET.

MANY yachtsmen may not be aware of the fact that there is a navigable inside channel from the Great South Bay of Long Island through to Shinnecock and Peconic bays for craft of humble draft. To such the log of the sloop yacht Cricket on her September cruise may be of interest. Cricket is a centerboard jib and mainsail boat, 15ft. 6in. l.w.l., 18ft. over all and 14in. draft. She was designed and built complete at Amityville, L. I., by her master and navigator, Master Robbie Haight, at present a student at Stevens College, Hoboken. He even cut her sails—which were made with the aid of the maternal sewing machine—and bent them when made. "I knew she was strong enough," said Capt. Haight, "so I didn't hesitate to take her anywhere I could pilot her." With the assistance of a young friend who eagerly volunteered to act as "crew," the voyage, of which the following is the log, was safely accomplished:

Sept. 8.—Got under way from Amityville at 1:25 P. M. Wind, N.E. by N. Course, E. by N. Double-reefed fore and aft. Anchored at Cherry Grove 5:30 P. M Distance, 16 miles Time, 4 hours 5 minutes Lay all night on a lee shore. Wind increasing. At 1 A. M. let go large anchor, but it proved unnecessary.

Sept. 9.—Cloudy; blowing half a gale. Weighed anchor 5:35 A. M. Wind, N.N.E. and dead ahead. Beat across bay to Sayville under three-reefed mainsail and "bob" jib Anchored 9:20 A. M. Crew wore leaky oilers and was wet through Lay storm-bound all day at Sayville Dock. At 9:30 P. M. left dock, let go both anchors and paid out cable to bare ends.

Sept. 10.—Cloudy; good whole-sail breeze, N.W by W. Got the anchors and started with everything set at 9:10 A. M. Passed Patchogue 9:45 A. M., Howell's Point 10:10 A. M.; distance 7⅛ miles; time 1 hour Black squall from N.W. Dropped everything and scudded for Smith's Point under jib Passed Moriches 12 M under double-reefed mainsail and full jib. Catboat chased us about 3 miles, unsuccessfully. Entered canal at end of Moriches Bay. Passed under four bridges at West Hampton and Quogue. Had to pull and pole through between the bushes. Reached Shinnecock Bay and ran for Shinnecock Light Reached light 7 P. M. Landed accidentally right in lightkeeper's duck yard. Day's run 30 miles; time 9 hours 50 minutes.

Sept. 11.—Clear; wind light S.S.W. Under way 5 A. M. Entered Shinnecock Canal and unstepped mast. Passed under two bridges and through canal. Tide running through with us about 5 miles per hour. In most places could find no bottom with 11ft. oar. In Great Peconic Bay at 9 A. M. Becalmed for one hour. Breeze from S W. Ran from Robin's Island Buoy to Jessup's Neck Buoy in one hour; distance 6 miles. Reached Greenport 3 P. M Day's run 18 miles; time 10 hours

Sept. 12.—Good breeze from eastward. Under way with everything set 6:30 A. M. Beat down to Hay Beach Point, then laid course through Gardiner's Bay for Ram Island. Wind and tide against us. Ram Island to Montauk Point under jib and mainsail; wind still ahead. Caught three large bluefish in tide rift off the Point; landed one and cooked him for dinner Fog shut in at 3 P M, but drifted slightly 5:05 P. M Montauk Light bore due north. Laid course W. by S. for Fire Island; wind S E. Clubtopsail aloft. Lookout forward and helmsman aft; one hour watches At 9 P. M. wind dies out. Crews gets two hours below. 11 P. M. no wind; skipper gets two hours below.

Sept. 13, 1 A. M.—Light breeze from W. dead ahead. 5 A. M, no wind. Day breaks foggy, 6:30 A M, fog lifts. We are off Shinnecock Life Saving Station. Made about 25 miles during the night. Wind comes E. by N right aft. Shinnecock Light bears N at 7:58 A. M. Wind increasing. Still going wing-a-wing with topsail aloft. Passed Tianna L. S S. 8:17 A. M. Passed Quogue L. S. S. 8:54 A. M. (3¾ miles, 37 minutes). Passed Petunk L. S. S. 9:30 A. M. (3½ miles, 36 minutes). Passed Moriches L. S. S 10 A. M. (3½ miles, 30 minutes). 10 A. M. blowing two-reef breeze. Clubtopsail spars would not stand, so hauled the sail down and set it tack upward as a spinaker. Passed Forge River L. S. S. 10:47 (5½ miles, 47 minutes). Passed Smith's Point L. S. S. 11:17 (3⅛ miles, 30 minutes). Passed Bellport L. S. S. 11:45 (3¼ miles, 28 minutes). Passed Blue Point L. S. S 12:55 (5⅛ miles, 50 minutes) Passed Lone Hill L S. S. 1:02 (3 miles, 27 minutes) Passed Point o' Woods L. S. S. 1:35 (2½ miles, 33 minutes). At 2:15 P. M. Fire Island Light bore N. Dropped mainsail and scudded for bell buoy under jib while double-reefing mainsail. Beat into the inlet against full ebb tide under two-reefed mainsail and "bob" jib. Wind still E. by N. Gave her the full jib at Wa-wa-yanda. Rounded Whirlpool Point 5 P. M. and eased off sheets for home. Dropped anchor at Amityville 6:45 P. M. Day's run about 55 miles; time 12 hours.

From Greenport to Amityville, about 105 miles, the run was made in 36 hours without a stop. The best time was made on Sept. 10, from Sayville to Howell's Point, 7⅛ miles, time 1 hour, with wind on port quarter.

When the antecedents of skipper Haight are considered, it is no wonder that he has developed a penchant for nautical sport. He is a grandson of Capt. Samuel Samuels, the famous master of the old clipper ship Dreadnaught, the pioneer transatlantic yacht racer and now president of the *Marine Journal* corporation. Mrs. Haight was born at sea on the old ship Manhattan, on the voyage home from Batavia, under Capt. Samuels's command. When at the City of New York College Mr. Haight took the prize two years in succession awarded by Harper & Bros. for superior workmanship.

THE FUNDAMENTAL PRINCIPLES OF YACHT MEASUREMENT.

THE general recognition of the defects of existing systems of measurement in this country, and desire for a remedy, have as yet produced nothing in the way of suggestions or amendments that can be classed as more than local or superficial. One set of proposals deals with the limitation of draft, another with the limitation or taxation of overhang, and a third goes no further than to prohibit the bulb-fin type so far as mere construction goes, while recognizing it in actual form.

At best but little good can come from such partial measures of reform; as a matter of fact, those of this sort recently enacted are likely to prove positive elements of evil. If the measurement question is to be dealt with successfully and finally, so far as the latter term applies to the reverse of the long existing conditions of dissatisfaction and change, it can only be done by starting at the very foundation of the subject and building up properly from the bottom. That this is likely to prove a most difficult task, all familiar with measurement legislation will admit; but there are many yachtsmen who are at least competent to discuss it intelligently if the way could be opened to a general and thorough inquiry under the auspices of the yacht clubs. Of course, the season is now too far advanced for any positive action to take effect in 1897; but if anything better is to be done next November than has just been accomplished by the Larchmont and New York yacht clubs, a year is little enough time for discussion and deliberation.

Just what the situation will be at the end of the racing season of 1897 it is impossible to forecast, but it is safe to say that the work of framing and passing amendments to the measurement rule will be far more difficult then than at present. Any yachts built during the winter, and some fairly large ones may be looked for with confidence, must recreate the "vested interests" that do not now exist, but which are such formidable bars to all changes and restrictions of a salutary nature.

The following are a few of the propositions that should form the basis of any thorough discussion of the measurement question:

Yacht racing as it has existed for the past five years in America and Great Britain is marked by many features which are generally deprecated as to the disadvantage of the sport; the winning yachts being of great cost, limited life, liable to be quickly outbuilt, and of little utility other than as racers.

This state of affairs is due to two prime causes: the general conditions of modern sport and the defects of existing measurement rules. The first cause, the readiness of a small number to expend large sums in order to win prizes, regardless of all other considerations, is almost entirely independent of the question of the measurement rule, and is likely to exist to an undesirable extent under the most perfect formula. It can only be made inoperative by supplementing the measurement formula proper by rigid restrictions on light construction, specially expensive materials and an extravagant outlay in the racing. To illustrate, supposing that a rule were enacted that would produce a yacht similar to the old 40-footers, and a dozen such craft of modern but not extreme construction, reasonable accommodation and comfortable furnishing, were built and raced as the forties were, the owners living on board and sailing from port to port as the racing required. Should any one owner be tempted to come into the class with a yacht of equally good design, but of aluminum or other extreme light construction, using a steam yacht for his home and a tender for the racing yacht, ordering three or four suits of sails in a season and employing a couple of the crack racing skippers as first and second captains; it is plain enough that he would soon take all the prizes and kill off the class. It is difficult, if not altogether impossible, for the clubs to draw the line between legitimate and commendable enterprise on the part of the racing owner which raises the general standard of yacht racing, and that selfish spirit which looks only to the winning of the greatest number of prizes in a season, no matter what the result may be on the class in the future. It is the case at present, both in America and England, that the measurement rules are unjustly blamed for evils that they are not responsible for and that might have come under the most perfect of rules. This particular phase of the measurement question must be considered at the start, as it will prove only a waste of time to attempt to find a formula which of itself will correct evils that are due to some external cause.

Coming to the formula itself, the first questions are: the ends to be obtained by a formula of measurement and the general nature of such formulas. The first point we have frequently discussed and need not touch on now. Suffice it to say that yachtsmen are universally agreed that the function of a rule is to produce the best possible yacht; and as generally at variance as to what constitutes the "best," one man preferring the open skimming dish, one the little lead mine, a third the fin-keel, and a fourth the tub cruiser.

The second point, the proper nature of the measurement rule in the abstract, is one that has received very little attention when it is considered how many barrels of ink and reams of paper have been expended, not to say wasted, in discussing the secondary question, of the number and values of the factors in the formula. The question was suggested in a letter in our issue of Nov. 14, and is further discussed in the following from the same writer:

Editor Forest and Stream:

If I get the drift of the editorial comments on my letter of last week concerning measurement rules, it is:

(1.) That I entirely mistake the purpose of the makers of such rules, and that they do not believe in the restriction of the principal elements of design within fixed maximum and minimum limits.

Permit me to say in reply that, aside from the matter of regulating handicaps, I can conceive of but one purpose in making or amending measurement rules, viz.: to encourage the building of what the makers of the rules deem to be a desirable type of yacht. Yachts cannot be classified as belonging to desirable and undesirabe types without the fixing of definite limits to the variability of the proportions between the principal dimensions. In other words, the conception that a yacht has or may have an undesirable form is impossible without the prior fixing in the mind of maximum and minimum limits to the principal dimensions of the ideal yacht with which she is compared. The limits may be tolerably wide apart, but there can be no type unless there is a limit to the diversity of form between individuals composing a class.

That ideal type may be directly and certainly developed in two ways: by at once stating the limits to the fundamental proportions, and requiring all yachts to be built within those limits; or by attacking the problem piecemeal, by special legislation directed to each abnormal feature as it is evolved. The former method is the more economical, and produces the desired results more quickly.

The same results may possibly be reached by indirection, but with much uncertainty, and, if we may judge by experience, with little likelihood of ultimate success; that is to say, by means of complicated formulæ like this: L+1.2 B+Girth+$\sqrt{S}$.

This I contend is a clumsy way of confining the evolution of the yacht within certain desired limits, that it might almost be deemed a clever contrivance to hinder and delay the production of the ideal yacht.

(2.) To the objection that no possible formula has been suggested for a rule based upon absolute and definite limitations of the principal elements of design, it may be said that when formula makers have clear and definite ideas respecting the type of yachts they wish to develop, it will certainly be as easy to describe that type in terms that directly make a maximum and minimum limit to each of the principal dimensions as to describe it by the single term of an abstract number which is the sum of sundry numbers of concrete units of different kinds, representing individual dimensions, any one of which may be varied indefinitely.

The foregoing formula seems to be constructed upon the principle that there will be no inducement to unduly enlarge any of the dimensions named at the expense of others, because 1ft. of l.w.l., .83ft. of beam, 1ft. of girth and the square root of 1sq. ft. of sail are approximately equivalent factors in producing speed. It would be interesting to know by what process of reasoning this conclusion was reached.

SEXTANT.

It is a mere matter of history that practically all measurement rules up to the present time, with such exceptions as are found of late in certain special classes like the 40-footers, have been based upon the theory combated by Sextant of a summation of certain unlimited factors. It has at least been assumed that there were certain natural limitations to the extreme use of any one or more factors, though experience shows that such a natural limit is often far beyond what is generally accepted as desirable, as in the case of draft in the last few years.

We do not yet understand how a satisfactory formula, permitting different types to race together on a fair basis, can be made on the plan which Sextant suggests. It is quite obvious that by means of absolute restrictions one stereotyped model—and that a very good one—may be produced; but there seems to be no elasticity or opportunity for experiment under such a system. The result must inevitably be the production of one type, and past experience shows that the chances are in favor of the type being a bad one. Had British yachtsmen acted upon this theory in 1880 they would have taken as the ideal on which the formula was to be based the extreme narrow cutter; had American yachtsmen taken up the matter at the same time the whole field of American yachting would have been closed to anything other than the sandbag model in various sizes, from 100ft. downward. Had the experiment been tried in this country just before Minerva raced, in 1889, the ideal model would have been the deep, powerful and overrigged 40-footer. What such a movement would result in to-day can be imagined from the recent faulty legislation in the effort to apply this same principle to one factor alone—draft.

There is no disputing the fact that the present system of formula, as embodied in the Seawanhaka rule, the Y. R. A. rating rule or the present linear rating rule, to say nothing of the French and German rules, has failed to bar the racing machine and produce a desirable type of yacht whenever put to the extreme test of keen competition and the outbuilding contest which accompanies it. At the same time we cannot see that anything more is to be expected from the system advocated by our correspondent, or even how his suggestions are to be put into practical shape. We shall, however, be glad to hear from him and others in the matter.

British Canoeing.

THE following comments on the condition of canoeing in England to-day are from the *Field*. It is very unfortunate that, at best, there has always been an utter lack of harmony between the Royal Canoe Club, which after all is but a club and a local one in spite of its high position, and the British Canoe Association, which is not a club, but a national association. Curiously enough, to Americans, the racing legislation is entirely in the hands of the local club and not of the national association; and canoeing manages to exist in some way under such anomalous conditions. The real racing events are not those of the B. C. A. meet, but of the R. C. C. race meetings:

Of all the months in the year, probably November is the least utilized afloat; on the other hand, this month on shore witnesses the shaping of the mould and the casting of next year's chief canoeing events. The Royal Canoe Club meets in London on the 24th of this month, and after the annual dinner the autumn general meeting will be held. At that meeting almost anything may take place, and it is therefore impossible to say for certain, until after the meeting, as to how or in what lines canoeing may grow during the coming year.

Possibly some local club man of some outport club may think we exaggerate the importance of the R. C. C. meeting when we suggest that it moulds and casts the chief canoeing events; but let him for a moment consider the effect of a clash between the R. C. C. fixtures and the meet of the British Canoe Association as one instance. Such a thing is possible, but let us hope highly improbable. However, there are those, and we have heard from several lately, who desire to see the Royal C. C. hold a cruise, a camping cruise, in Scotland or North Ireland late in the summer, and thereat to hold the club's sailing races and cup race. It is needless to point out that if this were to take place, no matter whether the dates clashed or not, the two events would clash, and one of them would fall through; it would immediately become a question of which programme and locality was the most captivating. Few men could afford two distinct terms of holiday, and the extra expense of trans-shipment between the two meets would be a further damper on the possibility of attending both.

In the present state of canoeing as a sport, the senior club will be far better advised to stay at home; indeed there are many canoemen who think the club went too far afield this last season in holding its sailing races at Burnham-on-Crouch; but, like most things, there are two sides to that particular question. Viewed from the recruiting point of bringing new blood into the club, of binding members together in solid comradeship, and of making the club agreeable to its members besides the mere cup hunters, there can be no shadow of doubt but that the old Hendon Lake arrangement was the truest obtainable near London.

Hendon was slowly but surely poisoned by the advent of the racing machine; off-day pleasure sailing on the lake, which attracted men down on mid-week evenings, and company sailing on many fine Sundays was all knocked on the head by the influence of the rolley-over racing machine. Sailing became an arduous task, a gymnastic performance under most uncomfortable circumstances, with a considerable dash of real danger; hence the majority sought the comforts of ½ raters and other small yachts.

From the other point of view Burnham on-Crouch was expected to do, and has done, its powerful duty toward killing the poisonous insect which was lowering the vitality of canoeing. The Thames at Greenhithe last year showed up the wretched state to which canoe models had driveled, and Burnham has this year put, we sincerely hope, the finishing touch to the downward dragging of the will-o'-the-wisp. The whole Burnham chapter speaks eloquently to those who can look ahead; Burnham is no place for the novice, no place for recruiting; it is a perfect place for the racing man, but a poor place for the club member or cruiser who wants to at least see his club's money sailed for. The experience is that it is an expensive place to get to for either canoe or man; it is a long and expensive journey for visitors, practically out of the question for those who do not sleep at the place. The question of the best course for the club to take is indeed one difficult to answer, but as the motions relating thereto have to be sent in to the secretary on Tuesday next, Nov. 10, we draw the attention of canoemen to the subject, hoping that some brilliant idea for the coming season may be timely put upon the agenda of the general meeting.

This general meeting of the R. C. C., in addition to the business above mentioned, is the only meeting at which rules affecting classification for racing purposes can be altered so as to be effective during next season; it is therefore to be hoped that the agenda paper will contain some clear amendment of the racing machine rule. We have often mentioned one important alteration—absolutely important in the present circumstances. It is not the abolition, but the restricting of the sliding deck seat. The deck seat is already restricted in the cruiser class to the limit of the width of the canoe when it is rigged in; if such restriction is fairly acted upon the slide-out board cannot exceed half the canoe's beam; that is, in the cruiser class, 21in. The result of extending this restriction to the other class would be simply that the extreme racing machine could not be successfully sailed in a breeze. Now if that were so the present scare of the hawk (the 5ft. slide machine) would be off, and many old-time canoe sailors would come back into sailing, and novice recruits would have a chance, at least, of a pleasant sail, if not of a prize or two. Another, but less important amendment, would be the abolition of permanent foot-bath or bucket wells; such a contrivance as a canvas bucket well, fitted so as to be removable, is quite a proper fitting, and it can be used by a cruiser or a racer; but the canoe built without any well, or with a sort of soapdish or shallow indentation of the deck, curiously termed a well—such a craft is a machine, and is a standing enemy to the fair future of canoe sailing.

One other drawback to racing at Burnham was experienced last season, namely, the perishing strains suffered by the canoes in the roundabout, disconnected railway journey and carting. If Burnham is to be retained, carriage by water must be arranged for, and here an item of no small expense must be accepted and apportioned between the club and the competitors.

YACHTING NEWS NOTES.

Peregrine, steam yacht, R. H. White, is at Lawley's for alterations to the cabins.

The New York Yacht Racing Union has proposed a conference with the Yacht Racing Association of Massachusetts with a view to the adoption of uniform sailing measurement and classification rules. The sailing rules of the two organizations are now practically the same, but uniformity on other points is impossible so long as one organization has a length and sail area rule and the other a simple waterline with crew on board. With uniformity in sailing rules more practical knowledge of the value of the respective measurement rules can be had by allowing each association to build and develop under its own rules for several seasons and then comparing results.—*Boston Globe.*

The "Segler's Taschenbuch" (Sailor's Pocketbook) was first published in 1891 by our enterprising contemporary, the *Wassersport*, of Berlin, the German yachting journal The little book was notable, not only for its technical value, but as marking another step in the successful growth of yachting throughout the German empire. The new edition that has just come to us, considerably enlarged and improved, is in turn a memorial of the progress of the past five years, during which time the older yachts which marked the infancy of the sport in Germany have given place to many new yachts of the most modern type, from the great Meteor II. down to the little Bubble. The book, as its title indicates, is a guide for the young yachtsman; it is carefully arranged and written and very well illustrated with explanatory diagrams. It treats first of the different types and sizes of sailing yachts, then of gear and rigging, ballast, rudder, ground tackle, life saving. The second part, seamanship, deals with the small boat under sail, the yacht under sail and cruising in small boats. A chapter is also devoted to the German Sailing Union. One important addition includes a number of designs of small yachts, centerboard, keel, and bulb keel; such craft as are best suited to the use of the novice and the young Corinthian generally. Those who are familiar with the German language will find the book both interesting and useful.

Canoeing.

American Canoe Association.

ANNUAL MEETING OF THE EXECUTIVE COMMITTEE.

Toronto, Saturday, Nov. 21, 1896.

THE fourteenth annual meeting of the executive committee of the American Canoe Association was held at the house of the Toronto C. C. on Nov. 21, with Com. J. N. MacKendrick in the chair. The executive committee was first created in the fourth year of the Association, 1883, previous to which time all legislation was carried on at the general meeting of the members, held during the annual meet, each member voting in the election of officers and the amendment of constitution, racing rules, etc. Under the existing system the members of each division elect their division officers, who, with the commodore, secretary-treasurer and librarian, constitute the executive committee of the Association.

A meeting of the committee is held each year at the meet, but the principal business of the Association is conducted at the annual meeting of the committee in November, at a place selected by the new commodore. The various meetings have been held as follows:

1883, Albany.	1890, Boston.
1884, Albany.	1891, Albany.
1885, Oswego.	1892, Kingston.
1886, Albany.	1893, New York.
1887, New York.	1894, Albany.
1888, Toronto.	1895, Rome.
1889, New York.	1896, Toronto.

The central location of Albany has led to its frequent selection in preference to other cities.

Mr. John R Blake, the newly elected secretary-treasurer, called the roll after the meeting was called to order, the representation being: Com. John N. MacKendrick, Sec'y-Treas. John R. Blake, Librarian W. P. Stephens.

Northern Division: Vice-Com. R. Easton Burns, Purser F. H. McNee; Ex. Com: W. T. Lawless, by proxy; D'Arcy Scott.

Atlantic Division: Vice-Com. Joseph E. Murray, Rear-Com. W. E. Barlow, Purser H. W. Fleischman; Ex. Com.: Thomas Hale, Jr., J. K. Hand.

Central Division: Vice-Com. H. M. Stewart; Ex. Com.: H. C. Morse.

Eastern Division: Not represented.

Mr. R. J. Wilkin, president of the board of governors, was present, and on motion of Mr. Stewart, seconded by Mr. Fleischman, was accorded the privileges of the floor.

The minutes of the meeting of the committee in August were read and approved, with a motion to amend them by adding a minute of the election of Sec'y-Treas. Blake by a mail vote. A letter was then read from ex-Com. Huntington, inclosing the bond executed by Mr. Noyock, winner of the paddling trophy, and stating that the winners of the sailing and Dolphin trophies had promised to furnish similar bonds. On motion of Mr. Haud, seconded by Mr. Murray, it was resolved that a regular form of bond be adopted, to apply in the future to the three cups, the amounts for the A. C. A. sailing and paddling trophies being in each case $500 and for the Dolphin trophy $250, two sureties approved by the commodore being necessary in each case.

Invitations were read and accepted with thanks from the Toronto C. C., the Toronto Camera Club and the Toronto Athletic Club. The following report of the retiring secretary-treasurer was then read and accepted:

SECRETARY-TREASURER'S REPORT, 1895-96.

Receipts.

Sec'y-Treas. Cragg as per report	$761 60
Board of Governors, advance	250 00
Central Division, balance 1895	3 26
Northern Division, balance 1895	2 10
Central Division, full income 1896	189 07
Atlantic Division, 30 per cent. income 1896	85 50
Eastern Division, 30 per cent. income 1896	120 90
Northern Division, 30 per cent. income 1896	27 60
Year Book, receipts	282 76
Year Book, postage	44 48
Camp Site Committee	450 34
Transportation Committee	207 40
Regatta Committee	5 25
Camp dues	194 00
R., W. & O. R. R. Transportation 1895	18 96
Code books	1 31
	$2,644 53

Disbursements.

Transferred to Board of Governors	$761 60
Office expenses	22 20
General expenses	18 22
Camp expenses	159 94
Year Book	208 25
Year Book postage	44 58
Camp Site Committee	608 75
Regatta Committee	125 85
Transportation Committee	351 10
Board of Governors loan repaid	250 00
Board of Governors balance transferred	84 04
	$2,644 53

There are no unpaid debts of the Association. In addition to the cash transferred to the Board of Governors there has been turned over to the Association for use another year the following property:

Uncollected accounts—tent floors	$11 04
West Shore R. R. transportation	40 00
Tents	81 94
Floors, mess tent and headquarters	130 47
Dock	40 00
	$303 45

A portion of this, viz., West Shore transportation $15; tents $43.78, was reported on hand last year. In addition to the property turned over to the Association as above, there has been held and stored on the island, in charge of Mr. W. L. Delaney, tent floors and docks belonging to the members and for their use another year to the amount of $372.29, making the total property turned over for the Association and members $675.74.

Heretofore it has been customary to dispose of the tents and lumber in the camp floors, and augment the receipts from the sale of the same at the end of the meet, from which source the officers of the present year would probably have realized in the neighborhood of $200, and the cash receipts would have been swelled to that amount, in lieu of which the Association and members realize more substantial value in the property reported. One item of extraordinary expense appears in the sec'y-treas.'s accounts this year, viz., the purchase of prize shields, $119.25 Ordinarily the flags for prizes have been donated by members of the Association, without expense to the Association. This year, under the amendment to the Constitution, metal shields were given for prizes, the cost of which was paid by the Association. All of which is respectfully submitted.

T. H. STRYKER, Sec'y-Treas.

The undersigned committee, appointed by Com. MacKendrick to audit the accounts of T. H. Stryker, Sec'y-Treas. A. C. A., 1895-6, hereby certify that they have examined the same, and find above correct and properly vouched for. JOHN S. WARDWELL, No. 1013,
ROME, N. Y., Nov. 5, 1896. J. G. BISSELL, No. 1235.

The reports of the regatta committee were then read and accepted. The principal report consisted almost entirely of the report of the races as published last August in the FOREST AND STREAM, there being no recommendations as to changes of the rules.

REGATTA COMMITTEE REPORT.

Owing to absences on the committee, Mr. H. D. McVean was appointed a member of the regatta committee and acted as clerk of the course. To him we wish to tender many thanks, as well as to Mr. and Mrs. Post, of Ogdensburgh, for the use of their yacht Vailima. The entries for the races were very pleasing in numbers and have proved the policy of the last year's reduced limit in sail area. We would recommend to the following regatta committee that a sailing course be laid out in each bay, if possible, as the winds that prevailed during the last camp were more or less irregular, due to their blowing over Grindstone Island. The prizes or shields are a delight to every winner.

(Signed) E. B. EDWARDS, Acting Chairman,
BUTLER AMES,
H. D. MCVEAN.

REGATTA COMMITTEE, FINANCIAL REPORT, 1896.

Disbursements.

Prize Shields, Dominick & Haaf	$119 25
Megaphone	5 25
Rope for halyard and buoys	1 35
	$125 85

Receipts.

Donated for megaphone	$5 25
Balance, excess of expenditures	120 60
	$125 85

Respectfully submitted, W. C. WITHERBEE.
PORT HENRY, N. Y., Oct. 26, 1896.

The following was then read:

CAMP SITE COMMITTEE REPORT, 1896.

Disbursements.

Labor	$178 00
Carpenters' board	10 50
Lumber, nails, etc	420 00
	$608 50

Receipts.

Camp floors and labor	$450 09
Balance excess of expenditures	158 41
	$608 50
Uncollected accounts	$11 04

Property turned over to the Association for use next year:

Floor, men's tent	$108 00
Floor, fleet surgeon's tent	14 72
Nails	7 75
	$141 51

In addition to the above there was stored on the island for the use of members, in the charge of W. L. Delaney, individual floors and docks to the value of $372.29; making a total of property returned by the committee of $513 80.

Respectfully submitted,
J. R. ROBERTSON,
Chairman Camp Site Committee.
AUBURNDALE, Oct. 24, 1896.

Objection was made to the form of this report in that the property of members was presented as an asset of the Association for which the incoming officers would be responsible. On motion the report was accepted with the understanding that this private property was in no way chargeable to the new officers.

The following report of the transportation committee was read and accepted:

TRANSPORTATION COMMITTEE REPORT, 1896.

Disbursements.

Charter of scow for baggage	$9 00
Charter of steamer Pastime	337 50
Mail bag	2 50
Express, refunded	2 10
	$351 10

Receipts.

Steamer Pastime, cash	$207 40
Balance excess of expenditures	143 70
	$351 10

Respectfully submitted,
JAMES K. HAND,
Chairman Transportation Committee.
NEW YORK, Oct. 29, 1896.

The transportation committee begs to report as follows: Apart from the concessions obtained from the various railroads, steamboat lines, etc., which it is believed were satisfactory, the local transportation to and from Clayton was arranged for by the charter of the Pastime, which gave excellent service, so that the question of local transportation at A. C. A. camps has for once been satisfactorily demonstrated. The cost of the Pastime is shown in the accompanying report, the details of which are in the hands of Secretary-Treasurer Stryker; also vouchers and substantiating papers.

Receipts.

Aug. 15, cash, Captain	$20 20
Aug. 16, cash, Captain	10 35
Aug. 17, cash, Captain	10 15

Aug. 28, express, Hyatt	1 35
	$351 10

The report of the Librarian was then read and accepted.

LIBRARIAN'S REPORT.

To the Commodore and Executive Committee of the American Canoe Association:

Gentlemen: The Librarian has the pleasure to report that as to the main end for which the office of Librarian was established, the care for certain properties of the Association which are used at each annual meet, the same are now in good order except for small repairs to the large ensigns, that they are each year forwarded to the camp in season for the meet and returned at its close; the total expense for insurance and expressage averaging about $6 per year. In this connection the Librarian desires to call attention to the very thorough and careful manner in which the late Signal Officer, Mr. H. M. Stewart, discharged his duties as temporary custodian of the flags, signal codes, etc.

The name Librarian naturally suggests a much wider field than the care of flags, racing numbers, etc.; but up to the present time there appears to be no possibility for the establishment of a collection of books and charts and general bureau of information. The demand for information is but small, and the offers of aid in this direction from canoeists are even smaller and fewer. To follow out the excellent plan devised by Mr. N. H. Bishop, the founder of the Association, for the systematic collection of information relating to American waterways would require practically the entire time of one individual, and certainly cannot be attempted by any one Association officer without an allowance for clerical aid.

If any such plan is to be put in practice in the future it must be through a systematic sub division of the work, with one officer in each division, aided by local officers in the different clubs. There is no question as to the value of the work that might be done in this field, of a similar nature to that now conducted by the Naval Militia in studying closely the neighboring coasts and collecting information; but such work could only be of value to the country at large, and not to canoeing as a sport. So far as canoe cruising is concerned, the demand for such information is not sufficient to justify the expense to the Association of collecting and distributing it.

Respectfully submitted,
W. P. STEPHENS, Librarian, A. C. A.

The following report of the Central Division was then read, and on motion was ordered returned for correction in the amount turned over to the secretary-treasurer, to be accepted if approved by the commodore as correct.

R. J. WILKIN, Pres. Board of Governors.

Audited and found correct.
M. T. BENNETT, Auditor.

Nov. 16, 1896.

A letter was read from the owner of Stave Island offering to the Association the privileges of camping there; also a letter from Mr. Delaney and one from the caterer, Mr. McElveney, offering to take charge of the mess at Grindstone. It was moved by Mr. Burns, seconded by Mr. Stewart, that the meet of 1897 be held at Grindstone Island, provided satisfactory terms could again be made with Mr. Delaney; the date to be from Aug. 6 to Aug. 20.

A proposal was introduced by Mr. D'Arcy Scott, seconded by Mr. Burns, to limit the one-man paddling races to 16 by 30 canoes, at least 12in. deep and of 50lbs. weight; in other words, to abolish the paddling racing machine. As the motion had not been advertised in advance, no action was taken.

The term of office of Mr. W. P. Stephens as Librarian having expired, he was renominated by Mr. Murray, seconded by Mr. Barlow, and re-elected. Mr. Stephens brought up the question of the Librarian's position as a member of the executive committee entitled to a voice in the meetings and a right to vote, suggesting that the nature of the office was not such as to carry with it these privileges; but after discussion it was decided by the committee that under the constitution the Librarian is entitled to a vote as a member of the committee.

Mr. Hand proposed to amend Art. VI., Sec. 5, of the constitution by striking out the words "regatta or," and the amendment will be voted on in the future.

The meeting adjourned at 1:55 P. M., after a very brief but satisfactory session.

Rifle Range and Gallery.

Cincinnati Rifle Association.

CINCINNATI, O., Nov. 15.—The following scores were made to-day by members of the Cincinnati Rifle Association. Conditions: 200yds., off-hand, Standard target, 7-ring black. Capt. Gindele is still making 90s with his new Zischang rifle. He also has two clean scores to his credit to-day. A very tricky wind blew all day long; so much so, in fact, that it was hard to tell just what o'clock it did come from:

Gindele.

9 9 9 10 9 8 9 9 9 9—90 9 10 8 9 10 8 10 9 7 10—90
8 8 8 9 10 8 9 9 10 9—88 8 9 8 10 9 6 10 9 7 8—84

Calumet Heights Riflemen.

CHICAGO, Ill., Nov. 17.—Below are the rifle scores made by members of the Calumet Heights Gun Club on Nov. 8 and 15:

Class A, 200yds., off-hand, standard target, open sights allowed 2 points:

Nov. 8.	No. 1.	No. 2.
Harlan	4444244334—36	.....
Hobbs, Sr	4335451434—39+2—41	5344434344—38+2—40
Hobbs, Jr	4342433343—33+2—35	2444454543—39+2—41
Spalding	5344454444—41	.....
Peterson		0333550423—28+2—30
Davis		5054354454—39+2—41
H B Black		4455344354—41+2—43

Class B, ladies, 100yds., Creedmoor target:

	Nov. 8.	Nov. 15.
Mrs C W Carson	4445454445—43	5444454445—43
Miss Ervin	4334444444—38	4444554444—42
Mrs R B Carson	.....	4443445444—40

In the A Class on Nov. 15 the following scores werre made:

Dr Hobbs*....5445454454—44 Dr Davis.....4044345533—35+2—37
Spalding.....4444323444—36 C L Hobbs....4545454445—44
H B Black....4344542534—38+2—40

* Dr Hobbs won on the shoot-off by 45 to 44.

PATTY.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Dec. 1-3.—TRENTON, N. J.—Contest for live-bird championship; 100 live birds per man, $100 entry. Under the management of Charles Zwirlein.

Dec. 12.—HACKENSACK, N. J.—Amateur championship of New Jersey, under the auspices of the Bergen County Gun Club.

Dec. 22-23.—ELIZABETH, N. J.—Ninth bi-monthly tournament of the Elizabeth Gun Club. First day, targets; second day, live birds.

1897.

Jan. 4-5.—PRESCOTT, Arizona.—Fourth annual tournament of the Arizona State Sportsmen's Association, under the auspices of the Prescott Gun Club. Roy Hill, Sec'y.

Jan. 20-25.—SAN ANTONIO, Tex.—Second midwinter tournament, under the management of Oscar Guessaz. $200 added.

Feb. 27-March 11.—HOT SPRINGS, Ark.—The Arkansaw Traveler's first grand annual live bird tournament; $10,000 in purses and added moneys. Souvenir programmes ready Jan. 1. Address all communications to John J. Sumpter, Jr., Box 111, Hot Springs, Ark.

March 23-25.—NEW YORK CITY.—The Interstate Association's fifth annual Grand American Handicap at live birds.

April 15-17.—SAN ANTONIO, Tex.—Tournament of the San Antonio Gun Club. Open to amateurs only. Willard T. Simpson, Chairman Ex. Com.

May 11-14.—OIL CITY, Pa.—Seventh annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Oil City Gun Club. Targets and live birds. Black powder barred. Special event: 25 live birds per man, $25, $1,000 guaranteed. Send entries to H. C. Reeser, Sec'y, Oil City, Pa.

June (third week).—CLEVELAND, O.—Fourth annual tournament of the Chamberlin Cartridge and Target Company.

June 16-17.—FARGO, N. D.—Third annual tournament of the North Dakota Sportsmen's Association. Targets. W. W. Smith, Sec'y.

DRIVERS AND TWISTERS.

Paul R. Litzke, of Little Rock, Ark., writes us under date of Nov. 20 as follows: "Oscar C. Guessaz writes me under date of the 12th inst. that active preparations are now being made for their second annual tournament, and that the dates selected for it are Jan. 20-25, 1897, while the added money will be the same as last year, $2,000. In addition to the money there will also be a trophy contest for the Schmelzer Cup, at present held by Mr. James W. Sexton, of Leavenworth, Kans., who has generously consented to put the trophy up for open competition. This is only one of the many kind offers made by the sportsmen all over the country, showing how much interest there is taken in the approaching shoot. The railroads are going to make liberal concessions, and there will be greatly reduced rates as a special inducement to the sportsmen. Game of all kinds is unusually abundant this season in Texas, and not only are quail, turkey and deer plentiful, but the duck shooting is also excellent, as the lakes are full of water, something not found everywhere in the South this fall. The holding of the shoot two weeks later than last year is also a good move, as one can now take in the Midwinter and then spend two weeks game shooting, and then return to Hot Springs in time for the big live-bird handicaps which John J. Sumpter, Jr., will pull off. How is this as an opener for '97? The Memphis Club has abandoned the idea of holding a tournament this fall."

The members of the Calumet Heights Gun Club, of Chicago, Ill., are singularly blessed. Read the following note from Patty, explaining the absence of target scores made by members of that club: "Bluerock shooting has been indulged in but little for the past two weeks on account of members spending the mornings on the river (Grand Calumet) killing ducks, returning for dinner and in time for rifle shoot. On Tuesday and Wednesday of last week Messrs. Lamphere and Paterson bagged fifty-eight, most of which were bluebills; on Saturday last they brought in nineteen; others had strings of fourteen, nine, and so on. While we do not look for great shooting so near the city, we believe we get our share. Thanksgiving Day ends the shooting year of the club and a programme has been arranged for shotgun and rifle contests for prizes."

We have sent out during the past week several copies of proposed new rules for target shooting. We have done our best to mail them to parties who seemed to us as likely to study the same carefully and to be able to give us more hints thereon. The rules now in use, good as they are, have been proved time and again to be lacking in certain particulars, and we have done our best to cover all points in plain language. Of course, there are defects, but, with the aid of our friends, we hope to be able finally to offer a set of rules that will be nearly perfect. Proposed new rules for live-bird shooting are now in type, but they will have to undergo the same scrutiny as the above before being declared O. K.

In another portion of our trap columns we give the body of the annual review issued by the Interstate Association. These annual reviews are always interesting, marking, as they do, each step in the Association's career as a trap-shooting foster-mother. The season of 1896, judging from the contents of the review, has been in reality its most successful season since its organization, about seven years ago. There is one feature about the Association's methods which we especially appreciate: It goes where it will do most good, not where it will have the largest attendance. The banner tournament held under its auspices in 1896 was that given by the Portland, Me., Gun Club, July 22-23, with an average entry the first day of 35½, and on the second day of 30⅔.

Mr. Swenson, secretary of the East Pittsburg (Pa.) Gun Club, sends us the following note: "The E. C. Powder Co. has, through Mr. C. M. Hostetter (Old Hoss), presented the East Pittsburg Gun Club with a handsome silver cup, to be shot for by the members of the club. The shoots will be held every second and last Saturday for four months, everyone to shoot at 100 targets per month, best shooter to keep the cup for the month following. The final will be a 400-target race, best shooter to become owner of the cup."

Friends of Jas. F. Taylor, the popular member of the West Newburgh Gun and Rifle Association, will be sorry to learn that he was unable to shoot on the Blooming Grove Park Association's team at the team race at the N. Y. Athletic Club's grounds last Saturday, owing to an attack of sickness. Taylor is one of the best shots at either live birds or targets in this section, and recently won everything before him at the Blooming Grove Park Association's tournament for members only.

At the Vicksburg (Miss.) tournament, Nov. 17-18, H. G. Wheeler, of Marlboro, Mass., won first average each day. The magautrap was used, and Wheeler broke 182 out of 200 shot at on the first day; 189 on the second day. This was a most successful *début* for him as a full-blown representative the King Powder Co., for that's what Gil is now. He's out for blood, and says that he will shoot King's Smokeless to the top of them all.

We wrote a letter to Jack Parker about four weeks ago and have not to date received a line from him. Of course we realize what he is doing to the ducks on Lake Erie in the vicinity of Mouille Point, and can therefore partially excuse the apparent neglect of his less favored friends. We've been to Swan Creek ourselves, and can yet, in imagination and with closed eyes, see those flocks of mud hens that made our mouth water until we knew what they were.

Thanksgiving Day shoots will be as numerous as usual. There will be sweepstake shooting at Dexter Park all day, while at Oakwood Inn, Elizabeth, N. J., Nate Astfalk has provided an excellent bill of fare. The Boiling Springs Club, of Rutherford, N. J., holds its annual turkey shoot for the members of that club and its friends. The Endeavor Gun Club, of Jersey City, N. J., also holds an all-day shoot at its Marion grounds.

The Lockport, N. Y., Gun Club holds a tournament to-morrow (Nov. 25) at its grounds in that city. This is the first annual shoot of the club, and it is making special efforts to achieve success in this line. A six-men team race is a feature on the programme. The Rose system of dividing purses will be used. The appointments of the club are up to date, expert traps with electric pull being a portion of its equipment.

Charlie Zwirlein writes us that he has received a letter from Jim Elliott stating that he leaves Kansas City for Trenton, N. J., immediately after his match on Nov. 27. He also states that there are over 30 entries for the handicap, and adds that entries will be received up to the conclusion of the second round on Dec. 1. He has plenty of excellent birds on hand, and says that the boys won't complain of their quality.

Charlie Budd has been doing some excellent work on live birds lately, and now comes into the field and challenges Jim Elliott for the cup he won recently from J. E. Riley, of Kansas City. The trophy was presented by the Kansas City *Star*, and was won by Riley at the Missouri State shoot last May. Both Elliott and Budd are shooting well, so the match should prove a good drawing card and a hard one to win.

Neaf Apgar and Jake Blendermann left for Washington, Ind., the home of Jack Winston, on Nov. 22 for a week's quail shooting. The two above named, accompanied by Tom Keller, had a great day's rabbit hunting last week on a farm in New Jersey owned by Mr. Blendermann. The party had lots of fun and got a fair supply of rabbits, bringing home a total of 14 head.

"Fixtures" for the season of 1897 come in very slowly. Does this mean that it is going to be an off year for target shooting tournaments? We understand the Cobweb Gun Club, of New York, is considering the advisability of holding a big tournament at its grounds, Baychester, N. Y., during the week of the Sportsmen's Exposition. A big event at live birds is suggested as part of the programme.

The Forest Gun Club, of Philadelphia, Pa., advertises a shoot at its grounds on Thanksgiving Day. All events will be at targets, popular prices, and all purses will be divided on the Rose system. The grounds are located at Twenty-seventh street and Lehigh avenue, Philadelphia.

The membership of the Interstate Association has received a great acquisition in the shape of the Du Pont Powder Co. There is every prospect that before the annual meeting of the Association, Dec. 17, one or two more firms will come into the fold and help on the good cause.

Shooters in the vicinity of New York should not forget that Friday, Nov. 27, is the date set for the Dutchy Smith-Wolstencroft match at the Fanwood, N. J., grounds of the Climax Gun Club. The match is at 100 targets, expert rule, one man up, for the Austin Powder Co.'s cup and $25 a corner. The match commences at 2 P. M.

The dog got in its deadly work on the Trap department this week, and several interesting reports of shoots have had to be held over until next week. B. Waters's chuckle as he scans this week's issue in his quarters at Newton, N. C., will be more than a ripple.

The invitation three-men team race shot on Saturday last, Nov. 21, on the grounds of the N. Y. Athletic Club, was a most successful affair, despite the unpleasant character of the weather. The scores were low, but the shooting was hard.

The contest for the *Recreation* cup, Dec. 12, on the grounds of the Bergen County Gun Club, of Hackensack, N. J., should prove an interesting affair. The cup is open to non-professional members of all New Jersey clubs.

Oscar Guessaz announces that the San Antonio Midwinter Tournament will be held Jan. 20-25. This will satisfy many of our correspondents who have been writing us on this point.

Mr. C. A. Dammann, the gentleman upon whom the mantle of Irby Bennett, as representative of the Winchester Repeating Arms Co., has fallen, is a brother-in-law of Mr. Bennett. Mr. Dammann bids fair, judging from what Paul Litzke says, to rival his brother-in-law's claim for popular favor.

We are informed that Dr. Carver has posted a forfeit to shoot George Roll for the Du Pont trophy. Winston, however, if he makes good his expressed intention, will have the call, as he has had his forfeit up to shoot the winner of the Claridge-Roll match ever since Nov. 7.

Shooters, crackerjacks or otherwise, who want a shoot at Knoxville, Tenn., next May, should hasten to let Roger Van Gilder know what they think about such a scheme. A letter addressed to Mr. Van Gilder at Knoxville will have no difficulty in reaching him.

The second match of the series of three arranged between the Endeavor Gun Club, of Jersey City, N. J., and the Bergen County Gun Club, of Hackensack, N. J., will take place at Marion Dec. 3. The team race will be shot at 2 P. M., sweepstakes commencing at 12.

What has become of the proposed resuscitation of the New Jersey State Sportsmen's Association? Why does not its president, "Uncle Al" Heritage, call the promised meeting at Taylor's Hotel, Jersey City? New Jersey needs its State Association badly.

Nov. 24. EDWARD BANKS.

The Vicksburg Tournament.

VICKSBURG, Miss., Nov. 18.—It is a significant fact that all the tournaments in the South are successful and enjoyable affairs, and the fifth annual tournament of the Hill City Gun Club proved no exception to the rule. Here in the South one receives such open-handed hospitality, and the welcome that is accorded makes one always anxious to attend such gatherings. The announcement of an approaching tournament carries with it a gleam of anticipation and a desire to attend that is almost irresistible. This is the whole secret of the success of the Southern tournaments. The Hill City Gun Club offered no great inducements, as $200 added money in these days of big tournaments is not considered much of a drawing card. Under these conditions the club could not expect a large attendance, nor did they look for one; a tournament of this kind must naturally look for its visitors from the neighboring cities, for it is not to be expected that shooters can be drawn any great distance with the inducements above referred to. Then it must be remembered that this is the height of the shooting season, and it has been a long time since all game native to the South has been so plentiful. These conditions and the fact that it has been a year of numerous tournaments, both large and small, all over the country, doubtless kept the attendance down.

When gauging the success of this shoot by its attendance all the above facts must be taken into consideration. Comparing this shoot with any similar one, it will be found that the entries ran nearly up to the average; 25 to 40 shooters is what one generally finds at gatherings of this kind. Not one of those present will say that they had anything but a pleasant time, and that the shoot was not a success, nor that they failed to enjoy their visit, or regretted their trip to Vicksburg. The club made no money, it is true, but this was not the club's object, as here in the South few tournaments are conducted for revenue only. Trap-shooting has been on the wane in Vicksburg, and it was principally to try to rejuvenate the sport here that this shoot was given. No little credit is due Messrs. Bradfield, Wright, Miller, Pinkston and Porterfield for their efforts in this direction, and it is safe to assert that should they hold another shoot, as they contemplate doing in the spring, the attendance will be much larger; for all of those who were present this time will return and will endeavor to have others come.

VISITORS' ROLL.

There were present during the shoot the following: W. A. Bonner, Duncan, Miss.; Dr. Forsythe and Harry W. Stevenson, Monroe, La.; J. L. White, Memphis, Tenn.; Frank J. Arrighi, H. L. Baker, James Pipes and E. L. Wilson, Natchez, Miss.; Henry Dinkins, Anguilla, Miss.; Hugh L. Foote, Rolling Forks, Miss.; Alex. P. Smith, Van Meter and Arnold, Greenville, Miss.; H. C. Morris, Mayersville, Miss.; E. L. Sharkey, Refuge, Miss.; and J. C. Morris, Brunswick, Miss. There were also the following trade representatives on hand: A. W. du Bray, representing the Parker Gun Company, Meriden, Conn. Paul North, working the magautrap, and talking bluerocks for the Cleveland Target Co., of Cleveland, O.; H. G. Wheeler, making his debut as a representative of the King's Smokeless Powder Co., of Cincinnati, O., explaining the merits of the powder and Peters's reinforced shell. Popular Tom Callender, of Nashville, Tenn., was also there, taking care of Laflin & Rand's interest, and their new W-A powder. Dave Porterfield, whose home is Vicksburg, was saying something about Du Pont's and Hazard powder. Last, but not least, there was C. A. Dammann, a Winchester Repeating Arms Co. representative, who has lately stepped into Irby Bennett's shoes; all indications are that he will fill his predecessor's place with equal ability.

THE GROUNDS.

The programme stated that the shoot would be held at the Exposition grounds, and the club anticipated no difficulty in securing them for this purpose; but when they attempted to make arrangements to this effect the directors only asked the modest sum of $50 per day for the use of them, also retaining the privilege of serving refreshments and lunch. This of course the club could not consider, and had to look elsewhere for grounds. They finally selected a piece of land just opposite the city, on the sandbar near the Louisiana line, quite easy of access, and with a fair background. It was only a few minutes' ride from the hotel; or, if one chose to walk, it was about 10 blocks. The river formerly ran along here, and during the seige of Vicksburg many an important engagement took place here between the Federal gunboats and the Rebel forts that overlook the river. Traces of these are still visible, and one of the most important ones, known as the Devil's Backbone, could be seen from the shooting grounds. Here in the old river bed the club had arranged a temporary grounds, and a shelter had been erected to protect the shooters in case of a rain, and plenty of chairs had been provided. All kinds of refreshments were served on the grounds. The weather throughout the shoot was fine, and the only thing absolutely necessary for the comfort of the guests were the seats.

The club had made arrangements with Elmer E. Shaner to manage the shoot for them, but owing to illness Mr. Shaner was unable to attend; so Paul North, who was present to show off his new magautrap, took charge, and conducted the affair in a most excellent manner. The club at first intended to use a set of bluerock expert traps, but Paul put up his magautrap, and so well did it work that the club never regretted the change.

The first day shooting did not begin until 10 o'clock, and the programme events were started about 11:30. So well did the trap work that all events were finished before dark, and very little shooting can now be done after 5 o'clock. It required about 400 targets for the programme events, and when shooting is begun at 8:30, as is usually the case in the summer time, it will be possible to throw about 7,500 targets a day from this trap, and the cost of trapping should not be over $1 50. The company will put them on the market by the first of the year. The trap seemed to work much better than when I first saw it at the Cleveland tournament, where it was operated by experienced hands, but here by green boys.

Mr. C. J. Wright acted as cashier, while Messrs. Miller, Bradfield, Pinkston and Porterfield looked after the welfare of the guests. The Rose system of dividing the purses was used, and as usual gave entire satisfaction and made a number of new converts. Wheeler did not think much of it before the shoot, but afterward expressed himself to the effect that he was now convinced that this was the only absolute fair system. There were five moneys, and the points established were 7, 5, 4, 3 and 2. All events were at unknown angles.

FIRST DAY.

The opening day of the shoot was bright and clear, with a good stiff breeze blowing from the score, which added to the difficulty of the shooting. The magautrap too was as puzzling to the shooter, with its deceptive curves, as are those of a pitcher in a baseball game. Though there were a number of good shots present, only two reached the 90 per cent. mark. Owing to the difficulty referred to above in regard to securing grounds, shooting did not commence until 10 o'clock, when a 15-bird extra was shot to give those present a line on the new trap. The programme proper was not begun until an hour and a half later, and though it called for 200 shots, and the entries averaged 20, the trap was equal to the occasion, and the entire programme was shot through by 5:15.

When the averages for the day were computed it was found that Wheeler was in the van with 91 per cent. Then came Miller with 90, closely followed by Dr. Forsythe with 89. White, however, made an average of 90, but shot only in one event, a number entirely too small to base an average on. During the day 26 shooters participated in the shoot, the largest number in any event being 22 and the smallest 16. The extra event had 20 entries, and of this number one only, Miller, made a straight. This shooter also made two straights in the regular events, a feat that none of the other contestants were equal to. The table below shows the standing of all those who participated:

Events:	1	2	3	4	5	6	7	8	9	10	Shot at.	Broke.	Av.
Wheeler	19	18	19	17	19	19	18	16	19	18	200	182	91
Miller	16	17	18	19	18	19	17	20	16	20	200	180	90
Forsythe	20	17	17	17	18	19	18	18	18	16	200	178	89
Porterfield	18	19	17	18	20	17	17	19	15	16	200	176	88
Stevenson	16	15	18	13	17	19	17	18	18	17	200	168	84
Arrighi	16	15	17	12	20	16	19	18	17	16	200	166	83
Smith	17	17	18	13	17	17	17	15	18	13	200	162	81
Dinkins	15	16	12	14	17	16	20	19	18	14	200	161	80.5
North	15	16	18	16	15	15	15	17	17	16	200	160	80
Bonner	16	13	15	14	19	17	14	18	16	17	200	159	79.5
Sharkey	17	17	17	15	14	20	17	18	15	19	200	159	79.5

SECOND DAY.

During the early part of the morning it was hazy, but by noon it had cleared off, and the day was even warmer than yesterday; there was no wind blowing, however, and the experience of the previous day had familiarized the shooters with the work in hand, so averages ran much higher. With the exception of Stevenson, most of the contestants improved their percentage; Stevenson, for no apparent reason whatever, was clearly 'way out of form, as he stood fifth on the first day. The entries ran very uniform, the fewest being 18 and the most 21; 28 shooters participated in the programme events of the day, two more than on the first day.

Wheeler again led the procession with the excellent percentage of 94.5. He made no less than three straights in the regular events and one in the extras. Dr. Forsythe kept up his fine work, and to-day he landed second with 93 per cent., Miller being third with 92 per cent., just exchanging places as compared with their standing of the day before. There were also two extra 15-target events shot. In the first one Miller, Porterfield and Wheeler made straights, while in the second Smith and Paul North made straights.

The table below gives the standing of all those who made an average of 60 per cent. or better. The following failed to reach that per cent., or shot in only one event: Callender, Folkes, Kline, Lee, Wailes and Searles:

Events:	1	2	3	4	5	6	7	8	9	10	Shot at.	Broke.	Av
Wheeler	18	19	18	20	19	17	20	19	20	19	200	189	94.5
Forsythe	19	18	20	19	17	19	20	17	18	19	200	186	93
Miller	17	20	19	20	18	17	18	17	19	20	200	185	92.5

PAUL R. LITZKE.

In New Jersey.

FORESTER GUN CLUB, OF NEWARK.

Nov. 14.—The Forester Gun Club, of Newark, held its regular monthly shoot this afternoon on its grounds, near the Lehigh Valley Railroad's coal shutes in that city. The wind blew very strongly from the north and swept across the meadows, making the shooting quite hard. The attendance of members was very good, the main attraction being a special prize in the shape of one of Laflin & Rand's silver kegs of W-A powder. This prize was competed for at 50 targets per man, 25 known traps and angles, and 25 expert rule. Sinnock was the winner with a score of 43, made up of 23 at known angles and 20 at expert rule; Hayes ran him close with 42, after making only 19 at known angles. W. Smith and Wambold scored 41, and landed in third place. The scores in this event were as follows:

F Sinnock.....1111101111111011111111111011101111011111101110111—43
Hayes.....1101110111110001101111111101011111111111111111111—42

Nos. 1 and 4 were expert rules; No. 2, known traps and angles; No. 3, reversed order.

Haverhill Gun Club.

HAVERHILL, Mass., Nov. 20.—On Wednesday, 18th inst., the Haverhill Gun Club held an all-day shooting tournament on their grounds at Hoyt's Grove, in this city.

The weather conditions looked anything but favorable in the morning, the sky being overcast and a strong southeast wind blowing, with an occasional slight fall of rain. Many of the expected out-of-town visitors failed to put in an appearance, doubtless on that account. But the day proved to be fairly good, no rain falling after the shooting commenced, although the sky remained overcast, which made the light rather bad, especially in the afternoon. The following are the scores made:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22

GEO. F. STEVENS, Sec'y.

Pittsburg Shooters at Work.

PITTSBURG, Pa., Nov. 16.—The birds trapped to-day at a shoot held on private grounds were a rattling good lot of flyers. The best work of the day was done by W. S. King, who scored 28 out of 30 from the the 30yd. mark. Alex. King and Sandy McPherson made the next best records, each accounting for 26 out of 30. The scores were as below:

	No. 1	No. 2.	No. 3.
McPherson (28)	1111111111—10	1111011111— 9	1100111110— 7
W S King (30)	1111111110— 9	1111111110— 9	1111111111—10
Old Hoss (28)	0111111111— 9	0011101011— 6	1111110011— 8
Anson (28)	0111111111— 9	1111111111—10	1110111110— 8
A H King (30)	1101111110— 8	1111111111—10	0101111111— 8

The Interstate Association's Annual Review.

THE Interstate Association has forwarded to us a copy of its annual review, a work always full of interest to those trap-shooters who have any cognizance of the good which the Association is doing in the trap-shooting world. During the season of 1896 it held seven tournaments, one at live birds, the others at targets. Each of these tournaments is treated of so fully in the review that we have seen fit to use copious extracts from that work. The

Introduction

is a good thing to begin with, even if it is one long "krow":

"'I luv a rooster for tew things—one iz the krow that iz in him, and the other iz the spurs that air on him tew bak up his krow with.'—*Josh Billings's 'Essay on the Rooster.'*

"The sixth year in the history of the Interstate Association closes with the issuance of this Review. In the period over which this brochure extends tournaments have been given at many points; and, notwithstanding the long period of depression from which the country is now emerging, the work of the Association during 1896 compares favorably with that of former years—surely an emphatic testimony to substantial worth. The object of the Interstate Association is 'the encouragement of trap shooting,' and ever since its organization the attention of its management has been largely directed toward that purpose, as well as improving and simplifying the methods of conducting tournaments. The changes of the past years, in line with the policy mapped out by the Association, would indicate that the future will bring forth even better results.

"The usual custom of confining its labors to one particular section of the country for the entire season was departed from, the Association at its last annual meeting having deemed such a course advisable. After mature consideration it was decided to devote the first part of the season of 1896 to the South, and the latter part to a hitherto untried field—the far eastern New England States. The wisdom of this movement and the success resultant therefrom will be apparent to the reader by a glance at the interesting data and summary of the work accomplished.

"Prior to 1896 all tournaments given under the auspices of the Interstate Association were conducted in accordance with certain rules and regulations adopted at the beginning of each season. This year a departure was made from the old-established rule, and clubs were permitted to select such handicap, system or method of dividing purses as they deemed most advantageous for their particular tournament; consequently some of the clubs adopted the well-known method of dividing purses—40, 30, 20 and 10 per cent.; others selected a handicap—using the expert rule—while the majority selected the Rose system. The division of moneys in accordance with the Rose system seemed to meet the general approval of the shooting public—the expert as well as the amateur—and in order to familiarize our readers with this system it is fully explained elsewhere in this review.

"Nothing so pointedly emphasizes the great good accomplished by the Interstate Association as the fact that wherever tournaments have been given under its auspices many new gun clubs have been organized, numerous devotees of the sport were enrolled as active members, and an increased stimulus given to the pastime which to-day stands preëminent in the list of outdoor sports. So, while we admit having indulged in a little 'krowing,' it's because our 'krow' is justified not by expectancy, but by solid results. We have the 'spurs' not only to 'bak up our krow with,' but to continue our mission on the lines laid down."

After indulging in the above preliminaries, the Association takes up each of its tournaments in detail, the first being

The Grand American Handicap.

The inaugural tournament was the fourth annual Grand American Handicap at live birds, which was decided at Elkwood Park, near Long Branch, N J., March 24, 25 and 26. The Interstate Association guaranteed $1,000 (and all surplus added) in the main event, which was shot under the following conditions, viz.: 25 live birds, $25 entrance, 50yds. boundary, with a dead line at the 33yd. mark, handicaps ranging from 25 to 33yds., high guns to win, and moneys to be divided in accordance with the number of entries received, as follows:

$500 for first high gun, $300 for the second high gun, $200 for the third high gun. No more, no less, no matter what the number of entries may be. Should there be more than 40 and not exceeding 50 entries all money in the purse in excess of the $1,000 to be divided 50, 30 and 20 per cent. to the fourth, fifth and sixth highest guns. Should there be more than 50 and not exceeding 60 entries all money in the purse in excess of the $1,000 to be divided 30, 25, 20, 15 and 10 per cent. to the fourth, fifth, sixth, seventh and eighth highest guns. Should there be more 60 and not exceeding 70 entries, all money in the purse in excess of the $1,000 to be divided 25, 20, 15, 12½, 12½, 10 and 5 per cent. to the fourth, fifth, sixth, seventh, eighth, ninth and tenth highest guns. Should there be more than 70 and not exceeding 100 entries, all moneys in the purse in excess of the $1,000 to be divided 12, 12, 12, 10, 10, 10, 8, 8, 8, 5 and 5 per cent. to the fourth, fifth, sixth, seventh, eighth, ninth, tenth, eleventh, twelfth, thirteenth and fourteenth highest guns.

There were 109 entries, of which 98 were regular entries at $25 each; 6 were penalty or post entries at $35 each, and 5 were forfeits, making the total purse amount to $2,710. The handicaps were so eminently fair and just, and the birds proved to be such a superb lot of flyers, that there was not a straight score of 25 made—yet there were 8 scores of 24 and 13 scores of 23.

The ties on 24 shot off for the first eight places, and the ties on 23 shot off for the remaining 6 places. In order to have an honest shoot-off for every place from 1 to 14, the Interstate Association supplied the shooters with their tie birds free of charge. The result was a very pretty struggle as follows:

TIES ON 24.

O R Dickey (29yds)	222222	1st.
Sim Glover (30yds)	2222202222222222	2d.
G W Coulston (28yds)	2222202.2211220	3d.

E M Cooper (28yds)	•	
B W Claridge (29yds)	0	
J F Paddleford (27yds)	0	
Ed Hill (30yds)	0	

In addition to first money the winner, Mr. Orrin R. Dickey, was presented with a beautiful silver cup, donated by Messrs. Phil Daly, Sr., and Phil Daly, Jr.

One hundred and twenty-seven shooters took part in the tournament, and $5,955 50 was divided in different purses. The total number of live birds trapped was 4,435.

In the Palmetto State.

The second tournament was given at Charleston, S. C., April 14, 15 and 16, under the auspices of the Palmetto Gun Club.

BEST AVERAGES FIRST DAY.

B H Worthen, first	88	per cent.
D M Porterfield, second	80	" "
G H Peterman, third	78.8	" "

BEST AVERAGES SECOND DAY.

B H Worthen, first	88.5	per cent.
Irby Bennett, Geo Swan, second	81.7	" "
G H Peterman, third	79.4	" "

The third day was devoted to the shooting of a 100 to 125 handicap target race and a three (3) men team race. In the first event contestants were handicapped according to percentage made during the previous two days' shooting. In the second event teams were composed of three (3) men from a State; more than one team permitted. The results follow:

HANDICAP TARGET RACE.

John W Todd (110 targets), John Rocker (120 targets)	scored 100 and won first money	$44 00
H C Bridgers (118 targets)	scored 99 and won second money	39 60
L W Bicaise (118 targets)	scored 97 and won third money	35 20

THREE MEN TEAM RACE.

South Carolina Team, No. 1, scored 133 out of 150 and won first money	$33 20
North Carolina Team scored 125 out of 150 and won second money	24 90
South Carolina Team, No. 3, scored 119 out of 150 and won third money	16 60

The total number of shooters taking part in the tournament was 31. Average entry first day, 21 1-10; average entry second day, 21 3-10; average entry third day, 21. The total amount of money divided in purses was $1,590.50. 13,175 targets were trapped during the tournament. $400 was added to the purses by the Palmetto Gun Club.

The Land of Cotton.

The third tournament was given at Birmingham, Ala., April 29 and 30, under the auspices of the Birmingham Rod and Gun Club.

BEST AVERAGES FIRST DAY.

Irby Bennett, first	74.1	per cent.
Alex Smith, C L Gunn, second	73.5	" "
D M Porterfield, third	70.3	" "

BEST AVERAGES SECOND DAY.

Irby Bennett, E Vass, first	76.1	per cent.
D M Porterfield, second	75.4	" "
R H Baugh, Alex Smith, third	71.6	" "

The total number of shooters taking part in the tournament was 36. Average entry first day, 18½; average entry second day, 13 2-5. The total amount of money divided in purses was $971. 6,150 targets were trapped during the tournament. $200 was added to the purses by the Birmingham Rod and Gun Club.

Natchez on the Hill.

The fourth tournament was given at Natchez, Miss., June 3 and 4, under the auspices of the Gaillard Sporting Club.

BEST AVERAGES FIRST DAY.

U M C Thomas, H L Foote, Wm Miller, first	91.2	per cent.
D M Porterfield, second	90.6	" "
Irby Bennett, T A Divine, third	86.2	" "

BEST AVERAGES SECOND DAY.

H L Foote, first	90.6	per cent.
Wm Miller, second	88.1	" "
D M Porterfield, third	81.3	" "

The total number of shooters taking part in the tournament was 43. Average entry first day, 22 3 10; average entry second day, 18 1-10. Total amount of money divided in purses was $1,164.50. 10,700 targets were trapped during the tournament. $110 was added to the purses by the Gaillard Sporting Club.

Among the Pine Trees.

The fifth tournament was given at Portland, Me., July 22 and 23, under the auspices of the Portland Gun Club.

BEST AVERAGES FIRST DAY.

Noel E Money, L H Schortemeier, J S Fanning, first	90	per cent.
O R Dickey, H M Fedderen, Arthur Randall, second	88.2	" "
J von Lengerke, third	87	" "

BEST AVERAGES SECOND DAY.

O R Dickey, first	90.3	per cent.
J von Lengerke, second	88.4	" "
Noel E Money, third	86	" "

The total number of shooters taking part in the tournament was 55. Average entry first day, 35½; average entry second day, 30 2-5. Total amount of money divided in purses was $1,003.55; 14,085 targets were trapped during the tournament.

With the Green Mountain Boys.

The sixth annual tournament was given at Burlington, Vt., Aug. 26 and 27, under the auspices of the Lake Side Rod and Gun Club.

BEST AVERAGES FIRST DAY.

O R Dickey, first	93.1	per cent.
S A Tucker, second	90.8	" "
C O Barrett, J S Fanning, third	87.4	" "

BEST AVERAGES SECOND DAY.

O R Dickey, S A Tucker, first	91.3	per cent.
F S Edwards, second	89.3	" "
J von Lengerke, third	88.6	" "

The total number of shooters taking part in the tournament was 46. Average entry first day, 22 3 10; average entry second day, 20 3 10. The total amount of money divided in purses was $706 35. 9,055 targets were trapped during the tournament. $100 was added to the purses by the Lake Side Rod and Gun Club.

Near the Metropolis.

The seventh tournament was given at Marion, N. J., Sept. 7, 8, and 9, under the auspices of the Endeavor Gun Club.

BEST AVERAGES LABOR DAY.

The total number of shooters taking part in tqe tournament was 47. Average entry Labor Day, 15 1-5; average entry first day, 19 1-5; average entry second day, 16 1-10.

The total amount of money divided in purses was $1,351.

13,535 targets were trapped during the tournament.

$150 was added to the purses by the Endeavor Gun Club.

Recapitulation.

In the table as outlined below will be found a summary of the work accomplished during the season of 1896. Noting the fact that the tournaments were given in relatively far distant points, and as a rule in the smaller cities, the results are indeed very gratifying:

Shooters taking part	385
Live birds trapped	4,435
Targets trapped	66,700
Money divided in purses	$12,742 40

The Grand American Handicap at live birds will mark the opening of the season of 1897. As usual, it will take place at New York, March 23, 24 and 25. It is our intention to perfect arrangements for giving the most interesting series of tournaments for the coming season yet proposed in the history of the Associaton, and clubs contemplating holding tournaments should make early application for the same.

J. A. H. DRESSEL,
Secretary-Treasurer, 313 Broadway, New York.

Not a Personal Matter at all.

IN our issue of Nov. 14 we had occasion to lock horns with a decision made by the referee in the recent Winston-Langen match at Elkwood Park. Our attention had been called to the decision by a correspondent, and a clipping from one of FOREST AND STREAM'S contemporaries, *Shooting and Fishing*, giving the referee's decision in full, was sent with a request that we give our opinion thereon. We gave our opinion on the merits of the case, little dreaming of the weight of trouble that would fall upon us for our temerity.

It is now made plain in the issue of that same publication for Nov. 19 that its shooting editor was not only reporter of the shoot between Winston and Langen, but was also the referee in that match. We were not unaware of that fact at the time we questioned the decision; on the contrary, we paid the referee personally a courteous little tribute at the close of our remarks. But now that his position in the affair has been made clear, we can take it for granted that his statement of the conversation which took place between Winston and the referee is correct. In order that we may be quite plain in our discussion of this case—a discussion, by the way, that should not be marked by any bitterness of feeling—we again give the clipping referred to:

"A singular happening took place during the shooting; it occurred just after Winston went out to gather a knocked down bird. Naturally, every one watched the retrieve closely. The trapping lads were as much interested as Winston himself. Thus it happened that No. 4 trap remained unfilled when Count went to the score and called, 'Ready, pull!' He killed the bird nicely. Winston turned toward the referee and said:

"'Mr. Referee, should not Count shoot at another bird? The rules call for five traps.'

"The reply of the referee was: 'Yes, they do call for five traps, and technically you are right. As it is the referee's business to see that traps are filled, I fail to see how I can penalize the shooter for th fault of that official.' The bird, having been killed, was scored a cred for Count."

In the issue of Nov. 19 above referred to, in an article entitled "Purely personal," we are taken to task for treating of the matter on "hearsay evidence." An extract from the article itself will best explain what we mean by this:

"The many years of my career, both as sportsman and journalist, have taught me one thing; that thing is never to criticise the decision of a referee in a shooting contest unless I had been present at such contest, and, therefore, familiar with all the circumstances which led up to such decision. It is a matter of regret, of course, but it is a fact nevertheless, that the passions and prejudices of men so mould their opinions that hearsay evidence is the worst thing imaginable upon which to base an argument or to form a judgment. My critic was not present, and knows nothing of what took place save as it has been told by some spectator."

Now *our* critic is surely wrong. We judged of the question on th best *direct* evidence at our disposal. We used the very words writ ten by the referee-reporter over his signature, practically an affi davit that purported to give a *verbatim* report of a conversation that passed between our referee-reporter and Winston. If that is hearsay evidence, and therefore "the worst thing imaginable," then there i an irreconcilable difference between the sayings of the same man a referee and as reporter. As a matter of fact, the paragraph abov quoted is a palpable attempt to evade the real issue by implying tha the criticism was due to "passions and prejudices," when not th slightest trace of either was felt or manifested. This is not a personal matter at all.

The argument that the words "All traps must be filled before th shooter calls 'Pull,'" because they occur in the A. S. A. Rule 4, which refers to the duty of a puller, by implication make "him the one to see that the traps are filled," seems to us rather weak. It looks much more like a positive statement of what must be done before the puller comes into play. It means, or it does not mean, that all five traps *must* be filled before the shooter calls "Pull." It is a part of a rule and therefore just as valid and binding as a whole rule; and as such it cannot be revoked by any action or any negligence on the part of puller, trapper or referee.

The "purely personal" article then tackles Rule 5, A. S. A., and says that it "simply refers to the number and position of the traps, saying simply that all matches shall be shot from five traps, and arranging their position." If the rule says that "all matches shall be shot from five traps," how can a referee take it upon himself to let one man shoot from five and another from four, unless both contestants are agreed that such shall be done?

Next comes A. S. A. Rule No. 2, which, according to *our* critic, "makes it obligatory upon the referee to see that the traps are filled." The rule refers to the duties of a referee and says: "The referee shall see that the traps are kept properly filled." Is the word *shall* in this rule as strong as the word *must* used in the sentence: "All traps must be filled," etc.? Our interpretation of Rule 2, A. S. A., is that the referee shall look after the trappers; do the best he can to prevent one contestant gaining any advantage over another unfairly even unwittingly; possess eyes in the back of his head; preserve un varying good temper; and above all remember that he is there not to make rules, but to decide knotty points upon their merits and according to the rules under which the contest is being shot.

It appears after all, that while we were arguing the question from the A. S. A. point of view, the match was not shot under those rules at all. It was shot under Hurlingham rules, with one exception; that exception was an agreement that Winston might go and gather his own birds if he chose to do so. Winston availed himself of this privilege, for we read: "It was this action on the part of Winston that made him the sole cause to which may be attributed the negligence of the trappers and the remissness of the referee." It was Winston, then, after all, who was to blame in the matter! It is only fair to presume, however, that he was the innocent cause; so why penalize him?

We were therefore in error when we supposed that A. S. A. rules governed the contest. The fault was not ours, but that of the referee-reporter, who says. "Yes, they do call for five traps, and technically you are right. As it is the referee's business to see that the traps are filled, I fail to see how I can penalize the shooter for the fault of that official." After such a positive statement that *the* rules called for five traps, and that it was the referee's business to see that the traps were filled, no conclusion was possible other than that A. S. A. rules governed the contest, because, to use the words of the shooting editor in the issue of Nov. 19: "I would mention here that in no copy of Hurlingham rules that I am cognizant of is a word said regarding th number of traps, their position or the filling of them. That in so fa as any printed rule is concerned, a match may be shot with one, two, three, four or five traps. Hurlingham rules presume that a referee has some knowledge, and very much is left to the judgment of that official."

Now, Hurlingham rules are a set of special rules gotten up for a private club. They do "presume that a referee has some knowledge, and very much is left to the judgment of that official," and for cause—the referee at Hurlingham is, we understand, the club's secretary, a man with an intimate knowledge of everything pertaining to trap-shooting, and thoroughly capable of settling every question that may arise under his club's rules.

Our argument was therefore wrongly based on the assumption that A. S. A. rules governed the Winston-Langen match. Argued in the light of those rules—rules which do call for five traps and which do specify that "all traps must be filled before the shooter calls 'Pull,'" and that it is the referee's duty to "see that they are kept properly filled"—we leave it to the good judgment of our readers as to what should be a referee's decision in such a case, merely reminding them that if "the rules do call for five traps," no dereliction of duty on the part of any referee can abrogate that rule.

Coming down then to Hurlingham rules—the rules which governed this contest—how could Winston be said to have been "technically" correct in his claim when there is not "a word said regarding the number of traps, their position or the filling of them?" If the agreement was to shoot *five* traps, that agreement was broken if one of the shooters was allowed to score a dead bird from *four* traps. The penalty for the referee's neglect of his duty actually fell on an innocent man—Winston; Count Langen was undoubtedly just as innocent as Winston, but he seems to us to have been in error when he called "Pull!" with only four traps filled instead of five. Was he complying with the rules? What rules?

We see no reason at all to alter our opinion af the case. As we look at it, the bird was a "no bird" if killed; a "lost bird" if missed.

In the closing paragraph of our note on this question in our issue of Nov. 14 we referred courteously to the referee as "a gentleman of considerable experience in the character of a referee." In his comment on our criticism that gentleman objects to our passing him over in such a brief manner. Since he objects to our description of him, we gladly avail ourselves of the opportunity to give his own estimate of his own capabilities as he sees them (we quote again from *Shooting and Fishing* of Nov. 19):

"Why not be fair and state that the gentleman who rendered the decision questioned by his critic has had a longer, larger and more varied experience than any living man in the United States; that his services are in constant demand much against his wishes, and that his decisions are and have been most universally respected."

All of which is irrelevant, incompetent and immaterial, as there are thousands of men who are older than thousands of other men. But age does not always bring wisdom, nor experience skill, and all combined in this age do not constitute an oracle. If the decision was a sound one it could be shown to be so by the rules, usage, or by common sense, rather than by the plea of many years of personal experience and popularity. When a truth is uttered, we do not ask: "How old was the man who said it?" and there are many things so simple that a man does not require a lifetime to learn, the simplest of all being the principle that in a competition of skill each contestant shall have equal protection and an equal chance.

Hot Springs' First Annual.

THE great live-bird tournament promoted by Jno. J. Sumpter, Jr., and his friends is to take place at Hot Springs, Ark., Feb. 27-March 17, just the time of year when Hot Springs is, as Mr. Sumpter puts it in a letter to us dated Nov. 16, "at its 'high-water mark,' being full of people from all points of the globe, and when the weather is just simply sublime." Mr. Sumpter goes on to state: "We do not expect to have shooting all day long every day, but will commence about 1 o'clock every afternoon, thus giving the contestants plenty of time for baths and recreation in the forenoon. We will have plenty of good birds on hand, and no one can go away saying they did not have enough shooting. Matches can be shot in the forenoon, or in fact at any time, for we will have two different grounds in readiness."

The magnitude of the scheme undertaken by Mr. Sumpter and his friends is something stupenduous. His advisory board, however, is a good one, and should prove of the very greatest assistance to him. There are three members of that board: First, Phil Daly, Jr.; second, Frank E. Butler; and last, but by no means least, FOREST AND STREAM'S especial friend and ally in the South, Paul R. Litzke, of Little Rock, Ark. In the hands of this trio, backed as it will be by the knowledge and experience of Mr. Sumpter himself, mountains of trouble will become delectable little molehills.

We are promised advance copies of the programme at an early date; in fact Mr. Sumpter has started to work on it a week ago.

On Long Island.

EMERALD GUN CLUB, OF NEW YORK.

Nov. 17.—The Emerald Gun Club, of New York, held its regular monthly live-bird shoot at Dexter Park, L. I., this afternoon. The weather was far too warm for the time of the year, and there was not a breath of wind stirring. As might be expected, the conditions were all against the birds. But Mr. Lippack, the proprietor of the grounds, had some good birds on hand, and straight scores were by no means as numerous as one would suppose. Of course the birds were not all good; there were a few slow flyers among them that made the draw of the birds decidedly uneven. Some of those duffers spoiled straight scores too. Woods and Gus Nowak will both remember for many a day the easy ones they missed. Job Lott also has cause to keep in mind a driver that went over the line before being gathered. G. B. Hillers made some good kills of some fast birds and landed with 9 also.

Four straight scores were made: Gus Grieff, E. J. Clarke, Tom Short and G. E. Loeble. So far as Gus Grieff is concerned, he doesn't seem able to lose a bird on these grounds in the Emerald Club's monthly shoots. Out of the last seven shoots he has attended, he has scored 69 out of the 70 shot at. E. J. Clarke made his first appearance at the traps since he met with the accident that broke his collarbone and caused his retirement from the shooting world for some months. Tom Short is a member of the club who seldom, if ever, misses one of this club's monthly gatherings, and almost as seldom misses one of the birds trapped for him; to-day he added a few more points to his record for the yearly prizes. Loeble has only recently returned from a trip after the ruffed grouse of the State of Vermont. His brush-shooting has done him no harm, as his score of to-day testifies; he handles himself like a shooter when at the trap, and centers his birds well; the only slobber he made to-day was on his last bird and that bird didn't get very far after all.

Among the 8s were Dr. Hudson, B. Amend and J. Woelfel. The Doctor is shooting a new Smith gun that he is not accustomed to as yet; it shoots very close and its owner will probably astonish his friends at Eden, N. C., when it comes to tackling the country birds at the annual shoot that always comes off when the Doctor gets down there for the quail shooting. We understand that he purposes leaving this city for Eden on Saturday, Nov 21, and has expressed his intention of bagging his own Thanksgiving turkey, and doesn't care much whether it's a wild one or not. B. Amend, another of the 8s, is a shooter who has improved both in style and execution during the past twelve months. J. Woelfel, another 8, drew some hard birds and made some good kills.

To J. H. Moore, one of the old members of the club, and its present treasurer, belongs the honor of making the star kill of the day. He drew an outgoing bird and missed it with his first shell; ordinarily this wouldn't matter much, but Mr. Moore is now shooting a Winchester repeating shotgun, a shotgun he is new to, and which consequently he sometimes forgets to "pump." That's what happened on this bird; when he remembered what was the matter and had got the second shell into the chamber, the bird was almost to the boundary line (an 80yds boundary at that); but distance doesn't worry Moore; he pulled and the bird fell dead. The Emeralds (an organization that Schorty says is now composed of more frankfurters than "spuds") gave a good imitation of a college yell when they saw the feat of their treasurer. T. Codey, one of the regular shots of the club, tried a new gun to-day with disastrous effect. The trigger pull and bend of the stock are both entirely different to his old-time weapon, with which he has rolled up some good scores at these monthly contests.

The system of handicapping the members is of two kinds—rise and points. The members are divided into two classes, A and B; each of these classes is subdivided again into several different sub-classes, a member scoring the number of points in each shoot by which his score exceeds the number of his handicap points. The divisions are as follows:

Class A, 29yds., 7 points: Greiff, Clarke, Lott and Woods.
Class A, 28yds., 7 points: Dr. Hudson and T. Short.
Class A, 28yds., 6½ points: Loeble, Nowak, Sands, Fessenden, Vroome, J. Maesel, Moore and Place.
Class A, 28yds., 6 points: R. Regan and P. Butz.
Class A, 28yds., 5½ points: B. Amend, W. Amend and P. Thiele.
Class A, 28yds., 5 points: J. Woelfel.
Class B, 26yds., 5½ points: T. Codey.
Class B, 25yds., 5 points: Dr. Richter, E. Weiss and G. K. Breit.
Class B, 25yds., 4½ points: C. Maesel and G. B. Hillers.

From the above list it will be seen that Hillers, a Class B man, added 4½ points to his record by scoring 9 kills, his handicap points being 4½; Loeble's straight added 3½ points to his total. The scores in to-day's shoot were:

* Remsen and Dr. Leveridge shot as guests of the club. W. Amend's score does not count in the competition for yearly prizes.

We are indebted to Job Lott for his courtesy in furnishing us with the above score in detail. EDWARD BANKS.

IDLE HOUR GUN CLUB, OF BROOKLYN.

Nov. 16.—The Idle Hour Gun Club, of Brooklyn, held its monthly shoot at Dexter Park this afternoon. The attendance was very small, H. Knebel, Jr., and H. Boemmermann being the only members of the club that put in an appearance. These two gentlemen tried their hands in three separate matches, and in each case the result was a tie. The first was at 15 birds, and each scored 11. The second was at 5 birds, and again they tied, neither man losing a bird. Five more were then shot at, and each scored 4.

REMSEN IN GOOD FORM.

Nov. 18.—J. S. S. Remsen is fond of shooting targets and has rigged up a little trap house in the orchard at Remsen Hall, Flatbush, that gives him and his friends plenty of practice. The trap house is small, but accommodates a trapper and three traps. This afternoon F. S. Edwards journeyed to Remsen Hall to try the traps and targets. A little 100-target race was shot, Remsen winning easily by 8 breaks with 93 to 85. The conditions were practically unknown angles, the three traps being set at regular angles—No. 1 a left-quarterer, No. 2 a straightaway, and No. 3 a right-quarterer. The puller, Mr. Remsen, Sr., pulled whichever trap he chose, and could pull one trap alternately if he liked; all that was necessary was to give the trapper time to load the trap. The traps being close together, it was just about the same as one trap, unknown angles. The light in the afternoon is a little hard, as the traps face nearly due south with a tendency to the west of south. The ground too slopes up hill from the score to the trap, making the shooting rather deceptive. Remsen's shooting was remarkably good, as he ran 36 straight and 32 straight, a total of 68 out of 69 shot at. In shooting the race each man shot at 5 targets and retired. The scores were:

FOUNTAIN ROD AND GUN CLUB, OF BROOKLYN.

Nov. 19.—The Fountain Rod and Gun Club held its monthly shoot this afternoon at Dexter Park, L. I. Eight members contested for the Brixey cup, W. H. Lair being the winner with 9 out of 10. This cup was presented several months ago by William R. Brixey, a member of the club, who stipulated that the cup should be shot for at eighteen of these monthly competitions, and should ultimately become the property of the man who made the best average during that time. To-day's score, added to his previous records, make it look very much as if W. H. Lair would become the owner of this valuable trophy. The final shoot for the cup will be held on the third Thursday in December. Scores:

W Rial (30)	0211222222— 9	A Crook (27)	2222010110—7
Dr Wynn (30)	11221012•1—8	H McLaughlin (27)	12101(•012—5

INDIAN GUN CLUB.

Nov. 21.—The Indian Gun Club, a new organization, shooting at Dexter Park, held its regular shoot this afternoon. The club event is at 10 live birds, and this event was won by James Lydecker with a clean score. Below is the result of the main event:

J Lydecker	2222222211—10	L Lilienthal	2200113102— 7
J C Adams	1101211122— 8	S Porter	0121101022— 7
A B Solomon	2112010111— 8	H Renner	1100020020— 4
J Smith	2111010211— 8		

NEW UTRECHT GUN CLUB.

Nov. 21.—The attendance this afternoon at the target grounds of the New Utrecht Gun Club at Dyker Meadow, L.I., was decidedly slim. Only two men put in an appearance: J. Gaughen and the secretary, Dr. G. E. Pool. The latter did not have a gun on account of his not feeling well. Gaughen consequently had a walkover in the club event, scoring 20 out of 25.

An Invitation Shoot at Travers' Island.

THE New York Athletic Club gave a most enjoyable shoot at its grounds, Travers' Island, N. Y., on Saturday, Nov. 21. Notwithstanding the wretched weather, for the day was one of the most depressing November days it is possible to imagine, it is a hard matter to recall a day's shooting that has passed off more smoothly and more pleasantly than that at Travers' Island last Saturday. To Mr. J. D. Foot, the moving spirit in the N. Y. A. C.'s target-shooting circles, the credit of the whole affair really belongs. He was here, there and everywhere, keeping things moving and doing his share toward entertaining the club's guests, and as a natural result his scores suffered; no man can work and shoot.

To reach Travers' Island, unless you can swim, possess a boat or are fond of walking, the best way to go is to take the Harlem River branch of the N. Y., N. H. & H. R. R. at the terminus of the Third avenue Elevated. The run to Pelham Manor, the station for Travers' Island, is about 25 minutes; but it doesn't seem quite so long when the company one is traveling with is as congenial as that with which we were blessed on the above date. All trains were met by stages from the club house, so there was not the slightest trouble in transferring shells, guns and shooters to the club's grounds. A drizzling rain from the east was coming down very steadily when a start was made with a 10-target event at about 11:45, while a thick fog that hung over Long Island Sound kept the siren at one of the nearby lighthouses busy warning vessels off its rocks. Its melancholy, weird cry was jokingly attributed to a sick sea cow in the Zoo on Glen Island, about 1,000ft. distant from the shooting grounds, but some of the boys maintained that it was the lamentation of the mate of one of H. P. Fessenden's bull moose, the heroes of his moose story.

The accommodation at the score was capital, the platform being covered by an awning that kept off the rain. A tent to the rear of the score was kept well warmed by a stove that made many friends during the day. It was a small affair, but—oh, my! Harry Dain and Jack Halsted both went into raptures over it, and paid it many compliments: "Just the thing for us in the Bad Lands! How Ben O. Bush, of Kalamazoo, would love it!" said they. As a matter of fact it was a Government campaigning stove loaned for the occasion. In shape it is like an inverted funnel, about 18in. in diameter, with a stovepipe running up through the peak of the tent. The funnel is set on the ground, draft being furnished by a 2in. space between the "funnel" and the ground in front of the stove. Of course it is fed through a door, and with charcoal a very hot little stove is the result.

The trap house is an excellent one, the trappers being able to do their work with absolute freedom. Gil came down from Newburgh to help the local boys, and he gave it as his opinion that the trap house was about perfect. The electric pull worked well, bluerock expert traps and targets being used, with North's electric pull. About 2,500 targets were thrown in less than five hours, with a generous allowance of 45 minutes deducted from that time for the enjoyment of the lunch provided by the club's able steward, Mr. Schwind. Two 10-target events and a 25-target event were shot off before lunch, and were amply sufficient to furnish the guests of the club with a topic of conversation in regard to "the way those targets go."

Something should be said about the way the targets were thrown. Being thrown over the water, lost targets and broken pieces falling into Pelham Bay, there was absolutely nothing by which to gauge their speed. They went far and fast, while straightaways were comparatively scarce. "Shooting behind" was the trouble with the scores, while slow shots were outgunning themselves time and again. Nos. 4 and 5 traps too threw a little high, targets from these traps being frequently undershot. A tree to the right of No. 5 trap caused trouble on sharp right quarterers, it requiring quick work to break them before they got out of sight. For this reason shooters were allowed to stand well to the left of No. 5 score to abate the trouble. In practice Edwards stood slightly to the right of No. 5 score and drew a sharp right-quarterer and—the tree got the load of 7½ chilled shot.

Dr. Kennedy officiated as referee, being assisted during the team race by C. H. Taggart, of Newburgh, who stood at one end of the platform and acted as judge in case of a disputed target. It is only fair to Dr. Kennedy to state that Mr. Taggart's office was practically a sinecure. The cashier's department was in charge of Mr. Gregory, who, though new to the business, soon caught on to "the mysteries" of the Rose system, and divided up the purses and paid out the moneys as soon as each event was over. Carl von Lengerke had charge of the traps and acted as manager of the shoot.

The team race was started immediately after lunch was over, about 2 P. M. The first round ended with the Newburgh team, who were the favorites at the start, two targets in the lead with a score of 67 out of 75; the Endeavor team was second with 65, and Boiling Springs third with 62. The second round showed a lower average generally, 22 being high and only two men making that number: Huck and Loomis. At the close of the match the totals showed the Endeavor Club ahead by 3 breaks, with a total of 127 out of 150, an average of a fraction over 84 per cent. In order came Newburgh 124, Boiling Springs 123, N. Y. A. C. 112, Blooming Grove Park Association 110.

Mason, of the Newburgh team, was high with 44; Carl von Lengerke, Loomis and Huck coming next with 43 each; Adams, Apgar, Edwards, Piercy and Stanbrough scored 42 each. The above totals tell plainly enough that there was something about the shooting that the boys had not fathomed. Or, may be, it was the lunch! So easily and smoothly did the team race pass off that there was time enough after it was over to shoot a couple of 20-target events. Some of the shooters, however, had had enough of it, and preferred to go over the grounds of the club and take a look at the famous single-sticker, the Defender, which lay at anchor, topmast housed, between Travers' Island and Glen Island.

The scores in the different events were as follows:

Team race, three-men team, 50 targets per man, unknown angles, $10 per team, one money:

Endeavor Gun Club.

C. P. P., White Plains.—Deer shed their horns annually during the season from December to March.

C. McN, Providence.—No King Charles spaniels are advertised, and we are unable to refer you to what you are seeking.

CONSTANT READER.—There is no law forbidding use of batteries in any Long Island waters. See issue Oct. 24, page 328, relative to the Long Island law.

BOSTON, Boston, Mass.—I am stocking an island on the coast of South Carolina with pheasants and other game, and as hawks are very plentiful in that section, I am anxious to get the best possible advice as to the best possible way of destroying these hawks. Could they be trapped? If so, how? Ans.—Hawks are commonly trapped by fastening an ordinary steel rat trap firmly on top of a pole standing in a field. The birds alight on the open trap and spring it. This method would not be likely to be successful in a thickly timbered country. The hawk chooses the top of the pole as a vantage point from which to overlook his surroundings. Of course no bait is needed for the trap.

J. A. R., Bay St. Louis, Miss.—1. How may deer feet be prepared for gun racks? 2. By whom is the best book on dog training written? Ans.—1. The feet should be cut off at the "knee"—which is really the wrist—in front and just below the hock behind. Split down the back to between the hoof and turn back the skin down to the edge of hoof. Remove all tendons and fat, and rub inside of skin and the part above the hoof with a mixture of one-third by weight of powdered alum to two-thirds white arsenic. Turn back the skin and sew up the seam with strong white thread, taking care that the stitches shall be concealed by the skin and hair. Bend back the toes at right angles to the metapodial (leg) bone, and tie them there to dry. Do not use fine string for this, but rather strips of cloth, or else wrap the foot and leg loosely in paper before tying in position. In two weeks the leg should be dry. Then the shank must be fixed in the wood which is to support the rack. Any carpenter can make a neat job of this. 2. To train a pointer or setter get Hammond's "Training vs. Breaking;" to train a spaniel, Mercer's "The Spaniel and its Training." These cost each $1. "House and Pet Dogs," paper, price 50 cents, is the best book for training house dogs.

PUBLISHERS' DEPARTMENT.

A Great Railway.

THE Chicago, Milwaukee & St. Paul Railway Co. owns and operates 6,169 miles of road.

It operates its own sleeping cars and dining cars.

It traverses the best portion of the States of Illinois, Wisconsin, northern Michigan, Iowa, Missouri, Minnesota, South and North Dakota.

Its sleeping and dining car service is first class in every respect.

It runs vestibuled, steam-heated and electric-lighted trains.

It has the absolute block system.

It uses all modern appliances for the comfort and safety of its patrons.

Its train employees are civil and obliging.

It tries to give each passenger "value received" for his money, and

Its General Passenger Agent asks every man, woman and child to buy tickets over the Chicago, Milwaukee & St. Paul Railway—for it is A Great Railway.—*Adv.*

A Superbly Appointed Train.

UNDOUBTEDLY the handsomest train between Chicago and St. Paul, Minneapolis, the Superiors and Duluth is the "Northwestern Limited," which leaves Chicago at 6:30 P. M. daily via the Northwestern Line (Chicago & Northwestern R'y). Its equipment, which is entirely new throughout, and embraces compartment sleeping cars, buffet, smoking and library cars, standard sleeping cars, dining cars and ladies' coaches, has every luxury which imagination can conceive or mind invent for the comfort and convenience of passengers. All agents sell tickets via the Chicago & Northwestern R'y. For full information apply to agents of connecting line, or address W. B. Kniskern, G. P. and T. A., Chicago, Ill.—*Adv.*

Map of the United States.

A LARGE, handsome map of the United States, mounted and suitable for office or home use, is issued by the Burlington Route. Copies will be mailed to any address on receipt of 15 cents in postage by P. S. Eustis, Gen'l Pass. Agent, C., B. & Q. R. R., Chicago, Ill.—*Adv.*

A Treat for Artists.

THE autumn scenery of the Hudson River and Mohawk Valley lends additional charm to a trip over the New York Central at this season. Fourteen fast trains every day between New York and Buffalo and Niagara Falls.—*Adv.*

THE free attendant service maintained by the New York Central at Grand Central Station, New York, is another example of the care and courtesy by which patrons of this great railroad are surrounded.—*Adv.*

"THE PASSING OF COLORADO."

As timely and appropriate comment upon the communication of Mr. H. G. Dulog, respecting the passing of the game of Colorado, may be cited the report of State Game Warden Gordon Land, who has recently returned to Denver from a trip into the White River country to investigate the reported wanton slaughter of elk and deer in that region. This statement shows that there is yet a great supply of game in Colorado, but that it is "going," as Nessmuk used to say. In company with the sheriff of Rio Blanco county and three deputies, Warden Land went to the headwaters of the White River, where he found numerous camps of Indians, who, he says, were off from their reservation without a permit; and all were prepared to stay in the mountains through the winter to hunt deer and elk for the skins. In some of the camps were found great stacks of hides, many of them already tanned. No arrests were attempted, the warden's party being insufficient to compel the Indians to accompany them. Three of the Indian police, who had been sent out from Fort Duchesne to bring back the Indians, were themselves detected violating the game law.

Warden Land found one hide hunter who had taken 2,000 hides across the line into Wyoming, and he reports having heard of "half a dozen traders who this season have purchased from 1,000 to 5,000 hides from Indians and hide hunters." The ranchmen, he asserts, respect the law, but there are other men in the county who own no land and make their living by slaughtering game. This is the conclusion of the whole matter as expressed by Mr. Land: "The law should be so changed as to make buying of hides, tanned or untanned, a felony. If the traffic in hides can be stopped the slaughter of the game would cease." In other words, put into operation the principle of our platform plank.

THE STUMP BEAR.

UNTIL Dr. C. Hart Merriam, Chief of the Division of Ornithology and Mammalogy of the Department of Agriculture, began to collect the skulls of American bears and from them to determine the number of species on this Continent, all our bears were classed by naturalists as belonging to three species: the polar, the black and the grizzly. The result of Dr. Merriam's investigations was to add to this list seven others, making a total of ten, namely: the Kadiak bear, of Kadiak Island, Alaska; the Yakutat and the Sitka bears, also of Alaska; the grizzly, the Sonora grizzly, the barren ground, the common black, the Louisiana, the Everglade and the glacier bears. This was an astonishing addition to our bear supply, but there is reason to believe that the end is not yet, and that we shall have occasion to adopt still another classification considerably extending the species of North American bears.

It is certain that one important bear has been entirely overlooked by Dr. Merriam and all other scientific students of the subject. This is the stump bear, a well-established species, and the most widely distributed of all our bears.

The stump bear is known to science (or is now at least made known to science if science cares to know it) as *Ursus ligneus;* that is, *ursus*, bear, and *ligneus*, of wood. There are several varieties, among the best known being *Ursus ligneus quercus*, the oak stump bear; *Ursus ligneus pinus*, the pine stump bear; and a more or less familiar variety, *Ursus ligneus malus*, the apple stump bear.

The stump bear is found throughout the American Continent from the desolate wastes of Labrador to the Everglades of Florida. Its range includes mountain, valley and plain, and in all of these regions it is more common than any other species is now or ever has been. It is the last of all bears to abandon the country at man's approach; it lingers long upon the confines of civilization, and is at all times numerous in newly settled districts. Thus it is seen in hundreds of localities where those who report its presence have never seen a bear of any other kind, and where not even the oldest inhabitant can recollect the existence of a black or a grizzly or any of the others listed by Dr. Merriam.

Like its congener, the black bear, the stump bear is found in huckleberry patches, and on hillsides to which women and children resort for raspberries and blackberries. It is particularly common in old fields which have not long been cleared of their timber, through which fire has swept, and which have grown up to blackberries and raspberries. It haunts those pasture lots to which small boys go at dusk to drive home the cows; it has frequently presented itself to the vision of wayfarers by night in close proximity to lonely country roads; and it has even invaded apple orchards, though never until after sunset. This bear, too, is quite commonly seen in the purlieus of Sunday-school picnic groves, particularly when the lesson of the previous Sabbath has had to do with the story of the bears which came out of the woods and ate up the forty and two children who had mocked Elisha for his bald head. It is an interesting fact in physics and natural history that often the smallest child sees the largest stump bear. As the campaigns of Napoleon, by the sacrifice of so many of the stalwart men of France, are reported to have lessened the stature of the French race, so it may with reason be assumed that the stump bear, by scaring so many small boys "out of a year's growth," has exercised an appreciably unfavorable influence upon the American physique.

The variation in color and size is more marked in the stump bear than in any other species. Individuals range from silver gray and dead bark shades to jet black, the last predominating in burnt clearings. In size the differences are quite as marked; a small stump bear may be very, very small, but a really large one is tremendous. While we have no such carefully recorded data for the stump bear as Dr. Merriam has collected for the ten species he has catalogued, there is nevertheless abundant evidence to correct his statement that the Kadiak is the largest bear in the world. The stump bear is bigger.

We have said that the stump bear is not shy. It is also courageous. The black bear has been denounced as cowardly, but the stump bear never decamps. If it does not advance to the charge, as the grizzly, it at least holds its ground and never runs from man. The human being does the running. Thus the stump bear is a powerful promoter of sprint running. If the subject were to be studied into, we probably should find that the sprinters most famous in athletic annals came from the country, where at an early age they were given their first start by a stump bear experience.

Exciting stories have been told by frightened fugitives, who have averred that they have been chased by a bear, and since no bear of any other species was within a thousand miles, their pursuer must have been the stump bear; but no victim has ever yet actually been overtaken by a stump bear, or mangled by its fangs, or killed by it unless by fright.

The stump bear has been shot at repeatedly, from the days of the flintlock to the present, and by the most perfect modern weapons, held in the hands of men who do not miss their mark; but never yet has hunter brought home a scalp. No leaden bullet can harm it. It is more impregnable than the alligator was fabled to have been in the olden days. Whether any one has ever tried on it the charmed bullet of silver we cannot tell. Its invulnerability would appear to class it as among those wild animals which an Indian reckons as "medicine," beings which have a charmed life, and against which the wiles of man can avail nothing. Indeed there is, under certain circumstances, something positively uncanny about the creature, for the most highly trained bear dogs, which always attack the black bear with the utmost ferocity, will pay not the slightest attention to a stump bear, beyond perhaps going up and smelling of it. Moreover, there are legends which tell of certain bold men, who, armed only with a club, have advanced upon a stump bear in the dark, and who as they drew near were mystified at beholding the bear metamorphosed into a common black stump, as Apollo with arms outstretched to clasp Daphne saw her changed into a laurel. Probably we may here find the origin of the term "stumped."

The stump bear has done more than any other species to stimulate the written and unwritten literature which goes under the general head of bear stories. Many a back door has been entered with startling precipitation, and many a fireside has been enlivened by the narrative of what has taken place outside in the dark. It would be interesting to have the stump bear's side of such stories. Yet the thing to ask about a bear story is not "Is it true?" but "Is it a good bear story?" If the tale gives play to the imagination, establishes the superhuman prowess of the narrator, and sends the chills down the back of the listener, what boots it whether the bear was a bear or a stump?

There is no bounty on the stump bear, for it is not like its black brother, a hog thief; nor is there any market for the pelt. Long after all other bears shall have been obliterated from the land, the stump bear will remain as the last of the fearsome denizens of our woods and fields.

"AND BE."

A PRESS dispatch from Boston the other day stated that Mr. Philip Marquand, a civil engineer of that city, had been declared a fugitive from justice in the State of Maine, and that papers for his extradition had been signed by Acting Governor Wolcott on request of Governor Cleaves, of Maine. The charge was that the Boston man had killed a moose in close time of this year, the meat having been discovered by wardens in his camp on Eagle Lake on Sept. 29. Mr. Marquand had left $100 with the wardens as surety for his appearance at the hearing in Foxcroft. This hearing he failed to attend, and the Commissioners had to resort to extradition, a proceeding which has been used before under similar circumstances. Eventually Mr. Marquand did attend a secret court at Dover, with his counsel, and the affair was settled upon terms which we have not seen reported.

The case prompted some discussion respecting the penalty provided by the statute for the offense of moose killing in close time. The text of the law reads that one so offending "forfeits not less than $100 nor more than $300 * * * and be imprisoned thirty days." That may be good law, but it is certainly bad grammar, as we pointed out when the Legislature perpetrated it. Under the rule that a penal statute must be construed literally, is there any warrant here for imprisoning an offender against this law? The text does not say "and shall be imprisoned." We might assume, of course, that the framer of the law intended it to read, "and shall be imprisoned;" but can a man be put in jail on the strength of an assumption that the law was intended to provide something which it actually does not provide? We have already expressed an opinion that under the reading of this section an offender may not be both fined and imprisoned; that he may be fined, but that there is no warrant for the penalty of imprisonment thirty days nor thirty seconds.

At the same time we believe that at the first opportunity this flaw in the statute should be corrected to the end that the men from Boston and New York and Philadelphia and Chicago and St. Louis and New Orleans—not to count Worcester and Springfield and Hartford and New Haven—who go down into Maine in summer and engage guides and sneak off into the woods and kill moose and deer out of season, shall forfeit a good round sum "and shall be imprisoned" as well. And since the Supreme Court of the United States has declared in effect that a State may incorporate in its game laws a discrimination against non-residents, we would like to see a Maine law so framed that it would jail the visiting "sport" who kills moose out of season, while at the same time it could not be used by corrupt and vicious game wardens as an instrument of oppression of the backwoodsmen who kill game for their families in winter.

The fact is that we have in this country a growing class of those who assume, and act upon the assumption, that with their money they can buy anything they may fancy, among other things permission to break the laws by paying the money forfeit therefor. Fine they spell p-r-i c-e. If they fancy a moose in midsummer, they take it. If detected, they jauntily hand over the amount of the fine, and try for more at the same price. They may perhaps feel piqued at being detected in their illicit deeds, but their only chagrin is over being found out, not over having been lawbreakers and sneaks, violators of the rights and privileges of their law-abiding fellows, and corrupters of the guides they hire to aid and abet them.

Manifestly the only way in which we may secure to the law-respecting sportsman his rights is to find some punishment which will actually deter these close season killers from their selfish and defiant practices. If they laugh at fines, it is certain that they would not laugh at a term in jail. As the old man said to the boy in the apple tree, "If turf and sticks will not bring you down, I'll try stones."

The Sportsman Tourist.

STORIES OF AN HEROIC AGE.

II.—A TRAGEDY OF POWDER RIVER.

After Sandy had recovered from his wounds he became restless. One day he approached me with a proposition. There was such an important and mysterious look upon his face that I expected some valuable disclosure.

"The fact is," said he, "I am getting restless. Now, you have a couple of ponies; what do you say to going 'havers' on the wolves at my baits up Cow Creek way. Things are quiet now, we can slip up to the Bear's Paw and load down with pelts during this fine weather. Wolves were very thick when we were there, though; what do you say?"

I did not reply for a moment. The proposal seemed tempting enough, for I knew the nature of the country Sandy had been wolfing in. Finally I laughed and said jokingly: "How about the Indians, Sandy, ain't they pretty thick up there too?" "Well," he replied seriously, "I think we can take care of the Indians this time. You see we will be more careful, and we won't build any fires 'to see to shoot by.'" It was not hard to come to an understanding with Sandy. I was to furnish the stock, which consisted of two ponies, and we then became partners in the wolfing enterprise.

We packed our ponies one day and footed it up to Cow Creek. On the opposite side of the Missouri, on a small, open bottom, we unpacked with the intention of remaining a couple of days while we looked over the country near the mouth of Cow Creek. The little bottom spoken of was low and perfectly bare of timber.

We killed three buffalo bulls here, and with their skins and some driftwood erected a small but comfortable war house, which we used while stopping there and on our trips up and down the river. The very appearance of this war house was enough to intimidate a party of Indians. It was built in the shape of a bell, the lower part built up of slabs of driftwood, about 3ft. high, and the top rounded off with the hides. The lower part had concealed portholes for use in possible skirmishes, while above, out of range, imitation holes were made by cutting the hair off the hides in places and marking with charcoal to enhance the fraud. While at this camp we had an adventure which gave us a foretaste of what we might expect in that region.

We started up a ridge one morning to see what the country had in view for us. It was storming a little. Running across a band of antelope, I killed four of them, and we thought it a good place to put out a bait for wolves. We had just finished this business, when looking about me I saw what appeared to be about a dozen buffalo traveling along in single file.

Something odd about them caused me to look again. They were then about 150yds. away, coming along the far side of a ridge, so that I could only see the upper part of their bodies. When I looked the second time I saw that they were Indians in a stooping position, wrapped round with buffalo robes with the hair side out. The pony that we had brought with us was about 50yds. away and toward the Indians. We started on a quick walk in the direction of the pony, and at the same moment the Indians disappeared from view. When they came into view again they were only 50yds. away. I motioned to them to halt, whereupon they stopped, the partisan throwing down his robe and gun, raised his hands above his head and advanced toward us.

He was a short, compact-formed fellow, and gave his name as the Polecat's son. He said they had been up in the Crow country, had met the Crows in a skirmish, in which one Sioux received a shot in the leg, and he pointed out the fellow, who was a little in rear of the party, limping along as best he could.

Polecat wanted tobacco; Sandy had a plug, and I told him to break off a piece and hand it to him. But my lordly Sioux ignored the piece, preferring the plug. He evidently thought that superiority of numbers gave him the right to dictate. I quickly undeceived him by telling Sandy to put it back in his pocket.

About this time the rest of the party edged a little closer, which movement Sandy perceiving raised his rifle in a threatening manner and motioned them to halt. Polecat, turning to me, fiercely said, "Do you want to fight?" I replied, "No, not to-day, but your men must keep back." He cooled down somewhat, and after some more talk we started off with our pony, keeping a close watch on our red friends until well out of their neighborhood.

I knew the Polecat's son slightly, and while he was not a pronounced hostile he would bear watching on the prairie. I had an idea they were afraid of the Crows, and would lose no time in getting home.

The very next day we packed up our traps and started for the headwaters of Cow Creek. At the first bait we found ten wolves, a red fox and three coyotes. These we skinned, and pegged down on a side hill out of observation, intending to take up the hides on our return

When we reached the head of the creek we stopped for awhile while Sandy pointed out and explained the position of things at the time of the attack of the war party. It appears, from what was learned afterward, that after the Indians fired the volley they were so astonished by the white men picking themselves up and returning the fire that they fled precipitately, taking, however, the ponies with them. They thought they had missed the white men entirely; in fact, had overshot them.

We went out to the bait on the mountain, and on the way there we saw a band of cows among which was a calf barely a day old. It ran along in the band alongside of its mother through the snow with all the vigor of a month's calf. It was a dingy yellow little fellow, and had all the wild instinct of the buffalo.

We found our bait, and heard shooting in the distance about the same time, indicating the presence of Indians. Indeed, we thought it probable that the band of cows had been alarmed from the same source.

We pulled five wolves out of a heavy snowbank, and it was hard to judge how many more might be buried in the same place. We did not think it wise to investigate further, but hurriedly skinned those we found, and had packed up and started when three Indians put in an appearance.

They were very black-looking fellows, and I could not understand them in the least, but sized them up as "Stony Assinaboines." They showed us a dark line in the distance, which proved to be their camp on the travel. They did not appear to be unfriendly, but as they had watched us some time before showing themselves it was hard to say just what their intentions were.

Good luck had favored us thus far in regard to Indians. The same could not be said as to wolves. They were decidedly scarce, and by no means came up to our expectations. We barely obtained seventy-five wolf pelts in all, where we expected to skin up 200 or 300. As the last bait was nearly all devoured, it was possible that a number were buried under the snow, but there could not have been many.

This was our last venture in the wolfing business together. In the spring (1876) I went to the south of the Judith Basin with two companions—Jack Mail and John Lee—on a hunting expedition along Flat Willow and other creeks that run into the Musselshell, where we remained until early summer, when we were driven out by the Sioux, who were very active in that part of the country that season. It was the opinion of frontiersmen that they were congregated in unusually large numbers in the Yellowstone country.

I happened to be in the Judith Basin when the news of Custer's fight with the hostiles reached there. Later I joined the command operating under General N. A. Miles, and while with that energetic and skillful officer I saw all the Indian fighting I wanted, for he believed in hitting hard blows where they were most needed, and while he was most humane and generous to those who showed a disposition to come to terms, he never let up on the trail of Indians on the war path.

In consequence, the troops in the district of the Yellowstone were constantly drawing field rations and devoting their energies to promoting peace and quiet in the territory, a result that encouraged settlers to occupy and make fruitful a hitherto waste region.

I lost track of Sandy for a couple of years, but in February, 1880, he loomed up as the chief actor in a little tragedy that occurred on Powder River.

Sandy and a comrade of his were on a little hunting expedition when they discovered fresh moccasin tracks in the soft ground along the river. There were no friendly Indians in the country, and all of the hostiles were supposed to be north of the line. As soon as the hunters discovered these signs of Indians they packed up their traps and started down the river. They camped at night near some scattered cottonwoods and put up a low corral of slabs, poles and drift to protect their camp.

In the morning, while eating breakfast, six Indians suddenly appeared in the timber near their camp. Sandy leveled his gun and ordered them to halt. The leader of the party threw down his blanket, placed his gun and knife upon it and came toward them with uplifted hands. The Indian was allowed to come inside the corral, when he straightway engaged the two men in conversation. Meanwhile the other Indians were stealthily edging up a little closer. Sandy, perceiving this, drew his gun on them and waved them back. Though a brave man, he was excitable at times. His partner stood with gun in hand ready for any emergency.

Now, whether the Indian was rendered desperate by the evident excitement of the two white men and was afraid to turn his back to them, or thought that the time for the supreme coup of his life had come, will never be known. What he did was this: He suddenly stretched out his hands and grasped the rifles in the hands of the white men. If the rest of the Indians had been equal to the occasion and rushed in then it would have been very bad for Sandy and his partner, for these Indians were of the desperate material that composed Sitting Bull's followers; ambitious youngsters as well as ruffians and renegades from other tribes.

There was at once a desperate struggle for the mastery. The Indian, a sturdy, resolute fellow, hung on to the guns with the tenacity of despair. The white men, taken by surprise, realized like a flash their immediate peril and the necessity of overcoming it. Down they went on to the ground, the Indian uppermost. They were now out of sight of the other Indians, who were afraid to advance, as the side of the corral hid the combatants.

In the struggle Sandy's gun was discharged, the bullet grazing his arm. He succeeded finally in wrenching the gun loose, and putting the muzzle against the Indian's belly, pulled the trigger. The Indian struggled to his feet, jumped over the corral and before the hunters fired again was safe in the timber. In the skirmish that followed another Indian was shot, how badly they could not determine, but the Indians pulled out shortly after, and they saw no more of them. They shortly after packed up and started for the fort. Upon hearing their story the commanding officer at Fort Keogh directed that a party be sent in pursuit of the Indians. This party, of whom I was one, was under the command of Corp. Tom Glover, of the 2d Cavalry, and was composed of a detachment of cavalry, a few Cheyenne and Sioux scouts and the necessary packers, about fifteen in all, if memory is not treacherous. It was late at night when we reached the little corral, the scene of the conflict of the morning before. We made coffee, and after a hearty meal of hard tack and fried bacon spread our blankets before the blazing camp-fire and went to sleep. Not so the Indian scouts. They smoked and sang, joked and talked for half the night, after the fashion of Indians when in camp and not under the restraint of the prying curiosity of strangers.

In fact they were a little skeptical about the truth of Sandy's story; it seemed so improbable to them that two white men should be able to discomfit six of Sitting Bull's warriors. They questioned him again that night and listened to his story with rapt attention, interjecting many brisk "huhs" and deprecatory "ums" as he related the adventure.

In the morning one of the Cheyenne scouts, while poking around the camp, discovered a pile of brush with a dead Indian under it.

A general search was then instituted and a study made of the tracks leading away from the place, with the following result:

It appeared that the Indian shot in the corral had, accompanied by another Indian, started for home by way of the Yellowstone, as the tracks led north. One Indian was dead, shot between the eyes by Sandy, while fighting under cover of a tree. Three tracks led up Powder River, showing that the remaining Indians had gone on their way either to fulfill the quest or business that had brought them to that part of the country, or to draw attention from their wounded comrade, who was on his way home across the line, a journey involving travel of about 100 miles or more, through bad lands and prairie, before reaching a safe retreat. These facts were determined very quickly by those who could read the signs—by the Indians quickest of all. The Cheyennes and Sioux with us had been hostile to the Government only a couple of years back, now they were eager to follow the trail of the small war party.

By sunrise we were on the trail, it being easy to follow, as the February sun thawed the snow sufficiently to retain the clear impress of any track which the frosty nights froze into rigidity.

Powder River valley in February was a rather forlorn-looking country—gray and bare, except for the somber scrub cedar and pine along the foothills. Even the deer had deserted it at this season, and only a stray antelope and mountain sheep was occasionally seen darting for some safe retreat.

We had not traveled over ten miles when it became apparent that the hostile Sioux had strong suspicion of being followed, for they had taken advantage of every slope or ridge that was bare of snow, and twice they left their direct course to travel up the bed of gulches, down which trickled little streams of snow water, expecting that the water would increase in volume and wash out the tracks. In one place noted they had doubled on their tracks a short distance, and had camped in a little hollow forming a perfect ambush for any that might pass.

The Cheyennes pointed to this spot significantly and laughed as they rode by. After this we were deliberate in our movements, and took turns in going ahead.

There was no order in our march, some riding ahead; others, where the ground was favorable, deployed on either side.

We had left the Powder River valley and were traversing the broken ridges that border the Mizpah; the way became more difficult, broken cliffs appeared on either side covered with the stunted cedar and pine of that region, and on them frequently were the mountain sheep and black-tailed deer.

Late in the day we made camp in a grassy glade, the Cheyennes camping a little apart, as our party was too large to find comfort around one camp-fire. Indians do not usually overload themselves with blankets when on a trip, hence they always build some kind of shelter of brush or logs to break the force of the wind, or a protection from gathering frost or dew, which they regard as more to be avoided than rain or snow.

War parties usually build very substantial structures when camping for the night, the form being distinctive of the tribe or nation to which the party belongs; thus the Sioux and allied tribes build in tepee fashion, the loose, interlacing top forming a vent for the smoke from the fire in center of the lodge, round which the Indians sit in a circle, and at night, with the discarded war bonnets, shields and feathered cases for guns and bows in the background, forms a scene at once wild and picturesque.

The Crow Indians build a war house in flat, oblong shape, with a square hole in the top to let out the smoke.

We were in good spirits that evening, for there was some excitement in the chase, although the advantage was clearly on our side. After supper the Cheyennes sat in a circle around their little fire, and, passing the pipe from one to the other, sang in unison a song of love or war, which must have been of a humorous character, as it was frequently interrupted by laughter.

Interrogating one of the Cheyennes, Yellow Bull, as to the probability of our overtaking the Sioux, he expressed the opinion that we would come up with them about noon the next day. This he expressed in the graceful gesture of the sign language, and then added in the Yankton Sioux dialect (generally used in the region of the Upper Missouri by the different tribes in their intercourse with the whites), "*Kick-e-sapa e-ba-duxya*" ("they will fight"), which was certainly a foregone conclusion with most of us.

A moment's reflection convinced me that Yellow Bull was probably right in his calculations; in fact, it was a case of Greek against Greek.

Only a short time before these same Cheyenne scouts had been hostile Indians, and had doubtless been in the same predicament as the Sioux ahead of us.

With the instinct of a savage every detail of the chase was a revelation to Yellow Bull; every artifice used approved itself to his understanding, and he probably knew the very spot or point where the Sioux would watch or spy the pursuit.

By daylight we were on the trail again, the way became rougher as we advanced, and the raw February wind swept down from the gulches with chilling force. Troops of black-tailed deer sped away from our front into the cedar groves, but no one fired a shot for fear of giving alarm. About noon, as we were traversing a grassy glade, the wind, which swept through every hollow and apparently from no particular direction, wafted to us the odor of burning sagebrush.

At once all were on the alert. The Cheyennes scattered out to find the quarry; we followed suit, and some little time had elapsed, for we moved with caution, when my attention was attracted by the odd movements of one of the Cheyenne scouts, who stood behind one of the cavalrymen and was pointing eagerly ahead in a manner to encourage the soldier to advance while he followed in the rear. Just at that moment a shot was fired from the gulch ahead, killing the soldier instantly. The Cheyenne also dropped in the grass and remained under cover for half an hour before he dared move, and then his exertions to get away without exposing himself led to some odd contortions of the body and showed the cunning art of the savage when in straits.

There was some confusion for a little while, during which shots were exchanged between some of our party, who had crossed the ravine on the opposite rise of ground, and the Sioux, who it was discovered were concealed in a sort of cave under a large rock.

A short distance from the rock their camp-fire was visible, near which a blanket or two which had been hastily

flung down showed that the Indians had been taken by surprise, although the camp had probably been made near the rock as a place of refuge.

Fronting the ravine and facing the retreat of the Sioux, some 150yds. away, was the crest of a hill; thither the Cheyennes had betaken themselves, and in a short time the greater portion of our party had congregated at the same point for consultation.

One of the cavalrymen who had ventured too near the Sioux had received a shot in the breast, and as he was very weak it was deemed best to send in to the post for a surgeon.

A volunteer was called for to carry a dispatch; none of the Cheyennes responding, a young Sioux scout who was with the party stepped forward and offered to go. And here occurred an incident. As soon as the Cheyennes saw that the message was to be intrusted to a young man of the same nation as the fugitives we had surrounded, and who might be suspected of a fellow feeling for their unfortunate predicament, they came forward in a body and protested against his being employed in the service, offering eagerly to send one of their own party. But here again the young Sioux interposed, setting forth his good faith and claim as a volunteer, when the others in the first instance had declined to go.

In this dilemma the corporal appealed to my knowledge of Indian character to decide the matter. The result was the Sioux received the dispatch, and how well he acquitted himself of the lonely and disagreeable night ride may be seen later on.

After our courier had departed the rest of our party brought rocks, while I built a mound near the crest of the hill. At a sufficient height to overlook the spot where the three Sioux were concealed I made a port-hole with the rocks, with enough cover for protection for the observer.

The Sioux were very quiet while this work was progressing, but when Sandy elevated his hat on a ramrod and held it up at a proper height to attract their attention, they very promptly put a couple of bullets through it.

A survey through the port-hole with a field glass revealed nothing but the dark entrance under the rock. The position under ordinary circumstances was an impregnable one, but we knew that it was icy cold there, that the Indians were scantily clad, and would not dare to make a fire if they had the materials.

Night was approaching and I believed that, growing desperate, they would make a break in the dark to get away. Disposition was made for camp in the little hollow near the ravine, also for a guard over the Sioux for the night to prevent their escape. It was a cheerless camp, a chill night and dark, the moon showing itself but dimly through the drifting clouds, a raw wind making sleep impossible in that unsheltered spot even with such robes and blankets as were obtainable.

The first glimpse of daylight found the camp astir, and while discussing our hastily cooked breakfast we decided upon a scheme to rout the Sioux from their nest under the rock. Our plan was simply to rush in a body upon their retreat, to kill them if they made any resistance, otherwise to drag them out. This plan met the approval of our allies, the Cheyennes, who, it is safe to say, though brave enough, had no idea of forming the van of any such enterprise.

While making our preparations for this attack some one drew our attention to a body of Indians riding rapidly toward our camp from the nearest line of hills. While observing them we saw they were followed by a column or company of mounted soldiers, and we knew then that our Sioux scout had lost no time in conveying the dispatch to the fort. Captain S., of the Fifth U. S. Infantry, was in command, and learning how matters stood, sent White Bull, a Cheyenne scout, to talk with the Sioux and persuade them to surrender.

White Bull took position on a small eminence and harangued the hollow some little time without eliciting any reply. Finally a faint response came, then a short parley, and the way being made clear, our three "tetons" came forth. The foremost was a tall, sullen-looking fellow, wrapped in a white blanket coat with hood of the same material lined with white wolf fur; the other two were of the same type, but shorter, and with stolid, impassive faces. They were promptly taken charge of by the guard and escorted to the military post as prisoners.

One of them had received a shot in the leg while lying in the hole.

The wounded soldier was cared for by the surgeon. The dead soldier was wrapped in a canvas, lashed on to a pack mule, and so transported to the Yellowstone. On being questioned the prisoners stated that they came from Sitting Bull's camp near Woody Mountain, north of Milk River, and were bound on a horse-stealing expedition against their enemies, the Mountain Crows, and had no intention of molesting the whites until their leader came to grief at the hands of Sandy. They then continued their original course in a desperate hope to draw the pursuit from the wounded comrade.

Notwithstanding their assertion that they had no intention of molesting whites, they were sure enough desperate cutthroats. In the route they had marked out for themselves, settlers with their families were moving into the country to clear the waste places and cultivate the land. It was some satisfaction to know that the three savages—our prisoners—would not kill, maim or torture any more in this life.

From my knowledge of the Indian character, I can readily see how it was that the leader of the war party ventured to attack, single-handed and unarmed, two experienced white hunters; Sandy, though full of grit and "sand," was by nature nervous and excitable, and when the Indian found himself face to face with two resolute men, caged as it were in the corral, with the probability that if he turned back they would either kill him or hold him for their own safety, moved by the first impulse or by despair, grasped their rifles; then if his party had rushed on, his "coup" would have been complete, but he slipped and fell with the two white men, and out of sight behind the walls of the little corral, his friends were afraid to venture up.

This incident, fortunately for Sandy and his companion, led to the discomfiture of the hostiles.

BROOKLYN, N. Y. LUTHER SAGE KELLY.

The FOREST AND STREAM is put to press each week on Tuesday Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

PARTRIDGE SHOOTING IN ITALY.

THE dark profile of the Apennini Mountains detached itself with cutting neatness from the pale hue of the eastern sky, when our carriage came to a standstill just at a point where the Flaminian road crossed the summit of a small eminence; it dawned and the solitude of the *Campagna Romana* extended far around us, hill after hill, in the gray and uncertain light of a first of November morning.

A fine sight and a fine morning indeed, and we were very much inclined to admire both, forgetful of anything else, when a man with a long double-barreled gun, followed by a small dog, came out from the shade of some bushes, welcoming us with a hearty good morning.

So he was not a brigand. Banditti are growing rather scarce in Italy. He was my man Fred, our guide for the trip. In a couple of minutes we alighted, and in a couple more were all ready with our shooting paraphernalia. Meanwhile he informed us of some bevies of gray partridges he had located in the neighborhood, extending his arm and covering with its sweep half the horizon. What an extraordinary idea he had of neighborhood we had yet to learn, but of that hereafter.

The carriage was sent away with orders to wait for us at Rignano Flaminio, a very little town of 1,000 inhabitants; and while it rattled away we left the road, taking our path across a grassy slope toward some stubble fields where we expected to find the first bevy; but, "Take care," said the guide, knowing a good old habit of mine, "you must be cautious and alert, and particularly nothing of your stop a little; the birds have been hunted hard by many, and are too much disposed for journeying across mountains and valleys before you can even see them. It is snap-shooting or nothing; don't forget it, sir."

And cautious we were indeed, but to no great purpose for that.

It was broad daylight when we reached the stubbles, which extended far enough upon undulated ground, broken now and then by deep, woody chasms and small thickets; so seeing that the neighborhood was quite a large one, in the wish of exploring it thoroughly we separated, Mr. H. taking to the left with the guide, and myself to the right, while Willy was keeping a middle course.

It fell to my lot to explore a little valley, and I had not yet gone 100yds. when Tell, my old pointer, began to show very clearly that something was at hand; but at the very same moment I perceived, almost a quarter of a mile away, some fifteen birds spring wild from the stubble and disappear beyond a small eminence. So I went ahead and Tip came across a couple of quail, both of which I brought down, the second perhaps at 40yds.

The double shot attracted the attention of Willy, who was exploring the next valley; and he appeared on the top of the hill when I told him of the partridges, and away he went for passing the welcome news to Mr. H. The result was that after ten minutes we found ourselves all together at the beginning of the valley, where I thought the birds would be.

Now we began in earnest, and the guide, pointing to a thicket, said: "There they are." But he was mistaken, for before we had covered half the distance Tell pointed right ahead of Willy, and immediately the bevy got up with a terrific whir of wings that almost scared the boy. But he winged his bird notwithstanding, and two more shots by Mr. H., quite out of range, had the happy result of scattering the remainder.

It was up hill and down hill all the time, but we were sure of some very good sport; so along we went till Willy started a partridge and scored a miss, but Mr. H. was near at hand, and with his left barrel shot the bird for him.

Just then the guide called our attention to Reno, the splendid setter of Mr. H., pointing beautifully some hundred yards on his left, but as we were going there Tip and Tell came to a point also—Tip through a thicket of bushes and Tell far beyond in the stubble. It was a fine sight, and sure enough we were enjoying it. But unhappily the guide started a hare, and away went his dog across the field yelping. The hare was promptly stopped by Mr. H. Yet it was too late, as half a dozen partridges had got up out of range, and Tell was coming very sulkily toward us.

We parted then, Mr. H. and Willy going for Reno, and myself for Tip. The good dog had never stirred, and I had the luck of starting three full-grown birds, but I stopped a little too much, so when I was ready with my first shot I had to content myself with killing one, using my choke-bore because they were too far away for any common barrel; indeed in trying it I got a bunch of feathers and nothing else. Willy and Mr. H. were more fortunate and cut down three out of four birds.

I had located pretty closely my two partridges and went alone for them. Meanwhile my friends, judging the stubble very promising, started for quail, and were lucky enough, as notwithstanding the late season they killed five in an hour. For my part I did find the partridges, but they got up wild some hundred yards away and made for a large and deep chasm, where I followed them, but found the place so thick with trees, bushes and thorns of every description that I judged better and left them alone.

The sun was now high and rather hot, so I came back to my friends and proposed a stop for breakfast, to which they readily assented.

At noon we started for Rignano, perhaps ten miles distant across a broken land, mostly stubbles, with oaks scattered all over it. We worked up hill and down hill a couple of hours or so, crossing some twelve or fifteen woody creeks, so deeply burrowed in the earth that it took our utmost exertions to go down safe and get up at all. Willy had the chance of shooting a good-sized hare, neatly pointed by Tell, Mr. H. a lone partridge and myself three more quail.

We were now quite near the town. The creeks swarmed with blackbirds and thrushes, but we were not hunting for them, although in Italy it is a common practice to shoot such birds, the latter particularly, as they are such delicious eating and so destructive of olives.

In fact, we were seeking for the second bevy located by Fred in the neighborhood, but had almost given up hunting and were walking leisurely toward the road, when from a vineyard Tip flushed our quarry. "Seven birds," said Willy, who had a chance of seeing them between two rows of vines; so we took a new start, although there was little hope of retracing them in the woody hills where they had sought refuge, with sunset near at hand and a very indifferent idea of the direction they had taken.

But never mind; in five minutes more we were exploring a thicket well nigh impenetrable, and after it an olive tree grove, then another vineyard, and were just emerging upon a prairie when the birds took to their wings in a hurry, yet not so quickly but that five shots were discharged and three more partridges went to our bag.

An hour later around the dinner table we made the inventory of our game and found two hares, ten gray partridges and ten quail. Not a bad catch, after all, so late in the season, eighty days after its opening, and what was better yet, we had enjoyed a day of real sport.

We were tired enough after more than ten hours' walking across a very hilly country, but that mattered not; so, having had a good and substantial dinner, we went to bed, and dreaming partridges again and again, prepared our limbs for greater exertions.

Unluckily our hopes were fated to end in nothing. During the night a thick fog set in, and when morning broke rain was pouring down in torrents, so we packed our traps and took to the carriage homeward bound, but quite satisfied with our trip. A. CAMURRI.

ROME, Italy, Nov. 3.

CAMP BLAIR.

Editor Forest and Stream:

"Leaves have their time to fall;" and the North Wakefield Trout Fishing Club gets itself together in September of each and every year at its comfortable club house in the Province of Quebec to catch the wily trout, shoot the foolish partridge, inhale the unpolluted air, drink from the crystal lakes, and, in short, have that real honest enjoyment that can only be measured by the lifetime of its members.

The 15th of September is the usual time for the congregation of the faithful, but this year three "old stagers," having an early attack of the fever, presented themselves at the Grand Central Depot on the evening of the 9th, armed and equipped as the law directs in such cases, and by the excellent arrangements of the N. Y. and Vermont Central Railroads we were landed in Ottawa the next day at 11 o'clock A. M. without a transfer. On inquiring for our old cook we found he had gone out with a surveying party, not expecting us to call before the usual time. We were not long in engaging the services of another cook, directing him to take the first train to North Wakefield, while we after lunch chartered a team, loaded our duffle, made a few purchases and started on a delightful twenty-seven mile ride, for the roads were in good condition, the weather fine, the foliage clothed in its autumn garb, and the team and driver just suited to the occasion. Comments are unnecessary to those who have taken such a drive. We arrived at Camp Blair about 6 o'clock hungry as bears, only to find the cook had not put in an appearance, and Pat had gone to the depot six miles away expecting to meet us there. Did we go hungry long? Not much. We could all do a little cooking ourselves. A fire was soon made—tea, fried ham, sliced peaches and a fresh loaf of bread we had taken from Ottawa gave us a comfortable supper, and by the time we had finished it Pat and the cook arrived, so we did not have to wash the dishes and clean up the table.

While smoking before the big fireplace after supper we jointed and strung our rods, and having repeatedly read in FOREST AND STREAM of trout having been caught after dark, I went down to the large pine that had fallen into the lake, where I had repeatedly taken trout in the daytime, and cast until I got tired with never a rise, and here I may say that myself and others tried several evenings from the shore and from boats with the same result, never getting a single trout, and we tried a variety of flies. The next morning, by the time the cook had his arrangements for breakfast started, I was down to the fallen tree, and the third cast made I hooked and landed a trout, and, taking it up to the cook in my landing net, he served it for our breakfast, and it would be superfluous to say it was very good, and that we enjoyed our first trout in camp better, I ween, than epicures could have done at Delmonico's.

For four or five days we three were lords of the manor, with trout and partridge enough to supply the table, prospecting from lake to lake to see where the big ones dwelt in their crystal solitudes, and taking quiet yet very solid comfort. On the fifth day of our sojourn other members and their guests began to arrive, and soon we numbered a party of ten just such men as an increase of numbers only adds to the enjoyment of all. With three doctors in the party, of course no one would *dare* to get sick, lest he be done for in short order; with an ex-congressman to occasionally put on a dignity that did not fit him at all, and a sort of a politician who had sometimes laid plans whereby his friends had found office, but who never shot his mouth off on politics in camp unless some one would extend an open palm, saying, "Five dollars, please, or dry up;" and he always dried. It was an unwritten law of the club that no politics was to be ventilated in camp; and it required little trouble to enforce it. Some of the party were expert fishermen, and all could cast a fly fairly well, except one of the medical fraternity, and he persisted in telling about going out and "swatting" the water to catch a fish; but he being a guest we had to deal kindly with him, but having since become a member of the club he will find the wax in his ears warmed at his next visit to Camp Blair. It has been the blessed privilege of your scribe to mingle with many an outing party, both in fishing and shooting, and he has no hesitation in saying this was the most congenial party with whom he ever gathered. One we missed, and our hearts ached with his for the sorrow that prevented his joining our annual outing.

We caught abundance of fish for the table, and no one left camp without a well-filled basket; in fact we caught a greater number than in any previous year, the largest weighing a trifle over 3lbs., and we turned loose all under ½lb. We found trout in the various lakes in localities we had never tried before. If there be any country for a "fish hog" (I don't like the term) that is not the place for him; but a reasonable man can always find fish enough to make it interesting and truly sport. Although partridges were not as plenty as in previous years, yet there were few days when they were not served for dinner. One day two of us were casting from either end of the boat while the guide quietly paddled the boat along shore, when I heard my friend

say to the guide, "What's that?" and both seemed intently listening in the direction of the shore. As my hearing is impaired, I paid little attention, but kept on casting. Presently the guide touched me on the leg, whispering: "There he is, shoot him" Supposing it was a partridge, I quietly laid down my rod and picked up my shotgun, taking from my pocket a No 8 shell, and as I put it in the gun looked for the first time in the direction the guide had indicated, when I beheld a beautiful black bear within 100 t. of us, and looking as intently and surprised at us as we did at him. I quietly returned the shell to my pocket, closed my gun and took a good look at bruin, till he made a pivot of his hindfeet, and without any haste turned himself around and went off into the timber. I have said he was beautiful, and he seemed so to me. I could see his ears, eyes and lips distinctly as he stood breast toward me, and his coat was jet black and fairly glistened in the sun. My companions said "Shoot," but I told them I was not wasting any No. 8 shot on bear. After he was gone it occurred to me that this might have been Brother Hugh's bear; certainly the graphic recitals of his bear hunts in the Southern canebrakes flashed through my mind, and I wished Captain Bobo horses and hounds could have been there to have bagged the handsomest bear I ever saw. Now, Mr. Editor, please excuse this seeming digression, for, in fact, it is interwoven in the day's fishing, and will never fade till the lamp burns out.

Having in previous years encroached on your space to describe our camp, lakes, possessions and a general description of the country, I beg only to say that each year I am more strongly confirmed in what I have said in past years—namely, if one delights in testing his skill with the instinct of the wily trout, and delights in a quiet retreat in the country that God made and still governs, where he can enjoy living and a recreation which can not be found in crowded towns, then he must secure by lease or purchase a section, small or large, that he can call his own, having these advantages, and such places are becoming rapidly less every year. Some one has said: "It is not all of life to live;" and everybody has used the paraphrase: It is not all of fishing to fish, and in this all speak the truth. If there is no sentiment attached to the rod and gun in these later days, then are we still behind the red man, and should try to make his bow and arrow and his barbed hook and spear from a bone, and try to use them simply as he did to procure food; and in view of the depletion of game and fish I fear many of us would go hungry. While the trout seem to hold their own in our lakes, both in size and number, the club has decided not to run any risk in the matter, and hence has made arrangements for several thousand fingerling trout to be put in the lakes next spring, and has also ordered black bass for stocking Wright's Lake, the only lake we control whose waters do not flow into the other lakes. We do not believe it is good policy to take all we can get, giving nothing in return. But I must close this imperfect and disconnected sketch of one of the pleasantest outings of my life. Do we prize such things more as the number we can reasonably claim grows less? I think so. And is not this the best evidence that such sports are very dear to our hearts? A.

Haddam, Conn., Sept., 1896.

HOSPITALITY AMONG SPORTSMEN.

The hospitality among sportsmen is proverbial. This virtue is not confined to one race or country; it is universal, international, as two of my American friends here, students of medicine, will readily testify. Both of them are fairly good shots and stanch admirers of the rod and gun. They concluded last summer to spend a portion of their vacation time in shooting partridges, and I assisted them in procuring hunting permits, guns and ammunition. Upon my suggestion they put an advertisement in one of the leading sportsmen's papers of this country to the effect that two young Americans were in search of an opportunity to enjoy a few weeks' shooting sport on partridges. My advice was followed, and within a week after their advertisement had appeared in print my friends had received twenty-three offers from different parties, mostly large estate owners, all over the country. They concluded to accept an invitation from a gentleman residing in Posen, near the Russian frontier, and in due time boarded a train for their destination. After a ride by rail of about seven hours they arrived at the station nearest to the place they were bound for. A light carriage with a coachman in spotless uniform awaited them at the station and a second wagon had been sent for their baggage.

"How far is it to X?" they asked the coachman, after they had seated themselves in the carriage, in German. The answer came promptly, but it proved a conundrum to my friends, because it was given by the coachman in his mother tongue—in Polish All their further attempts to secure the desired information proved fruitless. But they were not kept in suspense very long. After a ride of thirty minutes the final destination was reached, and they entered the gates of a castle-like building, surrounded on the three rear sides by substantially built barns, stables, etc. Inside the gate they were received and cordially welcomed by the proprietor, a pleasant gentleman, whose figure gave signs of good living. He escorted his guests to their rooms, which proved exceptionally clean and richly furnished. A small chamber adjoining the rooms was assigned for the dogs.

Fifteen minutes later they heard a gentle sound at their door, and in response to their "*Herein*"—come in—a fair maid entered and informed the newcomers that "*Die gnädigste Frau*"—the most gracious lady—was ready to see her guests.

Fortunately my friends were equipped with dress suits. These were pressed into service, and this done they made their initial call on the lady of the house. She first addressed her guests in German, but after ascertaining that they were Americans she conversed with them freely in good English.

The conversation was interrupted by a servant who came to report that supper was ready. And what a supper had been served! The table was covered with the choicest meats, warm and cold; fishes, pastry and fruits; and last, but not least, the finest liquors, still and sparkling wines. After supper a game of poker was played. At 9 o'clock the following morning, and after a first-class breakfast, the landlord asked his guests to mount the wagons ready for the occasion. Each gunner had his wagon assigned to him and each gunner had a servant at his disposal. The eatables were prepared by the lady, the refreshments by the landlord. The former were more than what my friends expected, the latter simply fit for a Lucullus. Partridges were plenty. Four guns and 189 birds bagged the first day. Enough. My friends had a royal time, and stayed ten days. And what did all this pleasure cost them? Apart from the railroad fare, not a single penny; even the servants had been strictly forbidden to accept any tips. It was simply a case of sportsmen's hospitality, nothing more. Armin Tenner.

Berlin-Schöneberg.

THE PASSING OF COLORADO.

Some of us whose heads are getting gray a good deal earlier than they ought to can call up a picture of the Colorado mountains in autumn something like this:

A buck stands in the edge of the yellowing aspens; groves of spruce break in on the background, with their somber green. The buck glances back over his shoulder, his great ears spread out, searching the broad park of bunch grass, which stretches downward, while at the side, amid the brown riband of fringing willows, a growling brook rumbles off to join its river. Sometimes in place of the buck one could get a glimpse of the spreading antlers of a six-point elk, and in the summer among the berry patches you could hear the soft crushing of the bushes and the gratified snuffle of the browsing bear.

In the days when the Little Pittsburg was a name to conjure by; when Aspen and its Molly Gibson were unborn; when Castle Fork had neither been built nor deserted, nor changed its name to Ashcroft; when Carbonate (which was soon to be the county seat of the future county of Garfield) had not been founded, nor left, as it now is, to the sole possession of the mountain rats; in those days, I say, two modest prospectors camped where the slender springs of the North Fork of the White gather to trickle down into Trapper Lake, whence the stream bursts with power. These men saw the banded elk pour bugling and bawling over the rim rock. They saw bucks spring regardant by the dozen at the approach of their scanty train. They even saw bears, glistening with a reflection of darkened steel, turn and twist on the slide rock whence they tried to dislodge some badger or gopher who had sought refuge in the crevices. One of these prospectors, now searching rather health than wealth, has revisited these scenes.

Starting from Glenwood Springs, the party of which I write took its way in the last days of September up the grade in a snowstorm to Bennett's Mills, certain deserted buildings standing now in an extensive timber reserve of the Government. For fifty miles each way stretches this tract. Beginning at the west of Glenwood, some ten miles distant, it reaches far enough to include the head of Williams Fork of the Bear, and runs from Trapper Lake on the north down to near the junction of the forks of the White.

From Bennett's Mills our party in two camps came to Big Fish Lake, lying between the Marvine lakes and Trapper Lake, and shortly after crossed the North Fork of the White and struck for Williams Fork of the Bear.

This destination we did not immediately reach, but owing to the fantasies of our guide we got "balled up" in down timber and precipices near Pagoda Peak. This served just as well. We camped a day, got a small deer, and then by devious routes got over the divide and sought the headwaters of Williams Fork. Here we found a considerable number of ranches.

Up to a certain elevation there was some plowing done on these ranches. It appeared that oats were the only crop that could be trusted to ripen at the altitude, and in one place we saw a farmer cutting his oats green in October to save the crop. Higher still there were "horse ranches," where stacks of marsh hay had been cut for winter feeding, though I am credibly informed that neither cattle nor horses will prosper standing belly to shoulder deep in snow day and night all winter for the sake of a ration of marsh hay.

From our camp on Williams Fork we hunted west over the flat-topped mountains to the head of Ladd's Creek on the north and far southward. We saw does and fawns in numbers, but no elk, and but one buck quite distant and going like a locomotive. We did, however, see horse tracks and men's tracks and men and horses all over, and shortly pulled out down Williams Fork and over the country to Hayden.

We crossed the Bear River at Hayden and in two days came to a region known as California Park.

This district, lying between the Bear's Ears and Sand Mountains, contains the headwaters of Elkhead Creek, which flows into the Bear below Hayden.

We were disappointed to find that a wagon road, though a dim one, led clear through the park, but we made camp on the site chosen by some former party and found room, by clearing away cans and bottles, for our unassuming settlement. We hunted the Bear's Ears, we hunted the Sand Mountains and stalked antelope on the flat between. Here occurred the greatest feat of the trip. My packer and I started out one morning to hunt the Sand Mountains for elk. On the way we noticed two horsemen cross the wash a mile above us on the left. Shortly afterward we sighted antelope—I began stalking a sentinel buck. He finally walked away down the back of the ridge and I started to run forward. Almost immediately the sentinel turned back to his post; so I crouched again, but something on the other side startled the band and they swept by me at 40yds.

I fired at a fat antelope, but the band sped on solidly at that swift, graceful gait which puts an express train to the blush. I fired again and an antelope fell, sliding along the smooth, sloping grass for nearly 40yds. before it came to a final rest. I signaled to my companion to bring the horses, but he showed me that a dead antelope lay near him and I learned that I had made a double on running antelope—a feat that I shall hardly hope to repeat.

We climbed the Sand Mountains after dressing our game, and found elk pastures and elk sign, but no elk. We did, however, discover two hunters in a distant gulch and a copy of the *Rocky Mountain News*, which had wrapped some one's lunch. We also heard twenty shots fired in less than a minute by antelope shooters, and at all times heard an interrupted fusillade of people shooting does and fawns in the woods. I say does and fawns because there were plenty of them and no bucks in that part of the country.

We felt crowded out from California Park, and returned by a somewhat different route to the North Fork of the White. Near here we discovered a fresh bear track in the snow. The bear was small because his tracks were small. He was lean because he did not touch his heel to the ground, as fat bears do, and he was hungry because he turned aside to snuff at every dry bone in his path in the hope of getting fat enough to "hole up" comfortably, also he was speedy. We followed the track fast as long as the snow lasted and for half a mile further. Then the track played out, and afterward we played out and returned to camp satiated rather with sport than game.

It was curious to see that squirrels and a coyote had followed the bear for a long distance. The squirrels were possibly looking for pine nuts that the bear might dig up.

This was our last hunt. We soon reached the North Fork again, and from there in to Glenwood there was no chance for game.

Yet this tract of country is just the part most vividly pictured in the memory of the old-timer. The region is an ideal one for game. It lies in the Government timber reserve, where no settlement is allowed. It has grassy pastures, thickets of aspen, forests of spruce, brooks, lakes, crags, parks and ravines, that once swarmed with game. And now not a hoof! Not a footprint broke the fair carpet of the new-fallen snow.

To the westward, toward Pagoda Peak, one finds a few does and fawns. Then on Williams Fork more does and fawns. In California Park and the country adjoining we saw about 200 antelope, while there were many does and fawns along the slopes of the mountains about. We saw probably over 100 of them. Altogether we saw fresh tracks of fifteen or twenty straggling elk and of one bear, besides seeing two small elk in the flesh. But even thus late the game did not bunch up. There seemed to be practically no bucks.

My men gave me the usual explanations for this seeming lack. The bucks had not yet come down. The bucks had gone down before the does. The bucks were back along the range.

Some of these explanations have caused amusement for many years, particularly the last one with its grand indefiniteness.

In this especial case we had traveled with our pack train some 250 miles, besides making hunting excursions to the highest ground and well down in the bottoms; and it became my opinion that theories of temporary hiding would not account for the lack of elk and deer. I think that, in spite of its ridiculous apparatus of game laws and wardens and deputy wardens, the State of Colorado is losing its game as fast as the independent voters can butcher it.

There are not enough elk now left in the State to raise a bugle or gather a band. Of course the rural citizens of Colorado are not the only ones who kill the game.

The great tourist hotels at Glenwood and Colorado Springs send out gentlemen from New York, Manchester, Birmingham and Cincinnati.

These gentlemen are, many of them, good hunters. They take their wives, servants, families, crockery and other luxuries, making a moving village.

There are also sportsmen's resorts at Trapper Lake and the Mawine Club, the latter reached by a wagon road from Newcastle. These resorts are managed by competent guides and hunters, who take the best of care of their patrons. But in all these cases a certain respect is shown for the law, and some of the guides have been appointed deputy wardens in order to act with the more authority.

The statute of Colorado allows each hunter to kill and consume one adult deer, elk and antelope each season.

All the population of the game districts violate the statute in season and out of season, or sympathize with its violators.

The ranchers are the worst sinners. They get good chances to slaughter when the snow is deep, and kill at every chance.

I saw a cabin on the Williams Fork on the roof and around the walls of which hung thirty bucks' heads not apparently a year old. I am told of another rancher who killed 100 deer in a season; of another who used venison to feed his hogs, and so on.

Besides the ranchers, there are the "boys" who go out for their "fall meat" or their "winter meat," as the case may be. Four-horse teams start from Leadville, Aspen, Newcastle and Glenwood, and come back loaded with carcasses. Sometimes the wardens catch these men and convict them. It is then held a point of honor for the "poor fellow" immediately on his release or on payment of his fine to kill and waste enough game to soothe his wounded feelings. The taxidermists, who, by the way, seem to do wretched work, are also responsible for a small amount of illegal killing.

Thus we have ranch butchers, meat hunters, spite hunters and head hunters, all working with the sympathy of their fellows to destroy the game.

The game is no longer back along the range. It is dead.

The Williams Fork this year was lined with hunting outfits all the autumn. They were killing does and fawns. There was nothing else to kill. The fusillade in California Park sounded like a Gatling battery at times. They were killing does and fawns. There was nothing else to kill except a few wary antelope. We saw a doe and fawn lying by the roadside bloating and left to waste by some man who wished to show that he was big enough to break the law and avoid detection.

We passed sleepless nights and lived laborious days trying to avoid our fellow creatures and find camping grounds that were not littered with cans, whisky bottles, rags, withering carcasses, and all the unsightly refuse of a half-civilized outing.

We were, however, bound to find the elk pastures carpeted in spots with the *Rocky Mountain News* and the Wahsatch *Screamer*.

Colorado in its mountain portions is a beautiful State, and in the reservations exempt from settlement it affords an ideal home for game; but owing to the butcher-like and law-breaking tendencies of its rural population the game is doomed.

It does not need the mystical lore of life's sunset to prophecy that in two years one may hunt as profitably for elk and bear in Kansas and Illinois as in Colorado.

In five years deer will be as scarce here as wolves in the Adirondacks.

The cause of civilization will, however, have gained a great advance.

The game wardens will then be changed to health inspectors to prevent camp refuse from breeding a typhoid pestilence.

At that time merry bands of tourists will sally from Glenwood and Colorado Springs to hunt the cap like the sportsmen of Tarascon.

Enterprising citizens can then cut crops of oats green in October near the highest peaks if the snow be not too deep, and a railroad will run up every considerable gulch into the hands of a receiver. H. G. DULOG.

MUCK-A-MUCKS.

DENVER, Colo., Nov. 20.—*Editor Forest and Stream:* In your issue of Oct. 24 I find a letter from Mr. John Mowat showing some temper because a certain Boston gentleman had referred to certain Canadians as "high muck-a-mucks." You confess inability to explain the title or the origin of the offensive word.

Fifty or seventy-five years ago there was constructed on the Northern Pacific coast a common language known as the "Chinook jargon," for convenience in trading with the many Indian tribes of that region. Exactly who was the inventor of it I cannot tell, but it was made up of words, more or less exact, from many languages, civilized and savage, in which the language of the Chinook Indians doubtless predominated. The Chinooks occupied the coast immediately north of the mouth of the Columbia River and were the first native people with whom traders who arrived in ships came in contact—hence, probably, the foundation of the new language that was built up. It was a curious fact that, while there were a great many tribes or remnants of tribes living in close proximity, they seemed to have no knowledge of each other's language. For instance, when I first knew them, there were seven Indian villages clustered around the great falls of the Willamette River, living mainly upon the salmon they caught at the foot of the falls, each having a distinct language which was not understood by any of the others; but all could speak the Chinook jargon, and it was so all through the country. The white people had also to learn the language in order to converse with their Indian neighbors, and it was, in fact, largely used by all people and at all times, in business and otherwise. I think it comprised only 546 words and was not difficult to learn.

One of its words in most common use was "muck-a-muck," and it meant food, or anything that could be converted into food, except salmon. Salmon was so emphatically the staff of life with those people that it was not included in the common term "muck-a-muck," but was always distinguished by its proper name. "Hi-yu" meant plenty. "Ha-lo" meant scarcity or nothing. "Hi-yu muck-a-muck" signified plenty to eat of common food. "Hi-yu muck-a-muck, ha-lo salmon" meant a sufficiency of ordinary supplies, but no salmon, and consequently a rather restricted bar quet. "Ha-lo muck-a-muck, ha-lo salmon" meant utter destitution at the time and a strong presumption of famine near at hand.

In later years I have heard the term "high muck-a-muck" used occasionally, generally as a sneer, or a term of derision, applied to some one who was blessed with a superabundance of self-esteem—a presumptuous, "stuck-up" personage. I presume it was in this sense Mr. Mowat understood the term to be used. Whether or not it has come from the Chinook jargon to the people I have heard use it in recent years I cannot tell, but presume it did not. Your suggestion that it may have grown from the Algonquin word *mogquomp* may be correct. The first invasion of the Oregon country by white men, in sufficient numbers to be sensibly felt, was by Hudson Bay Fur Company employees, who went from the Canadas and so on west to the Columbia, and down that river to its mouth. The company's supplies were received direct from England by ships that entered the Columbia, and their people probably had much to do with framing the 'Chinook jargon." Its term of distinction was "Ty-ee," and a very great man was "Hy-as Ty-ee," or "Hy-as Bos-ton Ty-ee." In fact, in the earlier years all United States men were "Boston Ty-ees." So you will see that Boston attained fame among the Chinooks and their neighbors at a very early day. This does not tell where the word "muck-a-muck" came from, but I believe it will do no great harm to allow Mr. Mowat's charge to rest where he has placed it—upon Boston. W. N. BYERS.

Natural History.

ADIRONDACK BEAVER.

Editor Forest and Stream:

I notice in this week's issue of your paper an article on Adirondack beaver, and I am pleased to be able to contribute a few facts which came under my own observation this year, thinking they may be of interest to others.

Early in June I spent a day or two at Lake Madawaska, which is in Franklin county, between Brandon and St. Regis Falls. This lake is fed by a small stream known as the Quebec Brook, and I was paddled up it several miles by Jimmy Eccles, a guide at Joe Alfred's little hotel at Madawaska. On the way down from a very successful day's fishing, Eccles asked me if I would like to see where beaver had been working, and on receiving an emphatic reply in the affirmative he put me ashore, and I saw where a considerable number of small silver poplars had been gnawed off about 2ft. from the ground. The workings were not fresh, having been made last year, I should say, and there was no sign of any dam. Eccles said, however, that there were similar workings on the other side of the brook, which was quite wide at this point. While there we saw a hedgehog in the brush, and killed him with a club, which proved to be, upon examination, a piece of one of the poplars the beaver had cut, the chisel-like marks of his teeth plainly showing upon it. I regretted afterward that I had not brought a sample of this work out with me, but later in the season I found more of it.

The last of August, while fishing on the middle branch of the St. Regis River, my guide Martin called my attention to some stubs from 1 to 6in. in diameter which the beaver had left standing, after having dragged the tops to the water, presumably, as they were nowhere to be seen. The signs were old, but in following up a small stream which came into the river near by I came across some comparatively fresh workings, the stumps being still green and the cuts or tooth marks almost new—probably having been made late in the spring. Martin thought there must be a small family of beaver in the immediate vicinity—probably further up the little stream we were on. He cut off one of the stumps, which I brought home with me.

From these evidences and reports I got from several guides who do more or less trapping in the winter, I am convinced that there are a good many beaver in the Adirondacks, and that under the present protective law they will "increase and multiply and replenish the earth." I am told, however, that many of them are solitary in their habits and are called "bachelor" beaver, living like muskrats in the river banks instead of building houses, and showing no disposition to build dams

Let us hope that this interesting animal will not become extinct in our State, and that the law looking to his preservation was passed in time to save the scattered remnants of his tribe. ARTHUR F. RICE.

DO BIRDS HIBERNATE?

Editor Forest and Stream:

In the rich table of contents furnished us in FOREST AND STREAM for the 7th inst. I noticed particularly a brief article entitled 'Queer Ways of Birddom." I noticed this article particularly because it mooted one or two points in birddom that I thought had been set at rest. As to one of these points I wish to speak. I did not imagine that it was the belief of any one in these days that any species of birds hibernated by burying themselves in the mud. I know it was an ancient belief in regard to swallows. Gilbert White, of Selborne, observed that myriads of birds of the swallow kind in the autumn forsook the chimneys and houses and roosted at night in the osier beds along the Thames. "This resorting toward that element," says he, "at that season of the year seems to give some countenance to the northern opinion (strange as it is) of their retiring under water. A Swedish naturalist is so much persuaded of that fact that he talks, in his 'Calendar of Flora,' as familiarly of the swallows going under water in the beginning of September as he would of his poultry going to roost a little before sunset." It is evident from his language here that White did not entertain this opinion. On the other hand, the celebrated Dr. Johnson believed that they did so hibernate. His biographer, Boswell, reports him as saying: "Swallows certainly sleep all the winter. A number of them conglobulate together by flying round and round, and then all in a heap throw themselves under water and lie in the bed of a river." Here we have the very *modus operandi*. Johnson, however, was not a naturalist, and his view was no doubt only what Sir Thomas Browne would have termed one of the "vulgar errors" of his time. What are the facts in the case? Who has sufficient data to speak definitely upon this matter and settle this important point in natural history? T. J. CHAPMAN.

[There is a wide literature of the swallow hibernation belief, but it is hardly worth while to discuss the subject. The swallow goes south for the winter with other migrating species; its migration is as fully observed, understood and recorded in the ornithologies as that of other birds.]

NEW EDITION OF COUES'S KEY.

ORNITHOLOGISTS will be glad to learn that a new edition of Coues's "Key to North American Birds," largely rewritten, and brought up to date, is to be issued before long. The volume has a history dating back more than twenty years, and has done much toward the making of the younger generation of North American ornithologists.

The "Key" was originally published at Salem, Mass., in 1872, under copyright of F. W. Putnam and Elliott Coues. This was purchased a few years later by Estes & Lauriat, of Boston, who brought out the second edition in 1884, entirely rewritten, and in fact a different book, retaining the old name, but having incorporated with it Coues's "Field Ornithology of 1874."

This second edition of 1884 has been repeatedly reissued, and the third edition (1887) contained a new appendix, and the fourth edition (1890) another new appendix. Otherwise all the editions since 1884, inclusive, have been printed from the same plates, and are identical in everything but the appendixes.

Since the founding of the A. O. U. in 1883 the advance in American ornithology has been unprecedented, and the 'Key" is no longer adequate to the proper presentation of the case. That it may resume the honorable place it long held Dr. Coues has undertaken a thorough revision of the whole work, which will now be reset and very largely rewritten. The substance of the two appendixes will of course be incorporated in the main text, and many other additions are to be made of the species and subspecies described since 1890. The nomenclature will be closely conformed to that of the latest edition of the A. O. U. "Check List," 1895

Dr. Coues writes: "I have been since 1883 chairman of the committee on classification and nomenclature which produced both the 'Check Lists,' 1886 and 1895, and must now take my own dose of the medicine we have so long been brewing. One reason I had for not sooner revising the names in the 'Key' was the incessant changes they were undergoing; but now that we have reached a tolerably settled state of affairs, from which there will probably be little departure for the next ten years, I feel that the time has come for the long contemplated revision of the 'Key' in accordance with the new nomenclature we have adopted. I am diligently at work now, the publisher is ready to take copy as soon as I can furnish it, and we hope to be out in a few months. Besides the changes of names, and a very thorough scrutiny of the text for all requisite additions or corrections, the new edition will be embellished with a large number of new cuts, and some of the old ones will be retired from duty after long and faithful service."

Notwithstanding the large amount of new matter which will be introduced, Dr. Coues hopes to keep the bulk of the volume down, so that it will not much exceed that of the former editions; and it will no doubt be sold at the former price, $7 50.

The FOREST AND STREAM is put to press each week on Tuesday Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

"Game Birds of North America."

THE "Game Birds of North America, a Descriptive Check List," is the title of a small book published by Bradlee Whidden, and prepared by Mr. Frank E Bates. The book is in many respects a useful one, for its size makes it handy to carry in the pocket, and its descriptions, while wholly free from technicality, should be sufficient to enable the sportsman in most cases to determine to what species the bird he shoots may belong. Something of this sort has long been needed, a volume giving little more than the name, description and range of our game birds, and which is so small and light that the gunner may carry it about with him.

In his introductory note Mr. Bates acknowledges the difficulty of satisfactorily defining the term game bird. The conclusion which he reaches is that a game bird is "One suitable for food, and which is habitually pursued by man for sport, demanding skill and dexterity for its capture." Notwithstanding this definition, he includes among his game birds the loon and the mergansers, but explains that these birds are not commonly accepted as game, and he marks them and others with a star to indicate this doubt as to their position. He puts the same mark before the emperor goose, about which we know nothing, and before the crane, the gallinules and the coot, but leaves the remainder of the 124 species included in the volume without this mark.

The book is divided into three sections: "Water Birds," including loons, ducks, geese and swans; "Waders," including cranes, rails and the group commonly known as "shore birds;" and "Land Birds," including the partridges, grouse, wild turkey and the passenger pigeon.

The book is sparsely illustrated with outline cuts of heads, feet and bills of some species, and is preceded by two pages devoted to a key to identification of game birds, the Water and Marsh Birds being placed in one section and the Land Birds in another. Various characters are given by which the different genera and species may be determined.

While the book makes no pretense to scientific standing, and while some of its descriptions leave much to be desired, yet because of its handiness, and because it gives the names, descriptions and, very roughly, the range of some of our game birds, the volume is likely to prove useful to a large class of men who use the gun.

Miss Merriam's California Bird Notes.

THE charm of Miss Florence A. Merriam's writings is well known to all those who have read her "Birds Through an Opera Glass" and her "Summer in a Mormon Village," as well as her shorter papers, which never appeared in more permanent form. Her last volume, published by Houghton, Mifflin & Co., she calls "A-Birding on a Bronco."

It contains notes taken in Southern California from March to May, 1889, and from March to July, 1894; the particular locality being at the foot of the mountains thirty-five miles north of San Diego, and twelve miles from the Pacific Ocean. These notes were made altogether from observations conducted through an opera glass. They are extremely interesting, and are told in a very happy style. Miss Merriam is always fully in sympathy with nature, and her training as an observer has been so thorough that little goes on about her that escapes her eyes and ears.

From her ranch home Miss Merriam made excursions on an old and steady bronco, with the special purpose of observing the birds; and the result is this volume of 226 pages, charmingly illustrated by spirited pen drawings made by Louis Agassiz Fuertes, as well as by many half-tone illustrations from Miss Merriam's camera. Mr. Fuertes's drawings are extremely good. He seems to catch the spirit of the birds, and there is life in all his work. Even the heads of the birds have about them the true bird expression.

Miss Merriam is doing a most excellent work in thus introducing to people, who themselves have no opportunity for observation, the feathered friends that she loves so well; and she seems to be equally at home whether she deals with the lighter and more attractive work of the student of ornithology, or marshals facts or figures to support her statements as to the economic value of birds.

Melanotic Rattlesnakes.

Editor Forest and Stream:

Noticing the inquiry of Dr. A. S. Packard for information as to the existence of the melanotic variety of our rattlers in different localities induces me to say that in the mountains of Virginia, my native State, black rattlers are very common, so much so in some localities that the mountain people believe the black ones to be the female sex. The color of these dark snakes is as glossy black as that of the blacksnake, and while the variety may have originated in individual melanism, there is no doubt that the peculiarity has become fixed by heredity and breeds true. The common banded rattler of the mountains is the only species I have ever seen showing melanotic coloring. In the common blowing viper melanism is rather common as an individual peculiarity, but I have never seen a melanotic specimen of any other species of snake. In the mountain rattlers it is certainly not an individual peculiarity, but a true varietal distinction.

Something of the same sort is to be observed among squirrels. I never saw a black specimen in Virginia or Maryland, whereas in central Louisiana the gray squirrel is almost replaced by a black variety not specifically distinct from the common gray. I have often wondered that phenomena so striking appear to have been passed unnoticed by our writers on natural history, as noted by Dr. Packard in reference to the melanism so common in the mountain rattlesnakes. I think I can hardly be mistaken in supposing that in some localities the peculiarity has been fixed by heredity and become a true varietal distinction. M. G. ELLZEY, M.D.

CUMBERSTONE, Md.

Editor Forest and Stream:

Concerning black rattlesnakes, about which Dr. Packard asks, I will say: Perhaps all the rattlers in the Catskill Mountains are not black, but all that I have seen there were quite a bright, glossy black. I have also seen black rattlers in the mountains of Pike county, Pa., which are the northern end of the Blue Ridge.

FRED MATHER.

BROOKLYN, N. Y.

Game Bag and Gun.

WHERE TO GO.

ONE important, useful and considerable part of the FOREST AND STREAM'S service to the sportsmen's community is the information given inquirers for shooting and fishing resorts. We make it our business to know where to send the sportsman for large or small game, or in quest of his favorite fish, and this knowledge is freely imparted on request.

On the other hand, we are constantly seeking information of this character for the benefit of our patrons, and we invite sportsmen, hotel proprietors and others to communicate to us whatever may be of advantage to the sportsman tourist.

DUCKS IN THE SOUTHWEST.

LITTLE ROCK, Ark., Nov. 25.—Up to the present writing it has been a very unsatisfactory season in more than one respect, and there is little prospect now that it will prove otherwise.

The extreme drought that prevailed almost generally all over the South has dried up many of our finest duck marshes and lakes, while of the few remaining ones that yet contain water not a few form inaccessible retreats for the ducks, for the reason that the water is so shallow that it is impossible to push a boat through the moss, flags and buckbrush, and the bottom is so treacherous that they cannot be waded. These lakes or marshes are invariably fine feeding grounds, and in former seasons furnished excellent shooting. The above conditions prevail over nearly all of Arkansas, Tennessee, Mississippi, Louisiana and some parts of Texas.

There are a few places, however, where the shooting is reported good. On Big Lake, a body of water bordering the northeastern part of Arkansas and the southern part of Missouri, the shooting has been very fine for the past month, and will continue so until the lake freezes. Here there must be something like fifty market-hunters engaged in the work of slaughter. Some idea of the ducks that are killed here daily can be gleamed from the fact that recently the express company at Kennett, Mo., made one shipment of thirty-six barrels of ducks, and the following night carried out thirty-two barrels and twenty-six sacks of ducks. Such shipments are made daily to St. Louis and Chicago commission firms. The famous Paw Paw Flats in southern Missouri have not been up to their usual high standard. Kennett is situated on the Kennett, St. Louis & Southern road. The way from the North is via the St. Louis & Southwestern to Campbell, and from there to Kennett; then eighteen miles to the lake, and which can only be reached by private conveyance.

Last week I received word that the ducks were coming in at Grassy Lake, near Fulton, Ark., and good shooting should be found there. Fulton is situated on the main line of the Iron Mountain road, about 100 miles from here. The lake is about four miles from the town, and all the equipments that are necessary for a trip are a pair of waders, and gun and shells. No boat is necessary, as the lake can be waded at all points.

Ducks are also reported plentiful at Swan Lake, Ark. Go to Pine Bluff, and from there take the Pine Bluff & Eastern road seventeen miles to the lake. Here the shooting is from a light-running boat that sets well up on the water, as the lake is very low and covered with moss that very much impedes navigation. The ducks feed on the moss, and the shooter who is well on to his game should find it no great feat to bag fifty ducks, which is more than sufficient by half.

There are a number of shooting preserves in eastern Arkansas whose chief sport is duck shooting, but of all these at only one is the shooting good. This favored one is the Wapanoca, and here for the past two weeks the sport has been fine. The club has a rule that limits the bag to fifty, and of all those who have shot there during this time none, not even the poorest shot, have failed to bag that number in a day's shooting. Capt. L G. Billings, of the U. S. Navy, and Mr. Morgan Brown, of Nashville, Tenn., were there as guests of Mr. W. A. Wheatley, the secretary of the club; they shot there several days last week, and each of these reached the limit on more days than one. Capt. Billings also made two doubles on geese one day.

Capt. R. P. Bonner, of Louisville, Ky., was also a guest of the club; he was shooting one of those destructive cornshellers—this time a Spencer—and one time managed to knock down six ducks from a flock that came in to his decoys. The Captain experienced no difficulty in bagging the limit.

Messrs. Galloway, J. C. Neely and Geo. Gallhan went over while the flight was on, and in addition to bagging their allotted number of ducks, Neely and Gallhan killed a deer between them.

The other prominent clubs in this part of the State are the Blackfish, St. Francis, Swan Lake and Hatchie Coon. At none of them, however, is there any shooting worth mentioning.

At Beaver Dam, another good shooting preserve located in Mississippi, and owned principally by Memphis sportsmen, the ducks are quite numerous; but owing to the extremely low water it is impossible to get to them; so while there are plenty of ducks, there is virtually no shooting. On the 5th Tom O'Sullivan went there, and by pushing his boat a mile through the mud succeeded in bagging twenty-two mallards, two geese and two turkeys. The exertion necessary to push his boat proved almost too much for the old man, and he is now under the care of a doctor.

There are no ducks to mention in the vicinity of Vicksburg and Natchez, Miss., owing to there not being any water. The same condition prevails in the northern part of Louisiana. At Monroe there are none, while at Shreveport there has been something of a spasmodic flight. A party of four, consisting of Messrs. Sam. Enders, Walter Jackson and S. J. Jenkins, of Shreveport, and C. L. Dammann, of Memphis, bagged 207 in less than a day's shooting at Cross Lake, about four miles from that city. This, however, is also a protected preserve. Mr. Du Bray was there shortly after, but there were no ducks then to speak of.

Mr. Oscar Guessaz writes me from San Antonio, Tex., that the shooting is fine down on the Texas coast. The fresh-water ponds are all full of water, and everybody who has ever visited this part of the country knows that this means an abundance of ducks to the Texas shooter.

The shooting in this immediate vicinity has also been of an uncertain quality; from the 5th to the 15th the shooting was fair in those few places that contained food and water, though at present the ducks are scarce again, for yesterday a hard day's wading and some good, lucky shooting resulted only in a bag of ten mallards where two years ago I could invariably bag the limit, twenty-five.

PAUL R. LITZKE.

IN MASSACHUSETTS COVERS.

ABOUT the middle of September I gave the readers of the FOREST AND STREAM a small account of my hard luck on the opening day on partridge and woodcock (Sept. 15) in covers about fifteen miles from Boston, where friend John and myself used to tramp through nearly every Sunday to get some fresh air, being "chained" throughout the week, and incidentally watch the birds grow and keep track of their whereabouts.

The hard luck was to go there on the first train on the opening day and find that a native hunter had discovered our broods and broken them up so badly that we were unable to start a feather.

Yesterday, Nov. 23, we "unchained" ourselves again and started for our old stamping grounds. I remarked to John that we must keep up our reputation (we generally have good luck) and have game with our turkey next Thursday (Thanksgiving). The day was a glorious one, cold and crisp, just such weather that makes one feel like moving around right smart, in fact, an ideal hunting day.

We hunted perhaps an hour before either of us secured a point. At last my dog Rusty made game, but before he could locate the bird away she went, but nevertheless offering me a fine shot, and I did my best to frighten her, drop her with both barrels, but she didn't drop worth a cent.

A few minutes later I heard John's Colt speak out twice and was about to call: "Did you get her?" when I heard a birch switch swish through the air and a yelp quickly followed, which told the story without asking.

Within a short time from this I had secured the first bird and John was busily engaged in trying to locate a bird that he had feathered badly and had marked down, but we both had to give it up, and struck out in another direction. Presently John's dog came to a stand, but John failed to score.

In going through a piece of scrub oak I secured another partridge that got up wild ahead of the dog. All the forenoon I could hear John letting go two barrels at short intervals, and other times hear his dog yelp. His dog was working so rank it completely upset his shooting.

We concluded to eat our lunch and have a smoke, talk with ourselves, size up the situation, and discuss the best remedy to prevent any more misses in the afternoon. Then we sallied forth again, with blood in our eyes. No more misses this afternoon. In a few minutes we struck a very likely looking cover; my dog was working hard on a trail. "Watch out now, John, she is liable to jump us." Sure enough, before either dog could locate her away she went, offering a beautiful shot for us both, and we let go two barrels each. That bird's life would not have been worth gambling on at the moment she jumped, but if she hasn't stopped she must be going now. John looked at me, I looked at John. Words were unnecessary. We simply started again to look for more birds that needed a little frightening to help their education along.

A few hundred yards further along I came to a great hole in the ground under some pines. I called to John to come over and look at it, and then whistled to Rusty, who was ranging off too far. With a roar up jumped a bird almost under my feet and went across an open. Ah! Miss, you are my bird. I swung on to her and tugged at both triggers; no report, safety catch up. "Why didn't you let her have it?" came from John across the open. "Oh, I saw she was only going into that corner down there, which will give you a sure thing." Wasn't that good of me? Whi-r-r-r! There goes another out of a pine tree right over my head. The safety was all right this time. This made my score three birds.

"Now, John, we'll get the bird that went into that corner."

I sent my dog in while John stationed himself in the open on the opposite side. The dog made no sign of game, so I followed.

There she goes! She jumped out of a pine tree on the other side of the road, but neither of us could get a shot. We marked her down and followed. On the way I bagged a rabbit and put him in my pocket with the birds for company. We failed to raise the bird we had marked down, so we retreated in the direction of the depot, as it was getting near train time. Coming to a likely looking place I started my dog into it, then engaged myself picking up frostbitten apples under a tree. I was hungry enough to eat almost anything about this stage of the game. Glancing over the stone wall, I spotted my dog stiff as a stake. I called John's attention to Rusty and asked him to go and get that bird up. I was so hungry I would not leave those apples for a dozen birds then.

John started to do as I asked. When he was about halfway up to the dog, out rushed his own dog from behind some bushes, and bounding by my dog, put up the bird. I had just time to see this, for the next minute the air was so blue and thick my power of vision was not strong enough to penetrate the atmosphere in that direction, but out from the haze I could hear the swish of a switch and the yelp of a dog.

Further on John's dog Antonio realized it was better for his health to point his birds than to flush them, so John succeeded in grassing one.

Everything seemed to go my way on this trip; the dog worked well, and I got more game than I ever expected to get so near Boston. The reverse seemed to follow John; dog worked bad—something unusual—which upset his whole day's shooting. But he is sportsman enough to admit that he was glad he had ventured out, for the fresh air was worth a great deal. Although neither of us were overburdened with game, we got what we started for, and the turkey had company on both of our tables Thanksgiving Day.

Game Laws in Brief.

THE *Game Laws in Brief*, current edition, sold everywhere, has new game and fish laws for more than thirty of the States. It covers the entire country, is carefully prepared, and gives all that shooters and anglers require. See advertisement.

DEER AND HOUNDING.

Editor Forest and Stream:

An item relative to deer hunting in the vicinity of Lake George, recently published in a New York paper and reproduced in several papers in Central New York, makes the following statement: "Most of the hunting is done in the vicinity of Tongue Mountain. Warren county hunters never go across the lake into Washington county for deer; not if they value their dogs. In the towns of Fort Ann and Dresden local hunters have established a law peculiar to the locality that no matter whether in season or not all dogs found trailing deer are shot. In consequence of this arbitrary law, not down on the statute books of the State, hunters give the eastern shore of the lake a wide berth. The reason given for the promiscuous slaying of dogs in Washington county is said to be that Dresden and Fort Ann hunters wish to preserve the deer until winter and then kill them crust hunting or on snowshoes."

The reason given why the Dresden and Fort Ann hunters are so anxious to prevent the deer dogger getting the game is to my mind wholly erroneous. It was my good fortune in the early 80s to be so located that I was enabled to devote considerable time to roaming over the hills and mountains of the strip of land lying between lakes George and Champlain in Washington county, and I do not know of a class of citizens anywhere more devoted to the interests of game preservation than the residents of that territory. Fifteen years ago, when the deer had practically disappeared from all other localities on the outskirts of the Adirondack forests, thanks to the efforts of the deer dogger and the market hunter, the deer held their own in the towns of Fort Ann and Dresden owing to the fact that hounding was absolutely prohibited through an enactment of the Washington county board of supervisors, supported by the determined efforts of the residents of the towns named. When the State game law was amended so as to abolish all county enactments (a good change on general principles) the good people of Washington were left for a brief period each year without this protection, and perhaps have been forced to adopt rather harsh methods to save the deer on this territory from extermination. If, as alleged, the hunters of Fort Ann and Dresden have ceased to be law-abiding citizens, it is a pleasure to learn that their law-breaking propensity has taken the mild form of an earnest endeavor to prevent a most cruel and destructive practice. When I first visited this locality I was informed by a resident of Dresden that that town was not a healthy one for deer-chasing dogs, and I am delighted to learn that it has not since improved as a sanitarium for that animal, but the statement that the deer are preserved from the hounder in order that they may be slaughtered later on by the crust hunter may be set down as wholly false.

My knowledge of the Dresden deer hunter convinces me that still-hunting, and that only in the open season, is the only method practiced by him, and it would take undoubted evidence to change that conviction. No finer object lesson in deer protection has ever been afforded in this State than that in the county of Washington during the past fifteen years.

Deer were by no means an uncommon sight during the period from 1880 to 1890 within four miles of the village of Whitehall, at which time they had practically become extinct in all other portions of the State, through the combined efforts of the deer dogger and the jack hunter and a want of wholesome laws to prevent unlimited shipping of venison out of the woods. In conclusion, permit me to say that if the perverse hunter of Fort Ann or Dresden will persist in enforcing the unwritten law of that locality which prohibits a most cruel practice, may his shadow never grow less and may the biggest buck with the finest set of antlers await him when he shall go forth to slay his deer in a humane and sportsmanlike manner.

M. SCHENCK.

A LONG ISLAND DEER HUNT.

BROOKLYN, Nov. 27.—*Editor Forest and Stream:* Now that the season of deer shooting on Long Island is over the experiences of the hunters have become memories, and many are the tales that will be told, both fact and fiction, of the wonderful shots that brought down deer of fabulous weight. If I can gain the attention of an audience I would like to tell the story of a hunt that was a reality.

On Tuesday, Nov. 10, Mr. E. B. Remington, Mr. L. D. Martens and I arrived at the station of Central Islip. As we had made no previous arrangements, we found some difficulty in securing a place to remain at over night, but at length, through the kindness of a Mr. Wolfarth, the proprietor of one of the hotels, we were taken in at a private house, where we passed a comfortable night.

In the meantime, after we had eaten supper, we went down to Mr. Wolfarth's place again. He kindly showed us the head of a fine buck he had killed two years ago, and gave us some points about the country and best shooting localities, which proved to be very valuable indeed.

An hour before daybreak we were on the grounds where we expected to watch, and even at this time we found two others ahead of us; so we were obliged to go a trifle further east than we intended. Mr. Martens and I were armed with Marlin repeaters, while Mr. Remington used a shotgun loaded with buckshot.

Mr. Remington stationed himself on the railroad track near the eastern limit of the South Side Sportsmen's Club's preserve, while Mr. Martens and I watched along the track on opposite sides of a few acres of swamp land which lay just north of the railroad.

There were several advantages in our position; we were in a good locality for game, and all possible shots would be at a range of from 100 to 400yds. As most of the hunters used shotguns, we were alone on these watches, with the exception of the two men before mentioned; then the open nature of the country made it possible for us to use our heavy rifles without danger of shooting any one.

Accounts do not exaggerate the number of gunners that turn out for Long Island deer shooting, and from our stands we could see them strung along the railroad as far as the eye could reach, less than 50yds. apart.

No dogs were started on the north side of the track as far as we could tell from the sense of hearing, but there were many to the southeast, and soon there was repeated firing in that direction.

Shortly before 8 A. M., just as I was beginning to give up hope of seeing anything from my position, and thinking

of moving off to the southeast, where the shooting was going on, I heard a crash in the bushes to the northeast of me and saw a doe dash out of the woods and start across the open. It did not take many weeks for my rifle to reach my shoulder, but before I could fire a fine buck sprung out of the woods after the doe, running easily, but with long graceful bounds, which were making short work of the distance to be covered. The instant I saw him I shifted my rifle from the doe without firing at her and let go at the buck. Changing my aim made a poor shot, for it did not take effect. It steadied me, however, and when the lever of my repeater had thrown a fresh cartridge into the breech my finger confidently pressed the trigger and down came the buck. I ran forward, but seeing the deer struggling to regain its feet I fired twice more, the first piercing its neck and the last crashing through the poor beast's brain.

Then I had time to look about me. The doe had made good her escape, for the stranger behind me had fired only one shot at her, which missed. Mr. Martens had been unable to shoot on account of the other stranger being in line of his aim. Had this not been the case the doe would have fallen to Mr. Martens's rifle and we should have had two deer to bring home.

We waited half an hour, and, as no dogs appeared, we concluded that the deer had been "walked up" by somebody, thus giving us a clear title to our game.

Little time was lost in carrying our prize to the station, but hurry as we would, the morning train to the city had left, and I had to drive to Islip with the game, where I took a train for home, the others returning to the hunting grounds. They did not shoot any more, however, though Mr. Martens heroically held his fire from a buck that loped along just inside the preserve fence.

As we had to carry our deer nearly two miles, we thought it must weigh at least 300lbs., but the scales brought our expectations down to a trifle over 200. The buck had a very pretty pair of antlers, however, and I am having the head mounted as a souvenir of my first Long Island deer hunt. B. F. ELLSWORTH, JR.

CHICAGO AND THE WEST.

Thanksgiving in Chicago.

CHICAGO, Ill., Nov. 28.—The weather was a dismal failure in Chicago on Thanksgiving Day, and the plans of a great many hunting parties were changed by the drizzling downpour which prevailed over a good part of this section. Thanksgiving Day is the occasion of the annual hunt of a great many persons—elevator boys, newspaper men and the like—who go afield then to lay in their winter's supply of meat. Reports have not yet come in from many of the parties who went out into Wisconsin, Indiana and Illinois; but among them all there must have been some who enjoyed the season's abundance of small game. There are more quail, squirrels and rabbits in this part of the world this fall than for many years past. For instance, I hear of two gentlemen, Mr. F. Teipel, of Grand Crossing, and Mr. L. Paul, of Chicago, who bagged 180 quail within the week at Effingham, Ill , or rather at a point a few miles below there. They shot over a pointer belonging to Mr. William Werner, of this city, and not considering it outside of the ethics to shoot rabbits ahead of a good dog, killed a few sacks of rabbits incidentally. As earlier mentioned in these columns, that part of the State of Illinois is blessed with abundance of quail this year.

So far as I can learn every shooter in Chicago had a good Thanksgiving dinner except myself, and my escape from one rested upon circumstances which seem somewhat singular. A friend had, a week or so ago, sent me up a fine, fat wild turkey for my Thanksgiving dinner, and I felt sure that the presence of my turkey, at least, would make me welcome in almost any home of the city. Yet in this I was mistaken, for though I earnestly requested a number of my friends to ask me to dinner, they all firmly declined, saying that they had other turkeys and other guests of their own. I felt quite sure that I could get Roll Organ to ask me to dinner with him, and I even allowed him to look at my turkey so that he might be sure of the *bona fide* character of my representations. Mr. Organ wavered for a moment, but finally declared that there were going to be eighteen or twenty of his own people at his house for Thanksgiving dinner, and that the high class character of the attendance would bar me out. He suggested, however, that I might send the turkey with my regrets. Thinking that I might need the turkey in my business, I did not comply with his suggestion, but hung on to the bird as a sort of forlorn hope. At last, on Thanksgiving eve, not having been able to obtain any dinner invitation for the following day, I gave the bird away to another friend who offered to take it off my hands as an accommodation, and wandered forth into the streets of Chicago friendless, turkeyless and alone.

As all men know, Thanksgiving time is harvest season for the shooting gallery people, who at that season set in operation a base imitation of the good old turkey shooting contests of our forefathers. As I wandered down the street with my hat pulled down over my eyes and my hands thrust deep into my pockets, in the manner of him who has despaired, I heard the tinkling of a little bell, a summons which oftentimes I have found myself unable to resist. In a few moments I was one of the spectators at a Chicago Thanksgiving turkey shoot. The dingy and smoky little gallery, redolent with the odor of kerosene, beer and tobacco, was packed with a noisy and more or less drunken crowd of men and boys, most of whom were engaged in the Grand Prix de Turkey. The shooting was not at the turkeys themselves, and hence was less cruel if less skillful than the sports of our ancestors. The range was 30 or 40ft. in length, although through the smoke and flicker it seemed more than twice as long. The conditions were that in order to win a turkey one must pay something like 2 cents a shot, and must hit a ½in. bullseye at least two shots out of five or six, the handicapping varying as the fancy of the gallery people dictated. A very drunken man had more liberties allowed him than one who was comparatively sober, etc., all of which shows the fair-mindedness which prevails in this city. As I was entirely sober, the keeper of the *salle aux armes* imposed a rather severe handicap on me. I found that it was no slight feat to hit the bullseye half the time with rifles sighted as these were, and in a light so utterly abominable, and I soon came to understand why so few turkeys were taken from the numbers which flapped and strutted in the windows as an advertisement for the gallery. My eyes were watery, my face perspiring and my pocketbook less by some 60 cents coin of the realm when the keeper reluctantly conceded that I had won a turkey. Under the code I was allowed to select my turkey, which of course was a live one, and accordingly I opened the slats back of the window and hauled out what seemed to me to be the largest and fattest fowl of the lot, one which was strutting and puffing himself out in all the glory of conscious vigor. Alas! I found that to be the worst bluff of a turkey that ever was, and when I got him in my arms and smoothed his feathers down it seemed to me that he was not much bigger than a nightingale. Whereby I learned yet more of the sapience of the shooting gallery man. Carrying my live turkey, I again wandered forth into the street, but not alone. The turkey proved of habits alternately social and rebellious, and although it was now well past midnight, so that the streets held few passers-by, I found that I attracted a great deal of interest and attention. Finding it difficult to carry the turkey, I put him down and tried to herd him along the street in the direction of my home. A rapid calculation showed me that I would get him there in about two years at that rate, so I chased him into a doorway, corralled him again, and paused for thought. I did not really want the turkey, as I had no place to eat him any more than I had for the wild turkey, and moreover I reasoned that I had no place in my apartments where I could keep him comfortably, since he was probably not accustomed to steam heat and portieres. Just at this juncture there came along a little old woman who was probably a Pole or an Italian—all these sawed-off foreigners look alike to me. I told her she could have the turkey if she could get away with it, and she fell upon it gladly with many croakings. The two passed from sight down under the flaring line of gas lights, the woman so lean of body, so strident of voice, so loose of fluttering coverings that I scarce could tell which was she and which the turkey. And so farewell turkey No. 2.

It might be thought that the experiences of the day would have given me sufficient of turkey, but not so. On Thanksgiving morn, as I wandered down town, I heard yet again the irresistible summons of the little tinkling bell, and turning I saw, in the dingy window of another gallery, still a few bedraggled specimens of turkeys which had survived the contests of the night previous. Much against my will I walked into this gallery also and sadly asked for a rifle and inquired for the rules and conditions governing the *tire aux turkeys* at this place. This time the light was better, the crowd absent and the rifle sights not quite so difficult. My turkey cost me 15 cents and again was delivered to me alive. I begged the gallery keeper to kill it, and he having done this I put it in my pocket and went on down town. There may be those who think that one cannot put a turkey in his pocket, but these have never seen a Chicago Thanksgiving shooting gallery turkey. At my office I rapidly went through my mail, hoping that I should find even yet an invitation out to dinner, but fate was against me, and despairingly I gave away this turkey also to a friend, and went and bought my dinner in a restaurant. With regret I state that probably I was the only man in Chicago who, having three turkeys up his sleeve, yet failed to have a Thanksgiving dinner. But I had learned much of natural history. Also I had learned something of shooting galleries. At one of these galleries I discovered that the proprietor kept house back of the targets, where his wife had a cook stove and a few other culinary paraphernalia. It seems that the man and his wife lived and slept there, their customers having a habit of coming at all sorts of hours. Through the heavy partition which acted as back stop for the bullets there was cut a hole about a foot square, through which shooters could shoot at the "long range target." The long range target hung over the cook stove, and the bed was back of the short range. I thought there might be danger in having part of the household under fire during the long range operations, but the gallery man said: "Oh, she don't work over on this side of the room when they are shooting on the long range target." The lady herself further assured me by saying: "I ain't afraid at all. The bullets don't come through very often." And I noticed that she was cooking turkey on the stove under the long range target. Always turkey!

The Close of the Duck Season.

Nearly all the ducks—except a few lingering mallards—have left the country by this time. A few birds were on Thanksgiving Day seen along the Desplaines River near Willow Springs, and of course there will be scattering bunches of mallards along the open water of the timbered rivers for some time yet.

Really, the closing of the duck season occurred during the first week of November, and that week showed the heaviest shooting of the season for this neighborhood. At Fox Lake, during two days' shooting, over 400 ducks were killed by Willard Champion, of Chicago; F. M. Lasher and Frank Fisk, of Elgin; G. L Tilden, Fred Tilden and A. B. Winne, of Fox Lake. Other heavy bags were made in lower Wisconsin at about the same time, as the last of the northern flight paused for a short time on these waters.

A Trip to Koshkonong.

On Nov. 7 and 8 the wildfowl began to leave their feeding grounds on Lake Koshkonong. There had been a heavy snowstorm in that vicinity, and the snow lay 16in. deep, though the lake still remained open. It being reported that the shooting would be good, Messrs. R. B. Organ, B. Dicks and myself availed ourselves then of the invitation of Eddie Bingham to go up to the old Bingham homestead on Lake Koshkonong, to properly and efficiently finish up the canvasback season. We had a most charming and delightful experience in this little trip—not in the number of birds killed, but in the novelty of experiences enjoyed. The Bingham homestead is a famous place, well known to all shooters of Chicago. The land was entered more than fifty years ago by the father of the present generation of Bingham boys, at a time when deer and Indians were common in all that country. The farm lies right along the shores of the lake, and has several points noted as shooting grounds. The best of these, known as the "Stone Blind Point," has probably had more canvasbacks killed from it than any other point on the lake, and many and many are the thousands of fat canvasbacks which have there turned up their toes within the past thirty or forty years. Ira Bingham now conducts the old homestead farm, and his mother, Mrs. Bingham, a very old lady, still lives there to tell the modern duck shooters stories of the old days on the lake, back in the Indian times when the family had just moved in. It is not altogether an enviable position to be head of the Bingham homestead in these days, for all sorts of claims are made on the hospitality of the family by shooters eager to break into the coveted shooting of Lake Koshkonong, which is the most celebrated ground in this part of the world for redheads and canvasbacks, it being the last of the wild celery waters of the North touched by the south-bound flight of these fowl. Here the birds feed all the fall in the shallow lake, well protected in these days by State laws and private preserves, and when the weather conditions are right the shooting on Lake Koshkonong is something which nowadays is news of national interest.

At the time of our visit we found several gentlemen, among these Mr. Southerland and Mr. McKinney, of Janesville, also at the Bingham homestead for a little shooting. Mr. McKinney is an ardent pursuer of the canvasback, and has this fall killed about 150 canvasbacks, besides redheads and other birds. There were four or five of us in the Stone Blind most of the time. In front of this point a large fleet of decoys is permanently anchored. All we had to do was to pass the night in good beds, get up early and enjoy a splendid breakfast, and then walk a quarter of a mile or so over the hill to the blind, where abundant hay and horse blankets did all possible to alleviate the chill of the severe winter weather. We sat in the blind and visited much more than we shot; for though we could see countless thousands of birds feeding or working out over the lake, their education had been such as to render them very shy of the Bingham point. At times a distant gun would be heard, and across the lake we could see a black mass of birds arise, hover and pass on to other grounds, perhaps returning in a few minutes and settling in a great broken swarm. The great bulk of these birds were canvasbacks and redheads, and rarely would one see a finer gathering of these choice birds. In addition, there were many bluebills and also numbers of marsh ducks. All the fowl were uneasy, but would not work inshore, so we got no shooting. At times we could see a flock come high over the water and drop down, and these we took to be travelers coming down from the North. The weather was now very cold, and the men about the lake said that either on that day or the next the birds would nearly all leave the lake for their Southern migration. They usually begin their Southern flight just before sundown, going straight up high into the air and then striking off on no man knows how long a course to the Southern waters. It was a pleasure merely to sit and watch the habits of the wildfowl on these favored grounds, and all in all we got quite enough birds to repay us for our freezing. My friends Organ and Dicks had been lucky enough to get a pair of canvasbacks before my arrival, and Mr. Dicks killed another during the afternoon. From time to time, at long intervals, a flock of bluebills or a scattering bunch of redheads would come by, and from these we took an occasional tribute at long range; so that gradually the little pile of ducks, each frozen stiff as a wedge, grew behind the Stone Blind until we had twenty or so between us, including half a dozen redheads.

Tricks of Shooting.

The wind was not in the right direction to float our ducks ashore when we killed them, and Mr. McKinney, who is an old Koshkonong hunter and as much at home in a "sneak boat" (the sort that is now forbidden by law on these waters) as a duck is in the water, kindly acted as retriever in general for the party. The waves were running pretty stiff, but he handled the little paddling boat so skillfully as not to ship any water, and picked up all our dead birds before they were lost in the hazy line which marked the mingling of the sky and water on our brief horizon. After a time Mr. McKinney left the blind, and Messrs. Dicks, Organ and myself were left alone. One of us killed a duck, and it became a grave question how we were going to get it, both my friends vowing they hadn't lost any duck under the circumstances. In this I am inclined to doubt their sincerity, as the sequel will show, but at any rate they persuaded me that I was the man to go out in the boat after the duck, and this I did. They overwhelmed me with compliments of a very suspicious sort when I came back in, and I noticed they seemed very much pleased over something, though I did not know what it was. We lay around in the blind quite a while after that, nothing occurring to break the monotony, until finally, as it happened, there came swimming up for a sociable interview with our decoys a solitary bluebill, which passed at about 50yds. from the blind and took a look at us. Organ suggested that I sit up in the blind and kill the bluebill on the water, and as the shooting was poor, and the chance a tempting one, I readily agreed to this. "I won't do a single thing to that duck," said I, as I slowly got upon my knees and covered the bobbing form. I did not mean to take any chances about it, so I allowed for the wind, and waited for several moments for the duck to show on the top of a wave before I fired. Meantime I heard something like a suppressed giggle behind me, but was too much interested to pay any attention to that. At length I pulled trigger. This I say advisedly, and do not say that I fired at all. The fact is I did not fire, but only got a snap. Thinking the gun had missfired, I tried the other barrel, and it too snapped. Excited at this, I broke open the gun, finding two empty shells in the chambers. "Well, I thought she was loaded," said I, and hastily slipped in two good shells and then took my chance at the duck, which by this time was too far out to kill. I never suspected I had been victimized till my two friends broke into a shout of laughter. It seems they had sent me out in the boat so that they could fix up my gun on me, counting upon much pleasure when I should snap both barrels at the next flock that came in. They calmly told me that they considered the solitary bluebill as a providential matter, and both assured me that they had all they could do to keep from shouting when I sat up and announced that I wouldn't do anything to the duck. They both said too that the long wait for the shot was almost more than they could stand. "I thought you never were going to shoot," chuckled Dicks, "and it looked as though the joke was on us."

A Bag of Buckwheat Cakes.

I have said that the position of head of the Bingham family is a trying one because of the number of guests who are always bothering about in the shooting season. The family does not lease any shooting, and does not accept pay for board, so that the place in no way is a public

one, though it could hardly be called more than semi-private. I think there were about a dozen guests at table while we were there, and Ira Bingham good-naturedly guyed them about eating the family out of house and home. What quantities of fresh country sausages, of ham and eggs, of buckwheat cakes and syrup, it took to appease all those hungry hunters I dare not state, lest the story have no credence. The buckwheat cakes were especially irresistible, and of these Roll Organ regularly ate between two and three dozen at each meal, always having a special plate of his own running between the kitchen and table. We kept a rough sort of tab on Organ during the visit, and found that his cake average per meal, morning and night, was twenty-eight cakes. This for twelve meals made the handsome total of 336 buckwheat cakes. It is no wonder Ira Bingham at length told him that he had better go home, after a while, so that the other boarders could get a chance. In all we must have eaten several thousand buckwheat cakes at the old Bingham homestead that trip, and Ira thought that next year he would have to put the whole farm down to buckwheat, especially if Organ insisted on coming up again. I am advised that after his final departure for the city Roll Organ found a neat package of cold cakes in his pocket, no doubt put there for his use as a lunch, to sort of keep him going till he got home. And it is further said that when he got home and opened up his carryall bag to take out his shooting clothes further packages of buckwheat cakes were found there, it being evident that he knew there was a hard winter coming on. He was the worst I ever saw, and if he gets the Bingham homestead sore on us we will all get turned away next year. So we feel moved to caution him about further excesses Anyhow, he can't say he didn't get three square meals a day.

The Breeding Grounds of the Canvasback.

There has apparently been considerable divergence of opinion among scientific men and hunters alike as to the breeding grounds of the canvasback duck. A great many think that this bird is an Arctic breeder, and believe that its chief nesting grounds are in Siberia. Others think that it breeds in Manitoba, and some claim to have found its nest in Minnesota, Dakota and Iowa. I am satisfied that all these opinions are wrong, and in this I am backed by the knowledge of no less an authority than Ira Bingham, who has been raised on the shore of Koshkonong, and has been familiar with the canvasback all his life, having killed thousands of them in his time. Mr. Bingham claims that the canvasbacks breed exclusively on Koshkonong waters, and that that is the reason these birds are found there in such numbers, while they are so scarce elsewhere. Even to Mr. Bingham the habits of these birds were long a mystery, and he was puzzled to account for their numbers; for he admits, even to day, that he has never seen the nest of a canvasback, which it is often asserted no American shooter ever has really done. At length he hit by mere accident upon the solution of what has long been one of the mysteries of natural history. It seems that the habits of the canvasback have never been but half understood. It has always been a weird, uncanny bird. It is unnatural that any bird should be able to live standing on its head most of the time, the way a canvasback does, nor does it appear possible that a duck of ordinary attributes would disappear from view beneath the waters under the earth for hours at a time. It has always been a question in my own mind whether the bird was really feeding all the time it was under water. Scientific men say it is feeding then, but they do not prove this at all, they only assert it, which is really an unscientific thing to do. No one has ever seen what a canvasback does when it is under water. Moreover, all canvasbacks have a strong facial resemblance to each other, so that one is easily mistaken for another. In a flock of canvasbacks on the water we see birds going down and birds coming up, but how can we tell which bird is which? Indeed, we cannot do this at all, and we cannot scientifically prove that the bird we see coming up cheerfully from the lower regions has not been down there for an hour, or a day, or for several days. We do not know what is going down under the water at all. We only assert that we do. It is surprising, when we stop to think of this, how widespread has been the erroneous opinion on these matters, how gullible indeed the populace has been in accepting as settled something which was not really settled at all. It was for Ira Bingham to bring forth the first really scientific evidence upon this matter, and to prove beyond any reasonable doubt the inaccuracy of the old beliefs.

Mr. Bingham was sinking a well last summer—an artesian well—to supply the milk house which sits down near the lake front, and at the depth of about 300 ft. below the surface he encountered water, and got a fine, clear stream of about 3in. which from that time to this has never failed, and which has kept the quality of the fresh milk on the Bingham homestead something exceeding good. I mean only that the milk is good and cold, nothing more. The inside of the milk house has a vast tank or shallow vat, in which the deep cans of milk are set, and the water continually flows from the artesian well into the tank and around the milk cans, keeping the temperature the same summer and winter, the water being conveyed into the milk house from the artesian well by a large iron pipe.

Ira Bingham says that the well gave him no trouble for the first few days, but at length seemed to be suffering from some sort of clogging up, which determined him to sink it a trifle deeper—down to the hard pan which underlies all that country, and which I believe is called the Sklavonian slatestone, or something of that sort. Within the next 50 ft., at any rate, he learned what had been the trouble with his well, and at the same time solved the mystery about the nesting grounds of the canvasback duck. To make the story short, he struck a flow of canvasback eggs which lasted for three days and nights. These eggs passed out of the pipe and through the milk house, most of them uninjured, though Mr. Bingham broke a few of them to satisfy himself as to their real character. He assures me that the Semitic cast of countenance is clearly apparent even before the young canvasback has left the shell. Mr. Bingham, being a game protector, did not use any of these eggs for frying purposes, and indeed made no announcement of his discovery, for he said he was afraid it would bring the place into too much notoriety, and he did not want persons to be trampling over the flower beds. He is convinced in his own mind, however, that the canvasback does not breed in Siberia or in Manitoba, but that it rears its young right at Lake Koshkonong, where it has so long been found in abundance. He knows now that it is a subterranean or subaqueous breeder, and thinks that there is no doubt a passage far under the Bingham farm which has communication with the waters of the lake at some unknown point, and that thus the eggs pass out into the open water and are hatched by the sun later in the season. This seems very likely, for it is well known that the great majority of the canvasbacks are always seen far out in the open water of the lake.

The hypothesis seems to cover all points of the known phenomena very perfectly, for thus the protracted diving habits are fully explained, as well as the presence of the bird in such numbers at this point. They have been known here ever since the country first settled up, and the Indians say that they were always there so long as they can remember. In proof of this, one may see numbers of Indian mounds all over the hills in that country, and great quantities of arrow heads, stone hatchets, etc., are found there every year. Moreover, the well is still at the same place and it is still flowing. Not only myself but several of my friends saw it, and can attest that the stream is large enough to carry a canvasback egg safely through the pipes without crushing it. Of course, at the time of our visit no eggs were actually passing through; for, as I have stated, it was in the winter and the birds were about leaving for the South. Asked if he thought the flow of eggs through the pipe would lessen the supply of canvasback upon the lake, Ira Bingham said he hoped not, and believed that such would not be the case, as every precaution was taken to let the eggs float on through the milk house out into the lake without being broken or disturbed in any way.

The low, brown little milk house on the Bingham homestead has something the look of a fish hatchery in its outline, but it is not this. Few, to look at its unassuming structure, would guess that it covered one of the most singular of discoveries, and that it was, in effect, as one might almost say, a canvasback hatchery instead. I venture that the like of it is not known in the whole of this great country. Mr. Ira Bingham is a plain, unassuming man, as may be seen, a man with the soul of hospitality. He has not given much time to idle theorizing, but is a close observer of nature and above all a practical man. It seems to have been left to him to blunder, as it were, but to blunder none the less in a most convincing manner, upon the real solution of the long-mooted question as to the breeding grounds of the canvasback duck. I will certify, and all my friends can certify, that these Koshkonong canvasback ducks are no counterfeits, but up to the highest standard of canvasback excellence. Mr. Bingham knows that he has something of a curiosity in his artesian well, and he is seeking to keep both the well and the discovery covered up. He will, I am sure, however, forgive me for making known these interesting facts, which it seems to me belong to the public as well as to Mr. Bingham and his personal friends.

The Call of the Pintail.

Mr. B Smith, of Woo Sung, Ill., writes me as below in regard to the call of the pintail duck. Duck hunters of this region are familiar with the grating, chuckling note of the pintail, and are aware that it can be decoyed, or rather partially decoyed—which is about as much as can be said for the pintail at any time—by imitating the note. I have often heard this note of the pintail in the fall, but always when the birds were on the wing, and usually when they were passing straight on in a traveling flight. Not all the flocks would thus answer the call or notice the decoys, but once in a while one would, though it seemed to be a way they had of stating that they were aware of the real condition of affairs, and declined to come down. I have rarely known them to call when they intended to draw in close to the decoys. Mr. Smith says:

"Mr. Mather asks about the call of the pintail. I have heard them call in the spring when a large flight would be coming in to open, shallow ponds. With a duck call, by placing your tongue against the top of the mouth and blowing a sharp breath, it will produce a clattering sound of about ten notes. I think it can be heard further than the call of the mallard; though not so loud and coarse, it is sharp and penetrating. Cannot say if they call in the fall, as we seldom see them here."

Pink Tea at Memphis.

As is well known in sportsmen's circles, Mr. Irby Bennett, of Memphis, late Southern salesman for the Winchester Company, has been promoted and stationed at Hartford, Conn., and last week departed from his home in Memphis to his new home in Connecticut. This was made the occasion of a farewell supper, or, more properly speaking, a pink tea in Mr. Bennett's honor, the entertainment being held at the residence of Messrs. Paul and Harry Dammon, their friend Mr. Divine assisting. There were present further Mr. Thos. Callender, of Nashville; Mr. Jas Grundy and Judge L. B. Suggs. An elegant and dainty menu was prepared and the affair would have been most pleasant had it not been for the thought of the event it commemorated. The festivities were prolonged until a late hour, and formal leave was then taken of Mr. Bennett by his friends. Mr. Divine, as spokesman for the party, made (from a chair) a very affecting speech, and told Mr. Bennett that Memphis was about to lose a good citizen, and begrudged him to New Haven very much. Mr. Bennett made proper response, thanked his friends for their many acts of kindness to him, and promised to keep them supplied with nutmegs and maple sugar from his new home in the far, cold North. And now there hangs on the door at 39 South Court street a card with the inscription "Wanted, a partner."

Man's Love for the Dog.

Mr. Jos. Irwin, of Little Rock, Ark., writes me that he has lost by death his favorite pointer Nancy, over which we both shot during a visit to Little Rock, and a dog of high character as a field performer. He states that Nancy died of inflammation of the lungs after only twenty-four hours' sickness, and in spite of all that he could do to save her. He speaks of the loss with that genuine regret which a sportsman feels at losing a good dog, and adds that he believes that few dogs ever lived that had had more birds killed over them than Nancy. It will be long before he finds another dog for which he will feel more affection.

The Dog's Love for Man.

From Shelbyville, Ind., there comes the news of the sad fate of a shooter by the name of James Hull, who, a week ago Thursday, accidentally shot himself while out quail hunting. The load of shot struck him in the chest, and he saw that he was fatally hurt, but manfully tried to do what he could for himself. He threw off his game coat, which contained several quail and rabbits, and tried to get out of the woods to obtain help. He walked about a quarter of a mile and then fell, and was later found and taken to his home.

When Hull left his coat in the woods where he was shot, his dog, a pointer which he called Doc, and which was his only companion at the time, seemed to misunderstand his master's wishes. He lay down beside the coat, and here, two days afterward, he was found by searchers who had gone to the scene of the accident. The dog had been for nearly three days without any food, and the weather was very cold; but no persuasion could induce him to leave what he considered to be his post of duty. He charged savagely and repeatedly on the men who sought to take him away, and these, for some reason not clear to one, finally thought it best to kill him. He was shot and given a good burial. Faithful to the last moment of his life, he surely deserves good fortune in the happy hunting grounds, if any such thing may come to dogs.

Ghosts.

There is a haunted camp near Iron Mountain, Mich., up in the pine woods, where the dishes rattle on the table and all sorts of noises prevail without apparent cause. Any party of deer hunters wishing to have the place rent free, and also to earn $25, can do so by sleeping there one night. So says the owner, R. W. G., who has moved out of the camp and is afraid to stay there. E. Hough.

1206 Boyce Building, Chicago.

Water Killing Deer.

Chicago, Nov. 27.—*Editor Forest and Stream:* In one respect Deerslayer has thus far the advantage of his critics. He has kept his temper and indulged in no personal abuse, which, as he justly remarks, is not argument. I have been one of the worst offenders in this respect, and although my opinion of the act he defends is in no respect changed, a calm consideration of the case convinces me that the language I used was unjustifiable, and I desire through your columns to beg his pardon in all humility for the terms in which I spoke of him.

Now for the argument. He cannot deny the truth of what I said in regard to the extermination of deer, buffalo or Indians. That disposes of his claim that game laws are needless. Next comes the query, Why is it unsportsmanlike to kill a deer in the way he describes?

First, the running of deer with dogs drives them out of any given section sooner than any other method of hunting. In all thinly-settled portions of the country where the settlers depend largely on game as a means of support, they oppose the use of dogs for the above reason.

Twice in my life I have shot dogs, once in Maine and once in West Virginia, when in full cry on the track of a deer, and both times by the earnest request of the man with whom I lodged, who had posted me at a runway while he ranged the hills above. I felt almost like a murderer when I did it, for I love a good dog, and it was the owner rather than the dog that should have been shot.

Secondly, when deer has been captured as Deerslayer describes the sport is at an end. Of course, any boy can kill him when thus tied; but such killing is butchery, not sport. Now, I don't find fault with a man for earning his living as a butcher—I have known many very worthy men of that trade—but nothing short of starvation would induce me to practice it, and no money would tempt me to kill a deer after I had got him tied and hopeless of escape.

I never shot at a deer at a longer range than 200yds. and never failed to kill when I shot, and I don't think any man ought to shoot at game without reasonable certainty of killing. If I should find myself in the situation described by Deerslayer my first impulse would be to caress the poor, timid beast, and try to calm its fears.

No animal is so easily tamed or becomes more fond of its master, as I have proved repeatedly. Catch a little fawn and hold it in your arms a few minutes, caressing it kindly, and when you put it down it will follow you like a dog.

Hoping my logic is sound, though Deerslayer may not agree with it, I will say no more.

H. W. S. Cleveland.

A Massachusetts Grouse Snarer Convicted.

Boston, Mass., Nov. 28.—*Editor Forest and Stream:* The Rod and Gun Club, of Massachusetts, reports the conviction of Harvey Hunter at Orange, Mass., for snaring. For several years the game has suffered so much from snaring that sportsmen frequenting that section have complained greatly, and the Rod and Gun Club sent its special warden with instructions to stop the business, no matter how long it might take.

For over four weeks daily patrol of the country was continued, taking in the towns of Orange, Wendell, Warwick and Northfield, over 2,000 snares being found and watched. When birds or rabbits were found in snares special watch on those also was continued till at last sufficient evidence was secured to warrant an arrest, which was made, and on Nov. 23 he was convicted at Orange on four counts: Of setting snares, of taking by snares two ruffed grouse, of taking by snares three ruffed grouse, and taking by snares two rabbits. On his pledging in the future not to snare again he was sentenced to pay a fine of $20 and costs, the three other cases being placed on file.

It is especially gratifying that the prosecution was successful, as it is supposed that over 1,000 partridges had been taken the present season alone. During the early portion of the season as high as fifty and seventy-five birds in a single day were reported to have been snared, the covers having been almost cleared of game.

The Rod and Gun Club is well satisfied with its season's work thus far, and has received full and welcome support in its policy of looking out for Massachusetts sportsmen's interests, and letting the results speak for the club.

As has been before stated in the Forest and Stream, the Rod and Gun Club is composed of sportsmen who subscribe yearly for the purpose of having work done, and no money is spent save for that work.

One thousand dollars has been raised this year, and they hope to double that sum in 1897, in which case additional game wardens will be employed. Business.

Maine Deer.

RUMFORD FALLS, Me., Nov. 26.—*Editor Forest and Stream.* I notice that Deerslayer remarks that most of the deer killed in Maine are hounded. This statement is far from the facts. I have lived in Maine all my life excepting five or six years. I have owned a gun since I was ten years old, and have roamed the woods days and weeks, and have never known a case in the northern or western part of the State where deer were hounded. In fact I never knew of a case in the State, yet I am told that it has been done some in the southeastern section. In the greater part of the State public sentiment would not allow business of this kind for a minute.

A large number of deer have been shot in this vicinity within a few days, one of which was shot within the village corporation limits and not more than one-half mile from the post-office. Wednesday night 3in. of snow fell, and early Thursday morning our hillsides were covered with hunters, but a cold sleet commenced falling, which froze and made a crust that was uncomfortable and very noisy walking, so that few deer were shot, although many were followed all day.

A friend and I were out and followed a deer four hours, and as we entered a piece of evergreen woods where there was not any crust, and were fast creeping upon him, a greenhorn came thrashing through the woods at an angle to us and a short distance ahead. When he struck the trail he started in hot pursuit. We never said a bad word, but turned around and started for home, where we arrived too late to enjoy the Thanksgiving dinner with the family. When we parted at the corner of the street the friend who was with me intimated that he hoped that pesky greenhorn was still running, and personally I hoped he would run his head against a tree. W. W. SMALL.

Too Warm Weather in Texas.

PETTY, Tex., Nov. 25.—The weather is warm and no prospect for a change soon. We have not yet had enough cold to kill the foliage sufficiently to make quail shooting successful, although some ordinary bags have been made. Mr. Jim McWright told me that he on one evening bagged fifteen quail. He says there are plenty of the birds and shooting will be good after the weeds and cover are killed by cold.

An old darky who lives north of here on Red River told me a day or two ago that he had never seen such an abundance of squirrels as there are this year. He said when asked if there was much game in his neighborhood: "Why, boss, I never seed so many squirils in all my born days. You don't hab to hunt 'em; you can stay in de house and kill all you wants, but Ise done quit foolin' wid dem no 'count things, I is. I goes out and catches me some big fat possums; cost too much to buy ammunition to kill dem triflin' squirils; den possum is gud nuff fer me, boss. I ain't eat a piece o' hog in two months." The old darky said it was a mighty good deer that was equal to possum.

A party of hunters who returned last week from a hunt in the Kiamichi Mountains, Choctaw Nation, report deer, bears, and turkeys plentiful, and plenty of bass in the streams. They killed enough deer and turkeys for their wants while in the Nation, but they dared not bring any out with them, as the laws of the Nation make it a penalty by confiscation of arms, ammunition and game, also a fine, for taking game outside of the Nation. PROVO.

A Texas Game Center.

VELASCO, Tex., Nov. 23.—W. C. Bryant's melancholy days have come again, but they are not the saddest of the year with me. I always look forward to the fall of the year with pleasant anticipations, it brings to mind so many things connected with my boyhood days, such as long chains of ducks and geese passing over, hauling big ox wagons, loads of corn, gathering pecans, trapping quail and a thousand things I cannot put in writing.

I am killing ducks now, this being the best time of the year for them—they are in the marsh lakes near the Gulf by the thousands. I killed a snow-white swan yesterday which measured 7ft. from tip to tip, and a prettier fowl I have never seen.

While visiting my old friend, Frank Hawkins (the owner of 20,000 head of cattle and 50,000 acres of land under fence), in Matagorda county, a few weeks since I killed three deer and one bear. I had some David Crockett fun with the bear; I shot him at about 50yds. while crossing a road in the canebrakes with my .44 and thought I had him dead, but on going up he started for me with mouth wide open and hair turned the wrong way. I guess I shoot best when I am scared, for I hit him square between the eyes, better than I could have done had I been standing still and not excited.

Parties coming South this winter, looking for a good game and fishing country, I would advise to come to Velasco, where they have a good livery stable and hotel.

O. S.

A Wild Gander which Left his Mark.

A GENTLEMAN near this city winged a wild goose as it rose from a small pond, and has the honker minus the first joint of one wing. The bird of migratory proclivities seems contented to reside in a coop with some native geese, and takes to the new order of things without much complaint.

About thirty years ago a gander became separated from his fellows and alighted on this same small artificial pool, where it was attracted by some native geese, and allowed itself to be driven with them into an inclosure. It became tame, and gradually the native flock by pruning took on the markings and watchful, alert appearance of the Canada wild goose. G. W. CUNNINGHAM.

Nova Scotia Moose Law.

NOVA SCOTIA.—*Editor Forest and Stream:* We tried hard to get ruffed grouse shooting prohibited for two or three years, but could not get it through. M. P. P.'s from rural districts would not "deprive the country lads from earning money by killing them for market." We will succeed in time.

The section of law prohibiting killing of cow moose was repealed, much against my wish, as well as that of many others, but the majority of reports on the subject ruled. Cows after third year generally have twins, and very few are barren, so you can see how destructive such killing is. C. W. BLISS.

Naphtha Launches and Long Island Ducks.

NEW YORK, Nov. 21.—*Editor Forest and Stream:* I notice in your last issue that the Game Protective Association meets in January. Cannot something be done at this meeting to take up the question of prohibiting shooting of sea fowl in Long Island Sound and bays adjacent, either from naphtha launches or from sail boats? Of course, the majority of these birds are not of the best quality of ducks, but the sport of shooting them is just as great, and in the last few years shooting has become worse, due to this practice. As it is now, naphtha launches are allowed to sail on the ducks when on their feeding ground, and many thousands of these birds are frightened and disturbed and only a very few are killed, whereas point shooting or shooting from duck boats with decoys few of the birds are shot at compared with those that are killed. As I understand it a law was passed last winter intended to stop the shooting from launches, but could not be enforced. Cannot this be changed at the meeting this winter? This shooting, with proper restrictions, can be made very good near New York, and it is a great pity to have it interfered with in this way. L.

A North Carolina Quail Country.

HICKORY, N. C., Nov. 21.—*Editor Forest and Stream:* On Nov. 14 my father and I were at loss as to where we could have a few days' quail and rabbit shooting, and sought your estimable paper for information. We found advertised the Hickory Inn, Hickory, N. C., and without waiting for correspondence with the proprietor informed him that we would reach there Nov. 18. Since arriving we have gunned two days and obtained a bag of fifty-six quail and four rabbits, and this with the thermometer ranging in the eighties at midday, allowing us to gun only between 8 and 11 o'clock in the forenoon and between 3 o'clock and sundown in the afternoon. We used no hounds for the rabbits, these being kicked up while walking through the fields. We without difficulty can find from eight to fifteen coveys of birds every day. For lovers of quail shooting this place is a paradise.

HARRY WOOTTON.

Educational.

SOME hunters do not know that it is not good form to ask an owner of good covers, who is also a hunter, for permission to kill or scatter the game. So, instead of the usual very unpleasant "Tresspas Notic—No Huntin Here," I applied a suggestion which was and may yet be in the Philadelphia & Morristown cars about putting feet on the seats. My notice read:

"The owner of this land himself hunts and shoots. Sportsmen will and others must be courteous."

A friend who read it said that the "others" would not understand what I meant. I replied that they would inquire and find out the meaning, and so learn something. He was pleased with the idea, and put up the same, to wit:

"The owner of this land hunts and shoots himself," etc.

I think his will create more inquiry than mine.

JUNIATA.

Wild Pigeons Then and Now.

NEW YORK, Nov. 25.—*Editor Forest and Stream:* I saw an item in a newspaper recently that a wild pigeon had been shot on the easterly end of Long Island, and that it was on exhibition as a rarity, many people going to see it. I found in my scrap book the inclosed clipping, which shows how plenty they were in 1870. The item is from a paper of Sept. 14, 1870:

"Immense numbers of wild pigeons passed over Portsmouth, N. H., last week. On Wednesday forty-three flocks were counted passing over the North Mill Pond in one hour. One person in Eliott killed sixty at one shot, and several others killed during the day from 100 to 200 dozen each. Dr. G. A. Cooper, of Brooklyn, shot 200 wild pigeons in one day last week at Montauk."

I saw myself thousands of them crossing the Palisades in the neighborhood of Guttenburg, opposite New York city, in 1874. E. S.

Shooting on the Eastern Shore.

KELLER, Va., Nov. 28.—*Editor Forest and Stream:* Shooting on the eastern shore of Virginia is panning out well this autumn. Rabbit hunting is fine, the crop being abundant; twenty-five to fifty to a man is not unusual.

Quail are plenty, but under a two years' prohibitory law none are being killed.

The coast bays are swarming with ducks. Never so many before: black, broadbill, redheads; and as for brant, they fairly darken the sun. A gentleman just from Hog Island Bay to-day reported the quantity as being unprecedented, of all sorts. The mild weather, however, is operating against first-class shooting. Still, December will be good, as we may expect for that month the weather more unsettled. T. G. E.

Maryland Ducks, Quail and Rabbits.

PENNSYLVANIA, Nov 25.—Have just returned from a four days' trip to O. D. Foulk's place at Stockton, Md. When our party got there we found two gentlemen from Philadelphia, who had come down ahead of us; they were good shots and jolly fellows, and there was game enough for all. The morning we left we all walked up to the station, with a one-horse wagon full of game and baggage—geese, ducks, rabbits, quail and woodcock. Every one of us had all the game we could carry, and Mr. Strickland and his brother, who had ducked more than the rest of us, had more than two men could get along with. We had a grand time, and hope to go later on for ducks when the weather gets colder.

CHAS. H. CLARKE.

Game in Orland, Me.

WILLIAM and Foster Soper have trapped about 100 red foxes this fall, and a short time ago a large black bear got his toes into a fox trap. Of course he walked off with the trap without much trouble. He was seen with the trap on his foot, but made his escape. Mr. Branard, of East Orland, returned from Moosehead Lake with two large caribou. W. O. BLAISDELL.

Unlawful Game Shipment on Long Island.

WE reported the other day the unlawful shipment of game from East Hampton, Long Island. A resident of that town who complained of the illicit traffic to the game protector received a reply from Game Protector Selah T Clark, of Bay Shore, in which the protector says: "I cannot see anything in the law prohibiting these people from shipping game in the months of November and December." An individual who "cannot see anything" in the New York game law to forbid the shipment of quail, partridges and woodcock to market is not fit to be a game protector.

Sea and River Fishing.

MEN I HAVE FISHED WITH.

XXIII.—Sergeant William Patterson.

THERE is some reason for believing that his name was William, although I do not know it. The reason is entirely from analogy; he was always known as "Bill" Patterson, and I had known other men to be called "Bill" whose real name was William. Further than this I find upon the rolls of Co. H, 25th Wisconsin Infantry, the name of William Patterson, of Potosi; and my old friend, Judge Seaton, who has kindly posted me on affairs in the village since I left it, says: "Bill Patterson went out with the 25th Wisconsin Infantry." Therefore, as I have said, there is reason for believing his name to be William. If living, he is near Portland, Ore; but letters to him have been returned to me after being opened by another William Patterson.

On that New Year eve when our surveying party returned to Potosi from northern Minnesota there was quite a little visiting done by neighbors who were anxious to learn of adventures among the Indians; and as I lived in the middle one of three cottages, all under one roof, owned by a Mr. Knight, who lived on one side, and Bill Patterson on the other, both neighbors called. Bill was then I think about thirty-three years old, I was twenty-three, and 'Old Poppy Knight," the only name that memory recalls him by, was probably sixty; but little, weazened and dried up, and "meaner 'an pusley," as farmers say. Bill was a strapping, broad-shouldered fellow who had been on the West Coast in that early day, perhaps with the "Argonauts" who went to the gold fields of California in 1849; a rough, swaggering fellow, just the opposite of Old Poppy Knight, whom he seemed to dislike in a superlative degree.

Mrs. Patterson and Miss Rowena Knight, daughter of O. P. K., were in the family circle. The conversation had been general, and I had tried to reply to three or four questions at once, when Pop asked: "Are them Injun girls good lookin'?"

"See here, Pop," said Bill, who had been where the evening had been more bibulously observed, "what does an old duffer like you want to talk about Injun girls for? I've been all through Sonora, New Mexico and the whole West Coast, and I never see a squaw that was worth a second look. I want to find out what them Injuns live on up in that cold country, where Fred says there's no game. I've ast that half a dozen times, and you don't give him a chance to answer. Now you let up for a little 'til we get at this problem of eating." Then to me: "What can they get to eat up there?"

"Mainly fish," I answered; "they dry it for winter and eat it without anything except salt, of which they are fond; but where they got salt before the white man came is a question. The Indians on the sea coast got it in their fish and oysters, and those about the interior salt springs had it to trade with other tribes; but when you look at it you will see that the dwellers in some parts must have eaten their meat without it."

"Bill says he never saw a good-looking squaw," said Pop. "Now there's lots o' half-breeds up there, and are the half-breed girls better looking than the squaws?"

"Pop," said Bill, "you had better go up there and see for yourself; this thing of beauty is a personal matter. Some o' them squaws might take a fancy to you, for they ain't got the first bit of taste. I've seen men that has married squaws, but I don't think I ever saw an ugly old squaw that would marry you. I'll be obliged if you will shut up"

Put yourself in my place! As the host, I did not fancy this sort of talk; but what could I do? Although Mr. Knight was Bill's landlord as well as mine, I knew that it would only need a word more for Bill—in violation of all rules of hospitality, in which he was not well read—to take the old man by the collar and trousers and set him outside. I turned the tide by telling of Henry Neaville's frozen feet, and we got along harmoniously until the clock said it was time for congratulations on the new year. As the good nights were said Bill whispered that we should have a deer hunt on the first day of the new year, and after the rest were gone we sat down over our pipes and arranged for it.

A couple of inches of snow fell early in the night on top of the old snow, which was about the same depth, but not hard. The new year of 1857 opened still and mild, without being bright; as perfect a day for a hunt as it was possible to have. Every rabbit that had ventured out since midnight left evidence of its wanderings, and we saw where the quail had huddled on the ground and had risen in the morning. The partridge left a broad trail until it tired of wading and took to a tree. All these things were noted as we went off to the northwest to strike the Grant River. Bill wanted to talk about "Old Poppy Knight" and I tried to keep him still. Two winters in the woods had the usual effect of making a fellow think more than he talks. We were on a ridge and were about 100ft. apart.

Bill said: "Old Pop made me mad last night, bustin' in the talk to know if squaws was good-lookin'. What 'n thunder is that to him?" and then he launched out in his rough way and "swore like our army in Flanders." There was a crackling of brush, followed by several thuds, and Bill's rifle spoke. I saw nothing; the deer had been lying down on Bill's side of the ridge listening to what Bill thought of the propriety of O. P Knight's inquiry into the physical attractions of the Ojibwa maidens, and no doubt feared that Bill's indignation might take a wrong direction, and so considered it best to leave him to settle it with Mr. Knight without being a party to the row. We went to the place where the deer jumped, but found no

blood. Going back to the ridge, about 50yds., I looked the range over and then found where the bullet had cut a twig and then raked up the snow half way to the spot where the deer jumped, no doubt when it was several rods on its journey.

"Who'd think there was a deer lyin' down in that thicket?" asked Bill. "Why, I s'posed we'd have to track 'em after we found where they'd been."

"If they're not afoot you never know when you may jump one along a ridge," said I, "for they seldom lie in the hollows, and you can look for 'em on the sheltered side of a ridge 'most anywhere. Now let Old Poppy Knight rest and keep still for a while. Your shot has been heard by every deer within three miles, and it may have put some of them afoot, but you will have to tramp before you see one. We're nearing the river now; the ridge forks here; you take the left hand one and we'll come together at the river."

After going about half a mile and seeing no track I heard Bill's shot from the western ridge, stopped and cocked my rifle. A buck came dashing down the hill and I slipped behind a tree. Great bounds he took and up the hill on my side he came, panting with the effort. Gaining the ridge, he stopped, turned to look back, and presented a full broadside view to me at not over 100ft. As I fired he leaped into the brush, but the great spurt of blood on the snow told the tale. I gave a whoop and got an answer, then called, "Come over here!" and sat down on a log. It seemed hours before Bill made the journey across the valley that the buck had made in a very few minutes, if he really consumed any time at all. We took the track and down by the river we found the deer, dead. Bill's bullet, shot on the jump, had grazed just back of the shoulder, cutting the hair and marking the skin, an excellent shot at a jumping deer, for no doubt it jumped before Bill saw it.

The buck was a fair-sized four-pronged one. We dressed it and then went to a spring, washed, and ate our luncheon, for it was far past the noon hour. As we lighted our pipes Bill remarked: "We'll divide that deer when we get up and it's about all we will want to carry home. Under the rule that the first bullet hole takes the hide it's mine, but you can have the head if you want it."

"All right, Bill, show up the hole and take the hide, that's the rule."

"Didn't I make a hole in his belly just behind the shoulder? Do you mean to say I didn't hit him?"

"There's a scratch there that a jury might decide was made by your bullet or might have been made by a pine knot when the deer stepped over a log. I don't want the hide; Charley Mallett wouldn't give over $1 for it anyway. I am sure your bullet made the mark, for there was fresh blood there and the cut was across the breast, not lengthwise, as it would have been done when the deer was on the run. Take it, I only spoke in that way because of your claiming the hide so promptly."

"Now, see here," said Bill, "I don't want that hide. I ain't no hog! All I thought of was that I didn't miss that deer slick and clean as I did the other one, and I wanted you to know it. I'll tell you what we'll do; let's give a quarter of the deer and the hide to old John Jamison, who has been sick all winter and hasn't earned a dollar; send a quarter to that widow up there on the British Hollow road, I forget her name, but her husband died before you got back from the North. Then we'll keep the rest, and if Old Poppy Knight would like a steak—no, I'll feed it to Charley Guyon's coon dog first. Say! I wouldn't let that old pelican have a smell of it. No, sir, not by a mill privilege." I put my friend's remarks in quotations, as though they were just what he said, but have taken the liberty of twisting his two last words into more refined language. His charitable proposition was carried out; we had our hunt and all the meat we needed. It's not hard to give away what you don't need, the difficulty often occurs in deciding what it is that you don't need when your neighbor is destitute and is in desperate need of things which you don't—here I get off the track and go to moralizing over what struck me as a good streak in the nature of Bill Patterson, who took good care that no one should discover that he had what he would have considered a weak spot. He would have fought me for that deer skin, but you see how it went.

February had come and Henry Neaville's feet had got over their October freeze. He drifted into my house one day on a south wind when Bill was profanely reciting his adventures in Sonora and New Mexico, and said: "There's a lot of fish in a pond hole down by the river and they're all a-crowding up to a little spring that keeps an open place and gives 'em air. There's a lot o' bass, pike, dogfish and all the other kinds, an' you can just dip 'em up by the scoop full; what do you say about going down and getting some?"

"All right!" said Bill, "we'll go in the morning. I've got a dip net that only wants a handle, and I'll put one on in the morning. Come down after breakfast and we'll go. I haven't had a fresh fish this winter and have forgotten just how they taste."

Our outfit consisted of a dip net, or a landing net of coarse mesh strung on a 14in. ring with a rake handle attached; an axe, a spear or "gig," and some mosquito netting which Henry brought. What the latter was for I had no idea, but then I had not seen the place. It was snowing a little, with hardly any wind. The pool, or pond hole, as Henry called it, might have covered two acres and had been washed out of the soft soil by the great river some time when it overflowed its banks, and in summer it was dry. A spring came in its eastern edge and kept the ice from making up to the shore. Thousands of large fish crowded to this opening for air and I never saw such a sight before nor since. There must have been many thousands of the different fishes which inhabit the Mississippi River crowded into a small space, those in the rear pushing up to the open place and forcing the others to the shore and around to the rear, as if they said: "You have had your chance to breathe, now make way for us."

I stood in amazement at the scene. Bill took the axe and cut the opening larger until the thin ice at the margin was gone and we could stand at the edge. I took the net and dipped up a few fish, trying to select my favorite crappies and small catfish.

"Let me take that net," said Bill, and he proceeded to lift the fish by the netful. The spear was of no use, it would only mar the fish and we could take all we wanted with the net.

After a while, when there was about 100lbs. of fish on the ice, I thought it time to quit, and mentioned the fact that we had all we could carry and enough for ourselves and friends. There seemed no use to kill more.

"I don't intend to stop short of a ton," said Bill. "Henry, you go back to the village and get a team from Jo Hall and a bob-sled and we'll take a load of the best of these to Dubuque, and if they take well we'll give 'em another load this week. Keep it still, or there'll be a big gang down here to take a share in the fish."

This was taking a commercial view of the fishing, and I said to Bill, after Henry had gone: "I never liked to see men rob the woods of game and the waters of fish to send to market, and I only thought to come down and get a few for our own use. It's this wholesale slaughter for market that has made the East barren of fish and game, and I've talked against it there and I don't want to engage in it here. Fur is a different thing from game, and I could trap for a living easy enough, but somehow it doesn't seem right to take advantage of those fish and market them, when if we take what we want and leave the rest to breed there will always be plenty for us."

Bill's remarks, carefully expurgated, were something like this, but contained more adjectives, for in his ordinary conversation he "swore like our army in Flanders:" "Look a-here! What ar' you chinnin' about anyhow? I've been all over Sonora, New Mexico and Californy, and fished in more rivers than you ever see, but these Mississippi bottoms are different. It's this way: In the spring and fall there's a heap o' water comes down this valley, an' it overflows all these bottom lands and the fish come up close to the bluffs to keep from being swept down in the current. When the water falls they get trapped in these holes and there they are."

"Yes, but when the spring freshet comes don't they swim out and go to their breeding grounds, and so keep the river stocked?"

"Not by," and he referred to a place where a mill might be placed. "These ponds freeze over tight and the fish die. They die in thousands of just such holes all along the river, and they have died in this hole year after year. This spring water coming in here is a new thing, it wasn't here last winter, and it may stop or cold weather may close it; I don't care whether it does or not, there's a chance to send a sleigh load of fish to Dubuque, and that's all there is of it."

I saw it was as he said. I cut into some of these pond holes later in the winter and found a stench of decaying fish. Within the past few years the U. S. Fish Commission, through the urgent requests of Col. S. P. Bartlett, of the Illinois Commission, has sent a car up the river and seined the imprisoned fish from these holes and returned them to the river; as good a work as hatching millions of fish eggs; perhaps better, for it saves the parents and allows them to breed next spring.

Henry came with the team and found us on the shore cooking fish and frying sausages for dinner. Bill thought he was as good a camp cook as I, but we differed on that point. Without discussing the question, I feel impelled to go off the track to say: Our open-air appetites, whether in the woods or on the waters, make camp cooking seem superlative. Benedick says in "Much Ado about Nothing":

> "—But doth not the appetite alter?
> A man loves the meat in his age that he cannot endure in his youth."

This leads me to say that after many years' experience in all kinds of dining, strike me if you will, it is now my mature judgment that taking a dinner in the abstract, without any of the poetical surroundings of the chase and the sentiment which hovers about game killed and cooked by yourself, a grand dinner served by a competent *chef* to gentlemen in evening dress has a charm for me that increases with age. Not that I have lost all taste for an *al fresco* feast in camp style; but there are pleasures of many kinds and they are not always comparable. I only draw the line at those messes called clam chowders, fish chowders and the nightmare provoking clam bake. These may be classed as coarse feeding, but I have had as delicious trout, venison and other game served in camp as ever tickled a tongue. Yet a service in courses, the varied products of the vineyards, the fruits and desserts—I like all good things, but the best of all is good company, whether in evening dress or flannel shirt; yet I can't admit that camp cookery excels the best hotel cookery, taking each on its merits outside of sentiment. We deceive ourselves in this: we come in hungry enough to eat a bear before his skin is off, and "hunger is the best of sauce."

You have often come into camp with a string of trout and had to clean and cook them before you could eat supper. You stuck a stick in the gills with a bit of pork in the mouth and stood them up before the fire and turned them when necessary. When you thought they were done you sat down and ate them half raw and half burned, and your hunger prompted you to say that you never ate such trout before in your life. If trout cooked in that same way were set before you in a restaurant you would reject them as unfit to eat. But the memory of a camp dinner with an appetite only six hours old, but very large for its age, has a halo around it that should properly encircle the appetite. Though not a taxidermist, I have stuffed several thousand first-class appetites, but never could preserve one.

Henry sat down and helped us out on the dinner, and told how he had thrown the villagers off the track by saying that we had killed two deer and a bear, and needed a sleigh to bring them in. A mink trotted down along the shore to the hole where he usually fished, stopped short of it, looked over at us and took the back track. Henry said: "That mink made a mistake and thought it was Friday. When he saw us eating sausage the fact that it was Thursday dawned on him, and he left for the landing and Chapman's chicken house."

We sorted the fish, throwing all gars, dogfish, redhorse and other poor kinds aside, and loaded the sleigh box with bass, pike and crappie, and my two companions started down the river on the ice for Dubuque, Ia., some dozen miles below, and after waiting a while I got a team which had brought pig lead to the landing to take up a good lot of fish and our traps to the village. Besides these things there was a bag with about a bushel of young fish of many kinds, which had been seined out of the spring by the mosquito netting which Henry had brought. None of these were over 2in. long, and I was in doubt what they were intended for until Bill said: "You spread these little fish out so that they don't heat nor freeze, and when we get back I'll have 'em cooked as the Mexicans used to cook 'em down in Sonora. I've seen lots of things out there that you fellows never dreamed of, and here I am wasting my time in these old lead mines. What's lead worth? Thirty dollars a thousand!—I mined for gold worth $20 an ounce. Say, when you get them fish to Potosi and go to dividin' 'em just lay out some o' the best for old John Jamison and the widow on the British Hollow road. We'll be back to-night or to-morrow, and if this trip pays we'll do her again. Good-bye."

The team I found at the landing was from British Hollow, and the driver gladly went over to the fishing place. I told him to pick out all the fish he wanted and put them in front so that they couldn't be given away. I had the fish assorted for the different people, and delivered them all except the last two lots. We stopped at Jamison's, and at my call a man came out to know what I wanted.

"I've a lot of fish for John that Bill Patterson has sent up to him; Bill knows John well, and here they are; I s'pose you're John, and you will remember that we sent you up some venison about the New Year."

The man took the fish and said: "John died early this morning, but his children may use them, and no doubt will be glad of them, for John left nothing, he's been an invalid so long. As a friend of the family, I thank Mr. Patterson and you—" but I had started the horses on, saying to the driver: "Get out of this quick! We can't do any good and—let the horses go."

A few rods brought us to the cabin of the widow. She came to the door in response to a knock, and I stepped in and explained my errand. Something in her manner made me lower my voice, and she began to cry. By the light of a tallow candle I saw that she was a poor, thin, careworn woman, and I fumbled the cap in my hands awkwardly, hardly knowing how to get out of the house without indecent haste. She was prematurely old, and it was doubtful if she had ever been even passably good-looking. Poverty and care were stamped in every line of her face. She might have been thirty, but looked to be twice as old. Her little girl, an only child, was very ill. Would I look at it?

I followed her to a back room and found a child of about six years lying on a bed and apparently asleep, but twitching violently. Then came a muscular spasm which doubled the little sufferer up, and I was alarmed.

"Has a doctor seen the child?"

"No, I thought she'd get over it without the expense of a doctor, for I am very poor. My husband was hurt a year ago by a fall down a shaft, and died last October. I've worked when I could get work, but have not been strong enough to do much. It's a hard world for the poor and weak, and if my little girl goes from me I want to go too."

I don't know that it did any good, but I took the girl in my arms and walked the floor with her, trying to help her unconscious struggles. When the spasm passed I laid her on the bed and went out to find some one to go for a doctor. I found a man going to Potosi on foot, and told him to send Dr. Gibson out at the earliest moment, and returned to the house. If the doctor would only come, and let me get out. The time passed so slowly. I was not fitted by nature to be either a doctor or an undertaker, and suffering which I could not relieve was a thing to be left to itself, but I could not leave it. The child had several spasms, and the night passed over a little cabin with sorrowing mother and a dying child in the arms of a rough, untrained fellow, who would help both if he only knew how to do it, but who wished himself 1,000 miles away.

It had never occurred to me that I would be missed, so busy was my mind with the misery in the cabin, and when a jangle of sleighbells stopped in front of the cabin long after midnight I mentally said: "There comes the doctor."

I was walking the floor with the child in my arms when the door opened and the doctor came in, followed by Bill Patterson, Henry Neaville, Mrs. Patterson, and a dozen other men and women.

"What had kept me so long?" "Why didn't you come home?" Bill said: "When we sold them fish in Dubuque for less than we've got to pay Jo Hall for the team, I said: 'I'll be blessed* if I ever take another load of fish to Dubuque.' If you've got them little fish all in good order we'll have 'em fried at Johnny Nicholas's restaurant to-morrow night, and I tell you they'll be fine. Hello! What's the matter?"

While he was talking to me the mother of the child dropped fainting to the floor, for she had seen the women take the child from my arms—dead! FRED MATHER.

* It's hard to recall the exact expression after the passage of nearly forty years, still it may have been "blessed" that Bill said. I can't, for the life of me, think of any other word that would fit in here.

THE RANGELEY FISH SUPPLY.

SENATOR FRYE writes to the *Rangeley Lakes* concerning the trout supply:

My attention has just been called to certain criticisms by our guides and others touching an alleged statement attributed to me, to the effect that ten years would be the end of fishing in the lakes, etc. Of course I never said anything of the kind, for my interest in that locality is too profound to permit me to decry its merits, and I know that in some of the lakes the game fish are increasing rather than diminishing, notably in Rangeley, from two causes other than propagation: first, an open pathway from Mooselucmeguntic, coupled with the temptation of its clear spring water, wonderfully alluring especially to the salmon; secondly, because the difference between high and low water is slight. So that the favorite haunts of the fish continue the same from year to year.

The only talk I ever had with anyone relative to this subject was with Miss Crosby last fall at my camp, and that conversation was confined to the effect of summer bait fishing in the Big Lake. From time to time my attention has been called to the fact that in the heat of the summer, when the trout had sought the spring holes for cool water, they were captured by deep fishing with worms and minnows, in enormous quantities, all of them killed, many wasted. That this murderous slaughter, in which, I am happy to say, no sportsman participates, has had a serious effect, I have no hesitation in affirming, and my knowledge of those waters is certainly equal to that of any other person.

This lake has some advantages: the limitless quantity of food for the trout; the great extent and comparative security of the feeding grounds; but it has also serious disadvantages: the open pathway up the stream to Oquossoc waters; no means of access whatever from the lower lakes through upper dam. It is a generous contributor, but no receiver.

The constant changes in the height of the water, making to-day a bar on which to drop the fly, and in a month water over it deep enough to float a gunboat, are a disturbing element. These things only illustrate the necessity of creative and preservative agencies if the fishing in this lake is to continue to be attractive to sportsmen.

The guides in our Rangeley Lake region are a splendid body of trusty men and I wish them well.

The hotels are as good as can be found anywhere and I hope will overflow with guests. Neither, however, for present gain, should be willing to kill "the goose with the golden egg." I have as much interest in the splendid lake country as any man living, having enjoyed a longer experience than any other. It has been for many years my paradise, my escape from worry and trouble, my only place for perfect rest and unalloyed recreation. This very fact impels me, in closing, to seriously and emphatically assert that if summer "plug fishing" in Mooselucmeguntic Lake is not prohibited by law, in time serious results will follow. WM. P. FRYE.

ANGLING NOTES.

Salmon Spawning in the Hudson.

SINCE the first salmon were planted in the Hudson River in 1882 a grand total of 3,394,911 salmon fry and 12,330 yearling salmon have been planted in the upper waters of the river. For several years after the first plant was made, and after the salmon had been to sea and returned to the river, their ascent was in a measure barred by the dam at Troy. Then fishways were built at Troy, Mechanicsville and Thompson's Mills; and one season, when the dam was taken out at Fort Edward to be replaced by a new one, the salmon moved upstream as far as Baker's Falls, at Sandy Hill, the point to which the shad ran before there were dams in the river. During all the fifteen years that salmon have been planted in the Hudson nothing has been positively known about their spawning in the river. That they got through the Mechanicsville fishway and wandered into the Hoosick River was known; it was also known that they were evidently forced to spawn in the main river below Mechanicsville before the fishway was built, for salmon smolts were taken in bait nets above Troy, and once a large number of yearling salmon were found dead in the river between Troy and Mechanicsville. That was the only evidence forthcoming during the fifteen years that the salmon had spawned in the river or its tributaries. It was well known that they could not get up to their natural spawning grounds above the mills and factories where the fry and yearlings were planted, for the dams and natural falls without fishways checked their ascent, and it was equally well known that they must have spawned somewhere, for they returned to the river each season from the sea, but where did they spawn?

The shad fishermen who knew of this salmon in the river, for some of them caught salmon in their nets, told of spawning beds here and there, but when the story of a salmon spawning bed was investigated it proved to be without foundation in fact. Last summer I heard a very straight story of a large number of salmon being seen on a spawning bed in the main river the previous fall, but the location did not seem to me to be right for the purpose. It is true that the fish might not have a choice when the time came to deposit their eggs, and they would make a bed in what would ordinarily be considered a most unlikely place; so all the reports were investigated and nothing came of them until Mr. W. H. Hart, agent of the New York Central & Hudson River R. R., with whom I had talked on the subject during the summer, wrote me that he had heard of salmon being seen in a creek some distance below Catskill. That was what I wished to hear, "salmon in a creek," and I began to think I might be on the right track. Armed with a letter from Mr. Hart to a resident merchant near the creek, I made a visit to the place and met the merchant. He never had heard of salmon in the creek or in the river either, but referred me to a fisherman at the mouth of the creek. Had he gone with me to vouch for me that I was not an officer of the law with a warrant for fishermen who had been netting salmon contrary to law, it would have saved me some time. The fisherman knew nothing of salmon in the river or the creek, had never heard of or seen one, and furthermore he would not be likely to take salmon in his nets, for he did not use the kind of nets that would take salmon. It was an hour before the man would admit that salmon had been taken in some other man's nets, and some big salmon had been seen up the creek and one had been speared with a pitchfork. That was the only salmon I knew positively about before I went there, and if some boys had not speared that salmon with a pitchfork I might not have known of the fish in the creek for another year or longer.

It was a good day for a walk up the creek among the hills—and a fine creek it was too, of clear, cold water, with gravel bottom, such as salmon would delight in if they should happen to find it in their search for spawning beds. I had been referred to a man living a couple of miles up the stream who is an all-round sportsman, and when I reached his house found him at home. At first he was not inclined to be very communicative upon the subject of salmon, and I assumed that he was not quite sure that I was the man I represented myself to be, and of whose coming he had received notice. Finally the ice was broken, I established my identity, and the information I sought began to flow. Without knowing positively that such is the case, I imagine that quite a number of salmon have been killed in the creek contrary to law during the past four years, as it is admitted in a general way that a few have been. The people killed them as a novel fish and then found out that they were protected by law, with a heavy penalty for taking them other than with hook and line, and they kept very quiet about the fish being in the creek, but ceased to break the law for fear of the consequences. The first thing to establish was that the fish seen were actually salmon and not something else. My informant first saw a captured fish, which he described so accurately that it could be nothing but a salmon. This he judged to be a stray fish, but one evening in June he saw salmon jumping in a pool in the creek, and thereafter watched the pool.

When he saw them first, in June, they were bright and silvery, but as weeks passed they grew dark in color and some had ugly-looking heads and jaws. Sometimes twenty-five or thirty could be seen in one pool, and at other times more, depending upon the light and the water. They could be seen up to September, but he did not visit the pool from September to November, and then he saw no fish; but the gravel in the rapids above the pool had been torn up, and there were ridges in the gravel across the current which he "could not account for." There were probably fifty or more fish in the pool, weighing from 10lbs. to perhaps 30 or more pounds each. The fish had been there four years in succession. Formerly there was a pulp mill at the stream, but it had burned down, and soon after the salmon were first seen. Since that time he heard of the salmon further up the creek, as there was a break in the dam where the pulp mill had been.

The only break he made from beginning to end was when he asked me what gave the salmon such red-colored flesh, and I answered him without asking how he found out that they had red flesh.

When he showed me where "something had disturbed the gravel above the pool and made ridges in it across the current," I walked back down the valley to the railroad well satisfied, promising to come again on another occasion.

The Pike as a Poacher.

Mr. Frederic M. Halford, author of "Floating Flies and How to Dress Them," and other works valuable to the angler, has written a book recently upon "Making a Fishery," which I will have more to say about at another time, but now will refer only to one paragraph in it. Making a fishery is not building a fish hatchery, but relates to the care of a river or portion of a river, or to a pond, to produce the best fishing. To make a fishery requires considerable thought and an expenditure of time and money, as Mr. Halford shows conclusively, although we in America are inclined to take for granted that if fish are planted in the water nature will do the rest. The destructiveness of pike, which we commonly call pickerel, is a fruitful topic in a general way, but Mr. Halford has given some figures on this subject which are of interest because they are not speculative. He says: "It may possibly be imagined that the various estimates of a pike's capacity have been exaggerated, and I would therefore give the following examples of the undigested contents of pikes' stomachs as revealed by autopsy: On the 18th of April, 1893, wired a pike 9in. long; found tail of a partially digested trout quite 4in. long protruding from its jaws. On the 27th of September, 1893, a pike 7½lbs. was taken in the nets; the contents of its stomach were as follows: Two small pike about 9in. long, nine lamperns, five bullheads, and a trout about 1½lbs., with only head partially digested and tail protruding from its mouth. March 26, 1894, a pike 11in. long, wired in a hatch hole, had three lamperns, two bullheads and two yearly trout in its stomach. On Oct. 3, 1894, a pike 2½lbs., taken in net with tail of trout quite ¾lb. in its mouth. The trout was scarcely dead when taken from the pike's jaws. Take these four examples, multiply them by the thousands of pike in a neglected trout stream, consider the rapid rate at which they increase, and no further argument can be needed to demonstrate the paramount necessity of declaring war to the knife against *Esox lucius*."

In New York State we are not troubled to any great extent with pike in trout streams, but pike have made their way into trout ponds and lakes where nature never intended they should find habitat, and where they can be kept down only by vigorous warfare waged against them. A neighboring State is not so fortunate, so the Fish Commissioners of the State told me recently, for many of their streams, trout streams, are infested with small pike. One of the Commissioners wrote me about a plant of trout. He was on the train with the shipment of trout when it arrived at its destination and concluded to go and see where the fish were going to be planted. He found that the messenger had been directed to plant the fish in a pool that was full of "pickerel," and he would not allow the trout to be planted there. In one lake in this State there are lake trout in abundance, and also pike, but during an investigation extending over a number of years I have found but one case where pike were caught with lake trout in their stomachs. On the other hand, one lake trout was caught in another lake with eleven young pike in its stomach. A. N. CHENEY.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

FIXTURES

BENCH SHOWS.

Dec. 8 to 11.—Augusta, Ga.—Georgia Poultry and Pet Stock Association. J. W. Killingsworth, Sec'y.

Dec. 15 to 18.—Central Michigan Poultry and Pet Stock Association's show, Lansing, Mich. C. H. Crane, Sec'y.

1897.

Feb. 2 to 5.—New England Kennel Club's annual show, Boston.

FIELD TRIALS.

Dec. 14.—Athens, Ala.—Dixie Red Fox Club's second annual trials J. H. Wallace, Sec'y, Huntsville, Ala.

1897.

Jan. 11.—Tupela, Miss.—Continental Field Trial Club's quail trials. P. T. Madison, Sec'y.

Jan. 18.—West Point, Miss.—U. S. F. T. C. winter trials. W. B. Stafford, Sec'y, Trenton, Tenn.

Nov. 8.—Carlisle, Ind.—Union Field Trials Club second annual trials. P. T. Madison, Sec'y, Indianapolis, Ind.

METROPOLITAN KENNEL CLUB'S SHOW

THE Metropolitan Kennel Club's experience at its show, held in Brooklyn, N. Y., Nov. 24–27, has been such that the club has decided to make this an annual affair. At first—that is, on the first day of the show—the attendance was very light, and it began to look as if Brooklyn people didn't care much about dogs, and as if nobody wanted to go to Brooklyn even if they were likely to find a few good dogs at the end of the trip. On Wednesday the accounts of the show in that morning's papers had evidently aroused people to a sense of what was going on; from Wednesday evening until the close of the show the attendance proved so thoroughly satisfactory that, as stated above, the Metropolitan Kennel Club will hold a show annually in Brooklyn.

The place chosen for the exhibition of dogs was the old Thirteenth Regiment armory, corner of Hanson place and Flatbush avenue. Beyond the fact that the light was poor, particularly on those parts of the floor outside the circle of light thrown from the skylights in the roof, the selection of the place for holding the show was a good one. Of course the appointments did not compare with those at Madison Square; there was something dilapidated and forlorn-looking about the hall where once one of the crack regiments in New York State paraded and maneuvered. The show ring was ample, and being immediately under the skylight the light was excellent. The dogs were benched and all arrangements made for that purpose by Spratts. The aisles between the benches were wide enough to permit of free passage, except where some more favored dog attracted more than its share of attention.

The class of dogs was unquestionably high, while the entry list reached somewhere in the neighborhood of 700. The winners in the different classes, in the vast majority of cases, came to Brooklyn with reputations already made on other benches; but many of the judges expressed their opinion that the quality of the "young blood" was rather more than up to the average.

The judges in the sporting classes were: Pointers, Mr. Charles Heath; American foxhounds and beagles, Mr. Herman F. Schellhass; English foxhounds, English, Irish and Gordon setters, Mr. John Brett; spaniels, Mr. A. Clinton Wilmerding; greyhounds, Mr. H. W. Huntington. The other classes were placed in charge of gentlemen equally capable of settling the questions as to who should have the blue ribbon and who should wear the red. The awards were as follows:

ENGLISH SETTERS.—CHALLENGE—*Dogs:* 1st, Warwick Kennels' Albert Ranger.—OPEN—*Dogs:* 1st, Mrs. L. McK. Garrison's Freckled Monk; 2d, D. J. Peters's Robin Goch; 3d, Oak Grove Kennels' Count Dick. Reserve, H. Pape, Jr.'s, Critic. *Bitches:* 1st and 3d, D. J. Peters's Robin's Juno and Robin Cora; 2d, Oak Grove Kennels' Monk's Nun. Reserve, J. Dumas's Nellie Noble Gladstone.

IRISH SETTERS.—CHALLENGE—*Dogs:* 1st, Oak Grove Kennels' champion Kildare. Reserve, J. M. Bullock's Pride of Patsy. *Bitches:* 1st, Oak Grove Kennels' Queen Vic. Reserve, J. B. Blossom's Delphine.—OPEN—*Dogs:* 1st, Woodbury Kennels' Rockwood; 2d and 3d, J. B. Blossom's Bronx II and Londonderry. Reserve, E. J. Whitlock's Mayor Wurster. *Bitches:* 1st and 2d, Oak Grove Kennels' Duchess and Kildare Doris; 3d, J. B. Blossom's Rosevelt.

GORDON SETTERS.—CHALLENGE—*Dogs:* 1st, Miss S. A. Nickerson's Count Noble. Reserve, O. Schafer's Wang Ivanhoe. *Bitches:* 1st, J. Graham's Lady Gordon. Reserve, J. B. Blossom's Heather Bee.—OPEN—*Dogs:* 1st and 2d, J. B. Blossom's Heather Bruce and Doc; 3d, J. Meyer's Sport. Reserve, B. F. Lewis's Dick. *Bitches:* 1st and reserve, J. B. Blossom's Venus and Sally Beaumont; 2d, E. H. Morris's Glenmount; 3d, Miss A. Lewis's Leola.

POINTERS.—CHALLENGE—*Dogs:* 1st, G. W. Lovell"s Shotaway; 2d, Westminster Kennel Club's Sandford Druid.—OPEN—*Dogs* (55lbs. and over): 1st, L. A. Van Zandt's Hanck's Lad; 2d, F. A. Hodgman's Ridgeview Regent; 3d, J. C. Bergen's Princess Lad. Reserve, Dr. H. B. Anderson's Master Rush. *Bitches* (50lbs. and over): 1st, G. Ferguson's Beggie; 2d, F. A. Hodgman's Daisy Bell; 3d and reserve, L. C. Smith's Lady Reveller and Guelph. *Dogs* (under 55lbs): 1st, G. S. Mott's Sir George; 2d, A. M. Harper's Jack Kent; 3d, G. Muss-Arnolt's Bracken Bob. Reserve, B. F. Lewis, Jr.'s, Captain. *Bitches* (under 50lbs.): 1st, Mrs. R. K. Armstrong's Brighton Flossie; 2d, R. A. Fairbairn's Lass o' Yoka; 3d, G. S. Mott's Belle of East Chester. Reserve, G. W. Lovell's Cyrene.

SPANIELS.—USED FOR FIELD PURPOSES—CHALLENGE (over 28lbs.)—1st, Dr. J. S. Bradbury's Drayton Warwick.—IRISH WATER—OPEN—1st, B. F. Lewis's Doctor.—CLUMBER—OPEN—*Dogs:* 1st and 2d, H. Jarrett's Major Gilfeather and MacGregor. *Bitches:* 1st and 2d, H. Jarrett's Glenwood Greeting and Susie.—FIELD—OPEN—*Dogs:* 1st, 2d and 3d, Miss Anabel Green's Wardleworth Sweep, Fashion and Darkest Africa. Reserve, R. P. Keasby's Black Knight. *Bitches:* 1st and 3d, Miss Anabel Green's Zulu and Meg; 2d, J. Ogden's Princess Bolus. Reserve, Toon & Thomas's Endecliffe Myrtle.

COCKERS.—CHALLENGE—*Dogs:* 1st, Swiss Mountain Kennels' Goldie S. *Bitches:* 1st, Swiss Mountain Kennels' Gabrielle.—OPEN—BLACK—*Dogs:* 1st, Swiss Mountain Kennels' Josephus; 2d, J. B. Riggs's Jake W.; 3d, F. Croker's Terry; reserve, Mrs. F. F. Dole's Rosedale Royal. *Bitches:* 1st, Swiss Mountain Kennels' Dart; 2d, G. Greer's Woodland Belle; 3d, C. & D. Priest's Trilby II; reserve, Mepal Kennels' Mepal Beetle.—OTHER THAN BLACK—*Dogs:* 1st, G. Greer's Brookside King; 2d, W. T. Payne's Tansy; 3d, Swiss Mountain Kennels' Derby S; reserve, T. McK. Robertson's Robertson Rufus. *Bitches:* 1st, T. McK. Robertson's Red Dolly; 2d, W. T. Payne's Tansy; 3d, Mrs. F. F. Dole's Edgewood Beauty; reserve, G. Greer's Brookside Queen.

GREYHOUNDS.—CHALLENGE—1st, Woodhaven Kennels' champion Spinaway; 2d, Toon & Thomas's Southern Belle. OPEN—*Dogs:* 1st, Woodhaven Kennels' Woodhaven Surprise; 2d, Weeks & Turner's Springhill Electris; 3d, Penn Square Kennels' Shamrock. *Bitches:* 1st, Woodhaven Kennels' Dolly Dollar; 2d, Miss Ada L. Seeley's Grace; 3d, Woodhaven Kennels' Princetonia; reserve, Woodbury Kennels' Belle. *Puppies:* 1st, 2d and 3d, Charles M. Higgins's Viva, Leo and Vega.

ENGLISH FOXHOUNDS.—OPEN—1st, B. F. Lewis, Jr.'s, Friendly.

AMERICAN FOXHOUNDS.—1st, B. F. Lewis, Jr.'s, Commodore.

BEAGLES.—CHALLENGE—1st, J. Lewis's Raffler. OPEN—*Dogs:* 1st, Hempstead Florist; 2d, Hempstead Furrier; 3d, Hempstead Truman; reserve, Protection Kennels' Laick's Boy. *Bitches:* 1st, G. Laick's Gypsy; 2d, W. E. Deane's Lady Glenwood; 3d, Hempstead Purity.

POINTS AND FLUSHES.

Messrs. C. Tucker and J. M. Avent made a match at Newton, N.C., for $100 a side, Count Gloster against Peconic, the race to be run at Newton; but as fifteen days were allowed from the time the match was made to determine whether the dogs would be in fit condition, all the conditions are favorable for a no race.

Mr. C. E. Buckle sold Daisy Croft (Antonio—Daisy F.) to Mr. H. T. Payne. He also purchased Gleam's Ruth, and will take both bitches with him to California on his return.

Tony Boy, running in the Subscription Stake of the Eastern Field Trials, is by Antonio out of Laundress.

Mr. Mortimer writes of the loss of Hope Noble: "Miss Nickerson's Gordon setter Hope Noble, which made his escape from the Brooklyn Dog Show on the morning of Tuesday last, has not been recovered. The dog got away by the breaking of his collar and therefore had no collar or stall number on when he escaped, but he had on a black cloth cover, trimmed with black braid. Any information which will lead to his recovery will be thankfully received by me. JAS. MORTIMER, Hempstead, L. I."

U. S. F. T. CLUB'S TRIALS.

THE field trials of the United States Field Trials Club egan on Nov. 23, following the trials of the Eastern ub, and they were run on the same grounds. A second week on the same grounds adds greatly to the difficulties the competition, the birds being much wilder, more difficult to find, and the dogs which run in the first week have an advantage over those they run against in the second week, since they learn the grounds and haunts of the birds.

The judges were Mr. W. S. Bell, Pittsburg, and Capt. Joseph H. Dew, Nashville, Tenn. Mr. S. C. Bradley, Greenfield Hill, Conn., was the third judge in the Derby; and Mr. H. T. Payne, editor of *Field Sports*, San Francisco, was the third judge in the All-Age Stake. There were but few visitors following the trials.

Nothing has proved of more constant annoyance to judges, and more hampering to the competitors, than the obstructive time limit imposed by this club on the heats in both the first and second series of the Derby and All-Age stakes: thirty minutes in the first series and forty-five in the second series of the Derby; thirty minutes in the first series and one hour in the second series of the All-Age Stake. There was the same old useless running recurring frequently to meet the requirements of a stupid rule, for it is stupid as it applies to a competition, and in purpose is but a sop to absent owners; an implication that dogs get a thorough trial—as if the test was a matter of time rather than a matter of performance. But it defeats the very essence of fairness, since it forces the judges to run a dog three-quarters of an hour or an hour, whether the running be in the hot midday hours or the cool hours of morning or evening, or a late heat carried into the night, as they were forced to do once; and often, when there is a palpable inferiority of one dog or superiority of another, or a poor brace, the judges merely run the dogs here and there to kill time, so that from any point of view it is fallacious. So much time is consumed by dogs which have no chance to win that the judges needs must trim the second series down to the smallest possible number, thereby cutting off some dogs which might have another opportunity to mend what seemed to be hard luck in a first heat. In short, by attempting to substitute crude theories for intelligent action, the rules waste a lot of time, make the competition much narrower, destroy equality of conditions, since the judges cannot intelligently offset the work of the midday hours against the work of the evening hours, and besides it gives some braces too long an opportunity in the best hours and others too long in the worst, so that there is no equity in the allotment. One hour at midday is much more trying than two hours in the morning and evening. If the judges were left free to act, they would have time to give all the dogs a more thorough trial, would establish a better equity, would come more rapidly and accurately to the best dogs, and their trained intelligence would be far better to rely upon than the theoretical formulas which make judges come to correct conclusions by rule.

The Setter Derby.

The quality of the competition, save the performance of three or four dogs, was decidedly inferior. Several of the dogs, which had made a good competition in the Eastern trials, appeared to be out of form in these, and made a low grade of competition.

Pinmoney won first and ran in improved form, ranging wide and fast, and her finding was excellent. Her pointing, though showing some lack of finish, was of a high order, and her work generally denoted admirable natural ability. She worked nicely to the gun.

Count Gloster, second, was sound in his point work, exhibited good judgment in ranging and pointing, though his range was but middling as a whole.

Tory Rustic, winner of third, ran an ordinary race, and was inferior to Hurstbourne Zip, though the latter was running badly out of form. His knowledge of work was better, and he showed far more bird sense.

This stake was for setters whelped on or after Jan. 1, 1895. First, $250; second, $150; third, $100; $10 first forfeit, $10 second, $10 to start.

They ran in the following order:

Charlottesville Field Trial Kennels' b. b. bitch Pinmoney (Count Gladstone IV.—Daisy Croft), C. E. Buckle, handler, with P. Lorillard, Jr.'s, b., w. and t. bitch Luta L. (Eugene T.—Beryl), C. Tucker, handler.

Avent & Thayer's b., w. and t. dog Peconic (Count Gladstone IV.—Hester Phryne), J. M. Avent, handler, with S. L. James's b., w. and t. dog Tartar (Count Gladstone IV.—Sylph), J. H. Johnson, handler.

S. P. Jones's b, w. and t. dog Hurstbourne Zip (Tony Boy—Dimple), D. E. Rose, handler, with F. R. Hitchcock's b., w. and t. dog Tory Rustic (Count Gladstone IV.—Rhoda Rod), J. M. Avent, handler.

P. Lorillard, Jr.'s, b., w. and t. dog Count Gloster (Eugene T.—Gloster's Girl), C. Tucker, handler, with P. M. Essig's b., w. and t. bitch Saragossa Belle (Gleam's Pink—Maud E.), J. H. Johnson, handler.

H. Ames's b., w. and t. bitch Christina (Blue Ridge Mark—Lou R.), D. E. Rose, handler, with Theodore Goodman's b., w. and t. dog Albert Lang (Count Gladstone IV.—Dan's Lady), J. H. Johnson, handler.

Monday.

The weather was cloudy and raw, with a moderate east wind. The work of the day was inferior to what it should have been considering the opportunities. The low grade of the competition resulted in less finding and less point work.

First Round.

PINMONEY AND LUTA L. were cast off at 8:30. The former soon found and pointed a bevy nicely. Pin made two points on singles and one flush. In a cornfield she next pointed a bevy, and in the pine woods she made two points on singles. Luta made one, also refused to back. Up at 9:16.

PECONIC AND TARTAR began at 9:36. The range of Tartar was moderate. Peconic pointed, then roaded to a point on a bevy. Tartar refused to back. Down 53 minutes. Peconic was disobedient and difficult to hold to the course.

HURSTBOURNE ZIP AND TORY RUSTIC were cast off at 10:32, and ran till 11:50. As the heat progressed it was plain that the former was running in bad form, far under that displayed the week previous. Both made game. Zip pointed, at the same time Tory roaded to a point; nothing found. On some marked birds, Zip pointed at the same time the bird flushed, after which he flushed twice. Zip pointed; nothing found. Sent on, Zip pointed a bevy, and Tory, swinging in ahead without seen Zip, pointed the same bevy.

This heat ended the forenoon's work, and a few minutes were devoted to lunch.

COUNT GLOSTER AND SARAGOSSA BELLE were started at 12:28. Count stopped to a flush, the bird going but a few feet, then made a point on the bevy. Sent on, he next pointed a bevy by the side of a ditch, and on the scattered birds he made four points, and, being pressed forward too hard, he flushed one. He made two other flushes. Belle flushed a single. She ranged well, but showed inexperience on birds. Count ran quite a good heat.

CHRISTINA AND ALBERT LANG started at 1:18. Christina in weed field pointed bevy, and afterward pointed the single birds. Albert pointed a bevy by the edge of a ditch in a cornfield, Christina backed; Albert moved forward to locate the birds better or to get closer to them; Christina shot forward, and between them the bevy was flushed. Christina flushed a single. Up at 2. Albert showed lack of finish. Christina ran a moderately good heat.

Second Round.

Four were kept in, and two more dogs were called for later, the competition for the third place being weak and unsatisfactory. Peconic had shown poor merit in his first heat, and he showed less in his second, being disposed to self-hunt and was very disobedient, and hardly deserved a second trial.

HURSTBOURNE ZIP AND PECONIC started at 2:32. On some marked birds Zip made four points in woods on dry leaves, marking his points by drawing on a step or two. Peconic pointed a single. Zip pointed a bevy in weeds, and held point stanchly some time. Peconic was unmanageable, ignored voice and whistle, and bolted several times. Zip made a hesitating point on a single, and a good point on another. Up at 3:18. Zip slowed down a good deal during the heat.

PINMONEY AND COUNT GLOSTER were cast off at 3:29. Pinmoney backed Count's point in open; nothing found. In open weeds Pinmoney pointed a bevy; Count, about 30yds. behind, pointed footscent of the same bevy. Count made two points on singles, and each made a barren point. Up at 4:15.

TORY RUSTIC AND CHRISTINA began at 4:35. Down 46 minutes. Christina stopped to a flush on a single, then pointed the bevy. Tory pointed a bevy in corn, and then a single. Tory found and pointed another bevy, on part of which Christina got a point. Christina made two points on singles, and one at the same moment that the bird flushed.

The Pointer Derby.

The prizes in this stake were the same as those of the Setter Derby.

The competition was weak and the performance poor, the winners not carrying away the honors by meritorious performance. Their work was something less bad than was that of the losers. The judges seemed to be feeling their way helplessly after the first series, and did not succeed in determining anything very definite after much trying of dogs braced up in many ways. On Tuesday night or Wednesday morning, after the first heat, it could have been decided more accurately than at any other time.

Tick's Kid, the winner of first, made an ordinary competition, save a few brief periods on birds. He loafed some of the time, worked fairly well at other times, and at all times that he ran he had the choicest parts of the two days, morning and evening. His work in the first series was hardly sufficient to warrant taking him further, and though he won it was in very weak competition and on very weak work.

Young Rip Rap, second, was much the better ranger, but marred his work by flushing wilfully. He also showed good pointing capabilities. Still he seemed to loaf at times, or at least he did not maintain his range.

Redskin and Ripple divided third, the former running the stronger race up to Tuesday night and seemed to be the winner. Ripple made but an ordinary showing.

The judges did not observe an equity in running the dogs in the cool and warm hours, alternating such with the series, as Tick's Kid's four heats were all in morning and evening, while all the others had to show their capabilities in a hot sun.

The dogs were run in the following order and numbered:

Del Monte Kennels' b. and w. dog Tick's Kid (Tick Boy—Lula K.), C. Barker, handler, with C. I. Shoup's l. and w. bitch Aloysia (Rip Rap—Dolly D.), George E. Gray, handler.

H. S. Smith's l. and w. bitch Ripple (Rip Rap—Pearl's Dot), J. H. Johnson, handler, with F. W. O'Byrne's b. and w. dog Moerlein (Rip Rap—Belle of Ossian), N. B. Nesbitt, handler.

F. W. O'Byrne's l. and w. dog Redskin (Love's Kent—Fritz's Fan), N. B. Nesbitt, handler, with Del Monte Kennels' Tony Works (Tick Boy—Lulu K.), C. Barker, handler.

W. J. Love's l. and w. bitch La Dolle (Love's Kent—Fritz's Fan), N. B. Nesbitt, handler, with Charlottesville F. T. Kennels' l. and w. bitch Rupee (Delhi—Selah), C. E. Buckle, handler.

George E. Gray's (agent) b., w. and t. dog Young Rip Rap (Rip Rap—Pearl's Dot), G. E. Gray, handler, with T. T. Ashford's liv. and w. bitch Elgene (Kent Elgin—Julia Paine), J. M. Avent, handler.

J. S. Crane's l. and w. bitch Firefly (Rip Rap—Clipaway II.), G. E. Gray, handler, a bye.

Tuesday.

A cloudy morning soon changed to a clear, warm day—too warm for good work, and decidedly unfavorable to the weak competition made by the dogs in the stake. It classed less than ordinary, and there was not a single display of good finding or sharp, sustained pointing during the day. The number of birds found was relatively small, as was to be expected from narrow, haphazard searching or low class work in general. It rated in the class of work very much below the setter Derby.

First Round.

TICK'S KID AND ALOYSIA started at 8:41. Down 43 minutes. Both showed poor range and made a commonplace performance. Kid flushed an outlying bird of a bevy, then pointed the bevy. Aloysia flushed and caught a single. Kid pointed; nothing found. Aloysia made two points on singles in woods. Poor rangers both, and work commonplace.

RIPPLE AND MOERLEIN ran from 9:34 to 10:26. Ripple stopped to a flush of a single, then pointed the bevy, and afterward made two points on scattered birds. Moerlein made a point on a bevy, the find being more by accident, as at the time he was not ranging, and pottered a great deal. Neither dog showed any judgment in beating out the ground.

REDSKIN AND TONY WORKS began at 10:39. Down 41 minutes. Tony made a sloppy exhibition throughout, both in ranging and on birds. Redskin wheeled to a good point on a single. His range was but moderate.

LA DOLLE AND RUPEE ran 48 minutes, beginning at 11:37. Dolly pointed a single, then moved forward and flushed it, and was unsteady. Rupee ranged fairly well.

A short intermission was taken for lunch.

YOUNG RIP RAP AND ELGENE started at 1:13. Rip pointed a bevy, Elgene refused to back, ran in, both flushed the bevy and chased, Rip stopping soon to order. Elgene was near a bevy which flushed in woods. Rip pointed a single, then drew on and flushed it. Neither worked independently, and both were going narrow at the close of the heat. Rip showed experience; Elgene showed but little training. Down 55 minutes.

FIREFLY, the bye, ran 34 minutes without finding. She had a moderately fair range, but pottered frequently.

Second Round.

REDSKIN AND RUPEE began at 3:18. Some ragged point work was done on birds. Rupee roaded to a flush on a single and the rest of the bevy flushed wild. On some scattered birds, Redskin made two points at the same time the birds flushed and made another good point on scattered birds. Rupee pointed a single nicely and flushed once. Redskin was the better ranger, though both were loafing toward the end of the heat. Up at 4. The work was far from equaling the opportunities.

YOUNG RIP RAP AND LA DOLLE ran 59 minutes without finding. Range poor.

TICK'S KID AND RIPPLE started at 5:12, and as the rules arbitrarily required that the judges run the dogs 5 minutes in the second series of the Derby they ran till after dark. Kid made a sloppy point on a bevy. Ripple pointed a single at the edge of ditch in switch cane; was uncertain and moved on, came back and pointed it nicely. Sent on, Tick pointed a bevy. On the scattered birds, Tick pointed twice and flushed once. Ripple made three points on singles, but marred her work by not holding her point steadily, sometimes moving up closer than was desirable. This brace ran under far more favorable conditions than did the dogs which ran in the earlier hours.

Wednesday.

The weather was clear, calm and sultry, more like a day of the summer time than of the late fall. The continuation of the Pointer Derby was noticable for its distinctly inferior work, and the scarcity of it.

TICK'S KID AND REDSKIN began at 8:27, Tick being in the middle of good luck, having run in the early morning and late evening the previous day, with similar good luck on this day. Tick pointed a bevy and Redskin backed reluctantly to order. On the singles, Tick nicely pointed two, Redskin one. On a marked bevy, Tick made three points on singles. Up at 9:06. Both loafed at the start, but after birds were found they were much more industrious, Tick the better.

RIPPLE AND YOUNG RIP RAP started at 9:21. Rap pointed a bevy, Ripple stopping to order in poor imitation of a back. Rap in pines pointed a single. Ripple pointed a single, was not stanch, pressed forward; Rap backed or pointed at same time. Rap flushed and chased a bevy. Up at 10:32. Ripple ranged close. Rap took long casts at times, but his range was mostly moderate.

REDSKIN AND YOUNG RIP RAP ran 20 minutes without finding.

The pointers were next permitted to rest while the first series of the All-Age Setter Stake was running.

TICK'S KID AND YOUNG RIP RAP were cast off at 4:31. Down 39 minutes. Tick was again fortunate in having the best hour of the day, and in the two days' competition he did not have a single moment in the really hot hours of the two days. Kid pointed a bevy, Rap working about on footscent. On the scattered birds some sloppy work was done.

The All-Age Setter Stake.

This stake was for setters which had never won the Champion stake, or more than one first prize in an All-Age stake in any public field trial in the United States. There were eight starters, run as follows:

H. R. Edwards's liv. and w. dog Harvard (Dan Burges—Gay), G. E. Gray, handler, with Fox & Blyth's b., w. and t. dog Tony's Gale (Antonio—Nellie G.), J. H. Johnson, handler.

W. H. Beazell's b., w. and t. dog Harold Skimpole (Whyte B.—Nettie Bevan), G. E. Gray, handler, with Del Monte Kennels' b., w. and t. dog Sam T. (Luke Roy—Betty B.), C. Barker, handler.

H. R Edwards's b., w. and t. dog Harwick (Topsy's Rod—Opal), Geo. E Gray, handler, with E A. Burdett's dog Cincinnatus Pride (Cincinnatus—Albert's Nellie), Frank Richards, handler.

H. B. Ledbetter's b., w. and t. dog Marie's Sport (Gleam's Sport—Marie Avent), Geo. E. Gray, handler, with N. T. Harris's b., w. and t. dog Tony Boy (Antonio—Laundress), D. E. Rose, handler.

In this stake Mr. H. T. Payne, of *Field Sports*, as judge, took the place of Mr. S. C. Bradley, who only accepted the office of judge during the running of the Derby.

Marie's Sport, winner of first, made a competition of extraordinary merit, his range being planned with rare judgment, and he beat out the full scope of ground that good work to the gun would permit. He was observant of the gun, and was obedient. His locating and point work were noticeable for quickness, precision and stanchness, all easily accomplished from ability and perfect schooling. He was industrious every moment of his time. His performance was that of one of the great dogs of America.

Tony Boy, second, also ran a great race, and was a very close second, Sport's advantage over him being in his masterly bird work, and it is safe to say that if each ran in his best form it would be as it might happen

which one beat the other. Tony Boy's range was excellent and well planned throughout.

Harold Skimpole ran but a fair race in his first heat, his point work being light; but his last heat was high class, and he was an excellent third. His speed and range were excellent, and he mended in his bird work, a part in which heretofore he has been remiss.

Cincinnatus Pride ran a good sound heat, and I thought it of sufficient merit to take him into the second series, he running a very even heat with Harwick, and a better one on birds than Harold Skimpole; and as there was a bye he could have been taken in without any inconvenience whatever. In fact, when it came to the time to run the bye dog, a dog outside the stake was taken in for a running mate for him, which, considering all the circumstances of Pride's good run, a bye dog and the need of another dog to make a brace, was unskillful management of the running.

First Round.

HARVARD AND TONY GALE began at 11:25. Both made game some distance apart and pointed; nothing found. Tony pointed and roaded alternately; at last he flushed two or three outlying birds of a bevy, then pointed the rest of it. Gale pointed a rabbit, presumably as his handler shot at it. Each made a point; nothing found. On scattered birds of a bevy flushed by horsemen Tony pointed one; Harvard backed. Up at 12:35 Both dogs ranged wide, but they made a poor showing in respect to bird work.

HAROLD SKIMPOLE AND SAM T. were cast off at 1:32. Sam pointed nicely a bevy in the open. While searching for the scattered birds in woods each pointed; nothing found. Next Sam pointed a single in woods. Turned into the open, Sam pointed and Harold refused to back. Sent on, in about 20yds. Harold pointed and one of the judges flushed the bevy. Sam about the same time stopped to a flush on two or three birds. Both were fast rangers, though neither beat out the ground to the best advantage. Sam made the better showing in finding and pointing. Up at 2:21.

HARWICK AND CINCINNATUS PRIDE began at 2:26. Pride pointed a bevy nicely in open weeds. On the scattered birds in open sedge Pride made one point, Harwick two; both notable in their pointing for good judgment and accuracy. Sent on, Harwick pointed and moved on, roading into the weeds in the open field. Pride pointed a single near where Harwick had pointed; a moment afterward Harwick pointed twice on singles and soon Pride added one more. Up at 3:08. Both ranged well at good speed, showed good judgment in ranging and pointing, and made a commendable showing.

MARIE'S SPORT AND TONY BOY started at 3:19, and it was soon apparent that they were showing a higher class performance than any other dogs in the stake. They ranged wide and fast and still worked well to the gun. Sport a bit the better in the excellent work. Sport was first to find and point a bevy. No work was done on the scattered birds, though they were sought. Tony, standing in a cottonfield, pointed a bevy of which he did not have the wind accurately, the birds being behind him. On the birds in woods Tony pointed twice and Sport flushed a single. Sent on, Sport found and pointed a bevy and Tony backed to caution. On the scattered birds Sport made a good point on one and Tony backed. Up at 4:11. It was an excellent race, well contested from start to finish in high class form, Sport's work throughout being a shade the better.

The final heat in the Pointer Derby was run next, and the day's work was ended.

Thursday.

The forenoon was warm, calm and showery, the dogs appearing to do their work with greater ease and precision under the improved conditions. The afternoon was warm, but clearer. The work of the day was good, that done by the setters being of an excellent class. Owing to rain a late start was made.

TONY BOY AND HAROLD SKIMPOLE began at 9:53. The conditions apparently suited Harold, for he ran a most excellent heat, holding his own well in the hard competition. He by diligent and skillful work found and pointed a bevy, and a moment afterward Tony swung in and pointed independently on the same bevy. On the scattered birds each made three good points on separate singles. Sent on, each ranged and searched well, each finding and pointing a separate bevy, and next Tony pointed a single bird. Up at 10:54. The heat was very evenly contested, but Tony's superior showing on the previous day made his standing the higher of the two. Each showed excellent range and diligent seeking, and their point work was skillful and neat.

MARIE'S SPORT AND SAM T. began at 11:22 in the warm, drizzling rain which fell intermittently all the morning. It was soon plain that Sport was outclassing Sam in every detail of the competition save the one of speed, and as to speed Sam was applying his with poor judgment, he having no consecutive plans for more than a minute or two, while Sport's heat throughout was intelligently planned and executed. Sport pointed a bevy in pines and Sam backed, and each pointed single birds well, Sam pointing his on one side of the fence while the bird was some yards away on the other. As Sam jumped on the fence he pointed. Sent on, he roaded a few yards swiftly and the bird flushed. Sport made two more points on the scattered birds, while Sam made three points to which there were no birds, but they were probably made on footscent. Sent on, both were found pointing, Sport on a bevy, Sam about 15yds. up wind of it pointing from it, probably on footscent. Sent on, Sport found and pointed a bevy; Sam again made a point to which there was no bird. Down 1 hour and 10 minutes. Sport ran a very strong heat and exhibited high class working powers.

The party went to lunch.

HARWICK, the bye dog, was given a running mate which, owing to poor performance and a merry giving of tongue, did not improve his work. He made a good point on a bevy and a single bird point, while his range was not conducted with the best of judgment. Down 1 hour. This heat ended the stake.

The All-Age Pointer Stake.

This stake, as in the Setter Stake, was well supported with winners; in fact, the greater number were winners, as was to be expected when the stake was thrown open to all-age winners. It will be only a question of time till the club's All-Age stakes lose all support from the untried dogs if the club persists in leaving its stake open, as at present. But all this has been minutely pointed out in the columns of FOREST AND STREAM some months ago, and the predictions then made have become true in part, and are coming true as to the rest. We would advise the club to return to the old restrictions and bar first prize winners.

There were twelve starters, run as follows:

N. T. De Pauw's liv. and w. dog Jingo (Mainspring—Queen II.), N. B. Nesbitt, handler, with W. A. Winsatt's liv., w. and t. bitch Lady Grace II. (Roger Williams—Graceful II.), L. White, handler.

N. T. De Pauw's liv. and w. bitch Sister Sue (Jingo—Rooney C.), N. B. Nesbitt, handler, with Charlottesville F. T. Kennels' liv. and w. dog Tippoo (Rip Rap—Monterey), C. E. Buckle, handler.

Charlottesville F. T. Kennels' liv. and w. dog Delhi (Rip Rap—Queen III.), C. E. Buckle, handler, with F. R. Hitchcock's liv. and w. bitch Tory Jessamine (Duke of Hessen—Westminster Blade), J. M. Avent, handler.

Charlottesville F. T. Kennels' l. and w. bitch India (Rip Rap—Dolly D.), C. E. Buckle, handler, with W. A. Winsatt's liv. and w. dog Odd Sides (Lap of Pearl—Graceful II.), L. White, handler.

H. K. Devereux's liv. and w. bitch Virginia (Little Ned—Pearl's Dot), with Ashford & Odom's liv. and w. dog Von Gull (Kent Elgin—Fannie V. Croxteth), D. E. Rose, handler.

Del Monte Kennels' b. and w. dog Tick Boy (King of Kent—Bloom), C. Tucker, handler, with Charlottesville F. T. Kennels' b. and w. dog Nabob (Rip Rap—Dolly D.), C. E. Buckle, handler.

There were many difficulties in securing good competition, one of the greatest being that, owing to constant disturbance of them, the birds were warier and changed in their habits.

Also, the competition in this stake was very indeterminate, partly from meager opportunity or important differences in the number of birds in different parts of the grounds, and the great difference between the morning and evening hours in the hot days, and the ill effects of such a continuous time limit, which undoubtedly forced the judges to draw the lines harder in spotting.

But few times in the history of field trials have there been so many different views as to the placing of the winners. It was at the finish generally agreed that Jingo, Von Gull and Odd Sides were the three fortunate ones, but as to the order of their merit the differences were developed.

Jingo was awarded first, Von Gull second, Odd Sides and Tippoo third.

Jingo was running in lower form than last year, saving himself from too vigorous effort in speed and range, and showing much of the cunning which comes to dogs at his age. His range was wide at times, narrow at other times; he ran sometimes at good speed, sometimes he was going slow in his ranging, and he was a few times guilty of loafing. He showed no dash, went to his birds with a low nose, and had a habit of crawling slowly on his points, and by footscent, though cunningly, cautiously and accurately, and there was an element of luck in his favor in the part of the grounds on which he ran, since it contained the most birds.

Von Gull improved in his work, one heat with another, his first heat being ordinary. He made some bad mistakes in his point work, but on the whole made quite a fair competition, though far below first-class work.

Odd Sides, so far as the class of his work is concerned, made a cleaner and more sharp-cut competition than the others, though his bird work was inferior in quality to theirs, as it could not otherwise be, he running on ground which contained fewer birds. He went to his birds accurately and with a high nose, beat out with judgment the full scope of ground on each side of his handler, and always working nicely to the gun. Taking the class of his work, he was the best dog in the stake, and should, in my opinion, have been first. Owing to the differences hereinbefore enumerated, the amount of work was but a small consideration, but the class of the dog, added to his performance, were correct data to determine his merit.

Tippoo made but a fair class of competition.

First Round.

This was begun at the conclusion of the corresponding pointer stake.

JINGO AND LADY GRACE II. were cast off at 2:26. Lady had a sore foot and started quite gingerly, but as she warmed to her work her lameness almost disappeared and she ranged wide and with judgment. Jingo and Lady were both found pointing the same bevy, but as to which one pointed first no one knows. On scattered birds in close, bad cover, Jingo flushed a single. Next, Jingo made a good point on two birds and Lady backed nicely. Sent on, Jingo made another excusable flush and next pointed a single. Up at 3:13.

The handlers lost a good part of the time fiddling about in cover that was too dense for moderately good work to be possible, besides making a showing far below the merits of the contestants.

SISTER SUE AND TIPPOO began at 3:19. Tippoo made a clean point on a bevy and held his point stanchly some minutes while Sue was being brought up. On the scattered birds Tippoo pointed and Sue drew stealthily on back, and only refrained from stealing the point on hearing commands. Next, sent on, Tippoo pointed a bevy and Sue refused to back. On the scattered birds Sue made two points, Tippoo a point and a flush. Up at 4:13. Sue had but moderate range and pottered when seeking bevies. Tippoo was the better in range, but part of the time he went leisurely.

DELHI AND TORY JESSAMINE started at 4:25. Delhi was much the better in range and judgment, Jessamine working in a crude manner. She pointed a single bird in the open field. Next, Delhi pointed a single. Next she made a stanch point which Delhi backed; nothing found. Down about 40 minutes.

Friday.

The morning was heavy with clouds, with a soft wind blowing, and all indications were for rain. Gradually the clouds broke away, and toward noon the weather cleared up, and again was comfortably warm. Birds were extremely difficult to find in certain parts of the grounds, which had been constantly worked day after day during the two trials, and the judges gave too much attention to working the dogs on single birds in most unpromising places, and sometimes to the detriment of good competition; for the dogs were pulled into thickets too much, to and fro, breaking up their ranging and making ragged heats. Two dogs cannot be pulled and hauled about in a competition as can a single dog in actual field shooting. The same dogs were sent in repeatedly on single birds, regardless of the fact that they had shown definitely what they could do in that respect, and there seemed to be an over-valuation of points. One end of the grounds contained birds in plenty, the other end but a few, while other parts had hardly any. Yet this condition seemed to have no consideration in the running, and the dogs were successful or not as it happened regardless of these conditions.

INDIA AND ODD SIDES began at 8:31. Odd soon took a wide cast and pointed a bevy nicely. Sent on, another bevy was marked down in woods. India made two points on singles. Odd made two good points and an uncertain point on another. Both ranged well and did good point work, Odd Sides showing excellent knowledge and ability. Up at 9:06.

VIRGINIA AND VON GULL began at 9:13. On some marked birds Virginia made two points, Von made three points and one flush. Von was much the wider ranger, though his range was far from regular, and he covered the ground carelessly, while Virginia ran haphazard, without judgment, and covered but a moderate quantity of ground. Up at 10.

TICK BOY AND NABOB were cast off at 10:10. The ground run on during the heat was largely bare, and the dogs wasted much time on it instead of going to the rougher places, where the birds were if there were any. A bevy was marked down and Nabob secured a point on it. The birds were followed again into a small thicket so dense that any sort of competition was impossible, and after Tick drew on the birds and accomplished nothing the judges did what they should have done at first—went on. Next Nabob pointed a bevy and was backed, and sent on, Nabob made an uncertain point on a single in a bad place. Both dogs were deficient in dash. Up at 10:59.

Second Round.

Six dogs were kept in, and the selection did not show very excellent judgment, since Virginia had done nothing to warrant further opportunity; while Delhi, though showing good range, speed and judgment, and having had an insufficient test on birds, was left out. He was run on a poorer section of the grounds and a place that was overworked day after day, and it seemed a great hardship on him to dismiss him so curtly. But it seemed as if the class of work was not considered, and points, which between two good dogs may be in excess with one or the other as a matter of luck, seemed to have great weight in the decisions.

JINGO AND TIPPOO commenced at 11:32. Jingo pointed a bevy at the edge of woods and Tippoo backed. Tippoo flushed a bevy in woods. The judges did not see it. Jingo roaded with a low nose in an over-cautious manner and the single flushed wild. Next in woods he flushed one excusably, Tippoo did likewise. Jingo pointed; Tippoo backed; nothing found; footscent probably. Up at 12:46. Tippoo started well, showing fair range, but at the finish was going slow and narrow. Jingo showed cunning, a great memory of the grounds and places where he had found birds, he running most of his second heat on the same grounds on which he ran his first heat, an advantage to him and a disadvantage to his competitor, and his speed and range were irregular, as he loafed at times and ranged wide at others. There was but little dash in his work. He had an annoying habit of crawling on his points.

INDIA AND VON GULL began at 1:40, after lunch. Von in open weeds with the wind in his favor roaded a bevy to a flush in an inexcusably blundering manner. On the scattered birds in woods he made three clean-cut points on singles; India pointed twice, presumably on footscent. Next India pointed by a log, moved on, and the birds were flushed afterward. Up at 2:17. This was Von's best heat, and he was going strong and wide at the finish. However, the grounds were more favorable for good going than in his previous heat. His point work was good on singles and faulty on the bevy.

ODD SIDES AND VIRGINIA started at 2:56. Odd took a wide cast, pointed and held point some moments stanchly while his handler ran to him. He then drew skillfully and accurately to a determined point, and the birds were flushed to it. Sent on. The handlers were then a long distance apart. Virginia made a point on some birds in the open. Sent on, she next made game, pottered on the scent in the open, failing to locate the bevy, which was close by and was afterward flushed by a handler and followed. Virginia pointed a single in woods and Odd backed nicely; both were steady to shot. Sent on, in sedge Virginia pointed a bevy, getting very close on it. Up at 4:11. It was difficult to understand why the heat was run so long, as it was apparent from the first that Virginia was outclassed and had no chance in the stake. She was a haphazard, close ranger, showed little skill in locating, though working diligently and doing her best.

JINGO AND VON GULL started at 4:37. Von pointed, but did not locate bevy accurately; it was accidentally flushed, and making a short flight, lit in sedge and bushes a few yards ahead. Von had the wind favorably and should have located it more favorably. Each made a point on the birds, Von not working up to his opportunities. Sent on, Jingo pointed a bevy nicely at the top of a ridge and Von backed well. Sent on, both were found pointing a bevy in sedge. The bevy was marked in the open fields and followed. Each made a point on singles. Jingo flushed a bird on bare ground in cottonfield, then stopped to flush, and pointed one remaining. Both were showing good work, classing nearly alike. Up at 4:55. Jingo's success was due greatly to cunning, delicate nose and caution. He carried a low nose in roading, going to his birds mostly by footscent, yet going to them accurately.

This heat ended the stake.

Saturday.

The weather was cloudy and warm. There were but two heats to run; the Derby winners, first pointer and first setter, were to run a one-hour heat; and the All-Age winners, first pointer and first setter, were to run two hours, the absolute of each stake being for the Gould cups. There seemed to be a lack of interest in the competition, as there were no spectators other than judges, reporters and handlers.

The Derby Absolute.

PINMONEY AND TICK'S KID were cast off at 8:36. It was a very one-sided heat throughout, Pinmoney outworking

and outclassing her opponent. It showed the error of giving a dog a prize on a little good point work, instead of giving it on the class of his work in general. Pinmoney found and pointed two bevies, and made four points on singles. Kid pointed one bevy, made two stanch points to which nothing was found; made three flushes and one point on a single, and showed indecision in locating his birds and pottered on false scents. His range was narrow, and he needed much urging to keep out at work. The setter ran in excellent form. Down 1 hour. Pinmoney won.

The All-Age Absolute.

MARIE'S SPORT AND JINGO were started at 9:47. Jingo flushed a bevy, and on the scattered birds he made a crawling point. Sport made two good points on singles. Sent on, Sport pointed a bevy, and Jingo pointed the same bird or backed him. Sent on, Jingo made a good point on a bevy. Sent on, Sport pointed a single bird, and next pointed a bevy. Down 2 hours. It was simply a good working heat, there being nothing brilliant in this competition. Marie's Sport won.

This ended the trials. B. WATERS.

Mr. Arthur Froembling, secretary of the American Dachshund Club, writes us that the club will hold a meeting on Thursday, Dec. 10, at 8 P. M., 131 South Clark street, Chicago. Besides the regular business, arrangements will be made for the special prizes at the coming shows.

I MUST say that your paper is the best advertising medium of any of the sporting papers, as before I advertised in them and all my replies mentioned the FOREST AND STREAM. I sold some of the litter in California, one in Maine, one in New York State and one in Tennessee. My money was well invested in that adv.; the others I did not get a reply from. Hoping I will meet with same success this time, I am

Respectfully, ROBT. J. CARRY, Agt.

Wheeling.

TIRES.

SIX years ago Arthur Du Cros was barred from racing at the autumn wheeling meeting in London because his bicycle was fitted with pneumatic tires. He had come over from Dublin to give the Englishmen a taste of Dunlop's new invention, but the wily Britons, after due consultation, refused his entry at the eleventh hour.

To-day all this is a matter of ancient history, and the pneumatic tire is as much an institution as the bicycle itself; but it must not be forgotten that next to the transmission of power by gear and the use of ball bearings the bicycle has seen no greater improvement.

Its use has made possible the great reduction in weight of the modern bicycle by putting life into it to resist jolts and jars and sudden strains, and it has increased its scope and consequently its utility. It is possible now to ride with pleasure on roads that were practically impossible with the old style tire, and the effort required to propel the bicycle has been greatly lessened.

In this respect the effect has been similar to that resulting from placing springs under a wagon. With springs horses can draw over average roads the same load and wagon that they could not draw without springs, and aided by the air cushion afforded by pneumatic tires the bicycle rider similarly finds his power and pleasure greatly increased.

And here it is worth noting that in the craze for light wheels, which culminated last year, tire weights and sizes were reduced beyond the modicum required for comfort. Tires measuring 1½ and 1⅝in. are undoubtedly lighter and more speedy on hard roads than those of larger diameter, but they are more likely to puncture, and as they must be kept pumped hard, are much less springy. Such tires are suitable for scorchers, but for the average rider on average roads they are utterly unsuited.

There is already a noticeable change of sentiment in this regard, and many riders are demanding tires of 1¾ or 2in. in diameter. Such tires can be ridden with safety considerably softer than the small tires, and on sandy or rough roads the difference in their favor is very apparent.

A knowledge of the nature of tires is always of value to wheelmen.

From a structural point of view there is very little difference between the single and double tube types, except that in one the inner tube is removable, while in the other it forms an integral part of the tire. In either case this inner tube is made of pure rubber, and its duty is to retain the air with which the tire is filled. The outer layers are to take the wear and tear and give strength to the tire, and they will not hold air under pressure. This is the reason why patches must always be put on the inside of single tube tires to insure permanent repairs in case of puncture, for otherwise the air will ooze out between the different layers.

Aside from this inner tube to hold the air there is no pure rubber worth mentioning about a bicycle tire.

The outer layers are made of vulcanized rubber compounded with various mineral substances to give strength and elasticity, built up upon canvas casings made from long fibered cotton woven in various ingenious ways. The danger of puncture is lessened by these cotton webs, and also by the hardness of the rubber compound on the tread or wearing surface. Elasticity and strength, however, are more or less opposed by the nature of things in tire construction, and something of one or the other must be sacrificed to suit the special purpose for which the tire is intended.

The tires are always the first thing to give way about a good bicycle, and they are bound to wear out sooner or later though the wheel itself lasts forever. Their life may be lengthened by care, and there are a few points that should be borne in mind to get even ordinary service from them.

One of these is that the mineral oils, such as kerosene, gasoline, etc., are destructive to the rubber, and that if a drop falls on a tire it should instantly be wiped off. Vegetable oils, such as castor oil, linseed, etc., are not hurtful, as their solvent effect is comparatively slight.

Heat also is bad for tires; and the bicycle should not be left in the sun more than can be helped, or near a stove or furnace. Sometimes heat from the friction of a brake on a long coast will destroy the outer surface. And this brings us to the general proposition that the brake should never be used except in case of emergency. This applies particularly to the common method of braking with one foot, because this is much more apt to injure the tire than a well-fitted brake of metal or rubber. Even with the best types of brakes that act on the tire pieces of stone or sand are apt to collect at the point of friction and cause disaster.

It is also a fact that rubber cuts much more easily wet than dry, and the tires should be especially humored in wet weather.

Oiled his Wheel.

HE strode into the second-hand bicycle dealer's with a look of rage upon his face.

"Say, this is a pretty deal you have given me. Why, it would take a steam engine to furnish power enough to run this machine."

"Why, what is the matter with it?" asked the dealer, alarmed at the growing rage of the customer of the day before.

"Matter! matter enough. You told me this was an easy-running machine, and you can't make it budge. I oiled it freshly this morning, just before going out, and in five minutes, sir, it was like drawing a load of stone."

"Sure you used pure oil?"

"Used the stuff you gave me in the bottle. Bad enough, probably."

"In the bottle? Why, man, I didn't give you any bottle of oil. It is in a can."

"Can, eh? Well, what do you call that?" said the irate man, as he took the bottle out of the leather case. "I put it in the bearings, just as you told me."

"My dear fellow, that is the liquid cement for tires."—*Australian Cyclist.*

Yachting.

THE general features of the agreement between the Royal St. Lawrence Y. C. and the Seawanhaka Corinthian Y. C. as to the class for the next international contest was settled some time since, both parties agreeing to the limits of 500sq. ft. of sail and 5ft. extreme draft for a 20-footer. When it came to the question of details, however, many difficulties cropped up, and no satisfactory conclusion has yet been reached. The holder of the cup is at liberty to accept any limitations, but the challenging club is hampered by the obvious necessity of adopting no limits which will materially conflict with the rules of the Sound Y. R. U. So far as the sail is concerned, while the Y. R. U. rules place no absolute limitation on sail, there would probably be no serious objection to a tacit recognition of a limit of 500sq. ft., as it is very doubtful whether any one would care to take more provided the majority were within the limit. In practice, should the Seawanhaka C. Y. C. adopt the limit, the Union of course not doing so, the result would be that all or nearly all of the class on the Sound would be within the limit. It is just possible that one or more yachts of greater sail area might be built and raced in the class, and it would of course be highly undesirable that one of these should prove herself faster than any yacht within the limit, so that the challenger sent to Montreal would be slower than another of the same class left at home. The limit, however, is so liberal that such a contingency is a remote one. As to building with no limit to the sail, permitting an area of over 600sq. ft, any one familiar with Montreal racing and the local conditions of Lake St. Louis will recognize that the advantage would be greatly on the side of the defender. A minor difficulty in connection with the sail has been that of the details of measuring, regulation of spinaker, etc., simple enough at first view, but by no means easy when all points are considered.

The chief difficulty, however, lies in the proposed limit of draft, according to the original idea, 5ft. for the ordinary fin-keel boat. When it comes to phrasing this limitation, however, the centerboard and the Union at once come to the front. A limitation of 5ft. to the draft of the fin-keel must be accompanied by some corresponding limitation of the centerboard type. If it be said that the extreme draft of fin or centerboard shall not exceed 5ft., the result is the prohibition of the Linton Hope board, one of the most useful devices yet introduced in small racing craft; and the development of a long and shallow centerboard, a very undesirable form. If the crude limitation of the Larchmont Y. C.—5ft. draft with no restriction on the centerboard—be adopted, the result will be that a centerboard will be dropped through the fin. The most reasonable solution of the matter would seem to be something in this form: In all keel yachts the extreme draft shall not exceed 5ft., and in centerboard yachts the draft to the lower side of the keel shall not exceed 2ft., with no limit to the drop of board. This will bar the use of the bulb as ballast in a centerboard boat and will leave the present racing types, such as Glencairn and El Heirie, entirely unrestricted. Such a regulation as this could hardly conflict with the Yacht Racing Union unless it follows the lead of the Larchmont and New York clubs in the deliberate encouragement of the fin-keel type above all others.

THE YACHT RACING UNION OF THE GREAT LAKES.

THE work of union, organization and systematization, which first began in this country on Lake Ontario in the formation of the Lake Y. R. A. in 1884, and has recently advanced so rapidly on salt water through the formation of the Yacht Racing Union of Long Island Sound and the Yacht Racing Association of Massachusetts, has now spread further westward in the formation of still another association, as recently reported in our columns, to be known as the Yacht Racing Union of the Great Lakes. Such a union as this is by no means a novelty; many attempts have been made to unite the Lake Y. R. A. and the various local associations which have existed at times on the other lakes, but without success. Owing to a number of changes within a few years in the direction of more modern and less violently conflicting rules, the conditions are far more favorable than ever in the past, and we have little doubt that this attempt will prove a permanent success.

The method followed is precisely the same as that which accomplished such good results in the case of the Sound Y. R. U; the initiative was taken by the representatives of two associations: the Interlake Y. R. A. of Lake Erie and the Lake Y. R. A. of Lake Ontario, who recently met in Buffalo and formally organized the new Association, adopting the necessary rules. Invitations to join the Union have been sent to all the associasions and clubs on the Great Lakes, and will probably be accepted. It was found impossible to secure a conference of representatives of all interested bodies, and the means taken was the only practicable one.

The rules adopted are as follows:

General Rules.

Adopted Nov. 7, 1896.

I.—NAME.

The name of this organization shall be the Yacht Racing Union of the Great Lakes.

II.—OBJECTS.

The objects of the Union shall be to encourage and promote yacht racing on the Great Lakes and to unify rules, but it is not intended that the Union shall act in any other than an advisory capacity.

III.—ORGANIZATION.

All associations of four or more yacht clubs on the lakes in good standing shall be eligible for membership in the Union.

IV.—MANAGEMENT.

The affairs of the Union shall be managed by a Council consisting of three representatives from each association. These shall be appointed annually not later than one month before the annual meeting and shall hold office for one year, or until their successors are appointed. Representatives shall be chosen as far as may be practicable from the active yachtsmen of the Association.

V.—DUTIES OF THE COUNCIL.

It shall be the duty of the Council to consider and act upon applications for membership in the Union; to appoint special officers and committees; to frame racing rules and arrange dates for racing events, and to determine and settle all questions and disputes relating to yacht racing which may be referred to them for decision. And further, to take such steps as they may consider necessary and expedient to carry into effect the objects of the Union.

The Council shall elect a chairman and a secretary.

VI.—MEETINGS.

The annual meeting of the Union shall be held at such place as the chairman of the Council shall determine on the first Saturday in November in each year. The business of the Council shall be carried on as far as possible by correspondence, but the chairman may call special meetings of the Union whenever necessary, and shall do so upon the requisition in writing of three representatives. Two weeks' notice of every meeting shall be given to each representative.

Three representatives from not less than two associations shall constitute a quorum at any meeting of the Union.

VII.—SUBSCRIPTION.

The expenses of the Union shall be apportioned equally among the associations.

VIII.—VOTING.

The chairman, in addition to his vote as a representative, shall, in case of a tie, be entitled to a casting vote.

Voting by proxy shall not be allowed except in the case of a proxy given by one representative to another representative of the same association.

IX.—AMENDMENTS.

Amendments to these rules or the racing rules may be adopted at any meeting of the Union by a two-thirds vote of those present, provided that the notice of the meeting shall have contained any such proposed amendment in full.

Racing Rules.

I.—MANAGEMENT.

1. All races and all yachts sailing therein shall be under the direction of the regatta committee of the association or club under whose auspices the races are being sailed. All matters shall be subject to approval and control, and all doubts, questions and disputes which their shall arise shall be subject to their decision. Their decision shall be based upon these rules as far as they apply, but as no rules can be devised capable of meeting every incident and accident of sailing, the regatta committee should keep in view the ordinary customs of the sea and discourage all attempts to win a race by other means than fair sailing and superior skill and speed. The decision of the regatta committee shall be final, unless they think fit on the application of the parties interested, or for other reasons, to refer the questions at issue for the decision of the Council of this Union, whose decision shall be final. No member of the regatta committee or Council shall take part in the discussion or decision upon any disputed question in which he is interested.

2. A member of a regatta committee who is the owner of a yacht sailing in a race shall not act upon the committee in the management of such race.

II.—APPLICATION.

1. The rules shall apply to all yachts, whether sailing in the same or different races.

2. Yachts shall be amenable to the rules from the time the preparatory signal is given until the finish of the race.

III.—MEASUREMENT.

1. Yachts shall be rated for classification and time allowance by racing length, which shall be determined by adding to the load waterline length the square root of the sail area, and dividing the sum by 2.

Formula:

$$\frac{\text{L. W. L.} + \sqrt{\text{Sail Area}}}{2} = \text{R. L.}$$

2. The load waterline length shall be the distance in a straight line between the points furthest forward and furthest aft, where the hull, exclusive of the rudder stock, is intersected by the surface of the water, when the yacht is afloat in racing trim in smooth water, with all persons aboard when the measurement is being taken stationed amidships.

All yachts shall be measured for load waterline length with the same number of persons on board as are allowed for crew in the yacht's class, and whose average weight shall not be less than 150lbs. each, or a dead weight placed on board equivalent thereto.

If any part of the stem, sternpost or other part of the yacht below the load waterline projects beyond the length thus measured, such projection shall be added to the measured length, and a form resulting from the cutting away of the fair line of the stem, sternpost or the ridge of the counter for the apparent purpose of shortening the load waterline shall be measured between fair lines.

The measurer at the time of taking his measurements shall affix a distinctive permanent mark at each end of the load waterline.

3. Under Section 3 the methods of measuring the sails by triangulation are given in detail, by the British Y. R. A. method.

* * * * * * * * * *

MODE OF MEASURING.

In cases of disputed measurements, or if the necessary measurements cannot be obtained from the sailmaker, the sails can be measured in the manner following: Take the length of boom from mast to end and length of gaff from mast to end (any extension of gaff or boom to be considered part of gaff or boom, and to be extended when measured to its full limit), then hoist the sail with the tack fast and set the peak and luff up taut, and let go the topping lifts so that the weight of the boom comes on the leach of the sail. With a line and tape measure the leach and luff and the diagonal *C*. For the head sail measure the height *I* and the distance *J*, as provided for in the section dealing with headsail. For topsail the sail would be hoisted and marked in a line with the gaff, then lowered and the other dimensions taken. From the measurements so taken a sail plan would be made and the areas calculated as described.

SAILS OF UNUSUAL FORM.

If the various methods of measuring sails as herein shown do not, in the opinion of the measurer, cover the case, he is to divide the sails into such triangles or figures as will get at accurate results, and a sail plan showing the manner in which the yacht has been measured, giving the different measurements and the points from which they have been taken, shall be furnished by the measurer to the owner of every yacht measured by him.

4. If any yacht by alteration of trim or immersion by dead weight shall increase her load waterline length, or shall in any way increase her spar or sail measurements as officially taken, she must obtain a remeasurement.

IV.—RESTRICTION ON AREA OF MIDSHIP SECTION.

The area of the midship section or largest vertical cross section of any yacht launched after Nov. 7, 1896, when in racing trim, shall not be less than 35 per cent. of the beam (at l.w.l.), multiplied by the extreme draft wherever found exclusive of centerboard if it be not a board weighted for ballast.

V.—CLASSIFICATION.

1. All yachts shall be classified by racing length and shall be divided into classes as follows:

First Class—A—All over 50ft.
52ft. Class—B—Not over 50ft. and over 42ft.
42ft. Class—C—Not over 42ft. and over 37ft.
37ft. Class—D—Not over 37ft. and over 32ft.

32ft. Class—E—Not over 32ft. and over 27ft.
27ft. Class—F—Not over 27ft.
2. Each yacht shall be entitled to sail in her own class and in no other.

VI.—RESTRICTIONS ON DRAFT.

The maximum draft of any yacht launched after Nov. 7, 1896, when in racing trim, shall not exceed that specified for her class in the following table, exclusive of centerboard if it be not a board weighted for ballast.
First Class—10ft. draft.
50ft. Class—10ft. draft.
42ft. Class— 9ft. draft.
37ft. Class— 8ft. draft.
32ft. Class— 7ft. draft.
27ft. Class— 6ft. draft.
On all yachts launched after Nov. 7, 1896, there shall be placed upon the hull, immediately over the point of greatest draft, a metal plate or other distinctive mark. Such mark shall be placed above the l.w.l. and within 6in. thereof, and the owner shall furnish to the measurer or regatta committee a declaration of the vessel's draft to such mark, signed by himself and the designer or the builder of the yacht.

VII.—TIME ALLOWANCE.

Time allowance shall be calculated on r.l., according to the appended table, but yachts the r.l. of which is within 1 per cent. of the upper limit of their class shall not give or receive time allowance to or from each other, and no yacht launched after Nov. 7, 1896 (except in the first class), and no yacht, the measurement of which has been increased since that date for the purpose of placing her in a higher class than she previously sailed in, shall be entitled to any time allowance.

VIII.—ALLOWANCE FOR RIG.

In races where yachts of different rigs sail together schooners shall be rated for time allowance at 85 per cent. of their racing length, yawls at 94 per cent., and all other yachts at their actual racing length.

IX.—OWNERSHIP.

1. No person shall be the owner of more than one yacht entered for a race in the same class.
2. Each yacht entered for a race must be the *bona fide* property of the person or persons in whose name she is entered, who must be a member or members of a recognized yacht club belonging to one of the associations of the Union.

X.—ENTRIES.

1. All entries shall be in writing and shall be signed by the owner or his representative, giving name of yacht, racing length and racing number, and must be lodged with the regatta committee not later than noon of the day before the race, exclusive of Sundays, unless otherwise ordered by the committee.
2. The regatta committee may refuse to accept any entry made after the time of closing.
3. The same yacht shall not be entitled to enter for a race under different rigs.
4. The regatta committee may, if they consider it expedient, reject any entry.

XI.—INSTRUCTIONS AND POSTPONEMENT.

1. Each yacht entered for a race shall at the time of entry, or as soon after as possible, be supplied with written or printed instructions as to the conditions of the race, the course to be sailed, marks, etc.
2. The regatta committee shall have power to change the courses or amend the instructions on or before the day of the race, provided notice of such change is given to each yacht in writing before the preparatory signal is given.
3. The regatta committee shall also have power to postpone any race should such a course appear to them desirable. No race, however, shall be postponed merely because of lack of wind if any of the competing yachts shall have sailed round the course once within the allotted time: but should such race not be finished, the prizes shall be awarded in the order in which the last completed round shall have been finished.

XII.—SAILS.

There shall be no restrictions as to sails or the manner of setting or working them, but no yacht shall carry any sail for which she has not been measured.

XIII.—FITTINGS AND BALLAST.

1. Floors shall be kept down and bulkheads and doors left standing. All yachts shall keep their galley fittings and fixtures on board and in their proper places. All yachts must carry one serviceable anchor and cable on board and a life buoy on deck.
2. Trimming by dead weight shall not be allowed after the preparatory signal. Ballast shall not be taken in or discharged after noon of the day preceding the race. A race postponed or resailed shall, so far as regards this rule, be considered a new race.

XIV.—CREWS.

1. The total number of persons on board a yacht shall not exceed the allowance in the following schedule:
1st Class—1 person to every 5ft. of r.l. or fraction thereof.
50ft. Class—11 persons.
42ft. Class—9 persons.
37ft. Class—8 persons.
32ft. Class—7 persons.
27ft. Class—6 persons.
2. No person shall board or leave a yacht after the starting signal has been given, except in case of accident or injury to a person on board.
In all races each yacht must be steered by a Corinthian, and must be manned by Corinthians, except that any yacht may carry and use her regular professional crew.

XV.—TIME OF MAKING RACES.

There shall be no limit to the time in which a race is to be sailed, except when it is otherwise specified in the instructions.

XVI.—RE-SAILED RACES.

No new entries shall be received for a race re-sailed, but a yacht duly entered shall be entitled to start, though she originally failed to start, or having started was withdrawn. No yacht disqualified in a race shall be entitled to start in case the race shall be re-sailed.

XVII.—NUMBERS.

Each yacht shall display a number, which will be assigned to her, on both sides of the mainsail, above the reef bands, at an equal distance from the luff and leach.

XVIII.—LIGHTS AND FOG SIGNALS.

The Government regulations regarding lights and fog signals shall be observed.

XIX.—PROPULSION.

1. No means of propulsion other than sails shall be employed.
2. Manual power only shall be used for working a yacht.

XX.—STARTING AND FINISHING.

1. All starts shall be flying, and shall be one-gun starts.
2. Half an hour before the time of starting a gun shall be fired and a flag hoisted as a signal for the yachts to approach the starting line. Ten minutes before the start a preparatory gun shall be fired. At the expiration of ten minutes *exactly* the flag shall be hauled down and a third gun fired as a signal to start. Should the gun miss fire the lowering of the flag shall be the signal to start.
3. In the event of different classes starting in succession, not more than ten minutes apart, the starting gun of each class shall be the preparatory gun for the next class to start. Each yacht shall be timed from the starting signal of her class.
4. If any yacht, or any part of her hull or spars, be on or across the line before the signal to start is given she must return and re-cross the line. A yacht so returning, or one working into position from the wrong side of the line after the signal to start has been given, must keep clear of all competing yachts.
5. A yacht shall be considered to have finished a race when, on completing the course, any part of her hull or spars shall be on or across the line. The rules as to marks, right of way, etc., are uniform with those of the Sound Y. R. U.

* * * * * * * *

Definitions.

I.—CORINTHIANISM.

Corinthianism in yachting is that attribute which represents participation for sport as distinct from gain, and which also involves the acquirement of nautical experience through the love of sport rather than through necessity or the hope of gain. It is consistent with the motive higher than mercenary found in the ranks of officers of the navy and naval architects, notwithstanding the remuneration they receive, while it is inconsistent with the trade of the fisherman, even though one following such a trade has never been a paid sailor. In this respect the following general definition is given:
No person who follows the sea as a means of livelihood, or who has accepted remuneration for services rendered in handling or serving on a yacht, or who is a professional in any other sport, shall be considered a Corinthian yachtsman.

II.—YACHTS.

A yacht shall be defined as a vessel of not less than 16ft. l.w.l., and must carry not less than 300lbs. of ballast permanently stowed under the platform or in lockers, or have a beam of not less than one-third of her l.w.l. length. She must have standing rigging, or a fixed mast, and must be kept permanently on the water during the season, and must not be engaged in trade. Yachts launched after Nov. 7, 1896, shall comply with the restrictions on draft and area of midship section required by the rules.

The allowance table is based upon a coefficient of 50 per cent.

The above rules are based upon those of the Lake Y. R. A., as used for some years, and those of the Sound Y. R. U. with the pending amendments. In many important details the Lake Y. R. A. has been years in advance of even the largest of the coast clubs, so that small change was necessary.

The points of difference between the Sound Union and the Lake Union are few, but four in all, of which two are unimportant. The allowance table is based upon 60 per cent. in the Sound rules and but 50 per cent. in the Lake; and the latter has adopted a minimum limit to the area of the midship section, 35 per cent. of the circumscribing parallelogram. So far as the Lakes are concerned, with but four existing yachts below this limit, it is perfectly practical and for the present at least must prove beneficial in barring further additions of the fin-keel type.

The two important points of difference are the measurement of sail area and the class limits. The Lake Y. R. A. was the first outside body to adopt the Seawanhaka rule, as long ago as 1884; and it has retained the rule to the present day, except in the detail of the method of measuring the sail. About four years ago, for reasons which are not very clear, the Seawanhaka method of spar measurement was abandoned in favor of the British Y. R. A. method of sail and spar measurement combined, from either the yacht herself or the sail plan. In actual practice as applied to a small fleet of yachts this method has worked very satisfactorily; but save in the case of special rigs on the smaller boats it does not appear that it is in any way superior to the older and more definite method. The measurement of the 42-footer Canada, for instance, by the two methods, compares as follows: The "actual" area, as found by the Y. R. A. method, is 2,009sq. ft.; the "approximate" area, as found by the Seawanhaka method, is but 1,995sq. ft., a difference of 14sq. ft., or almost three-fourths of one per cent. The measurements from the yacht herself, as they should be taken, or even from the sail plan, are more quickly and easily taken by the Seawanhaka method, regardless of weather; and they are capable of easy and certain verification, which is not the case where five out of eight distances are taken from the sails and not from the spars.

Of course in the above comparison both measurements are taken with jib-headed topsail only. As an incident and not a necessity of the use of the Y. R. A. method, the largest clubtopsail carried is included in the measured sail; the difference in the case of Canada being that she is allowed 193sq. ft. less sail by the Y. R. A. rule than she could carry under the Seawanhaka rule. This of itself is a matter of detail and not of principle.

Looking at the growing importance of uniformity in racing rules, we do not see anything in the Y. R. A. method which justified its use in preference to the other method now in general use in this country; and we can only regard it as unfortunate that the new Union has started on this basis. In practical operation on the lakes, with but a limited number of yachts to be measured and few new yachts each year, the Y. R. A. method will doubtless work very well; but we cannot see how it is any better than the other. In one respect it is decidedly inferior. In international races the first requirement is that all measurements shall be taken to points absolutely fixed, and capable of exact location and verification should a remeasurement be necessary. This is more easily possible when all measurements are from fixed points on the spars, which do not change with the weather, than when most of the measurements are made on the sails. Admitting that the two methods are of equal merit, it must follow as a matter of course that it is desirable to use one exclusively, and that the one already in the widest use.

The other point of difference is a more difficult one. On the lakes west of Ontario there are no uniform classes, and few yachts that will fit into any new classes. On Ontario, however, quite a fleet has been built up to certain established limits, which conflict directly with those now used aboat New York. The respective classes are as follows:

Sound Y. R. U.	Lake Y. R. A.
51ft.	50ft.
43ft.	42ft.
36ft.	37ft.
30ft.	32ft.
25ft.	27ft.

On the face of these figures there appears a serious difficulty in bringing the two systems to any common basis; as a matter of fact, the use of a uniform interval of 5ft between the classes, as in the L. Y. R. A., is wrong in principle; and though the harm is not so apparent with five classes between 22 and 42ft., it would be impossible to arrange a complete scale of classes from 100ft. downward on this system. This of itself is of small consequence on the lakes, as it will be a long time before anything larger than the 50ft class is required.

The difficulty is further increased by two other circumstances of the case: Should a yacht of the 43ft. class go from New York to the lake, she would in the first place increase her measured l w l. by the change from salt to fresh water, and at the same time her sail measurement would be increased some 200sq. ft. through the measurement of the excess of clubtopsail over jib-header. This would result in removing her still further from the 42ft. class, in which she should sail In the smaller classes, the lake limits being the larger instead of the smaller, the salt-water yacht would remain in a similar class, but of course she would not if the limits were the same, 36ft in both cases.

With a uniform system of sail measurement the only difficulty would be with the difference in immersion due to the change from salt to fresh water. The lake and coast fleets are so far independent of each other through distance and other conditions that there is not that absolute need for uniformity which exists on the Sound, or even between the Sound and Massachusetts Bay, but at the same time it is to be regretted that in forming a new union the work cannot be done throughout on the same basis as already used by so many clubs, especially as there are no serious questions of principle involved, but only of details.

The new Union has come at a most opportune time, when an increased interest in yachting is apparent on all the lakes, and when it may do much to bring about better methods of racing and to build up strong and vigorous racing classes. As now started, it promises to meet the necessities of the immediate future, and by the end of the season of 1897 it should be possible for all the lake interests to meet in convention and to perfect still further the rules under which the original organization was accomplished.

LAKE HURON AND THE AUX SABLE RIVER.

FOR several months previous to Aug. 22, 1894, extensive preparations were in progress for a projected ten days' outing in canvas canoes, the route selected being the lower portion of the Aux Sable River and the south shores of Lake Huron. The canoeists who were to take part in this expedition were enthusiastic cruisers and more or less experienced canoemen, as was highly necessary, as well as to be possessed of unlimited patience, as owing to the shallowness of the river many dangerous objects that would be liable to puncture the canoes were exposed at the surface.

Notwithstanding this and the many discouraging reports we obtained of the difficulties to be met with, we resolved to see this uncanny spot at all hazards. And accordingly, at 3 o'clock in the morning of the above date we loaded our canoes and outfit into a farmer's wagon, equipped with a huge grain-rack and liberally provided with hay, into which we imbedded the canoes and onto which we distributed ourselves in various comfortable if inelegant positions.

The four canoes taken on this trip were Yukon, Gallinipper, Water Witch and Ojeek, and they were skippered by the Treasurer, Captain, Pilot and Bluebeech, respectively. Jim, the irrepressible, also accompanied the expedition in the capacity of able seaman on board Water Witch, in company with the Pilot.

Leaving Wyoming, Ont., we drove a distance of about thirty miles to a point on the river where it is joined by a small tributary stream, locally known as Rock Glen, reaching it at about 9 A. M. As we had doubts of finding a sufficient depth of water to float the canoes down from this place, we were not disappointed when the Treasurer, after a hasty glance into the mighty gorge, announced that "the old Aux Sable was as dry as a cracker." The great drought that prevailed at the time had reduced the river to a mere rivulet, threading its way among broken fragments of limestone rocks that had fallen from the cliffs above.

Descending to the bed of the stream, we explored its course for about a mile, meeting with nothing but discouragement, but as we had not come on this trip to be bowed down by grief, we took the matter coolly, enjoying an hour's ramble in the glen, where we collected some strange fossils. At the head of the glen there is a small fall, on the brink of which an old stone mill stands, that as we looked up to its dizzy height gave us a creepy sensation, as it looked as though about to topple over into the gorge below.

The scenery of the Glen and river gorge is very pretty and romantic, and is a favorite resort for picnicking parties and campers. It is also frequently visited by geologists, who there find an excellent field for geological investigation.

On ascending the bank again we had the pleasure of meeting a gentleman who was well acquainted with the river, and who gave us much valuable information, but while cheerfully doing so expressed some doubts as to the practicability of navigating the Sable in canvas canoes. The Cap combated this idea in his characteristically vigorous manner, declaring that we should go through if we had to do so overland, and adding that the canoes would "float on a heavy dew" anyway. This was a clincher, and after quiet was restored our friend admitted the force of the captain's argument, and having given us all the information within his power wished us a safe and pleasant passage as he took his departure.

After a lunch we again hitched up the horses, and driving down river about six miles to Sylvan Bridge were rejoiced to find an abundance of water, and accordingly our hopes rose to a high altitude. The outfit was driven down to a convenient place at the water's edge, where it was dumped, and the business of preparing dinner gone into in a hurried but earnest manner, that would not brook delay for a moment.

After we had satisfied the wolf within us, we packed the canoes, and with a "meet us ten days hence at Blain's Grove, Lake Huron," to Solomon, our teamster, we shoved away from the shore, and soon began to experience the delightful change from a jolting vehicle, dusty roads and a scorching sun, to the easy motion of a light canoe, gliding noiselessly along beneath the shades of majestic forest trees.

The river at this place is only a few yards wide, the banks low and lined with a variety of timbers, among which were some monster scraggy butternut and walnut trees laden with nuts. For several miles the channel was free from obstructions, but along the margin of the stream a vast accumulation of drift stuff had found a lodgment, which afforded an excellent resting place and retreat for the innumerable turtles, muskrats and other creeping things that infested it, but which amused and interested us as we leisurely paddled along.

Finally, coming to where a tree had fallen across the stream, we found it necessary to use a small axe to clear the way. This instrument the Captain was provided with, and being an adept in the fine art of using it he soon cleared a passage through. While engaged in this our attention was attracted by the rumbling sound of a Grand Trunk R. R. train crossing the river bridge, apparently only a short distance away; so distinct was the sound that we involuntarily looked up, expecting to see it go thundering past. We learned the extent of the delusion after we had paddled something over a mile. After passing the railroad bridge the river became more difficult of navigation, savage snags and uprooted trees were more numerous, necessitating the greatest care to avoid them. This continued for about a half mile, when, on turning an abrupt bend in the river, the sight that met our gaze filled us with amazement.

The river so far as could be seen was a compact mass of logs, stumps, whole trees, and every conceivable kind of rubbish, that for diversity of surface croppings and hydraulic density eclipsed anything of the kind we had ever seen. It was while worming our way into this mass in order to shorten the carry as much as possible that the first disaster befell us, and the first intimation we had of anything having gone wrong was in seeing the Captain making frantic efforts to get out of his canoe and on to a convenient log. So intent were we in observing this that we failed to catch the exact meaning of his words, but we did note the power and volume of his voice, and the liberal use he made of it. He had snagged his boat, and in the excitement of the moment, and while Bluebeech was making frantic efforts to render him assistance, his canoe also met with a like fate, and another tempest of bitter invectives was 'on" immediately, in which he gave expression to his convictions of the shabbiness of the whole affair in unstinted measure.

Taking the canoes ashore, we unpacked and repaired them, and deciding to remain at this place for the night, the tents were pitched. As there was still remaining a couple of hours of daylight in which a good deal of amusement

might be crowded, and as every moment was precious to us on a limited outing, various proposals were made and rejected, until finally Jim reckoned he would get a mess of fish; when forthwith the whole squad became imbued with the same desire; but after an hour of steady, persistent threshing, with the mess still in the prospective, we gave it up and directed our attention to a general survey of the jam and the extent of the carry we would have to make in the morning.

We found that by going directly across an elbow formed by a bend in the river the distance would not exceed 300yds through a fine, open bush, with little underwood and but few down trees to impede our way. With our minds relieved on this score we were leisurely returning to camp when we were attracted by the sharp crack of Jim's pistol repeated five times in rapid succession, and before we had ceased to wonder at this he was at it again, never ceasing until the magazine was empty. It was a puzzler. The Captain suggested the probability that "Jim had slipped his cable," but on his return to camp and being asked for an explanation he very provokingly declined to give any. The only probable solution to the problem we are ever likely to get was furnished by the Pilot, who thought that Jim had "cut loose" on a blue-gilled bullfrog or a sleeping turtle. Jim made no reply to this, but the expression on his face was that of a broad and comprehensive grin, full of deep and subtle meaning.

Aug. 24.—We were all prompt in turning out early this morning from a couch that had been a steady and uncompromising torture to us throughout the whole night. Every eye looked blue, every countenance haggard and woebegone, and notwithstanding the mighty efforts put forth to brace up and look buoyant, it took a dip in the river and a good breakfast to smooth out the wrinkles and restore us to anything like cheerfulness.

When breakfast was over we made the carry, which was an easy one, and once more afloat quickly forgot all our past miseries.

We had now a fine tortuous stretch of river for several miles, with a fertile wooded valley gradually widening out on either bank. The timber, though smaller, was much more dense, and to our especial delight the evidences of civilization were becoming less frequent as we progressed. We were now well pleased with our prospects, filled with high hopes, and began to regard the unfavorable reports we had heard of the river as a base and calumnious slander.

We had not proceeded more than a mile after we had soothed ourselves into this comfortable frame of mind when the evidences of a change in the river became more noticeable, occasional snags became visible above the water, and many more threatened us beneath its surface; we were fast getting to the outskirts of this little paradise, and shortly discovered that we had reached its confines and were hard aground. However, after a careful survey of the situation by the Treasurer, he announced his belief that we could force our way over and avoid a carry, and taking the initiative he led the advance in what proved to be the grand spectacle that was to follow. Using his paddle as a setting pole, he forced Yukon along, climbing over every obstacle until, as he supposed, he had got beyond the difficulty, but unfortunately here was where the real trouble came in.

A small tree lying directly across the channel and a few inches under water barred the way, but the Treasurer tackled this new difficulty without hesitation. Forcing the stem of the canoe up over the log, he gave her a tremendous boost, sending her along until she rested on the narrow inch keel directly amidships, where for a time the nimble Treasurer adroitly balanced with his paddle. In the next act, through some inadvertence on the part of the Treasurer, or possibly Yukon may have "missed stays"—whatever may have been the prime cause matters little—it is clear, however, that the paddle slipped, the canoe overturned, and that the Treasurer made a large dent in the water, while the whole unregenerate mob in the rear yelled like a pack of Indians.

The chilly water acted like a nerve tonic on the Treasurer, who quickly uncoiled his legs from the cockpit and rising to his feet smilingly bowed an acknowledgment of the graceful tribute tendered him by his friends.

It is strange how deep and soul-absorbing is the interest taken in an affair of this kind, and how little offense is taken should one so far transgress as to smile aloud. But the trouble was not all over yet, though the rest of the canoes were taken over safely. Before we had proceeded a dozen yards Gallinipper came to grief with a hole in her bottom. The Captain bore his misfortune with great patience and becoming gravity for about a minute. When the spell was broken he began to anathematize in solid chunks and to relegate things in general and snags in particular to the nether lands; but as his humble efforts to do justice to the occasion seemed so inadequate when considered in comparison with the magnitude of the grievance, it will not be wondered at that he gave it up in impotent despair.

Raising Gallinipper stern first on to a log, we made the necessary repairs, and then lowering her into the water the Captain stepped in; but as he did so the water she had taken through the rents, and which had settled forward when the stern was raised, now rushed aft, flooding the cockpit to a depth of 6in., at sight of which the Captain scrambled to his feet, yelling that the whole —— bottom was out of her, and, though he realized the true state of affairs in a moment, it was too late.

Having bailed and sponged out Gallinipper, we moved on again, and in an hour reached the Lake Burwell drainage canal. Here we found the river completely blocked, while the canal, as far as we could see, was open. Turning into the latter, we pushed along for a couple of miles, when we were again blocked by a jam. We had reached the shores of what was once Lake Burwell, though now thoroughly drained and grown up with rank grasses, bulrushes, weeds and willow bushes, the whole infested with snakes and swarming with mosquitoes. In the midst of these swarming myriads and cheerless surroundings we prepared and ate our midday meal.

Our next step was to find out how far the jam extended; this the Pilot and Bluebeech undertook to do They explored the canal for a half mile, and on their return gave a most dismal account of it; drift timber, dense thickets, grass, weeds and bulrushes higher than a person's head, bogs, muskrat holes and mosquitoes. Of such was their report. The Captain and Treasurer determined to go through at all costs, now struck out, and following the canal for about three-fourths of a mile discovered a small stream of about 4ft. in width of pretty swift water, but comparatively free from obstructions, though their view was limited to a few yards.

We were not very sanguine about the matter, but decided to take the risk, and immediately commenced making the portage, which proved to be the toughest piece of manual labor we had ever undertaken. Three trips were necessary to get the outfit over. The first was gotten through with great cheerfulness and a copious abundance of perspiration The second was made in dead silence, except when some unfortunate got his feet tangled and went to grass, or stepped into an unseen muskrat hole, with his pack like a pile-driver shoving him down to its slimiest depth.

But the third and last trip was the one that remains the freshest in our memories; the loads seemed the heaviest, the log holes deeper, dirtier and more abundant, and with our usual luck we invariably got into them and left a well-defined trail from them by which they could be again easily located. And accompanied as we were by myriads of the pestiferous mosquitoes, whose presence, it may be guessed, did not lessen the burden of our miseries, we remembered too, while staggering along under a crushing load, the advice of good old Nessmuk to "go lightly;" and we did the proper thing by recording the usual mental vow never to get caught in a snarl like that again.

However, we at last got everything over, loaded the canoes, and, pushing off into the swift current, shot down stream at great speed for about 50yds., when we were forced to get out and drag the canoes over a log. A little further on we got into a tight place between a log and the bank. Squirming through this, we were plunged one after another into the tangled maze of a dense forest of bulrushes of enormous growth that arched over the stream, forming a complete tunnel. It was an uncanny place, and might be the high road to disaster for us, but it was exhilarating sport, and while it lasted we were "chained to business."

An occasional cut in the face from the long reeds hanging over the water admonished us to keep a sharp lookout for them. At last, all too soon, with a rush and a plunge we emerged into a basin of quiet water and daylight, and casting an anxious glance away to the northward were rejoiced to see our uninterrupted waterway extending like a silvery thread clear to the sandhills. As the day was fast waning we did not dally much by the way, and being favored by the current and a good depth of water we soon covered the distance.

In the passage through the hills we met with a great many shallow places where we were forced to relieve the canoes of our weight in order to float them over. Reaching the Sable River again, a few minutes' paddle brought us to our old camp ground under the scrub oaks. The tents were pitched by the Pilot and Bluebeech, who made the light axes zip as they raced to see who should get through first. Jim rustled for a pail of water, the Treasurer prepared the camp fire, while the Captain brought forth the frying-pan. Supper was soon over, and as darkness came on we piled on more fuel, lighting up the group of ruddy faces that encircled the camp-fire. The Captain was particularly happy and jubilant over the successful termination of the exploits of the day. Bluebeech's face was radiant from the scorching effects of an August sun and innumerable mosquito bites. The halo that illuminated the Treasurer's face was produced by a like cause. The Pilot's face was like the orb, the greatest source of light, and the whole camp was illuminated by his genial rays; while Jim, the irrepressible, sat in the ruddy light of the camp-fire burnishing up his five-shooter and blandly smiling all the while.

[TO BE CONCLUDED NEXT WEEK.]

The Smaller British Racing Yachts.

WE are indebted to the *Field* for the following review of the smaller classes during the past season. It is particularly interesting because it gives details as to the types of the different yachts which were not published prior to or during the season, and failing which, the mere record of the races from week to week has told nothing to the American reader. The two smaller classes are of special interest in connection with the Seawanhaka C. Y. C. cup, though they are now of such sizes as will work in very badly in the case of a future challenge to the United States or Canada:

The shoals of yachts built to the new Y. R A. classes of 36, 30, 24 and 18ft. linear rating during the past season have shown excellent sport in the Solent, and the year will compare favorably with any of its predecessors. Exciting and crowded starts, incidents at gun-fire, and beam and beam matches have been innumerable, but speaking generally the season of 1896 will neither be remembered for the originality of design of its successful raters, nor for any improvement in their construction. When, at the close of the summer of 1895, the first test craft built under the linear rating rule sailed out of Cowes harbor, it soon became apparent from her performances with the crack raters of that year that an extensive field for development was still open to the fin bulb type under the altered conditions of measurement. First productions showed a tendency toward a more or less slight increase in displacement, a decided decrease in draft and a large increase in sail area; the body form of the new boats, save for deepening amidships and pinching in beam, remaining much the same as hitherto. These properties ,curiously enough, with but a single exception, have characterized designers' efforts in all subsequent additions to the principal class, while the 24ft. yachts have with few exceptions kept to the same groove.

Under the sail area rule it was rightly claimed for the fin-bulb type in the small classes that what was sacrificed in room between deck and keelson was amply atoned for in handiness, safety and comfort in a sea way; however, owing to the before mentioned departures or exaggerations these qualities have been absent in many of the more extreme of last season's boats. In the diminutive class, the 18 footers, the east coast unballasted yachts have again carried all before them, and the new Solent boats have made a decidedly disappointing display in company with their Thames rivals. This class, it may be noted, has been seen at its best in the east coast and Thames matches, where it has had to do duty for both half-rater and would-be one-rater owners, the increased cost of a 24ft linear rater over last year's class having in many instances prevented Thames Corinthians from building

The interest in one-design classes is not usually extensive, and yachtsmen often find this system of racing less perfect in practice than theory; although the oft-quoted adage of Annasona and Sleuth-ound is less likely to hold good in smaller vessels, few one-design classes are without their crack. The new Solent class have proved no exception, though they have usually kept very close company in their contests. Ten craft were built by Messrs. White Bros , of Southampton, keel yachts of a thoroughly wholesome and seaworthy type; indeed, in design and sail plan as comfortable little vessels as could be desired, their dimensions being l w.l, 25ft., over all measurement 33ft., beam 7ft 9in., draft 5ft., and 700ft. sail area, the lead keel weighing 2 tons 13cwt., and their linear rating working out about 28ft. The boats were cutter rigged and were raced without topsails; they performed best in hard winds and moreover steered to perfection on all points of sailing, this quality giving them an advantage over many cast off new class races for cruising purposes, which are often as wild as March hares when reaching or close reaching in a breeze.

The season for the 36ft. class opened in the Solent with three new boats, all from Mr. C. Sibbick's board, and built at the Albert yard: Heartsease for Mr. C. L. Orr-Ewing, M. P.; Silva for Mr. A. H. E. Wood, and Ermin to the order of Mr. G. A. Tonge. The first-named pair differed from the last year's 5-raters, being cutter-rigged, while Ermin and the top sawyer of a season ago, Norman, kept to the lug-sail, setting double headsails and short bowsprits. They were all plate and bulb craft, and averaged about 31ft. l.w.l., 9ft. 6in. beam, and 5ft. 9in. to 6ft. draft of water, carrying about 1,250ft. to 1,300ft. of canvas. Another new 36ft. yacht of the same type, a lugsail boat, was turned out at the Sibbick yard, but she began her career in the Clyde. Her owner, Mr. J. C. Connell, named his new craft Westra, after his 1-rater of last season, and she proved as successful as her famous namesake. Two additions came from the Gosport yard: Starlight for Mr. E. S. Revett, and later in the season Grafin for Lord Cowley, both from lines by Mr. Chas. Nicholson; they were high-sided, light displacement, fin-bulbed yachts, with exaggerated overhang and large sailspread. Mr. C. D. Rose found his Mediterranean boat Dusky Queen outclassed by the new vessels, so after some weeks of the season had elapsed he placed an order with Messrs. Summers & Payne for a 36-footer. Time was short for the designer to get the yacht ready for the remainder of the season's racing, or it would have been interesting to have seen a miniature Penitent from Mr. A. E Payne's board: however Emerald, as Mr Rose's craft was named though a fin-keeled cutter, was perhaps the prettiest of the Solent fleet, having the shapely run and tapering stern of Red Rover and Spray. The only Clyde contribution which visited southern waters was from Mr. W. Fife, Jr.'s, design for Mr. A. B Walker; she was known as the Sinner, but was subsequently rechristened Fern. The Fairlie lugger was also a fin-keeler. To Mr. C P. Clayton falls the distinction of being first to scrive the uncut board, a heavy displacement keel cutter, Edie, being built to his lines by Messrs. W. White & Sons, of Cowes Like Penitent in the 52ft. class, she was the sole representative with an ogee section, and thus having no opponent of similar type, it is difficult to form an opinion as to whether she was a capable opponent or the reverse. Her performances against the skimming dishes excited considerable interest, but on the wind she was not equal to the fin-keelers in a fair trial.

The Sibbick boat Westra entirely wiped out the four old 5-raters on the Clyde, including the last year's crack Almida, which was completely outclassed Almida did not make the show against Westra that Norman did when Mr. Connell brought his new yacht to Solent waters. Until the *début* of Fern on the Clyde Westra's victories were very hollow; the former, however, gained a great reputation as a light-weather performer by four successive wins against the Sibbick boat; so when the pair came South in August their meeting with Heartsease, Silva, Ermin, Emerald, Starlight, Norman and the whole host of Solent yachts was looked forward to with much interest. Heartsease was regarded as a crack boat when the Clyde luggers arrived, and they had some rare contests during the height of the season; in fresh breezes Westra made a better display than any of the fleet, and Emerald also went well, while in strong winds Capt. Orr-Ewing's Norman was probably her superior.

One of the finest matches of the year between those who sailed the race out was on the closing day of the Royal Victoria regatta, when Norman, Starlight, Heartsease, Silva, Edie, Westra and Fern had a set-to in a fresh wind, the cutters setting jib-headers over reefed mainsails. Fern led at the close of the first round, and when they rounded the Outer Spit the second time under half a minute separated the four yachts remaining in the match These had a dead beat to the Northeast Buoy, and Norman shook off Westra. Fern and Heartsease in fine style as they tacked up to the Gilkicker; however, abreast of Stokes Bay, Westra crept on to the old 5-rater, and a slip by the latter in tacking short of the mark almost gave Mr Connell's boat the match. The pair beat Fern by about 2m. and Heartsease by 3m., while Silva and Starlight made an indifferent show to windward, and Edie knocked herself out by making a tack into the tideway when doing fairly well.

The race was a useful instance of the respective qualities of the boats in a breeze and choppy sea—circumstances to which few of the 36ft. class of 1896 are suited

Heartsease's record of twenty-six first prizes in fifty starts, and Westra's of twenty-four firsts in thirty-four starts, are the best of the year Mr. Connell handled the latter with the same skill he pioneered his 1-rater last season, while Mr. C. L. Orr-Ewing, although comparatively a novice in helmsmanship, steered Heartsease on twenty-nine occasions, and took no less than twenty-seven prizes, a notable performance. Silva and Ermin had eight first prizes each, the former flying twenty and the latter twenty-five winning flags, and Norman carried off seven firsts and eleven other prizes.

The 30ft. class have had a remarkable success in the Solent, and their doings compare favorably with those of the 2 5 raters last year. North country designers have not had a chance to try their skill, but Messrs. Sibbick, Nicholson and Payne have all had a trial, the success of the first-named being most marked. Mr Sibbick has been fortunate in again turning out a boat for Mr. A. C Connell, an owner who makes no mistake about getting good work out of his charge, his new Lora beating even the record of last year's Lorette. The other yachts from the Albert yard were Tatters, for Mr. H. Welch Thornton, and Florence, for the Marchese di Serramezzana. Mr. A. E. Payne designed and built Valeria for the Earl of Albemarle. She was a narrower and deeper-bodied yacht than the Sibbick craft, which averaged about 26ft. l.w.l., 7ft. 6in. beam, and 4ft 6in. to 5ft. draft; but though a good boat in a breeze, Valeria was never very satisfactory She first came out with a large gaff mainsail and mast stepped right in her nose; subsequently her sail plan was altered, but her proper trim was not obtained until the tag end of the season, and it is likely even then the best was never got out of her. Memsahib, to the order of Mr S. L. Beale, was from the Gosport, and she was an average performer in moderate weather. The entire fleet of 30-footers were of the fin-bulb type, and with exception of Lord Albemarle's boat were lug-rigged; like the 36 footers, they showed prodigious speed in light airs, but for vessels of their cost owners are justified in expecting better performance in a breeze.

Corolla, purchased by Mrs. Schenley, Meneen, Zivolo and Gareth have been raced against the new boats, and the first named pair have made a good show. Corolla has done best of the bunch close-hauled in a hard wind, and Meneen, rigged as a cutter, has been almost equal to the cracks in her own weather. Gareth had alterations effected to suit her to the new rule, but was not up to her original form, although still as fast or faster than the new boats in a big jump. The light weather flyer of last season, Zivolo, was quite outclassed.

There was some interesting racing at Torbay, where the 36ft. and 30ft. classes were brought together in two matches exceeding 24 and not exceeding 42 rating. On the first day, in a moderate breeze, Westra was 12m. ahead of Valeria on a 14-mile course, the latter making about her best display of the season and finishing 1m. ahead of Lora, and nearly 2m. ahead of Tatters On the second day's racing there was a hard wind, the bigger boats having a single reef, and the 30-footers too hauled down. Over a 21 mile course Lora kept within 9m. of Westra, the Y. R. A. time being 13m 52s. between the classes. Norman, in this race, was giving the new boats a dressing, when she went the wrong course and was disqualified, and Valeria retired for the same reason when making another creditable show

Turning to the 24ft. class, which has decidedly suffered by the change of rule, the entries being less numerous than in the last few years of the 1-rating fleet, and the generality of the boats but poor traps compared with the best of the 1-raters. The older boats, for instance, with 18ft. 6in. l.w.l., 5ft. 6in draft, and say 3cwt. of lead on the bulb, and 320 odd feet of canvas, were better able to stand up to their work in a breeze than this year's type with 21ft. l.w.l., 2ft. 7in. to 3ft. draft, and with only a couple of hundredweight more lead on the bulb and 500ft. of canvas. The new craft, too, were often turned out with little regard to the fact that the buckling strains in such vessels are far more severe than in the 1-raters. From the Albert Yard, Cowes, Mr. Sibbick launched Tarta V. for Mr. A. Hewitt; Shrimp, Capt. J. Orr-Ewing; Adie, Mr. Jessop; Vision, Mr. G. H. Harrison and Mr. E. O. Cockburn; Shamrock, Mr. T. F. Perrott and Capt. McMahon; Will o'-the-Wisp, the Earl of Harrington; Bodagh, for Mr. Balfour Neill, and several others, all very light displacement boats Messrs. Camper & Nicholson built Menina from Mr. C Nicholson's design for the original owners of Corolla, Messrs. C. Newton Robinson, W Cook and G. Lake, and she was a far heavier boat than any of the Sibbick craft.

Mr. A E Payne, however, without doubt, turned out the best 24-footer of the year both in construction and design, Speedwell, for Miss Cox, being a very clever production. The little craft bore a strong resemblance to the Herreshoff Niagara, though her displacement was heavier in proportion than the hard weather 20s. Mr. Payne's other production, Grishelda, for Mr. H Walton, was not a success, but, like Valeria, the 30-footer, better things may be expected of her when properly trimmed. Bodagh, which proved about the best of the Sibbick lot, showed really phenomenal speed, reaching, on which point she was the fastest rater of the year; her contests with Speedwell, which was a far more weatherly and wholesome craft, and could lose Bodagh close handed, were most interesting, and resulted, though only numerically, in favor of Mr. Balfour Neill's boat, which beat Speedwell twenty-one times against sixteen victories to the latter.

Although essentially light-weather performers, the class did not err on the side of recklessness, and the farce at Ryde on July 16 when Miss Hughes sailed Miss Cox's Speedwell over the course for the prize in a fresh wind is best left without comment. It will be remembered that in 1894 Miss Sutton did the same thing with the little Herreshoff Morwena over the Ryde course without an opponent in what may now be called lady's weather, although there were more than half a score of entries on the card. Such tales would make bygone Corinthians turn in their graves

The 18ft. class have been at best but moderate performers, and the wiping out they again received from the Linton Hope unballasted boats in all weathers and on all points of sailing detracted somewhat from the interest in their doings. Mr. Blair Cochrane's last year's boat Jeanie was more than equal to the new Solent raters on a wind in anything like a breeze, while Mr. Brand's new Spruce, Atharah and Mirette, all from the Sibbick yard, were regarded as satisfactory craft.

Mr. Linton Hope altered the form of his dagger-plate to make his designs suitable to the new rule, and fairly surpassed himself with Kismet, and subsequently, too, went one better with Coronis. Apart from difference in type, these boats are more elegant in form than their Solent sisters, the tapering stern seen in last year's Lotus being carried out even finer in the new phantoms. Kismet, in open waters, won eighteen first prizes in nineteen starts, a record which has seldom, if ever, been equaled.

The changes which have taken place in the design and construction of small yachts during the last few years have been beneficial to yacht

architecture and to the sport itself, both in British and Continenta waters, and it is essential, if this improvement is to continue, that a sound and seaworthy type should be encouraged and maintained. The failure of the small classes in this respect to fulfil anticipations has fully justified the free expression of opinion and sea of correspondence which has surrounded the rating rule. No widespread interest, however, can be aroused in the questions attributed to Soakage, which has led to feverish excitement among small yacht owners.

A New Steam Yacht.

An order has just been placed with the Harlan & Hollingsworth Co., of Wilmington, Del., by G. W. Childs-Drexel for a sea-going steel steam yacht, from designs by A. S Chesebrough. She will be 170ft. 8in. over all, 150ft. 8in. l.w.l., 24ft. beam and 14ft. 9in. draft, with triple expansion engines and single screw. Mr. Drexel is now the owner of the steam yacht Alcedo.

Canoeing.

AMERICAN CANOE ASSOCIATION, 1896-97.

Commodore, John N. MacKendrick, Galt, Canada.
Sec'y-Treas., John R Blake, Galt, Canada.
Librarian, W. P. Stephens, Bayonne, N. J.

PURSERS.

Atlantic Division, H. W. Fleischman, 1611 N. 21st St., Phila., Pa.
Central Division, Laurence C. Woodworth, Gouverneur, N. Y.
Eastern Division, F. J. Burrage, West Newton, Mass.
Northern Division, Francis H. Mannee, Kingston, Canada.
Annual dues, $1; initiation fee, $1.

WESTERN CANOE ASSOCIATION, 1895-96.

Commodore, C. F. Pennewell, Detroit, Mich.
Vice-Commodore, Nat. H. Cook, Chicago, Ill.
Rear-Commodore, E. H. Holmes, Milwaukee, Wis.
Sec'y-Treas., W. D. Stearns, Detroit, Mich.
Executive Committee: R. M. Lamp, Madison, Wis.; C. J. Steadman, Cincinnati, O.; F. W. Dickens, Milwaukee, Wis.

THE AMERICAN CANOE ASSOCIATION.

The ending of the sixteenth year of the American Canoe Association, as marked by the annual meeting of the executive committee this month, shows a condition of affairs that is in nearly all respects highly satisfactory. This year the various officers have been up to time with their reports, all but one being presented to the meeting, so that the condition of the Association's finances was made plain to all present. We are personally indebted to several officers for their courtesy in forwarding advance copies of their reports, thus making it more easily possible to publish them with the general report of the meeting.

The most important report as showing the financial standing of the Association was the report of the board of governors, and this is most gratifying. The serious deficits that existed prior to 1892 have since that time been converted into a handsome balance of $1,237 in cash safely invested. The most satisfactory thing in connection with this balance is not the mere possession of so much cash in the general treasury as the assurance of wise and economical administrations in the future—a matter that will be appreciated by those older members who have witnessed so many useless and costly experiments in the past. The credit for this work of placing the Association on a sure and permanent financial basis is due principally to ex-Commodore Chas. V. Winne, the turn of the tide being marked by a balance of $1.58 turned over by him at the end of his administration in 1892, after paying the debt of over $500 which he had inherited from previous adminstrations. His efforts did not stop here, but it was largely through his influence that a new era of careful and economical management was inaugurated; and it is through the efforts of the men whom he called to his aid on the various committees in 1892 that the Association has been run at a small but substantial profit each year.

Save for one purpose, there is no reason why the Association should accumulate property, or why the total receipts of each year should not be at once expended in lessening the cost to the individual members. This purpose for which a surplus may properly be accumulated is the purchase and preparation in the near future of a permanent camp site. Apart from this it would in some ways be desirable to carry over small balances in such accounts as that of transportation to meet occasional contingencies or special expenses; but in the main it is neither necessary nor desirable that the Association should accumulate a large permanent surplus. The great benefit, however, of a certain surplus each year, apart from the question of the purchase and improvement of a permanent site, is that it offers to each su ceeding body of officers an incentive to careful and economical management, at least equal to that of their immediate predecessors. If each set of officers must assume a certain amount of debt with their office the chances are that the debt will be increased rather than diminished; but with an example of economical management to guide as well as to stimulate them, they are likely to do quite as well as their predecessors.

One important aid to the work of financial reform is the new board of governors, created from the hard necessities of several years of bad management as both an aid and a restraint upon the executive of the year. This board, a permanent body gathered from the oldest and most experienced members, with a four-year term for each, is naturally different in its composition from the annual executive and committees. The experience of three years indicates that the experiment is a success.

While the actual cash profit this year is small, the conditions are very different from those of the preceding year; then the mess shed and other appurtenances of the camp were provided by outside parties, the approach was entirely by land, no steamer being necessary, and considerable material was sold at the end of the meet. This year it was necessary to build a wharf, kitchen and a large floor for the mess tent, all of which were left for the present year; a launch service had to be maintained between Clayton and the camp, five miles, and nothing was sold at the end of the meet. In addition to all this the Association has for the first time in its existence provided all prizes without soliciting donations, in itself a very desirable change. Taking all things into consideration, the result is quite as good as could be expected.

The Association has at last reached a point where a dearly bought experience may be turned to profitable account in many details of its yearly business. First, as to the camp site; many will agree with us that the experience of the nine meets at different and widely distant points has been a failure in most respects, and in none more so than in the increase of membership. One strong reason for the departure from Grindstone in 1887, after three most successful meets there, was the expectation that a meet in a new locality would result in a material increase of members from that locality, men who under ordinary circumstances would not join the A. C. A. and attend a meet at one central but distant point. With this end in view the meet of 1887 was held at a beautiful spot on Lake Champlain, easily accessible for the members of the Eastern Division, and since then three more camps have been held in the same locality, at Willsboro and Bluff Point. At none of these meets, even that of 1891, has the Eastern Division been present in such numbers as to place it on a par with the others, and though the division shows a large membership to-day, it has always been noted for the slight interest which its members, outside of a small body, have taken in the general meets, and the very small attendance.

The meet of 1890 was held on salt water for the same reason, to interest the canoeists within the limits of the Atlantic Division, and this it did to a certain extent; but it is safe to say that both the Jessup's Neck and the Croton Point meets have cost the Association more members than they have gained. Both of these sites were unknown and purely experimental, and both were failures, the former in the matter of transportation and mess, owing to the isolated location; the latter in the matter of a very poor camp ground. The Jessup's Neck meet, though looked back to now with pleasure, after its discomforts are forgotten, marked the last attendance at camp of many valued members, and the Croton Point meet not only failed to draw out a good attendance from New York and the Passaic River, but did its share to deter men from making another trip to an entirely new camp ground.

The great difficulty in the choice of a new site each year is that entirely new arrangements for preparing the site, transporting and catering for the members must be made; and this, under most disadvantageous conditions, the officers having to deal with local men entirely unknown to them. The result has usually been that a very large sum has been wasted on the ground itself, the transportation arrangements have been not only costly but inadequate, and the mess has been a failure owing to the dishonesty or incapacity of the contracting caterer. A too frequent repetition of unpleasant experiences, an inordinate expense of money and time in reaching a poor camp ground, and a week or two of poor catering, has driven away many an old member who should still be seen at the meets; and, on the other hand, the change of location and the catering to local and Division interests have failed to bring in new members. The year book of 1897 shows a membership of 720, the highest number on the roll being 1,105—the number enrolled in six years. The highest number in the 1896 book is 2,900, the total membership being 852. The e figures show that, while the Association has taken in 1,800 members in nine years, it has gained about 130.

This great loss is due to two causes; in the first place, the apparently large gain in membership is caused by the recruiting through the efforts of the officers of a number of new members in the division where a meet is to be held, many of these members never attending the meet and many more attending but once. This enforced enlistment of men who really care nothing for canoeing or for the Association is of no permanent good, as few of them remain, and as a rule they even do harm while their membership continues. One of the curses of the meets has been the young fellow, or old one too, who cares nothing for canoeing or camping and owns no canoe, but joins the Association and attends a meet merely because the camp is near at hand and he has heard from his friends of the good times they have. It is this element in a large degree that is responsible for the noise and liquor in camp, and it has cost the Association double in that the disorder and riot have driven away forever some of the best and most esteemed of the old A. C. A. men. The successive year books show apparent large accessions of membership from the different divisions in turn, but the true facts of the case are also shown by the item "Dropped for non payment of dues," in 1895, 153. At best this sort of membership is worth to the Association not over $2 each, the initiation fee and one year's dues, and this is a poor return for the many objectionable features it presents.

Another cause for the decrease of membership is the defection of old members as the result of costly and unpleasant experiences in reaching the camp As men grow older they very naturally desire to camp in greater comfort than in the primitive days of the A. C. A., when a man's whole outfit was carried in his canoe, and they have found by experience that it is a very expensive performance, comparatively speaking, to ship the necessary duffle to and from camp, and while in camp they must often put up with serious inconveniences. Then too they have formed new ties and are not so free to float about the country in happy-go-lucky fashion; their families must be considered in the question of the yearly vacation. The result is that Mr Benedict perhaps goes so far as to unearth his old tent from the garret, look it over regretfully, make a mental review of the cost of his last attendance at a meet and of the poor mess he put up with, and decides that on the whole, while he would like to be with the boys again, it will be cheaper and but little more expensive to take his family to some recognized summer resort. This is all wrong; it is these old men that the Association needs more than it does new ones, and they should be made to understand that they can and must come to the meet. The best way to this end, as we have before maintained, is to confine the meets to one good central location for a term of years at least, not moving until compelled to by the advance of civilization or some similar cause. The arrangements for transportation, mess, etc., can thus be made with the same men each year, taking them out of the domain of experiment and giving to each member an assurance of cost and time necessary to attend the meet and the conveniences which will be provided there. In this way, and with the aid of the associations and ties that must grow up around any familiar camping ground, very much may be done to secure the continued attendance of the best members of the Association, old and young.

Now that Grindstone has been selected for another year the work of the camp site committee will be easy. In the very important detail of the mess, the buildings are already on the spot and the caterer of last year, Mr. McElveney, has offered to renew his contract and to clear up and improve the surroundings of the kitchen. The principal improvement needed on the camp grounds is in the location of the ladies' camp, and several means of accomplishing this have already been discussed. So far as the main camp is concerned very little work will be necessary, and the expenses next year should be very light.

The transportation arrangements this year were most satisfactory, members being carried between the camp and Clayton promptly, quickly, and at a low charge—25 cents per trip one way for the five miles. The Canadian members had independent transportation on the small local steamers, but these are not allowed to carry passengers between two American ports—the Port of Clayton and the Port of Grindstone Island. This necessity for a double service is a disadvantage in that, had the total attendance at the camp been confined to the A. C. A. steamer Pastime, the cost would have been the same and the receipts much greater; but under the existing revenue laws of both countries no different arrangement is possible. At the same time it has been demonstrated by this year's committee that a satisfactory launch service is possible at a small outlay to the Association, very much less than has so often been squandered in a service that was an utter failure. It is probable that the attendance next year from the States will be materially greater than this, thus increasing the receipts with the same outlay, and in any event there is no reason a somewhat higher fare should not be charged if it be decided best to make the launch service self-supporting. Given a suitable steamer at the dock to meet the incoming and outgoing trains, no reasonable objection can be made to a charge of 50 cents in place of 25 for prompt transportation to camp. The great trouble in the past has been that there was no A. C. A. boat, and members were compelled to hunt for and charter outside craft at a great loss of time and a cost of $5 to $10 each. With a continuance of the transportation arrangements in the same manner as this year there need be no further trouble on this score.

The prize question has reached what seems a final and satisfactory settlement. It is in every way desirable that the Association should buy and not beg its prizes, as a matter of justice to the officers and the regatta committee, if for no other reason; and this it is now able to do. The shields are handsome, appropriate and durable, far better than the silk flags, the handsomest of which soon soiled and decayed when hung up.

The racing rules now stand as they are for the coming year, no proposals for their amendment having been presented by or through the regatta committee; in fact, the committee made no mention of the rules in its report. This is to be regretted, though in accordance with custom it would be of material benefit to the Association if the retiring regatta committee, fresh from its active experience and observation, would present to the executive committee its opinions as to the actual operation of the rules and the necessity for changes. At no time have the rules been so perfect that no changes were possible, and even if it is not desirable to make any at present, that fact is worth recording. With such a careful overhauling of the rules each year by those most competent to do it, they might be put in very much better shape than they are now in. The only proposals for amendment were those recently published in the Forest and Stream, but not presented in the committee's report, and the proposal presented at the meeting. The former were very indefinite in their nature, and could only have been incorporated by a thorough rewording of the measurement rule, and they were not even discussed by the executive committee. The latter, not having been published two weeks in advance, could not be acted upon at the meeting, and its proposer was not present to speak for it, so that there is little likelihood of its being passed by a mail vote, the worst possible way ever devised to amend racing rules. The proposal is a radical one, and will bear much discussion, being nothing less than the abolition of the trophy paddling machine and the substitution of ordinary service canoes for the trophy paddling race. In its favor may be urged the patent fact that nine or ten years of the paddling machine has produced nothing that is in any way a benefit to canoeing and in some years the paddling trophy race has been a mere farce. The change is urged by some of the Northern Division members, the ones who have done the most to encourage and develop the paddling machine. We should like to see a thorough discussion of the matter now while it is fresh in mind, in order that if the change is to be made in the future all sides of the question may be thoroughly understood. As to the sailing rules, the result of the past season was very satisfactory as compared with previous years, and the prospects are good for the next season, so that matters may well be left as they stand in the absence of decided proposals for a change. It may be said that by dint of much careless amendment a general rewording of many of the rules has become necessary, but this is a matter of detail that is not of immediate consequence.

The most serious question before the Association to-day is that of its membership, which is, as the figures before quoted show, much less than it should be. To secure a membership which shall be satisfactory both in numbers and composition three things are necessary. First, the rapidly dying interest of the original members of the Association, including those who joined prior to 1889 or '90, must be reawakened to an extent which will induce them to keep closely in touch with the Association, to retain their membership, to treasure the opportunity for reunion which the annual meets afford, and to take a more or less direct part in the affairs of the Association, not necessarily on the active committees, where much work is required, but in an advisory capacity. We have found by sad experience that the number of these men at the meets and the executive committee meetings is less every year until but a corporal's guard can be relied on, and the exchange of information about absent friends brings out the fact that they are not only out of active canoeing, but practically out of the A. C. A. as well, even though still retaining their club membership. Among those who are fast losing a hold on the Association are such men as Oliver, Gibson, Vaux, Foster, Stanton, Brown, Mix, Seavey, Rathbun, Nat Smith, Ward and Nickerson, all hard workers for canoeing and the A. C. A. at one time. It is no longer possible for such men to take part in the races as racing is to-day, or to give valuable time to detail work in camp, but it should be that they retain a live interest in the Association, enough to bring them to the meet every year or so.

As to the present active membership, still represented at the meets, it is only to be expected that those of the old fellows who still attend the meets with reasonable frequency—Winne, Will Wackerhagen, Edwards, Brokaw, Whitlock, Robertson, Butler, Goddard, Parmele, and Gage—will before long succumb to the same influences that have separated their companions from this Association. Then, too, there is the main body of the present membership, younger members whose interest both in the meet and the races is still keen and active, but who may be expected to drop out after perhaps an average of six years' regular attendance.

Outside of the present membership it is absolutely necessary that the Association should take in new members and good members every year, training up men who will in turn do the work of the older ones, and who will take the same pride in the prosperity of the Association.

It must be admitted that for several years past the outlook has not been promising; many old members have practically withdrawn, the work imposed on those who remain has been severe and arduous, the accessions of membership have been but slow and have turned in few good workers, either in the

routine work of the officers and committees, or in the actual participation in the races.

The very best that can be said for the plan of catering to different local interests through a change of camp site each year is that it has failed to bring in the anticipated new members, and also to counteract the inevitable disintegrating tendencies of age, business, social and domestic ties, and super-refinement of racing that are cutting down the membership list on the upper end. Our own belief is that the case may be stated much more strongly, and that the many failures and disappointments incident to the hippodroming scheme are mainly responsible for the loss of many of the best members.

How to bring back the missing, to retain the present, and to recruit anew, is a very difficult question, but one on which the very life of the Association now depends. In our opinion the first and by far the most important step is through a reliable guarantee of a good camp site and mess, prompt and reliable transportation, and the attendance of a number of the old members. If every man who is in doubt whether to go again to the meet or to take his vacation in some other way could be made to understand that he could reach the camp easily and quickly by the advertised means, that the camp ground would not be a hot sand hill or a wet thicket, that he could obtain plain and good camp fare, and that he would be certain of meeting A, B, C and D, if not a dozen more of his old chums, the question would soon be decided in the right way. If, too, the same assurance can be placed before the new man, in place of awful tales of destitution and starvation at the hands of the caterer at Jessup's Neck, of pillage and robbery by hackmen, expressmen, boatmen and telegraph messengers in the same year, of the stranding and marooning caused by the wretched launch service of the first year at Willsboro, and of the stifling simoons of the Hudson that brought malaria to the broiling sandhills of Croton Point, another good man may be rescued from the tennis court, the golf links and the summer hotel piazza, and taught the way to the best of outdoor sports—camping and canoeing.

As a means to this end, of perfect camp arrangements, the permanent camp ground stands at the head. It not only lessens greatly the labors of the officers through the practical continuity of mess and transportation service in the same hands, but it is an absolute bar to the wild experiments in location and other details that a new board of officers is too often tempted to make, at the expense of the Association at large and of every individual member who attends the meet. The arguments we have advanced in the past against a permanent camp site are in themselves as strong as ever to-day, but they lose their weight when placed side by side with conditions then unforeseen, but which have since developed to a degree that has wrought serious injury to the meets and to the Association at large. The positive danger of degeneration into a picnic at a luxurious and fashionable camp ground, of the establishment of a "Ballast Island" for the American Canoe Association that shall rob it of all but the name of canoeing and camping, must now be considered side by side with other equally dangerous conditions that, while preserving the outdoor camp under canvas, are at the same time limiting the membership and attendance.

As far as the objectionable features of over civilization go, they may be avoided by the selection of an isolated location, distant from hotels and cottages, and at the same time accessible by such arrangements as can readily be made by the Association; and by stringent regulations prohibiting the erection of everything in the nature of a permanent building and compelling the use of tents alone for shelter. Those public structures which are annually built in a makeshift way at a very great expense, the wharf, kitchen, mess shed and store as well as the floors for headquarters, can then be built permanently and much better—of plain and simple design, as is suitable for such a purpose—and such grading, draining and other work as is necessary on almost every camp site may be done properly. To such a camp as this men could come with a positive certainty as to the time and cost of transportation, the nature of the climate and surroundings, the quality of the mess, and the number and character of the men they would meet. About such a camp, especially at Grindstone Island, would spring up associations and influences that would grow stronger instead of weaker as a man grew older, bringing him back each year to forget for the time the cares and responsibilities of life in the presence of old scenes and old friends. In such a home the Association might hope not only to retain all its present members, but to call back many of the old ones as they were made to understand that the A. C. A. meet of to-day was not so widely separated from that of long ago as has been too frequently and painfully apparent in recent years; and the growing reputation of such an ideal camp would call to the membership of the Association not only young men, but those of more mature age, and of such high standing as characterized its founders.

The executive committee meeting is, to a certain extent, a miniature of the meet itself, and, like the larger gathering, it this year showed but few of the old members. The business of the meeting was carried out with unusual dispatch, possibly because the members were invited to attend the football match in the afternoon. The Atlantic Division made a remarkable record by a complete representation, notwithstanding the distance from Philadelphia to Toronto, every member of the Division executive committee being present. The spirit shown by the vice-commodore and purser, both from Philadelphia, is most creditable to the Delaware River canoeists, and promises well for the success of the Division next year. In the Central Division one member, Mr. Morse, came all the way from Peoria, Ill., on purpose for the meeting, he being the most western representative of the Division and of the Association.

The Eastern Division made no representation whatever, which is to be regretted; no Division can afford to neglect entirly the business of the Association. It is not a little strange that, with its large membership and its long continued prominence in sailing, the Eastern Division takes small part in the executive work of the Association, and more than once has waived its turn for the commodore and meet. In the case of the annual meeting of the executive committee, the officers of each Division should make some concerted effort to have the Division represented by at least one member. Out of half a dozen Division officers there should be at least one who can attend the meeting, or if not a proxy may be sent. It has happened too often that the Northern Division has been entirely unrepresented at meetings in the States, as at New York, Boston or Albany; and that other Divisions have had no representatives at meetings in Canada. The annual meeting is in no sense a matter for the one Division in which the next meet will be held, but is strictly an Association matter; and the Association, as a whole, should participate through the means of a proper representation of every Division. It is, for instance, unfair to a Division that includes over one-third of the membership of the Association that its officers take no part whatever in the business of the Association, and that in a year in which it should be at the head.

One reason for the speedy dispatch of the year's business was that there was little to be done. The question of a camp site was practically settled at the meet last summer; there was but brief discussion of the matter of date, for the reasons that it was generally recognized that the meet last year was held a little later than is desirable, and also that this year the date of the full moon makes it easily possible to hold the meet a week earlier. The only discussion in this connection was over the matter of the Trunk Line certificates, which extend from three days before to three days after the advertised dates of any meeting. It was considered very desirable to make some arrangement by which those who desire to take more than two weeks' vacation may have their certificates extended prior to or after the dates of the meet. This may possibly be done by some concession on the part of the transportation companies.

In the matter of amendments to the constitution, racing rules, etc., there were practically no proposals before the meeting; the constitution has for some time worked very well in its present form, and no material improvement has been suggested. The racing rules are by no means as near perfect, but still there is just now no pressing call for their amendment, and no practical proposals to that end save the one relating to the paddling trophy, and which was not so presented as to be open for action

One great reason for the speedy expedition of the business, for which perhaps the football game was in a measure responsible, was the absence of wild and indefinite schemes, often old ones that have been tried and rejected, unknown to their proposers, and to the pointless and interminable debates on trivial points. It has been too often the custom at the meetings of the committee, both in camp and at the annual meeting, to waste valuable time in the general and indiscriminate discussion of more or less irrelevant projects and questions, the result being that by the time the more important matters are reached, such as the consideration of the amendment to the racing rules, the day is over, the dinner near at hand, and the real business of the meeting is rushed through in a most slipshod fashion. This year the meeting kept very closely to business during the whole of its single session

The Toronto C. C., once one of the most active in the Association, has for some years almost dropped its connection, a result due, as in the case of other Canadian clubs, largely to the location of so many meets far south of the border. On this occasion, however, it proved a most hospitable host to the Association; its house was given over to the members for the meeting, the visitors were escorted in the afternoon to see the great football match of the year, between the universities of Ottawa and Toronto, and in the evening the officers of the club entertained the visitors at dinner between 6 and 8 o'clock. A pleasing surprise at the dinner was the presence of Lieut.-Col. Cotton, the commodore of 1893, who was opportunely captured by chance as he was changing trains at the station and carried off to the dinner. He had just returned from a visit to England which kept him away from the last meet. After dinner all hands returned to the club house for a smoking concert, an amusement for which the T. C. C. is noted, which occupied the entire evening, Com. Wilkie acting as chairman. Among the old A. C. A. men present were Hugh Neilson, Judge Dartnell, E. B. Edwards and Robert Tyson. On Sunday the visitors were taken for a drive through the city and entertained until the evening trains, when they left for home. The annual meeting of the board of governors was held on Saturday evening.

The weather during the two days was most unpleasant. After several unusually warm days both in New York and Toronto, Friday was cold and bleak, and on Saturday snow fell in the latter city to the depth of 3in., making the streets wet and sloppy, with a dull November sky above. The experience of numerous meetings at about the same date, the third week in November, at New York, Boston, Toronto, Albany and other places, goes to show that it is later than desirable and likely to be marked by a disagreeable change of weather, the first real indication of winter. There is no reason why the meeting should not be held earlier, about the first week in November, when the chances are much in favor of warmer weather.

Rifle Range and Gallery.

Calumet Heights Rifle Scores.

Chicago, Ill., Nov. 21.—The following scores were made by members of the Calumet Heights Gun Club in a hazy atmosphere with a changeable wind blowing across the range:

Class A, 200yds., off-hand, standard target, open sights allowed 2 points:

Harlan	3444431545	—40	J O Hobbs	4444444444	—40
Paterson	0343334332	—28	C L Hobbs	3434444 45	—38
H B Black	4334444443—37+2—39		Davis	3234433333—31+2—33	

In the ladies' contest, Class B, 100yds., 22cal. rifle, Creedmoor target reduced, Miss Ervin was the only competitor, and accordingly she was awarded the ladies' medal on the good score of 41 points made as follows: 5444443445—41.

Patty.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Dec. 12.—Hackensack, N. J.—Amateur championship of New Jersey, under the auspices of the Bergen County Gun Club.

Dec. 22-23.—Elizabeth, N. J.—Ninth bi-monthly tournament of the Elizabeth Gun Club. First day, targets; second day, live birds.

1897.

Jan. 1.—Newark, N. J.—Sixteenth annual tournament and reception of the South Side Gun Club. W. R. Hobart, Sec'y.

Jan. 4-5.—Prescott, Arizona.—Fourth annual tournament of the Arizona State Sportsmen's Association, under the auspices of the Prescott Gun Club. Roy Hill, Sec'y.

Jan. 20-25.—San Antonio, Tex.—Second midwinter tournament, under the management of Oscar Guessaz $200 added.

Feb. 27-March 11.—Hot Springs, Ark.—The Arkansaw Traveler's first grand annual live bird tournament; $10,000 in purses and added moneys. Souvenir programmes ready Jan. 1. Address all communications to John J. Sumpter, Jr., Box 111, Hot Springs, Ark.

March 23-25.—New York City.—The Interstate Association's fifth annual Grand American Handicap at live birds.

April 15-17.—San Antonio, Tex.—Tournament of the San Antonio Gun Club. Open to amateurs only. Willard T. Simpson, Chairman Ex. Com.

May 11-14.—Oil City, Pa.—Seventh annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Oil City Gun Club. Targets and live birds. Black powder barred. Special event: 25 live birds per man, $25, $1,000 guaranteed. Send entries to H. C. Reeser, Sec'y, Oil City, Pa.

May 17-22.—Kansas City, Mo.—Annual tournament of the Missouri State Game and Fish Protective Association. Fred T. Durrant, Sec'y.

June (third week).—Cleveland, O.—Fourth annual tournament of the Chamberlin Cartridge and Target Company.

June 16-17.—Fargo, N. D.—Third annual tournament of the North Dakota Sportsmen's Association. Targets. W. W. Smith, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

Since mailing the drafts of the proposed new rules for target shooting, we have been informed that a revision of the A. S. A. rules has been under consideration for some time. We have also learned that the Sportsmen's Association (anent which association Elmer Shaner has something to say in this issue) contemplates promulgating a new set of trap-shooting rules. We are pleased to find that this matter has attracted so much attention, as it fully bears out all that we have claimed, viz., that no set of rules now in use are considered to be anything like perfect. Talking about rules; A gentleman who was, we believe, one of the original framers of the A. S. A. rules, said to us the other day in defense of those rules: "You must remember that there is always a point in any rules where they come to an end and where equity begins." We have always thought how much better it would be to minimize the labors of the referee, and leave as few points as possible to be decided by that official upon the "equity" plan. What may seem equitable to a referee and to the parties in whose favor he decides, very often looks just the opposite to the other parties in the case. Then again, no referee is infallible.

Charlie Grimm is after Carver; Carver wanted to challenge Roll for the Du Pont trophy, but found Winston's money ahead of him; and now Elliott tells us that Carver is after his scalp and also after the Kansas City *Star's* cup won by Elliott from Riley. Talking about Carver's challenge to Roll, why shouldn't Mr Buckley, Carver's backer, send on his money to Mr. E. S Rice, in Chicago, and challenge the winner of the Winston-Roll match? We believe Mr. Rice would be just as willing to honor the challenge as, here in the East, Roll's and Winston's challenges to the winners of the Claridge-Malone and the Claridge-Roll matches respectively were honored. As a matter of fact, whether champions or would-be champions, anybody who really *wants* a match can easily get it if he only looks in the right place and makes his needs known. It didn't take Parmelee and Elliott long to fix up their match; not a scrap of printer's ink was wasted in windy preliminaries. The simplicity of the affair was absolutely refreshing.

In connection with a Driver and Twister in our last issue that touched upon the proposed reorganization of the New Jersey State Sportsmen's Association, we are glad to be able to state that the project is not pigeonholed, but that steps are being quietly taken to put everything in good shape before a meeting is called to consider the reorganization. The meeting will be called, in all probability, at Taylor's Hotel, Jersey City. It does seem a shame that the State of New Jersey—a State that can muster among its shooters such men as Enoch Miller, Dutchy Smith, Ferd Van Dyke, Neaf Apgar, Tom Keller, Justus von Lengerke, Fred Quimby, Heber Breintnall, etc.—should be without a State organization to look after the interests of trap-shooters. The game laws of the State need some looking after too; the State Sportsmen's Association could do some good by taking a hand in that matter and helping to unravel some of the many twists and snarls the late Legislature is answerable for.

H. W. Brown writes us from Binghamton, N. Y., as follows: "The attendance at our weekly shoots has been so small of late that I did not think it worth while to send in the scores week by week. Game shooting has been taking the boys' attention. While Binghamton cannot show any very good target shots, we have among us some very good shots on game. Recently Mr. Kendall made quite a record, scoring ten woodcock and one partridge (ruffed grouse) straight in cover. Another member of the gun club scored nine woodcock without a miss, and at another time killed eleven partridges without a miss also. This seems to me like a pretty good record." We should say so too, and have taken off our hats to our friend Mr. Kendall, and to that other member of the gun club. If they can go out and get all those partridges and woodcock, small wonder they won't stop at home and try to break targets!

The secretary of the South Side Gun Club, of Newark, N. J., Mr. W. R Hobart, writes as follows: 'The South Side Gun Club, of Newark, N. J., will hold their usual New Year's Day reception and tournament on Jan. 1, 1897. This will be the South Side's sixteenth annual, and all shooters will be cordially welcomed. A nice lunch will be served at 12 o'clock, and no pains will be spared to make the affair a pleasant one. A feature of the meeting will be that no one will be compelled to enter the sweepstakes, which will be entirely optional, and tickets for birds will be issued which may redeemed at their face value or are good until used. The shooting will commence at 10 o'clock."

The shoot for the *Shooting and Fishing* trophy now held by the Boiling Springs Gun Club, of Rutherford, N. J., did not come off last Saturday afternoon according to agreement; the challengers, the Climax Gun Club's team, of Plainfield, N. J., arrived on the scene too late for any chance of the match being shot that afternoon. The days are very short now, and the light on the meadows is none of the best when 4 o'clock has struck. There is a likelihood of a contest for the trophy at the Boiling Springs grounds on New Year's Day, when it is hoped that the Endeavor Gun Club will enter a team and help the Climax to make it interesting for the Rutherford boys.

According to the Columbus, O., *State Journal* of Nov. 22, Heikes and Bartlett shot a race the previous day against Ed Rike and Scott McDonald, both members of the Buckeye Gun Club, of Dayton, O., and both neighbors of Heikes, whose home is at Dayton. The conditions of the race were: 100 targets per man, 50 of them at unknown angles and 25 pairs. The scores on the singles were: Heikes 49, Bartlett 47, Rike 47, McDonald 44. On doubles Heikes scored 42, Bartlett 35 Rike 33 and McDonald 24. The combined team totals were: Heikes 91, Bartlett 82, total 173; Rike 80, McDonald 68, total 148.

Taylor Cox, of Joplin, Mo., won the last medal shoot of the Joplin Gun Club with the score of 91 out of 100 at unknown angles. The other scores were: Sergeant 89, H. T. Leeman 86, C. M. Sumner 85. In sending us the scores, Sergeant adds: "Taylor Cox is now using a Winchester, and is breaking nearly all the targets" Is this a genuine piece of information from friend Seargeant, or is it merely a joking reminder of the time at the Pittsburg shoot when he (Sergeant) sold his Winchester to Elmer Shaner for a dollar after missing —, we won't say how many targets?

At the time of going to press we cannot give any definite idea as to the probable number of entries in Charlie Zwirlein's big live-bird race that commences to-morrow (Dec. 2) at Trenton, N. J. The weather is hardly pleasant for spectators to stand around in, but it is just the sort of weather that puts snap and life into the birds when they are handled with the care and judgment they always receive when Zwirlein has anything to do with them. A touch of frost in the air is not a bad thing for the shooters either, so we may look for some good scores on fast birds.

On our way to the shoot at Rutherford, N. J., on Saturday last, Nov. 28, we ran across Allen Willey, once a familiar figure in trap-shooting circles in this vicinity. Mr. Willey says that he has been sticking too close to business to do much shooting of late, but believes that he hasn t quite forgotten how to handle a gun. Looking after a theatrical company keeps him on the move all the time, but whenever he gets a chance he goes out and blows the oil out of his gun and incidentally tries to stop drivers and twisters from five traps.

Thanksgiving Day was a miserable one, from a weather point of view, in this vicinity. Not until very late in the day did a breeze spring up and start the fog that wrapped the city in a cloak of cloud, moving seawards. It is, however, hard to stop the boys shooting when they want to do so; bad weather won't do it, and as a result there were several holiday gatherings of a trap-shooting nature carried to a successful close on that day.

One of the prettiest miniature specimens of the gunsmith's art that we have ever handled was shown to us the other day by Justus von Lengerke at his store, 8 Murray street, this city. The gun was a double Francotte, 32-gauge, hammer, weight about 3lbs., and as well finished as one of the highest grade guns. Justus had had it made specially to order for his son, now eight years old, who, under his father's tuition, will be taught how to use it.

The Missouri State Game and Fish Protective Association claims the third week in May, 1897, as the week in which it will hold its annual tournament. As this Association always gets up a good and attractive programme, and as its annual shoots are invariably among the highest class of such affairs, it will be advisable for secretaries of gun clubs to note the above dates with a view to avoiding clashing with the same.

The Sportsmen's Association has taken a lease of an elegant suite of rooms on the tenth floor of the Williams Building, corner of Broadway and White street. The rooms, which face west, will be ready for occupation in about two weeks.

The *Recreation* cup, emblematic of the amateur championship of New Jersey, is now on view in the window of Schoverling, Daly & Gales. The first shoot for the cup is set for Dec. 12. The management of the Bergen County Gun Club, of Hackensack, under whose auspices the cup is to be shot for, should remember that the days are very short now and that, if the entries are at all numerous, it will be necessary to commence promptly on schedule time if the shoot is to be decided before darkness drops down on the Hackensack meadows. It would be a good idea, too, if the club put on one side all its black targets and trapped only the yellow-ringed ones on this occasion.

The grounds of the Climax Gun Club, of Plainfield, N. J., are located at Fanwood, N. J., and are about as hard grounds to shoot on as any we have ever come across. The background is very poor, and for expert rules it could not well be more difficult. Small wonder, then, that Wolstencroft and Dutchy Smith could not beat 77 out of 100 at expert rules on Nov. 27. Wolstencroft won by 77 to 74.

Roger Van Gilder in a letter dated Nov. 25 says: "I don't believe there will be in '97 many, if any, very large added money shoots. So why not all meet again at one place for, as Charlie Budd says, 'One more good old time before we go to the happy hunting grounds?'" That sentence sounds so exactly like one of Charlie's that we can almost hear Dago Chief's voice uttering the words!

In a letter to us regarding certain points in the proposed new rules for trap-shooting, E. D. Fulford, of Utica, N. Y., under date of Nov. 25 says: "I will see you at Zwirlein's shoot next week. I have been chasing ruffed grouse over the mountains of Oneida, Madison, Herkimer and Lewis counties, and I am going to the score at Zwirlein's in good form, fit and *well*."

To satisfy many inquiring friends, we take this opportunity of stating that the Interstate Association has not decided as yet where to hold the Grand American Handicap of 1897; it has not even considered the matter, but will doubtless appoint a committee at its annual meeting, Dec. 17, to visit certain places and report upon them.

The New Utrecht Gun Club, of Brooklyn, N. Y., will hold its live-bird shoots at the Dexter Park grounds until further notice. It will be remembered that its club house at Woodlawn, L. I., was demolished early this fall by lightning that set fire to the building, burning it to the ground.

"Roundmouth, the Indian," alias Frank S. Parmelee, of Omaha, Neb., chief of the famous Indian squad of 1896, has lowered Jim Elliott's colors in a 100-bird race by 92—91, Elliott losing his last bird. The match was shot at Kansas City, Mo., on Thanksgiving Day.

Capt. A. W. Money sailed last Wednesday, Nov. 25, for England on the American liner; he expects to be absent from this country about six or seven weeks. Local shooting circles, both live bird and targets, will miss him sadly.

What a short time a year is after all! In another six months we'll be talking of the late New York State shoot at Auburn! And perhaps also recalling some features of the crackerjacks' carnival at Knoxville! Eheu!

Jim Elliott is here once more. He has come straight from Omaha, Neb., where he met Frank Parmelee in a 100-live bird race, to take part in Zwirlein's big shoot at Trenton, N. J., this week.

In view of the extreme probability of a tournament at Knoxville, Tenn., next May, Tom Keller is hustling around and securing signatures to contracts for his freak show at that shoot.

The following is from Hot Springs, Ark.: "Look out for the souvenir programmes of our big live-bird shoot, Feb. 27-March 11. They'll be ready for distribution about Jan. 1."

Don't forget the dates of San Antonio's Midwinter tournament—Jan. 20-25. Our fixtures column always tells the tale as soon as dates are decided upon.

DEC. 1. EDWARD BANKS.

At Watson's Park.

CHICAGO, Ill., Nov. 19.—The following scores were made to-day at Watson's Park in a 50-bird race between Dr. Shaw and Dr. Carver:

Dr Shaw.....01•11011210121122111121202—20
11012111111112112211111112—24—44

Dr. Carver.....0222202112221121002122120—20
11221121112121222002212121—23—43

Nov. 24.—Dr. H. H. Frothingham and Henry Wright shot a 60-bird race here to-day, Dr. Frothingham making the great score of 49 out of 50, losing his 6th bird dead out of bounds. Scores:

Dr Frothingham.....21211•12111221222221112111—24
22121122221211101121221122—25—49

Wright.....1•22222202122221101121111—22
2•12222221222222•1222212—23—45

Nov. 26.—John Ruble and J. H. Amberg shot a match here to-day at 25 live birds for $25 a side, Ruble standing at 27yds., and allowed the use of one barrel only; Amberg to stand at 30yds., and to use both barrels if necessary. Score:

Amberg.....020112•02212222111122222•00—18
Ruble.....1111111•011111100101•1001—17

Four 5-bird races, $2 entrance, were shot with the following results:

RAVELRIGG.

Trap-Shooting Forty Years Ago.

ALGONA, Ia., Nov. 13.—*Editor Forest and Stream:* When I was a small boy I had a great love for the gun. We lived near Fresh Pond, in West Cambridge (now Arlington), N. J., near the old Whitman Hotel. Once or twice a year they had a trap shoot at this hotel, and, like many of the small boys in the neighborhood, I was always around when the shoot took place. The old-time shooters of that part of the country were sure to be there. Jerome Boals, who kept the celebrated Bowdin Hall, near the Revere House, in Boston; Capt. Bradshaw, Messrs. Setchel, Litchfield, Dr. Mason and a dozen others would be at their places when the trap was filled.

The shooters stood in a large circle, about 25 rods in diameter. Only one trap was pulled, and that was placed about 35yds. from one edge of the circle. The shooters stood about 30yds. apart, where stakes were set. The "score stake" was just inside of the circle. One shooter stood at the "score stake," and when all was ready called "Pull!" The puller opened the trap and the shooter at the score had the first chance. If he did not kill the bird, then any other shooter might shoot, and often 10 or 12 shots would be fired before the bird came down, and often it got away.

The referee was expected to know which shooter killed the bird, and many disputes took place, as oftentimes three or four men would claim the bird. It was considered a great honor to kill the most birds. There were no prizes whatever.

When I was sixteen years old my father came home one night and told me that they were going to have a pigeon shoot up at Dr. Mason's, near Pearce's ring (now Arlington Heights), and that Stephen Locke, Dr. Mason's brother-in-law, would like to have me there. I was delighted to think that I could be one of the shooters, and got out my little 16-gauge gun and cleaned it very carefully and had it in perfect order. At that time I was shooting a great many jacksnipe and woodcock. Mr. Locke often went with me; he was considered one of the best shots in America. My father was a fine shot, and was quite fond of my shooting in the field. I often killed fifteen or twenty jacksnipe without a miss. Both he and Mr. Locke were satisfied that if I could keep cool I could kill pigeons at the trap.

The morning of the shoot was pleasant and mild. My father took me in his carriage to the shooting grounds, and told me to be careful and not get excited, as he wished me to win or be equal to the best, as more than I knew of depended on my shooting that day. I fancy I must have looked quite young to the balance of the shooters, as most of them were from thirty to fifty years of age. A great many people had come to the grounds to see the shooting, and all were wondering who would do the best shooting. We drew for positions in the circle, and I drew the score. I went to my position and the balance of the shooters took their places. My friend Mr. Locke spoke to me and told me that I had a jacksnipe in front of me and that I wanted him. I felt somewhat excited, as I knew I was expected to kill my bird, and I was very anxious not to dissappoint my good old father. The judge told me that everything was ready; I called "Pull"; the trap opened, the gun went off, and I have a faint recollection of hearing the judge call "dead bird." I was so excited that I hardly knew whether I had a gun or not. The people yelled; they were with "the boy." After that I was less excited and killed my birds well. I killed 15 birds without a miss, being the best man. The old shooters all seemed pleased at "the boy's" shooting. George Tapley, of the Ocean House, Chelsea Beach, patted me on the back and said: "Well done, Jack." My father was well pleased, and when I went home that night he told me not to get the big head, as the shooters did not like that. If I did get it I have had it taken out of me many times since.

That was a shoot of forty years ago. It would look somewhat strange to see a shoot of that kind now, but I think I never enjoyed a shoot more; I look back at that day as one of the great days of my life. Shooters were just as enthusiastic then as now, and I think they will always be the same. I have shot in many States from the Atlantic to the Pacific, and have always found the same kind friends among the shooters. Always full of life and hope. JOHN G. SMITH.

Parmelee versus Elliott.

OMAHA, Neb., Nov. 26.—Below is the score of the race between Frank Parmelee and J. A. R. Elliott, which was shot on our grounds (Omaha Gun Club) to-day, resulting in a victory for Parmelee by the score of 92-91. The race was exciting from start to finish. Going to the score first, Elliott made a clean miss of his first bird, a right-quarterer; then making a run of 40, the best run of the race. Parmleee shot poorly in the first 25, losing 4 birds. In the second 25 both Parmelee and Elliott dropped 2 birds, all of them hot birds that carried the shot just far enough to get over the boundary. In the third series Parmelee only missed one bird, his 17th, which was a warm proposition flying in about every direction possible; though hit hard with the second barrel, it carried the shot to the fence. In retrieving this bird, Sam, the dog, made one of his grand stand plays, jumping fully 4ft. in the air and getting the bird as it was apparently about to leave the grounds. Elliott lost 2 birds in this series, both screamers. In the last 25 Parmelee, after missing his first bird, killed straight, while Elliott dropped 4, losing the race by 1 bird. At the 76th round it looked as though Parmelee could not possibly win, but Elliott's misses of easy birds turned the tide. At the 95th bird Elliott missed, tieing the score and causing wild excitement. Thus it stood until the last bird left the trap; Elliott, though hitting it hard with both barrels, lost it by a few inches—dead out of bounds.

The weather was something frightful. A keen wind blew from the north directly over the traps, and the air was full of sleet that stung like needles, making it decidedly unpleasant for both shooters and spectators. Elliott used his second barrel for safety almost invariably, and won much admiration by the quickness with which he used it. Parmelee, on the contrary, took chances several times when prudence seemed to dictate the use of the second barrel. After the main event the members of the club passed the balance of the day in shooting live birds.

Nov. 21:

Paterson (A).....0011111111111101111111100—20
Lamphere (A).....1111111111111111011101001—19
Norcom (B).....1110111110011101111111011—20
Wilde (C).....1000011110001101001011111—13
Chamberlain (C).....0111101000001000001100100— 9
K Marks (C).....0101001000011000001110000— 8
Harlan (C).....0110110001000011000000000— 7
H B Black (C).....0100000000000001000000000— 3

To-day three other events were shot as follows:

No. 1, 5 pairs, unknown traps and angles: Paterson 6, Norcom and Lamphere 5, Harlan 2.

No. 2, 10 targets, unknown traps and angles: Norcom 8, Lamphere 7, Paterson 6, Harlan 3.

No. 3, 15 singles, same conditions: Lamphere 12, Harlan 11.

PATTY.

Binghamton Gun Club.

BINGHAMTON, N. Y., Nov. 21.—For the past 10 weeks the members of the Binghamton Gun Club have been competing for a handsome gold medal. The conditions of the medal contest were: 50 targets per man, unknown angles, handicap allowance of extra targets, the first man to win it three times to become the owner of the medal. The system of handicaps proved to equalize the shooting ability of the contestants so well that it required 10 contests out of a possible 13 to decide the ownership of the medal. In to-day's shoot Brown and Hobbie tied on 45 each and Brown retired from the contest, allowing Hobbie the win and the medal, this being his third victory. Below are the scores of the 10 shoots:

	Sept. 12.	Sept. 19.	Sept. 26.	Oct. 3.	Oct. 10.	Oct. 17.	Oct. 24.	Oct. 31.	Nov. 14.	Nov. 21.
Kendall (50)	46	36	42	41	46	38	36	38	39	38
Hobbie (50)	42	47	41	45	40	38	40	41	46	45
Brown (50)	43	43	47	..	44	44	39	46	46	45
Stone (53)	..	29	39	43	39	..	37	..	40	34
Bromley (55)	44	46	41	39	37	43	44	47	45	43
Boss (53)	..	..	48	43	46	41	40	46	..	..

The fifth shoot was a tie between Kendall and Boss, the latter winning on the shoot-off. The ninth shoot resulted in a tie between Brown and Hobbie, Brown winning in the shoot-off with a score of 20 straight. In to-day's shoot Brown scored 96 out of 100 shot at.

On Nov. 7 our medal shoot was postponed on account of the sickness of one of the members. In its place we shot for a handsome trophy donated by Ladin & Rand. The conditions of the race were a 100-target handicap, allowance of extra targets based upon the averages made in the medal shoots up to that date. This arrangement made Brown the only scratch man; he won the trophy with 97 out of 100.

H. W. B.

A Card from the Winchester Arms Co.

NEW HAVEN, Conn., Nov 24.—*Editor Forest and Stream:* We desire to say that the press dispatches of this morning, in which it is stated that the Messrs. Hartley & Graham have acquired an ownership in the stock of the Winchester Repeating Arms Co., are entirely untrue and without foundation. The relations of the Winchester Company to Messrs. Hartley & Graham are friendly. Messrs. Hartley & Graham, or either of them, are not owners of the stock of the Winchester Company. WINCHESTER REPEATING ARMS CO.

Haverhill Gun Club.

HAVERHILL, Mass., Nov. 29.—Herewith I hand you the scores made on the grounds of the Haverhill Gun Club by some of the members and their guests on Thanksgiving Day. It was a first attempt on the part of most of the latter, and the scores naturally run low.

Our club is a young one, organized on the night of June 12 last, and but two or three of the members had ever shot at inanimates previous to our initial shoot on July 4. From a charter membership of twelve, the club has grown rapidly in numbers, and now has a roll of forty-eight members, with a prospect of an increase another season.

Besides giving two tournaments the club has held regular Saturday afternoon practice shoots and all-day shoots on holidays with a fairly good attendance. The improvement in shooting on the part of some of the members is very noticeable. Grounds were secured within a mile of the City Hall, having a car service of fifteen minutes in the afternoon and every half hour forenoons, which makes them very convenient to all. A substantial club house, 25×14, was erected, and a pit and screen for five traps put in immediately after organizing. Owing to the lay of the grounds we were obliged to face our traps a little to the west of south, but a sky background was thus secured for all but No. 2 trap, a few trees to the left interfering somewhat with a clear view of the target from that trap. Bluerock expert traps are used and pulled with a Walls trap pull from the porch of the house, and targets are thrown at all of our practice shoots at from 50 to 55yds., although at the commencement we made the mistake of sending them much faster, which was rather discouraging to beginners.

Early in the month of August the club made application for membership in the Massachusetts State Shooting Association, and a tournament of that association was held on our grounds during the present month.

At a regular meeting of the club, held on Friday evening, Aug. 14, it was voted to offer a cash bonus of $10 for each and every conviction of any violation of the game laws of Massachusetts effected by the deputy wardens, and to petition at once for the appointment of four new deputy wardens for this vicinity. The result has not been up to our expectations, I regret to say. We were more than anxious to dispense a few "tenners" in so good a cause, but have not as yet had that opportunity; but plans for another season are already up for discussion among our members, and we hope to be able to show to all violators of our game laws that theirs is a risky business in this part of the State.

It would be of great value to us—and I presume also to other young clubs—if secretaries of some of the older clubs would give us through the columns of your valuable paper the result of their experience in devising methods to increase the interest in trap-shooting among the members, so as to secure a larger and more regular attendance at the practice shoots of the club. Let us hear from you, gentlemen, and I am sure the editor will gladly give space to all you may see fit to write on the subject.

Scores at to-day's shoot were as below:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22

Events 1, 2, 3, 4, 5, 14, 15, 17, 21, 22, 23, 26 and 27 were at regular angles; events 6, 7, 8, 9, 10, 12, 13, 16, 24, 25, 28, 29, 30 and 32 at unknown angles; event 12, reversed order; events 18, 19 and 20 were "snipe shoots," known angles, unknown traps; event 31 at 5 pairs of doubles. The last event (No. 32) was shot after it had become so dark that it was almost impossible to see a bird. GEO. F. STEVENS, Sec'y.

Lockport Gun Club.

LOCKPORT, N. Y., Nov. 25.—Below are the scores of the shoot held here to-day. This was the first annual tournament of the Lockport Gun Club. Our effort was successful, the shoot being well attended notwithstanding the rainy weather. The best shooting was done by Sim Glover, the Rochester expert. Buffalo shooters were out in force and gave a good account of themselves. The Rose system for dividing purses was used and gave entire satisfaction. Scores:

THANKSGIVING DAY AT DEXTER PARK.

Nov. 26.—The main event at the Dexter Park grounds to-day was a match between C. Steffens, the crack shot of the Jeannette Jagd Club, an organization that shoots live birds on the Guttenburg race track, and G. E. Loeble, a member of the Emerald Gun Club of New York. The conditions were 50 live birds per man, $25 a side, loser to pay for the birds, Steffens standing at 30yds. and Loeble at 28yds. Chris Meyer looked after Steffens and C. W. Dudley acted in a like capacity for Loeble. Steffens shot a 7lb. 14oz. Parker gun, with 31grs. of Walsrode, loaded by V. L. & D. in an imported Walsrode shell; Loeble shot a Greener gun that weighed 7¾lbs., with 45grs. of Schultze.

The match birds were expected to be a specially selected lot, and were provided by Cord. Busch, of New Jersey. As a matter of fact, the birds trapped in the sweepstakes shot both before and after the match were superior in quality to those trapped during the match. The day was of course all against good birds, the air being damp and perfectly still. Steffens beat his man with ease, winning by 4 birds, with 45 to 41. Score of the match, showing trap, flight of the bird and result of each shot, is given below:

CRESCENT ATHLETIC CLUB, OF BROOKLYN.

Nov. 26.—The members of the Crescent Athletic Club did some shooting this afternoon at the club's grounds, Bay Ridge, L. I. The chief event decided was a 25-target handicap race, won by Charles Sykes, the only scratch man, with a score of 20 out of 25. The scores were:

C Sykes (0)	11101110001111111111101111	—20
D G Geddes (1)	10101110110110001111111111	—19

FALCON GUN CLUB, OF BROOKLYN.

Nov. 27.—Six members of the Falcon Gun Club, of Brooklyn, took part in the club's regular monthly live-bird shoot, held at Dexter Park this afternoon. The club event is shot under what are known in this club as Falcon G. C. rules, which provide that 7 live birds shall be shot at by each man from H and T traps, and that a kill with the first barrel shall count one point, a kill with the second barrel half a point, the bird being on the wing when shot at with either barrel. Under these rules John Vagts was the winner with 7 straight one-barrel kills. Chris Meyer and John Bohling both scored all their birds, but each had to use his second barrel on one bird. In a team race shot after the club shoot, Chris Meyer and John Bohling scored 5 birds each against J. N. Meyer with 4 and John Moller with 3, the general totals being 10 to 7. Scores in the club event were as below:

J Vagts (25)	1111111—7	J N Meyer (27)	0111111—6
C M Meyer (27)	1121111—7	J Moller (25)	1101111—6
J Bohling (25)	2111111—7	H von Staden (25)	2002021—4

NEW UTRECHT GUN CLUB.

Nov. 28.—The New Utrecht Gun Club, of Brooklyn, held its first shoot at Dexter Park this afternoon. A poor attendance was the natural result of the extremely wretched weather. In the club shoot at 10 live birds Chris Meyer won in class A with 10 straight, and J. Gaughen won in class B with a similar total. In the handicap race for the Laflin & Rand W-A trophy J. N. Meyer was the winner with 10 out of 11, Gaughen having tied with him with 9 out of 10 and then missing his extra bird. Scores:

	Club Shoot.	W-A Trophy.
C M Meyer (A, 30)	2112221122—10	(A, 29)....00
C Furgueson, Jr (A, 30)	2122202222— 9	(AA, 30)..222100
J Gaughen (B, 28)	1222222221—10	(B, 29)....21222221100— 9
J N Meyer (B, 30)	1122012211— 9	(B, 29)....12222022222—10
Conny Furgueson (B, 27)	2222•22222— 9	(B, 28)....222022222

The following sweeps were also shot:

No. 1, 5 birds: C. Furgueson, Jr. (30) 5, Conny Furgueson (27) 4, C. M. Meyer (30) and J. N. Meyer (28) 3.

No. 2, same conditions: Conny Furgueson 5, C. Furgueson, Jr., and J. N. Meyer 4, C. M. Meyer 2.

No. 3, same again: J. N. Meyer 5, C. M. Meyer and C. Furgueson, Jr., 4, Conny Furgueson 2.

Chicago Trap.

CHICAGO, Ill., Nov. 28.—The annual meeting of the Cook County League will be held the evening of Monday, Dec. 7, at the Sherman House, this city.

A directors' meeting of the Cook County League, to determine the long-delayed awarding of the season prizes, will be held Monday evening, Nov. 30.

After a close finish with his friend Lamphere, Mr. A. C. Patterson wins the A Class season medal of the Calumet Heights Club.

The Thanksgiving shoot of the Calumet Heights Club was held in the most inclement of weather, yet the club shot 165 live birds and threw 1,800 targets, besides holding some interesting rifle contests, as appears elsewhere. The club is one of the most active of the city, and is as renowned for its social good times as for its faithfulness at the traps.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

In New Jersey.

ENDEAVOR GUN CLUB.

Nov. 26.—The Endeavor Gun Club held an all-day shoot to-day at its grounds, Marion, N. J. The day was stormy and dark, consequently the shooting was very hard; still some good scores were made. The attendance was light, owing to the bad weather, open season on game and family ties, but those present had an enjoyable time. Fourteen events at unknown angles were shot, the scores made being as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14
Targets:	15	15	25	15	15	25	10	10	25	15	15	25	10	15

A. R. STRADER, Acting Sec'y.

FORESTER GUN CLUB OF NEWARK.

Nov. 26.—The Forester Gun Club, of Newark, had a fairly good shoot to-day in spite of the unfavorable weather. The most interesting contest was that which decided the ownership of a turkey and some chickens. John Fleming took the turkey, George Backus two of the chickens, while Mr. Isaac Terrill took care of the other chicken.

This club shoots the second Saturday in each month. Visiting shooters are always welcome.

Scores in to-day's events were:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18

C. O. GARDNER, Sec'y.

JEANNETTE JAGD CLUB.

Nov. 27.—Henry Winters was the winner of the Class A badge at the regular monthly shoot of the Jeannette Jagd Club, held at Guttenburg race track; he did not secure the trophy without a struggle, as C. N. Bruny and G. E. Loeble tied him for it with 9 out of 10. On the shoot off, miss-and-out, Loeble dropped out in the third round, but Bruny did not lose a bird until the eleventh round; Winters killing 11 straight won the badge. Captain Ehlen won the Class B badge with 9 out of 10. Scores were:

Class A—28yds.

Henry Winters	1022112221—9	William Brinkerhoff	1100220111—7
George E Loeble	2222212220—9	Charles Offerman	0010211110—6
C N Bruny	1221021121—9	Charles Steffens	1111001010—6
Herman Otten	1222222100—8		

Class B—25yds.

Captain Ehlen	1222222110—9	Frank Karten	0110100111—6
John Hainhorst	0111201110—7	Robert Packard	2100021022—6
Charles Bohling	2211110200—7	Richard Owens	0210120010—5
Nick Crusius, Jr	1102100120—6	Fred Tietjen	0201001110—5
Henry Gerdes	2011002201—6		

A team race at 5 birds per man resulted in a win for Steffens's team by a single bird, as below:

Steffens's team: Bruny 5, Greiff 5, Brinkerhoff 5, Winters 4, Packard 3, Steffens 4, Bohling 4, Gerdes 2—33.

Otten's team: Otten 5, Offerman 5, Lott 5, Hainhorst 4, Karten 4, Loeble 4, Ehlen 3, Crusius 2—32.

BOILING SPRINGS GUN CLUB.

Nov. 28.—To-day was the date set for the contest for the *Shooting and Fishing* trophy between the challengers (Climax Gun Club, of Plainfield) and the holders (Boiling Springs Gun Club, of Rutherford). The day was a miserable one for target shooting, although the absence of wind almost made up for the poor light over the Rutherford meadows. There was no contest for the trophy after all, as through some misunderstanding the Climax team did not put in an appearance until shortly before 3 P. M., an hour far too late to shoot a team race at this time of the year, particularly when the race has to be shot under the conditions governing the trophy above mentioned, which are as follows: 5-men teams, 50 targets per man, 30 to be shot at expert rules, one man up, and 20 to be shot in 10 pairs; a total of 500 targets at the slowest styles of shooting. So late was it when the balance of the Climax team arrived that Ferd Van Dyke, who was to have shot with the Climax, had actually packed up his gun, shot away his last shell and was on the point of leaving the grounds for the 3 o'clock train. Gus Greiff, the captain of the Boiling Springs team, seeing that there was not enough time to shoot off the match before it got too dark to see, refused to start the match at all. As a matter of fact, it was too dark to see targets properly at 4 o'clock, and the rain at that hour was pouring down for keeps.

The result of this failure to come together will probably not be without benefit, as in all likelihood there will be a race for the trophy on New Year's Day, in which it is hoped that the Endeavor Gun Club may join, and thus make a good day's sport on the holiday mentioned, besides helping to make the contest for the trophy an enjoyable one.

Instead, therefore, of the match, several small sweeps were shot at all styles of shooting. In the table given below all events were at unknown angles. It will be noticed that Ferd. Van Dyke's handling of a rifle has not affected his work on targets. Scores.

Events:	1	2	3	4	5	6	7	8	9	10	11			
Targets:	15	10	10	15	10	25	25	15	10	25	25	Shot at.	Broke.	Av.
F Van Dyke	15	..	10	..	9	24	25	13	..	..	..	100	96	96
Edwards	..	..	..	15	9	21	24	15	10	23	25	150	142	94.6
J A Paul	..	8	..	10	10	23	22	15	8	..	..	110	96	87.2
W H Huck	..	..	..	..	8	22	..	..	9	..	..	45	39	86.6

C F Lonone	14	10	10	14	7	15	21	8	..	..	..	125	99	79.2
Platt Adams	..	..	..	13	8	18	21	13	9	16	..	125	98	78.4
F Hyde	..	..	..	..	9	18	19	12	9	18	..	110	85	77.2
A A Hegeman	..	..	..	..	..	18	16	8	..	..	..	60	42	70

In addition to the above shooters Greiff scored 9 in No. 5 and 13 in No. 8. No. 9 had six other entries besides those shown in the above table: R. Manning 9, K. Frank and A. L. Ivins 8, T. Brantingham 7, E. Collins and B. James 6.

Three events at expert rules, one man up, were shot during the afternoon, Platt Adams being the only one to score 10 straight. An event at 5 pairs was also decided, the scores being given below in detail:

	No. 1.	No. 2.	No. 3.	Five Pairs.
Edwards	1111011011—8	1100111111—8	1110111001— 7	11 11 10 01 11—8

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

Heavy Scoring at Pittsburg.

PITTSBURG, Pa., Nov. 18.—There was some heavy scoring to-day on the Davis Island grounds of the Herron Hill Gun Club. All the local cracks put up big totals, while D. A. Upson, a visitor from Cleveland, made his record 43 out of 45 shot at. The King brothers, Messner, Born, etc., all figured in the results of the three events shot at, Will King continuing his good work at the recent shoots by scoring 41 out of 45, and Alex King equaling Upson's score. Bessemer was the only one to make 25 straight in the main event, and scored 9 out of 10 in No. 2; he, however, dropped his first two birds in the third event and spoiled his chances of making a tie with Will King.

A curious feature of the 25-bird race was the ill luck that made itself evident in the thirteenth (the unlucky number) round; in this round seven of the eleven competitors lost their birds. The conditions of the event were 25 live birds per man, $20 entrance, birds included, handicap rise. Bessemer's straight paid him $60.50, King and Born dividing a fraction over $45. Messner, Alex King and Upson tied for third money, $30.25, and agreed to shoot off the tie in the next event. In this they tied again, each man going straight, and accordingly divided. Jacques, with 20 birds to his credit, took fourth money, $15. Scores in this event, and in the one at 10 birds, $10 entrance, were as follows:

	No. 1.	No. 2.
Bessemer (29)	0222222222222222222222222—25	2222022222—9
W S King (30)	3221121122221212012222212—24	2221111122—10
Born (28)	2212222212210112122222222—24	2122221122—10
A H King (30)	2222222222220022222222222—23	2222222222—10
J G Messner (30)	2222022222220222222222222—23	2222222222—10
D A Upson (30)	2222220222222222222202222—23	2222222222—10

McWhorter (29)	.....	1121222012—9
Cleveland (28)	.....	2011222200—7

A miss-and-out, $2 entrance, re-entry in first round, had 11 entries. Darkness put an end to the event, with 6 men still a tie at the end of the 10th round. Bessemer missed his first bird, re-entered and missed again. Scores:

W. S. King, A. H. King, Upson, Anson, Jacques and McPherson 10, McWhorter 9, J. F. B. and Strong 2, Cleveland 1, Bessemer 0.

The Sportsmen's Association.

PITTSBURG, Pa., Nov. 24.—*Editor Forest and Stream:* Are the trap-shooters of America conversant with the aims and purposes of the Sportsmen's Association? Do they fully realize the many advantages to be derived by becoming associate members thereof? Acting on the policy that you can never say too much of a good thing, in season or out of season, I feel that the present time is most appropriate for calling the attention of trap-shooters to the movement inaugurated for the betterment and advancement of their interests.

The movement, by the way, is not a local one. It is general, and, aiming as it does to carefully guard and protect its members throughout the United States and Canada, it unquestionably appeals to one and all. A circular letter explanatory of the aims and purposes of the Association has been sent to trap-shooters far and near. A few moments' consideration of the aims and purposes will convince every trap-shooter of the great good that must needs follow the execution and carrying out of the policy upon which the Association stands committed for. To my mind it is scarcely necessary to say here that the membership fee of $2 per year is very low. Without any privileges save that of admission to the annual exposition of the Association in New York city the fee is most reasonable, but when we consider how the Association works for the sportsman's interests in the matter of railroad transportation, hotel rates and accommodations; the inauguration of an equitable system of classification; the fair and clean conduct of all trap-shooting events; and many other matters that to the trap-shooter's mind need so much attention and consideration, the amount exacted for membership is a mere nothing. Moreover, the Association strikes the proper keynote, and the loftiest one, when it sets out to have a new and thorough code of rules arranged which it hopes will be made general at all trap-shooting events in the United States. Candidly, I believe that every one of the aims of the Sportsmen's Association will be carried out, and at no distant date, provided the shooters themselves come to the front and lend their aid and their influence in attaining a condition of affairs that will pay them manifold for their labors. I would suggest that all trap-shooters make it a point to carefully scrutinize the plans of the Association. J. A. H. Dressel, secretary-treasurer, P. O. Box 2325, New York, will send a pamphlet containing detailed information to any one asking for same.

ELMER E. SHANER.

Answers to Correspondents.

No notice taken of anonymous communications

W. D. G., Boyce, Va.—Please let me know how and when to plant wild rice. Ans. The sooner it is planted after it is harvested in the fall the better. After the seed has been gathered for some weeks the enamel on the outside of the kernel seems to crack, and this accounts for failure in spring planting. It should be planted on a mud bottom, where there is little, if any, current, and if possible where there is no other vegetation. As it grows only in the water, it should not be planted on ground that goes dry in midsummer. It will grow in water from a few inches to 4ft. in depth, but does best in shallow water. Before sowing soak the seed for an hour or so, in order that it will sink at once. It is better to sow thickly than to scatter a small amount of seed over a large space.

C. F. McQ., Amsterdam, N. Y.—My English setter dog, ten years old, has the following symptoms: He first will commence to walk around the room. His hindlegs give out and he will fall down, get up, fall again, crawl on his belly and breathe hard, and his mouth goes as if he was chewing something. His eyesight seems to leave him. He does not froth at the mouth any, but loses all control of himself. They last about twenty minutes at the longest; then he will go to sleep and sleep for four hours. He eats well and all right. When these spells come on he will have two and three a day. He makes a good deal of water and stays in the house most of the time. I have given wood charcoal, broi of potash, castor oil, castor pill. Ans. Treat for worms. Give ten grains of bromide of soda and forty drops of fluid extract of cannabis indica twice a day. See that ears are healthy and clean.

PUBLISHERS' DEPARTMENT.

HAVING demonstrated by the year's business just closed that there is a regular and increasing demand for metal boats, and feeling justified therefore in going to the expense of greatly increasing our machinery and facilities for making boats, we are enabled to make prices that will place our metal "Get There Duck Boats" within the financial reach of the sportsmen of the country, and have reduced the price of the boat from $30 to $20. We have in every way improved the quality of the boat, and the sportsmen who have used it are universal in its praise, claiming it is the finest boat that has ever been placed on the market. We have received testimonials from the sportsmen using it, which we will be glad to forward to intending purchasers together with our catalogue.—*Adv.*

Travel up to Date.

THE New York Central offers unequal advantages for through travel between the East and West. It is the only Trunk Line entering the city of New York; its Grand Central station is in the very center of the metropolis, in the midst of the hotel, residence and theater district; it is the only line protected the entire length by block signals; it has the fastest trains in the world; the finest equipment; scenery including the Hudson River, Mohawk Valley and Niagara Falls.—*Adv.*

The Theory of Success.

THE New York Central management evidently proceeds on the theory that the more care there is taken of a traveler, the more he will travel—witness its "Limited" trains, block signals, free attendants, and the comfort and luxury surrounding one from beginning to end on "America's Greatest Railroad."—*Adv.*

Map of the United States.

A LARGE, handsome map of the United States, mounted and suitable for office or home use, is issued by the Burlington Route. Copies will be mailed to any address on receipt of 15 cents in postage by P. S. Eustis, Gen'l Pass. Agent, C., B. & Q. R. R., Chicago, Ill.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, DECEMBER 12, 1896.

VOL. XLVII.—No. 24. No. 346 BROADWAY, NEW YORK.

For Prospectus and Advertising Rates see Page iii.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

AUDUBON BIRD PLATES.

The reproductions are to me most satisfactory; they lack color, of course, but in every other respect are the best we have ever seen, and I think I may say that those of the Audubon family still remaining are much gratified with the first of the series. M. R. AUDUBON.

THE FOREST AND STREAM'S reproductions of some of Audubon's famous bird portraits in half-tone from the rare first edition are as follows, with dates of those already printed: That of the Willow Ptarmagan will be given in our next issue, Dec. 19.

BLACK DUCK, Sept. 26, 1896.
PRAIRIE CHICKEN, Oct. 24.
CANVASBACK DUCK, Nov. 21.
WILLOW PTARMIGAN, Dec. 19 (next week).
SHOVELLER DUCK.
REDHEAD DUCK.
AMERICAN WHITE-FRONTED GOOSE.
PURPLE SANDPIPER.
AMERICAN GOLDEN PLOVER.

WANE OF THE EUROPEAN BISON.

IN the New World, as in the Old, the bison has become practically extinct. But a few years ago there were millions of what we call buffalo, now none are left.

The European and the American bisons are closely allied and are the sole existing representatives of their kind. The European form once existed over a large area of forest-covered Europe, and the American over more than two-thirds of temperate North America. In Europe the only living wild specimens are found in the Caucasian Province of Kuban, though there are vague reports of the existence of some few individuals in Roumania and Wallachia. In America there are a few bison in Colorado, a few in the Yellowstone Park, and a few in the Peace River country. Besides these, the only living American bison are found in captivity, and these domesticated herds probably number not very far from 400 individuals.

In the Old World there has been for many years a herd of European bison preserved in the imperial forests of Bielowitza, in Lithuania, Russia. And concerning this herd a paper written by Dr. Eugen Büchner has recently been published in the Memoirs of the Imperial Academy of Sciences of St. Petersburgh. Dr. Büchner announces that his purpose is first to make a critical historical study of this herd, and then to find out what light this history may throw on the general subject of the extinction of the larger mammalia.

The early history of the Bielowitza herd is obscure, but since the year 1832 an official count has been made annually, and this count, while not an exact one, is sufficiently close to throw much light on the condition of the herd during the last sixty years.

In 1833 these bison numbered 768, and from this time on there was a gradual increase, until in the year 1854 the herd numbered 1,824 individuals. In 1855 the number was the same, but the following year it dropped to 1,771, and in 1857 rose again to 1,898. From this time on there was a gradual but irregular decline to 528 in 1872. From 1873 to 1892 the table of numbers is subdivided. One portion of the herd is in the Bielowitza forest, a smaller portion in the neighboring forest of Swisslotsch, and a third, still smaller, in the zoölogical gardens at Bielowitza. The total of these sections of the herd numbered 528 in 1873, but by 1880 had increased to 600. In 1883 it fell to 592, and in 1884 there was a loss of more than 200, the total reaching only 384. For the next three years there was a slight increase, but in 1889 there was another drop to 380, and between that date and 1892 an increase to 491.

These figures having been given, the question will naturally be asked, why is it that a herd so carefully protected as this one has been should show such a marked decrease? None of the ordinary dangers to which wild animals are exposed can affect these. They are protected from poachers, are rarely hunted, are seldom drawn upon to supply zoölogical gardens, are not known to be especially subject to any disease, and have a great range where there is no likelihood of the food supply running short. Besides this they are measurably protected from the attacks of natural enemies. All these dangers put together ought not to cause the death each year of a number sufficient to wipe out the annual increase. Since 1802 the killing of bison except by special permission has been prohibited in the forest of Bielowitza, and the records seem to show that between 1832 and 1860 only nineteen were killed. In 1860, however, an imperial hunt was organized in the forest, when twenty-eight individuals were killed. This killing seems also to have been followed by a serious diminution in the number of the herd, the count dropping in the next year from 1,575 to 1,447, a loss of 128 head. A portion of this loss may be due to the death of wounded animals, but this would hardly account for the whole loss. From time to time specimens of the bison have been presented to various zoölogical gardens, and in FOREST AND STREAM a few years ago was printed an account of the capture of a number of calves in this forest for that purpose. The reduction of the herd from this cause cannot have been great, and the records give only thirty-one so captured up to the year 1873, since which time nothing is known of any having been sent away to supply zoölogical gardens. Poaching has done little to diminish the herd, for it is believed that from 1873 to 1892 only thirty-six have been lost in this way.

A more serious danger than any of these comes from the depredations of wild animals. Bears and wolves are said to kill the bison, while lynxes destroy the calves. Great hunts have been organized to reduce the numbers of these carnivores; one such took place in 1855, another in 1861. In 1870 forty wolves, one bear and five lynxes were killed, and in 1871 no less than sixty-three wolves, one bear and five lynxes were destroyed. In later years the results of the hunts have shown that the wolves were almost exterminated. In fact, for the last twenty years the destruction of bison by wild animals has hardly been worth considering.

Manifestly all these causes put together will not account for the rapid diminution of this herd. There is some reason deeper seated than any or all of these. Dr. Büchner concludes that the gradual waning of this herd is due to continuous in-breeding. As long ago as 1830 Jarocki observed that the cows seldom calved more than once in three years, while often, it is said, they will fail to produce young for several years, though later they may breed again. Often too a cow, having produced a calf, may be unable to rear it through lack of milk. This slowness of breeding and the very large percentage of bulls found among the Lithuanian bison are also clear signs of degeneration as a result of in-breeding; for it has been shown that close in-breeding, like a reduced condition of nutrition, is favorable to the production of a high proportion of males. In addition to these evidences of an abnormal condition induced by continuous in-breeding are found certain physical signs, such as fatty degeneration of various organs and abnormal condition of portions of the skeleton. Some animals have thin, light fur, weak horns and are pale in color.

All these indications point in one direction—to the ultimate and not distant extinguishment of the Bielowitza bison, a fate paralleled by that of the ancient wild ox of Europe, which disappeared in the early part of the seventeenth century, notwithstanding its careful protection. Dr. Büchner concludes that in-breeding is undoubtedly the cause of the extinction of most large mammals after their numbers become so reduced that they are separated into isolated colonies.

If this fate has already overtaken the European bison, which has been protected for many years, and which has always been more numerous than the American bison is now, what may we look forward to for our own species in the wild state? Surely nothing less than a similar degeneration, but one more speedy, because the number of breeding animals is so much smaller. In one single respect ours has a slight advantage over its European cousin in the fact that there are several herds of domesticated bison, whose owners, by exchanging stock, may put off for a few generations the evil day which impends. But for the wild herds, few in numbers, and left to themselves, there seems little hope unless some general interest can be awakened in the subject.

MINNESOTA AND THE PLATFORM PLANK.

No State in the Union has more at stake in the preservation of its game supply than Minnesota, and the citizens of that commonwealth are fortunate in having good laws and energetic officials to enforce them. Executive Agent S. F. Fullerton has been alert, active and aggressive this year, and has made a record on seizures of unlawful game which we believe to be without a parallel in the history of game protection in this country. Up to the first of this month Mr. Fullerton and his deputies had confiscated about 7,500 pounds of venison and about 300 dozens of birds illegally killed and shipped. Even these statistics pale into insignificance in comparison with the coup of Dec. 3, when at St. Paul Agent Fullerton seized thirty tons of venison claimed as illegally shipped to parties in Chicago, New York and Boston. The fines involved, the press dispatches say, will amount to more than $40,000.

Notwithstanding this successful intercepting of game, large quantities escape the vigilance of the wardens and are shipped to Eastern markets. The game dealers of Minnesota are reputed to be shrewd by nature, and this innate smartness is developed and sharpened by the illicit phases of their trade; they acquire the cunning, readiness of resource, fertility of deception and general trickiness so common to all smugglers, receivers of stolen goods and moonshiners. Add to this that the managers of some of the railroads running East out of Minnesota help the commission men to cover up their tracks, and it will readily be understood that the task of enforcing the game law is not child's play.

The statute forbidding the shipment of venison to market has proved to be defective. Its terms provide that "it shall be unlawful to consign by common carrier to any commission man or sale market deer at any time." This has been circumvented by the simple device of shipment by market killers to themselves ostensibly in St. Paul or Minneapolis, where they themselves or some agents of the commission houses acting for them are on hand to receive the consignments. In this way it is estimated 5,000 more deer have been slaughtered for market this year than last, while the officials have been powerless to interfere with the traffic. Commenting upon this aspect of the problem, Mr. Fullerton declares his conviction: "Our only salvation, if we have another year like the present, with snow on the ground during the deer season, will be the doctrine advocated by FOREST AND STREAM, which meets with my hearty approval—that is, stopping the sale of game altogether. We are going to have it added to our law this winter when the Legislature meets. We will have the opposition of the commission men and market-hunters, but we have no doubt but we will carry the point."

SNAP SHOTS.

Our game columns contain notice of an Ohio man who boasts in the local paper that his hunting party in Minnesota outwitted the game wardens and succeeded in bringing six deer out of the State, in violation of the game law and despite the watchfulness of the game wardens. Might not extradition proceedings here be resorted to with profit?

Now in the old days there were moose in the Adirondacks; but in these later times when an Adirondacker wants moose he must make a far journey into Maine for them. Will it ever be recorded that the man of Maine must go to the Adirondacks for his moose?

A copy of the first edition of Walton's "Compleat Angler" was sold at auction in London last week for £415 or $2,075. With a few copies of this book in his library to fall back upon for auction purposes, one might afford now and then to take a day off for going fishing.

The Sportsman Tourist.

HOLLAND.

Why Holland I do not know, and can only surmise that the parties who are responsible for the patronymic came from the land of marsh and dyke, and as they gazed upon the ragged rocks and rugged hills of the quaint old town they were strongly reminded of the Vaterland—because it was so different—and in the fullness of their hearts they christened their new-found home with the name they loved so well. The name was a great favorite in the early days, for nearly one-half of the States have their Holland, and some of them have two or three.

My pet Holland lies in a sly nook of the old Bay State, next the Connecticut line, near a portion of the headwaters of the Quinebaug River. The face of the country is exceedingly rough and broken, and as we ramble over the fields beautiful pictures of wooded hill, moss-grown rock and grassy slope are spread before us in rich profusion, causing our feet to linger while we gaze in rapture upon the enchanting scenes.

Nearly every autumn for many years, and often several times in the season, with renewed pleasure and ever increasing love for the dear old place, have I visited this once famous resort of the sly woodcock and chosen home of the swift-winged grouse.

Well do I remember my first visit to Holland nearly thirty years ago—a red-letter day it was in truth. Starting from our home in Springfield upon a beautiful October morning in company with Mr. George Ashmun, than whom more genial companion or truer sportsman never went afield, we leisurely drove across the country, occasionally stopping to beat a good-looking cover, or halting at a farmhouse, where we were invariably invited to sample the worthy farmer's cider and entertained with the quaint remarks of the entire household, as they gave us their views on the burning question of the hour—the supply of woodcock.

Mr. Ashmun was very popular among his farmer friends, who, one and all, ever kept an eye out for his favorite bird, the woodcock; and it was rare indeed that they could not give information as to the whereabouts of several that they had located while at work about the farm.

Just before sunset we arrived at the Holland Hotel, a rambling, old-fashioned, homelike-looking house, situated upon a gentle slope, and commanding rather a pretty view of wild and broken country. Upon entering the house we were pleased to find that everything inside was old-fashioned too, even to the cordial greeting and hearty welcome of our host and hostess. To the many hundreds who have enjoyed the bounteous hospitality of this well-known resort no words of mine in praise of its excellence are necessary. The landlord, Mr. Kinney, was an old-fashioned, farmer-like looking man, with lots of sound common sense, a deep fund of dry humor, and a bluff, hearty way with him that won him hosts of friends. Mrs. Kinney, upon whom devolved most of the cares of the hotel, was the most admirable hostess in every respect that I have ever known; always cheerful and kindly, and solicitous that your every want was immediately attended to; her well-spread table, bounteously supplied with well-cooked, well-served dishes, made more appetizing by pressing invitations to partake of this or that dish, coupled with offer—aye, and performance too—to prepare some tidbit that you might relish, were all most enjoyable and homelike; and then the motherly solicitude with which she would care for you if you were a little off. Indeed it was almost a pleasure to be sick under her care for the sake of the nursing and coddling you would receive. Many times each season for many years did I enjoy the hospitality of the dear old place, each visit adding to the love and respect which I shall ever feel for my two friends, who now, alas! are sleeping side by side in the little churchyard.

My first trip, as I have before said, was most enjoyable. With Mr. Ashmun for a companion this could hardly be otherwise, but in addition to this the weather was delightful, the country beautiful in its rugged wildness, and woodcock were plenty. Instead of giving a description of our trip, if the reader will accompany me, we will explore every cover of importance, and if we find no birds I shall at least have the satisfaction of showing you where once they were plentiful and living over again some of the glorious days of bygone years.

We will take the regular route and hunt the grounds in the good old-fashioned way that has not, to my knowledge, been deviated from in a single instance during all the years that have passed since first on that bright October morning with Mr. Ashmun I was initiated into the mysteries of the many coverts, and made acquainted with the secrets that ever surround the chosen home of the shy woodcock. Turning our horse's head to the west, we climb the hill, and bearing to the south we come to a sawmill, where we hitch our team, and crossing the rude bridge of slabs, we walk a few rods to the top of a gentle rise, and here we are in the well-known "Butterworth" cover; but you say, "There is no cover here, nothing but a bare knoll with a few scattered bunches of huckleberry bushes, a few wild thorns and perhaps a dozen stunted apple trees—positively not a particle of woodcock cover." Never you mind appearances. This is a woodcock cover, and a famous one too, or at least it was in the good old days, and in those times the bushes, thorns and apple trees were scarcer even than now. Then this bare and rather bleak-looking spot, although containing scarcely a couple of acres, was every morning good for four or five birds, and occasionally a full dozen were found.

Here just at our feet, where for many yards there is nothing but a straggling growth of wiry-looking grass, I have flushed first and last more than a score of birds, and just to the right, where that gray moss covers the ground, is another good spot; but the cream of the cover is around that sprawling apple tree. Often have I seen a beautiful double here, and once when alone I actually missed all but half of one out of three as pretty double rises as ever were seen, and all in less than five minutes.

Notice that stunted cedar near the edge of the bank by the pond. I shot off its top more than twenty years ago, and killed my bird too just as it pitched over the bank some 20yds. beyond.

Near the fence to the right is now quite a growth of bushes, and water is found there, except when it is very dry. Formerly the growth of bushes was sparse, but it was good cover nevertheless, and many birds have been brought to bag in this corner.

Turning to the left along the fence, we come to ground that slopes to the east, with a few stunted sumac bushes scattered over its surface.

It was on the opposite brink of that little hollow, half way down the slope, that my friend Sabin saw a woodcock sitting on the ground just in front of old Trump, who was pointing it in his best style. As I came up in response to his signal, Sabin showed me the bird and proposed to capture it under his hat while I stood guard in case he failed to make connection. As he turned to lay down his gun the bird went unheard by him; of course I made no sign, and he very cautiously, on hands and knees, approached, and as he had carefully marked the very spot, he clapped down his hat, exclaiming, "I've got him!" If you don't think that this was funny, just ask Sabin to look and see if there is not a woodcock in his hat.

Further down is a very inviting looking thicket, but no woodcock, so far as I know, was ever found there. Turning back along the north side of the slope, down among the scrubby apple trees, we often found a bird or two, and nearly always one near that big rock. It was on that rock that Sabin and I had another experience that was rather remarkable. Old Trump was pointing on the up-hill side of the rock, nearly at the east end; Sabin went to the dog and I passed around and came up on the lower side, when a bird rose at my feet and flew squarely to the left, and I grassed it just at the foot of that thorn bush. A small fraction of a second before I fired I heard my companion's gun, and was wondering if it was possible for him to have seen the bird, when he assured me that it was dead before my gun went off. As I came around the rock, greatly to the astonishment of both of us, old Trump solved the mystery by bringing a bird that had flown to the right and been killed by Sabin, and then retrieving the one killed by me.

This rock marks the end of the cover, and we will return to the team; but stop a moment, we must take the regular course in working these grounds, and to do that we must right here discuss the reasons that induce the woodcock to select this as one of their favorite spots to spend the day, and, as has been the invariable custom, we give it up and proceed on our way.

Unhitching the horse, one of us takes the reins while the other walks a few rods to the bridge, and standing in the road sends the dog to work out a little birch-covered knoll on the bank of the brook, where occasionally a bird or two may be found.

The only time that I ever saw a woodcock tower was at this place. The dog pointed near those two angular rocks and I walked up the bird and cut loose at him as he topped the birches; he came down a short distance and then began to tower, going straight up for nearly 300ft., then he took a course that but slightly slanted downward and disappeared over the brow of that hill to the south and we never saw him again, although we searched for him a good half hour.

No, that cover to the left is not a woodcock cover. We often beat it out years ago when the growth was young, and a more likely looking place than it then was for them it would be hard to find, but we never found one there. Occasionally we would find a grouse or two near the upper edge, but they were always wild and I do not remember that we ever brought one to bag in there. Sabin often said that the corner was haunted, and after we had thoroughly worked it out several times without result we gave it up.

One day, as we were passing by the cover, we met an old man hobbling down the road, and as we gave him "good day" he stopped, and waving his hand toward the place remarked: "'Tain't no use to hunt in there, you won't find anything." Something in the manner of the old settler led me to believe that he might be able to account for the phenomenon and mechanically I passed him my flask, remarking that I should very much like to know the reason why birds should not frequent so sweet a spot. Draining the flask to the last drop, the old man seated himself on the bank and thus held forth: "When I was a younker that side hill was full of game and would have been now if it wasn't for old Lou Jackson and his pesky snares. Old Lou has been dead a good many years, but his spirit haunts the place and no partridge or woodcock will stay there more than a few minutes before they see or hear old Lou's ghost and they are off hot shot. Some say though that the old king partridge is still alive and hangs around here and drives off the birds, just as he used to when he broke old Lou up; but pshaw! that was more than sixty years ago, and who ever heard of a partridge living half so long?"

My companion had by this time become deeply interested, and passing his flask to the old man expressed a wish to hear the story. With sparkling eyes our venerable friend soon made the flask a fitting mate to mine, and settling himself well together gave us this:

"When old Lou was a boy he used to set snares in there, as it was a great place for partridges, and he used to catch lots of them, and he kept it up after he was grown up, and every fall and winter he pretty much kept his family in meat out of that corner; but there came a time when he couldn't catch a bird, and what the matter was he didn't know, and he worried over it to beat all.

"After thinking it over he concluded he would watch and see if he could find out what did it, so he gets up the next morning before day and goes up yonder almost to where that gum tree is, and sat down to watch. According to his tale, he had been there about an hour when he saw a couple of partridges meandering toward his pet snare where he used to catch most of his birds, but before they got there an old whopper of a partridge, as big as a rooster, came out of the brush and walking up to them made a sort of cackling noise as though he was talking to them, when they looked as though they were scared half to death, and turning tail they flew up the hill as far as he could see. This completely fased old Lou, and he made a break for home, where he told his story, all the time growing scareder and scareder until finally he took to his bed, and in a few days he was dead. The doctor said that it was brain trouble that carried him off, but his wife said that he was scared to death by the king partridge, as she heard him more than twenty times promising the bird that if he would only leave him be he would never set another snare."

This we agreed was a capital return for our outlay, and I never pass the spot without a deep feeling of regret that we did not have another drink for our Wandering Willie.

Passing on up the hill, we came to a very tempting patch of alders on our left in an old orchard, and just beyond is one of the sweetest bits of birch cover I ever saw. The spot is very properly called "the birches," and a surer place to find woodcock, in the good old days, was not to be found in this region. Driving to the end of the cover, we hitch our team just in the fork of the two roads to that large birch, now a good foot in diameter, that was not even started into growth when first I came here, but has grown as a sprout from the stump of one nearly as large that we formerly used. Crossing the road, we get over the fence at this particular spot and send on the dog. When that large oak tree a short distance to the left was scarcely 20ft. tall, it was very nearly a sure thing to find a bird or two within a few feet of it, and along this cross fence to the right was another likely spot. Here we are at the top of the rise in a small open place, and after I add another stone to the little mound in its center I will give you its history.

It was there that Mr. Ashmun stood when he fired his last shot and killed his last bird; that was his last shooting trip, and every time I come here I add a stone to the mound in memory of my friend and the many pleasant days afield we spent together.

Just beyond the row of alders, in the hollow below us, is an old unused road that formerly was a very good road to travel, as we nearly always routed out from the alders several grouse that would fly toward the mountain with more or less success, according to the merit of the traveler.

Here at the old cellar hole, now almost filled up and hidden by the dense growth, Sabin and I had a low-down trick played upon us two days in succession, and but for an accident we would have suffered the second time even more keenly than we did the first. We had beaten out this portion of the cover and were some little distance this side of the alders, in the old orchard, when a grouse flushed some 50yds. this side of us and flew straight for this place. We at once followed and beat out all the cover in this vicinity, but without finding him. The next day we again started the bird in nearly the same place, and as we were beginning to get somewhat interested, we laid ourselves out for a thorough search; but after more than an hour of beating back and forth all the cover, we sat down here by the cellar and ate our lunch. We had resumed our guns and were about to leave the spot, thoroughly disgusted, when old Trump somehow managed to fall into the cellar. No sooner had he struck on the bottom than with a thunderous roar our tricky friend came out of the hole like a rocket; but his race was run. Two shots that rang out almost as one, a sudden collapse of the swiftly flying form, a fleecy cloud of feathers floating in the air, a heavy thud as the noble bird struck the earth, told well the tale that a scurvy trick like this had met its just reward.

Shadow.

[To be continued.]

WHEN THE SUN SHONE BRIGHT.

I am alone in my office. It is 11:30 P. M., and the wind whistles clear as it strikes this little town, coming from the far north over a barren, treeless prairie. It is a night for looking back and I have just lived over a happy day long ago, and when I realized what I was thinking about I jumped up and opened my desk. And here is what I saw looking backward. In 1873 I lived on the Trinchara Creek in Colorado, thirty miles east of Trinidad. Thomas A. Perley, now of Salem, Mass., and I were in the cattle business and lived together on his ranch. We were not partners; each owned a herd of cattle, but we lived together for our mutual convenience. He went with cattle to Kansas City that spring, and I had got Alex. Elliott, who now lives near Las Animas, Colo., to stay with me for society. I had bought Alex's cattle and he was feeling quite cheerful, as he had a large balance in the bank, two race horses, good health and a good disposition.

The Indians to the east of us had broken out, and every one but Alex and me had left the creek and gone to Trinidad to be out of harm's way; but we stayed. We had an adobe house as strong as a fort; our stable was joined right on the house behind. We had only one horse apiece on the ranch. The rest were up in the mountains, miles away, where the plains Indians do not go. We had a well at the door and lots of grub, and it was just dangerous enough to be pleasant.

One morning I proposed that we saddle up and go mavericking. Mavericking is going through the range and branding all the yearlings that one can find that have no marks and brands and have left their mothers. You can't tell whom their mothers belonged to, and the yearlings used to belong to the man that got his brand on them first. And let me tell you privately, they do yet, all laws to the contrary notwithstanding.

I told Alex that we would take a ride, get what we could, and if we saw Indians either fight or run, whichever was easiest. We saddled our fast fat horses and pulled the cinches so that the saddles sat as if they were part of them and away we went—well mounted, well armed and young, with all the world before us. Making the restless, chafing horses walk, to be fresh for a run or a fight, we worked as slowly as we could through the bunches of cattle toward the north; and soon I found a fine young bull; and after a short, sharp run had him under control and headed for the place where we intended to corral and brand. We went along; I drove and Alex hunted, and by about noon felt very well pleased. We had six, when suddenly Alex, who was on the side of an arroya (a broad valley that has a water course when it rains, but is generally dry), suddenly stopped and beckoned me to come quick, pulling his rifle from its scabbard under his leg as he beckoned. I quit the yearlings, which were quiet, and loped to him. Just below him, about 200yds. away, stood a saddled horse—I can see her now as she looked up at us—and several things flashed through my mind. Where was the rider? Was he an Indian? Where were the rest of 'em? My mavericks, my mavericks; if there is a fight I'll lose 'em. The ground in the arroya was rough. Where was our Injun?

Alex said: "You ride round the mare, Dick, and see if there is anyone around her." And around I went. I rode up as close as I could, without starting her off, and Alex closed up on the other side. Then Alex made a run at her and threw his lariat, made a poor throw and caught the horn of the saddle, and the wild brute twitched the rope out of his hand and ran away, rope and all. Alex

was mad. He came to me and said: "Give me your rope. You go back and hold the yearlings; and if I can't rope her again I'll run her down and circle her in toward you, and you can catch her with your fresh horse and I'll hold the yearlings." So away he went.

I went back and soon had the calves quiet and under control, and had a fine view of the chase. The two horses ran like birds for about three miles, and then Alex could turn her, but could not run up on to her close enough to rope her, so he turned her south, and away they went.

Just then I looked south and here came another man with a few yearlings, all alone. I looked at him through my field glass and it was J. W. Leweling, who now lives in Rocky Ford, Colo. He also was out seeking what he might pick up this fine morning. Alex drove the mare past me just as Lew came up. Lew and I were friends. I explained the situation to him in a few words; told him to follow with the cattle, his and ours, and that I would help Alex corral the mare at one of Lew's corrals, and for him to come to us with the cattle. It was all right, and away I went. The corral was three miles away and I soon had the mare in it. Then Alex came up, with not much go left in his horse.

The stray was a wild thing with a fair Texas saddle, a headstall with a bit of broken rope hitched to it, which showed that she had worn or broken it off. There was blood on the saddle, in the seat and on the stirrup fender —old blood dried on—lots of it. There was a big pack tied on behind the saddle. The story was easy to read. A man shot off the saddle, probably by Indians, perhaps by white men, and the mare had proved too fast for them and had got away. We roped her and threw her, and when we took off the saddle the hair came off her belly where the girths had been on so long and so tight. She may have had the saddle on two weeks. There was a fine Mexican blanket under the saddle and another one in the pack behind; also a pair of jean pants with $30 in one pocket in a pocket-book; two bottles of strychnine; a Mexican home-made awl to mend shoes, matches, a buckskin, and quite a lot of other trinkets. There was not a scrap of writing in the pack, nor any brand on the mare. So Alex put on the pants and I put one of the blankets under my saddle. Here came Lew, and we put in ten fine yearlings along with the mare. Then we divided. Lew took the mare and saddle. Alex and I took the pack and blankets. Lew took his four yearlings, and I gave Alex my half of the $30 for his three. So we pitched in and branded; then turned the mare in with a bunch of Lew's horses which ran near there, and went back to the Perley & Dixon ranch by the light of the moon, awful hungry, but feeling very chipper. How we did eat beefsteak and tortillas and drink black coffee at about 10 o'clock that night.

Here my memory fades. Lew slept there that night, but whether we went out together again next day or not I don't remember. Ask them if you want to know. They are as alive as I am. I do remember this: Alex once said after that that Lew got two good colts from the mare and then sold her for $60, and got a good cow and calf for the saddle, and that it was a poor divide for us; but I told him that I'd have been well paid in fun if I hadn't got a thing. And now you know something about it too.

W. J. DIXON.

A FEW DAYS IN THE WOODS.

IF you can spare the space I will tell you and your readers of a short trip I made to the woods a few days ago:

On the morning of October 12 my wife went to Pittsburg, Pa., leaving our boy, who will not be nine years old until in November, and me to run things during her absence, which was to continue until the evening of Thursday, 15th inst. The boy, whose name is Frank, has always had an ambition to "go camping" in the woods, and I thought this a good time to gratify it. A few days before I had made an arrangement with a friend to camp on his place at a spot I knew of, and I told Frank that we would spend the time in the woods while his mother was gone.

I commenced preparations, being constantly reminded: "Pa, you know Nessmuk says, 'Go light.'" He has read Nessmuk, but if I'd taken all that he suggested we'd have had two or three teams for the transportation.

What I did take was: cloth for a tent and two little sacks for pillows, a pair of genuine Mackinaw blankets, which have often rendered me similar service; a pair of ponchos, very large ones; a small double-blade axe, weighs 1¼lbs.; a frying-pan, two tin cups, a small coffee-pot, a double-barreled hammerless shotgun, thirty shells loaded; a small Stevens rifle, weighs about 4lbs., .22cal.; two boxes cartridges for it; two loaves of bread, a half-gallon bottle filled with fresh new milk, about a half pound of ground coffee, a little pat of butter, about a pound of raw sliced ham, and a dozen eggs. Of course I had some pepper and salt, my pipe, tobacco and matches.

I gave a liveryman a dollar to drive us out to the place, about five miles away, and made the necessary arrangements as to his coming after us. After we had unloaded and the liveryman had left I looked at my watch and it was 3 o'clock P. M. In about an hour I had our tent set up, had cut down two small hemlocks, and we picked the "browse" fine for a bed and stuffed the sacks with the same for pillows. Then I kindled a fire and soon had a good one. Frank made his supper of bread and milk; I ate ham, two eggs, and drank a pint of hot coffee. Then we sat and talked, and I smoked and told him stories until he began to get sleepy, when I put him to bed. It sounded pathetic out in the vast solitude to hear the youngster saying his prayers in the tent just as though he were in bed at home.

After he had gone asleep I fixed up some matters about the camp, replenished the fire, and sat and smoked and thought for about an hour, when, on looking at my watch, I found it was 9:30 and I went to bed. I had thought that there would be rain for some time, and awakening in the night I could hear the patter of rain drops on the tent and the drip of water from the forest leaves. I saw that our fire was all right and soon dropped off to sleep again. When I next awakened it was 6 o'clock. I jumped up and set about preparing breakfast. Before it was ready Frank awakened, got up, dressed, washed in the little run, which was great fun for him, and we ate our breakfast.

After things had been cleared away I took the shotgun, put two shells into it and half a dozen into my pocket, told Frank to take the little rifle, and we walked up the run. About 300yds. from camp a pheasant (ruffed grouse) sprang up with the peculiar boom of the species and started swiftly through the woods, but within 30yds. a shot from my right barrel had cut him down, and at the same moment a second bird sprang up, and my left barrel caught him about 40yds. away. I pushed fresh cartridges into my gun, Frank brought in two dead birds, and we continued our walk. Seeing nothing more, we went back to the camp, and I put in the rest of the forenoon giving him some lessons with the rifle, and soon satisfied myself that he has the making of a marksman in him—he holds well and shoots with both eyes open.

The afternoon I spent in repeating my lessons in shooting to Frank. In the evening I raked over the remains of a large fire, and having wrapped our two pheasants in large balls of clay, placed them in a hole in the bed of the fire, covered them up, and rebuilt the fire on them. We slept soundly this night, and on Wednesday morning after breakfast again started out. This time we went down the stream, and I got four pheasants and four woodcock. I had taken a dozen shells with me and two in my gun. As we were returning I saw a fine gray squirrel run up a tree. I was satisfied it had not been alarmed by us, and soon saw it on a limb about 40ft. from the ground. I called Frank, pointed out the squirrel, and told him to try it. He seemed not to want to shoot, but I told him, "Go ahead, and if you miss I'll get it with my shotgun."

He rested his gun on a little limb and fired, and I confess to not a little surprise when the squirrel fell out of the tree dead, having been shot just behind the shoulders. Immediately after the crack of the little gun a second squirrel, much higher on the same tree, ran out on a limb and barked furiously. I said to Frank: "Can you load your gun? If you can, push in a cartridge and try that one from the same place." I soon saw that he could and did load his gun, and resting on the same limb he fired, and the second squirrel fell to the ground. This squirrel had been struck in the throat and its neck was broken.

As we walked back to camp Frank said:

"Pa, don't you think it would have been better if we had let these birds and squirrels alone? We didn't need them. They were pretty when they were alive, but now they're dead, and it does seem to me that we oughtn't to have killed them, because we came into the woods to the home of these pretty things and killed them just for fun. We wouldn't like it if anybody was to kill us for fun, would we?" There it was again, the instinct of our cooler moments against killing. I knew it all before, but now with the clear eyes of childhood looking into mine, hardened it may be by years in the world and in contact with men, I felt like a murderer and as though my boy had become one at my order. I explained as best I could, but in such circumstances we see the fallacy of the sophisms with which we are wont to solace ourselves.

We reached camp, where I made some coffee, prepared our dinners and dug out the pheasants that I had "mudded up" the night before. We made a glorious meal, and Frank declared that he had never tasted anything so good in his life before.

In the afternoon we walked in a different direction, and got hickory nuts, a few chestnuts, some wild grapes —the genuine mountain blue grape—and some "stones with shells in them," as Frank described certain fossil remains that we found. That evening Frank went to bed early, saying as he lay down, "Well, pa, this is our last day in the woods this year, and I'm glad we're going home to-morrow." I shortly followed him.

Morning came, and after breakfast we again took our guns and went out into the woods. It was a glorious morning, and the autumn leaves showed all their glorious tints. I got two pheasants and we returned to camp at 12 o'clock.

After dinner and a smoke I commenced tearing down preparatory to removal. Everything was packed and ready to put on the buck wagon at 3 o'clock. I lighted my pipe and we sat by the smouldering remains of our fire, until at 3:15 we heard the cheery hello of the liveryman and were soon speeding homeward. Arriving there, we unloaded, unpacked, put things away and met my wife at the train. When she saw "the game," six pheasants, four woodcock and two squirrels, all had to be explained, and Frank said, "We're going again next year, aren't we, pa?" Cost, $2 to the liveryman and my time. Frank has something to talk about for a lifetime. Who will say it wasn't worth the money? It is only fair to add here that Frank declared on eating of the birds afterward that although they were good yet they didn't taste like the birds we cooked in the woods in the balls of clay.

WAYS OF THE RUFFED GROUSE.

Editor Forest and Stream:

I have just read with much interest Mr. B. Waters's admirable monographs on our four most familiar game birds. I hesitate to make any objections to such an acknowledged authority as Mr. Walters, but my experience leads me to different conclusions in one small particular.

In his paper on the ruffed grouse Mr. Waters again and again refers to the "aversion of the ruffed grouse to the haunts of man." He says: "It ventures into the open only on such infrequent occasions as it is tempted to search for food, and then only in places seldom invaded by man, and where it fancies there is freedom from pursuit." "The ruffed grouse is ever intent on making its home and haunts distinctly apart from those of man." In two or three other places he makes statements to the same effect.

Now I think that the man who would hunt this bird on that principle in the populated portions of Maine would be very unsuccessful.

I have shot the ruffed grouse in Missouri, West Virginia and Maine. What he says is fully in accord with the habits of the bird in Missouri and West Virginia, so far as my observation goes. It also seems true in the wilderness of northern Maine, judging from what various sportsmen have told me. But it seems that just the reverse is true in the more settled sections of Maine, at least in Oxford and Cumberland counties, where my experience has been obtained. I have hunted in these counties seven or eight seasons. My score one year was 44; this year it has been 19.

I have always found so many more birds on the skirts of the woods near farmhouses that I always hunt on the edge before entering the body of the woods. When it is practicable I work along the edge altogether.

I do not suppose that *Bonasa umbellus* has any particular affection for man, but he finds more food—apples, grasshoppers, checkerberries, etc.—on the borders of the woods. I believe that, constantly being scared up by boys and men, the birds lose that extreme fear of man which is characteristic of them in less settled sections.

It is commonly reported that the birds have been uncommonly wild and scarce this year. I have not found it so. They seem to me to have been wild, but as numerous as in other years. Last year, however, their number was greater than usual.

The ruffed grouse which I shot in Missouri were of a much browner color (approaching the color of a woodcock) than those of this State. I wonder if this has been noticed by others.

G. S ELLIS.

MAINE.

THE HEATH HEN.

BOSTON, Dec. 2.—*Editor Forest and Stream:* The communications and editorials which my inquiries in regard to the Martha's Vineyard prairie chicken or heath hen have brought out have been most interesting, and, as information, gratifying to me. On the other hand, the almost if not quite completed extinction of this fine species is far from comfortable reading.

I have had no chance to look up the article on this bird referred to, as printed in FOREST AND STREAM some years ago, but it is clear that a large body of information exists and awaits the industry of some one interested to write a full and exhaustive monograph on the subject. I write to make an earnest plea for some one to do this work.

No better subject could be wished. The thanks of all ornithologists and all naturalists and all good sportsmen also await him who shall give us such book.

There must be yet discoverable many a reference to the Martha's Vineyard heath hen in the old chronicles of the island and of the considerably wider territory which it once inhabited. I distinctly remember statements—perhaps in FOREST AND STREAM, but if so published many years ago—to the effect that the bird once inhabited Nantucket, Long Island, the pine barrens of New Jersey, and probably at least the southern portions of Rhode Island and Connecticut. Then there is the fascinating field of investigation of the living remnant, if, as I hope and believe, there is one. Will not gentlemen living on Martha's Vineyard or making long visits to the island take this matter in hand?

It seems to me that the mating time in the spring would be the best season to determine the number of birds remaining. The "booming" sound made by the males can be heard a long distance, and would, I should think, surely betray every colony of the birds that may be left. I would go a long way to hear that sound again, unheard by me for many a year; and would give much for the chance to steal upon and witness the amazing tournaments and strutting contests they hold at that time, and which in boyhood in northern Illinois I used to see. I can assure any of our New England students who have never seen one of these tournaments that it is a sight worth great exertion. And I believe it is yet within their privilege.

Moreover, there should be secured at least a few authentic specimens before it is too late. I am anxious to know if any Western prairie chickens have ever been added to the native stock on Martha's Vineyard, as has been alleged. Surely somebody must be able to answer this question. It has often been asserted that this was done, but I have never been able to prove it to be more than a rumor. I thank the editors of FOREST AND STREAM for republishing that most fascinating paper on the pinnated grouse, by Audubon. As I read it, I recalled my own first memories of the bird, and experiences with it in Indiana and Illinois in 1861–2 and 3, where it then existed in vast numbers. My uncle, who at a little earlier period moved from New Hampshire to Indiana, told me that for a long time he was accustomed, whenever he wanted a chicken for breakfast, to quietly open his door, loaded gun in hand, early in the morning and shoot one from the ridge pole of his house, where he was almost certain to find one roosting. They used to assemble in autumn in vast flocks, and I well remember my own first attempt to secure a bird by shooting blindly and without special aim into one of these whirling flocks and my discovery of two important things, viz., that I must, if I wished to get a bird, aim at a particular one, and also that I must not judge distances on the prairie as I would among the hills of New Hampshire. I found myself at first blazing away at game which seemed within easy reach of my gun, but which was in fact two or three gunshots away.

I enjoyed every word of Mr. Hough's long article on prairie shooting, and while I am speaking of him I want especially to thank him for his true word-picture of the Kankakee Marsh and its peculiar people. "Down on the Marsh" we used to call it, and we could tell true stories of the variety and abundance there of game and fish in the sixties that would hardly be believed now by any but "old-timers." Mr. Hough knows the marsh, as his article plainly proves, and I beg leave to ask him to shake.

But to return for a final word about the Martha's Vineyard heath hen, will not your correspondent Kentwood, whose letter in your issue of Oct. 31 is the latest and most authentic news on the subject, undertake further research and give us the result? I am sure the brethren of the great FOREST AND STREAM circle will be glad to have him do it.

C. H. AMES.

Weight of Moose.

Editor Forest and Stream:

I read an article in a late issue treating of the weight of moose. In an experience of over fifty years in a great moose region, I have had opportunities to know the exact weight of dressed meat of moose and other game as brought to camp by hunters. I assisted in weighing one bull moose that went an even 800lbs. for the four quarters. I shot a cow moose that exceeded this weight by several pounds. Now, if I recollect aright, the rule at the slaughtering establishments is to allow 56lbs. for the four quarters of dressed meat to the 100lbs. gross weight of a prime ox. The examples of moose given were fat, the cow remarkably so; and by the rule given a very close

result is obtained of their live weight. I will add that I have shot others which I judged to equal, if not exceed, the weights given. I relate what happened a long while ago, and perhaps the species nowadays are hunted out ere they get their growth; or, as I think, the old ones are becoming too wary to show up in the open. ALLEGASH.

Linnæan Society of New York.

AT a meeting of the Society the following papers were presented: "An Ornithological Reconnaissance in Mexico," by Mr. Frank M. Chapman; "The Alfred Marshall Collection of Birds' Skins and Birds' Eggs." by Mr. L. S Foster; "Remarks on the Ruby-crowned Kinglet," by Mr. E. I. Haines.

Game Bag and Gun.

LETTERS OF SPORTSMEN FRIENDS.

I.—From Jack in Saratoga, N. Y., to S. in Alma, Mich.

SARATOGA, N. Y., Nov. 8.—My Dear S.: It is raining to-day here, but I hope that a thousand miles away on the banks of the Cedar the sun is shining brightly and the soft haze of an Indian summer fills all the landscape, and agreeable to promise I will put in an hour in giving you a little sketch of the '96 trip to Essex county. As my last reported, I spent Oct 16 and 17 shooting near Warrensburgh with Mr. C; the bag was thirty-one, of which twenty-two were woodcock and the balance grouse.

The morning of the 19th ult. dawned bright, clear and beautiful, with a crisp frostiness in the air which made both us and the woodcock think of warmer climes. The setter Tick and the pointer Pete were securely chained to the steam pipes in the Adirondack Railroad baggage car, our duffle piled up out of the way, and then with pipes alight we stowed ourselves away in the smoker and the '96 trip was on.

Up we went through the valley where the great Hudson has its rise, watching the changing color on the mountain sides now splendid in rainbow tints of October; watching the bright, limpid water as it bubbled and gurgled over and around the rocks and boulders, glistening and gleaming in the warm sunshine; noting a deep pool here, swift swirl there, and wondering if a gamy black bass wasn't waiting for the "flowers that bloom in the spring," and the deceptive fly that comes dangling along about that time. And so we sped on; our asthmatic old engine finally pulled us into North Creek on time, and the Doctor, dogs and I sought the hospitable door of the Adirondack Inn to regale the inner man and wait for the stage. A hearty dinner on my part and sundry dainty nibblings by the Doctor, another whiff before a blazing, old-fashioned fireplace, and at 2:30 the stage pulled up at the door and off we started over the old familiar road to the Powers mansion. We waved our hand to the big rock which marks the grave of a good dog, passed the bald, high hill, of which Fred tells his usual lie about the deer being driven over the sheer front by dogs, on through the glory of the mountains in October, and in two hours were saying "How d' do" to the Powers family. Then we got into our shooting togs as soon as possible and started for the little run down by the schoolhouse to pick up the two or three woodcock that always make it their abiding place. For the first time on record we drew it blank and got back to dinner at 6 P. M. with nothing but shells in our pockets. To eat and then to sleep was the programme.

The Doctor was out first in the morning; he hadn't killed thirty odd birds within a few days, and hence his index finger itched more than mine. He went to the window and looked out; I watched him out of the corner of my eye, but gave no sign that I was not peacefully sleeping, as the chill breeze of the early dawn gently and gracefully waved the skirts of his night robe. He drew aside the curtains and looked long and looked earnestly, and then looked again and groaned deep and loud and prolonged. Then I asked him if it rained. And he replied with certain unnecessary embellishments that it snowed; and it kept on, and we were snowed in for the day. Toward evening it grew warmer, rained, and at night not a trace of snow was left, and the whole valley was bathed in a white mist as the moon rolled over the hills, and we retired, feeling confident we should pull triggers on the morrow.

Next morning about 8 o'clock our old guide Fred dropped in ready for us, having one of his mountain-climbing trips planned, but was promptly vetoed, and I announced as the programme: "East Side, and woodcock." So we started down through the "Corners," across the bridge, and along the route you know so well, and "broke in" at a little clump of cedar, where you and I have shot (at) many a swift-flying grouse. As I went down into the brush, leaving the Doctor on the edge, I was startled by a sharp *quit, quit*, and up in my very face flushed a grouse. Both bird and man were rattled, but as he topped the brush I saw him at the end of my gun, and with the snap of the nitro he curled up, keeled over and bumped the earth, my bird. As the gun cracked another started, and I snapped the left at him, but missed; and out he went to Doctor and Fred. Bang! bang! bang! went their guns, and on, on, on went the bird to covers that we knew not of. A little further and Tick throws up his head and points stanchly, and I see a woodcock flush a short distance from the other dog. He flushes so lazily that I do not shoot, but watch him for 10yds., when he alights on the mud in plain sight of myself and Tick. The dog stirs not, but the cock runs behind a stump, and, disappearing, flushes wild unseen by me; but Fred, he of the eagle eye, has seen the sneak, and marks him down across the river. Down to the bridge we go, and up the other side. Tick, who is galloping ahead, stops so suddenly that he stands cross-legged, and as I step quickly in front of him out "boils" a grouse and starts straightaway, but he goes not far before the gun cracks, his feathers drift on the lazy air, and directly I am shaking him by the legs, arranging his brown plumage before consigning him to the bag.

A little further and Tick stops, significant that the woodcock is in danger; and he is, for going quartering away I pick him out of the air with the second barrel. Then where we go through the bars up to East Side I put two out to my companions, but they don't seem to care much about killing feathered game anyway; and here we are at the place where our guns cracked so often and merrily four years ago; the spot where I missed more woodcock in the shortest time in my sporting history: the spot where Rowdy ran amuck. How he did enjoy himself that evening! What cared he for the Doctor, laboring, sweating, yelling behind him; here were birds galore and his nose was full of them, and if the Lord's willing and lightning don't strike him the air will soon be full of them; and it was so. How he did put them up! It gives me pleasure to shoot woodcock, but it would have given me more to have peppered the dog that day; and while I missed the cock right and left, I have always felt confident that I would not have missed Rowdy were the range never so long.

But here we are again, and the plan of campaign is quickly laid to hunt the piece on parallel lines a hundred yards apart. Tick creeps and crawls through the entire piece, but not a feather shows. I'm not satisfied, although the Doctor says he hasn't seen a sign of a bird; so I begin again on the edge, and in two minutes Tick is stiff. Take your time, gentlemen, the dog will not move; no rushing or chasing by him. I look carefully ahead, and there about 20ft. away sits our long-billed friend. "I see him," said I. "Shoot him," says Fred. "Not on your life." The Doctor has put his gun to his shoulder *à la* trap. "None of that, Doctor; down with that gun." And he obeys. As the bird jumps and swings away on whistling wings, I make my usual break and shoot before the bird has reached his flying level and before I've really sighted him, and so I miss, and so does the Doctor; but in an instant I catch him over the left barrel and he wilts in mid air

We stopped right there and I reminded the Doctor that his dog had passed within 20ft. of the bird; that when you hunt cock you must, *à la* Pettit. "pound the ground," get yourself or dog into every likely corner, and wound up the lecture by asserting my belief that there were more birds awaiting the diligent hunter in that same cover; and there were, for we started six more and bagged them all before 11 o'clock. Then the rain took an inning and we crawled under a bridge to "wait till the clouds roll by." We waited and waited, but finally gave it up and started slowly toward the "mansion," working likely edges as we went along, and picked up two more grouse before reaching that hospitable shelter. And so ended the first day. You have my postals stating later results.

It always did me good to see the Doctor kill a grouse and watch the race between him and Pete to see which would have the first bite. His dog was fairly stanch on point, but an inveterate shot breaker. At the crack of the gun the dog immediately "lit out" in the direction of the bird; if it was killed and the dog preceded the Doctor to the remains the bird was hash instanter. So when the Doctor shot and killed he immediately dropped his gun and had a "free-for-all" race, with Pete usually in the lead and the air ringing with shouts of "Here, Pete, Pete," which would have a tendency to slow him up, but never so as to give the Doctor a clear lead. Even now I wake up in the night and laugh at the recollection. If his gun cracked I could always tell the result by the noise, and knew the race was on. Tick is tireless, steady and stanch, and goes at woodcock like an old hand. I don't think your Tony is any better. Enough for this time. More anon. JACK.

II.—From S. in Alma, Mich., to Jack in Saratoga, N. Y.

ALMA, Mich., Nov. 16.—Dear Jack: I have read your long and very gratifying letter relating the course of the hunt and the details of the bag for one day in the old familiar glades and swales of Essex; and I assure you it brought back the familiar scenes vividly to mind and I could follow your track like that of a rabbit in the snow. I picture to myself the start in at the cedars, the whir of the grouse that bit the dust at the crack of the gun; the woodcock flitting across the river, only to be followed and brought to bag; and then the crawling through the bars when you go up to the East Side woodcock covers. Yes, I remember that day four years ago, when I thought Lexington or Waterloo was on again; when it was a question which scared the most cock, the guns or Rowdy, for neither one hurt them much. There I lay on an old fallen tree while the fun was fast and furious, until, unable to stand it longer, I dragged my weary limbs up the height and finally reached the scene of action in time to be told that the birds had probably all been driven into the next county. Lucky I was not there that soft autumn evening, for Fred would have had more birds to carry in than he was accustomed to!

I will try and give you a little bit of our experience the only day the sun came out while I was shooting. Cedar Lake is about twenty miles west of Alma on the D. L. & N. Ry., not a regular station, but trains stop when flagged. I knew one Nelson who used to do a rushing business there when lumbering was at its height in this and neighboring counties; he made a lot of money, but, as is sometimes the case, he indorsed very freely for others, and one morning woke up to find that, instead of being worth an hundred thousand, he was nearly if not quite on his uppers. Out of the wreck he saved 1,000 acres of stump lands, two or three store buildings, barns, etc., on which Mr. Wright holds a mortgage, and which we are now foreclosing; but we all hope he will save 200 or 300 acres with his stores, barns, etc., so as to have enough to grub a living from the rest of his days. He lives upstairs over a store in one of the buildings, and has plenty of room, there being a parlor, sitting room, dining room, kitchen and four bedrooms. I had a bedroom off the sitting room, and as his furniture is the remains of prosperous days, Sharp was as "snug as a bug in a rug." I had a big vacant room down stairs, with a stove in it, in which I kept the dogs, cleaned the guns, strung up the birds, and did the hundred and one little things incident to a shooting trip which one doesn't like to take into the living rooms of a cultured family.

The place appears to be called Cedar Lake because there are no cedars around what once might have been a lake, but is now reduced to a mere pond not over ten acres in extent. But there are some rare good shooting grounds about there, and from their nature and extent will be practically inexhaustible if the close season is observed. There are miles of such half-dry swamps as you occasionally run across in Essex, and scrub oak uplands as far as the eye can reach. If we had enjoyed such weather as yesterday and to-day, I should have had a very different report to make of the trip. As it is, I'm glad you didn't come, for without good weather an outing is only half an outing.

There was one day I would have given all my old shoes to have had you along with your trigger finger in line, but aside from that day the birds lay humped up in dense cover or lay *perdu* under old roots and logs. It was a lowering morning when we started about 9 o'clock and struck into a piece of swampy woods a quarter mile from our stopping place. Soon Belze made game and directly was pointing stanchly toward an old tree top lying in tall, rank swamp grass, the ideal place for grouse on a cloudy morning. I stepped in ahead and away went a bird, but not a fair shot; away went another and I threw away an ounce of No. 8s, and at the crack of the gun up jumped two more from the opposite side, but at a distance of 40yds. they swung into view and I laid the gun on the tail of one and he wilted like a flower in the frost; as I was slipping in shells off whirred two more and I gave them a salute at long range, but not with fatal effect. Then both Belze and I woke up to the fact that such chances are not lying around for anything with a gun to find, and realized that our nerves were at high tension. By this time Knapp swung around with Tony, but the game was all awing and none left for his deliberate but deadly fire. It had rained the night before, and as the birds had flown toward the wet part of the swamp we concluded to swing on out into the open side hill adjoining and see if the quail were breakfasting. Tony was sent out to scour the field, while I kept Belze at my heel with some difficulty. I was just about to start down along the edge of the swamp when I noticed Tony stop suddenly, turn half around with a step or two and stop. He was about as far from us as the D. & H. station is from the Worden, but he held his point stanchly while we came up and walked in ahead, Belze in the meantime backing in good style. Up go the bevy of quail and I drop one, while for a wonder Knapp misses clean.

We follow them back to the edge of the swamp, but at the sound of our approach up they jump without waiting for the dogs to stand them, and make off for the swamp. Knapp drops one, and at long range I drop another. I see him tumble into some alders, and go to pick him up. Belze whisks around a minute or two and then points him. Just as I stoop to pick him up he darts from under my hand and runs faster than you would think possible, and dives into a hole under a half-decayed stump. We rip up a root of it, but cannot stir the main portion; and although both dogs have to be pulled away, we have to pull ourselves away and leave the little Robert to eke out a flightless existence. Passing on, we come to a lad cutting up a tree at the edge of a cornfield, and ask him if there are any birds thereabouts? He replies, "Haven't seen any this year." However, within a gunshot of where he is working we find another bevy, which flush wild and pitch into the swamp. I note where they stop, and find them again in some willows; just the ideal place for woodcock if it were not so late. As they rise wild I get in both barrels: one at random with the usual result, but the other held well on an outlying single that flushes after the rest and he falls almost at Knapp's feet. They have gone now where only a bird can go, and so we pass on to an old logging road and start in after ruffed grouse. We haven't gone far before both dogs make game, and draw up side by side. Ah, Jack, old boy! An' you should have seen them then! Tony with his head thrown up to a high point, Belze half crouching and rigid in true pointer style, and a blanket would have covered them both.

The picture was so admirable that for the moment we forgot the birds, till a rush and a whir as two grouse went away through the trees brought us to a sense of duty. Knapp missed, but I had a more open shot and scored a clean kill. Another bird flushed out of sight, and directly another tried to top a little second-growth pine, but just as his barred breast showed plainly against the living green my gun cracked, and down he came. Going forward to pick him up, he proved to be only wing-tipped, and there he strutted away with wings drooping and tail spread for all the world like a turkey cock. It was a picture that I lingered to enjoy, the dog all the time trembling from stem to stern, his jaws closing convulsively, until finally I told him to fetch, which he did in good style, although the bird would have run off again had I not taken him from the dog's mouth before he dropped him.

It was now about noon, and so we concluded to discuss lunch. Now comes a wrinkle worth noting, and which we never enjoyed in the Adirondacks. A fire is built sheltered from the wind, and as soon as the bed of coals begins to form we cut sticks about 6ft. long, and putting our buttered bread on the forked end toast it to the queen's taste. Knapp has already dressed a couple of quail, and they are soon basting and broiling on a spit, and there you have quail on toast, hot and savory, in the deep of the woods at a time when salt horse would be savory; and of course the birds were simply delicious. No more cold snacks for me. On a crisp, cool day, with an appetite to match, you have no idea how grateful to an empty stomach is a piece of hot toast and a steaming bird. Occasionally we would shoot a rabbit and roast him on the spit, *i. e.*, his hind quarters, for the noontide repast. In addition to the epicurean feature it well repays in recuperation and the zest with which one takes up the afternoon shooting, to have a good rest at the middle of the day and a ten-minute snooze in the sunshine on a full stomach. One day I heard the whistle of wings so familiar when woodcocks spring, and directly Belze was standing prettily beside a little stream. Up went Mr. Bird and up went the gun, and down he came. I made him grace the piece of toast at noontime, and a bird never tasted better. Take my advice, old friend, and hereafter don't gobble or gulp down a few mouthfuls of cold bread and meat at noon and then haste on to the hunt. The bag will be heavier and you will enjoy grassing them much more if you duplicate the above-mentioned delightful experience.

I was leisurely picking a bird bone, with my back against a log, when a white weasel scurried along a log about 20ft. distant and was lost in the forest. These little fellows are very rare and bring a high price, but we concluded to let him scurry. Knapp then picked up his gun and said: "While you are picking your teeth I'll go back into the woods a piece and swing around to you again in a few minutes." As I sat there enjoying the sunshine, so rare in those days, I heard his gun crack; he called out "Mark!" and grasping my gun, I saw a grouse with wings set sailing toward me. She was just touching the top of

a brush pile when I saw her on the end of my gun, and she fell to the ground without so much as a twitch, killed dead.

Do you think a bird may be so shot that a keen-nosed dog cannot catch any scent from it? A day or two previously Knapp was telling me about being out with a dog whose nose was of proven delicacy and keenness; that he had killed a bird and the dog failed to fetch, although he passed directly over the spot where the bird fell. Himself going to the spot, found the bird visible to the naked eye, and the next instant the dog passed over the bird without detecting it. Nose off, you say? Not so. Now I stood within 30ft. of the victim of my last shot, and he lay there distinguishable, but not what would be termed in plain sight. I sent Belze to fetch, and twice he passed directly over the bird without so much as an indication that the bird was there. Swinging back, he put one foot on the bird, but the instant he raised his foot he caught scent and then suddenly stopped and located the game and brought it in. Now it seems to me that a bird being instantly killed, not so much as a flutter left in him, the shock suspends for a short time the emission of the usual odor, so as to give no indication to the keenest nose. Have you had similar experience and tried to diagnose—or dog nose—the case?

We now made along an old wood road, and Tony at one side pinned a single, and Knapp did the rest. He also picked off another ruffle neck at the edge of a clearing, and we emerged to a narrow meadow, along a stream of about 20ft. in width. We blundered on to a small bevy of quail, an outlying bird flushing and getting away unhurt, but setting to wing a half dozen more, which we marked down in the tall grass between us and the water. "Now," said I, "my friend, we are in for a picnic with Master Bob and his brothers if we keep our eyes and fingers steady;" and so we were. The dogs picked their way around in the high grass, now and then drawing to a point or roading a running bird, till we had picked up four. Then we crossed the stream on a bridge 100yds. down stream, and were just starting up stream, when in a little clump of bushes both dogs drew to a stand. In a minute two grouse boiled out, and we both scored a miss, while a third that Belze roaded flushed and went away unshot at. I felt the need of having some one scoff at me then, but you not being around the air trembled with nothing but mutterings deep. On we went after two birds that had come across the stream when we started the last bevy, and soon both dogs had them in limbo. At the rise we got one, and picked up another that had died after having flown across the stream.

We now shouldered guns and made a forced march to a likely hillside bordering a big swamp directly on our route to Cedar Lake, so as to be near the supper table when the day's hunt was done. The bag began to be heavy, and for the first time my shoulder ached with the 8 or 10lbs. in the bag. The sky had been darkening with clouds for an hour, and now and then a drop of water told us to make for cover. Going along the hillside, we picked up two more birds, and the rain now falling fast, we made the best time possible over the mile and a half that lay between us and supper. We got in at a quarter to 5, wet and happy, after the first day of what could be called sport since arriving on the ground. I had got down to shooting trim and was ready for some reasonably good records, but all the rest of the time the weather was raw, sour and rainy, and the birds were wiser than we and stayed at home, so we only picked up enough for the pot, or possibly a few to spare, as reported to you by card from day to day. And so passes into history my trip of 96. It was far from what I had planned it to be, owing to your flunk on coming west, but on the whole I'm glad, as before intimated, that you did not come to share our disappointment in the weather; for it is trying to see the rain or snow fall day after day, or the wind howl great guns, all the time knowing that with sunny skies a good bag awaited the tyro, and a back load the expert with a gun. You said something about Tick being as good a dog as Tony; read on.

To Essex went a hunter bold,
Who tramped the hills in heat and cold;
Across his arm a shooting stick,
And at his heel a dog called Tick.

A hunting dog! Jove save the name,
For skunks and grouse were all the same
To him. And then when all alone
How stanchly he would point a bone!

When not engaged in hunting fleas,
His curly tail just fans the breeze
That sweeps the field. He points his best
With game due east, his snipe nose west.

When woodcocks spring or quails take wing,
What is that cock-eared, piebald thing
That scampers after? By Old Nick!
It is Jack's pride, the famous Tick.

When jumps the rabbit from the ground,
With leg of deer and bay of hound,
Tick speeds away; and bound to roam
Till every lowing cow comes home.

Oh, what a dog! Compared to Tony
He's like a wolf, long, gaunt and bony.
While Tony beats a field with sense,
Tick goes to sleep beside the fence.

* * * * * * *

Wouldst thou a brace of bird dogs see?
Tony and Belze are dogs for thee!
Of royal blood, swift, stanch and true,
As fine a brace as ever drew
A field for quail, a wood for grouse,
Or guarded well their master's house.

Yours as ever, L. A. S.

Hardship in New Jersey.

THE New Jersey game wardens continue to make hardships for the law-breakers in that State. The arrests for November averaged more than one a day, and on old and new cases $258.66 was collected and deposited to the credit of the Commissioners. Fish and Game Protector Chas. A. Shriner and his deputies are setting an example of "Jersey justice" which might well be emulated elsewhere.

TRACKING MOOSE ON BARE GROUND.

"WELL, Ralph, let's be going," I said as I wearily shouldered my rifle and rose from the old "blow-down" on which I had been resting.

We were about five miles from our camp on the South Branch of the Machias, engaged in the difficult task of tracking moose on bare ground. For two days we had followed the tracks of three moose, a bull, cow and calf, as far as we could judge, which fortunately had continued to travel slowly and in circles, enabling us to return to camp at night, having carefully blazed our last stop on the trail, and continue the pursuit the following morning.

Ralph, my guide, now took the lead, directing me to keep close behind him; I could not help but admire his wonderful skill in following the almost imperceptible trail. Nothing escaped his lynx-like gaze. Here he would point to a bit of moss scraped from a log as one of the great creatures thundered over it—there, to a slender branch of "moose wood" from which the bark had been peeled by our game. Ralph would generally stop before one of these moose bites, as he called them, and taking out his old clasp knife scrape some bark from a place that had not been touched by the moose. By comparing the color of this freshly peeled wood with that of the moose bites, he could estimate their apparent age and get some idea of the distance between us and our game.

We soon came to a dense clump of alders bordering a swamp, and here Ralph stopped, seemingly puzzled. "I've lost the trail," he finally remarked; "you sit down a few minutes and I'll look the ground over a bit." Cheerfully assenting, as I was beginning to feel rather tired, I threw myself down on an old pine top and for fully fifteen minutes Ralph thrashed around among the dry alders, now and again kneeling to study the age of a track. At last he returned with a discouraged look on his usually merry countenance.

"It's no use," he said, "there are so many tracks in there I can't tell which are the right ones. One thing is certain, the three moose we're after crossed this swamp somewhere, and the only thing we can do is to circle it and hunt for their tracks on the other side. If I only had a little snow to go by I'd show you some fine moose hunting."

Determining not to give up if I had to circle all the swamps in Maine, I told him to go ahead, and in less time than either of us had anticipated we rounded the marsh grass and alders, and saw to our mutual satisfaction a fine hardwood ridge not far ahead. Once more my guide searched for the lost trail, and soon was rewarded by the discovery of fresher tracks than we had yet seen where the three moose came out from the swamp. Thus stimulated, I gripped my rifle, and with a quicker pace we set out over the ridge. A snow squall had sprung up, but as the tracking on the ridge was a great deal easier we did not mind the snow much. What I did mind, however, was a violent wind which followed the snow flurry, creating great havoc among the forest monarchs. Crash after crash resounded through the woods, as the tops of stately pines were torn away by fierce blasts and hurled down sometimes not 8yds. from us.

"If you hear one breaking above you dodge it," remarked Ralph, who had stopped to look at his compass. "A fellow down my way was crushed to death by an old top last year." And with this pleasing assurance he resumed the march.

The snow had ceased to fall, and the sun was striving to break through a mass of clouds, when Ralph again halted with an exclamation of satisfaction. I read the favorable signs as soon as he did; there in a patch of marsh grass was a place where some large animal had lain down.

"Don't move!" exclaimed the guide, "you might spoil some important signs," and with a catlike tread he made his way among the multitude of tracks plainly visible on the wet ground.

"Now you may come," Ralph remarked, after he had surveyed the ground and surroundings to his satisfaction. "See what you can make of it."

I studied the situation some time before venturing an opinion. "The bull must have lain there," I at length commented, "and over here are two more depressions where the cow and calf probably rested, as they are much smaller. When the three moose arose they walked over to this moose wood and fed a while, then they continued along here on a slow walk, and finally went off in that direction." So saying, I indicated a course at right angles to the one we had been following.

Ralph gave a hearty laugh. "That's just where you are dead wrong. These tracks you are now looking at are old ones, probably made two months ago. I must confess they fooled me until I saw that," and coming to where I stood he pointed to a peeled twig which would have escaped the eyes of most men.

"Well, what of that?" I said, somewhat chagrined.

"Why, don't you see by the color of the wood that it is an old bite? When the moose were done feeding they doubled on their tracks and went off in this direction. I have found some bites not over an hour old."

Parting the bushes, I saw he was indeed right. There, in a direction exactly opposite to the one I had indicated, were fresh footprints of three moose. With new ardor we applied ourselves to the chase, crossing two small ridges, and finally ascending a rather steep acclivity. The appearance of the country now very noticeably changed, thick undergrowth giving place to a carpet of soft green grass, while the trees grew larger and much further apart. Suddenly Ralph stopped. Peering from behind his rather ponderous form, I noticed that we were approaching a sort of vista or natural clearing in the forest overgrown with stunted timber and moose wood. The guide's eyes were fixed on some tracks just in front of him, tracks which meant no more to me than the many others we had been following all day. But this crafty woodsman had noticed that while all the footprints previously seen were slightly coated with snow, those just in front of him had not a flake upon them.

"Be on your guard now," he whispered, "the moose are not far off."

Just then some unknown influence caused me to look up, and my eye lighted on a fine specimen of the bull moose standing between two pines about 125yds. distant. Ralph saw him as soon as I did, and our rifles rang out simultaneously. The great animal reeled, almost fell, and then crashed off through the bushes.

I was for giving chase at once, but Ralph would by no means permit this.

"We must wait at least ten minutes," he said, sitting down on a log and taking out his mammoth time-piece; "more game is lost by following it as soon as it is wounded than any other way. That moose is hit hard, and he will not go 40yds. if left alone; but if he hears us following him there is no knowing how far he may be able to travel."

We waited accordingly, the minutes seeming very long to me. At length the guide put up his watch, and stealthily we made our way to the point where we had last seen the bull. There, sure enough, we found a fresh trail leading in the direction we judged our game had taken, Ralph soon pointing out a great root which had been literally torn from the ground.

"That looks like the work of a wounded moose," he remarked, and we quickened our speed. The guide, however, bore a puzzled expression on his countenance, and before we had gone 100yds. he stopped abruptly.

"We have made a big blunder," he said after a moment of silence.

"What do you mean?" I asked in surprise.

"We fired at the bull moose," he continued, "and we are now following the tracks of the cow."

"What makes you think that?"

Ralph removed his cap and scratched his head. "That bull was hit hard, he could never have come as far as this; besides this track is too small to be the bull's."

"But the root torn up, you said it was the work of a wounded moose?"

"A moose badly scared will often tear around some. Now mind, this track may be all right, but I have a sort of feeling that it isn't. I propose we blaze that old stump there so we can find this place again in case my theory proves wrong. We can easily retrace our footsteps to the spot where we fired at the bull, and if I am not greatly mistaken we will find another moose track there which will prove the right one."

So back we went, easily finding our starting point, where a fresh difficulty arose. The moose had been feeding and tramping around before we disturbed them and a perfect network of tracks confronted Ralph. Trail after trail we followed with no result. I was about to give up in despair and even Ralph was weakening when suddenly he uttered a cry of delight, at the same time holding out a leaf he had just picked from the tracks we happened to be following. I took it from him and could hardly help giving three cheers, for on that leaf was a tiny speck of blood.

All was now easy; every few yards we would find fresh marks of crimson on ground or bushes, and often torn and trampled shrubbery.

At length Ralph paused in the act of climbing over a windfall, looking back at me with a broad grin on his face. Hastening up, I peered through the bushes and there lay the bull moose, which had not run more than 30yds., having been hit squarely in the breast. As near as the guide and I could estimate, the animal weighed about 1,000lbs., and while his head was large, the antlers, though well formed and evenly pronged, were a bit under size.

"Well," said Ralph, "you've got him, but it was a tough job. If we had only had a little snow I could have shown you what we fellows up here call real moose tracking."

LEONIDAS WESTERVELT.

YELLOWSTONE PARK GAME.

MAMMOTH HOT SPRINGS, Yellowstone National Park Nov. 30.—*Editor Forest and Stream:* In a few days I shall ship to Washington most of the animals we have here. I shall send six antelope, one cow elk, four beaver and two black bears. I will leave five elk (bulls). I'm having crates made for them in Gardiner. They are to go by express. November has been a very stormy month; hardly a day without a storm of either rain, snow or wind. Friday night last was our coldest—27° at the Hospital, Fort Yellowstone. There is much more snow here now than usually at this time of the year. About two weeks ago we had the ground well covered, then came a chinook wind, with a little rain; the snow melted off in many places, low down, but in others only enough to form ice over a considerable extent of country; then came more snow and the cold snap. There is good sleighing from the Springs to Cinnabar, but the snow is very badly drifted.

The antelope were on the flat on the east side of the Gardiner River and slopes of Mt. Everts in large bands, but the coyotes were giving them fits—were killing at least five and six a day. The coyotes are very numerous, with now and then a few wolves. The poor antelope were obliged to get away, so they crossed Gardiner River, traveling down along the Yellowstone in sight of the town of Gardiner. Two miles below there is a line of fence across except at the road. The first band of about 150 soon got out of the Park into Montana, when the people of Gardiner and Cinnabar started in on them. In one day over twenty were killed. Not a day passes but some are killed. One got past Cinnabar and in Reese's field, where it was shot by Reese. If they get past Cinnabar they have Horr to pass, with its hundreds of miners, all wanting to get a shot. It's possible that a few may get below Fridley, where there is a bit of unfenced, open country. Monday the last band left the east side of Gardiner. There was a bunch of eight, with six coyotes after them. By morning I don't suppose there will be one alive on that side of Gardiner. This morning I saw over 200 within a quarter of a mile of Gardiner on their way below.

I fear there will not be many antelope left in the spring—not enough for seed. I hope I am mistaken. I hope that a few will manage to live and return to the Park in the spring, but even their efforts to do so will be a useless struggle unless the coyotes are killed off. I'm sorry to see the antelope killed by the people around here, but they say that they may as well have them as the coyotes; they would be killed anyway. Day before yesterday three antelope were killed in sight of town.

The severe weather has made the elk come down very early. About 200 were in the Government pasture, some eating at the "dump pile," Saturday. Mount Everts and the Blacktail county are alive with them. I saw twenty-one mountain sheep in the Gardiner Cañon the other day; several fine rams among them.

Tom Miner tells of a band of mountain sheep in the first cañon of the Yellowstone above Bear Creek, and that he saw the tracks of a family of six mountain lions. They

will get most of these sheep or run them out of the country.

A party of four men have been hunting up Hellroaring Creek; they were traveling with a permit. On their way in they had twelve animals loaded with game. They have been arrested for killing their meat in the Park and are at the Mammoth Hot Springs now awaiting trial.

Some people won't believe there are any wolves in the Park. I saw five in Hayden Valley, where Mr. Hough and I found the dead buffalo. E. HOFER.

DEER HUNTING AND DEER LAWS.

Editor Forest and Stream:

Just a few words in regard to the manner in which Deerslayer's article in FOREST AND STREAM has been received by a number of your correspondents.

First, I wish to state very emphatically that I do not approve of Deerslayer's method of taking deer. But when a man does not agree with you as to the method to be used in killing deer it is no reason why he should be "jumped upon" roughshod, and such abusive and insulting terms as "butcher," "human fiend" and "brute" showered upon him. Without doubt every correspondent who has abused and insulted Deerslayer could call to mind the time in his sporting career when he was not above taking a pot shot at a bunch of quail, or even shooting a deer in the water with a scatter gun. I have as friends men who shoot game birds sitting or make pot shots when they get a chance, yet they are men of honor. What they lack, and undoubtedly what Deerslayer lacks, is education in their sport. Help them up to the higher plane of sportsmanship by kinds words of advice and common-sense argument. If you wish to convert a man to your religious or political faith you do not abuse or insult him, but bring to bear your most convincing and conclusive arguments, couched in pleasant words. Gentlemen, if you were in camp in the wilds of the Rockies, with a man for guide who differed in opinion with you as to the proper method of taking game, you might argue with him, but you would not insult him.

Let us hope that the pages of America's best and cleanest sportsman's journal may not again be soiled with such insults as have been flung at Deerslayer, and all because God has not made him to see as we see, or think as we think. JOHN C. BRIGGS.

IOWA.

DEC. 3 —*Editor Forest and Stream:* The battle royal that has followed on Deerslayer's description of his method of hunting has developed again a phase of sportsmanship that is very distasteful to those who have the benefit of education and refined associations. It is likewise one of the few things that a FOREST AND STREAM reader has to sometimes regret seeing in his favorite paper. I do not refer to Deerslayer's style of hunting, but to the style of the criticisms he has raised. Personally I have never killed a deer, nor fired at one, chiefly because I have never, but on one day, been within range of any. On that occasion I had my rifle on one side of me and my camera on the other, paddling in a canoe around a Canadian lake, amusing myself doing nothing. Two deer came out of some reeds and brush and stood for a moment looking at me from the shore, and I photographed them fairly well. Then they went upon their way. I wanted a picture of wild deer most. Next I would have liked a shot at one, but the second desire yielded to the most ardent. To shoot a deer I have gotten within reach of by skill or endurance or nerve on my part would give me greater pleasure than to shoot one that came into my tent and couldn't get out. If he were tied up to a tree I would enjoy it still less. I don't think that I would care for Deerslayer's method at all, in fact I am quite sure that I would not, but right there arises the question as to whether my different taste gives me the right to assail him with outrageous language and epithets, as some of your correspondents have done. To express in a public print the hope that a man's gun will burst and kill him, because he catches a deer with a rope, is a form of controversy closely resembling rowdyism. For the sake of your old-time prestige I was sorry to see some of these letters in your columns. Mr. Cleveland's manly apology disarms criticism, to a certain extent, of all his co-offenders as well as of himself, and I will turn away from the whole greatly to be regretted matter, with relief, to speak of the question that is at the bottom of all disputes as to the proper manner in which deer and other game should be taken.

In the first place, all citizens of a State have an equal right to its game. If it runs or flies on public lands they have an equal right to go there and hunt it. Scores of years ago the number of deer in the Adirondacks and elsewhere so greatly outnumbered the hunters whom the facilities of those days enabled to hunt them, and the number of deer born every year so greatly exceeded those killed or dying from natural causes, that there was no need of a law for their protection. Every man took what he pleased, if he could, and no one noticed the difference. Now, however, all is changed. In the last fifteen or twenty years railroad improvements have made it so easy for even women and children and invalids to reach the wildest hunting grounds that the number of hunters has increased, doubled and tripled with the years in geometrical progression. Coincident with the increase in the army of hunters came the greater range and power of the weapons, to say nothing of their being repeaters. Formerly a man rarely got two shots at one deer. Now he gets three or four frequently. All these things, naturally enough, have led to a steady decrease in the number of the deer—a decrease so steady in proportion to the hunters that there is brought before us the unmistakable possibility of having no deer left at all. Then we begin to enact laws to secure the killing of less game than formerly, in the hope that the natural increase of the animals will keep pace with the loss by means of the hunters.

Now we reach our point. The sole object of the law is to prevent too great a number of the deer being killed. That is its essence, and certain methods are only forbidden because they make it so easy to capture the game that a greater number of deer that we can spare would be annually killed if those means were used. Any method that does not possess this same fault is perfectly justifiable and its employment purely a matter of taste. Now for Deerslayer's deed. He, by means usually employed in the Adirondacks, drove (or had driven for him) a deer into the water. Then he pursued it in a canoe, and on catching up with it tied a halter round its neck to secure it when shot. Then he or some one else shot it. Everything, excepting the use of the rope, was exactly according to the regular method of Adirondack deer hounding. If they were near enough to the animal to put a cord around him they could hardly have missed him with any kind of gun. Therefore the act in no way, however slight, increased the destruction of the game. Personally I cannot see much amusement in pursuing deer in a canoe, because if you get so very close to them the only part of the chase which is in the sportsman's own hands—namely, the shooting—is so easy that there is little pleasure and no cause at all for a feeling of hunter's pride in it. That is my own view of the matter and doubtless some of Deerslayer's rather hasty critics possess the same, but I respectfully call their attention to the fact that such dogmatic laying down of the law as they have done lately is quite as likely to be the result of boorish egotism as of pure sportsmanship.

Keep to the essential point, gentlemen. The number of deer killed annually is of more importance to coming generations of hunters than is the way in which they were killed. If I leave a son, I have no doubt if he has my blood in his veins he will like to hunt above all things, and he would be better pleased that the sportsmen of to-day had killed a couple of hundred Adirondack deer annually by lassoing than a couple of thousand by shooting. There is the whole matter in a nutshell. Let us confine ourselves to a thorough examination of these matters and to the enacting of laws for the better preservation of our game, but let us be equally careful to avoid what is none of our business. If Deerslayer chooses to secure his legal number of deer per year in a manner which is actually more difficult than the usual one, as it clearly must be, let him do so in peace, and let us devote our energies to getting on the trail of the men who take more than their share with the cleanest kind of stalking and shooting. Through it all let us leave aside all-aged, catch-gallery phrases of "butcher" and the like, and discuss the matter politely and with due regard to the courtesy which improves every relation in life, and alone makes social intercourse between those who disagree tolerable.

FRANK LAURENCE DONOHUE.

MAINE AND ITS BIG GAME.

BOSTON, Dec. 5.—Another flood of deer is arriving by the way of the American Express Co. from the wilds of Maine. There have been several tracking snows of late and each is followed, in a day or two, by a number of deer reaching Boston. Prices are very high in the markets, and the temptation is strong to the sportsman not over rich in this world's goods to sell his venison. I hear of a deer sold by a hunter just returned from Maine to a hotel for $30. But as the season advances the deer are getting poorer in flesh, and it seems almost a pity that the open season does not close with Dec. 1. Very few moose are arriving just at present. By the train reaching Boston Monday evening there came seven deer, with a great many saddles and parts of deer. The next day there were about as many, but since that time only two or three to a train.

J. Parker Whitney, well known to the readers of the FOREST AND STREAM, went up to his camp home at Mosquito Brook, Richardson Lake, Me., on Tuesday last. He was accompanied by his family and a friend. He went in via Bemis, and from thence to the Upper Dam. The weather was cold and the lake very likely to freeze, but Capt. F. C. Barker got him through to the Dam without accident. Capt. B. then immediately drew his steamers out for winter. All the other boats on the Rangeleys are out for the season, and those waters will doubtless be closed before this reaches the eye of the reader. Mr. Whitney will remain at his camp till the new year. His two sons, in Harvard College, will spend Christmas with him. A trail is to be cut from Bemis to Mr. Whitney's camps sufficiently good for the passage of a team in winter. The distance is five or six miles through an unbroken forest. From Mr. Whitney's to the Upper Dam there is already a fair trail, the distance being about two miles.

Mr. E. M. Gillam's hunt for quail in Jersey was a fairly successful one. He met his brother, of the Philadelphia *Record*, at their old home, and both had their favorite dog. They hunted the quail sections about Vineland faithfully, having fair success. Then they tried some of the quail sections of eastern Pennsylvania. Here the hunting was novel and new to Mr. Gillam, of Boston, the shooting being almost entirely from open fields instead of woods and thickets. They found the lands generally posted with "All shooting forbidden," and it took a good deal of persuasion and "standing up" to get the farmers' consent to allow their lands to be shot over. In one case the Gillam boys thought they had permission to hunt all right, and raised a flock of thirty or forty quail. E. M. drew his bird with both barrels, and his brother followed suit, but before their dogs could retrieve the birds they saw an angry farmer coming, accompanied by a big Newfoundland dog. The dog was savage, and immediately seized upon both dogs and proceeded to punish them most unmercifully. The burly farmer was also ready to punish the owners of the dogs, and it took a good deal of palaver, accompanied by a greenback, to pacify him. At the best the boys had to leave the quail they had shot, but they got a good number on the whole trip, making a record of over forty.

Still the hunters are going to Maine, and doubtless will be till the end of the open season on big game. Partridge shooting is unlawful in that State after Dec. 1, and it is hoped that the gunners after big game will leave the birds to breed. Messrs. Wayne H. North, Dr. Frederick Freeman, Bert Atkins and M. D. Cressey started for Ashland on the Aroostook Railroad last evening. From Ashland they are to go forty miles into the Alagash country. They are taken in charge at Ashland by Asa Rafford, their principal guide. Their principal camp is to be at Pratt Lake. They go for moose, though deer and caribou will be accpted.

A dispatch to the daily papers gives a thrilling account of a Wilton, Me., man with a moose in the Dead River country last week, where a party of four was engaged in hunting. They had already secured three deer when one morning Leon Bump came upon a cow moose, which he allowed to escape. Quickly he saw a big bull. Firing two shots, he only angered the beast, and it immediately made a rush for him. The report says that the man was so paralyzed with fear that he could scarcely move, but did raise his rifle and fire again, stopping the moose when only 6ft. away. In the party were Leon Bump, E. C. Bump, Guy Fernald and Dr. C. F. Rowell.

The newspapers also have it that W. K. Moody, with his brother, Prof. J. F. Moody, of the Auburn (Me.) High School, has been down to Bemis, Me., on a deer hunt, and that Capt. F. C. Barker hunted with them. They struck Bemis the night before Thanksgiving, and it was snowing. The next morning it was dull and foggy, but there were 3in. of new snow on the ground—the ideal condition for deer hunting. The hunters were off early, and it did not take long to strike tracks. A big buck was shot on the side of the mountain, with two or three other ineffectual shots obtained. The most singular feature about the buck was the fact of his having but one antler. There was a stub about 4in. long for the other. It had evidently been broken off when in the velvet, as it was entirely healed. The next day the snow nearly all went away, leaving the hunting poor. This weather was followed by a freeze that rendered hunting very difficult by reason of the crashing of the leaves and underbrush at every step.

Dispatches to the newspapers complain of a good deal of illegal shooting of deer in Maine, and shipment by underground railway to the Boston markets. I have occasion to go through these markets almost every day, and so far I have failed to find the usual signs of illegally killed and shipped venison as numerous as usual. So far venison has been scarce, though some has been obtained from sportsmen who have sold their deer in order to help out on the expenses of their hunting trips, as already noted. It may be that there is yet a good deal of illegally shipped venison to reach the Boston markets, but so far I cannot see that the quantity has been as great as usual. Prominent market men, thoroughly acquainted with the venison business, will indorse my statements.

I intended to have mentioned further up that Bemis is a very easy point for the hunter to reach in the big game section of Maine. One reaches that peculiar lumbering, hunting and fishing city in the woods in the early evening, via Portland & Rumford Falls and Rumford Falls & Rangeley Lakes railways. Capt. Fred C. Barker takes excellent care of the sportsmen, and it is like living at a good home, and yet right in the big game woods. J. A. French, well known to sportsmen formerly going to the Rangeleys via Andover, is at Bemis with forty men in lumber camps, and with a contract to get out 2,000,000ft. of spruce. But he is going deer hunting on the next good snow. SPECIAL.

LEBANON, N. H., Dec. 5.—*Editor Forest and Stream:* A party of nine sportsmen from this place and vicinity, members of the Sagamore Gun Club, who have a camp on Birch Island, Holeb Lake, Maine, have just returned from a week's trip to that locality, bringing with them fourteen deer—a good showing, as the snow was not in the best condition for tracking on account of a light crust. They report plenty of game in that region.

W. S. C.

NEW YORK.—My chum and I have recently returned from a shooting trip in the northern part of Maine, and as it proved most successful I thought perhaps some of the readers of your interesting journal might like a short account of it. We went in from Ashland to one of Mr. C. G. Reed's camps, situated on the south branch of the Machias River, where we remained just fourteen days, bringing out with us four deer, one moose and one caribou. I have hunted in many parts of Maine, but never before have seen so favorable a spot for game of all kinds.

We both wish to highly recommend Mr. Reed, who tried in every way to make our stay in his camp agreeable as well as successful; and as for the guides he furnished us with—Ralph Morse and A. F. Hoffses, both of Mapleton, Me.—I can only say they are two of the best hunters and all-round guides I have ever had experience with.

You will find inclosed an account of my moose hunt, which I would be greatly pleased to have printed in FOREST AND STREAM for the edification of other amateur moose hunters, who may be benefited by some of my mistakes. LEONIDAS WESTERVELT.

[Mr. Westervelt's moose hunt is described in another column.]

ARKANSAS AND THE SOUTH.

LITTLE ROCK, Ark., Dec. 4.—The eagerly anticipated rain that was to fill up our marshes and streams finally came, and for a whole week it did nothing but rain, so that there is now plenty of water in our duck marshes. The knowing ones then said that all that was necessary was for the rain to break up with a cold snap, and we would have a good flight of ducks. This too came, and with it the ducks also, but the thermometer rapidly ran down below freezing, and remained so for five days. The natural consequence was that all our marshes and lakes froze, and remained in that state so long as to drive all the ducks further south. Thus the flight that should have afforded good sport remained only a day, and our duck shooting for this season is now a thing of the past. It is quite likely that the shooting is now good in Florida, Louisiana and Texas, as freezing temperature is reported as far south as San Antonio, and the shooting must now be fine on the Texas coast.

Quail.

The sportsmen of the South will now turn their attention to the quail, and as the crop is unusually abundant in Arkansas, Tennessee, Mississippi, Louisiana and Texas, there is not much question where to go in order to get good shooting. Mr. Harry Stevenson informed me while at the Vicksburg shoot that quail shooting was good in the vicinity of Monroe, La., and that they never went a great way from the city to do their shooting. Mr. Frank Arrighi told me that it was not a difficult task to find from fifteen to twenty bevies in a day's hunt within a short distance of Natchez, Miss. At Vicksburg, too, the birds were plentiful, and Mr. Will Miller and Mr. Bradfield told me that they had had some fine sport with the birds this fall. All along the line of the Yazoo Valley R. R. good shooting is to be had, and a man can not go much amiss in any part of Mississippi. Locally the birds are plentiful, but not much attention has been paid to them, as the weather up to the present cold snap has been too warm. But now that there is frost in the air and all the vegetation has been killed off, they will get little rest until March 1.

Two of our local shooters, J. W. Irwin and John Pemberton, had rather a novel experience the other day. They started off duck hunting, and the only dog they had was a Chesapeake retriever. The flight was rather scattering and soon ceased entirely. They then thought they would see if there were any birds to be found in the fields close by. Of course they expected to walk them up, and never paid any attention to their retriever. Presently Irwin noticed that the dog was acting rather peculiarly, as his head was high up in the air and gently swaying to and fro; so he walked up to him quietly, and when within a few steps of the dog he broke and put up a bevy of birds. These were marked down and the dog allowed to work on them, and whenever he scented one he went through the performance above described, and with only this dog to help them the shooters bagged thirty-six birds.

PAUL R. LITZKE.

CHICAGO AND THE WEST.

Enormous Seizure of Illegal Game.

CHICAGO, Ill., Dec. 5.—State Warden Fullerton, of Minnesota, has added another laurel to his wreath as a protective officer, and has struck one of the hardest blows ever aimed at illegal game handlers. It was thought that the Kewaunee game case of Illinois, fiasco as it was, broke the record for amount of illegal game confiscated. Mr. Fullerton's seizure, however, involves nearly as large a lot of game, and moreover he got away with his confiscated property. The appended press dispatch gives such facts as are known at this date, and will serve well enough to show how the big markets get their supply of venison. They get it at the expense of the people of such States as Minnesota, States which have a little game left belonging to the people. They get it by means of direct and high-handed robbery. Were the game dealers accused of burglary or theft in anything like a similar amount, the outraged law would punish them swiftly and severely. They might break into the vaults of the State treasury and steal directly the people's funds with as much face of right as to steal the people's game. Nay, they might do this with better right, for taxes of the people's property might replace again the money; but no tax upon the people and no resource, either of the people or of nature, can ever again replace the wild game when it is gone. It is a most singular matter that the people have been so slow in discovering the contemptuous injustice, the unlawful wrong, which has been wrought upon them for years by those who seek to privately market property which belongs to the public, and to which by no means can they establish a title. Too much honor and credit cannot be given Mr. Fullerton for his work in showing the people their rights. The facts are stated as below:

ST. PAUL, Dec. 4.—The largest seizure of game ever effected at one time in the United States was made last evening in the Chicago, Milwaukee & St. Paul freight yards by Executive Agent Fullerton, of the State Game and Fish Commission, and Deputy Game Warden James Nash, of Minneapolis. The officers seized and declared confiscated to the State of Minnesota three tons of venison that they claim was being illegally shipped out of the State via the Milwaukee road.

The venison was placed in a Chicago, Milwaukee & St. Paul freight car, which it completely filled. The meat was cut into pieces, all ready for disposition to retailers, and the fine for the illegal carriage of the game meat will amount up into thousands of dollars, as there is a fine of $50 for every piece found illegally in the possession of any shipper or merchant. The venison was tagged to persons in Boston, New York and Chicago. The railroad officials refused to disclose to the officials the bills which would indicate who shipped the venison and who was to receive it.

The officers are of the opinion that the venison was killed by pot-hunters in the northern part of the State, along the Lake of the Woods and in that region. It was impossible to make a count of the pieces, but the officers are of the opinion that the fines for the alleged illegal transportation of the game will reach somewhere in the neighborhood of $40,000 to $50,000 unless a settlement is arranged.

Proposed Illinois Game Law.

We are to have our regular Illinois struggle with the game law at the next session of the Legislature. This time the sportsmen's bill is to be called the Baird bill, and there is every reason to suppose that Mr. Baird has prepared a bill which will be acceptable to sportsmen, and which will not revive the likeness of the late lamented Blow bill, of beloved memory. We are to have our regular committee of sportsmen to go down to Springfield and try to teach the farmers what a fine man the "true sportsman" is. Also we are to have our regular committee from the game dealers of Chicago, who will not say so much about the true sportsman, but who will not do a thing with the farmers just the same. The game dealers will make their usual fight, allowing the sportsmen to do what they please with the Illinois game, which is all sold already, but objecting strenuously to any law affecting the sale of game from outside the State of Illinois. The leaders of the market men would accept a game law which would allow them to sell all sorts of game at all hours of the day and night, from Jan. 1 to Jan. 1. The sportsmen might probably compromise with them on that basis. Let us hope that we shall not be again afflicted with the news of weak-kneed brethren, who, for reasons which perhaps they do not care to have made public, raise their voices, or perhaps we might more accurately say allow their voices to be raised for them, in the cry for a compromise with the butcher shops of South Water street. There is no compromise natural or possible between an honest sportsman and these butcher shops. The war is here and we might as well fight it out. One dealer says some houses in this street often handle from $4,000 to $6,000 worth of game a day at the height of the season. "There is a demand for game which must be filled," he says. There is the whole thing in a nutshell. The dealers say this demand must be filled. Sportsmen know that if the last head of game in this country were killed and marketed the demand would not even then be filled. Yet the life of the sportsman would then be ended. There is your war. Now how can any compromise be possible?

Stole 300 Dogs.

The Chicago dog pound has for the past thirty days been a byword and reproach. Numbers of dogs have been confined there half fed and exposed practically to the winter air without heat and without the chance for exercise. One night this week some charitable soul, whose name is not known, broke open the dog pound and set free 400 dogs, giving them a sort of Thanksgiving Day, as it were. About 100 of the dogs were recaptured and put back in cold storage. There is a fairy story floating about to the effect that 300 dogs were mysteriously shipped in a car, billed through to Texas, but this story is one to which it is probably best to append the cautious journalistic legend, "it is alleged."

Wants a Meat Dog.

A gentleman who lives in New Jersey, but whose name I do not feel quite at liberty to give, has written me a letter which may be of interest to others than myself, so that I beg to give it. He says:

"From your description of the 'meat dog' I am convinced of your accurate knowledge of that article. I am just out of dogs of this description, and for next year's use may want to get one or two three to six months old setter dog puppies of pure blood, but of the large-headed sensible type which develop into 'meat dogs.' Can you give me the address of some one willing to sell such at a price within the reach of one whose Bradstreet rating is not 'AA—A1,' which translated means 'one million or over?'

"I shall greatly appreciate an answer by mail, and if I receive it shall more than ever enjoy the profound wisdom which weekly appears in 'Chicago and the West.'"

I have written the gentleman, expressing my grateful appreciation of his belief in my infallibility, which of course is entirely deserved, but I have delicately tried to explain to him that as I understand it you cannot look a puppy in the face and tell whether he is going to be a meat dog or not, no matter whether he has a large head or not. It is all a question of the experience, training and natural good sense of the dog. A meat dog does not necessarily have a large head. I have seen them with large feet. It is a test of a good dog in my mind, as is well known, that he should be able to meet with cheerfulness such an accident as being run over by a wagon, but there are dogs which might have large heads and be run over by wagons and yet not be good meat dogs. If I had any meat dogs about the office here I would not sell one for all of New Jersey, with Delaware thrown in, but I want to do what I can for a man who recognizes my ability in dog matters, an ability which it seems to me to have been too long smothered under a bushel of popular ignorance about it. No doubt many who will read this are owners of good, strong puppies, which have sensible looking faces, and which might, under proper care, develop into the only sort of dog which is worth having, namely, a meat dog. I wish as a favor to this gentleman and to myself that all such owners of dogs which they are willing to sell would write, giving description of such dog and price wanted for same. These communications should be addressed "Meat Dog, in care of FOREST AND STREAM," whence they will be forwarded to the gentleman making the inquiry. I feel pretty sure that he will eventually get what he wants. I want to see how many dog men there are who do not advertise, but who yet think they can sell dogs. In any well-regulated newspaper office a man should be able to get any kind of game he wants, from a meat dog down to a carpet sweeper, and if my friend in New Jersey is disappointed I am going to be disappointed too. I forgot to state that no dogs need apply which have not had wagons run over them as a preliminary test. This I think would be a boon to the status of shooting dogs to-day. If owners will only get out their wagons and their dogs, and thus try them together, the result will be such that I shall henceforth be regarded as a wise man and a benefactor.

To Texas.

Mr. George Kinney, of Chicago, is one of the early shooters to begin the southern migratory flight to Texas. Mr. Kinney's father is interested in the great Coleman-Fulton Pasture Co., in Texas, the cattle ranch at which our party, as well as many other parties of Northern shooters, were so handsomely entertained by the late George Fulton, as noble a soul as ever lived. Mr. Kinney will go to Rockport, Texas, where he will meet Mr. Jas. Fulton, and will with his wife and family pass the winter at Rockport. He will also visit San Antonio, and no doubt see all the boys there whom all the rest of us would be very glad to see again.

From Arkansas.

Mr. Joseph Irwin sends the following shooting notes from Little Rock, Ark., which serve to make envious those Northern men who live in cities and do not get any shooting:

"On Wednesday last in a slough just below old Mr. Pemberton's residence, where you and I spent the night, his son John and I enjoyed some very nice teal shooting over decoys. After putting out two and a half dozen in the head of the slough we made our blinds in the willows alongside, and Minnesota, my big Chesapeake, was soon busily employed bringing them across from the other side through the mud and water that few dogs could have passed over, but after making over twenty trips over and back he was ready and willing to go again. Never before have I more fully appreciated the value of a first-class retriever. I have bagged nearly a hundred ducks this season, and Minnesota has never lost one that fell within a reasonable distance and that he could see fall. We saw a good many geese and had some shots, but not a feather came to our bag. We have these geese located now and with the coming of harder winter expect to enjoy some of my old-time sport at them over profile and live geese decoys. At present they confine themselves almost entirely to the sand bars in lakes and rivers, but they will a little later go to the fields to feed, returning at night to the river.

"It has been unusually warm up to to-day, Nov. 27, but we are having quite a blizzard to-day. Thanksgiving shooters were a disappointed lot, as it rained all day so that they could not hunt.

"I wrote you last week about the death of Nancy, my pointer, and just a week later I learn of the death of my Roderigo dog over in Mississippi, where he was being trained. This cleans me up in the bird-dog line, I regret to say.

"I start on Thursday next with a party of friends for the mouth of the White River on a big-game hunt, and expect to have a great time. We have two packs of bear dogs and everything necessary for a good time.

"Another party leaves Clarendon, Ark., on a house boat on the 7th, and will float down White River, stopping at points where they find the shooting best, and they will no doubt have a fine trip.

"Jno. Pemberton and I went out Saturday for a duck shoot over decoys, but finding our blinds occupied, we gave the ducks up and went after quail, using on them my Chesapeake dog Minn., and we succeeded in bagging three dozen quail. He does not point them, but has an excellent nose and puts up the singles very nicely, and his retrieving was first class, of course. Who ever heard of hunting quail with a Chesapeake?"

Calumet Heights Club.

By all means the largest and best patronized sportsmen's country club of Chicago is the Calumet Heights Club, whose grounds, so often mentioned in these columns, are located in the wild country along the shore of Lake Michigan just below Chicago. The management of this club is a good one, the endeavor being constantly to afford the greatest pleasure to the greatest number. Trap-shooting is practiced, but not to the exclusion of other sports. Excellent opportunities for long range rifle shooting are afforded, and this branch of sport is a growing one, some of the members stating that next year they intend paying less attention to the shotgun and more to the rifle. Fishing, rowing and sailing have always had many warm followers in this club; and it is proposed now to even further extend the range of outdoor sports, alike for gentlemen and ladies. The club held its quarterly meeting at the Sherman House on the evening of Dec. 2, and appointed a committee on winter sports. These will look into the possibilities for general athletics, throwing the hammer, putting the shot, etc.; and will more especially look into the facilities for curling. Excellent rinks can be laid out on the Grand Calumet River. The committee will also see what can be done in introducing golf and archery. The club-keeper's house and the club dining room will be increased in size. The club is to print its constitution and by-laws in permanent book form. At the meeting a semi-official report was made by the shooting committee on the distribution of prizes. A committee was appointed on river improvements. It seems that the Grand Calumet River has a pleasant way of running backward or forward according to its own taste or fancy, and just now is running back toward its source instead of emptying into Lake Michigan. It is proposed to remove the bar at the mouth of the river.

Calumet Heights Club has been trying the experiment of acclimatizing quail, and has quite a number of these birds upon its grounds. The members make a practice in their walks about the country of carrying a pocketful of grain to distribute for feed for the birds. Next spring the club will plant millet, barley, etc., as feed for the birds, and will see what can be done in planting smartweed for mallard feed.

The wildness of the Calumet Heights country may be guessed when it is stated that numbers of wild foxes and also numbers of raccoons still live in the wooded hills near by. Last winter eight foxes were killed and a number of raccoons captured; but one is obliged to chronicle the death of the club's veteran foxhound Banjo, which was lately killed by a B. &. O. Railroad train.

The annual meeting of the Calumet Heights Club will be held next March. The outlook for the club for the ensuing year is a very bright one.

Called.

Among many pleasant callers at the FOREST AND STREAM office here this week was Mr. Thomas H. Keller, of the U. S. Cartridge Co., one of the best-known men in trap-shooting matters in the counfry. Mr. Keller is looking well and hearty as usual, and is apparently indestructible. He started on his return to New York and Boston with the intention of stopping off at Detroit for a little duck shooting if it was not too late, but it is likely that he will find everything frozen up there and the ducks gone.

A Canadian Sportsmen's Club.

On a recent visit to Chatham, Ont., the writer had the pleasure of accepting an invitation from Mr. W. B. Wells, of that city, to visit the club house and preserve of the Big Point Club, which is situated on Lake St. Clair, about twelve miles from Chatham. The shooting season was then over and we merely passed a night at the club house, but while there I learned some interesting facts in regard to one of the finest little clubs of the sort in the country. There are only six members to this club. Sir Casimir Gzowski is a gentleman eighty-five years of age, but very fond of the gun and still able to kill his bag of ducks. Sheriff Mercer, of Chatham, is eighty years old, a hale and white old gentleman who shows in his person the virtue of field sports. Christopher Robinson, Q. C., of Toronto, is another man of affairs who has time to be fond of the gun. Mr. S. Barker, of Hamilton, and Messrs. W. B. Wells and J. Moore, of Chatham, complete the select and able membership. There are no rules whatever in this club, as all the gentlemen know each other personally and there is plenty of room for all in the little club house. The club has been in existence for about twenty years, and so valuable are its privileges, and so well have they been conserved, that the shooting remains still good enough to please the most fastidious. On the last three days of his last trip to the club house Sheriff Mercer killed thirty, fifteen and forty-three ducks respectively. In fact, the daily average for the entire membership of the club for the entire season often runs in the neighborhood of twenty birds, none of the members trying to see how many they can kill at any time, and some of them shooting only parts of days. This certainly shows very good wildfowl shooting for these days.

The Big Point Club owns about 3,000 acres of valuable marsh ground along the edge of Lake St. Clair, and leases about 2,500 acres in addition as a preserve for quail, these covers being phenomenally well stocked. In short, this is a shooting club where there is some shooting, and it shows alike the efficiency of the Canadian game laws and that of intelligent preserving.

The game book of Big Point Club is the most complete and neatly kept that one has ever seen in any part of the country. From it it is possible to tell how many and what sort of birds each man has killed on each day of the season, and what is his daily average. The yearly totals and the daily average of the total bag for each year are also kept in tabulated form. The club has thus a complete record of its doings in neat and legible form, and as its

fortunate members sit by the big fireplace stove in the middle of the assembly room, they can turn over the pages of their game book and review, each for himself, the doings of the past with a pleasure almost as great as though it were happening over again. From a few memoranda hurriedly penciled as I looked through the pages of this interesting game book, I see that in 1876 the members of the club killed 1,358 ducks; in 1879, 1,150 ducks; in 1880, 2,227 ducks. In 1881 they bagged 2,450 ducks, a daily average of 20 birds to the gun. In 1882, 1,402 ducks; average, 15½. In 1883, 1,771 ducks; average, 22. In 1884, 1,942 ducks; average, 22½. In 1887, 1,160 ducks; average, 16½. In the year of 1894 there were 1,304 ducks killed, a general daily average of 19 birds. Certainly a fine showing.

The shooting at Big Point Club is chiefly at marsh ducks nowadays, as the last few years have been seasons of very low water, at which time the deep water ducks are not so abundant. The shooting is done from Rice Lake canoes propelled by paddle, a "teeterish" sort of a duck boat for the novice.

Mr. Wells tells me that he very often runs down from Chatham to the club on his bicycle, this requiring but an hour or so, and thus gets an evening's shooting in the most pleasant way imaginable. Rarely indeed can the sportsman of to-day have such privileges near his home.

The Ways of Some Deer Hunters.

A friend in Ohio sends me the following clipping taken from the Dayton *Journal*. I think all will agree with him that is about the cheekiest thing that appeared in print for a long time. It would at first thought appear inconceivable that any man would be ass enough to thus publicly boast of his unlawfulness and at the same time indulge in such empty vaporings as to his own prowess. Set it down that such a man is a rank coward in his heart, and an associate of rank duffers and pot-hunters, all of whom the great State of Ohio might do well to keep at home if possible and out of print when practicable. The question of non-resident shooting becomes obnoxious to dwellers in game-producing States when such men are the visitors. The extract needs no further comment. It reads in full:

Deer Hunters Returned from Minnesota with Six Carcasses.

SHAKY GAME WARDENS SMELLING AROUND THE BUCKEYE PARTY, PALE AS GHOSTS, BUT THE BOYS SHIPPED THEIR VENISON HOME ALL THE SAME.

WAPAKONETA, O., Nov. 20, 1896.—*Editor Dayton Journal:* We arrived home on Thursday, Nov. 19. We intended to stay until the law was out, but owing to the close watch the Minnesota game warden had on us we concluded to return home. We had six deer in the party, and we thought we had better start for home.

We started back as far as Hibbing and waited until next day at 12 P. M. There we took the Missaba road for Duluth, the game warden being on the same train, keeping his eye on us and telling the conductor and all his friends on the train that he would give them some venison. This evening we traveled on and reached Duluth at about 3:30 P. M., and there we all started to the Northern Pacific office to have our tickets signed up. On our return to the car we found that there were six State game wardens awaiting us.

We all went into the car and in they came. If you ever saw six badly frightened men, it was the wardens. You can imagine yourself if you were in their place to go into a crowd of men, seventeen in number, and every one having in one hand a Winchester rifle and in the other a double-barreled shotgun. It looked to them like a Jesse James gang. Anyhow there was not a man among them but what his voice trembled. They told us their business, and, of course, we complied with their wants.

The first to be examined was Mr. V. W. Houchin's hunting chest. He politely informed them that they should be very careful and replace everything in its place as it was or he would see that it was.

Then they began to feel a little shaky about it, at any rate they went through our baggage in a hurry, and should we have had some venison in our possession they would not have found it, as it was a little too warm for them.

They were satisfied of their search and found nothing. Mr. O'Dell, of Sidney, very kindly thanked them for following us wherever we went. They followed us for one solid week, and we Buckeye chaps were a little too sharp for them. They examined the car, but we have the venison. People in Ohio cannot imagine how the State of Minnesota put such people in an office of that kind who are lacking of sense, the way their game wardens are.

Had we made one move with all those firearms we would have had six corpses for the Duluth undertaker. These very men will never be any whiter when they are dead than they were at that time.

The main State agent, Mr. J. E. Phillips, was at Hibbing when we arrived from camp, and we were told he was there, so we proceeded at once to make safe our game, which we did, and I would like for any of my Ohio hunters to be very careful and not let those chaps get hold of them, for if they do that means $50 and jail. That's not very pleasant. Of course they cannot blame them, as they get one-half of what they arrest, so you see why we were watched so closely. Four hundred and twenty-five dollars was a nice thing looking Mr. Game Warden in the face, but when he put his hand down it was gone.

I will close, hoping that in the future we may be able to again write you. Yours respectfully. G. W. HOUCHIN.

Wild Game Around Chicago.

A wild red fox, which came from no one knows where, was found running down South Water street in Chicago one day last week. It was pursued and killed directly in front of the big brick building which now stands on the site of old Fort Dearborn. The appearance of the fox is a mystery, but true to fox reputation, he old fellow was next to the poultry coops.

The following story about a wild deer is taken from a current issue of an Elgin, Ill., paper, Elgin being practically a Chicago suburb:

"This morning a deer appeared on Highland avenue at 9 o'clock. It ran on Crystal street to Locust and on to State street, coming north again to West Chicago. Several men attempted to head it off, and it bolted west to South street. A man followed in a wagon, but the animal disappeared near the home of Horace French, taking to the fields. Later J. M. Adams and others started with guns, etc., to capture the animal. A Chicago man has a country place west of Algonquin, where he keeps several fine deer. As the animal came from that direction, it is thought to be one of his that escaped. The deer was found in the woods near Trout Park, and was shot by David Nish and Sidney Rogers late in the afternoon. It was a fine animal, in splendid condition, and weighed 180lbs."

No Cause of Death Found.

The daily papers of last week fully described the sad and mysterious death of Mr. W. W. Ingram, of this city, who was found dead in the woods near his camp, not far from Michigamme, Mich. When found, the body of Mr. Ingram showed that death had ensued some days before, and the body was of course frozen. Near the remains lay the carcass of a deer, which Mr. Ingram had evidently killed and was trying to take to camp. No wound or mark of violence was found on the body, and it seemed a mystery how death had happened. The most thorough investigations since then fail to throw any light on this tragedy of the woods. Mr. Ingram was a Chicago man of wealth.

Killed his Brother.

In the Michigan deer woods one young man accidentally shot and killed his brother last week. I withhold names out of respect to the living victim, who is nearly crazed.

So far I have heard of only four or five deaths by accidental shooting among deer hunters this season, a record pleasingly small as compared to that of thirteen men so killed last year in Wisconsin and Michigan.

A Quail Hunt in Canada.

At the close of the International field trials, which we attended together, Mr. Wells asked me to come over and have a little quail shoot on the Big Point preserve, which was only a few miles from the grounds on which the trials were run, and this I was glad to do of course, though quite unprepared for shooting. It was about 3 o'clock in the afternoon when we arrived at the shooting grounds and we had not a great deal of time, but from the time we cast off in the first cornfield I had as busy a time as I ever had in my life, until dark put an end to exertions, which caused me to perspire freely, as though it were midsummer. The trouble was that I could not hit anything. This sometimes occurs to the best of men and very often occurs to me, but this time was the worst case of it I ever had in my life. We actually put up over a dozen bevies of birds, I believe, and I fired somewhere between twenty-five and thirty shots, and all the birds I got made just the magnificent total of eight! I should have killed at least fifteen or more. We had but the one gun between us, a handsome little English gun and as good a quail gun as one need ask, but made after the English fashion with a very straight stock, which was a handicap almost prohibitory with me, as I cannot shoot a straight gun. Time and again I begged Mr. Wells to take his gun and do the shooting, but he grinned and declined, saying he was having more fun than he ever had in his life just watching me shoot, as he had never seen anything like it! The dogs were working beautifully, Mr. Wells having along three: Cleopatra, winner of first in the trials; Luke, divider of third, and Daphne, another good and as steady a bird dog as any man need want. It was Mr. Wells's declared intention to show me that field trial dogs could be good shooting dogs, and I must say that he can easily prove this proposition if he always brings to its support the three dogs he had that day, which would be hard to beat in the field. They made no mistakes and did some lovely work indeed. Their pleasure must have been marred by such wretched shooting as I did, but they kept to their work steadily and found us one bevy after another. We did not work the singles very closely, except in one or two cases, but the covers seemed literally full of birds. We had point after point from all the dogs, in fine shooting country, and I had shot after shot, but believe it was the sixth or seventh shot before I managed to worry down a bird, then another one or so after a while. Then Luke got a bevy point in a cornfield, and I was lucky enough to get a bird with each barrel. On still another cornfield all three of the dogs were together pointing a fine big bevy when we came up with them. Here I managed to kill one bird with my right and to knock down two with my left, my average thus beginning to take a look up, though, as I remarked to my companion, I would still be forced to make a good many triplet kills to bring up the aforesaid average to anything like what it should be. I had several more shots after that, but did not hurt anything, and Mr. Wells told me he would be perfectly happy to have me come there and shoot all I wanted any time, as it did not hurt the birds any and seemed to please me. He said he could easily see I was a game protector.

One little incident occurred on this delirious afternoon which goes to show how very careful all men should be in shooting in the field. We had a nice lot of birds marked down on a bit of bare pasture, where they were scattered among logs and brush heaps, and the dogs were picking up single points as fast as they got over the fence to them. There were a few head of cattle in there and also a big gray colt, which was very playful and insisted on coming up and biting and chasing the dogs away from their points, much to our disgust. I had just said to Mr. Wells that I should need to be very careful not to hurt any of these animals when I shot, and he took pains to drive away this big colt as I went behind the dog to shoot. At that time the horse was some 30yds. or more away and at one side, and Mr. Wells was watching it to see that it did not hurt the nearest dog, which it was trying to bite. He waved a stick at it and it started off, apparently with the intention of attacking the dog in front of which I was about to put up my bird. Just as the horse started toward me on the gallop, the quail also started on the gallop, swinging rapidly around to the right, directly toward the horse. I shot and missed it with the first barrel, and then swung on with it for the second barrel. Just at the very moment I was pressing the trigger I saw appearing in the narrow circle of vision about the gun barrel the head and ears of this big and troublesome gray beast, which till then I had not seen at all. It was too late to stop, and I half expected to kill a horse that shot, or at least wing-tip him, if I couldn't kill a quail. As fortune had it, I did not touch the beast, but could not have missed it by more than 3 or 4ft. This led Mr. Wells to infer perhaps that I was trying to hit the horse and couldn't; but he didn't say so. He only said that if we had shot that horse it would have broken up the Big Point quail preserve, because the Frenchmen of whom the land was leased would never have gotten over it. We were both angry enough at the horse to want to shoot it, but both very glad we had not. I think this was the narrowest escape I ever had from an accident in the field, and cannot be too thankful when I stop to reflect how very awkward the circumstance would have been had the accident really occurred, even though the horse could hardly have been much injured at the distance. It is a pretty good plan not to shoot at all where there are cattle or horses close; but in this case we thought we had everything all safe. The horse was running right toward the gun, or rather directly at right angles to the direction of the gun, and going at full speed, from behind me, just at the time when the gun was swinging around toward him. I could just see the front of him as I fired. I almost wish I had killed him, for we had so little in the bag after all the opportunities, and a horse would have served to fill up.

That was a weird afternoon, and at least funny enough to be remembered. I hope to meet Mr. Wells again somewhere in our part of the country where we can both have guns, so that he can get some birds for his dogs. I am not sure that I ever could learn to kill those Canadian quail, for they are about as big as turkeys, a bright red color, and fly like a streak of lightning. I think without jesting that these birds were fully a third larger than the quail of Louisiana or Texas. Their coloring is more brilliant and less dull and ashy of hue than that of the Southern quail. Mr. Wells tells me that the club must have thirty or forty bevies on its grounds. The birds would do well there except for an occasional severe winter which cuts down the stock. The Big Point Club men have imported numbers of quail from the Southern States and put them down here, this being the remedy after a hard winter; but this year the birds are unusually abundant. The best of care is taken of them on these grounds, and regular feeding places, protected from the snow, are established for them in the winter. The cover is corn, stubble or timber—what is called in Canada the "bush"—and is all that the birds could ask.

The quail is a fixture in that part of Canada and will always remain so, for the Canadian laws are good ones and are enforced. Until lately many thousand quail used to be brought into Chatham each winter for sale, but now that is all stopped. The excellent law of Ontario forbids the sale of quail or grouse, and a similar law is passed for Manitoba. Mr. Wells was the man who got the law passed in Ontario. If he would come over to this country and get a similar law passed, the sportsmen of the United States could afford to pension him off at $1,000 a minute for the rest of his life, and rise up and call him blessed besides. One needs no further argument for a non-sale law than a look at the well-stocked covers of the country around Chatham, which has been settled for generations and once shot well down, but which has now all the game a sportsman could ask. Chatham is an ideal town for the residence of a sportsman for that very reason. There is good shooting near at hand all the time in season. Would that the people of the United States had an equal respect for the game laws, and a law equally good to respect.

Mr. Wells writes me since my return that he and a friend have just been out on a little shoot back a way in the bush, and that they killed twenty ruffed grouse and forty quail (no horses). That is a great country for ruffed grouse, and the men there know how to shoot them; Mr. Wells himself, by the way, being about as good an all-round shot as they have, and very skillful on grouse, so say his friends. E. HOUGH.

1206 BOYCE BUILDING, Chicago.

THE MOST ENJOYABLE HUNT OF MY LIFE.

AND why was it so? Just because I was a novice and unskilled, but was lucky. I had but recently learned that I could "kill on the wing," by having, in a desperate mood, fired at and brought down a ruffed grouse after having tried in vain to catch a glimpse of the cunning birds on the ground, which, to my mortification, would rise thundering before me in mockery of my inability to see them. I was happy—perhaps a little proud. My eyes were opened. I saw that what I had so much coveted could be secured in a manner I had not before dreamed of, so far as myself being the marksman.

It was then that I began to try to acquire some skill in the use of the gun. I "poked" around with my brother's old gun a few times with not much success. One day, however, I concluded to take a hunt around the Shadka Lake, or Big Pond, as it was usually called, which was situated four miles distant from town, in hope that I might find more of the ruffed beauties to bang at, if not to capture. But I was disappointed—nay, vexed—when I learned that the family horse must be used that day to subserve the interests and dignity of labor rather than the pleasures of the chase. But I must have my hunt. So I resolved to try my luck again near home, but on new ground. I borrowed a double gun—light, but excellently made, and a good shooter—and started out accompanied by a Skye terrier. I had not gone more than half a mile when, as I leaped a ditch, a grouse rose and flew toward the woods. Little did I dream of his vicinage, and my surprise was unusual. A flutter of the heart, a nervous pressure of the trigger, and the bird fell dead. It was an added charm of weight when the game dropped into my bag. I then directed my course toward the Hudson—enchanting river!—and walked along its banks, enjoying that Indian summer day, a poet in feeling as well as a hunter in pursuit. Above me on the brow of a hill were other hunters with hounds, enjoying perhaps as much as I the glory of that autumnal atmosphere. From their direction, like a dart piercing the air, came a grouse which they perhaps had flushed. In a twinkling he passed me, and was beyond gunshot before I could level my fowling piece. But I did not go far until I came to a ditch, beside which grew a few stunted bushes. I walked along this until I came near its termination, when from its cover started a grouse and struck out for the woods. He had a pretty long stretch to reach the timber, and a more open and straightaway shot no sportsman could desire than that presented to my as yet unskillful but lucky aim. Like the first, the grouse dropped dead. Could I believe my senses? Two clean, consecutive scores! Hoopee! To show that brace of birds was an anticipation felt in a lifetime, and I must needs turn my face homeward. On my way I passed through a bushy field and shot a rabbit that was crossing my path. A little further on I struck a growth of timber, and a third grouse took wing. The trees seemed to be in my way and I was bewildered, but ventured a shot, and—was it possible?—he fell. But I had only wing-tipped him, and he ran as a grouse can, and I would have lost him perhaps had not my faithful Skye overtaken him. Well, I had a good heavy bag and no game lost that I had pulled on that day—a day as memorable as any I have ever spent in the field. "Accidental" marksmanship as it was, I have never had a more pleasant little hunt even with my pointers and setters, and when I could "draw a bead" with conscious accuracy upon the swift-flying grouse, prince of New York game birds. N. D. ELTING.

CENTRAL CITY, W. Va.

NEW YORK'S PROTECTIVE INTERESTS.

Editor Forest and Stream:

The New York State Association has very important subjects to consider at its meeting in January, and its conclusions must in some way be brought before the Legislature so forcibly that they will receive proper attention, else very soon there will be no further need for protective agencies, for there will be nothing to protect.

Other States are moving earnestly and honestly in the right direction. Must New York State's game and fish and forest interests be at the mercy of the lobby forever?

Wisconsin proposes to tax non-resident hunters from $25 to $50 for the privilege of hunting in that State. Can we not in the same manner protect our forests from the ravages of hundreds of "outside hunters?"

In his biennial report to the Minnesota Legislature, S. F. Fullerton, executive agent of the Game and Fish Commission, will recommend that a law be enacted making it a high misdemeanor for cold storage companies to handle game, especially during the close season. He thinks that in no other way will it be possible for the State to prevent the great slaughter of game every fall season and the ultimate extinction of that game. This year has repeated the experiences of former years, and the cold storage houses of St. Paul and Minneapolis, or many of them, are filled with game which has been taken solely with a view to profit. The Legislature may pass laws until those laws fill a large volume, and yet come far short of protecting the game of the State, unless there is some new and better theory behind them. It is Mr. Fullerton's idea that if there is some system of better and more thorough inspection at the big shipping points, the inducement to pot-hunting will be largely removed. Men will not tramp the woods for weeks and months and go to the trouble necessary in the killing and sending of large quantities of game to market if there is no chance for profit. The killing of game for home consumption by tourists and woodsmen, Mr. Fullerton says, is not particularly harmful, and will never depopulate the forests, but the hunting for profit, he holds, is a very serious matter, and one to which the Legislature should give its best thought, if the State is sincere in its desire to continue to rank as one of the best hunting grounds in the country.

The Game Commission thinks that its agents should have the power not only to enter these storage houses and make seizures—this authority they have at present—but to arrest the storage men and subject them to the same heavy fines for having game in their possession that men are liable to who kill the game in the woods. It believes it is practicable and desirable to have close inspection of terminal points in the State, and make the storage men liable with the hunters for any violation of the law.

The Fish, Game and Forestry Commission of New York State may awaken to the fact that its assumptions do not always satisfy the people, since 350,000 majority was given against the amendments to the Constitution which it approved so strongly. Such a commission in England would have at once resigned after such a vote of condemnation; but this one will neither resign nor die, but may we not hope that the vote of censure will prompt it to see that there is sufficient and proper legislation next winter to prove that it has at least some sympathy with the cause which it was appointed to represent?

INTEGRITY.

Tennessee Notes.

GRAND VIEW, Tenn., Nov. 30.—Deerslayer has made a special plea for his peculiar mode of killing deer, which perhaps could hardly be bettered. It contains a variety of hints which may be read with profit, if not with pleasure, by very many who carry the gun. Until we had read this production, Antler and myself were agreed that the previous communication about first noosing and then blowing off the head of a buck was a grim joke—in rather bad taste, no doubt, yet still a joke. We were evidently wrong, and comment seems superfluous.

As Mr. Theodore Roosevelt recently said in substance: "If you quote to another the commandment, 'Thou shalt not steal,' and the other fellow asks 'Why?' about all you can do is to repeat the commandment."

The meadowlarks and robins are still moving south. On Nov. 25 I saw about a dozen gold-winged woodpeckers, and yesterday a large flock of small birds, apparently of several sorts, passed southward.

On Thanksgiving Day I missed a wild turkey at 40yds. Shot behind him. I should have felt more thankful if I had bagged the turkey.

I have had little chance to get up my shooting since I came here, but have up to this time killed all the game I have shot at. If I miss the next turkey I shall have to consider myself a "back number."

Dec. 2.—We have had a heavy rain storm, followed by a fall of the mercury to some 10° below freezing. I think the migratory birds have all passed southward. No snow as yet, but cold, northerly winds prevail and make us seek the fireside.

There appears to be a project on foot to give the possums a chance for their lives. It is proposed to give them a legal closed season from March 1 or April 1 to Oct. 1. Friends of this marsupial will rejoice.

KELPIE.

Georgia Quail.

ATLANTA, Ga., Nov. 29.—*Editor Forest and Stream:* I will obey orders and report my luck to FOREST AND STREAM. Fred and I went out Thanksgiving Day for a little hunt and succeeded in finding three coveys averaging about ten birds to the covey. We found them very wild, having been shot over so much. The smallness of the coveys is accounted for by the fact of there being so many negroes and pot-hunters.

The last Legislature placed the open season on quail one month later this year, but it seems to have had no effect on them. I saw birds on sale as early as September.

I notice that some of your correspondents seem to doubt the ability of any one to clip the heads off quail with a rifle. I went out early one morning several days ago with my little .22cal. Stevens with .22 short smokeless cartridges, and succeeded in clipping the heads off two. As they were very wild, I had to crawl up to them. I shot one at about 20yds. and the other at ninety-two paces (about 75yds.). I use smokeless cartridges because they do not make enough noise to scatter the birds.

H. P. K.

Iowa Field Notes.

NEVADA, Ia., Nov. 17.—*Editor Forest and Stream:* Iowa duck shooting has been better this fall than for many years before. Many of the ponds are again filled with water and that fact calls to mind the old times when Iowa was a duck hunters' paradise. I have just finished reading Mr. Mather's last article on "Men I have Fished With." If Mr. Mather is as genial and entertaining a companion in the camp as he is in writing, then do I envy the men of whom he writes.

I had feared that by the death of O. O. S. we readers of FOREST AND STREAM had lost an entertainer who could not be replaced; but, though we miss him sadly, FOREST AND STREAM rises to the emergency and for the entertainment of its readers once more has been fortunate in securing that inimitable writer and sportsman, Judge Green, of Portland, Ore. Truly we of the FOREST AND STREAM family are more than lucky. Often, as I read the contributions of such men as Mr. Mather, Judge Green, O. O. S., E. Hough and Rowland E. Robinson, do I have a feeling of pity for those of my fellow beings in whom the love of nature and field sports has not been developed. How many, many happy hours have I whiled away in the pursuit of the sports of the field and stream, and in reading the experiences of others such as those named above. This love of nature and the sports of rod and gun afield are a blessing to any man.

Quail are on the increase in Iowa, and if we do not have an unusually hard winter we will have as good quail shooting by next fall as any reasonable man could wish for. Prairie chickens are holding their own remarkably well, considering the way they are hunted, in season and out of season. Mr. E. Totten, living about one-half mile west of our city limits, recently lost a lamb and came to the conclusion that the killing was done by wolves. As Mr. Totten is not raising sheep for wolf food, he placed strychnine out and soon had the wolf. The wolf, a gray timber wolf, was poisoned within a quarter mile of the limits of our town of 2,500 inhabitants.

JOHN C. BRIGGS.

Observations on the Natural History of the Genus Homo.

GREENVILLE, Pa., Dec. 1.—*Editor Forest and Stream:* In reading the various articles in the FOREST AND STREAM regarding whether the game belongs to the sportsman or guide, the same brings up another argument, namely: the difference between the so-called sportsman and the market-shooter, sometimes called game hog.

I know of many who call themselves sportsmen. They are sportsmen in fine shooting clothes, hammerless guns, and fine dogs; but that is all. They are poor shots, and they hire guides, mostly master shooters, to kill the game for them, so that they can have a big bag of game to show at home and blow about. They do not care whether there is another bird left in the woods or fields just so they have a big bag, the larger the better.

Now what is the difference between such sportsmen and market-shooters? Which is the game hog? What is a game hog? A game hog is one whose object is to kill all the game he can find. The market-shooter's object is to kill all the game he is able to find. Therefore he is a game hog. The fore-named sportsmen go out and induce game hogs to kill all the game for them that they are able to find.

Is such a sportsman a game hog? H. P. BEAVER.

A Florida Game Country.

MINNEOLA, Fla., Nov. 27.—Quail are very plentiful in this section of Florida. The game law has been respected by most shooters. I have resided in this locality for sixteen years, and quail were never more abundant. An old native asked me to come down to his place and take a bear hunt, and I went. We saw plenty of sign, but failed to jump a bear. My Gordon Rex found eleven bevies of turkeys, some of them containing twenty-five birds. These birds were found on what is called Green Swamp, lying in both Lake and Polk counties. The old native has lived on this swamp for thirty years, and says he never saw so many turkeys. We bagged seven of them. They were full grown, and very fine eating. Ducks have not come as yet; it has been too warm north of us. After a cold snap we shall have some bluebills and mallards. The past summer was very dry, consequently the deer stay back in the swamps. On account of poor laws and market hunters they have become very limited in numbers in this locality.

E. H.

Deer and Dogs in Pennsylvania.

PITTSBURG, Pa., Dec. 3.—*Editor Forest and Stream:* We are very much surprised to read in FOREST AND STREAM the account, under title "Hunter's Luck," by Jacobstaff, in issue of Nov. 21, that Dr. P. W. Levering, Dr. Z. P. Fletcher, John Polhemus and James Earl, of Jersey City, and hunter Rabeurdin, of Pike county, Pa., had been hounding deer in this State. The law prohibits hounding or running deer with dogs at all times. An account appeared in FOREST AND STREAM columns about a year ago of something similar that took place in West Virginia, and this now in our own State is too much. We think they deserve editorial mention, and that the fact that there is such a book as *Game Laws in Brief* were made better known.

N. H. FINLEY.

Pennsylvania Deer and Birds.

SPRUCE CABIN HOUSE, Canadensis, Pa., Monroe Co.—A party of hunters left the Spruce Cabin House, Canadensis, Monroe county, Pa., Nov. 23 to hunt for large game. It consisted of Wm. P. Ketcham, G. E. Ketcham, Jr., of New York; the proprietors of Spruce Cabin House, Messrs. Wesley J. and Milton D. Price, with Paul Price as guide. After hunting across the country to the shores of Lake Ted-us-kung in Pike county, they there put up for the night. The next day, on their return trip, a large buck weighing 230lbs. was sighted, and shot by Mr. Milton D. Price. A large number of pheasants and gray squirrels were also shot on trip.

In Wisconsin.

CABLE, Wis., Nov. 26.—Deer are very plentiful here. Lots of grouse have come in here within three years and also plenty of partridges. Plenty of them have been killed this fall. The fish in the lakes are abundant yet, as are also the trout in the streams, so that a good angler can get a nice catch of them.

J. S. I.

Politics and Game Protection.

WILKES-BARRE, Pa.—Ruffed grouse are very scarce here this fall. I am very much afraid that the birds will be entirely exterminated within the next few years if something is not done to stop market shooting. We have succeeded in getting a bill through the House and Senate, but the Governor vetoed it. I have made the suggestion to the gun club here, and they are going to act upon it, that we organize the sportsmen of this State politically. There are from 75,000 to 100,000 of us. We can control 90 per cent. of the vote. We purpose to organize and show our power, and then make the next available candidate for Governor sign a paper before election, pledging himself to sign a bill prohibiting the sale of ruffed grouse in market and the shipping of same out of the State.

H. M. B.

Sea and River Fishing.

WHERE TO GO.

ONE important, useful and considerable part of the FOREST AND STREAM's service to the sportsmen's community is the information given inquirers for shooting and fishing resorts. We make it our business to know where to send the sportsman for large or small game, or in quest of his favorite fish, and this knowledge is freely imparted on request.

On the other hand, we are constantly seeking information of this character for the benefit of our patrons, and we invite sportsmen, hotel proprietors and others to communicate to us whatever may be of advantage to the sportsman tourist.

MEN I HAVE FISHED WITH.

XXIV.—William Warren.

IT is a blessed privilege to be past the meridian of life to-day. What a store we white-headed fellows have of things which a younger generation of men can never attain! In the charmed recesses of remembrance lie the vast flocks of wild pigeons and of game to be had in an hour's walk where now there is naught of life save the abominable imported sparrow. And then there was the grand and glorious Civil War, but I must not write of that further than to say to the young men who were born too late to take part in it that I am sorry for them. Still they have the compensations of youth, and if fortunate enough to live where there is still some game left, or have the means to travel to the far-off places, will, after they get past the noon of life, have the same feeling of commiseration for the boys who are forty years in the rear of them which I have expressed.

There are two reasons for writing the above paragraph; one was because I accompanied Warren on my first and only buffalo hunt, and the other was because while taking "a cold bottle and a hot bird" with my old army companion, Baron Berthold Fernow, once of Poland, but later Major of U. S. Volunteers and of the Topographical Corps of Sherman's army, last week, the Major, in response to a question if he was still living in Albany, said: "No, I am now living at 151 West Sixty-first street, in this city, a place where I used to shoot rabbits when I first came to America, and where I once got lost in the underbrush and strayed away off to the northeast, where the Astoria ferry now is." Think of it! The street is near the lower end of Central Park and right in the middle of the city. The late ex-President Chester A. Arthur told me that he had shot woodcock where the Fifth Avenue Hotel now stands, and that is only at Twenty-third street. All this has nothing whatever to do with my fishing with William Warren further than to show what changes take place in our rapidly growing country. As a historian, in a feeble way I record it. As an American and a naturalist, I regret it. Emigration has been encouraged to build great cities where the buffalo should still range over territories which ought to have been left for Americans who will be born a century hence. These sentiments prove to you that I am an "old fogy," but one who believes that we should not give away our great farm when we have children growing; but that is "politics," and so we will go on to tell about this man with whom I fished in Kansas in the year 1857.

I was boarding with a man named Serrine, on the Cottonwood, while looking up a suitable place to claim a quarter section, and Warren came there often. He was from Chicago, and had a claim over on the Neosho. He was a big, strong fellow, about twenty-five years old, with a dark, pleasant face and a habit of clipping his words. A favorite way to begin a sentence was with the word "Betcher," which stood in his vocabulary for "I'll bet you." So one day in the spring he said to me:

"Betcher da'sent take a day off o' land-lookin' an' go' shootin' buffler fish, they're just comin' up on the riffles now and a-wallerin'. They're thicker 'n hair on a dog; 'f you never shot 'em you'll like it. What yer say?"

My rifle had been packed in a chest and sent by freight from Potosi, Wis., and the chest had been stolen somewhere on the rivers or at St. Louis, and I had only a Colt's Navy revolver to shoot with. From what I had seen of these big, unwieldly buffalo fish on the riffles it was certain that the revolver was good enough for such work. The fish were very plenty, and were mating and spawning on every riffle, but at the least alarm would dodge down into the pools below. The Cottonwood was a series of deep pools and gravelly riffles, over which the water flowed swiftly, and sometimes these were so shallow as to leave the hump-backed buffalo partly out of water. The river may have averaged 60ft. across, and it cut through a deep alluvial soil, forming high banks in most places, except at the inside of curves, where the current had made a gentle slope to the water. The riffles were at these points, and we could get near them by approaching the fish from the low side. It was not a particle of sport, but Warren thought it fun, and wanted to go on killing after we had more than we could carry, but I said no, and we strung our fish and went home.

"Betcher I c'ld kill a thousand buffler in half a day an' not go over two mile on the river. What's the reason you wouldn't kill any more? Don't yer like the fun?"

"No, there's no fun in killing things that you don't want to use, unless they're rats or other vermin which annoy you. My idea of sport is to hunt something which is hard to find, and is some use after you have found it. Shooting these fish is good enough when you want a change of diet from ham and salt pork, but they're too

easy for sport. As you say, you could probably kill a thousand in half a day, but shooting at a mark is just as much fun; in fact, it would be more fun for me than to kill things for the mere sake of killing."

This buffalo fish is a coarse thing, a relative of the sucker tribe, with a similar mouth; perhaps it is as good as the carp, but then we had not the carp and the taste of the buffalo has faded too much in forty years for comparison. My present notion is that both are worthless as food, but a residence by salt water may have spoiled me for enjoying most fresh-water fish, especially carp and suckers.

Warren sold his claim and took another while I was still undecided, and we put up a little cabin on the bank of the river and "batched" together. Within a few miles several town sites were laid out with pegs, each with grand parks, court house squares and grand avenues, on paper.

"Behind the squaw's light birch canoe
The steamer rocks and raves,
And city lots are staked for sale
Above old Indian graves."—*Whittier.*

The genius of speculation was abroad, and within a radius of five miles there were at least a dozen "future railroad centers" laid out. I only remember "Columbia" on the Cottonwood, where there was a grocery and gin-mill combined kept by a man named Jeff ——. He had maps and sold lots in the Eastern cities and took in what he could gather. He offered me ten lots in the heart of his "city" for my revolver, but somehow I thought I needed the pistol more than I did town lots. Then there was "Chicago," on top of a bluff where I shot sandhill cranes later on, which never got beyond the peg and map stage. Warren had a big interest in this and traded some lots for a yoke of cattle and a wagon. I doubt if there is even a farm house there to-day. Emporia was laid out high on the open prairie, between the Cottonwood and Neosho, with no water in sight. It was not a promising place for a town, but when my father offered to send me his double fowling-piece I traded the revolver for a block of lots in Emporia.

Warren said: "Betcher your revolver is gone, lost, vanished an' vamoosed. Why, that place will never amount to a hill o' beans, but if you'd invested in Chicago you'd have been o. k. They've dug over 100ft. for water there in Emporia and didn't get it. Whatter they goin' to do without water? Just dry up, that's all. Betcher 'll wish that revolver back 'fore long, for that was worth something."

There was a big push behind Emporia. A lot of Eastern capitalists spent money to find water, and they found it. As soon as it was struck I was offered $150 for my lots and I shook the money under my friend's nose. That find of water after nearly a year's digging made a great railroad center, and the neighboring "peg towns" were heard of no more.

Meanwhile I had located a claim and filed it at the land office. This gave me the privilege, as an actual settler, of pre-empting or buying the quarter section of 160 acres at the Government price of $1.25 per acre before the tract in which it was situated was offered at public sale. That spring there had been discoveries of great deposits of lead in the Ozark Mountains, and among the miners of Potosi, Wis., there was much excitement and considerable emigration. I had written father that I would go to the mines in Missouri. That shirt of Nessus which causes the restlessness or border life impelled me to go somewhere. I had tired of life as it was lived in the mines and woods of Wisconsin and Minnesota, and a new field of adventure was opened. With the average miner, who is a born gambler, there was the prospect of gain. I was not an average miner, nor a born gambler, and only wanted change and adventure. I had read all about Daniel Boone, Davy Crockett, Kit Carson, and Cooper's men of fiction, and dollars cut no figure in my calculations. I was young; old age and its needs seemed to be centuries away, if indeed it was ever thought of. I reveled in my youth and strength, and thought they would last forever. The quarter of a century that I had lived seemed to comprise the whole existence of the world, and all that had gone before my recollection was merely a fairy tale!

When I left Albany, in 1854, my father had exacted a promise that I would not join an expedition against the Indians. He knew that I loved a fight of most any kind, and when he learned that I proposed to go to the Ozarks he wrote me that he wanted me to go to Kansas and select a farm on which he could pass his declining years. This was not funny then, but it is to-day. My father was reared on a farm, but left it when eighteen years old and always looked to getting back on one. Now, when I am six years older than he was then, I know that his nervous organization, after years of absence from farm life, was no more fitted to it than my very different temperament was. But he wrote me that he had a land warrant from the war of 1812 (not his own by right of service, for he was born in 1800) and that he wanted me to select the place in Kansas.

The newspapers had been filled with accounts of "bleeding Kansas," and the troubles were not entirely over when our surveying party came out of the Minnesota woods in the last month of 1856. There was a fight there over the slavery question, a matter that I had paid no attention to, but there was a fight. I looked around and got letters of introduction to Gen. Jim Lane, the "Free State" leader, and went to Kansas; we spelled it Kanzas in those days, and my tongue has never been able to accommodate itself to the modern soft way of speaking the name.

I put up a log cabin on a good quarter section which had a stream running through it, and also had several acres of timber, two valuable things in that prairie country. Warren helped me in this, and also in splitting enough black walnut and mulberry rails to fence in ten acres. The land cost $1.25 per acre, but it cost $3 per acre to break the heavy prairie sod. I was playing farmer!

"One man in his time plays many parts,
His acts being seven ages. * * *"

Warren and I kept batchelor's hall until past midsummer, when my house was in order for business and my little family came on from Wisconsin. Our work was at a distance and we took turns at cooking, and on Sundays we cleaned up and washed the dishes. A very good housekeeper to whom I told this asked in undisguised astonishment: "Didn't you wash your dishes every day? Why! how did you get along?"

"My dear madam," I replied, "you are a most excellent housekeeper here in the effete East, but know little how to manage a batchelor establishment in Kansas in that early day. If we had washed our tin plates after every meal, as is the custom in some places, the microbes set free from the newly turned sod would have attached themselves to the tin and our lives would have been in danger from *tintinambulacra*. No, my dear madam, we did not dare risk it; so we turned our plates over after each meal to protect them, and only dared to wash them once a week. This was a fearful risk, but we did it; I now think it would be safer not to have exposed the plates to the influence of hot water and soap at all, but fortunately we escaped all harm, perhaps because we had youth on our side."

She paused a moment, drew a long breath and said: "You don't tell me—. Oh! men are horrid, anyway. I don't believe a word of it!"

Warren said: "When you take the ox team up to Emporia after the mail and provisions, see if you can't get some vegetables. The cows got into my garden and cleaned up what the coons, bugs and other things left, and we want some green stuff; see if you can get some onions, beets, cucumbers, or anything."

Among the things which I brought was a fine bunch of early beets and we promised ourselves a treat. We peeled and sliced them and put them in vinegar. Next day they were set out for the evening meal, when we talked about them.

"Betcher," said Warren, "them beets is more'n a hundred years old. I've seen lots o' beets, but they wuz allers tender an' good."

"They can't be old. They don't keep beets over a year like dried beans; besides, didn't you see the tops were green? I think they're a new kind or else the soil here is not good for beets."

"Betcher they ain't cut thin enough for the vinegar to sof'en 'em. These cukes are all right, they're cut thin and the vinegar goes right through 'em, and they're tender."

"Yes, the cucumbers are good enough, but what ails the beets I don't know. I've often eaten 'em at home when mother cut 'em up in vinegar; perhaps they want to be soaked in vinegar longer to make 'em tender; I don't know just how long they have to stay in vinegar before they're fit to eat."

"Betcher right! Let 'em soak awhile an' they'll get tender, an' beets is a mighty good relish too; they're good for what ails you; for a man can't live on salt pork, ham and all that stuff, salt codfish and mackerel and sich like, without a little vegetable food, or he will go to the bad; betcher life he wants a change. Just put them beets away until they get tender, that's all they want."

The beets were set aside in vinegar until such time as they might be fit to eat. We sampled them daily, but there was no perceptible improvement, and Sunday came. After cleaning house, or kitchen and dining room—for our 10×12 cabin was not only these, but also our grand *salon*—we brushed ourselves up and walked up to Serrine's ranch, where Mrs. S. and Mrs. Judge Howell were discussing some abstruse question of which we were ignorant, when they both turned and in the same breath asked how we were getting along with our "batching." Warren went into details about the biscuit, pancakes, roasts, fries and stews, and finally mentioned the difficulty with the beets.

There was an instantaneous duet of soprano and contralto: "Didn't you boil 'em first?"

I sneaked outside at once, and have no idea of how Warren stood off the two women; but the logs of the house were not chinked tightly enough to keep out a whole mess of laughter which came through in ripples at first, then in waves, and finally in shrieks that toppled the barrel from the chimney, and then the cabin filled with smoke.

On our way down the Cottonwood we said little until we got to the door of our castle, when Warren turned and said: "Did you know that beets should be boiled before they were sliced and cut up in vinegar?"

"Well, no; not exactly boiled, but I knew that something ought to be done to them like baking or frying or —"

"Betcher didn't know but what they were just cut up in vinegar like cucumbers, just as I thought. Betcher Mrs. Howell will spread that story, an' every woman up both rivers will know the beet story before a week. Well, let 'em. There's a whole mess of things that they don't know. How in Gibraltar do they s'pose a fellow is to know that the tender beets that he finds on the table have been boiled, any more than the cucumbers have been boiled?"

The slavery troubles, which had partly subsided, began to break out afresh, and it was evident that another great effort to make Kansas a slave State would be made. Congress had already abrogated the Missouri Compromise, and this opened the Territories of Kansas and Nebraska to the slave power, as it left the question to be decided by the actual settlers. Two conflicting Territorial governments had been established. Blood had been shed at the first election, when armed invaders had taken possession of the polls and elected a lot of non-resident pro-slavery men as a Legislature, which passed a law making it a capital offense to harbor or assist runaway slaves; and they had the backing of President Buchanan and the support of Gen. Harney, then in command at Fort Leavenworth. But against this was a great majority who had determined that Kansas should enter the Union as a free State or not at all.

Our section was comparatively quiet. We were running short on provisions, and as the staple articles were costly owing to the long haul by teams, we would take our teams to Fort Leavenworth, lay in half a dozen bags of flour—it came in 100lb. bags—sugar, coffee, pork, bacon and other things, saving the transportation and the profit of the local trader. The prairie roads were good in June, and at the frequent streams good camping places were always found with the three prime requisites—wood, water and grass. At Lawrence we fished in the Kaw River and caught seven catfish, one of which weighed 9lbs.; we ate the smaller ones and gave the big one to a passing family in a prairie schooner.

There was a municipal election while we were in Leavenworth. The Free State men won, but there was a lot of beautiful fights. A border ruffian named Lyle, who had murdered several men, provoked a fight with an old man and was killed by a Free State man named Hallen, who was arrested.

The excitement was intense and contagious. Few slept that night. Warren and I volunteered, with others, to guard Hallen; but there was no attempt made to lynch him. Next morning Hallen was refused bail and was committed to Fort Leavenworth for safe-keeping, and only our respect for the uniform of Uncle Sam allowed a sergeant and a squad to remove him; but Hallen bribed a guard and escaped, went to Lawrence and was never disturbed.

The buffalo country was west of us, but there remained a few deer and antelope as well as wild turkeys along the Cottonwood and Neosho, and Warren and I each had a Sharps rifle which had been sent from the East to help make Kansas a free State, and which had been issued to us at Leavenworth while guarding Hallen. October had come and one morning there was a light fall of snow and Warren came to my cabin. "Hurry up," he called, "there's a deer's track going straight for that bunch of willows in the buffalo wallow over there to the west where we shot the prairie chickens a week ago." We struck the track in the fast melting snow and came up to within 100yds. of the wallow, which was a small one not over 50ft. in diameter, and then consulted in a whisper how we should form for the attack. We had come up against the wind and there seemed ample time to consult when—a flash of gray bounded out on the prairie from the other side of the wallow, gathered its legs and leaped again as two rifles called "Halt!" The buck halted and never went again. One bullet nearly severed a hind hoof and one plowed up from below through his heart. Both rifles were of the same caliber and who it was that killed that deer remains as obscure as "the mystery of Gilgal."

We bought Indian ponies, cheap but serviceable, and accustomed to any amount of abuse, for an Indian never has a particle of regard for a saddle sore, but claps on the saddle in the same old place in perfect indifference to the suffering of an animal, and this trait has hardened my heart against the red man; he has no sympathy for suffering—not even his own. He has served the purpose for which he was placed here just as other created things have, and he dies out before civilization and must go, as we must when we have exhausted the coal which was stored up for our advent, and our planet falls in line with the dead worlds which—have no Indian ponies.

A little castile soap and water, with tallow afterward, soon put our ponies in shape for travel, and as the winter came on the troubled times increased. The bogus Legislature of Lecompton had authorized a convention to form a State constitution during the summer and things were getting red hot. Warren and I decided to go to Lawrence and offer our services to Gen. Jim Lane. At that time we thought Lane to be the best and greatest living American. He could sway men by his impassioned oratory, to which his profanity added the charm of emphasis. We had met old John Brown down at Osawatomie, and would have none of him. Brown was sitting by the roadside singing "Blow ye the trumpet, blow," through his nose, and Warren said:

"Betcher he's an ole feller that turns his camp into a Sunday-school half a dozen times a day; I don't want any of him; if you want to go with him all right, Jim Lane is good enough for me."

Said I: "Billy, I've got no more use for old Osawatomie than you have. There wouldn't be a bit of fun with him. He's a religious fanatic, and says that the Lord has sent him here to do things. I don't object to his doing things, but he won't get me to serve under him. I don't like him, and that's all there is of it. He's in dead earnest, but so is Jim Lane, and Jim is the man to make things hump."

We went back home. To-day the fame of the martyr John Brown, who freely gave his life for a cause, is sung all over the land, while my hero, Gen. Jim Lane, is remembered by a few as a political trickster, who killed a man that contested his claim to land, was tried and acquitted, for that was frontier custom, and then for six years represented Kansas in the U. S. Senate. Then, following the lead of President Andrew Johnson, he received the indignant reproval of his constituents and died by his own hand. How differently we look at men and things when they are as widely separated as then and now, when the cool judgment of sixty-three sits upon the rash impulses of the boy forty years ago!

It was in the southeastern portion where things were hottest, and where there was more or less desultory fighting, but party feeling ran high up the Cottonwood, and several Free State men had notices pinned on their doors warning them to leave the territory or they would be killed. I had a Sharps rifle and a double shotgun, and bought a revolver from a soldier who had come down our way on some business and had no money to get back. It was a Colt's Army, big of bore and not very accurate. Every man carried a revolver, and I would as soon think of going to the spring for water without a pail as without a pistol in my belt. I destroyed the notice found on my door; it wasn't just the thing for a woman to see; you know how they are about such things; so I closed my castle and left the little family in Emporia, giving as a reason that Warren and I wanted to examine some land further west, and might be away a month, and so smoothed it over while we started for Lawrence to consult Gen. Jim Lane. James W. Denver had superseded Walker as Governor in December, and he struck a snag on the start. About a year before this the pro-slavery officials had seized a wagon containing 150 muskets and carbines from an emigrant train and had stored them in the cellar under the Governor's residence in Lecompton.

"Boys," said Lane, "you are just in time. Col. Eldridge is going to start with a battalion to get a lot of rifles that belong to us, and he may have to fight to get 'em; but we'll have 'em, sure. Do you want to go?"

"Betcher," said Warren; "we came up to take a hand in anything that's going on; didn't we, pard?"

"Yes," I answered, "and down our way they're threatening us and we've got to do some cleaning out down there or abandon our homes and be cleaned out. So far they only threaten, but we know how every man stands in the whole valley, and if they kill one of us the cleaning out will begin at once and will be thorough."

We went to Lecompton, a motley crowd, some on foot and others, like Warren and I, on ponies; I should think the "battalion" numbered about 100. "Col." Eldridge made a demand for the guns as private property, and wound up by saying: "Governor, we merely demand our own, and are fully armed and determined to have those arms. Whether there will be a fight for them rests with

you to say." That was an argument that decided the case in our favor. The history of Kansas shows that it was only by illegal voting—"repeating," as it was called—that the Lecompton constitution was adopted; but I can't dwell on this.

A peculiar state of affairs existed. The Territorial Legislature was now under a Free State majority, and it declared the last election to be fraudulent and ordered the Lecompton constitution to be submitted to the people on Jan. 4, 1858, which somehow happened to be the same day named by the pro-slavery authorities for the election of officers under that constitution.

Said Warren: "This thing has got to be fought out. Voting is no use. For every man our side can get here from Boston or Chicago the 'Border Ruffians' can pour in twenty from Missouri. If Congress admits Kansas in as a State, it will be under the Lecompton constitution, which permits men to be held as slaves. If we don't vote for officers we can claim our rights and fight for them; but if you take part in the election you must abide by it."

I favored voting and we discussed this in our feeble way until Warren said: "Betcher da'sent go up to Lawrence and see what Lane says!" We went and found a convention in session that was as divided as we were, and that Lane had a body of men down near Fort Scott. Col. Eldridge told me that Lane was prepared to fight the U. S. troops if necessary if the Lecompton men called them out to assist them, and that he thought it best to vote. Again the volcano subsided and a peaceful victory was won at the polls, the Free State men winning every office under the hated Lecompton constitution. The officers elected promptly petitioned Congress not to admit Kansas as a State under the present constitution, and the petition being granted it put them all out of office from Governor down. Times were not dull there at that time.

Warren sold his second claim and came to live with me. Game was plenty, and from the ridge pole away from the fireplace there was always a turkey or two, some part of a deer and as many prairie chickens as could be used before spoiling. Antelope were plenty, but I killed only one; we preferred venison. Near the timber rabbits abounded, but we rarely shot them. In summer flocks of screaming paroquets went swiftly through the woods, but boys have been raised there since and have no doubt stopped all that. The mourning dove was too common for comfort if one was splitting rails in the woods; its melancholy note only ceased at night. A graceful species of kite sailed over the prairie looking for snakes, and there is a doubt if one of these is left. The only snakes I can remember seeing was a striped one, perhaps the "garter snake," a "blue racer," which I think is a form of our common blacksnake, and the small rattlesnake called *massasauga*, which inhabits prairies and seldom exceeds 2ft. in length.

Occasionally a train of a dozen wagons would pass our cabin going to or from the buffalo ranges and often left us a quarter of beef, but neither Warren nor I had any desire to go on these hunts. Perhaps it was because everybody else went and we did not want for fresh meat. We went once, but this yarn is too long to tell about it now, perhaps it will keep for a week. In the summer the little prairie wolves could be heard running deer or antelope most every night. No one called them prairie wolves there; they have another name, perhaps Mexican or Indian, but people in the East make such a mess of pronouncing it that the name ought not to be printed. I'll tell you: the name is ki-o-ty, but confound 'em the scholars spell it "coyote," and that leads a man to make only two syllables of it. He lives in the ground, like a fox, and if not as cunning as reynard, is as fleet and tireless, and it is said that he hunts deer in relays, one gang resting till the other brings the quarry back on the circle. He doesn't hunt rabbits, just picks 'em up.

One day Warren came in with four little pups in his coat. I didn't need a "dog" just then, but somebody said they were "just the cutest little things this side of the Santa Fe trail," and one was left for us. The young c—— grew on a liberal diet of milk and table scraps, but when the first setting hen came off with a brood he realized his place in nature. He was the fittest and survived. The old hen protested, but he ignored the protest and ate her as a *piece de resistance*, to which the chickens had been merely an *entrée*. I also protested—with a switch, but Lupus could not be made to understand that chickens were not the proper things to eat. At my advanced age I don't understand why chickens should not be eaten, and yet I tried to force that opinion on my protegé. He disliked discipline in all its abhorrent forms of switch, club or boot, and before long, perhaps the time required to set several chicks free from their imprisonment in the shell, it was apparent that there was an absence of cordiality in our intercourse. Lupus was kind to all but me after I put a chain on him and fenced the chickens from his domain. He preferred to chew my hand when I set a saucer of milk before him and only touched the milk when my hand was no longer available as food. Perhaps, poor fellow, his epicurean palate longed for live chicken and resented the offer of their bones after his master had taken the choice parts. Gurth, the swineherd, had some such feeling toward Cedric, the Saxon.

We passed the summer and the corn had nearly passed the roasting-ear stage; I had learned to guard myself from the carnivorous dentition of Lupus, but one day Warren called out: "The cattle are in the corn!" and surely they were.

I was a farmer. Ten acres had been put in sod corn and there was a crop. The crop may have been due to the richness of the soil—or to my excellent farming, if you will. But the fence was down, and half a dozen steers and some cows were doing to that corn what Lupus did to the chickens. Perhaps they were right, but it was no time for argument. I rushed out, and the nearest way was past the kennel of Lupus. He was lying quietly within until I passed, when he suddenly decided to see if my leg might not have a better flavor than my hand, and he acted on the impulse of the moment, and took a piece of it, just above the boot leg, where I kept a favorite muscle well trained for running and another for kicking. He tackled the wrong muscle, and the kicking one came to the relief of its neighbor and projected a boot under his chin with such force that he was a-weary. Other leg muscles took up the argument, and somehow the same boot that lifted him one under the jaw cracked his skull, and his hide was drying on the fence an hour afterward.

I was sorry, very sorry; so was my leg. It was too bad to kill the poor c——, and it was too bad to kill the poor little chickens. I was a brutal fellow, and I knew it.

Warren said: "You stood it longer'n I would. Them durned kiotys 's got two kinds o' teeth—one for chickens and wild animals and another for human flesh. Betcher never try to tame another one. Say, them devils runs down a wounded deer or buffler when they find one, and they get him. S'pose we go down on a buffler hunt some time. What d'ye say?" FRED MATHER.

ANGLING NOTES.

Fitz-James Fitch.

It is quite the fashion to remark on occasions that this is a small world after all, but when I learned for the first time on the last of November that my friend Judge Fitch had died on the 23d of July, this year, at Prattsville, N. Y., I resolved that it was a very large world.

Judge Fitch was born at Delhi, Delaware county, N. Y., in December, 1817, and consequently was seventy-eight years and six months old at the time of his death. He was County Judge of Greene county for eight years and then practiced his profession in New York city for ten years, when his health failed, and by the advice of his physician he returned to the Catskill Mountains, for which I have always believed that he had an abiding affection because of its trout streams.

Judge Fitch was the highest type of a fly-fisherman, and probably there were few more skillful than he in fishing a mountain stream where trout were educated and scarce. A gentleman of the old school, as we are given to saying of those who are courtly, precise, considerate, and observant of all the little amenities of social life, he was withal a loyal friend and charming companion. For nearly or quite fifty years he kept an accurate record of all the trout that he caught and all that he returned to the water uninjured. He required no 6in. law to restrain him in his fishing, for he was a law unto himself to basket only a moderate number of trout of decent size. If all fishermen were governed by the same motives which governed Judge Fitch in all his fishing we could do away with the fish laws entirely. He could make a fly-rod equal to that of a professional maker, and the "Fitch grip" for a fly-rod was his invention. The basket strap to be used on the left shoulder with a belt around the waist was also his invention, although a tackle dealer who made it gave it his own name, and lately I have seen it advertised in a London paper by still another name, and never was the inventor's name associated with it except among his own friends, who knew the circumstances and how it came to be invented, although the circumstances have been related in this journal. A few years ago this matter of the basket strap was agitated, and Judge Fitch sent me a photograph of himself with fish basket and strap on left shoulder, taken, as I now recall it, in 1850 something.

Judge Fitch endeared himself to all who came in contact with him, and his writings upon fly-fishing subjects, rod making, etc., chiefly over the pen name of Fitz, are some of the most vigorous and instructive contributions to our angling literature, and his death at a ripe old age will be mourned by a circle of sincere friends.

Weight of Sunapee Trout.

It is no exaggeration to say that during the past two or three weeks I have been asked fifty times: "How large does the Sunapee trout grow?" This is in consequence of the fish being brought to New York State by the Fisheries, Game and Forest Commission and planted in Lake George. My reply has been: 7 or 8lbs. is probably the maximum weight, although it has been claimed that they have grown to a weight of 10lbs.

It has been stated in the newspapers that the Sunapee trout are found nowhere else in New Hampshire except in Sunapee Lake, but this is an error, for they are found in Dan Hole Pond in New Hampshire. Whether the fish in Dan Hole Pond came originally from Sunapee or are native to the pond, as has been claimed, I will not attempt to say; but they are there, and I quote from a letter written by Commissioner Wentworth: "Daniels has been to Dan Hole Pond to see if he could get eggs of landlocked salmon or saibling (the Sunapee trout are called saibling, white trout and golden trout by residents in New Hampshire), and he tells a remarkable story on his return. The fish had cast most of their spawn when he arrived, but he caught six salmon, the largest 42in. long, and he was sure it would weigh 30lbs. He got but eight saibling, but the largest one would weigh 12lbs. Daniels found that saibling were in a pond near Dan Hole called Coonen Pond."

The Transfer of Sunapee Trout.

When I took the State fish car Adirondack to Sunapee Lake, New Hampshire, to bring back some of the trout from the lake, the adult fish had never been transported alive, and no one could tell what they would do once they were placed in the cans, even if they survived the wagon journey from the hatching station to the car, a distance of six miles. The Fisheries, Game and Forest Commission of New York are indebted to the New Hampshire Fisheries Commission through its president, Col. Nathaniel Wentworth, and to Dr. John D. Quackenbos, that the fish were permitted to leave the State to find a new home in the waters of New York, but the transfer from beginning to end was an experiment, and I have been asked to give some of the details of it.

The car reached Newbury, at the lower end of Sunapee Lake, on the evening of Nov. 6, which was Friday. It contained some fingerling brook, brown and lake trout as a present to the people of New Hampshire, in exchange for the Sunapee fish. The next morning Commissioner Hughes took the lake trout to Manchester, and on the same train I sent one of the three men on the car to Bucksport, Me., to return to the car with some young fish from the U. S. Fish Commission. In the afternoon, Col. Wentworth having arrived, spawn was taken from the Sunapee trout in the tanks at the hatchery near the lake. After spawning the fish were greatly exhausted and remained on their sides in the tanks longer than I wished they would before they righted themselves. Grant Christie, the captain of the car, was expected back from Maine about noon of Tuesday, and early that morning Dr. Quackenbos furnished a team to transport the fish from the tanks to the car. The two men were at the car and I had told them to have twenty-five cans of fresh water from the lake and the ice-box was refilled early in the morning. At the hatchery I had but three ordinary fish cans and one barrel to transport the fish. By 9 o'clock they were loaded—sixty Sunapee trout weighing from 1½lbs. to 5lbs. each, two landlocked salmon of 8lbs. each that had been spawned on Sunday, and one brook trout of 4½lbs. Four big saibling, two landlocked salmon and the brook trout were to go to Dr. T. H. Bean, director of the New York Aquarium; and two saibling of 5lbs. each were to go to T. W. Fraine in Rochester, to be mounted for the Sportsmen's Exposition in Madison Square Garden next year. There were reasons why I had so few cans and none of the men from the car to assist in transporting the fish in safety to the station, but they are not necessary to explain here. The start was made so hastily that I had to leave my personal baggage at Dr. Quackenbos's house, to be sent after me to the station. Once on the road, I urged the driver to avail himself of every bit of fairly good road to make haste. The wagon had no springs, and the poor fish, like Br'er Rabbit, had to take it. The largest of the fish were in the barrel, with a sack tied over the top, and before two miles had been traveled it seemed as though every fish had its head out of water gasping for oxygen. It was just after a hard rain, and the brooks we crossed were high-colored, and I did not dare use the water in the cans. At a clear spring, with the driver's help, fresh water was furnished to all the cans and the barrel, but it did not seem possible to get the fish to the car without great loss. Even if they did not die outright, I feared they would be so bruised that fungus would form, and it would be hard to nurse them back to normal condition. At the car the fish were hurried into cans of fresh water, placing one and two fish in a can. The water at the hatchery was 36° Fahr., and the water from the lake was 41°, and as soon as the fish were changed the water was reduced with ice. All the fish were alive when they reached the car, but some of them were badly bruised. The cans, of which there were ninety in the cars, were not large enough for the big fish, and they had to be curled up to get them in. Christie with his twenty cans of fish did not arrive on the noon train, and we had to wait until nearly 5 o'clock for the train which would bring him and haul the car to Claremont Junction. In icing the water it got down to 33°, and while I was at the telegraph office Catchefer, one of the men, took out all of the ice and added fresh lake water to two cans containing two big saibling that had turned belly up. It did not seem possible that a reduction of 3° in the temperature from the hatchery water would turn the fish over, especially as only two cans were so affected; but when I returned the water was brought up to 36° in all the cans. During the afternoon the fish turned up more or less, and at once the water was turned out and fresh put in, for pumping the water did not have the effect that it does with small fish. The big fish seemed to exhaust the vitality of the water beyond the point where it could be restored by aerating—to express it crudely. With fresh water the fish soon righted themselves, but all the cans were aerated constantly. We pulled out on the afternoon train, having lost one of the smaller saibling, and another was very sick; both probably having been injured by the larger fish in getting to the car, and none of the fish had recovered from spawning.

At the junction the train on the Connecticut River R. R. was an hour and a half late, and had it been on time it gave us only ten minutes to be switched to the Rutland R. R. in Bellows Falls, and there was nothing to do but make the best of it. We could get out at Bellows Falls at 11 o'clock on the Boston sleeper, and that we did. With Robt. Aulls I took the first watch until 2 A. M., and sent Christie (who had been up all the night before) and Catchefer to bed. Going over the mountain to Rutland the brook trout turned up, and it was discovered that a steam pipe near his can was leaking; but with a can of fresh water and some ice he righted himself. We had had no steam in the car from the time we struck the Boston & Maine R. R., and it was an agreeable change to find it again in the office and stateroom when we struck the Rutland R. R., although it was shut off entirely from the main part of the car containing the fish. On the trip to New Hampshire the stateroom and office had been partly flooded from the water when the train was going up grade at the time the water was being changed, and the holes in the car floor had clogged. At Rutland we remained in the railroad yard until 6:25 o'clock, and there was a chance for two hours' sleep, the fish acting well, although during the night first one and then another would turn over, but with twenty-five cans of fresh water only one small saibling was lost. The two large fish for Fraine were killed to give the salmon more room in the barrel, from which they had not been removed since they left the hatchery, except temporarily. The run from Rutland to Lake George was made by 9:30 A. M., and then all but the aquarium fish were taken from the car, and forty-two saibling, half males and half females, were selected for planting in the lake. The county of Warren furnished a steamer and the fish were taken down to a shoal near Diamond Island and released from the cans in good condition, although on the steamer three fish turned up, but righted when fresh water was added. Aerating the water did no good beyond a certain point. If the fish came up, pumping the water would send them to the bottom of the can again, but once they turned over the only thing to do was to put in a can of fresh water. We got away from Lake George at 11:25 with ten saibling for the Caledonia hatchery, half males, half females, and the fish for the aquarium all in good order and with plenty of water from the lake. While we were sorting the fish in the railroad yard previous to planting, both of the salmon and the brook trout turned over, but we were used to it by that time. We reached Albany at 2 o'clock and found a message from Dr. Bean that he would be up for his fish himself, and had sent me some big cans from the aquarium. These were procured from the express office and the fish changed. Catchefer remained behind and the car went on to Caledonia at 3 o'clock P. M., arriving there at 5 A. M. the next day with all the fish in good order. Dr. Bean came up at 4:15 and returned with the fish at 5 o'clock. That night he had them in the aquarium tanks. Fungus developed on the aquarium fish later, but the Doctor writes me that salt-water baths have nearly cured the fish of this parasite and that they are now in good condition. On the outward trip the car was loaded with about 10,000 fingerling brook, brown and lake trout, which

were planted in waters in Essex and Clinton counties before the car crossed over to New Hampshire. The route for the car was arranged by General Passenger Agent J. W. Burdick, of the D. & H. R. R., and free transportation was furnished by his road and the Rutland R. R.

A. N. CHENEY.

CATCHING THE BIG TROUT.

"WELL, are you going down to try for the big fellow to-day?" asked my friend Judge Coppock. It was our last day on the Carp River in northern Michigan.

"You've hit it exactly, Judge," I replied, "maybe you're going down that way yourself?"

The Judge laughed. We had been fishing together almost daily for a month for trout in the streams in northern Michigan. He was an enthusiastic bait fisherman, and had but little faith in the fly-rod, which was my way. A few days before we had fished the Maple River, where I had the good luck to capture more and better fish than he had taken. The question was superfluous. Each of us knew the other hoped to basket the big trout before night.

In a short time we left the hotel for the old beaver dam. The river for a mile below was full of fallen trees, under and over which rushed the shallow stream. The water had washed great holes underneath these submerged trees, and in them lurked many speckled beauties. The entire distance to the open part of the stream afforded excellent opportunities for the bait fisherman, but there were few places where a fly-rod could be used successfully.

There were two ways by which to reach the open stream: Over the high ground, which was covered with great pine trees and an interminable small growth, called "pin-tangle" by the natives, or directly along the stream. The low ground between the river and the bluffs on either side is thickly overgrown with bushes and small trees, through which it is impossible to make any headway.

I crossed the river and started down along the left bank. The judge started in at the dam.

No one but he who has been along the Carp can have an idea of the effort required to get through such a place. At many places it was necessary to get down and creep underneath large trees that had fallen over the stream, blocking the way on both sides.

At one place where I was compelled to squeeze under I noticed a deer track. The animal had crawled through the hole, just as I had to do.

I was fully an hour in reaching the open where I could do casting. There I put my rod together and began laying my flies out on the water. The river for half a mile to the bend where the big fish lay was all that a fly-fisherman could desire. The water rushed through between grassy banks overhung by bushes. Deep pools, first one side, then the other, appeared in view at each bend of the circuitous stream.

My basket was heavy with fish when I came in sight of the bend where the big fellow had his lair. It was nearly noon, so I stopped to rest awhile and eat my lunch, and at the same time decide upon the best plan to take the big fish.

A few days before the Judge had hooked him and lost him by reason of a weak spot in his line. I had hooked him twice and both times my leaders had snapped.

After lunch I took a leader of extra size and tested it inch by inch. I had been using two flies during the forenoon, but decided to use but one in trying for the big fellow, and that a dark Montreal on a No. 4 hook.

It was after 1 o'clock when I began to move carefully forward within casting distance of the big pool. I waded lowly, lengthening out at each cast.

Here and there I saw a trout jump, but I was after the big one and moved forward.

I cast in the shallow water furthest from the pool until I knew I was within reach, when I made a cast straight for the spot beneath the overhanging bushes under the bluff.

The fly dropped exactly right, and instantly there was a great rush, and the big trout curved in the air for his plunge. I made a sharp strike, and knew that I had hooked him deep.

He rushed out into the stream, broke water and tried to shake himself free from the hook. He kept me busy first down stream, then up, breaking the water frequently in his mad efforts to escape.

He kept up a constant fight for fifteen minutes, and then rushed under the bank and sulked. I gave several hard jerks, and began to think that in some manner he had got loose and that I was fast on a root. Again and again I yanked; there was no response. Finally I gave a long, steady pull, and out he came directly at me. I made up my mind to land him at once if possible. I touched the trigger of my automatic, keeping the line taut, and as he came to me in shallow water I took hold of the leader and slid him out on the wet sand.

I had succeeded.

As I turned about to pick him up and release him from the hook, I heard a yell, and the Judge came sliding down the bank and waded across.

"What do you think of him, Judge?" said I, as I handed the fish to him.

"He's a whale," he replied, as he lifted him up and down. "He'll weigh 7lbs. if he weighs an ounce."

Its weight was 5½lbs.

The Judge had beat me during the forenoon, except as to the big one, and was feeling good.

"But I say, Judge," I inquired, as we started for the hotel an hour later, "how is it that you were up there on the bank when I hooked him?"

"Well, you see," replied he, laughing, "I determined to beat you to the pool. I heard you crashing on ahead, but knew you would begin fishing at the open. I got through the tangle before you had gone half way to the bend. I made a detour to get around you, and would have got there first if it had not been for a big swamp hole. I saw you when you began stretching out. Of course I knew my only chance was at the bluff, where I could drop the bait directly into the water. I couldn't have reached him from the direction you came. You must have had out 75ft. of line when you hooked him."

"I expect I had," I replied.

"But," he continued, "it was interesting, and next to catching him myself I'm glad you got him."

"And what do you think of fly fishing now?"

"Well," said he, "I'm willing to admit that it has its advantages. I shall mix it up hereafter with bait fishing."

We arrived at the hotel in time for supper. The big trout was admired by the guests and was served for breakfast.

The Judge and I packed up and took the southbound train for home, satisfied with our month's vacation.

E D. MOFFETT.

Fish Introduction into New Jersey.

From the Monthly Report of the State Fish and Game Protector for November, 1896.

THE principal work accomplished during the month was the successful removal of adult pike-perch or wall-eyed pike from Lake Erie to Greenwood Lake. A great deal has been done by a number of the States in the East toward the propagation and planting of pike-perch in the waters in this part of the country, but in every instance, as far as I am aware, this work was done by procuring the eggs from the great lakes, developing them in State hatcheries and then distributing the fry. This system of introducing this valuable fish is open to the objection that the young fry are frequently devoured by large fish indigenous to the waters where the fry are placed; there is also danger of the fry succumbing to the effects of a change of water, the fry being very sensitive to such changes. For the purpose of propagating pike-perch by distributing the adult fish a number of wardens were sent to Toledo, O., the Erie railroad having kindly placed a car at my disposal from Jersey City to Marion. At the latter place the car was attached to a train on the Hocking Valley Railroad and taken to Toledo. Here about 600 adult pike-perch and about a dozen white bass were procured and these were removed to Greenwood Lake, the loss being only six fish. About fifteen of the fish were placed in the Raritan in Hunterdon county; the rest were placed in Greenwood Lake. As the water of Greenwood Lake is well adapted to pike-perch, there is no apparent reason why that fish should not be added to the fauna of that lake. Some few people, evidently rendered suspicious of the introduction of fish from other waters by the unpleasant experience New Jersey has had with carp, have expressed opinions that it might have been better perhaps if more attention had been paid to indigenous fish instead of bringing hither fish with which we have had no practical experience. There is, however, a vast difference between fish concerning which we know little and fish which belong to this country and which are highly prized in the localities in which they abound. The black bass is not indigenous to New Jersey, still there are very few people indeed who would like to see them banished from our waters. Where both black bass and pike-perch abound the former is considered somewhat gamier than the latter, but the pike-perch has the advantage of being a more prolific breeder and its flesh is far superior for the table. It grows to a far larger size and takes the hook readily. To these advantages must be added the fact that it is an enemy of the carp and experience has shown that it has driven this pestiferous fish from waters from which the carp had previously banished the bass and the pickerel. The success attending the experiment of bringing adult pike-perch from a distance will undoubtedly be followed by more work of a similar nature.

It was the intention on this trip to also secure some adult channel catfish to add to the food fish of the Delaware, but unfortunately the high winds prevailing in Lake Erie at the time of the presence there of the wardens prevented the taking of any of these fish; there is, however, no doubt that this fish can also be brought hither in a similar manner.

An attempt was made during the month to remove some of the pickerel and bass from the reservoirs of the East Jersey Water Company for the purpose of infusing fresh blood into the pickerel and perch of Greenwood Lake, but unfortunately this attempt proved a failure, owing perhaps to the cold weather having sent these fish to the deeper portions of the reservoirs, where they could not be reached by the nets. It is to be hoped that a renewal of this attempt in the early spring will meet with success.

The work of distributing trout was completed during the month.

Protector William H. Burnett.

Editor Forest and Stream:

I have read with much interest in your last week's issue the communication over Mr. Cheney's name in reference to Mr. William H. Burnett. I am a resident of Bolton, Warren county, N. Y., and am one of the owners of the Sagamore Hotel on Lake George. I have known Mr. Burnett personally for fifteen years, and I consider him one of the most reliable and conscientious men on the lake. He is in every respect a most suitable person for the position he has so honestly filled for many years, that of game constable. I know he is fearless, and should any of his friends break the law he would be the first man to prosecute them.

His reputation in our county is A1, and knowing the man so well I cannot refrain from doing what I consider my duty to give you my opinion of this man upon whom is now cast a most unjust imputation. You are at liberty to publish this over my name, and if I can do anything to advance Mr. Burnett's interest I would consider it my duty to do so. JOHN BOULTON SIMPSON.

Editor Forest and Stream:

In FOREST AND STREAM of Nov. 28, under the head of Angling Notes, I read a notice to the Grand Jury recommending them the game warden be removed from all public office in the county of Warren.

Of little consequence as the foreman of this Grand Jury may be or his opinion, it is right that, representing the Lake George Fish and Game Society, I should reiterate all that Mr. Cheney and H. A. Howard, ex-district attorney of Warren county, say of this official. His record for years is one of honesty and faithfulness, and it will be a great loss to the lake of very valuable services if he is interfered with. ROBERT LENOX BANKS,

Society for the Preservation of Fish and Game.

ALBANY, N. Y.

Onondaga Anglers.

AT the monthly meeting of the Onondaga Anglers' Association, of Syracuse, last Tuesday evening, State Fish-culturist A. N. Cheney read a paper on the "Beginning and Development of Artificial Fish Propagation.

THE NEW YORK AQUARIUM.

ON Thursday of this week, Dec. 10, the Aquarium was opened to the public, though the galleries are not yet in readiness and will be closed to the public for some weeks till the tanks are stocked and other arrangements of them are completed. The hours for the public are from 10 A. M. to 4 o'clock P. M., excepting Sundays and Mondays. There are no extra assistants to conduct an open Aquarium on Sunday, and Monday will be set apart for the workmen engaged in finishing the interior. Nevertheless there is now much of interest available to the public.

The interior has undergone a thorough reconstruction. The windows are so arranged as to admit an even, subdued light. Around the main floor the salt-water tanks are arranged, following the circle of the wall, their delicate green coloring, the effect of the sea water, making a most pleasing effect.

Altogether there are now 125 forms of animal life in the Aquarium, of which 78 are fish; the rest being seals, turtles, frogs, shellfish of various kinds, lobsters, crabs and other crustaceans, the corals, anemones and tube worms.

The water supply is so arranged that either salt or fresh water, as may be desired, can be used in every exhibition tank, and the laboratory is also supplied with both fresh and salt water. Labels printed in bold type will be placed on each tank. Besides giving the names and accurate portraits of the fish, they will give a succinct history and description of them. Both the common and scientific names are given, and the origin of the common names so far as known; also they mention the waters in which the fish may be found, and the places they prefer in such waters, the maximum size they attain, habits, whether permanent or migratory, spawning season, description of the fry, the food they prefer and whether or not they are esteemed as food.

Of the seventy-eight kinds of fish, twelve belong to the trout and salmon family. And they are a collection of rare excellence. There are landlocked salmon from Maine and New Hampshire, and of the trout there are brook, brown, steelhead, rainbow, Lake Tahoe (California), Swiss lake, hybrid lake and brook, and hybrid brook and brown, lake trout, and Sunapee Lake trout, the latter arriving in rather hopeless condition, but they are bright, clean and healthy now. There are live whitefish from Canandaigua Lake, and of the game fishes there are black and striped bass (a fine collection), and crappie, drum, pickerel, sea bass, tautog or blackfish, weakfish and white perch; and of the curious fish, the angler, boxfish, Bermuda chub, spotted codling, conger eel, bony gar, silver perch, sea ravens, sea horse, sand shark, dog shark, barndoor skate, sturgeon, etc.

The tanks are models of neatness and artistic arrangement, as indeed is every detail of the interior.

A Williamson.

MR. CHARLES HALLOCK has left with the FOREST AND STREAM an interesting example of work by A. Williamson, whose paintings hold an esteemed place among collectors. The scene is of a trout stream, and the canvas has added value because of the rarity of Williamsons now to be had. The price is $25.

AN EXCEPTIONAL CHANCE offers for purchasing one of Canada's famous salmon angling rivers, the Moisie. This celebrated stream has furnished excellent sport to a club of six American gentlemen for some years past. The owners are now offering the preserves for sale outright. Property includes the land on both sides of stream, inclosing pools, two large buildings, ice houses, men's lodgings, boats, etc. The river ranks next to the Cascapedia for number and size of fish, is easy of access, being but twenty hours from Rimouski on the Intercolonial R. R., and in regular communication by passenger and mail steamer and telegraph. We would refer our readers to advertisement on fourth page.—*Adv.*

THE IRISH SETTER AS A FIELD DOG, PAST AND PRESENT.—I.

LITTLE VALLEY, N. Y.—*Editor Forest and Stream:* The origin and past history of the Irish setter are so well known to its admirers that no comment thereon is needed here. Suffice it to say that the Irish setter is one of the oldest and purest of the breeds of setters.

Its color and general race characteristics admit of very little, if any, crossing with other breeds of setters. The standard of color for this breed calls for a dark mahogany red, a small patch of white on the chest only being admissible.

While this standard of color has kept the race pure and developed a lot of show Irish setters, let us see what it has done for the field quality of the dog.

With the advent of dog shows came the craze for the dark mahogany red, the dark eye, the long and lean head, etc., of the modern Irish setter. All else in breeding was thrown aside, and color and show form were alone bred for. The field quality of the dog was lost sight of, and he came down in his working grade almost to the lowest bench shows, and the craze for color were the nails driven in the coffin of this once powerful breed of sporting dogs.

The early history of field trials shows that this setter held his own with the other breeds of setters and pointers. As an instance of this, Biz defeated Count Noble once; and others, which I do not now recall, were winners. Their ownership also was a wide and powerful one. Many sportsmen preferred this setter for their private use. Indeed, some

Irish setters which never competed at the trials gained a wide reputation as field dogs of much merit. One of these, Mr. Scott Rodman's Dash, gained a very wide and favorable reputation among sportsmen who lived in and around New York. He was owned by Mr. Scott Rodman, who lived at that time, I believe, at Pine Brook, N. J. Mr. Jacob Pentz, who had shot over this dog extensively, once told me he was as good as any he had ever shot over. Dash in his day was famous as a snipe dog. You can hear of Rodman's Dash and his descendants to this day in that part of New Jersey.

I will give another instance or two of the good old Irish setter. In the year 1885 I was at the Poncho Agency, I. T., with Dr. F. S. Dewey. The Doctor owned an Irish setter, by Erin out of Queen. He was at that time six years old, but a splendid dog on chickens and quail, and also was a wide, fast ranger. He carried a high head and constantly used his nose. I also owned at that time an Irish setter which I had purchased from a freighter. When I bought the dog the following conversation took place:

"What kind of a dog is that?"
"Him's a Irish setter, I reckon."
"Will he point chickens?"
"Wal, I reckon—he'll set."
"How long will he hold a point?"
"Erbout a minit."
"What is your price for him?"
"Wal, pard, I reckon he's wuth erbout two plunks and er ha'f ($2.50)."

So I came into the ownership of Frank. In color he was medium dark, with no white. He was a business-looking dog, with a sensible-looking head.

The day following his purchase I took him out to see what he would do. He went away with a long, swinging gallop, and carried his head high—with fairly good tail action. He soon showed his ability to find chickens, and, as the freighter said, he stood "erbout a minit." He seemed to think it a waste of time to stand longer, and would then put up his chicken and chase it as far as he could see it, which was some distance on the prairie. I saw at once I had a dog of much natural ability, but he would need considerable training before he was useful to the gun.

The next day a check cord was attached to his collar; this, together with a somewhat liberal use of the whip, soon brought him down so that he would point long enough for the shooter to come up, but as soon as the birds were flushed he was off. A short time was consumed in getting him steady to gun and wing. He developed rapidly after this and made a remarkable dog in some respects.

He had followed the freighter's wagon so long and lived on freighter's biscuit and bacon so much that he was as tough as wire nails. He never seemed tired and his wind was always good.

Aside from making a good dog on chickens and quail he made a remarkable one on wild turkeys. He would hunt turkeys as a dog hunts grouse.

I found him one day on a point in some very high grass near a creek. When I came up he commenced roading carefully through this grass, occasionally stopping to move his nose from side to side in the wind. After roading 200 or 300yds. he pointed, the hair over his fore shoulders rising as he did so. In an instant I heard the twit of a turkey hen, and as she rose I killed her with my right barrel and cut down a young gobbler with my left. I stood still and saw seven more fly across the creek from me. The hair on Frank's back would always raise when he pointed turkeys, but on no other game.

On chickens and quail he was a bold, fast ranger—on turkeys exceedingly cautious. I killed a number of turkeys over him and a great many chickens and quail. His judgment in handling game was remarkable, as were his efforts to aid the shooter.

So it will be seen that in those days there were Irish setters of splendid field quality. They were not, however, show dogs. I have always believed that had Erin, Plunket and Rodman's Dash been more extensively bred to it would have improved the breed very much in field quality. It would at least have given breeders more blood lines to have bred to and from, and aided them in the selection of good blood for field work. It is this, I believe, that has aided the breeders of the English setter and pointer to get so far in advance of breeders of Irish setters.

The cross of the Count Noble blood with that of Gladstone has produced in English setters a race of dogs surpassed by none.

Pointer breeders also took advantage of the various strains. Croxteth blood was crossed with that of Sensation and others until the pointer is on an equal footing with the English setter.

Then again it is necessary for breeders to attend the field trials; to there learn what is desirable for an advance in breeding. Otherwise they may never know what really high class work is and can form no intelligent idea of what they should do to improve the dogs that they breed. In breeding one must know what is desirable as well as what is not. The practice of matching together dogs of which little or nothing is known, except that their blood lines are thus and so and that they may have been winners, is not intelligent breeding. They may have been winners where the competition was so poor that they could not help winning, or there might have been a dozen things conducive to their success other than their merits. Again, disposition must be taken into account on both sides. Much depends on that; otherwise the offspring may be rattle-headed, gun shy, soft-hearted or a dozen other things not desirable, and not conducive to successful breeding of field dogs.

Again, color in the Irish setter is a matter of very little moment so long as he is red. He might be dark, medium or light red, and still be a good field dog. It is my opinion that the breeders of this dog would do better if they eliminated color from their estimates in breeding. They should know more of their dogs' dispositions; of the elements that will produce a good brain, nose, speed and style, and a disposition to stand and endure hard work. Color is a mere matter of fancy. The practical sportsman cares very little for it. He wants a dog that will hunt and find game. He wants a dog with brain enough to handle his game after it is found. In my next I will try and give your readers some of my observations in owning, breeding and handling this setter—an experience extending over a period of eight or ten years.

DR. H. B. ANDERSON.

A. K. C. MEETING.

A MEETING of the American Kennel Club was held in the club's office, 55 Liberty street, New York, on Dec. 7, at 2 o'clock. The club meeting was a formality to clear the way for the regular quarterly meeting of the executive committee, to be held at same time and place. The meeting was called to order, Mr. Edw. Brooks in the chair. It was immediately adjourned and the executive committee meeting began.

There were present: American Bedlington Terrier Club (Thomas Pearsall); associate members (A. Clinton Wilmerding, Dr. H. T. Foote); Boston Terrier Club (L. A. Burritt); Central Beagle Club (Dr. W. E. Johnson); Gordon Setter Club (James B. Blossom); Irish Setter Club (G. H. Thompson); Mascoutah Kennel Club (C. F. R. Drake); Metropolitan Kennel Club (G. M. Kernochan); National Beagle Club (H. F. Schellhass); National Greyhound Club (Horatio Nelson); New England Beagle Club (H. S. Joslin); Pacific Kennel Club (James Mortimer); Pacific Fox Terrier Club (Capt. C. B. Knocker); Pointer Club of America (George Jarvis); Poodle Club of America (Henry G. Trevor); St. Bernard Club of California (George Bargate).

The reading of the minutes of the previous executive meeting was dispensed with.

The secretary's, treasurer's and advisory committee's reports were approved as read.

The field trial committee was not ready to report.

The application of the California State Poultry and Kennel Club for membership was granted. It had claimed its dates beginning on Jan. 10, Sunday, and much debate followed pro and con on this point, there being some precedents of the club against Sunday shows, and on the other hand it was shown that Sunday shows on the Coast were not considered improper, as there were theaters open on Sunday, etc. The matter was referred to the advisory committee of the Pacific Coast to report upon later.

The resignation of the Rhode Island State Fair Association was accepted.

Application was granted for the following prefixes: Dr. J. T. Kent, Belleplain; C. M. Selfridge and Perry Ward, Thornhills.

A committee of three was appointed by the chair, Messrs. Mortimer, Blossom and Burritt, for the purpose of investigating a matter in which T. J. Farley is involved. At the New York show last year his Irish setter puppy Kenmore, Jr., won, and soon afterward he sold him; then, it is alleged, he put another puppy in Kenmore's bench, which bore his winning number and card, and sold this puppy also as Kenmore, Jr. At Mineola both puppies were entered: one as Kenmore, Jr., and the other as Joe, formerly Kenmore, Jr., and thus the investigation came about. These two dogs, entered in Class 42, Irish setters, Nos. 92 (Kenmore, Jr.) and 95 (Joe), were disqualified.

The win of the bull terrier Milwaukee Tinker at the Milwaukee Kennel and Pet Stock Association's show was canceled, on the ground that he was under six months of age. At the same show the beagle bitch Kittie Clover was entered by the owner's agent in the open class when she was qualified for the challenge.

The Blenheim spaniel Murillo and the Ruby spaniel Princess Bee were disqualified as to wins at the Mineola show for being transferred from one class to another against A. K. C. rules; also the win of Black and Tan terrier Balacy's Flora was canceled, as she was incorrectly entered as a registered bitch.

Several cases at the recent Brooklyn show will be investigated later.

The treasurer's report was accepted. His statement was as follows: Receipts from all sources to date, $6,475.37; balance on hand Jan. 1, $2,233.08; total, $3,708.45. Disbursements from Jan. 1 to date, $6,343.82. Balance on hand, $2,364.63.

The bills for annual dues for 1897 were mailed to all of the A. K. C. clubs and they were urged to remit promptly. Failure to pay such dues before Jan. 1 next deprives delinquent clubs of representation, and they may be dropped from membership at the following meeting.

Mr. Mortimer moved that Rule 2, concerning dog shows, in so far as it states that exhibitors must abide by the consequences of their own mistakes, should be amended, as it was a great hardship on people who unwittingly violated that rule. He showed that originally it was intended to prevent unfair changing about from class to class, and not to apply to mistakes of innocent owners. The matter was referred to the committee on constitution and rules to report some manner of equitable amendment for later action.

The secretary, in behalf of Mr. Klein, presented the matter of making some arrangements with the U. S. customs whereby U. S. clubs could give bond for Canadian dogs to be shown at their shows, thus saving the Canadian owners serious delays and consequent loss. It was concluded that the matter could not be arrranged.

The advisory committee's report was read, but it contained only matter already published.

Hartford's Dogs.

HARTFORD, Conn.—*Editor Forest and Stream:* We have all read the little piece from the afflicted tradesman. That is one side; now hear the other. This person claims that dogs do a great amount of damage to provisions belonging to marketmen and provision dealers. If this provision dealer would put his goods in his store, where they belong, and not on half of the sidewalk—which on Asylum street they thoroughly block—the offensive dog would find nothing to spoil, and it would satisfy more than nine-tenths of all the people who have to get out in the mud, as it now stands.

Furthermore, this tradesman says he derives only a very small amount from dog owners, who use scrap-box food. He may feed his dog on such if he has one, but "there are others" who do not, and as for kicking a dumb animal, a man is a coward who suggests or does such.

Now about the provisions which are spoiled by dogs. What becomes of them? Are they thrown away? No.

The man who has a good dog does not allow it to run at large in the street, and he or any one else that values a dog to any extent would not risk its life among the deadly trolleys.

OWNER OF A GOOD DOG.

The FOREST AND STREAM is put to press each week on Tuesday Correspondence intended for publication should reach us at the atest by Monday, and as much earlier as practicable.

Field Trials and Field Work.

NEW YORK.—*Editor Forest and Stream:* A good field trial dog should be a good dog to shoot over, and a good field dog should be a good field trial dog. Especially should this be true of dogs broken on quail, dogs to be used in an open county.

They ought also to be well broken and easily and quietly handled. An owner who puts up from $150 to $200 ought to have a run for his money. There has been a practice among some of the handlers of starting dogs which they knew would not win. This ought in some way to be discouraged.

Of course all cannot win, but there are dogs started which never were good enough to make a decent run. If a dog cannot handle quail decently well, I do not know of what use he is as a field dog. If he cannot handle quail he certainly could not handle grouse and woodcock.

HANDLER.

POINTS AND FLUSHES.

During the period of agitation, when what has been commonly known as the "cropping question" was being everywhere discussed, many of those who so strenuously fought for a continuance of the barbarous practice loudly predicted the utter ruination of the bull terrier and the speedy oblivion of Great Danes in this country. Facts in connection with the late show at the Crystal Palace, and which admit of no controversy, go to prove that the fears of those most interested have been groundless. It was naturally to be expected that the passing of the new rule would affect for a time the breeds to which it applied, and the statements on all sides that such and such fanciers were giving them up for other specimens of the canine race created, among some, the impression that the fears of the advocates of cropping were going to be realized, and that the size of classes for these particular breeds would soon diminish to a vanishing point. It is now eighteen months since the Kennel Club passed its rule to prevent any further continuance of the practice of cropping dogs' ears, and the bull terrier is still in our midst, Great Danes are yet with us, and Manchester terriers still grace the show-bench in great numbers. Nay, more, the entry of bull terriers at the late show was actually a record one, and Great Danes have not paraded before a judge at a Kennel Club show in such numbers for years. —*Kennel Gazette (England).*

In our report of the E. F. T. C. All-Age Pointer Stake, in describing the general merits of Odd Sides, the word quantity was intended instead of quality in the following sentence: "Though his bird work was inferior in quality to theirs," etc. His bird work was inferior in quantity owing to birds not being so plentiful where he ran as they were on other parts of the grounds, but the quality of his work was superior to that of all the others.

Wheeling.

Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is particularly desirable.

TOO MUCH OF A GOOD THING.

Century runs do not over-fatigue some wheelmen, but for many men ten or fifteen miles over good roads is all they should attempt, and especially if their riding is at irregular intervals. Men with weak digestions should be particularly careful to avoid fatigue, and should refrain from climbing difficult hills or holding a hot pace when set by their companions.

Strict moderation is an absolute essential to secure the benefits of bicycle riding from the standpoint of health.

The occasional rider suffers perhaps most from overdoing the thing, but no one is exempt from the bad consequences of over-exertion.

Professional racing men build up great powers of endurance by careful training. Their muscles are hardened and strengthened by constant exercise, and their hearts, lungs and digestive systems gradually brought into trim to stand the increased demand made upon them. The professional understands that it is easily possible to build up muscular power that may be hopelessly handicapped by poor digestion or a weak heart, and he knows that a symmetrical development of muscles and vital organs is essential to success.

He is consequently careful to avoid excess in training and to guard against undue fatigue. At the time of his race, however, he cannot spare himself, and he rides to win, even if it costs his life.

Huret, who holds a number of world's records for long distance races, says that when he was on the point of breaking the twenty-four-hour record—he actually covered 544 miles within that time—he was practically out of his head. He was haunted by the fear of accident, which, as he became fatigued, seemed inevitable at every turn of the track, and made his riding absolute torture. All the arc lights on the track were merged into one gigantic electric globe that dazzled and blinded him, and for the time being the world was afire and he in a delirium suffering the agony of the damned.

What's in a Name.

OUR antipodean friends in Australia have names in their geographies that rival some of our own choice specimens as found in Maine and elsewhere. Here is a sample from the letter of a wheelman describing the road from Warrnambool to Geelong:

"A few words about the track in its present condition may not be out of place. Starting from Warrnambool, the road to Allansford has a very uneven surface for about four miles, thence on through Cudgee to Garvoc it is very good. After leaving Garvoc a patch of new metal about half a mile long is met; after which, with the exception of a little rough ground before reaching Terang, the road right through to Pirron Yallock is perfect. Then comes the worst part of the journey. From Pirron Yallock for a distance of four miles the road surface is very uneven, and after passing through Colac the road, to within two miles of Winchelsea, is all patches; from this point to Geelong the road is good."

NOVICE AND EXPERT.

THE first five miles that a man rides on a bicycle is frequently the hardest ride he ever takes. This is especially true of the man who teaches himself, though the man who receives instruction rarely fails to get as much exercise as is good for him in covering that distance for the first time. Five miles without previous experience is equal to fifty after the average wheelman has ridden 500 miles, or equal to a century when he has with reasonable regularity recorded 1,000 miles.

This does not of course apply to people who take a number of short lessons, and who stop at the first sign of fatigue, but to those who learn in a single lesson, and who do not give in until they have mastered the art.

"Practice makes perfect" is a maxim that must constantly recur to the cyclist. With experience he finds all the hard things become easy. The hill that a few months before he strained every nerve to surmount becomes of trifling consequence, and he hardly notices it as he covers the miles with even pace; and when he comes to the down grade on the other side and back pedals or coasts it makes him smile to think how scared he was the first time he descended it.

Riders vary in talents, and some men learn in half or quarter the time of others. It is not possible, therefore, in anything but a very general way to mark the line between novice and expert. We should say, though, that the man who has ridden a thousand miles over all kinds of roads, including hilly country, and who has covered in single rides distances of fifty, seventy-five or a hundred miles, has, as a rule, pretty near, if not quite, graduated into the expert class.

There are clearly defined periods of progress. At first the rider toils laboriously, and gets more sweat to the square inch than pleasure out of cycling. He has a terror of approaching vehicles that is only rivaled by his joy when he succeeds in safely passing them; and a hundred-foot boulevard set aside for his uses alone would not give him more space than he would like to have. At this period every mole hill is a mountain, and mountains themselves have no interest for him.

He runs into every rut and stone and ditch he comes across, and the number of narrow escapes he has would fill a book. At this period he is a "wabbler," physically and mentally.

But he is learning all the while, and presently there comes a time when on good roads his apprehensions disappear and he becomes aware that he is looking at the landscape instead of his front wheel, and thinking about subjects that would interest him under ordinary circumstances, instead of the old bugbears of collisions and sudden death.

This change frequently occurs as early as the completion of the first 100 miles.

At 500 miles he can ride the cable slot fairly well or a narrow wheel track in a country road, or easier still one of the footpaths that run beside, and he has learned the command of his bicycle on most hills and on bad roads. His muscles are hardening, and rides of twenty-five or even fifty miles over good roads do not bother him. The real pleasure of cycling is beginning to dawn on him, and he is also learning to make his bicycle of practical use in his affairs.

Then before he knows it he becomes aware that the industrious little cyclometer shows four figures on its open face, and if he is of the right kind of stuff at this stage of the game the wheel will have become a part of himself. Without being conscious of the fact the two have grown together, like the man and horse combination of the old centaur, and strangely enough it seems as though it was the bicycle that had learned and not the man. For the expert the steed of steel answers each little whim without the need of the rider's effort, here just missing that stone and there picking out the only smooth inch of road in 40ft. When the rider wishes to dismount it takes him to the exact spot and the pedal comes just right, and when he gets on again things adjust themselves just as nicely. Nothing feazes the trusty wheel, and the rider thinks to himself "How well trained it has become!" He does not take the credit to himself that he has at last learned the art of riding.

A Natural Trap.

NEW YORK, Nov. 13.—*Editor Forest and Stream:* A strange accident happened to me the other day, and I am sending an account of it to your wheeling department, because it occurred while I was out with my bicycle.

I was riding along a very lonely road past a piece of woodland, when I heard a hound persistently baying in one particular place. Thinking that he had possibly treed a coon, I left my wheel in some bushes by the side of the road and went over to investigate.

When I reached the spot I found that the dog was working at the base of a large rock 8 or 10ft. high, and perhaps 20ft. across in any direction. Upon examination I discovered that there was quite a cavity under this rock, and that by removing one or two small fragments I could make an entrance for the dog. Accordingly I set to work and raised several stones. One large stone was wedged in tightly nearly 2ft. below the surface of the surrounding ground, and I worked away at this for some time without success. Finally, however, on getting pretty well down into the opening I had made, and rocking it by purchase on one end, I loosened the stone. The same instant, to my surprise and alarm, a large fragment of the main rock, weighing perhaps two tons, slipped down several inches and pinioned one of my feet. The fact that it rested on some elastic leaf mold alone saved the foot from being crushed.

Realizing the danger of any movement on my part, I stood perfectly still and looked upward to ascertain the situation.

The loosened fragment of rock that held me fast reached a foot or more above my head and leaned over me threateningly, being plainly out of the perpendicular.

It had evidently been dislodged from the main rock by the action of the frost, water having collected in some internal fissure.

In shape it was like an immense tombstone, and I thought at the time that it might be my burial slab.

The weight of the rock pinched my foot in a very painful way, but it was evident that any ill-advised attempt to dig it out would bring the great mass over on my body, so I went at the task of releasing myself in a very leisurely way.

First I carefully drew some of the small boulders I had taken from the hole toward me. Then I wedged several of these under projecting irregularities in the lower surface of the large boulder till I had it propped in a way that I thought would keep it from rolling forward. Finally, with fingers and a bent stick, I loosened the earth beneath my foot and carefully dragged it free.

I was safe, but to guard against any one else being trapped as I had been I drove the dog to a safe distance, and climbing to the top of the rock mass braced my feet against the treacherous fragment and gave it a heave that sent it over with a rumble and crash, splintering the stones on which it fell and filling the air with a smell of brimstone. J. A. C.

Cycle Locks.

A GREAT many varieties of locks have been devised to prevent cycles from being ridden off by thieves; but in our opinion nothing is better than a small padlock and chain, which enables the owner not only to make the machine unrideable, but to secure it to a gate or railing, so that it cannot even be carried away. The chain, however, should be a special one made for the purpose, and should consist of properly tempered steel. If it is composed of any soft metal, a large pair of scissors will be sufficient to cut it through, unless it is very heavy and cumbersome.—*Scottish Cyclist.*

The FOREST AND STREAM *is put to press each week on Tuesday Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

PUBLISHERS' DEPARTMENT.

Map of the United States.

A LARGE, handsome map of the United States, mounted and suitable for office or home use, is issued by the Burlington Route. Copies will be mailed to any address on receipt of 15 cents in postage by P. S. Eustis, Gen'l Pass. Agent, C., B. & Q. R. R., Chicago, Ill.—*Adv.*

Yachting.

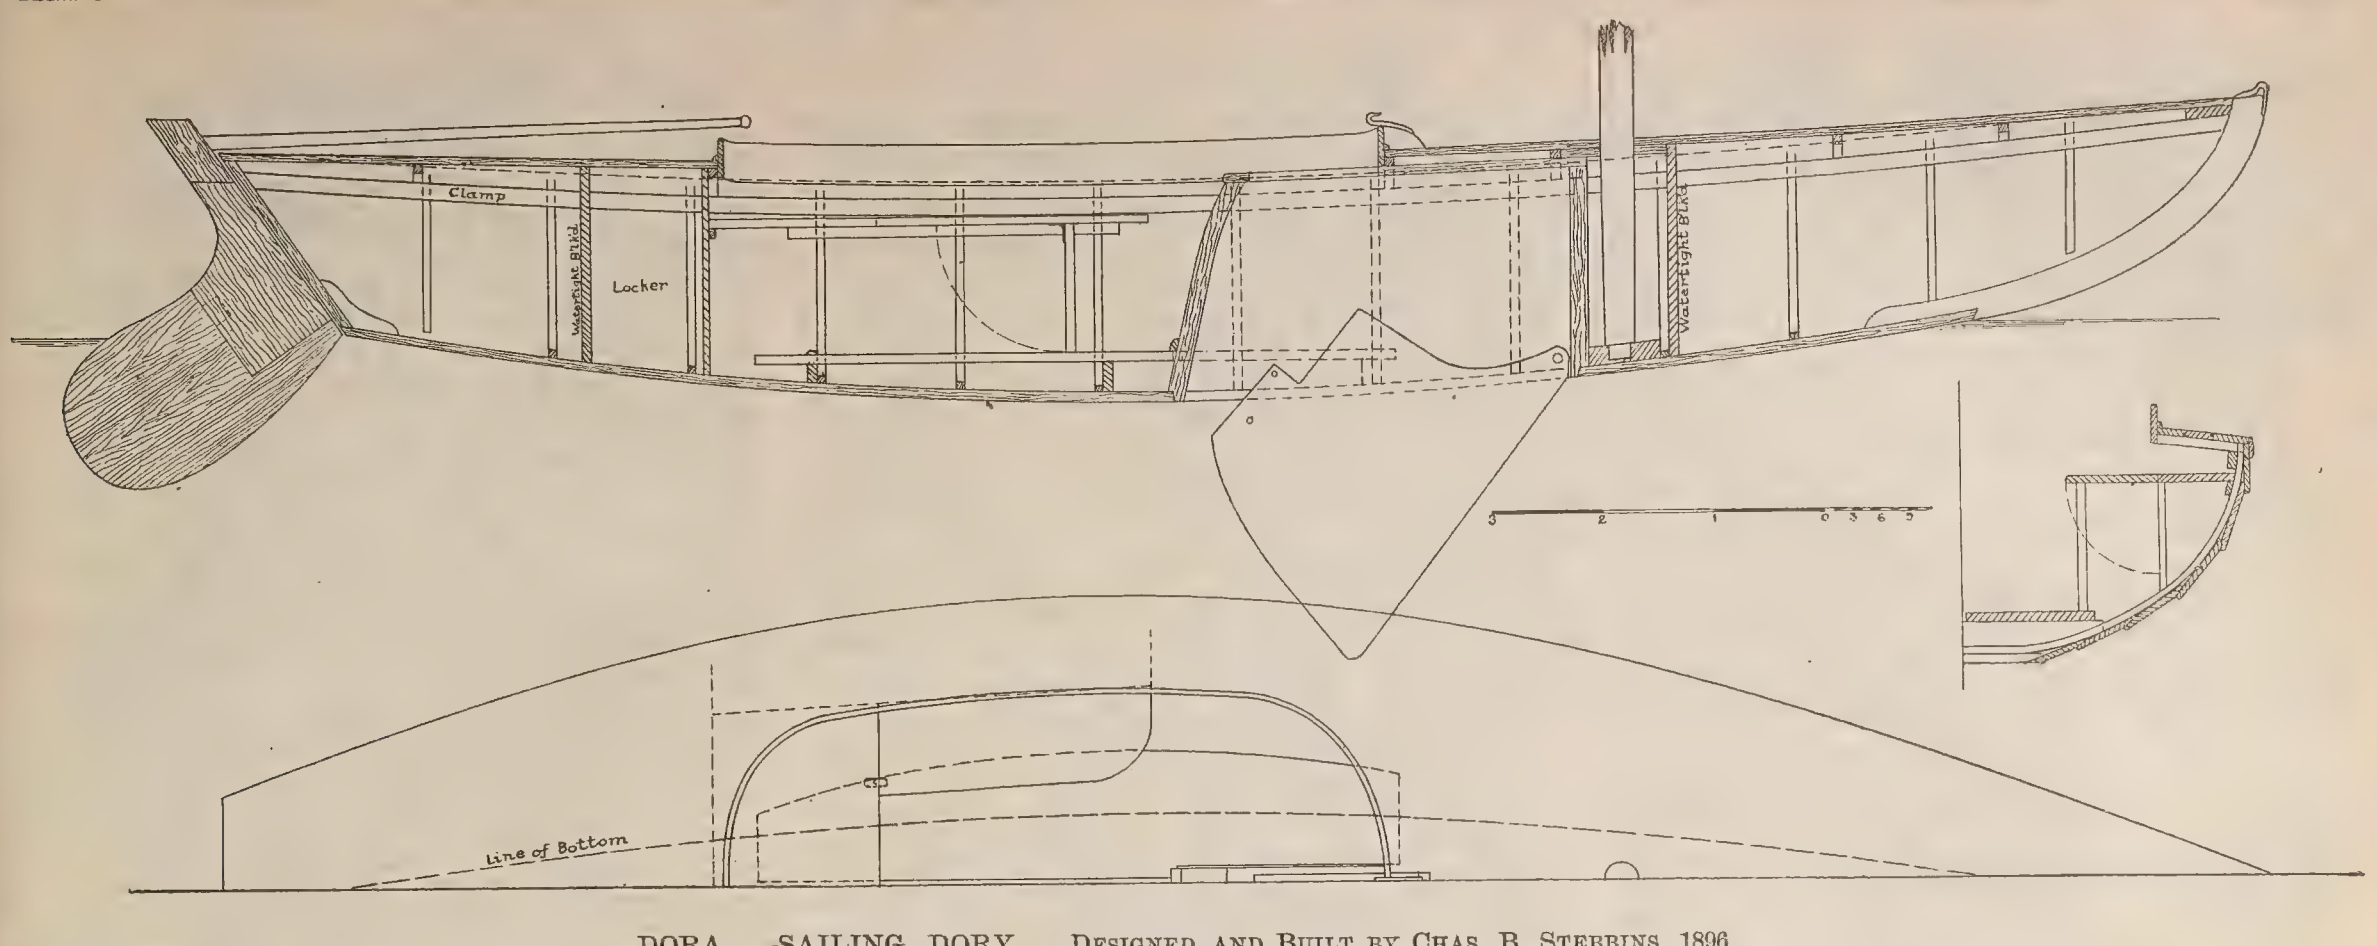
A meeting of the council of the Sound Y. R U. was held on Dec. 7 at the Seawanhaka Corinthian Y. C. house, at which were present by invitation W. A. C. Hamilton, of the Royal St. Lawrence Y. C.; L M. Clark, of Boston, president of the Massachusetts Y. R. A., and A. J Prime, of Yonkers, president of the New York Y. R. A. Certain changes were proposed and discussed, which, if made, will bring the Sound and the Massachusetts associations more closely in harmony.

NEW YACHTS.

THE accompanying list of proposed yachts for 1897 is by no means complete or correct, but is compiled from the best available sources, and we publish it thus early in the hope that it may bring out further information by way of addition and correction.

In sailing yachts but little has been done thus far. There are not even rumors of any new racing schooners, and the news of the possible alterations to Emerald closes one source of conjecture that always serves to make news in the dull season, the plans and intentions of her owner. The extreme improbability of a challenge for the America's Cup leaves the largest cutter class just where it has been for a year past, with Defender safely laid up in New Rochelle Harbor and no prospect of a new vessel to contest the honors of the big class with her. The next class, 70ft., has thus far progressed no further than a vague rumor that it will be built up this year. We wish that we could announce that this was more than the most indefinite rumor.

The prospects for the 51ft. class are much brighter. One order has already been placed by F. M. Hoyt, owner of Norota, with her designers, Gardner & Cox. The owner of the 30-footer Infanta, J. B. Mills, has been in correspondence with her designer, Will Fife, Jr., concerning a racing 51-footer, and several other recruits to the class are rumored. It is very probable that this will be the particular racing class of 1897.



The number of smaller yachts as yet reported is quite small, and many more may be looked for after the first of the year. A. Cary Smith has designed for Oliver Adams, of the Larchmont Y. C., former owner of the yawl Kwasind, a keel yacht of the same class, a cruising yawl with good accommodation; not a racing boat, but good enough for the races of her rig about the Sound. The order is not yet placed, but the yacht will probably be built by Reed Bros., of Fall River, who built both Kwasind and Audax. Another somewhat similar craft is now building from his own design by T. R. Webber, of New Rochelle, for a Philadelphia yachtsman. She will have 6ft. 3in. headroom and the interior will be very roomy and well arranged. At Tom's River, on the Jersey coast, W. P. Kirke is at work on a cruising craft of his own design for J. F. Ackerman, of the Atlantic Y. C., former owner of the yawl Fidelio. In Boston, J. R. Purdon has ready the design for a racing jib and mainsail boat for the 24ft. l.w.l. class of the Massachusetts Y. R. A., a very shoal hull with a 400lb. board and moderate sail plan, and also a keel cruiser of the same waterline. Lawley & Co. have under way a knockabout for sale, and also an order for a knockabout from F. O. North. The Herreshoffs have an order for a racing knockabout for H. M. Sears, of Boston, and several others are rumored for the same class from the Bristol shops.

About New York the interest in the smaller classes will be concentrated on the 20ft. class, but no boats have yet been ordered except one for Philip T. Dodge, owner of the 20-footer Eos, to be designed by Chas. Olmstead, designer of Eos and the successful 15-footer Riverside. Building has already begun on some of the smaller Western lakes, where the local builders have made reputations in their successful competition with the Herreshoffs, which they will work hard to maintain. The only boat yet reported is for Pine Lake, to the order of Com. Nunnemacher, one of the most active patrons of the small racing classes.

The steam list is but a brief one as yet, the principal vessels being on foreign stocks; for reasons which are perfectly obvious when one compares the latest productions of the Clyde and the Delaware. The largest of these is a seagoing steamer for John E. Brooks, of the New York Y. C., a seagoing craft intended for long voyages. Her dimensions are not yet made known, but she is from the drawing board of Mr. Watson, as is another new craft recently ordered for J. Gardner Cassatt, of Philadephia. The former will be built by the Ailsa Ship Building Co., of Troon, N. B., and the latter by Ramage & Ferguson, of Leith.

The home orders include several yachts for coasting service, of about 150ft. l w.l. Of these, one, Hiawatha II., is building at the new works of C. L Seabury & Co., adjoining the Gas Engine and Power Co., at Morris Docks, New York, for Chas. Fleischmann, of Cincinnati, owner of Hiawatha I., built by the same firm last year. The new yacht, of steel throughout, is larger, and will be most comfortable and elegantly arranged, with all the luxuries now found in this class of vessel. The other large yacht is for G. W. Childs-Drexel, owner of the steam yacht Alcedo; the design is by A. S. Chesebrough, of Boston, and she will be built by Harlan & Hollingsworth, at Wilmington.

The most interesting novelty among the new steam craft is a high-speed yacht of a larger size than has yet been attempted—122ft. l.w.l.—designed by Chas. D. Mosher for Chas. R Flint, an old New York yachtsman. This boat will be of composite build, with double skin, with very power-

DORA.—SAILING DORY. DESIGNED AND BUILT BY CHAS. B. STEBBINS, 1896.

ful engines and boilers and twin screws. A speed of over thirty knots is confidently expected of her. She will of course have all the usual accommodations and conveniences.

Messrs. Gardner & Cox are at work on a small steel steam yacht for Governeur Kortright, of the New York Y. C., for general cruising. No particulars are yet given of the 150ft. yacht to be built for F. E. Brush, of Detroit.

Already two new yachts have been launched, one an auxiliary sloop with 10 H. P naphtha engine, launched from the works of the Gas Engine and Power Co. and Charles L. Seabury & Co , on Dec. 2. The dimensions are 47ft over all, 12ft. beam, 2ft 6in draft without centerboard The owner's cabin is very large and comfortably fitted, having four transom berths, the head room under beams being 5ft 8in. A toilet room is fitted forward of the cabin, with patent Marine water closet and folding wash basin, mirror, towel rack, etc. The forecastle is comfortable and well ventilated, having accommodations for two men A galley is fitted in separate compartment, arranged with stove, dish racks, refrigerator, etc Ample water tank capacity for long cruising and a large storage ice box. The dining table is fitted on centerboard trunk, which does not come to full height in cabin Book racks, gun racks, storage lockers, etc., are conveniently arranged for owner and guests, while the furnishings are substantial and serviceable. The hull is very strongly constructed of oak, keel and frames; planking copper fastened and riveted throughout The decks are of white pine. The bottom is coppered The cockpit is very large, and the engine is fitted at the after end, so that no room is lost The propeller is a two bladed straight flange, and under motive power the boat will run 6 to 7 miles per hour. If sail power only is used the propeller sets flush with the sternpost and does not cause any drag. The centerboard is large, and will be of great value, as the sail spread is of good proportion. The yacht was built on order of W. Ashby Jones, of Richmond, Va., who will use her for Southern cruising in the Chesapeake Bay, hunting fishing, etc. She is now being equipped for the cruise and will proceed at an early date to Richmond

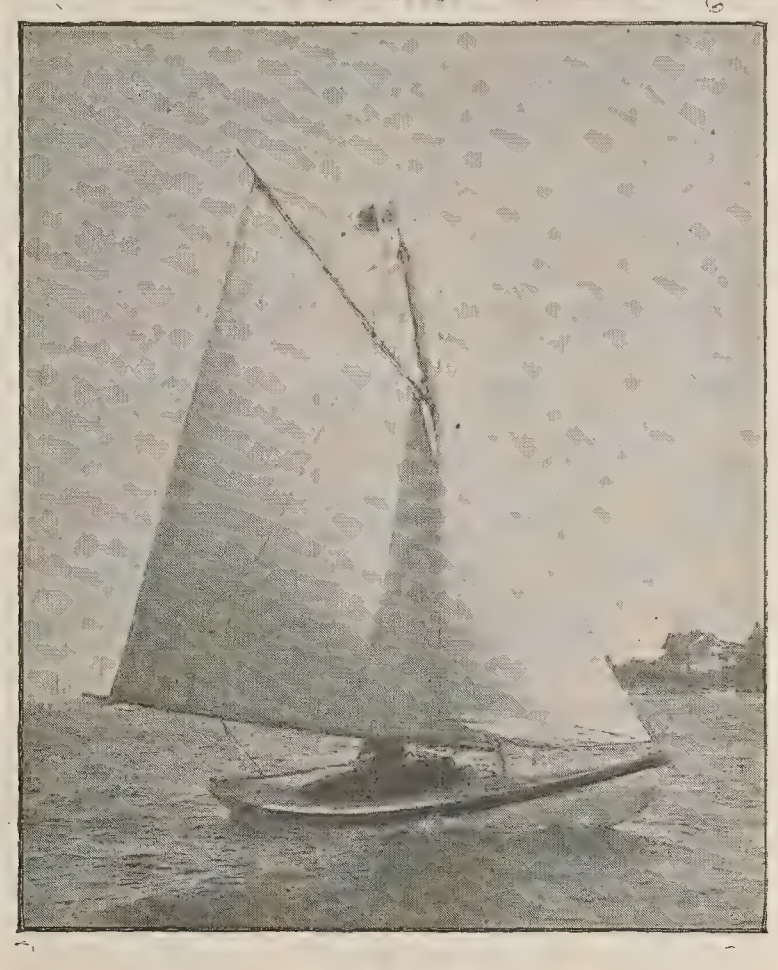
The other yacht is the 40ft. steam launch Caribe, built for Messrs. Flint, Eddy & Co. by the same company. She was launched recently and given her official trial trip, attaining a speed of ten miles; the contract called for nine miles. The Caribe is for service on one of the inland rivers in Mexico, and was shipped via steamship Yumuri on Dec. 5. She is 40ft. long, 7ft. beam and draws 3ft. aft. The hull is constructed of oak keel, stem, sternpost and frames. Cedar planked, copper fastened and riveted. The hull is coppered. The machinery consists of a single high-pressure non-condensing engine and a Seabury safety water tube boiler.

It is impossible to catalogue the craft of all sizes and for all purposes turned out at the works of the Gas Engine and Power Co , but this concern is busy as usual, even in a dull season, with power launches and yachts, large and small.

We shall be glad to learn from owners or others interested of other new yachts and their dimensions.

DORA.

A Sailing Dory.



THE sailing dory of the Massachusetts coast is an admirable little craft, safe, inexpensive, fast enough for general sailing, and especially adapted for rough water. The young Corinthian will find such a boat quite within his powers as an amateur builder, and at the same time a most suitable craft in which to put to practical test the theoretical knowledge of sailing that he may acquire by reading. The boat here illustrated was designed and built by Mr. Charles B. Stebbins, son of N. L Stebbins, the yacht photographer, a young student in the Massachusetts Institute of Technology, graduating this coming year in the Department of Marine Engineering and Naval Architecture. The boat was designed for sailing about Marblehead, and in her brief life of one season proved very satisfactory. She came to a most untimely end in one of the gales of last October; her owner stripped her and left her to be hauled out next day, but this was not done; the gale came, and she dragged ashore, being so badly battered on the rocks as to be past repair.

Dora was 18ft. 6in. over all, 14ft. 8in. on bottom, 5ft. 3in. wide at deck and 1ft. 10in. at bottom. She was 2ft. in depth and drew 8in.

The bottom was of $\frac{1}{4}$in. white pine, and the stem and sternpost, as well as the stern, of oak A single mould was used, that of the midship section; the stem and stern were fastened to the bottom and the frame set up on stocks with this one mould in place; the edges of the bottom were beveled to fit the garboard staff, the garboards were got out and set and afterward the other planks, all of $\frac{2}{16}$in. cedar. The result was a very handsome model, with sharp, easy ends, even sharper than at first intended. The frames were of oak, $\frac{3}{4}\times\frac{1}{2}$in , spaced 18in. on centers, steamed and bent in after the boat was planked. They were in single lengths from wale to wale. The clamps were of pine 1×2in. The bulkheads were of $\frac{1}{4}$in pine. The deck beams were of elm, 1×1in., the crown being $\frac{1}{2}$in. to each foot of beam; the deck was of $\frac{1}{8}$in. matched pine, and the washboard of $\frac{5}{8}$in. oak.

The centerboard was of cast iron $\frac{9}{16}$in. thick, weighing 130lbs., in addition to which about 370lbs. of iron was stowed under the flooring.

Being intended for single hand sailing, the cockpit was made rather small and the sail area kept to a moderate figure—150sq. ft. for the mainsail and 40sq. ft. for the jib. The centerboard trunk was kept as far forward as possible to give room in the cockpit, and the seats were hinged so as to drop out of the way. The dimensions of the spars were: Mast, from deck, 16ft. 6in.; boom, 14ft 8in.; gaff, 8ft. 6in.

DORA.

The bulkheads at the ends formed watertight compartments with ample floating power.

With white topsides set off by a sheer strake of bright red, the bottom below the waterline being green and the deck of a light tint, the little craft presented a jaunty and shipshape appearance that gave her young builder good reason to feel proud of his first attempt,

Dora will be replaced by a similar boat now building at Stearns's yard, Marblehead, the only difference being that the width of the bottom has been decreased to but 1ft. 3in. This change is shown on the plans.

THE SEAWANHAKA CUP.

A MEETING of the Royal St Lawrence Y. C. was held on Nov. 25, with Com. Ross in the chair, the following report being presented by the retiring sailing committee:

GENTLEMEN—Your sailing committee, elected last December, having completed their term of office, report as follows:

When your committee took office the challenge for the Seawanhaka-Corinthian International Cup had been accepted; preparations were at once made to encourage the 15ft. class, in order to build up as large and excellent a fleet as possible from which to select the challenger. Through the ready response of our active sailing members and the generosity of our commodore in donating very handsome prizes for the trial races, an excellent fleet of 15-footers was built and raced hard early in the season. The Glencairn was finally selected as a challenger, and succeeded in winning the cup in three successive races sailed off Oyster Bay July 13, 14 and 15.

Immediately after these races the S. C. Y. C. challenged for the cup, specifying the 25ft. class. Your committee considered 25ft. r. l. racing boats quite unfit for our waters, but intimated their willingness to accept a challenge in the 20ft. class, provided certain restrictions on sail and draft were imposed, which would make the boats serviceable for other purposes than racing.

In naming the 20ft. class we had in mind that the S. C. Y. C. had, at our request, postponed their intention of changing the class last year.

We felt, too, that the 20ft. class would be acceptable to many of our members who considered the 15-footers too small, and that no injustice was done to the present 15-footers, as they would be outclassed by next year's boats. The S. C. Y. C. have accepted our suggestions with regard to class, sail area and draft, but the details of the method of measuring have not been finally decided upon, nor the date of the contest. As soon as the main points were agreed upon an interim circular was sent to Canadian yacht clubs as appended:

The Seawanhaka Corinthian Y. C. international challenge cup for small yachts, having been won by the Royal St. Lawrence Y. C., and the former club having challenged for same, the races for this trophy will be held on Lake St. Louis next year, under the auspices of this club. The challenge has been made in the 20ft. (racing length) class, restricting the sail area to 500sq. ft. and the draft to 5ft. The cup is an international trophy, and it is hoped that all the Canadian yacht clubs will be represented in the trial races to be held for the purpose of selecting a defender. The details of the measurement and the conditions of the match are still under discussion, but will be announced by circular later, together with all necessary information.

Intending builders are therefore requested not to do anything definite without reference to the sailing committee of the R. S. L. Y. C.

Advice from those contemplating entering in the trial races will insure their receiving promptly all detail information.

(Signed) G. H. DUGGAN, Chairman Sailing Committee.
J. C. C. ALMON, Sec'y Sailing Committee.

Although the interest was mainly centered in our 15-footers, the other racing was by no means neglected. The usual class races having fair entries, there were good contests for the Sir D. A. Smith, Commodore Hamilton, Girouard and Hamilton trophies, the winners of the several cups being as follows: Sir Donald Smith, Chaperon; Commodore Hamilton, Xania; Justice Girouard (25ft. class), Marjorie; W. A. C. Hamilton challenge trophy (20 and 15ft. classes), Anita.

The club was invited to participate in two races given by the residents of Senneville; Lake of Two Mountains on Aug. 8, for the Lake of Two Mountains challenge trophy, and on Aug. 29, for special prizes for 15-footers. On both occasions we were well represented, and succeeded in taking the coveted trophy to Lake St. Louis; the cordial reception given the club on these occasions made them two of the pleasantest events of the season.

Your committee have been watching the changes which are now pending in the Long Island Sound Yacht Racing Union, believing that it is desirable that our sailing rules should conform as far as possible. Our sailing rule regarding the measurement of 20ft. class boats will have to be changed to agree with the conditions under which the contest for the S. C. cup races will be sailed, and we recommend that the necessary changes be made. Before retiring your committee desire to impress upon you their sense of the importance of making a strong effort to retain the cup, believing that it will do more than anything else to encourage yachting, as well as add to the good name and prestige of the club, and we would ask you to bring before our members the necessity of taking prompt action to build a fleet from which to select the defender. We feel that our success last year was due in large measure to the ready way in which the members came forward and built the 15-footers. Your committee recommend the purchase of a small club steamer to follow our races. It will be necessary throughout the trial and cup races next year to have a steamer from which to direct them, involving an outlay for charter of probably several hundred dollars. We have obtained tenders, and believe that a suitable steamer can be built for about $1,800, and think that a handsome return on this outlay might be realized by charging members a small fee to follow the races. We append statement showing details of our expenditure, also accounts and summaries of the races. Before closing we desire you to express our and the club's thanks to our commodore for his generous gift of prizes for the 15ft. class; to the steam yacht members for providing another prize; to Mr. Angus for his kindness in towing the 15 footers up to Lake of Two Mountains and his hospitality at his residence; to Mr. Drummond for his hospitality and sending up the Wild Rose to take Messrs. Croundell and Sherman, of the Seawanhaka Club, for a run on Lake St. Louis and Lake of Two Mountains, and also to Mr. Eadie for many services during the summer and towing 15-footers to Ogdensburg, Lake of Two Mountains and return.

The subject of the 20ft. class and the defense of the cup was discussed, and it was decided that the club should build at an early date an experimental boat. Com. Ross has donated the sum of $700 for prizes, to be expended as the sailing committee shall deem best in the encouragement of the new class. The sailing committee for 1897 will include Messrs. G. H. Duggan, R. Fitzgibbon, W. A. C. Hamilton, A. Hamilton, J. C C Almon, F. P. Shearwood.

On Dec. 5 Messrs. G. H. Duggan and W. A C. Hamilton, of the Royal St Lawrence Y. C , visited New York on the invitation of the Seawanhaka Cor. Y C , and were in conference with the race committee throughout the evening and nearly all of the next day. The proposed limitations of the 20ft. class were very thoroughly discussed, and the details of sail measurement, spinaker, draft, etc., were satisfactorily arranged. The conditions as decided on by the representatives will be made public as soon as they have been submitted to the two clubs The principal points covered were the limitation of the sail area to 500sq ft , the head triangle being measured instead of the windward jib, while the mainsail will be measured between marked points on the spars. The draft of keel yachts is limited to 5ft., and centerboard yachts with boards fitted to house above the bottom of keel are limited to 6ft. total draft Only amateurs may be carried in the international races. The trial races will be sailed in the middle of July and the international races in the middle of August.

Varuna.

THE new steam yacht Varuna, designed by G. L. Watson and built by A. & J. Inglis, Glasgow, for Eugene Higgins, of the New York Y. C. arrived at New York on Dec. 2. She left the Clyde on Nov. 21, with Capt. Trayler in command, encountering bad weather on the trip, which was made in 8 days 21 hours, making 378 nautical miles in one day. She is now at the Erie Basin completing her outfit for a long cruise to the Mediterranean, Mr. Higgins having planned to start on Dec. 12. Varuna is the largest and most imposing of her class yet seen in American waters.

YACHTING NEWS NOTES.

The mess dinners of the Seawanhaka C Y. C. at the new town house on Saturday evenings promise to become a popular feature of the off season in yachting. The entertainment committee proposes in the future to select some yachting topic for each evening, a short dissertation being given by some member, followed by an informal discussion. On Dec. 12 a ladies' reception will be given at the club house, 19 East Twenty-second street, from 4:30 to 7.

Strae, steam yacht. T. A McIntyre, has sailed for Jacksonville, Fla., with Capt. Geo. D. Purdy in command. Mr. McIntyre has sent the yacht South for the sixth successive season, using her on the Onslow River, where he has a winter home. Before sailing she was thoroughly overhauled and refitted at the Nyack works of her builders, Seabury & Co.

Canoeing.

AMERICAN CANOE ASSOCIATION, 1896-97.

Commodore, John N. MacKendrick, Galt, Canada.
Sec'y-Treas., John R. Blake, Galt, Canada.
Librarian, W. P. Stephens, Bayonne, N. J.

PURSERS.

Atlantic Division, H. W. Fleischman, 1611 N. 21st St., Phila., Pa.
Central Division, Laurence C. Woodworth, Gouverneur, N. Y.
Eastern Division, F. J. Burrage, West Newton, Mass.
Northern Division, Francis H. Mannee, Kingston, Canada.
Annual dues, $1; initiation fee, $1.

WESTERN CANOE ASSOCIATION, 1895-96.

Commodore, C. F. Pennewell, Detroit, Mich.
Vice-Commodore, Nat. H. Cook, Chicago, Ill.
Rear-Commodore, E H. Holmes, Milwaukee, Wis.
Sec'y-Treas., W. D Stearns, Detroit, Mich.
Executive Committee: R. M. Lamp, Madison, Wis.; C. J. Steadman, Cincinnati, O.; F. W Dickens, Milwaukee, Wis.

LAKE HURON AND THE AUX SABLE RIVER.

(Concluded from page 455.)

Aug 24.—The early part of the day was devoted to angling for bass. We, however, did not get any, nor did we capture a single specimen on the trip. The Captain, however, did get a mess of bream, which, if memory is not at fault, were forgotten while in the pan and burned beyond recognition.

Shortly after returning to camp Jim silently stole away from our midst. He had not been seen leaving camp and was not missed until the rattling crash of a whole broadside announced his whereabouts on a commanding elevation about a fourth of a mile away, and throughout the remainder of the day he was momentarily within hearing; for, be it remembered, he had brought along five boxes of pistol cartridges, and as he declared, was bound to work them off.

The remainder of the party, in the absence of other amusement now, also took to the hills, and labored assiduously in prostrating the decayed and tottering relics of a vanishing forest. Another form of recreation occasionally indulged in was in accelerating the speed of certain rodents into their holes. We then wandered off to an elevation from which we could look back along the course we had followed the day before, and though many points of interest were dimmed by distance, yet could we recognize them. Bluebeech, with great confidence, could point out certain features in the landscape by which he could tell beyond a peradventure the exact location of a certain bog hole that he had visited, but a sadness came over him as he cast his eyes down to where the traces of the conflict still remained on his boots and maculate hosiery. By this time the heat of the sun had become so great that we were glad to retrace our steps to camp and the shades of the oaks.

In the afternoon a sharp shower came on, driving us under the canvas; but when it had passed, leaving the air purer and cooler, we turned out for a paddle and enjoyed a delightful evening in exploring the river and the many bayous, in whose marvelous depths and crystal waters a museum of wonderful acquatic curios are to be seen.

Aug. 25.—On awaking this morning our ears were greeted by the roar of the surf, as it thundered on the shores of Lake Huron half a mile away. A gale of wind too was blowing, the effects of which we could see and hear, but in our wonderfully sheltered nook scarcely a breath of air was stirring.

The preparation for breakfast this morning was gone about in a most leisurely fashion. There was no hurry, no bustle about it, and after it was eaten there seemed no disposition on the part of the squad to repeat the angling failures of the past two days; moreover, there seemed to be a growing feeling of restlessness in the camp, an undefined sense of an approaching crisis. It took form as will be seen by the following dialogue, which took place between Jim and Bluebeech as the former sat intently poring over the advertisement columns of Forest and Stream:

Bluebeech: Hallo, Jim! what are you studying?

Jim: Kinematics.

Bluebeech: Minnow buckets?

Jim: Naw! Kinematics.

Bluebeech: What's that?

Jim: It's the science of getting a move on, taking down the tents, packing the canoes and taking a sneak down stream. I give you a pointer, see!

The Pilot now rose to his feet, and taking a step back bowed his willowy form, and warping his fingers around a tent stake wrenched it up with a mighty heave. The Treasurer anticipating the move came in a close second, and in less than a half hour nothing was left of the camp but the camp-fire that did not smoulder, a few very empty cans, and a pair of the Treasurer's ruined slippers that had been nailed to a tree. We were floating merrily down stream.

A half mile paddle brought us opposite the prettily located village of Port Franks, situated on a level, sandy plain on the south bank of the river, which here runs nearly parallel with the shores of Lake Huron, leaving a narrow neck of land between. Along this neck of land a range of towering sandhills rear their bald heads hundreds of feet into the air, offering a splendid natural protection to the village from the biting north winds. The village at one time was a brisk milling and salt-producing center, but with the disappearance of the pine and the filling up of the river by the washings of the Lake Burwell drainage canal these industries were abandoned, the population drifted away and now the pine mills and salt works are fast falling to decay.

As we passed beyond the village a driving shower of rain came on, with heavy gusts of wind, and coming to an opening in the hills, where the wind got a good slant at us, it taxed our energies to their utmost to avoid being driven on the shore; but on coming to a second bend in the river we were favored by a long, straight, down-wind course and went away over the troubled waters in a grand spurt that quickly brought us to the mouth of the river, where we pitched the tents and made snug for the night.

Aug. 26.—The day broke bright and warm, though a strong wind was blowing, and a heavy sea continued to roll in all day long. We were, however, in the sand cherry country, and they being abundant on the hills, and our commissary department being somewhat light in the luxuries, we were contented to remain and gather them, as they afforded us an agreeable variation in our diet, and helped to kill time. When we had gathered a sufficiency of fruit we turned our attention to the exploration of Mud Creek and the marvelous labyrinth of bayous connected with it, and were well repaid for our trouble.

In the afternoon, while Jim and the Captain were on one of their voyages of discovery, they came upon an old abandoned dugout canoe, and their curiosity to experiment with it led them to undertake the arduous task of transporting it over the sandhills to the river, where they launched it; but it looked so dangerously unstable that neither was disposed to risk his valuable life afloat in it. Jim persistently argued that the Captain, having a wide and varied experience in the handling of strange craft, should be the first to experiment with this one. The Captain could not see it, and argued that, as Jim was an expert canoeman, a nimble athlete and a good swimmer, and not having the care and responsibility of a family, he should be the first to step into the breach and immortalize his name. Jim demurred. They then repaired to a seat on a convenient log, where, seeming to think there was as much pleasure and diversion in arguing the point as in anything else, they continued the debate. They needed a rest too, as the labor of trailing this old relic to where it then lay had been very great.

The debate after a long and earnest discussion came to an end, they apparently having reached an agreement, as the Captain produced a strong cord from his pocket and attached it to the bow of the canoe and proceeded to tow it up to camp, while Jim aided him by keeping it away from the shore with a pole. As the procession approached camp the squad filed out to witness the triumphal entrance of the Captain with his prize. When the Captain had swung his craft to anchor and had mopped the perspiration from his brow he proceeded to point out its fine qualities and easy, graceful lines; he also described in lurid hues the magnitude of the task they had undertaken in transporting it overland to the river. Great interest was manifested during the recital of this tale, but when the Captain described where and how he had found it a discussion arose as to the legality of his rights, title, interests or claims in the craft. He was in possession, but not by inheritance; therefore he could have no claim in, to, out of, or upon the said craft. The roar that burst from the Captain as he tumbled up at this stage of the discussion was like a near-hand storm, and as he waved his hand to command attention he said impressively: "Gentlemen, I am in possession of this craft by right of discovery, and no one may deprive me of my legal rights but the legitimate owner." As may be guessed, this ended the discussion, the Captain having established his claim beyond doubt, and he announced that henceforth the vessel should be known as the Molliesquash. Then in a burst of magnanimous liberality he tranferred all his claims over to Jim, who had rendered him such valuable service in transporting it. The Molliesquash, though hardly deserving to be rated higher than A1 as a floating palace, yet was in many ways superior as a means of travel to a saw log, as Jim afterward abundantly verified by making several successful trips in her.

Aug. 27.—We were greatly disappointed on turning out this morning to find a heavy sea still running on the lake. We had intended to continue our journey along the shore to Kettle Point, where we wished to remain over the next day, which was Sunday. At this camp we had not been successful in taking any bass We had pretty thoroughly harvested the sand cherry crop, and having about exhausted every other source of amusement, we were now becoming impatient to be moving; but as this was out of the question we did the only thing that was open for us, *i. e.*, inaugurated a grand regatta in a sheltered part of the river, where for the greater part of the forenoon the white sails and bright canoes flitted hither and thither, races were indulged in spasmodically, and were brimful of excitement. Occasional exhibitions too of some of the most astonishing evolutions were given, these invariably occurring at a time when the wind came in from several points of the compass at the same time. Drifting races, hurry-scurry races and tacking down wind were features of the grand display that helped to wile away the time till the dinner hour.

After dinner the question of making the attempt to reach Kettle Point, only about seven miles distant, was again freely discussed. There was still a very heavy sea running, but we fancied it was going down. Finally Bluebeech paddled out to the mouth of the river, and after feeling the force of wind and waves returned and reported it too rough for the Pilot and Treasurer, whose canoes were not provided with aprons, but as they were most anxious to be moving they expressed a willingness to make the attempt.

The tents were soon taken down, the canoes packed, and we were off. As we neared the mouth of the river and viewed the blue, foam-capped expanse of rolling billows, it looked as though we were about to commit the grand folly of our lives.

The Captain ventured the remark that it looked pretty dirty outside, but there was no response from the crew, who seemed to have made up their minds to go it, sink or swim

We were soon going it in a grand dash through the boiling, seething succession of curling breakers, tumbled and tossed about We found we had a much larger task than we had bargained for; beyond the breakers our condition was not much improved, as the course we wished to take was directly in the trough of the sea.

Watching our opportunity, we would dash along with all possible speed; then as a great breaker threatened to engulf us we would head into it until it had passed, and then square away again with might and main; every minute or two we were forced to head in, and each time added a little more moisture in the bottom of the canoes. At one time our attention was attracted to Yukon by Bluebeech, who shouted "There's an upset," as a great wave struck Yukon broadside on with a tremendous thud, enveloping her for a moment in a mass of seething foam and flying spray, but in a moment she reappeared again, right side up, with the Treasurer sitting in his place unmoved and cool as a cucumber. The only comment he was heard to make was the brief one "letter-out;" nevertheless Yukon had taken a fine cargo of water aboard, which the duffle was absorbing. A similar process was going on in the other canoes, and our own clothing clung to our backs like a wet pack, cooling our ardor and preparing us for a flunk all along the line.

For an hour we had been working like beavers and had only made a mile, and at this rate of speed it would take us until evening to reach our destination, and should our canoes continue to take in water at the same rate at which they had been we would be swamped before we could cover a quarter of the distance.

But at this juncture an event occurred that speedily settled the matter for us This was the approach of three huge, towering, white-crested combers that came sweeping along with the speed of a race horse. We promptly headed up, and as we did so the Captain coolly remarked: "Boys, I guess we'll have to swim." As the first one came on the canoes rose, dove into and neatly split it in two, staggered a little, then bobbed up serenely on the other side. We now dug our paddles in with desperate energy as we dove down into the trough of the sea, up we climbed again, cut through the second and again through the third; the danger was now past, we were still afloat, every article in the canoes was afloat also and off on a little erratic cruise of its own.

We might have regarded the experience of those few minutes as something splendid were it not for the fact that we were drenched to the skin and the canoes half filled with water. Without any preliminaries every canoe was headed for shore and was urged along with a zeal and energy that betokened an earnest desire in each canoeist's heart to reach it by the shortest route and in the quickest possible time. On we went into the breakers, and amid the boil and roar and tumult were tumbled on the beach in an indescribable jumble and scramble. Bluebeech made a clean home run of it, but admitted being butted aft by an incoming wave as he made his way up the beach on his hands and knees; and though the opportunities were not favorable for close observation it is more than probable that the rest of the squad reached the shore in a manner not differing materially from that adopted by him. We were in a bad plight, everything wet, our staff of life afloat in the bread box; but so well pleased were we to be once more on solid ground that we would not have taken it seriously amiss had it been afloat in the middle of Lake Huron.

When the canoes had been hauled up beyond the reach of the waves they were unpacked and turned over to allow them to drain out. The duffle was then carried up to a slight depression between two hills, where a huge fire was built and everything hung up to dry. Exposing our own clothing to the fire by a revolving process of the body, we soon dried ourselves out. We responded to a call from the Captain to discuss a project which he had formulated for our deliverance from our present camp site to a more favorable one. His plan was to procure a team at Stony Point to move our outfit along the shore to Kettle Point, and as this plan was agreeable to all, the Captain and Jim started for the Point, a mile distant.

In a little while they returned with the discouraging announcement that they had failed to procure a team, but while at the Point they had learned that a gentleman who had left just a few minutes before their arrival had been making inquiry whether a party of canoeists had passed that place, and having been answered in the negative had driven away. The description given of the gentleman and also that of a dog that accompanied him left no doubts in our minds that the person described was the club's Secretary, and ourselves the party of canoeists whom he was in search of. Why the Secretary should be searching for us we could not guess, unless he was the bearer of a message to us of some great calamity that had befallen the folks at home. With this thought uppermost in our minds, and believing that he would continue his search to Port Franks, and as the only road by which he could reach that place ran at some distance back from the shore, we determined to intercept him at the Port.

The Treasurer and Bluebeech, now thoroughly alarmed, started for the Port at top speed. Taking the beach until the river was reached, they then followed along its banks to Mud Creek, which they crossed on a raft of cedar posts, and then a brisk walk of five minutes brought them to the village, where inquiry was made at several places, but no trace could be found of the Secretary; he had not arrived. They then started out along the road by which he would be sure to enter, but after traveling for about a couple of miles and not meeting him it became evident that he had not gone to the Port, as had he done so they should have met him long before this. Satisfied of this, they retraced their steps to the Port, where they hired a boatman to take them down to the mouth of the river, from where they sprinted it to camp, reaching it long after nightfall, thoroughly tired out and hopelessly mystified.

As we had already failed to procure a team, and as a heavy sea was still running on the lake, there seemed no other alternative but remain where we were until morning, when, if the sea had gone down, we would push on down to Blain's Grove, and there procure a conveyance. Should the lake still be rough in the morning we would have to adopt some other means of getting out. With this plan agreed upon, we turned in for the night.

Aug. 28.—At 6 A. M, the lake being calm, we shoved off from the shore, and for a few miles paddled briskly to get up a little circulation, as the morning was cool; then settling down to steady work we did not relax until Kettle Point was reached, where we rested a few minutes and then pushed on again. At Jeff's resort we ran in and inquired for the Secretary, but getting no intelligence of him we continued on down to Cedar Point, where we lunched and rested our weary bones for half an hour. Fearing we might be storm-bound, we once more—wearily, and with aching arms and blistered hands—grasped the paddles, with a grim determination to do the last stretch as quickly as possible and be done with the suspense.

On reaching Blain's Grove and the end of our cruise, we selected a favorable place for our camp and prepared and ate our dinners, after which the Captain and Treasurer left us to go in search of a conveyance to take them home. This we afterward learned they failed to procure, and were forced to walk the entire distance home. Ten miles of dusty roads in a scorching sun, parched with thirst and footsore, was what they experienced on that trip; and on reaching home they found all their fears were without foundation. All were well, and the Secretary's mission had been merely one of business.

Aug. 30.—At about 10 o'clock the team came to take us home, where we arrived in due time Though the outing could hardly be called a howling success, yet there was much in it that was pleasant, many incidents that were very amusing, and many that were very much the opposite; but on the whole it was about what we expected it to be, and we were not disappointed.

Rifle Range and Gallery.

The Revolver Championship.

THE revolver tournament held last week by the Knickerbocker Athletic Club, of this city, was interesting as an example of pistol practice, and was participated in by a number of persons, one of whom, Mr. Olsen, came on from Minnesota to take part in the contest.

We have already remarked that as a contest for the revolver championship of the United States, which this tournament was originally announced to be, it is an absurdity. Neither the Knickerbocker Athletic Club, nor any other organization, however good its intentions may be, has the power to do away with all that has been accomplished in any sport in the past, and to begin, at some date which may suit its own convenience, a new series of records. There are already champion revolver shots in this country, and what they have done in the past cannot be ignored.

The amateur championship is held by Capt. W. E. Petty, who has held it for four years against all comers. No title of championship given by any association will be worth the paper that it is written on until Capt. Petty shall have been defeated, and it would certainly be most unfortunate for the sport of revolver shooting if championship titles could be given out by any association which might choose to assume the right to do this. Such a course could result only in endless confusion and bickering, with the result of cheapening and degrading the sport and all who took part in it.

While the Knickerbocker Athletic Club might very well inaugurate a tournament to decide who should be the championship of the club or of the State, it can have nothing at present to say about the championship of the United States, and for the sake of the sport it is to be hoped that no claim to these titles will be made by the winner of this tournament until after the existing champion shall have been challenged and defeated. The matter is one in which the mere pride of an organization ought not to be allowed to endanger the sport.

On the other hand, this competition having brought out some good pistol shots, it will be eminently proper that they—or some of them—should challenge Capt. Petty for the amateur championship, and if he should be defeated by the winner in the Knickerbocker Athletic Club he will no doubt bear his defeat as gracefully as he has in the past the victories he has won.

Calumet Heights Riflemen.

CHICAGO, Ill., Nov. 26.—The Calumet Heights Gun Club held a rifle contest to-day in connection with its annual Thanksgiving Day tournament. The rifle committee of the club issued the following programme of events:

No. 1, to commence at 8 A M, sharp: Class A, medal shoot, 10 shots, 200yds, any caliber rifle, subject to the usual rules; four prizes; entrance for medal score, 25 cents; entrance for medal score and special prizes, 50 cents.

No. 2, to commence at 10 A. M.: Class B, ladies' medal shoot, 10 shots, 100yds., .22cal. rifles, subject to the usual rules; four prizes; entrance fee for medal score and prizes, 50 cents.

No. 3, to commence at 11:30 A. M.: Class B, ladies only, 5 shots, 100yds., .32cal. rifles, off-hand, any position; three prizes; entrance fee, 50 cents.

No. 4, to commence at 2 P. M.: Class A, gentlemen; 10 shots, any caliber rifle, off-hand position; each contestant to advance 20yds and fire the first shot at 180yds., second at 160yds., third at 140yds., fourth at 120yds., fifth at 100yds.; each contestant to fire his full score and count it afterward; four prizes; entrance fee, 50 cents.

Prizes for season's scores: Class A—first prize, diamond medal; second prize, silk umbrella; third prize, mantel clock. Class B—First prize, diamond medal; second prize, embroidered lunch cloth; third prize, embroidered centerpiece.

There will be two sighting shots permitted.

As this is to be the last rifle shoot for the season, we expect that every member who can will be on hand. With this idea in view, the rifle committee have made the programme as short as is consistent with the importance of the day.

The class medals will be awarded by the committee in the evening. Two consolation prizes will also be awarded in each class for second and third best scores for the season.

Thanking the members for their generous support in the past, and trusting that rifle shooting has come to stay in the Calumet Heights Club, etc.

The medals in the rifle contests for the season were awarded as follows: Class A medal to Dr. J. O. Hobbs on 206 out of a possible 250 points; Class B medal to Miss Ervin on 222 out of a possible 250 points.

The results in the four contests arranged for to-day are given in detail below:

	No. 1.		No. 4.	
J C Hobbs, Jr.	3455445344	—41	24344	—17
J O Hobbs	3424554435—39+2—41		43443	—18
Dr Harlan	3454443444	—39	.....	
Dr Davis	4354045344—37+2—39		32340—12+1—13	
G C Lamphere	0534444352—34+2—36		.....	
H B Black	3442440435—33+2—35		33144—18+1—19	
A C Paterson	3520433534—32+2—34		.....	
Dr Hodson	4434304254	—33	24524	—17
Spalding	4302424424	—29	.....	

In No. 1 J. C Hobbs, Jr., won first, Dr. Harlan second, G. C. Lamphere third and H. B Black fourth. In No. 4 Black won first, Dr. Hobbs second and Hobbs, Jr., third.

	No. 2.		No. 3.	
Mrs C W Carson	4445454444	—42	50434	—16
Mrs Marshall	3334445444—39+2—40		23232—12+1—13	
Mrs Chamberlain	4543443242—36+2—38		55453—22+1—23	
Mrs R B Carson	4434434444	—38	03332	—11
Mrs Lamphere	4434443333	—35	33423	—15
Miss Ervin	3332434333	—31	34043	—14

In No. 2 Mrs. C. W. Carson won first, Mrs. Marshall second, and Mrs Chamberlain third. In No. 3 Mrs. Chamberlain won first, Mrs. C. W. Carson second, and Mrs. Lamphere third.

In the above 10-shot contests "open sights" were allowed 2 points, and 1 point in the 5-shot contests.

Nov. 28—The following scores were made to-day by members of Class A, open sights being allowed 2 points in each 10-shot contest. Conditions: 200yds., off hand, standard target:

	No 1		No. 2.	
C W Spalding	3443445454—	40	3445443433—	37
A W Harlan	4454342443—	37	4421453444—	38
L Davis	4534444343—38+2—	40	4233335444—	35
A C Paterson	2322043343—	27	3254544342—36+2—	38

In a third shoot under the same conditions, Harlan won first with 41; Paterson second with 35+2—37; Davis was third with 36, and Spalding fourth with 33.

Miss Ervin shot a string of 10 shots for the Class B medal; conditions: 100yds., 22-caliber rifle, rest, Creedmoor target reduced. Her score was 4444545444—42. PATTY.

Columbia Pistol and Rifle Club.

SAN FRANCISCO, Cal., Nov. 22—The following scores were made to-day by members of the Columbia Pistol and Rifle Club:

Rifle, 200yds, three shots, Unfred diamond medal: F. O. Young 11, D. W McLaughlin 16.

Military rifle, Glindemann medal, ten shots: E. Hovey 45, F. H. Bushnell 45 F. H. Pape 45

Rifle record, ten shots: Dr. L. O. Rodgers 67, F. Schaffer 63.

Most flags during the month: E. Hovey (musket) 2, F. O. Young 3, D. W. McLaughlin 2, Dr. L. O. Rodgers 1, A. H. Strecker 1, H. Burfeind 1.

Pistol 50yds., Blanding medal, three shots, re-entry: J. E Gorman 7, 7; T. O Young, 8, 8; T. W. Bushnell, 8, 14.

All comers .22 caliber rifle, Rogers medal; five shots, re-entry: E. Jacobson, 9 9; Ed. Hovey, 8, 9; Colonel S. J. Kellogg 16; Mrs. M. J. White, 15, 16; Mrs C. F. Waltham.

Glindemann ladies' trophy, ten shots, .22-caliber rifle: Mrs M. J. White 38, Mrs. C. F. Waltham 46. ROELL.

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

Cincinnati Rifle Association.

CINCINNATI, O., Nov. 29—The following scores were made to-day by members of the Cincinnati Rifle Association. Conditions: 200yds., off-hand, Standard target, 7-ring black:

Knickerbocker Club's Tournament.

THE revolver tournament promoted by the Knickerbocker Club, of New York city, was brought to a close after a week's shooting on the club's ranges Some really excellent scores were made, but as re-entries were allowed this is not to be wondered at, as some of the best revolver experts in the country took part. The proceedings were well managed and everything passed off smoothly.

Thirty-three shooters in all took part in the contest, the majority of course being from New York and the vicinity, although there were some among the number who came a long distance to compete for honors with the revolver. Among the latter was Oscar I. Olsen, of Minneapolis, who was unable to get to New York before Thursday, and thus had only two and one-half days in which to do his best to beat those who had had six days at their disposal. Over 1,100 targets were fired at, an average of something like 33 to each man. Of course this average was not general; no doubt several of the shooters re-entered many more times than others. Figures on these re-entries would be interesting reading. It stands to reason that, given equal skill, the man who re-enters oftenest is the one that has the best chance to come out on top when only the two best targets at each of the two ranges count for prizes.

The names of the contestants were: Guy E. Robinson, Dr. C. T. Adams, Capt Jas. C. Summers, Dr. H. E. Westbay, M. Metzler, Dr. R. H Savre, S. W. McPherson, L L. Jessup, Dr. W. J. Furness, H. C. Barnett, F. S. Schwab, Geo. Mager. J M. Stewart. P. F. Wilder, Chas. McChesney, P d'Irio. F. Minervini, H. J Bennett, H. O'Brien, W. C. Damron, Theodore Beck, Alex Stein, F. W. Green, F A. Plaisted, Oscar I. Olsen, E A. Bigelow, W. C O'Brien, G. C Waters, C. B. Bishop, C. Corrie, G. W. Ripley, A. A. Webber and C E. Taintor.

The conditions were 6 shots on each target at each range, 10 and 20yds, use of any revolver whose barrel and cylinder did not exceed 10½in, any ammunition and any trigger pull. In giving its report of the scores made during the week, the New York *Sun* of Dec 7 says:

"The judges or scrutinizers were Gen. B. M. Whitlock, State Inspector of Rifle Practice; Gen. B. W. Spencer, Inspector of Rifle Practice in New Jersey; Lieut. H C. Broun; Maj. N. B. Thurston, of the 22d Regiment, and Charles Zettler, the well-known rifle shot. After a long session, which was principally due to the fact that the judges had to examine each and every one of the 1,100 odd targets with magnifying glasses, measuring instruments, etc., the following five highest scores were announced:

	10Yds.	20Yds.	Total.
Guy E Robinson	58	59	117
	58	57	115—232
Oscar I Olsen	59	58	117
	57	56	111—228
Theodore Beck	58	58	116
	57	55	112—228
Alexander Stein	57	59	116
	55	56	111—227
Dr R H Sayre	56	58	114
	54	56	110—224

"Many others were close up, but their scores were not figured out. While the winner made a remarkably high score, the majority of the experts were of the opinion that Olsen, the Minneapolis crack, did by far the best shooting of the tournament, and his average of targets shot at was higher than that of any other contestant. Instead of starting in on Monday and shooting continuously all week, as the winner and most of the other contestants did, he was unable to reach the city until Thursday, losing three and a half days' practice."

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES

Dec. 12—HACKENSACK, N. J.—Amateur championship of New Jersey, under the auspices of the Bergen County Gun Club.

Dec. 15.—CHICAGO, Ill.—Winston-Roll match for the Du Pont trophy; Watson's Park.

Dec. 22.—ALBANY, N. Y.—Tournament under the auspices of the West End Gun Club; sparrows. Horace B. Derby, Sec'y.

Dec. 22-23.—ELIZABETH, N. J.—Ninth bi-monthly tournament of the Elizabeth Gun Club. First day, targets; second day, live birds.

1897.

Jan. 1.—NEWARK, N. J.—Sixteenth annual tournament and reception of the South Side Gun Club. W. R. Hobart, Sec'y.

Jan. 4-5.—PRESCOTT, Arizona.—Fourth annual tournament of the Arizona State Sportsmen's Association, under the auspices of the Prescott Gun Club. Roy Hill, Sec'y.

Jan. 14-15.—INDIANAPOLIS, Ind.—Tournament of the Limited Gun Club; sparrows. Royal Robinson, Sec'y.

Jan. 20-25.—SAN ANTONIO, Tex.—Second midwinter tournament, under the management of Oscar Guessaz. $200 added.

Feb. 27-March 11.—HOT SPRINGS, Ark.—The Arkansaw Traveler's first grand annual live bird tournament: $10,000 in purses and added moneys. Souvenir programmes ready Jan. 1. Address all communications to John J. Sumpter, Jr., Box 111, Hot Springs, Ark.

March 13-17.—BAYCHESTER, N. Y.—Second annual tournament of the Cobweb Gun Club; live birds and targets. Cobweb handicap at live birds, $500 guaranteed.

March 23-25.—NEW YORK CITY.—The Interstate Association's fifth annual Grand American Handicap at live birds.

April 15-17.—SAN ANTONIO, Tex.—Tournament of the San Antonio Gun Club. Open to amateurs only. Willard T. Simpson, Chairman Ex. Com.

May 11-14.—OIL CITY, Pa.—Seventh annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Oil City Gun Club. Targets and live birds. Black powder barred. Special event: 25 live birds per man, $25, $1,000 guaranteed. Send entries to H C. Reeser, Sec'y, Oil City, Pa.

May 17-22.—KANSAS CITY, Mo.—Annual tournament of the Missouri State Game and Fish Protective Association Fred T. Durrant, Sec'y.

June (third week).—CLEVELAND, O.—Fourth annual tournament of the Chamberlin Cartridge and Target Company

June 16-17.—FARGO, N. D.—Third annual tournament of the North Dakota Sportsmen's Association. Targets, W W. Smith, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

E D. Fulford can now star as a boy wonder. He has removed that heavy black moustache that concealed every wrinkle when he smiled, and now appears with a smooth-shaven upper lip and looks ten years younger. His good looks, however, suffer proportionately, and it would seem more natural for him to be pacing the Rialto in the character of a theatrical star rather than handling a Greener as one of the planets of the shooting firmament.

A very unpleasant piece of business marred the pleasure of the great four-handed shoot at Trenton, N. J., last Thursday, Dec. 3. The original intention was to make the purse one money, winner to take all. A final agreement was come to by which, as we heard it, the winner was to take 75 per cent. of the purse, the second man saving his stake, there being four entries. At the close, Elliott and Brewer were tied with 96 each; Fulford came next with 93, and Class last with 92. This result was duly announced by the referee at the close of the match. Somehow or another Class and Fulford got mixed up in their dates and imagined they were a tie, and agreed to "divide second money." They went to Zwirlein, who was stakeholder, and told him that they had agreed to divide second money, as they were tied; he accordingly handed over the amount due to the second man, and they divided it. In a few minutes Fulford became aware that he was a bird ahead of Class, and Class was asked to hand over the money paid to him under a misapprehension. This he absolutely refused to do, and so far as we are aware of he has made no attempt to repay the money. Class made a great mistake in this matter, according to our way of thinking, and did harm to the cause of trap-shooting by such action. In regard to the division of the purse: It seems to us, in view of the fact that there was very little more than a tacit agreement to make it high guns under the revised condition of affairs as to stake money, etc.; and also taking into consideration that the race was shot under A. S. A. rules, the division of the 75 per cent. of the purse between Brewer and Elliott was about the only thing to do under those rules which state (Rule 26): "All shooting shall be class shooting unless otherwise stated." It is only right to say that Elliott and Brewer's backers accepted the division in a sportsmanlike manner. This feature is made the more pleasing from the fact that the stakeholder was himself one of Brewer's backers, and was responsible for half of his stake; by his ruling he actually lost 6¼ per cent. of the purse, *i. e.*, one-fourth of 25 per cent. of the purse divided between Fulford and Class.

A couple of months ago W. M. Harding, of the Boston, Mass., firm of Hovey & Harding, bought a Lefever gun with the intention of taking up trap-shooting. He is a good man on game, but targets were something he had never tried his hand at. Mr. Harding knows Charlie Budd and has a great respect for Charlie's powers as a target smasher. "So good a man on targets ought to be able to give me some pointers," thought Mr. Harding. Accordingly, being in Des Moines, Ia., about that time, he looked in upon Charlie at the gun store and asked him about trap-shooting, and whether there was a trap anywhere that he could practice over, aided by a few hints from the Iowa king-pin himself. Charlie, though busy, dropped everything, took Mr. Harding out and gave him an object lesson. As Mr. Harding told us the story, it was this way: "Charlie shot at a few targets to show me how to do it; of course, he broke 'em all. Then he made me shoot, and threw a lot of straightaways for me, and a few that went off to one side. I broke several of the straightaways, but those side fellows I couldn't touch." That was less than two months ago, we believe. Then Mr. Harding came East to his home in New York, and tried his hand at targets on the Endeavor Gun Club's grounds, at Marion, N. J., and also on the New Utrecht Gun Club's grounds, at Dyker Meadow, L. I. He will forgive us if we state that the result of those efforts was enough to discourage many a man from trying again. He has tried again, however, and the last time was on Saturday, Dec. 5, on the grounds of the Boiling Springs Gun Club, of Rutherford, N. J., of which club he is a member. He is no longer "easy." For a fifth attempt at targets 40 out of 50, half at known and half at unknown angles, is not to be despised. "Those side fellows" caused him no particular trouble, but we noticed some of the straightaways getting away from him. (The above story is copyrighted. If Charlie Budd wants to use it as an advertisement of his power as a trainer of crackerjacks he will have to ask our permission before doing so.)

Paul R. Litzke writes: "Owing to the heavy dew that fell on Thanksgiving Day at Hot Springs, Miss Annie Oakley was unable to give her exhibition, and the team race that was on the programme between Miss Oakley and John Sumpter on one side, and Hughes and Williams on the other, was not shot, but was postponed until the following Saturday. The weather on that day was bright and clear, with a high wind blowing, and the temperature below freezing. Miss Oakley did some very fine shooting with both pistol and rifle, and also shot at 25 live birds from five King traps, regulation rise; of this number she scored 20, with 2 others dead out of bounds. The team race could not be shot, Miss Oakley having to leave to catch an early train for New York."

At the Louisville, Ky., shoot, held Nov. 26 on the grounds of the Kentucky Gun Club, the winner of the Kentucky Futurity Handicap was J D Gay, of Pine Grove, Ky. At the shoot Gay did some remarkable work with the gun. In the Futurity he scored 49 out of 50, the lost bird being dead out of bounds. After the 50-bird event he shot in miss-and-outs until he had fired at 100 pigeons; of that number he scored 99, the last bird, as stated above, falling dead out of bounds. Mr. Gay shoots (if we remember right) a Parker gun; his load on this occasion was 3½drs. of Hazard's Blue Ribbon, 1¼oz. of Nos. 7½ and 7 shot in a 2⅞ Trap shell. All Mr. Gay's birds were shot at from the 30yd. mark.

We had a long letter from Milt Lindsley the other day; it was dated Nov. 30. Although he does not mention his health, it must be all right because there was any quantity of vivacity in every line of that epistle. Here's a sample: "I expect to be in New York in time for the Grand American Handicap and the Exposition, and don't think there is any doubt at all but what I shall win the handicap. When I don't do any shooting for quite a long time I get to thinking the matter all over and I come to the conclusion that I am a great shot. Of course I quickly lose this idea when it comes to an actual test, but as there are sometimes many weeks in which I don't do any shooting, it is quite a pleasant illusion."

Howard E. Norton, of Ironton, O., a shooter well known to many brother shooters outside of his own State, has accepted a position with the Winchester Repeating Arms Company, of New Haven, Conn., his connection with that company dating from Monday of this week. Another equally well known and equally popular shooter, who has joined the ranks of the employees of this company, is Bert W. Claridge, of Baltimore, Md. Mr. Claridge will be found busy in the loading room at any and all hours except those when it is necessary for him to eat and sleep. Baltimore and Ironton have both lost something, while New Haven has been the gainer.

Neaf Apgar and Jake Blendermann reached New York on Tuesday last, Dec 1, after a week's hunt at Washington, Ind., under the guidance of John L. Winston (No. 147), who also took them under his roof tree and set out the best he had. Neaf says that the quail were so thick that it was hard to miss them when they got up. Notwithstanding a rainy time that made the ragweed very wet, both parties came back thoroughly satisfied with the trip, something that doesn't happen every day of the week.

On Dec. 5 Annie Oakley gave an exhibition of shooting at Greenville, O., 2,000 persons being present, according to our correspondent, who grows enthusiastic over the pretty work done by "the Darke county girl." Mrs. Butler was born only a few miles from Greenville, and the people were anxious to see her. She broke targets, singles and doubles; then she rode a bicycle and broke more targets as she pedaled along. She wound up by killing 27 out of 30 selected live birds that had a strong northwest wind to aid them.

We have received a communication from the Bergen County Gun Club, of Hackensack, N. J., stating that the shoot for the *Recreation* cup will be started at noon, but that entries will be received as late as 2:30 P. M. in order to keep faith with the public as per previous announcement. Intending contestants will find it to their advantage to be on hand as early as possible, as it takes some time to shoot 100 targets and it gets dark very early at this time of the year. Sweepstake shooting will be started at 10 A. M.

The Baker Gun Company, of Batavia, N. Y., issues quarterly a magazine that contains a lot of matter that is of interest to men fond of a gun and of shooting. In its November number it gives, among other items, a description of a new "hammer gun built specially for the use of nitro powders." A couple of half-tone engravings show the gun and the action of the lock very clearly, the latter being a very simple piece of mechanism, while the gun itself is certainly a good-looking weapon.

During her stay at Hot Springs, Ark., Miss Annie Oakley has been doing some very good work with her shotgun. She has captivated the boys by her work on quail. A party of four, consisting of Mr. and Mrs. Frank Butler, G. W. Hughes and E. E. Woodcock, bagged 43 quail in about five hours' shooting, Mrs. Butler (Annie Oakley) being responsible for 13 of them, several more than her proportion. Jno. J Sumpter, Jr., says Mrs. Butler can shoot quicker in the brush than anybody else he ever was out with.

There seems some likelihood now of a match between Elliott and Brewer. The latter can easily find backing now that he has shown what he can do once more, and the former is by no means lacking in either pluck or skill. On Friday last, Dec. 4, Brewer went up to the store of the Winchester Repeating Arms Company and wanted to meet Elliott, but nothing came of it that day, as Elliott had business in New Haven and could not stop to talk shoot, having to hustle to catch his train.

The West End Gun Club, of Albany, N. Y., will hold a shoot at sparrows on December 22. Secretary Horace B. Derby writes us that his club will have enough birds on hand to guarantee an all-day shoot.

Brewer, Elliott, Fulford and Class! It was a great quartette and a great shoot. It will be a long time before we see its like again.

The shoot for the *Recreation* cup takes place at Hackensack, N. J., on Saturday next. The contest will be decided on the grounds of the Bergen County Gun Club, sweepstake shooting commencing at 10 A. M. As we understand it, the shoot for the cup itself will be commenced about noon, but entries will be received later, the early entries shooting their strings of 100 targets whenever the management deems it fit to start so that the shoot can be over by 4 o'clock at the latest. It will be well to make sure of closing all scores before it gets too dark to see targets properly, and that hour comes quite early at this time of the year.

J. O'H. Denny and his brother, Frank Denny, both well known to shooters as capable representatives of western Pennsylvania, sailed from New York on Saturday last, December 5, their destination being the south of France, where they propose spending the winter and some of the spring months. The Monte Carlo shooting grounds will be trodden by them many a time before they see Pittsburg again.

Paul North is tickled nearly to death, and the reason is not far to seek. Oscar Guessaz writes to say that at the Midwinter shoot next January the management has decided to throw their bluerock targets from magautraps. Paul says that this is a straw that shows the direction of the wind, and adds that that straw has no connection with the proverbial "last straw in the camel's back racket."

The Cobweb Gun Club, of New York city, claims the week commencing March 13 (the week of the Sportsman's Exposition in Madison Square Garden) as the dates for its second annual live-bird and target tournament. One of the chief attractions will be the Cobweb Handicap at live birds, a purse of $500 being guaranteed by the club.

The Limited Gun Club, of Indianapolis, Ind., announces that it will hold a big tournament at live sparrows January 14-15. In another column we give a communication on the subject from Secretary Royal Robinson, which we commend to the notice of all the Eastern men who purpose attending the San Antonio Midwinter tournament.

In their match at Omaha, Neb., on Thanksgiving Day, both Elliott and Parmelee used 3¼drs. of E. C. powder. The scores made on that day of 92 and 91, Parmelee leading by one bird, were decidedly good, as there was a strong wind blowing, with the thermometer below zero.

If you have any fault to find with the proposed new rules for target shooting, don't be backward about telling us so. We won't get mad and are only desirous of getting honest criticism that will help us to frame rules that will be somewhere in the neighborhood of perfection.

Thursday of this week (December 10) will see a shoot at Zwirlein's grounds, Yardville, N. J. There will be a 20-bird race, $15 entrance, handicap rise, as a chief attraction. Should the day be wet the shoot will take place on Friday.

Myles Johnson was on hand at the Trenton shoot last week. Myles has been a well-known figure at New Jersey shoots for many years, and bids fair to see many another shoot before we lose him. What he doesn't know about pigeons is scarcely worth knowing.

Pete Murphy, of Philadelphia, Pa., is quite a live-bird shot, but he stacked up against a big something when he tackled John L. Brewer at his own game—gun below the elbow, use of one barrel only—on Wednesday last, Dec 2, at Trenton, N. J.

Jack Winston, the 147 of the Austin Powder Company, left New York for Chicago on December 7. His match with George Roll, of Blue Island, Ill., for the Du Pont trophy takes place at Watson's Park, December 15.

Elmer Shaner will be in the city next week for the purpose of attending the annual meeting of the Interstate Association. Next year's programme will be the main topic of conversation at this meeting.

Seth Clover and A. P. Pope (Epop) are going to manage a live-bird shoot to be held at Erie, Pa., some time during the month of January Dates will be chosen and will be announced in our column of Fixtures.

The Walsrode Gun Club, of Newark, N. J., is planning a big shoot for Christmas Day. Both live birds and targets will be used.

DEC. 8. EDWARD BANKS.

Cook County League.

CHICAGO, Ill., Dec. 2.—A directors' meeting of the Cook County League was held November 30 for the awarding of the season's prizes. As the club totals, totals of each individual, percentages, etc., were fully published in FOREST AND STREAM at the closing of the last shoot, it is, in a sense, repetition to print them again, but mention of the different items of the long list of merchandise prizes may again bring to mind the attractions offered by one of the most ambitious local trap-shooting organizations of the country.

Dr. S. Shaw, who shot in the B class, made the highest scores of any individual in the association, and his winnings were the most considerable. The writer happened to be in the gun store of Von Lengerke & Antoine when Dr. Shaw called to take down a few of his prizes. He had upon the counter a fine Elliott model Winchester repeating shotgun, a handsome L. C. Smith ejector hammerless shotgun and a fine Remington breech-loading shotgun, all beautiful arms in their way. These Dr. Shaw was sending by express to Florida, whither he departs soon for an extended shooting trip.

The annual meeting of the League will be held Monday, Dec. 7, and at it plans for the future will be taken up.

The percentages of the winning teams were: Class A—Eureka 79^{11}_{12}, Garfield 68⅛. Class B—Garfield 75¼, Garden City 68⅛, Calumet Heights 66¼, Douglas 64¼, Eureka 62^{2}_{3}, Cicero 52^{2}_{9}. Class C—Calumet Heights 58½.

Lavergne Gun Club has disbanded. Ridge Gun Club did not enter any of the contests.

Below is a list of the winners, with their scores:

Grand Prizes: Class A—Eureka team 79^{11}_{12} per cent. Class B—Garfield team 75¼ per cent. Class C—Calumet Heights team 58½ per cent.

Class A Prizes: First, Ed. Steck, 113 out of 125; second, tied for by F. P. Stannard, Thos. Hicks and G. C. Lamphere, 112; third, J. A. Ruble, 111; fourth, A. C. Paterson, 107; fifth, M. J. Eich, 104; sixth, tied for by C. Antoine and W. R. Morgan, 100.

Class B Prizes: First, Dr. S. Shaw, 117 out of 125; second, R. Kuss, 112; third, John Glover, 108; fourth, C. P. Richards, 106; fifth, B. Barto, 104; sixth tied for by A. W. Fehrman and D. Carter, 103.

Class C prizes: First, J. H. Amberg, 92; second, S. H. Greeley, 91; third, A. T. Whitman, 87; fourth, A. C. Black, 71; fifth, H. Levy, 67; sixth, reserved for next year.

Individual prizes for highest average in six out of eight contests: Class A, tied for by Ed. Steck and F. P. Stannard, 134 out of 150; Class B, Dr. S. Shaw, 137; Class C, S. H. Greeley, 106.

Open to all individual prizes: First, Dr. S. Shaw, 117 out of 125; second, Ed. Steck, 113; third, tied for by T. P. Hicks, F. P. Stannard, R. Kuss and G. C. Lamphere, 112; won by Hicks in shoot-off; fourth, J. A. Ruble, 111.

Miscellaneous prizes: Special for best League score on Calumet Heights Club's grounds, B. Barto, score 23 out of 25. Lowest man in each club as follows: First, H. Weed, Cicero Club; second, Geo. Airy, Eureka Club; third, J. H. Amberg, Garden City Club; fourth and fifth, L. H. Goodrich, Eureka Club; sixth, M. J. Lowrey, Cicero Club; seventh, A. Cheesman, Cicero Club; eighth, J. B. Church, Douglas Club. Greatest improvement over last year's average, H. Levy, Garden City Club. Club making lowest average in a majority of the contests, Calumet Heights Club. Lowest average in five out of eight shoots, S. Palmer and H. Levy, 29^{5}_{9} and 32 per cent. Team making highest percentage during season, Eureka Gun Club's A team.

A Sparrow Tournament at Indianapolis.

INDIANAPOLIS, Ind., Dec. 5.—We hope to make up a special car load of shooters for the San Antonio midwinter shoot, or, failing in that, to have enough to make a strong addition to the Eastern contingent on its way thither. As a means of getting shooters from this territory together, we will have a sparrow shoot Jan. 14 and 15, and we suggest to our Eastern friends that Indianapolis is just the place to lay and break the monotony of a long journey. We promise them and others sport such as they can get nowhere else. Freshly caught birds, handled and trapped by Mr. W. T. Hill, the only sparrow expert, will try the skill of the best, and should be a welcome change to those surfeited with target and pigeon shooting.

We combine the rapid-fire system with unknown traps, and shoot sparrows as fast as some clubs do targets.

For programmes and rates to Texas address Royal Robinson, Sec'y The Limited Gun Club.

Erie Gun Club.

ERIE, Pa., Nov. 26.—Below are the scores made to-day by members of the Erie Gun Club. It will be noticed that Seth Clover was in front pretty nearly all the time. Scores:

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.
Clover	21222—5	21210—4	11122—5	21222—5	12211—5
Epop	21110—4	21110—4	10112—4	12110—4	11210—4
Jackson	11010—3	10222—4	10122—4	21011—4	11101—4
Derby	11011—4	11111—5	01221—4	02021—3	12111—5
Kepner	10022—3	01200—2	10012—3	00222—3	.....
Cavanaugh	10101—3	11210—4	12021—4	12121—5	11021—4
Bacon	.....	01220—3	01221—4	02212—4	21201—4
Reed	.....	.....	01220—3	21222—5	.....

In a miss-and out Clover won with 3, Cavanaugh and Jackson scored 2, and Epop 1.

"Learning Something Every Day."

MANY centuries ago the Latin poet Horace, if our memory does not fail us, wrote the above phrase when he was probably feeling good over a bottle of Falernian wine, and had reached that stage when he was at peace with all men, and was willing to acknowledge that he did not know everything—something that it is very hard for some of us to own up to. We take off our hat to Horace for thus openly confessing that he, even at his age, was still "learning something every day."

As a natural result of the articles which appeared in our issues of Nov. 14 and 28 on the decision of the referee in the Winston-Langen match, we have listened to a good deal of conversation on the subject. One point that particularly struck us in many of these conversations was the very general impression that prevailed that so long as a man had no chance to win, he should therefore have no chance to lose. It sounds all right, and in *Shooting and Fishing* of Dec. 3 we are told that this is

"A RULE OLD AS THE HILLS."

We quote from that issue: "Regarding that decision, there are two points which have not yet been mentioned, but which have direct bearing upon the matter. The first is: Suppose Count had missed that bird and had then turned and claimed another bird to shoot at because one of the traps was not filled. Would it have been just to allow him another chance? He had shot and lost. Should he have been given a second opportunity, virtually then shooting at 101 birds instead of 100? I fancy that his opponent, Winston, would have been the first to oppose the claim on the grounds that he had shot and lost. Had he so missed, the referee would have decided 'lost bird' without hesitation. It is a rule old as the hills that if a man cannot win, he cannot lose.

"Upon asking one individual whether he would have claimed that Count should shoot at another bird had he missed, the reply was, 'Most certainly not; it would not have been to Winston's advantage to make such a claim. If the referee had decided lost bird, as he would most certainly have done, why should Winston have asked for a change of that decision? He has some sense.'"

For information we now quote:

Hurlingham Rules (Rule 22).—Should any member kill a bird at a distance nearer than that at which he is handicapped it shall be scored no bird, but should he miss, a lost bird.

Gun Club (London) Rules (Rule 20).—Should any shooter shoot at a distance nearer than his proper distance, the bird if killed is "no-bird;" if lost, a "lost bird."

The Interstate Association's rules for live-bird shooting, the rules under which the Grand American Handicap is shot, do not govern this point at all, merely stating what shall be the referee's decision in cases where a shooter shoots from a mark "exceeding his proper handicap."

American Association rules make no provision at all for deciding what shall be done when men shoot from wrong marks, whether nearer to the traps or further away from them.

There is an analogy between the case where a man shoots from only four traps instead of from five, and the case where a man handicapped at 30yds. steps up and shoots from the 28yd. mark. In the latter case he cannot win, but he can lose, and the principle that inspired that rule is also "old as the hills," viz., equity. He is taking an advantage that is not warranted, and therefore he must not be allowed to profit by the result of the shot; on the other hand, if he cannot kill the bird when he is closer to it than if he had stood at his proper handicap mark, it is only fair to presume that he would have missed it standing where he should have stood. The line of argument adopted by the writer of the paragraphs quoted above is actually funny. How could Count, after having had the advantage of four traps instead of five, ask for another bird supposing he had lost under such circumstances?

In the criticisms which appeared in our issues of Nov. 14 and 28 we made no effort to quote anybody's ideas on the subject, leaving it to the public to decide the matter to its own satisfaction from the referee's statement of the case, quoting his own words, and giving our interpretation of the rules as we saw them. We considered our case strong enough to rest it without calling in outside testimony as to what was proper under the circumstances. "The other side," however, has quoted one or two opinions favorable to its side, among them the opinions of Fred Hoey and Leonard Finletter. Mr. Hoey's view of the case may be briefly disposed of by quoting again from *Shooting and Fishing* of Dec. 3: "Fred Hoey then stated that in no other way could a decision have been given; that it came under the same head as where, upon the shooter calling pull, two traps were opened and two birds were released. The shooter could claim a balk or he could shoot. If he did shoot he had to abide by the result, whether the bird was missed or killed. This was the only analogous thing to which the matter could be compared."

Mr. Finletter's opinion is given in the following paragraph: "The subject was brought up by Leonard Finletter, the crack shot of the Riverton Gun Club, and one of the best known lawyers of the Quaker City. He came up to the writer and stated that in his judgment the decision was an eminently proper one; that he was present, and under the circumstances as he saw them could not see how any other decision could have been made." Borrowing a phrase from the writer of the article in *Shooting and Fishing* of Nov. 19, we would like to add: "Why not be fair and state" that Mr. Finletter was not only present at the time, but was actually Count Langen's handler in the match, and that therefore his opinion as stated above must be taken as an *ex parte* statement. And this we say without in the least impugning Mr. Finletter's good faith on this question; it only goes to show how differently people view the same matter, a very good thing, by the way, for lawyers, whether Philadelphia lawyers or members of the bar resident in other cities.

Huntingdon Gun Club.

HUNTINGDON, Pa., Dec. 4.—The Huntingdon Gun Club held a contest to-day for a trophy presented to the club by the Laflin & Rand Powder Company, the trophy being a silver keg of W-A powder. Houck and De Forest tied with 22 each, and shot off at 25 targets, Houck winning by 20 to 19. Scores:

Houck	1111101011110111111111111—22
De Forest	1101111101111111011111111—22

G. G. HARMON, Sec'y.

Joplin Gun Club.

JOPLIN, Mo., Nov. 25.—The following scores were made in the last shoot for the old medal: Taylor Cox 99, C. Sumner 90, Sergeant 90, Leeman 89, E. Webster 87.

To-day we started in on a new medal which is held subject to challenge. The first shoot for it resulted as follows: Cragin 95, Leeman 88, Cox 87, Webster 87, Sergeant 86, Sumner 85. A second contest resulted as below: Sergeant 92, Cragin 90, Leeman 89, Cox 86, Webster 86.

J. Alexis Cragin distinguished himself by smashing 95 of the first 100 targets. Alexis is made of the right sort of material and only wants more practice to become one of the best target shots in the country. Leeman and Sumner, of Galena, Kan., who shoot regularly with the Joplin Gun Club, are always found in the front row and are both royal good fellows, and without their presence no shoot in this neck of the woods is complete. Taylor Cox, the one-armed shooter, was not in his usual good form to-day, he having broke 99 out of 100 targets shot at last week. Webster, who furnishes the boys with their ammunition, is now shooting regularly and is rapidly coming to the front as a target shot. Every shooter on the ground used Du Pont in a Smokeless shell.

We have several shooters here who will attend the midwinter and are anxiously awaiting announcement of dates. W. G. SERGEANT.

At Watson's Park.

CHICAGO, Ill., Dec. 5.—Dr. Frothingham shot a great race to-day in his match with George Roll, 50 live birds per man. Dr. Frothingham scored 48 to Roll's 44, one of the Doctor's birds falling dead out of bounds. Scores:

Geo Roll	2110212212012202212122211—22
	1111102112221112222•221220—22—44
Dr Frothingham	1222111211221212111111112—25
	1110221111211•11112122112—23—48

On the same day Dr. Liddy shot a 25-bird race with J. Rehm, defeating him by 23 to 17. Scores:

J Rehm	2020220101120212202202012—17
Dr Liddy	1122212111112222120211110—23

RAVELRIGG.

On Long Island.

CONEY ISLAND ROD AND GUN CLUB.

Dec. 2.—The monthly shoot of the Coney Island Rod and Gun Club held this afternoon at Dexter Park was another red-letter day for the veteran Uncle Billy Hughes, who, despite his more than three score years and ten, carried off pretty nearly everything in sight, scoring 15 straight before dropping a bird, and winning the club shoot with a clean score of 10 kills to his credit. The scores were:

H Knebel, Jr. (30)	1112111—7	0	John Schliemann (28) 2220111—6	1
William Rial (30)	1112211—7	0	Henry Muller (27)	0212212—6	1
William Hughes (29)	2221222—7	0	Dr Raynor (27)	0222112—6	1
Dr Van Ord (29)	2222223—7	0			

As will be noticed, Hughes, W. K. Rial, Henry Knebel, Jr., and Dr. Van Ord tied for the badge; on the shoot-off Hughes won with 3 straight to Knebel's 2, Rial's 1, and Van Ord's 0. In a 3-bird sweep first money went to Hughes and Rial with 3 straight. In another of the same kind the scores were: Van Ord 3, Rial and Hughes 2 each.

CRESCENT GUN CLUB.

Dec. 3.—The club shoot of the Crescent Gun Club was held at Dexter Park this afternoon. Dykeman easily defeated his solitary antagonist, Hopkins, by the score of 7 to 4. The scores made by the members and their friends were:

	Club Shoot.	No. 1.
J H Dykeman	2121222—7	210101—4
L C Hopkins	1•20611—4	00211•—3
G Diedrich		00102 —2

Two team races were shot as follows, 5 birds per man:

Hopkins's teams: Hopkins 4, F. C. Franklin 3; total 7. Dykeman's team: Dykeman 3, Diedrich 2; total 5.

Hopkins's team: Hopkins 5, Franklin 1; total 6. Dykeman's team: Dykeman 3, Diedrich 2; total 5.

HAPPY DAYS GUN CLUB.

Dec. 4.—The Happy Days Gun Club held its monthly shoot to-day at Woolsey's Point, L. I.

Our novice, Gus Moyer, with his Francotte gun, which he used to-day for the first time, made some elegant kills, especially the last two, both very fast out-goers to the left; each one was missed with the first barrel, but his second dropped them all in a heap within a yard of the boundary line.

Chas Rieger (28)	1112002121111—10	Fred Passe (28)	1101011211121—10
Gus A Moyer (28)	1110011101122— 9	E O Weiss (28)	1111001110122— 9

E. O. WEISS, Sec'y.

NEW UTRECHT GUN CLUB.

Dec. 5.—The New Utrecht Gun Club's target grounds at Dyker Meadow were well attended this afternoon. Seven members shot along in the main event at 25 targets, while F. A. Thompson, a member of the Vernon Rod and Gun Club, of Brooklyn, took part in the sweeps as a guest of the club. Although Mr. Bennett was not on top in the club shoot, losing 5 out of 25 in that event, he was well to the fore in the other sweeps, scoring 46 out of 50, and totaling in all 66 out of 75 shot at during the afternoon. The club shoot, so far as Class A was concerned, went to M. Van Brunt, who scored 22. Dr. Pool was the winner in Class B without a competitor to worry him. Scores:

Club shoot, 25 targets, known angles:

M Van Brunt (A)	1011101111111101111111111—22
D Deacon (A)	1111110011101111111111101—21
J Gaughen (A)	1111101111111011111101010—20
D C Bennett (A)	0111111100111101110111111—20
C C Fleet (A)	1010100111101010011110101—15
A A Hegeman (A)	1111001001111100001011001—14
G E Pool (B)	1100110011010110100101101—14
F A Thompson*	1111011111111001011110110—19

* Guest.

The following sweeps were also shot, Nos. 1, 2 and 3 being at known traps and angles, Nos. 4 and 5 at known traps, unknown angles:

Events:	1	2	3	4	5	Events:	1	2	3	4	5
Bennett	9	9	10	9	9	Fleet	6	4	3	6	7
Thompson	8	7	8	9	6	Hegeman	4	8	8	3	6
Gaughen	8	4	8	8	5	Van Brunt	..	..	..	7	8
Deacon	6	8	8	6	8						

Cobweb Gun Club.

NEW YORK, Dec. 3.—The regular monthly class shooting of the Cobweb Gun Club at live birds was held to-day at Baychester. The day was a beautiful one, but the atmosphere was raw and cold; but this had no effect whatever upon the results, as you will observe from the phenomenal shooting of Messrs. P. F. McKeon, Grant Nichols and Daniel Brady, of Class A. Too much cannot be said of their shooting, as McKeon killed 26 straight, Nichols 25 straight and Brady 15 straight. From the score of the miss-and-out shoot-off in this class it might be supposed that the birds were slow and easy; on the contrary, they were strong and exceptionally fast. After the first 8 Mr. Miller, manager of the grounds, selected the birds, and they were, with the exception of 2, "corking" birds.

Class A, 30yds.:		Tie.	Shoot off, miss-and-out.
P F McKeon	11111—5	212	122121222122111212
G Nichols	22222—5	222	2112122221112121220
D Brady	22121—5	221	21122120
F Hendricks	11111—5	211	w
E Miller	11112—5	0 w	
C Zorn	11100—3		
C Donnelly	10100—2		
J Loomis	20000—1		
Class B, 28yds.:			
M B McDonnell	20000—1	122	
A Elliott	02000—1	10 w	
Class C, 26yds.:			
W Purdy	11201—4		
C Ditmar	01201—3		
W Knight	02102—3		
A C Bage	20200—2		
G A Barker	000 w		
Class Z, 25yds.:			
G Thompson	02002—2		
C Burgee	20000—1		

McKeon wins Class A medal, McDonnell Class B medal, W. Purdy was the winner in Class C and G. Thompson in Class Z.

GEO. W. THOMPSON, Jr., Sec'y.

East Pittsburg Gun Club.

EAST PITTSBURG, Pa., Nov. 28.—The first contest for the trophy presented to the East Pittsburg Gun Club by the E. C. Powder Co. took place to-day on the club's grounds. The contest was shot at 100 targets, known traps and angles, allowance of extra targets as handicap. Williams, who had an allowance of 16 extra targets to shoot at, won the first shoot by 8 points over his nearest competitor, Rambo, who had an allowance of 4 extra targets. Rambo's score of 46 out of his first 50 shot at made him look very much like a winner at that stage of the game. The scores in detail were as follows:

Williams (116)	1010111111111111111011111110011111111101010111010111—40	
	1111101010011111111110101101010101111111111101111101—38	
	1111101101111111	—14—92
Rambo (104)	1110111111101111111111111111111111111101110111111111—46

SWENSON, Sec'y.

Newcastle Gun Club.

NEWCASTLE, Pa., Nov. 26.—The Newcastle Gun Club held a shoot to-day on its grounds near the tube mill. Some good work was done, notably by W. H. Hill and C. Matthews. Event No. 2 was the club shoot; in this event W. H. Hill won the class A medal, Charles Matthews the class B medal, and J. de Normandie the medal in class C. Scores in this event and in another 25-target event were as follows:

	No. 1.	No. 2, Club Shoot.
C Matthews	1110111101111111111111111—23	0111011111011111111011100—19

Trap-Shooting Rules.

THE absolute need of a set of trap-shooting rules that are up to date is demonstrated every day. The A. S. A. rules, good as they were when first framed, lack many of the essentials of an up-to-date set; trap-shooting in all its branches, but more particularly in target-shooting, having expanded at a rate that left behind all the calculations of its enthusiastic admirers.

While making no claim of perfection for the draft of a set of rules for target-shooting given below, we do claim to have tried to cover every point. With a view to correcting errors, and for the sake of making the rules conform as nearly as possible to the ideas of the majority, we ask our readers to scan each rule closely, and when anything is wrong write and tell us about it. Address all communications on this matter to the trap editor.

RULE 1. REFEREE AND JUDGES.—Two judges and a referee, or a referee alone, shall be selected by the management or by the contestants in a match, whose decision shall be final.

RULE 2. DUTIES OF THE REFEREE AND JUDGES.—The judges and referee, or the referee if acting alone, shall see that the traps are properly set at the beginning of the match, and kept in order to the finish. They or he shall endeavor to make the flight of the targets conform to the height and direction indicated in Rule 7. They or he shall test any trap upon application of a contestant at any time during the match by having a trial target thrown from that trap. They or he may at any time, and must do so when so requested by a contestant, select one or more cartridges from those of a shooter at the score and publicly test the same for proper loading. If the cartridge or cartridges are found to be loaded in opposition to the rules laid down in Rule 11, the shooter shall suffer the penalty imposed by the said rule.

RULE 3. SCORING.—Section 1. A scorer shall be appointed by the management or by the contestants in a match, and his score thereof shall be the official one. All scores shall be plainly kept, a lost target being indicated by a cipher and a broken target by the figure 1.

Section 2. Whenever possible the scores shall be kept on a blackboard, and in plain view of the shooters at the score; and the score thereon shall be the official score, and the score kept on paper for use in the cashier's department shall at all times be made to conform with the score on the blackboard.

RULE 4. PULLER.—A puller or pullers shall be appointed by the management or by the contestants in a match, whose duty it shall be to pull or spring the traps the instant the shooter calls "Pull;" he or they shall be placed in such a position that he or they shall have an unobstructed view of the shooter at the score. Where the pulling is to be done according to an indicator for unknown traps, the puller shall be placed in such a position that the shooter at the score shall have no means of ascertaining by the puller's actions which trap will be sprung.

RULE 5. PULLING THE TRAPS.—Section 1. The traps may be pulled from right to left or from left to right if so decided by the management.

Section 2. If the shooting is from known traps—that is, if a shooter knows which trap shall be sprung for him—he may refuse a target thrown from any other trap, but if he fires the result shall be scored.

Section 3. If the trap is sprung before or at any noticeable interval after a shooter has called "Pull," he can accept or refuse such target, but if he fires the result shall be scored.

Section 4. In any contest the parties thereto may select some person who shall be placed by the management in such a position that he is able to see that the traps are sprung in accordance with the number designated by the indicator.

Section 5. If the puller or pullers does not or do not pull in accordance with the numbers designated by the indicator, or by dice (if used), or by any other method ordered by the management, the puller or pullers shall be removed and others substituted. Every target thrown from a trap thus wrongly pulled shall be a "No target," whether broken or lost.

RULE 6. ARRANGEMENT OF TRAPS.—All matches shall be shot from three or from five traps, and all traps shall be set level and in a segment of a circle or in a straight line. When the traps are set in a segment of a circle, the radius of that circle shall be 16yds. In all cases the shooter's mark shall not be a less distance from each trap than that designated in Rule 9. The traps shall be not less than 3yds. nor more than 5yds. apart. The traps shall be numbered from left to right; that is, No. 1 shall be the first trap on the left, and No. 2 the next trap to the right of it, and so on. (For laying out a set of traps, etc., see diagrams herewith.)

RULE 7. ADJUSTING TRAPS.—Section 1. All traps must be adjusted to throw targets a distance not less than 40yds. nor more than 60yds. If any trap be found to be too weak to throw targets the required distance, a new trap or new spring that will do so must be substituted.

Section 2. The trap shall be so adjusted that the elevation of the target in its flight at a distance of 10yds. from the trap shall be not more than 12ft. nor less than 6ft.

Section 3. When shooting at known angles, the directions of the flight of the targets from each trap shall be: If only three traps are used, No. 1 shall throw a left-quartering target; No. 2 trap shall throw a straightaway target; No. 3 shall throw a right-quartering target. The angles for Nos. 1 and 3 shall be the same as those prescribed for Nos. 2 and 4 where five traps are used. If five traps are used, No. 1 trap shall throw a right-quartering target; No. 2 trap shall throw a left-quartering target; No. 3 trap shall throw a straightaway target; No. 4 trap shall throw a right-quartering target; No. 5 trap shall throw a left-quartering target. Traps Nos. 1 and 5 shall be adjusted to throw the targets so that their line of flight shall cross that of the straightaway target at a point not less than 10yds. nor more than 20yds. from No. 3 trap. No. 2 trap shall be adjusted to throw targets so that their line of flight shall cross the line of targets thrown from No. 1 trap at a point not less than 5yds. nor more than 10yds. from No. 1 trap. No. 4 trap shall be adjusted to throw targets so that their line of flight shall cross the line of targets thrown from No. 5 trap at a point not less than 5yds. nor more than 10yds. from No. 5 trap.

Section 4. After the traps have been adjusted to throw targets at the above angles, if the target for any reason shall take an entirely different course, it shall be declared a "No target" provided the shooter does not fire at it; but if he fires, the result must be scored. By "an entirely different course" is to be understood as follows: If the target ought to be a left-quarterer, and if it has any left-quartering tendency, it shall be considered a fair target; if the target ought to be a right-quarterer, and if it has any right-quartering tendency, it shall be considered a fair target; a straightaway may vary 45° on each side of its correct flight. If in the opinion of the referee the target has taken an "entirely different course," that is to say, if it has gone outside the above limits, he shall allow the shooter, provided he has not fired, another target from the same trap if the shooting is from known traps; if from unknown traps, the shooter shall be given another target from a trap designated in the manner set forth in Rule 17, Section 3, when a target breaks in the trap when the shooting is under "expert rules."

RULE 8. SCREENS.—Pits or screens, or both, may be used to hide the traps and trappers, but the screens must not be higher than is actually necessary to protect the trappers.

RULE 9. THE RISE.—In single target shooting the rise shall be: 18yds. for 10-bore guns; 16yds. for 12-bore guns; 14yds. for 14 or 16-bore guns; 13yds. for 20-bore guns. In double target shooting the rise shall be: 16yds. for 10-bore guns; 14yds. for 12-bore guns; 12yds. for 14 or 16-bore guns; 11yds. for 20-bore guns.

RULE 10. CALIBER AND WEIGHT OF GUN.—No gun of larger caliber than a 10-bore shall be used. No 10-bore gun shall weigh more than —lbs., and no 12-bore gun shall weigh more than 8lbs.

RULE 11. LOADS.—The charge of powder is unlimited. The charge of shot shall not exceed 1¼oz., Dixon's measure, struck. Any shooter using a larger quantity of shot shall forfeit his entrance money and rights in the match. If, however, the management is of the opinion that a shooter has not willfully violated this rule, it may return to him his entrance money, provided it obtain the unanimous consent of all the contestants.

RULE 12. LOADING GUNS.—No cartridges shall be placed in the gun until the shooter has taken his place at the score. In single target shooting only one cartridge shall be placed in the gun. All cartridges must be removed from the gun before the shooter leaves the score, and a shooter shall "break" his gun before turning away from the score. The penalty for violation of this rule shall be at the discretion of the management, who, after warning him, may, if the violation is persisted in, declare the shooter to have forfeited his entrance fee and rights in the match

RULE 13. POSITION OF THE GUN.—Any the shooter may adopt.

RULE 14. SINGLE TARGET SHOOTING.—If two targets are sprung at the same time and the contestant does not shoot, he shall be allowed another target; but if he fires, the result shall be scored. When the traps are set in the segment of a circle, each contestant shall shoot at 3 or 5 targets before leaving the score, the number being regulated by the number of traps used.

RULE 15. DOUBLE TARGET SHOOTING.—Section 1. Both traps must be pulled simultaneously; if in the opinion of the referee there is an appreciable interval between the springing of the two traps, and if the contestant does not fire, he shall be allowed another pair; but if he fires the result shall be scored. Each contestant shall shoot at three or five pairs consecutively before retiring. If three traps are used the first pair shall be thrown from Nos. 1 and 2; the second pair from Nos. 2 and 3; the third pair from Nos. 1 and 3; the fourth pair from Nos. 1 and 2; the fifth pair from Nos. 2 and 3. If five traps are used the first pair shall be thrown from Nos. 2 and 3; the second pair from Nos. 3 and 4; the third pair from Nos. 2 and 4; the fourth pair from Nos. 2 and 3; the fifth pair from Nos. 3 and 4.

Section 2. If only one target be thrown, it shall be declared "No targets."

Section 3. If one target be a fair one and the other an imperfect target it shall be declared "No targets," but if the shooter fires at an imperfect target or targets the result shall be scored.

Section 4. If a target be lost for reasons stated in Rule 20, the referee shall decide as follows: If the shooter is prevented from firing his first barrel for either of the reasons as above, and does not fire his second barrel, he shall be allowed another pair from the same traps; but if he shall have fired his second barrel, and the second target be lost for the reasons so stated in Rule 20, the result of the first shot must be scored, and the shooter shall be allowed another pair from the same traps, firing at both targets in the same order as at the previous pair and with a full charge of powder and shot in both cartridges, the result of the second shot being scored. The shooter must, however, under these circumstances point his gun in the direction of the target first fired at, and both targets must be in the air when the first barrel is discharged. If a target be lost for reasons stated in Rule 23, the result of the first shot must be scored, and the shooter shall be allowed another pair under precisely similar conditions attached in this section to the missfire of the second barrel in a double gun.

Section 5. If both targets are broken by one barrel it shall be declared "No targets." If the shooter fires both barrels intentionally at one target it shall be scored "Lost targets;" but if the second barrel be fired simultaneously with the first barrel it shall be declared "No targets," provided the referee is satisfied that the second barrel was accidentally discharged.

Section 6. If the second target be lost through the safety bolt "jarring back," that target shall be declared a "lost target." (By "jarring back" of the safety is meant that action of the safety bolt sometimes produced by the discharge of the first cartridge, the safety bolt going back to safe and rendering it impossible to fire the second cartridge without a readjustment of the safety bolt.)

RULE 16. RAPID-FIRING SYSTEM.—When the rapid-firing system is used there shall be a screen before each trap, on which shall appear the number of the trap, commencing from No. 1 on the left to 3 or 5 on the right, and each shooter shall stand at the score opposite the trap from which the target is to be thrown for him to shoot at. After he has shot at his first target he shall pass to the next score on his right, and so continue until he reaches the end of the score, when he shall return to the score opposite No. 1, and continue as before until he has finished shooting. If shooters are annoyed by or if there is any delay caused by the smoke of previous shots, shooters may commence at No. 5, moving up to No. 4, and so on, rotating in exactly the opposite direction to that given above in this rule. Where three traps are used four men shall be called to the score at the same time; the first three men on the score sheet shall face respectively Nos. 1, 2 and 3 traps; the fourth man shall take his stand in rear of No. 1 man, stepping up to the No. 1 score as soon as it is vacated. The fourth man is called the "pivot man." (N. B.—As soon as the "pivot man" has taken No. 1's place, the man who has shot from No. 3 score shall walk up to No. 1 score and become the "pivot man" for the time being.) Where five traps are used the first five men on the score sheet face respectively Nos. 1, 2, 3, 4 and 5 traps; No. 6 man is the "pivot man." The procedure with five traps is similar to that with three traps.

RULE 17. SECTION 1. KNOWN TRAPS AND KNOWN ANGLES.—When the shooting is at known traps and known angles, the traps shall be adjusted to throw targets as provided in Rule 7. The method of shooting off events at this style of shooting shall be the same as that set forth in Rule 16.

SECTION 2. KNOWN TRAPS AND UNKNOWN ANGLES.—When the shooting is at known traps, unknown angles, the shooter shall know which trap is to be sprung for him, but shall not know which angle the target is to be thrown at from that trap. Referees shall see to it that the trappers change the flight of the targets frequently. At unknown angles, any target that is thrown behind the line of the screen may be refused by the shooter, and he shall be allowed another target; but if he fires the result shall be scored. The method of shooting off events at this style of shooting shall be the same as that set forth in Rule 16.

SECTION 3. EXPERT RULES, RAPID FIRE.—The trap shall be set to throw targets as provided in Rule 7. The shooters shall take their stands at the score in the manner prescribed for rapid firing in Rule 16. An indicator shall be used to decide the order in which the traps are to be pulled. When five traps are used, the shooter standing in front of No. 1 trap shall shoot at a target thrown from any of the five traps. The shooter in front of No. 2 shall shoot at a target thrown from any of the four remaining traps. The shooter in front of No. 3 shall shoot at a target thrown from any of the three remaining traps. The shooter in front of No. 4 shall shoot at a target thrown from either of the two remaining traps; while the shooter in front of No. 5 shall have the remaining trap pulled for him. As soon as No. 5 has shot, the pivot man shall shoot from the No. 1 score at a target thrown as prescribed for the man in front of No. 1, and so on. When a target is broken by the trap, or there is a balk, and the shooter does not accept the target, he shall be awarded another target, the indicator being changed and a new combination designated. If the balk occurs when No. 1 is shooting, the procedure is the same as if there had been no balk. If it occurs when the man in front of No. 2 is shooting, the puller shall pull that trap whose number appears first in the new combination, provided it be not the number of the trap pulled for No. 1 man. If the balk occurs when the man in front of No. 3 is shooting, the puller shall pull the trap whose number appears first in the new combination, provided always that he does not pull either of the two traps already pulled for the men in front of Nos. 1 and 2. If the balk occurs when the man in front of No. 4 is shooting, the puller shall pull either of the two remaining traps according to the order in which the numbers of these two traps appear in the new combination. If the balk occurs when the man in front or No. 5 is shooting, the same trap shall be pulled, the man in front of No 5 always knowing his trap. If at any time the shooter fires at an imperfect target, the result shall be scored. As soon as all five traps have been pulled a new combination shall be designated by the indicator. When three traps are used the procedure is modified accordingly and is similar to that described above.

(Note.—In explanation of the above: Suppose No. 1 has shot at a target from No. 2 trap, and No. 2 at a target from No. 5 trap, and a balk occurs when No. 3 is shooting. Say the combination was 2, 5, 4, 3, 1, and suppose the new one is 1, 2, 5, 4, 3. No. 3 will get No. 1 trap, No. 4 will get No. 4 trap and No. 5 will get No. 3 trap, unless another balk occurs, and another combination is brought into play. The combination is always changed as soon as the shooter at No. 5 has fired.)

SECTION 4. EXPERT RULES, ONE MAN UP.—The traps shall be set to throw targets as provided in Rule 7. The shooter shall take his position at the score in front of No. 3 trap. The puller shall pull the traps as directed in Section 3 of this rule, precisely as if six men were at the score. In the case of imperfect targets or balks the puller shall pull the traps as ordered in Section 3 of this rule where it relates to balks, each man at the score firing at targets thrown from all five traps before retiring, and always knowing his last trap. If a shooter fires at an imperfect target the result shall be scored. When three traps are used the shooter stands in front of No. 2 trap and shoots at 3 targets before retiring. In all other respects the procedure is similar to that for five traps.

SECTION 5. EXPERT RULES, UNKNOWN TRAPS AND ANGLES.—The traps shall throw targets at unknown angles within the limits prescribed in Rule 7, and in Section 2 of this rule. The procedure, if the shooting be rapid fire, shall be the same as ordered in Section 3 of this rule. If the shooting be one man up, the traps shall be pulled as ordered in Section 4 of this rule. If a shooter accepts an imperfect target the result shall be scored. Where three traps are used the procedure is similar to that for five traps.

SECTION 6. REVERSED ORDER.—The traps shall be adjusted to throw targets as provided in Rule 7. The man in front of No. 1 trap shall shoot at a target thrown from No. 5 trap; the man in front of No. 2 trap shall shoot at a target thrown from No. 4 trap; the man in front of No. 3 trap shall shoot at a target thrown from No. 3 trap; the man in front of No. 4 trap shall shoot at a target thrown from No. 2 trap, and the man in front of No. 5 trap shall shoot at a target thrown from No. 1 trap. If the shooter fires at an imperfect target the result shall be scored.

(N. B.—Sometimes, to make the shooting a little harder, it has been found advisable to adjust Nos. 2, 3 and 4 traps to throw targets at unknown angles, and this system is strongly recommended.)

RULE 18. CLASS SHOOTING.—All shooting shall be class shooting unless otherwise stated. (Class shooting provides that all shooters tied for first place shall receive their *pro rata* share of first money; all those tied for second place shall receive their *pro rata* share of second money; and so in all other places, third, etc.) Any shooter in a tie for either of the moneys may withdraw his *pro rata* share of that money, unless the programme prescribes that all ties shall be shot off.

RULE 19. BROKEN TARGETS.—A target to be scored to the shooter must have a perceptible piece broken from it while in the air. A "dusted" target shall not be scored to the shooter. No target can be retrieved for shot marks. If a target be broken by a trap the shooter shall be allowed another target, but if he fires the result shall be scored.

RULE 20. ALLOWING ANOTHER TARGET.—Section 1. The shooter shall be allowed another target for any of the following reasons: (1) For a target broken by the trap. (2) For any defect in the gun or load causing a missfire. The failure to cock the gun or properly adjust the "safety" is considered to be the result of the shooter's own carelessness, and shall not be considered as a defect in the gun or load; a target lost under these conditions shall be scored "lost." (3) If the contestant is interfered with, or balked, or there is any other similar reason why it should be done, the referee may allow another target. (N. B.—The "jarring-back" of the safety is not to be considered a defect of the gun.)

Section 2. When the shooting is at known traps, the shooter shall have another target from the same trap; but if the shooting is at unknown traps he shall be allowed a target from some trap, as provided in Rule 17, Sections 3, 4 and 5.

RULE 21. LOST TARGETS.—Targets shall be scored "lost" for any of the following reasons: If the shooter fails to load or cock his gun, or to properly adjust its safety, or pulls the wrong trigger.

RULE 22. MISSFIRE.—When a cartridge placed in either the right or the left barrel apparently fails to explode when the trigger is pulled, the shooter must on no account break his gun; but shall hand it to the referee, whose duty it shall be to try both triggers without previously breaking the gun to cock it. If the cartridge be then exploded, the shooter shall be awarded a "lost" target; but if the referee shall find that the proper trigger has been pulled, and that the cartridge has failed to explode through no fault of the shooter, he shall allow another target, as provided in Rule 20, Section 2. Any shooter who shall break his gun after a missfire, instead of handing it unbroken to the referee for his inspection, shall be awarded a "lost" target.

RULE 23. FAILURE TO EXTRACT IN A REPEATING SHOTGUN.—In double target shooting, or in events where "both barrels" are allowed, when a shell cannot be extracted from the chamber for either of the following reasons, the shooter shall be allowed another target: (1) When the brass head of the shell pulls away from the paper, leaving the empty shell in the chamber and preventing the loading of the gun from the magazine. (2) When the extractor, although in good order, passes the shell and leaves it in the chamber, preventing the loading of the gun from the magazine. In either of the above cases the referee shall allow another target, as if there had been an actual missfire. The shooter must, however, immediately upon the failure to extract, and without attempting again to remove the empty shell from the chamber, hand his gun to the referee for his inspection. (The failure to comply with this provision shall be treated as a violation of Rule 22, and shall be penalized as such.) Nothing in this rule shall be construed as empowering a referee to award another target for either of the following reasons: (1) When the shell, although extracted from the chamber, has not been ejected from the mechanism. (2) When the feeding of a cartridge from the magazine has been blocked by the use of a shell too long for the chamber of the gun. (3) When the referee is satisfied that the shooter is using reloaded ammunition. In all such cases the referee must decide that it is the shooter's fault, and the result of the shot shall be scored.

RULE 24. ANNOUNCING THE SCORE.—Section 1. The result of each shot shall be announced plainly, and it shall be called back by the scorer each time. The call for a broken target shall be "Broke" or "Dead;" for a lost target the call shall be "Lost."

Section 2. When two judges and a referee are serving, one of the judges shall announce the result of each shot distinctly, the scorer answering him accordingly each time. If the other judge disagrees with the decision of the judge calling, he shall make his protest at once before another shot is fired, and the referee shall then give his decision, which shall be final. In case of another target being thrown before the referee's decision has been made, the target so thrown shall be a "No target," whether broken or lost.

Section 3. At the close of each shooter's score the result of it must be announced. If claimed to be wrong, the error, if any, must be corrected at once.

RULE 25. TIE SHOOTING.—Section 1. All ties shall be shot off at the original distance, and as soon after the match as practicable, at the following number of targets.

(*a*) TIES ON SINGLE TARGETS.—In single-target matches of 25 targets or less, on 3 traps at 3 targets, and on 5 traps at 5 targets; in matches of less than 50 targets and more than 25 targets, on 3 traps at 6 targets, and on 5 traps at 10 targets; in matches of over 50 targets, on 3 traps at 15 targets, and on 5 traps at 25 targets.

(*b*) TIES ON DOUBLE TARGETS.—In double-target matches of 10 pairs or less, ties shall be shot off at 3 pairs; in matches of more than 10 pairs, at 5 pairs. Unless otherwise stated by the management and so understood prior to the commencement of the match, the targets in the shoot-off shall be thrown as provided in Rule 15.

Section 2. If in a series of matches the result prove a tie, such tie shall be shot off at the original number of targets.

RULE 26. SHOOTING OUT OF TURN.—When a shooter fires out of turn the target so fired at shall be a "No target," whether broken or missed. When two shooters fire simultaneously at the same target that target shall be declared a "No target," whether broken or missed. (N. B.—It is left to the referee to decide whether the discharge of the two guns was simultaneous. If the discharge was not, in his opinion, simultaneous, and if the shooter whose turn it was to fire first did so fire first, and did break the target, it shall be scored to him as "broken;" but if, in the opinion of the referee, he missed the target, it shall be scored to him a "lost target." The shooter who fired out of turn must in every case fire at another target.

RULE 27. SHOOTER AT THE SCORE.—In all contests the shooter must be at the score within three minutes after his name is called to shoot, or he forfeits his rights in the match.

RULE 28. FORBIDDEN SHOOTING.—No shooting will be permitted on the shooting grounds other than at the score. If there be no inclosure no shooting shall be permitted within 200yds. of the score without the consent of the management.

Thanksgiving Day at Calumet Heights.

CHICAGO, Ill., Nov. 26.—The Calumet Heights Gun Club, of this city, celebrated Thanksgiving Day by holding a live-bird and target shoot at its grounds. The shooting during the greater part of the day was done in a high wind with frequent showers of rain. Great interest was taken by those present in all the contests of the day, notwithstanding the elements. The members present were about 50 in number. During the day 160 live birds were trapped and 1,862 targets thrown.

To-day's shoot being the last regular contest for the season's medals which have been shot for in the weekly contests, the same were awarded on the ten best scores made by the men in their respective classes. The awards were as follows: Class A medal, A. C. Paterson, with 231 out of 250; Class B medal, W. Metcalfe, with 203 out of 250; Class C medal, A. C. Black, 173 out of 250.

The programme of events for to-day was as below:

No. 1, 10 live birds, distance handicap, $2.50.

No. 2, 15 targets for practice.

No. 3, 25 targets, regular medal contest.

No. 4, 100 targets, handicap, sweep for merchandise prizes, entrance $1. Class A to shoot at 100 targets, Class B at 108 targets, Class C at 120 targets, purse divided as follows: One-half a cent allowed each shooter for each target broken by him.

All targets at 2 cents each.

Event No. 1, the live-bird event, had sixteen entries. All ties, of course, shot off for the merchandise prizes, the result of the shoot-off being given below. A strong wind blew across the traps, making some of the birds very hard The conditions were: gun below the elbow until the bird was on the wing:

G E Marshall (30)	1111111101—9	H B Black (27)	0012221021—7
W Metcalfe (30)	0212111212—9	P D Norcom (32)	0021010111—6
R B Carson (27)	2221221202—9	C W Carson (32)	0200200211—5
G C Lamphere (32)	0121122201—8	Dr Davis (27)	1000011120—5
A C Paterson (32)	1102221012—8	Dr Harlan (27)	0210101000—4
G H Knowles (32)	1121101110—8	Dr Hobbs (30)	1000012020—4
S M Booth (32)	0111102112—8	Dr Hodson (30)	0100102010—4
J S Houston (30)	0121101202—7	C L Dougherty (27)	1000001200—3

G. H. Knowles is the winner of the season's prize, a silver tea set. The merchandise prizes in the above race were distributed as follows: Marshall 1st, Paterson 2d, Houston 3d, Norcom 4th, C. W. Carson 5th, Harlan 6th, Dougherty 7th.

At the target traps there was a strong wind behind the targets that made them wavering in the flight, and causing them to duck out of many a load of shot. The medal contest to-day resulted as below.

A C Paterson (A)	1111111111111011111111111—24
G C Lamphere (A)	0111111111111011111011111—22
S M Booth (A)	0000111111010111101010100—14
J S Houston (B)	1111111101111111110111111—23
W Metcalfe (B)	0111001011101111100110111—17
Greeley (B)	1011111111000101111110100—17
P D Norcom (B)	1010000110100000010111010—11
R B Carson (C)	0010010111111111010011011—15
A C Black (C)	1110111001111010101100001—15
Chain (C)	1001010011110001011101111—15
Dr Harlan (C)	1101011101010111001001100—14
Morgan (C)	0000100110101111110001101—12
H B Black (C)	1000100000000000000000000— 2

The 100-target handicap race resulted in a win for A. C. Black, a Class C man, with 93 out of 120; second place went to Houston with 89 out of 108; Paterson was third with 87 out of his 100, and Greeley was fourth with 86 out of 120. The scores were as follows:

	1st 25.	2d 25.	3d 25.	4th 25.	Handicap.	Total
A C Black (120)	19	19	22	21	12	93
J S Houston (108)	20	21	18	22	8	89

P D Norcom (108)	9	20	20	16	7	72

In New Jersey.

ZWIRLEIN'S SHOOT AT TRENTON.

THE big shoot engineered by Charlie Zwirlein, of Yardville, N. J., took place at Trenton, N. J., as advertised, on Dec. 1-3. The weather was all against the success of the affair, but the race on the last day redeemed it from going down on the pages of history as a failure. That one battle was enough to satisfy anybody that saw it. Never before have the four shooters named in the scores which are given below met as a quartette of rivals on an equal footing. We have seen them entered for the Grand American Handicap, but shooting from different marks. At the Interstate Fair grounds on Dec. 3 it was "all on the same mark—30yds." If for no other reason than the bringing off of this contest, Zwirlein deserves infinite credit at the hands of the trap-shooters of this country. We treat of the match in detail in its proper place.

THE INTERSTATE FAIR GROUNDS,

where the match took place, are easily reached from the city of Trenton by a line of electric cars that land shooters and spectators right inside the grounds themselves, and within two minutes' walk of the score. The oval inside the race track is as level as a billiard table and could readily be laid out to accommodate three sets of traps in a straight line. As a claimant for Interstate Association recognition in the matter of the Grand American Handicap of 1897, there are several things to be said in favor of Trenton. The hotel accommodation is ample, Trenton's hotels being numerous and first class, while their prices are decidedly reasonable. The street car company is accommodating and, as stated above, transports its passengers from the center of the city to the fair grounds in about fifteen minutes, perhaps less. Fast trains are frequent on the Pennsylvania Railroad, and an hour and a half by rail from New York (including ferry to Jersey City), or one hour from Philadelphia, is the limit.

In pointing out the facilities for running the Grand American Handicap on these grounds, Charlie Zwirlein showed us his plans for erecting a temporary club house in rear of the dead line, amply sufficient to accommodate 150 shooters and their friends and attendants. The only drawback that we see to choosing these grounds as the scene for the next Grand American Handicap is the distance from New York, and we do believe that shooters who compete in that great event would prefer to sleep in New York to any other place. Barring that one drawback, Trenton can offer as many set-offs as any other city in the country.

UNFAVORABLE WEATHER

marred this meeting, a heavy snow, the first of the season, falling a few days prior to the shoot, and making it unpleasant under foot on the first day. The air too on the first two days was raw and cold, cutting right through the warmest clothing. The small tent set apart nominally for the shooters, warmed with a small oil stove, was appropriated by the public almost to the exclusion of the shooters; and both classes nearly froze to death anyhow. The accommodation was far too limited even with such a small crowd of shooters; what it would have been had another dozen shooters and a good crowd of spectators put in an appearance we hesitate to say.

The birds were good ones all through, while the all-blue ones trapped in the big race were as fine a lot as we have ever seen leave the trap on a calm day; many of them were screamers without more than a breath of air to aid them. Anticipating at least ten entries, Zwirlein had scoured the country for first-class birds, and had gotten together 1,200 all-blue pigeons, small in body and strong of wing; no peeps. When brought to the score in crates their tail and wing feathers were as clean as if they had never been cooped up.

The story of the three days' shoot must be told in detail, and only briefly at that, as there is much demand on our space this week:

First Day, Dec. 1.

The chilly nature of the day had its effects upon the spectators who stood around in the yellow sandy mud of the Trenton soil and watched the shooters step to the mark, shoot and retire with but little display of enthusiasm. The glare from the snow was not hard on the eyes, but it had a tendency to make the birds slower to start than they would have been had the sod been bare. Some excellent scores were made. The two Winchester experts, Jim Elliott and Ferd Van Dyke, were on top with 47 out of 49 and 34 out of 35 respectively; Aaron Woodruff, of Elizabeth, scored 35 out of 38; Class 33 out of 36, and Fulford 32 out of 35; the best Brewer could do was 23 out of 27, his gun handicapping very seriously, apparently making no pattern and having little penetration. Fulford's work was not clean, but it must be said that he was using a new gun, a beauty, a high-grade Greener, that he was neither accustomed to and which the load did not suit. He got his birds, it is true, but there were several slobbers among them.

To-day's events consisted of a 25-bird handicap, $25 entrance, and two miss-and-outs, $2 entrance, all at 30yds. The scores of these events follow:

	Handicap.	No. 1.
E D Fulford (31)	2022222222222222222222—24	222220
F Van Dyke (29)	2212222222222021222222222—24	2222212221—10
J A R Elliott (32)	2220222221222202222222121—23	2222222222—10
Frank Class (31)	2222222222222222022222220—23	.....
A Woodruff (29)	1222020122222222221122222—23	2212222212—10

J L Winston (29)	2202222022201022220122202—19	.....
P Murphy (29)	2202212210212012202202001—18	2110
C Zwirlein (29)	2222022022022220202w	.....
N H Astfalk	.....	1211222210— 9
I W Budd	.....	2112122111—10

No. 1 was a miss-and-out, $2 entrance.

No. 2, miss-and-out, $2 entrance: P. Murphy, Elliott and Winston 14, Class 10, Zwirlein 8, Budd 6, Astfalk and Cubberly 4, Fulford 3, Woodruff 2, Timmons and Brewer 1.

Second Day, Dec. 2.

The weather on the second day was somewhat better than that of the first day, with the exception of the cold wind, which was penetrating and raw to a degree; under foot the ground was all right, being frozen solid as a rock. The attendance was naturally small, a fact supposedly due to the cold weather, as the class of shooters on hand called for more outside interest than was displayed.

Five miss-and-outs at $2 each were shot, and also a race at 10 birds, $10 entrance, all at 30yds. rise. The best work was done as follows: Elliott, 34 out of 37; Fulford, 34 out of 38; Woodruff and Cubberly, 30 out of 32; Lott, 22 out of 25; and Brewer, 15 out of 16. Ferd. Van Dyke, whose shells had not shown up, had enough left to take part in the 10-bird race, and used them to such effect that he scored every bird, making his record for the two days 44 out of 45. The scores in to-day's events were as follows, re-entries being allowed in the miss-and-outs in the first round:

Match: Brewer vs. Murphy, 25 birds, $25, 21yds. rise, gun below the elbow, H and T traps.

Brewer.....1111111111101111111111111—23
Murphy.....0111101001111111011101010—17

Match: Murphy vs. Hill, 10 birds, $10, 30yds. rise:

Murphy..... 212222222—9 Hill.....102112•12 w

Other sweeps were shot as below, Nos. 1, 2, 3, 4 and 6 being $2 miss-and-outs; and No. 5, 10 birds, $10, birds included. Scores in these events were as follows:

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.	No. 6.
Fulford	212111—6	11—2	21111212—8	1120 —3	2122111022— 9	222122—6

147	.....	..	.....	.....	0222220222— 8	220

In No. 1 Fulford lost his first bird and re-entered. Fulford, Elliott and Zwirlein lost their first birds in No. 2 and re-entered. In No. 4 Zwirlein re-entered, Murphy re-entering in No. 6.

Third Day, Dec. 3.

This was the finest day of the week so far. The sun was bright and warm, but there was still enough snap in the air to make it advisable to hunt for a spot warmed by the sun, but sheltered from the gentle northwest wind that blew across the fair grounds. It was a pleasant day for shooting, but one that was decidedly in favor of high scoring, no matter how good the birds might be; the wind was of no use to them; it was too light, although its direction was all right. Then again, the snow on the ground, with the bright glare of the sun, was bound to dazzle and bewilder many a bird that would under other circumstances have left the traps like a streak. To do away as far as possible with any trouble from the snow, Zwirlein had had it swept away from around the traps, but it was still well in evidence, and unquestionably bothered the birds not a little.

It was fully 11:15 before all the principals showed up on the grounds to-day, although the majority of them had been eager enough the night before to make a start at 10 A. M. prompt. Jim Elliott, accompanied by Ferd. Van Dyke, were the only ones on hand at the hour mentioned. When we reached the grounds at 10:20, Elliott, Van Dyke, Charlie Zwirlein and George Cubberly, together with a few of the trapper boys, were the sole occupants of the little tent.

When Class, Fulford and Brewer arrived with their respective backers there was a good deal of preliminary talk, and the conditions were changed from "one gun to take all" to two moneys, 75 and 25 per cent. Nate Astfalk was chosen referee, while the official scorers, who had to work in relays on account of the cold, were: Will Park, of *Sporting Life;* J. K. Starr, of the Philadelphia *Public Ledger;* and the representative of FOREST AND STREAM, who also relieved Mr. Astfalk when it became necessary for that gentleman to retire for the purpose of warming himself and eating his luncheon. Charlie Zwirlein and George Cubberly looked after the birds. The retrieving was done for the most part by Pete Murphy's Irish setter Dan, a dog of four years of age, but full of centuries of good sense. Zwirlein's black setter dog, Nig, relieved Dan when it became necessary to give the latter's sore foot a rest.

The order of shooting was as follows: Fulford, Elliott, Class and Brewer. The first shot was fired at 11:40, Brewer firing at the 400th bird and finishing the match at 3:05, a matter of only 3 hours and 25 minutes for the 400 birds, or 400 birds in 205 minutes—nearly 120 per hour. This fast work was due to the promptness with which the men stepped to the score, and also to the quality of the birds, loafers being the exception. There was very little slobbering, consequently there was no waste of time in retrieving, and only two no birds were called; perhaps 12 or 15 others required scaring up with balls, one of such birds, his 62d, fooling Elliott by its quick work when it got off. It is impossible with the space at our disposal this week to describe this shoot as fully as its character deserves. We must do the best we can, for it was a great shoot. The luck of the birds was about even, nothing much to choose on either side.

BREWER.

Brewer showed what a really magnificent shot he is by his work to-day. Going to the score with a 7¼lb. Francotte, Nate Astfalk's gun, with 1¼in. more drop to it than any gun Brewer ever shot before, he made some wonderful kills and used splendid judgment, particularly on towering incomers. So impressed was he with the capabilities of this gun and (of course) of himself that he declared many times that he would kill 97 out of his 100. As a matter of fact he scored 96, with three dead out of bounds. Only one, his 58th, an extremely fast bird, got away without joining the vast majority laid out on the snow to cool off. Brewer's load was 48grs. of Du Pont Smokeless with 1¼oz. of No. 7 shot in a U. M. C. trap shell. In addition to being handicapped by using a strange gun, he had the misfortune to break the plate of some false teeth he now wears, and the kicking of the gun under the heavy load drove the plate into his cheek at each shot, causing blood to flow freely inside his mouth almost the entire time of the match. He shot the race of his life, an up-and-up race, and finished by running out with an unbroken string of 42 kills. His long runs were 12, 35 and 42 unfinished, scoring 80 out of his last 82.

ELLIOTT.

Elliott, as usual in an important match, lost his first bird, a fast right-quartering driver from No. 4 trap that towered rapidly as it left the trap. Apparently centered with the second barrel, after being undershot with the first, the bird fell dead just over the track. Then he settled down and ran 32 before slipping up on an almost similar bird to his first, but this time from No. 2 trap. After running 15 straight he unexpectedly let off an easy bird from No. 4 trap in the 50th round, scoring 47 to Brewer's 48 out of the first 50 birds. In the 58th round it will be noticed that his string of second-barrel kills is broken by a solitary figure 1. The bird was an easy incomer, and when Elliott pulled the trigger for the first shell the cartridge missed fire; he then did what was really a foolish action and perhaps bad judgment—he ejected the faulty shell and scored the bird with his remaining cartridge. In the 62d round he was badly fooled by a sitter that dodged a couple of balls thrown at it, and then jumped suddenly into the air and went away like an English snipe up wind on a wild day. After that he settled right down to work and ran out with 38 straight. His double-figure runs were 32, 15, 11 and 38 unfinished. Of course he shot a Winchester repeating shotgun, weight 7½lbs., Leader shell, 48grs. E. C. powder, 1¼oz. No. 7 shot, Winchester factory-loaded ammunition. The way he handled the "pump" pleased everybody, his bodyguard and valet, Ferd. Van Dyke, smiling all over his face as Jim landed bird after bird.

FULFORD.

Fulford shot in excellent form, and centered his birds well with his first barrel. How well he did his work in this line is shown by his string of one-barrel kills, 61 of his 100 birds being scored with a single shell. He was compelled to be chary of the use of two shells by being short of satisfactory ammunition, some of his loads not being suited to his gun, a new high-grade Greener, a beauty that weighs just 8lbs. This one-barrel work is very taking, and pleases the spectators, and speaks well for both shooter, gun and ammunition; but it is very apt to make a man slow with his second just when he needs it on a fast, driving bird. The loss of some of his birds being attributed to this in a measure, notably in the 15th, 41st, 48th, 78th and 79th rounds. Some of his kills with the second barrel were on the phenomenal order, but were decidedly of the class that "can't be done every time," even if the gun is pointed just right. We doubt if Fulford ever shot much better than he did to-day. His score of 93 out of 100, with 5 others dead out of bounds, shows that he was in great form. The loss of his 43d bird was a remarkable one. The pigeon was a dark bird that circled in to the left from No. 1 trap, flipping about as it flew; it flinched as the first barrel went off, but did not seem to be touched by the second; both times the gun went off the bird could not have been more than 28yds. from the shooter, but not a feather left it; yet it fell stone dead on the track just back of the dead line, dying in mid-air. Fulford stepped to the score each time when his turn came and shot along with an unruffled air from start to finish, realizing that he was in a shooting match and determined to be as near the top as he could get. His load was 54grs. of Schultze, 1¼oz. of No. 7 for the right and the same amount of No. 6 in the left, in U. M. C. factory-loaded Trap shells. Fulford's runs were 19, 25, 24 and 21 unfinished.

CLASS.

Frank Class performed his part in to-day's shoot in an entirely different manner to the way the others went to work. He was deviling Brewer all the time, pointing out Elliott as a sure winner, and offering all sorts of bets that Brewer would not win. Before the match began he offered Brewer the odds of 50 to 40 that he wouldn't finish first. No takers! He handicapped himself badly in the first 22 rounds, losing his 1st, 5th, 9th, 15th and 22d birds, the first three dead out of bounds. Then he struck his gait, and those who have seen Class shoot know what that means. Out of the last 78 birds he scored 75, losing 2 others, his 64th and 78th, dead out of bounds. He got into his old slap-bang style, filling a bird full of shot with the first barrel and landing the second into it with a precision and rapidity that was remarkable. On his day he is as dangerous a man as anybody in the country; some of his scores in the past few years show this. He shot a 7½lb. Francotte, 48grs. of Schultze, 1¼oz. of No. 7 in a V. L. & D. U. M. C. shell. His double figure runs were 31, 13 and 22, unfinished.

A REMARKABLE FINISH.

The last string of 25 in this match was a remarkable one. Zwirlein culled his crates carefully for the best birds he possessed, choosing those that he knew would best test the skill of the shooters. They were a rattling lot as a whole, and those who were looking on saw some great shooting. Fulford and Class lost their birds in the 78th rounds, and then Fulford lost his 79th dead out of bounds. This was the last bird that was not gathered in bounds during the remainder of the match, the next 87 birds being scored without a miss, although Brewer had a narrow escape in the 87th round. The bird, a good one from No. 4 trap, was hit, but not very severely. Brewer elected to gather it himself. He went about it very carefully, nearly two minutes expiring before he made an attempt to gather it. Then the bird rose about two feet from the ground and made for the boundary line where the spectators were standing. When within about 15 yards of the deadline, and looking very much like a sure lost bird, its wing snapped and down it came, being easily gathered by Brewer as a result.

The traps fell as below:

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.	Total.
Brewer	17	25	27	14	17	100
Elliott	18	26	20	30	6	100
Fulford	17	24	23	23	13	100
Class	19	20	21	21	19	100
	71	95	91	88	55	400

Some peculiarities will be noticed in the above figures, particularly Jim Elliott's scarcity of the figure 5. It will be noticed also that although the average for each trap would be 80, Nos. 2, 3 and 4 were much above their average, No. 5 being away below that average. The even manner in which the traps fell to Class is also specially marked. The race was shot under the following conditions:

100 live birds per man, 30yds. rise, 50yds. boundary, A. S. A. rules to govern, first to receive 75 per cent. of the purse, second to save his stake:

Trap score type—Copyright, 1896, by Forest and Stream Publishing Co.

Nos. 1, 2 and 3 were miss-and-outs, $2 entrance, with re-entries in the first round. In No. 1 Zwirlein re-entered four times; in No. 2 Zwirlein and Woodruff re-entered once each, Apgar twice; in No 3 Apgar re-entered once. No. 4 was 20 birds, $10, birds extra.

EDWARD BANKS.

BLACKBIRDS AT ELKWOOD PARK.

Dec. 1.—A trial was given the new traps and grounds at Elkwood Park to-day, a few blackbird sweeps being shot. The birds proved good flyers, and about 50 per cent. of them got away to resume their journey to the South for the winter. The first sweep was a three-cornered affair at 10 blackbirds, $5 entrance. Phil Daly, Jr., won with 8 out of 10, A. L. Ivins and Wooley scoring 7 each. Then Johnson and Grover shot a race at 5 blackbirds, Johnson by 2 to Grover's straight score of 5 ciphers. No. 3 was a handicap event, 10 blackbirds, $5, Grover and Johnson allowed 2 misses as no birds. In No. 4, 5 blackbirds, $5, the same two shooters were allowed a miss as no bird. The scores were as below:

	No. 1.	No. 3.	No. 4.
Woolley (27)	0022102121—7	2222220101 —8	02200 —2
Daly (28)	2212022202—8	0202002 w	22202 —4
Ivins (28)	0222220110—7	2001121110 —7	01102 —3
Grover (24)	.....	2020202200 20 —6	00200 —1
Johnson (25)	.....	2200210200120—7	021000—2

WALSRODE GUN CLUB.

Nov. 26.—Below are the scores made by the members of the Walsrode Gun Club at its annual Thanksgiving Day shoot. The main event was a race at 25 targets, handicap allowance of extra targets, the prize being one of Laflin & Rand's silver kegs of W-A powder. The keg was won by B. Schork, who broke 24 out of 28, being allowed 3 extra targets to shoot at. Scores:

Winters	1001111111111011111011100 —19
Luedecke	1111101111111111101101011 —21

H. REINHARDT, Sec'y.

Answers to Correspondents.

No notice taken of anonymous communications

G. S., Great Barrington, Mass.—My dog is five months old, and is trained under Hammond's rules. He seems to have a splendid nose, and I have taken him in the field for partridges several times. At first he would go but 10 or 12in. ahead of me, and now he does splendidly, all but the pointing. This afternoon I started a partridge and followed her up. The puppy only looked at her as she flew, and never made a sign of pointing. I followed her up, and saw her on the ground. The pup seemed to be trailing something, but he ran within 2ft. of the bird, causing it to fly. He has never pointed a partridge, and I ask you whether you think him worth bothering with. He is Llewellin stock, and cost me a good deal. Ans. Your puppy is too young either to train or to perform well on birds. Let him have his own way largely till he is more mature mentally and physically. About next fall he will be about the right age for field work and field training. Only very precocious puppies point at his age, and it is then no sign whatever of future excellence.

C. D. E., Allen, Mich.—While cleaning out the church spire at the M. E. Church, in this place, among some tame pigeons was killed one with a silver band on his right foot bearing the inscription, "J. L., '94, 10." Can you give any information regarding the bird? Ans. A stray carrier pigeon, but we cannot identify owner,

W. McD. P.—Will you kindly, in your Answers to Correspondents, give me some information as to the best place on the Gulf Coast of Florida to go for tarpon fishing? Ans. Punta Gorda; write to F. H. Abbott, manager Punta Gorda Hotel there.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2. | NEW YORK, SATURDAY, DECEMBER 19, 1896. | VOL. XLVII.—No. 25. No. 346 BROADWAY, NEW YORK.

For Prospectus and Advertising Rates see Page iii.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures.* **$5.**
Forest and Stream *6 months and any two of the pictures.* **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

FOREST AND STREAM OFFICE
346 Broadway
NEW YORK LIFE BUILDING
Present Entrance on Leonard Street

The FOREST AND STREAM is put to press on Tuesdays Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

AUDUBON'S WILLOW PTARMIGAN.

WE give to-day in the series of Audubon reproductions the portrait of the Willow Ptarmigan, with the chapter from the Biography descriptive of the bird.

This ptarmigan is hardly known as a game bird outside of Newfoundland, where it is commonly pursued with dog and gun and is known as "partridge." It occurs in one form or another in Labrador, northern Maine and in the British Possessions generally, but as a bird for the sportsman is but little hunted except in the island mentioned. The Nova Scotia Game Society members are contemplating an attempt to introduce the willow ptarmigan into their country.

Beautiful as is the plate of the willow ptarmigan, it of course can give no idea of the rich and vivid coloring of the birds and the surroundings of their summer home. The enlarged comb of the male in the breeding season is bright crimson; the feathers on the side of his neck are rich reddish brown or rufous, the back feathers are dark orange brown barred with black and tipped with gray. The colors of the female are more modest, as becomes her sex, being tawny barred with black. The hen and her chicks are resting on a rock covered with gray green lichen, and the green barren sweeps away toward the sky. Near the birds grows the plant known as Labrador tea, and in the lower left hand corner of the foreground are some wild peas. Among the many beautiful plates of this great work this is one of the most charming—a picture of bird life at home.

THE FOREST AND STREAM'S reproductions of Audubon bird portraits in half-tone from the rare first edition are as follows, with dates of those already printed:

BLACK DUCK, Sept. 26, 1896.
PRAIRIE CHICKEN, Oct. 24.
CANVASBACK DUCK, Nov. 21.
WILLOW PTARMIGAN, Dec. 19
AMERICAN GOLDEN PLOVER, Jan. 23, 1897
SHOVELLER DUCK.
REDHEAD DUCK.
PURPLE SANDPIPER.

It has already been told that there are some of the original Audubon copper plates still preserved in museums and elsewhere. Miss M. R. Audubon sends us this interesting note of some others, from her father's journal: "On July 19, 1845, the copper plates were greatly injured in a fire in Beaver street, though not destroyed. They are, however, in such a condition that it is doubtful whether they can ever be used."

Of these Miss Audubon writes: "They were sold by my grandmother, Mrs. J. J. Audubon, many years later. Two, the Snow Goose and the Great White Heron, are in my possession, having been given me by an utter stranger, who most liberally sent them to me, hearing I regretted owning none. This gentleman (whose name I withhold at his request) has a number set in the walls of his dining room. He wrote to me that his father bought them at a sale of old copper some years ago. Besides these and those owned by the museums there are a number of odd ones owned by different persons, of which I hear from time to time."

THE HAZARD OF THE FIELD.

WITH each recurring season, when shooters go afield and afloat in pursuit of game, accidents happen from the use of shotgun and rifle, and then betimes there come to the public reports of maiming or death accidentally inflicted by the use of such firearms. These accidents may be such as neither forethought nor prudence could guard against, yet they are almost invariably accredited to the criminal carelessness of the offending individual, or to his stupidity.

As the public sees such misfortunes, there is nothing to palliate, nothing to condone, nothing to excuse them. Let an accident happen as it may, if done with a gun, nearly everyone will consider that the man causing it is an unpardonable offender, and the prejudgments of it are tenaciously held against him. The man who caused the accident may be grief-stricken and overwhelmed at the injury or death of his friend or his victim, and would gladly take all the misfortune on himself could he do so. The accident might be such as would have happened to anyone else under the same circumstances, nevertheless many of the men who can write exhaust their stock of invectives in publicly denouncing him; others declaim with self-righteous vehemence against him; and all these self-constituted censors may be many miles from the scene of the misfortune and know nothing of its circumstances except what they gather from rumor. As an accident with the gun or rifle is more or less sensational, many men consider it a fit subject for venting their splenetic utterances, though unconscious of the Pharisaical implication which pervades their words, and indifferent to the fact that their information is seldom full enough to warrant even a just opinion in private.

Accidents in other vocations and avocations may happen and do happen every day. They are inseparable from life. The public, by observing that they are beyond the power of man to prevent, have come to accept them as a mournful matter of course.

Society guards against the accidents of life as much as possible, and, failing betimes, exercises its sympathy and care for the unfortunates; and he who caused the injury, if blameless, is sympathized with as one suffering from a grievous misfortune himself. He who would take it upon himself furiously and indignantly to inveigh against the ordinary accidents of life would draw but little attention to his own excellence by such means.

But accidents from the use of guns have come to be considered a lawful subject for the disposal of such ill-tempered sayings as are not available at other times. These accidents are seemingly considered as special accidents, differing from other accidents. There are thousands of mechanisms in the industrial world which day by day swell the numbers of those who have passed away, and of those who go through life maimed in body, broken in spirit and incapacitated for life's struggles, yet, as these mechanisms are not made for the special purpose of killing, any accident caused by their use is disassociated from such idea.

But guns are made specially for killing purposes, and though they may be used ever so legitimately in sport, an accident from their use nearly always is considered as the outcome of carelessness or negligence. The public is slow to learn that there will always be a certain percentage of accidents in the use of guns as there will be in the use of all mechanisms which have to deal with high powers, whether of horses in harness, steam in boilers or other steam appliances, electricity in wires and motors, etc. Each peculiar force has its list of victims, ever increasing. What is true of the forces employed in the industrial world will be equally true of the forces used in the pursuit of game.

There will be accidents which no care and forethought can prevent. In the industrial occupations of life men are taught carefully, yet with all the knowledge and skill derived from teaching and experience serious accidents happen. In sport with the gun many men have but a day or two each year, or but a few days at most; therefore it is not at all strange that they are awkward and at times thoughtless in the handling of firearms

---

The self-taught individual rarely thinks of his gun as being a dangerous weapon till he prepares to fire. He carries it full-cock on his shoulder, bearing with deadly menace on whoever may be walking behind him; or resting it on his forearm and pointing it forward, to bear on whatever may be before him, whether the same be man or dog. He is the man who pulls, muzzle first, his gun from the rear end of the wagon, or through a fence after he has crossed it, and something catching the trigger the gun is discharged and he is shot. Such a man as he rests on the muzzle of his cocked gun, hand on muzzle and both under armpit—a dog jumps up on him and touches the trigger and again the same old accident occurs Or he carries the loaded gun in the wagon, takes it in hand to alight, slips and again there is a tragedy. And nearly all these occur from thoughtlessness or ignorance, the result of a narrow personal experience, or neglect to learn from the writings of men of full knowledge, or from careless habit continued from careless beginnings.

No man, be his experience great or small, can consider that he is handling his gun correctly if there is a possibility that from his imperfect manner of manipulating it he puts any of his fellows in danger. He should persist in carrying his gun muzzle upward or downward at angles which preclude all possibility of danger, and this till the discipline becomes so fixed that it becomes habit. He should never take a loaded gun into a wagon, nor leave it out of his hands with a load in it. If he sets down his gun it is often unexpectedly picked up by some meddlesome and perhaps ignorant interloper who is curious to understand its mechanism and to try its workings. As a general rule, when among strangers it is a safe presumption that if the owner of a gun wishes one to examine it he will ask him to do so; till he does so it will be a safe course to let it alone.

From a standpoint of safety, the precautions necessary may be summed up in a few words: No shooter should place his gun with the muzzle pointing toward himself or anyone else. He should never carry a loaded gun in a wagon; never cross a fence, or other obstruction where a fall is possible, without first putting his gun at half cock or at safety, or, if need be, removing the cartridges; and he should never put his gun out of his hands without first removing the cartridges when people are about.

When he hears of an accident he should forbear saying "I told you so," and as for his opinion thereon he should consider that it is all bad enough without adding his disapproving opinion to it. He may look back in his own experience and find a time when such an accident was possible to himself, a time when he was ignorant of proper methods, but when fortunately no accident happened to him, and instead of vituperating the offenders he should consider that there may be those deserving of sympathy as well as much o deplore.

OUR CHRISTMAS NUMBER.

A RICH treat is in store for those whose good fortune it shall be to sit down in a cozy corner with the Christmas Number of the FOREST AND STREAM, which will be that of next week. dated Dec. 26 Here are some of the titles:

A CAMP GHOST STORY By G W. M

THE BARON AND THE WOLVES By Ernest Seton Thompson. With illustrations by the author.

STORIES OF AN HEROIC AGE— CHARLEY REYNOLDS. By George Bird Grinnell.

HOLLAND—CONCLUSION. By S. T. Hammond.

A LETTER FROM UNCLE LISHA. By Rowland E. Robinson.

A CHRISTMAS AT PORT TYLER'S. By Fred. Mather.

RUFFED GROUSE SHOOTING. Full-page drawing by Edm. Osthaus.

The announcement with respect to Mr. Robinson's contribution is provisional; it may be deferred until the following issue. The only certain way to make sure of all the good things given in the FOREST AND STREAM is to read the paper every week.

With the new year will begin the forty-eighth volume. The prestige of the paper as the American sportsman's favorite journal will be maintained in 1897. The FOREST AND STREAM will be as interesting, as instructive, as helpful, as of old. It will contend not less sturdily for the protection and advancement of the interests of field and stream, and outdoor sport with rod and gun.

AUDUBON'S PORTRAIT OF THE WILLOW PTARMIGAN.

The Sportsman Tourist.

HUNTING IN GREENLAND.

I SUPPOSE when I tell my reader that the deer hunt I am going to describe was not crowned with success, and that our efforts were useless, he will drop this article with disgust and look for something more ideal. But this particular hunt was so unique in a way off there in Greenland, so surrounded by peculiar conditions, that I think it will not fail to be of some interest, especially to him who has the true sporting instinct, and appreciates as only the hunter can the hardships and trials of the chase.

Again I want my reader to understand that he is not reading fiction, but a true account of actual adventure that four of us went through last summer. Were it fiction it would not have had such a miserable ending, and our party would have returned to camp with all the meat and heads they could carry.

The great Nugsuak Peninsula is a body of land situated on the west coast of Greenland, well up in the latitude of 71°. It is some hundred miles long and fifty wide, and extends from the great inland ice in a northwesterly direction to Baffin's Bay. The interior of this peninsula is but little known, and as far as I could ascertain from the Danes living in that locality we were the only white men who had gone over the ground. Bounded on three sides by fiords five to ten miles wide, laden with icebergs, and on the fourth by the impenetrable ice sheet, it rises abruptly to an average elevation of 4,000ft., where there extends a field of perpetual snow forcing itself out between the mountain peaks and down their sides in the form of glaciers. And such was the general character of the country in which we hunted deer.

We, that is John Phillips, myself and two Eskimos, Thui and Johnathan by name, made the party. Phillips was a tall, slender fellow, not yet of age, but strong, and with a grit and persistence that made him an admirable companion on such a trip. The two natives were wee bit of men picked up at the settlements as the best hunters, and as knowing a little of the country through which we were going. They were dark, dirty fellows barely 5ft. high, but could carry a pack on their backs, supported by straps across the forehead, for miles across the worst kind of going, and apparently enjoy it.

Our departure was made from the mouth of a salmon river, Ekaluit, on the north side of the peninsula, where our Boston party of students and professors had pitched the big tent. Provisions were taken for just four days, that being the time allowed us by the head of the party, and consisted solely of baked beans, biscuit and coffee, and a liberal allowance of black tobacco for the two guides. We wore the Eskimo coat of sealskin—"natsek," as it is called—woollen trousers and the "kamiks," or skin boots, for footwear. Thui absolutely forbade our taking walking boots on account of the noise they made with the hobnails on the rocks. Their loss was sadly felt before we got back, for the skin boots offered no resistence to the rough ground, every little piece of rock making itself felt through the thin soles.

At 4 o'clock on the morning of that latter day in August Thui stuck his head in the tent and said it was good to go, and after a hot breakfast and a careful examination of our traveling gear we were off, making our way through the lowlands and following up the valley through which Ekaluit River made its way. The valley was perhaps a mile wide, covered with the low blueberry and cowberry bush and dwarf willows, the whole flanked by two chains of mountains rising to the ice cap. The sides of the mountains were bare of vegetation, as were the huge banks of talus running from the cliffs far out into the valley, and the rock was invariably gneiss. For perhaps three hours we kept up this valley, which ran in a southeasterly direction, and found the walking pretty fair, the best we were destined to have on the trip. At each stop, which was always just before reaching the crest of some elevation, Thui unslung his pack, got out a small telescope and carefully scanned the outlook ahead for signs of game.

Presently the Eskimos turned off abruptly to the right and began the ascent of the cliffs, which here, along the side of a waterfall from the snow above somewhere, afforded us sufficient footing. It was hard climbing, but frequently looking back we could see how rapidly we were getting up, and soon we reached the top and found ourselves on the edge of a slightly rising table-land, with patches of snow ahead and the ice rising and disappearing on both sides. We were evidently on a divide and the stream we had ascended drained it. Here we stopped to take our lunch of biscuit.

Traveling now was over rock that seemed to have been broken up by frost action. Huge slabs were detached from the ledge and splintered into sharp, angular blocks which had not yet had time to weather. Small fields of snow were crossed, joining the ice fields on both sides of us, and soon we found ourselves on a slight descent, but had not made over a mile or two when we came to a halt on the edge of enormous cliffs overlooking a wonderful and surpassingly beautiful scene. Below us perhaps 3,000ft., and at right angles to the direction we had been coming, lay a lake some ten miles long and one and a half wide, of a light chocolate color. It was hemmed in on three sides by a ragged buttress of rock rising to the height that we now were, through which came at almost uniform distances a number of blue glaciers, shimmering in the sunlight and distributing tiny delta streams to the lake. From the water's edge lowlands, rich with blueberry bushes and moss, undulated to the mountain sides, where they met the talus. Down came the glaciers from the edge of the ice cap, some of them running far out over the lowlands and surrounded by moraines as fresh and gray as though they had been made that day. At the lower end of the lake the valley turned abruptly to the left, hiding the outlet from our view. It was in this arena then that we made our descent and chose for our scene of action the next three days.

Along about halfway down, after we had got into the belt of vegetation again, Thui suddenly stopped, stooped over and quietly remarked that we would get "tuktuk" (deer) very soon. This was good news. There were the comparatively fresh tracks of the caribou and it was tolerably certain they could not be many miles away. The natives had told us that "innuit" (people from the north) had frightened all big game away from this part of the peninsula and the chances would be against our finding game here, but now our spirits came up with the thought of deer so near us, and we hastened on down the mountain side and on to the lowlands, where we turned to the right.

The walking was now much like that which we had at first, only we were obliged to be continually going over great piles of morainic boulders. The water we found to be laden with glacial silt, a mud from the surface of the ice and too fine to settle quickly. There were small pieces of ice floating about here and there from one or two glaciers which had succeeded in reaching the water's edge.

Camp that first night was made under the shelter of a tremendous boulder 60ft. long and 20 thick, and tilted so as to leave a large space underneath, where we built our fire and turned in for the night. The meal consisted of a can of Boston baked beans, we spreading the contents of the can over a rock, where we all helped ourselves. The natives then prepared a fire with a certain green, pitchy vine similar to the cowberry bush, and proceeded to make the coffee. Taking the raw kernels, they spread them over a piece of thin rock and placed it over the fire until the coffee was roasted black. Then grinding it between two stones, the empty bean can was brought into play; it was filled with water, the coffee added and heated to boiling. The result was a black, strong, rich drink, which I found to be just what I wanted to stay my nerves.

"Turning in" simply meant going to sleep with us, for we had no tent, sleeping bags or extra clothing, but just as we were trying to find a smooth place to lie on Thui beckoned to us to come over where he was. He was sprawled out flat on the rocks with his eye to the telescope, intently taking in the slopes on the further side of the lake.

"Tuktuk, tuktuk!" he exclaimed, in his native tongue, almost as excited as we were when we heard it. "Two, old man, little child." But look as hard as we would we could not make them out. Thui said they were sleeping, and at that distance, some two miles away, no wonder they were invisible to our inexperienced eyes.

We took his word, however, that they were there, Johnathan confirming Thui's statement, and you have no idea what spirit this news put into us. Next morning we were up and after a hasty meal started off down the lake with the intention of rounding it and coming up the other side.

We scared up a few ptarmigan and two arctic hares that day, but they were only given a passing glance. How I wish, now that I know how our trip turned out, that I had bagged those two white skins. At noon we reached the foot of the lake, and crossing a large delta flat, spreading out from a glacier surrounded by a Titan dam of terminal and lateral moraines several hundred feet high, turned to the left at right angles to our former path and found another lake, smaller than the first, about three miles in length, spreading out before us. This lake was surrounded in the same way as its neighbor by extensive lowlands and hemmed in by the cliffs, and at its further end could be seen a river flowing out of it to the west and disappearing behind a chain of mountains. Evidently this was our only place to cross and a bee line was made for it.

But there is no country in which distances are so deceiving as Greenland; there is nothing in the landscape to give it scale and allow the spectator an idea of how far off an object may be. Nothing but rocks and boulders which vary in all sizes up to that of a large house.

So we found ourselves at dusk still two miles from the river and sought the protection of some friendly rocks for the night. Before turning in the natives discovered two more deer through the telescope just across the small lake. These John and I easily made out. They were a doe and a fawn this time and they were browsing among the piles of talus on the reindeer moss. Their fall coat was gray and an exact copy in color of the carpet of moss and willow over which they were slowly moving.

This sight, together with a liberal dose of the black coffee, put us in good condition for the night, and we smoked our pipes with a satisfaction and assurance that the morrow would bring us to our quarry, and I crawled in out of sight under a stone as big as a hut without noticing the bank of clouds collecting over the mountain tops to the east.

At 3:30 in the morning I awoke, for the first time cold. I crawled out of my den. There was a half snow, half rain, falling, and a heavy fog was slowly advancing up the valley. I called to John and the natives roosting among the rocks, and after some time managed to get a fire for our coffee from a few dry vines collected under shelving stones. At 7 we were off down the valley along the base of another lateral moraine, and after crossing several streams from the glacier reached the shore of the river at 9 o'clock.

The stream at this point was some thousand feet wide, but with the exception of its middle, where the greater current ran, it was not deep, many boulders and ledges protruding above water. The gradient was very marked, the whole river sliding along down hill to meet another lake, probably greater than any we had yet seen and whose head was just visible under the fog. We could see out in the middle of the stream, by bits of ice on the surface, that there was a rapid fall at this place, but it was all too apparent by the slope of the divide at this point.

We sat down and took off our socks and sealskin pants, keeping on the boots for protection against the rocks, and with Thui ahead with a stick, which I still believe he brought all the way for this purpose, that is, to feel his way, we started in. The water was cold, cruelly cold, and could not have been far from the freezing point judging from the feeling and the pieces of ice it contained. After getting out some distance Thui and Johnathan turned to the left and started up stream, John and I meekly following, dragging our benumbed limbs after us.

We were above our knees now and getting near midstream. Here the natives, after poking about for awhile, gave us to understand, by plunging the stick under water and then placing it against their sides, thus showing the depth of water, that it was too much for them and that they were going to try it again further up stream. So back we went to shore and trudged up a few hundred yards. This time we reached the deep water about three-quarters of the way across.

Up to this time I had kept my temper pretty well under control, thinking that we were doing the best under the circumstances and that the natives knew their business better than we; but when I saw them stop probing after sunken stepping stones, deliberately get out their pipes, light them and enter into a lengthy discussion as to the comparative merits of crossing above or below or of fording at all, this in ice water up to our knees, I must confess that I let loose the vials of my wrath on those poor fellows' heads and sent them to a warmer place than Greenland. They took it humbly enough and simply said it was too deep for them and began to make for the shore.

This was too much for me. With a call to John to follow, which he had the common sense to ignore, I took my rifle in my hand and waded out into the current, and was soon up to my hips slipping on and off the stones on the bottom, which seemed to be covered with some kind or slime.

Somehow or other I got across right side up and with a dry Winchester, and sitting down I took off what garments were wet and proceeded to wring them out. Looking back, I saw John and the two natives disappearing down stream, and I knew they were going to try it again there. I got into my wet clothes again, which were now thoroughly soaked, for it was raining hard, and started running up and down the shore for circulation. The wind was coming up and I waited anxiously for my companions to join me. Finally they came into view rounding a low island down stream, but to my disgust on the same side of the stream as before. I beckoned them to come over where I had made it, and after some demurring and another powpow between Thui and Johnathan over their everlasting pipes they concluded to make the attempt. But they never reached the other side. They got over as far as before, and were some half hour dissecting the river bottom with their poles before they gave me to understand that they should not dare to make the attempt. As I think it over now at a later day, I hardly wonder at their caution and am inclined to be more lenient with them than when the thing occurred. For the Eskimo, as I have said before, is a "wee bit of a man," and with their two heavy packs strapped to their heads it would have been a foolhardy thing for them to have attempted to reach the bank on which I was standing, especially when you think that hardly one native in 100 knows how to swim.

"John," I yelled at the top of my voice, "come on and let those black devils go back if they want to." But I might as well have tried to raise the dead as to make him hear across this stream, which was continually rising and making considerable noise on its race to the lower lake. I motioned to him to join me, but to my dismay he shook his head, and with the two natives made for shore. And then I did what I have since regretted—I retreated after them. For now, looking at the situation after a lapse of two months, surrounded by all the luxuries of a civilized home, I wonder why I could have prevailed upon myself to go back when there was game only a mile or two away; to have come such a distance, and gone through so much, and now to give up the object of the trip when almost within my grasp. I know what the opinion of my readers will be, and cannot blame them, seeing it as they do from the position of a looker-on; but I will say that when I found myself on the other side, alive and kicking, I thanked my lucky stars that I had been permitted to join my companions once again. Twice on the way over did I lose my foothold and go under; twice was I borne down by the current and brought up against a projecting boulder down stream. The struggle in that current the last hundred feet, with all my wet clothing tied in a bundle around my neck like a millstone, and still clinging to my rifle, was something I never want to go through with again. But thanks to a strong constitution and the invaluable experience of a boyhood spent for a good part in and about the river of a Vermont village, I got back and into my clothes, and following the others labored on to our former camping place among the rocks.

I was none the worse for my ducking, and none of us as far as I could see showed any ill effects from our five hours in the river except Johnathan. I found him, much to my surprise, shaking as though with the palsy, and his teeth chattering like castanets. Out of the pack he carried I got a suit of dry underwear and gave it to him, sleeping myself that night in wet clothing, and a disagreeable night it was.

As luck would have it, the temperature fell during the night to freezing, and the wind, coming from the east, penetrated into our rocky cells, chilling us to the bone. We were up several times during the night exercising to keep warm, and longing for daylight and the sun.

It came at 6 o'clock, bursting through the clouds, and stayed with us just two hours, which was enough for us to think that life was still worth living. We managed with perseverance to make a fire sufficiently hot to cook coffee, and then after eating the last of the beans and biscuit, tightening our belts and adjusting the loads, we started for Ekaluit, fully twenty miles away. I will not bore you with the details of that tramp. Starting in fair spirits—for we took the bitter medicine of the day before with a hunter's philosophy—our little cavalcade pushed on through snow, rain and fog for twenty hours; not daring to stop on account of the cold, and continually hounded by the thought that the nearest food was only at the tent. Thui had told us that morning that he should try a different route home, a cross cut, and said it was only three miles. Now an Eskimo mile is a Danish mile, and equivalent to four English miles; but as we tramped on that day and the next night and the following morning, over lowlands, up the cliffs, across the ice cap among the influence of the glaciers, and finally down the other side, putting mile after mile behind us, I am sure we covered about double that distance before reaching our destination.

And all over the most detestable kind of walking. I don't mind thirty miles on one of the turnpikes out of Boston; but over huge erratics and across an ice cap which satisfied all the conditions, on a miniature scale, found in crossing the great island of Greenland itself, with our feet shod as they were, the last half of the distance amounted to nothing less than slow, long drawn out torture.

As we ascended the cliffs overlooking the lakes we halted for a moment and took in at a glance the scene below us, which had even now a wonderful fascination. It seemed to me as though nowhere else on the face of the earth could there be such scenery, such savageness to those chains of mountains with the ice streams glinting and clinging to their sides, such unearthly hues to the lowlands and lakes themselves, and all shrouded in a stillness that was oppressive. Then we turned and

plunged into the fog. How those Eskimos kept their bearing across that waste of snow was surprising, although I imagine it was by the direction of the wind, which was, fortunately for us, at our backs.

We were in the fog ten hours, in blinding snow while on the ice cap, and came out on the north side when the moon, breaking through a rift in the clouds, lit up the surface of a glacier far below. Following down its left bank, a crossing was made over its slippery coating of wet ice, and the natives started off up the side of an adjoining spur into the fog again.

I was well nigh exhausted now, about midnight, and John was calling on me to stop. I yelled to the natives ahead to give us a rest, but they had no mercy. So, realizing our dependence on them to get us to camp, not having the slightest idea where we were, John and I drained the last drop of spirits from his pocket flask, and for the hundredth time screwed up our will forces and plunged into the mist after them.

The end was nearly over now. I vaguely remember wandering around in the fog with the moon dimly shining through it lighting up a waste of boulders; boulders everywhere, and four dark objects slowly picking their way over them, keeping together for fear of losing each other. Once, as we reached the ridge of the spur, we came through the mist and looked out over Umanak Fiord and among the islands and nunataks to the north, with a band of blood-red sky lying along the horizon.

Wearily we toiled down the slopes into Ekaluit, where almost before we knew where we were the white walls of the tent loomed through the misty morning air, and we entered, rousing the heavy sleepers within, and asked for food and drink. Nourishment, a long, refreshing sleep and a week nursing tender feet, and the deer hunt, with its deleterious effects, was a thing of the past.

It will go down to history as a chapter of failures, yet I am glad to have the memory of such an unusual experience. My hunter's instinct still troubles me at times when I think of the swollen river, the loss of game and the ignominious retreat, but on the other hand I have just enough humanity to be happy in the thought that on that retreat rested the safety of a doe and fawn browsing on the now snow-covered lowlands in the heart of Nugsuak, Greenland.

RUSSELL W. PORTER.

ISLANDS OF THE PACIFIC.

II.—Cocos Island.

COCOS ISLAND is a little beauty spot, west-southwest from Panama, distant some 600 miles. Its shores, generally steep and rocky, are indented by several little bays, each with its tiny white beach. Lying in a region of frequent rains, it is one of the best watering places in the Pacific.

Then there are the old legends of its once being a piratical rendezvous, and the supposition of buried treasure which always hovers around such places. Indeed, I believe there was once a schooner fitted out in San Francisco to search for buried treasure on Cocos Island. I never learned if they found any.

The island is small, but high, the sides nearly perpendicular, with a flat table-land at the top. It is very heavily wooded, and the trees are in turn covered with a dense network of vines and creepers everywhere dotted with bright yellow and white flowers, something like a morning glory, but larger.

The island is at its best after a shower. Like all tropical countries, the rain comes in torrents. It rains fiercely for perhaps an hour and then stops as quickly as it began, the sun breaks through the clouds and every leaf is all alive with sparkling rain drops. Beheld from the anchorage the island is then a magnificent scene. The green wall of foliage, with its myriads of yellow and white flowers, each leaf and flower bright with rain drops, hundreds of little waterfalls breaking out from the green wall, and falling with a grand sweep to the beach below. Then there is game—pigeons very like in size and color to the wild pigeon of America; and wild hogs, said to be descendants from stock left by Capt. Cook.

Back in the 60s I was one of the crew of an American bark which called at Cocos for water. The casks were easily filled by rolling them up the beach to one of the numerous waterfalls. Our work was soon done, and then all hands went off for a frolic. One boat, with the second mate, went for cocoanuts, while the rest, with the mate, went hog hunting. Our mate was very unpopular, but there was so much fascination in the idea of going after wild hogs that he had by far the larger party.

The mate, Mr. Allen, carried the only gun and went ahead. We floundered along through the thick bushes, over rocks, wading streams and fighting mosquitoes for some time. We had nearly reached the highest part of the island when one of the party discovered a hog some distance away. Mr. Allen saw that he could get no good chance where he was, but on looking about saw a small ledge a few rods off that promised a better opportunity. Creeping along carefully, he reached the place where, by pushing the gun through some vines, he thought he had the game sure; but that little ledge proved to be the lair of an old sow with her family of young pigs. As the mate shoved his gun through the vines the old sow took it for a challenge, and with a grunt and a roar charged directly at his face, which from his crouching position was all she could see. Then came the catastrophe. The mate had taken position on the edge of the ledge; at his back was a ravine some 20ft. deep, its sides forming an acute angle, and the whole composed of rough rock covered with a mat of vines and creepers. In his haste to regain his feet Mr. Allen lost his balance altogether, and with a wild yell of fright went over backward, gun one way, mate another, the old sow stopping at the edge of the cliff to snarl her defiance. It was fun for the boys, but mate Allen was badly demoralized. To make it worse, his gun had been discharged in the tumble, and before he could shake himself together and reload the game was gone. "What are you laughing at?" he roared, glaring round at the men.

The next sight of game proved more fortunate. Mr. Allen shot a large boar, breaking his foreleg, and the men finished him with clubs. We rolled him down to the beach, cleaned, cooked and tried to eat, but it was a miserable failure. We might get along with its being tough, but the flavor was beyond human endurance.

Among our crew was a long-geared Yankee from Boston. He had become dissatisfied with the ship, and made up his mind to desert. The night after the hunt he rolled his clothing up as snug as possible, packed it in a tub and climbed down the cable, while his mates lowered the tub after him. Reaching the water, and putting a line from the tub around his neck, he struck out for the land. The distance was barely two miles and he was a powerful swimmer, so we felt no fear for his reaching the shore. We met him some months afterward in Talcahuano, Chili, when he told us his story. He said: "After I left the ship I laid my course by a star, and struck out for the shore. I took my time about it, for I knew I had a long swim, and I wanted my strength to last me to the end. I got along very well for a while until in crossing a tide-rip my tub was swamped and hung up and down. I did not dare to let go of it, for all my clothes were there, and it would be death to land without them. I would not let them go and turn back to the ship, and so I shut my teeth hard and held on for shore.

"Many times during that swim I thought it was all over with Dick; but somehow I couldn't give up as long as I could move a leg. At last, however, I thought my time had come sure; I could just keep my lips above water, while my legs were almost up and down, and so stiff I could hardly move them. I was just taking a good-by look at the stars when my toes touched bottom. That gave me a little lift and I soon crawled out on the beach, dragged my tub after me and lay there until I had recovered some of my strength.

"A few days after a bark came in and I swam off to her, went up to Tomby and shipped, and here I am."

We had fine sport bathing here. We would go ashore, strip at some little basin under a waterfall, lather ourselves from head to foot and then stand under the cascade and wash the soap off.

We caught many fish, some marked like trout, but without the adipose dorsal. Then there were leatherjackets, John Dorys and many others that I could not name.

But our play was soon over, our water casks were full, and with one man short we stood out to sea, while many eyes were turned regretfully for a last look at fair Cocos.

TARPON.

AFTER DEER.

A Tramp in the New Brunswick Woods.

EARLY on the morning of Dec. 29 three sportsmen (would-be) and a driver started away from the market square of a New Brunswick town in a big two-horse sled. We sat on hay and were covered up to the chins with robes and blankets. Our names: Duncan, Jack and Allegor. The driver, a farmer in summer and a lumberman in winter, had been named by his parents and the parson Bob Black, and renamed by a colored cook from Washington, D. C., Bob White. So Bob White he was called.

After we had traveled through the hills for nearly an hour Allegor, the recorder of this trip, espied fox tracks through the woods at the roadside, and got out with his rifle to try to shoot something. Bob White smiled a thin smile under his iron-gray moustache, but said nothing. The other two laughed loudly and pulled the blankets closer to their chins. The horses continued their sedate trot, leaving Allegor alone, with the snow nearly reaching to his waist. As he was plunging forward two partridges puffed up suddenly from under the snow and perched on the branch of a birch tree a few rods in front of him. The hunter raised his gun and knocked the head off the nearest bird. Then he fired at the further bird, which flew away unharmed. Partridge in hand, he plowed his way back to the road and shouted after his companions.

That evening Bob White and his passengers arrived safely at Snodge's camp on the Dunbar, and were regaled with pork and beans, warm bread, and tea hot and strong enough to throw a Chinaman into nervous prostration. The cook served the grub; the "boss" was "mighty glad to see them," and the men grinned and spit, which attentions were due chiefly to Jack's checked knickerbockers. Then every man lighted his pipe, more wood was forced into the red-hot cooking stove and the boss told a story. More stories followed, stories of huge loads of logs hauled by small horses, of shipwreck, of big crops, of accidents on the steam drives, and of fights with bears and panthers. We did our best to help things along and all the boys tried our tobacco.

Our blankets, which had been warmed by the fire, were spread at one end of the camp, and after a fond good night we retired and dreamed awful dreams of Indian devils and bull moose. At about 4 in the morning Allegor awoke and saw the teamsters light their lanterns and go noiselessly out of the door to feed their horses. Then the cook got up and started his fire, and by the time his beans were hot and his tea steeped the whole camp was afoot.

After breakfast, with our snowshoes on our feet, our guns in our hands and everything else we owned on our backs, we struck off into the forest in search of the red deer. The sky was clear, the temperature several degrees out of sight below zero and our hearts light. The only points we exposed to the weather were our noses, and by keeping our pipes in a red-hot state all the time we saved those valuable smellers from freezing. Duncan led the way, I next, and Jack, with many attempts to walk out of his snowshoes, brought up the rear. Duncan, as seen by his loyal followers, was a sight never to be forgotten. The pack on his back was lumpy and bulky, and only allowed the top of his bearskin cap to show above it. Our frying-pan, which had been tied to one of the straps, kept count of his steps by whacking him in the small of the back. His legs were buried in three pairs of stockings, and the butt of his canvas-cased rifle frequently jerked back and each time struck Allegor below the belt.

After traveling thus for a great many miles and seeing nothing possessed of life except a red-headed woodpecker who seemed possessed of humor also, and laughed at us from the top of a dead tree, we decided that it was dinner time and that our watches were wrong (they made it 10 o'clock), and so stopped and unslung our packs. Duncan with a snowshoe cleared a space at the foot of a maple tree, and Allegor, axe on shoulder, went forth to chop some dry limbs off a huge beech which had been recently blown to the ground. Jack, with a look of grim determination on his brow and cartridges in both barrels of his shotgun, went back to slay the humorous woodpecker. It was not long before a brisk fire was throwing smoke and warmth into the air, and the frying-pan, filled with thin slices of fat bacon, was ready to place on top of the first bed of coals. While Duncan was melting snow and Allegor was trying to find the tea, two reports rang through the woods, followed by victorious cheers, rendered in Jack's barbaric voice.

"It must be a deer," said Duncan.

"Or a bear," said I.

In a few minutes Jack appeared, carrying one squirrel. The idiot held it aloft by the tail in his innocent glee, and Duncan said something which caused the complication of forked sticks we had reared above the fire to fall asunder. When the bacon was fried to a turn Jack in his modesty pocketed the deceased squirrel and condescended to eat and drink with his less fortunate companions. Toward the end of the meal I noticed that Duncan, who was sitting opposite to me, had stopped eating, and, doughnut in hand (half of it was in his open mouth), was gazing at something outside my line of vision. The expression on my friend's face was so wild that instead of turning my head to see what was behind me my eyes glued themselves to that unfortunate particle of doughnut, where it lay midway between his jaws and cavernous throat. Presently, however, he slid his hand to his rifle, raised it and fired within half a foot of my ear. Then the spell was broken, the doughnut swallowed with a gasp, and I turned my head. I saw the hindquarters of some sort of animal disappearing among the distant trees.

Duncan sprang up, yelling, "I hit him! I hit him!" but as he didn't find any blood on the snow he returned and glanced at the fire and made remarks not complimentary to the modern rifle. Jack, with a smile wherein modesty and pride were strongly mingled, drew the squirrel from his pocket.

After finishing dinner and repacking the grub, we tramped on through the woods, still heading north. Toward sundown we found a flock of partridges, and managed to bag five of them. We had now reached the primeval forest of spruce, and as the twilight was slowly stealing down we looked for a place to spend the night. A very suitable one was found on the lee side of a hedge of spruce bushes, and Jack and Allegor immediately set to work scooping out a trench in the snow. Duncan attacked a tree with his axe, and soon had the greater part of it split into firewood. A camp-fire in the winter woods requires a great deal of fuel.

By the time that the last streak of daylight had faded away from the wintery hill tops we three were comfortably seated in our trench, with fir boughs and blankets under us, the fire in front and high walls of snow protecting us from the night wind. Partridges hissed in the pan and slices of frozen bread were placed to thaw. After a most savory supper, pipes and pouches were drawn forth, more wood was turned on to the fire, and a few yarns were spun. The wind died out to an occasional sigh in the forest, and the big stars gazed down at us through the tree tops. Now and then the silence of the night was startled by the crying of a fox or the hooting of an owl.

Gradually our tired, outstretched legs became wonderfully comfortable and our snow-strained eyes began to close; so we tucked away our pipes, rolled ourselves up in our blankets and floated off into a land of rest and dream. At intervals throughout the night some one was awakened by the cold and sat up long enough to feed the fire.

Before 6 in the morning the delicate aroma of coffee rose to the brightening sky, and the remaining partridges sizzled in the frying-pan alongside of a few slices of fat pork. It was with some regret that we took up our packs after breakfast and left our snug retreat, making our trail still northward.

We wanted to strike MacNab's lumber camp before night, and from there take a team back to town. But this was not to be.

After tramping for a few hours we started three deer in a low piece of alder land, and started hotly after them. What wind there was blew off the deer. It was 8:25 when we sighted the game, and 3:30 when we stopped for lunch. We had been running pretty steadily all that time. After smoking our pipes and repacking our loads Duncan wanted to ascertain how far out of our course the chase had taken us, and began to look for his pocket compass. It was not in its usual place, on his watch guard; it was not in his pocket; then where in thunder was it? No one could tell him, so he began staring disconsolately at the grim tree trunks, to see which side the moss grew on. We found the moss after a while, but did not feel quite sure if it should cover the south side of a tree or the north side. Duncan said that it grew on the north to protect the bark from cold winds, and Jack swore that it grew on the south because it couldn't help it.

This dispute was not settled until we reached civilization. That night we camped in a snug little hollow, making a deep trench, as on the previous night, and eating some bacon and two small squirrels for tea. Before rolling in we sang songs to cheer our heavy hearts, and shivering hares came out onto the moonlit snow to hear our choice rendering of "The Younger Son was a Son-of-a-gun" and "Sweet Marie."

But why describe the events of the two following days? We tramped like heroes, and Duncan froze his nose. We finished the bacon and bread, and didn't see any deer, partridges or hares. Jack fell down a snowed-over gully and broke his pet pipe, and I burnt a hole through the sole of my shoe-pack. We shot and ate everything we saw, but we didn't see very much. On the evening of the third day after losing the compass we were rejoiced to hear the rattle of chains, the shouts of men and the jingle of sled-bells. We broke into a brisk run, and soon came out onto a well-beaten hauling road. Four teams, with their drivers, choppers, tenders and swampers, were returning from the landing, and onto the rear team we clung, and soon found ourselves in comfortable quarters in the lumbermen's shanty. We ate as we had not eaten for three days, and then we inquired our whereabouts. "This is MacNab's camp on the North Tay," said the boss. So we got there despite the moss on the trees.

THEODORE ROBERTS.

Game Laws in Brief.

THE *Game Laws in Brief*, current edition, sold everywhere, has new game and fish laws for more than thirty of the States. It covers the entire country, is carefully prepared, and gives all that shooters and anglers require. See advertisement.

HOLLAND.

(Continued from page 463.)

ALONG the old road until it turns sharp to the right a bird could occasionally be found, and from the turn in nearly a straight line to the old orchard, grown up to alders, there were nearly always several woodcock to be found. Beating out the alders, we generally found two or three grouse, and from there, turning short to the right along the fence, up to the corner, both grouse and woodcock made it their home.

Crossing the fence at the upper corner, we are in a nearly square patch of good-looking cover, and rarely were we disappointed in it. Many years ago the lower corner at the far side was the favorite place of a noble grouse that invariably flushed and went up the mountain before we had reached the middle of the cover. I saw him the first time that I was here, and for eight years I do not remember to have visited the spot without obtaining a fleeting view of him. Of course we hunted the ground in the orthodox manner each time, and the bird knew just when to flit. One day, however, in company with my friend Willliams, a badly wounded woodcock flew along the upper edge of the cover nearly to the far side, and we followed it. After securing the bird we turned into the cover and worked back along the lower edge, thus reversing our usual course. Our old friend, the grouse, was on the alert, and we heard him rise some distance ahead of us, and caught a glimpse of him as he swung into the upper corner where we had wounded the woodcock. Going straight for him, we of course cut off his retreat to the mountain, and, as we expected, he laid close and both dogs obtained a point at close quarters; and it was only after persistent kicking among the grass and bushes that we forced him to rise; finally he rose just behind us and started for his favorite haven, but his seconds were numbered, and we grassed him not 20yds. from where he started. On examination he proved to be a royal bird, in splendid plumage and condition, and one of the largest specimens we had ever seen.

Two years later the old settler told us the tale of Lou Jackson and the king partridge, and as the haunt of this bird was scarcely a stone's throw from the edge of the cover in question, we came to the conclusion that if this was the bird the spirit of old Lou could now rest in quiet, and that future generations of grouse and woodcock could roam through the long-deserted spot so well loved by their ancestors unmolested by uneasy spirit or frightened half to death by warnings of a vindictive bird.

Returning to the team through the lower edge of the birches, a bird or two would generally be found among the scattered clumps of birches, and, as I have before mentioned, we were pretty sure to find one or two under this oak tree. One of us would then drive the team about a quarter of a mile to a small brook that crosses the road, while the other would beat out the triangular patch between the road and the old road before mentioned, nearly always finding a bird or two.

One day my dog pointed just at the lower corner, where you see that tall clump of alders, and I went round the end and was just going into the brush when a grouse rose about 20yds. behind me and started for the woods, flying just this side of the house. I did not see the house until I heard the shot rattle against it as the bird dropped, and I at once started for the door to apologize, but was met halfway by a female, who began scolding before she left the house, and in spite of my humbly tendered apology, offered in my very best style, she never let up a particle, but heaped anathema and red-hot expletives upon my devoted head until I could stand it no longer, and left her still scolding; and it was not until I had passed beyond the sound of her voice that I remembered that I had left my bird where it fell, and so badly was I broken up that I dared not go back after it.

The cover each side of the little brook was a very likely looking place, and occasionally we would strike it very rich here, but often we would find it entirely bare, or perhaps a single bird would reward us.

One day, with my friends Patton and Sabin, in working up on the right hand side to the timber, we found fourteen woodcock and bagged every one, shooting in turn, without a miss. As we were crossing to work down the other side a bird flushed wild above and partly behind us and flew across into the timber. Although it was a very long shot I put well ahead and cut loose, but the bird kept on without making a sign. After Patton, in his inimitable manner, had soundly rated me for spoiling our record, we followed the bird about 200yds., when we found him dead as a stone upon a large flat rock lying exactly in the center of a patch of dark green maze just the size and shape of a dinner platter. This of course set matters straight again and we worked out the remainder of the cover, securing four more birds.

Again taking the team, we drive to the top of the hill, to where a long unused road turns to the left. Formerly we drove along this road, but it was discontinued and fenced up twenty years ago, and since then one takes the team around nearly a mile while the other walks down the old road to the little cover on the left known as the "chestnut tree," where we usually found two or three birds, and on the hillside beyond, and at times in the swamp below the road, grouse were frequently found in abundance.

When we arrive at the main road we find the team hitched to that scrubby apple tree and our companion ready to join us as we cross the road into the cover known as the "spoon woods." For a small cover this was one of the best for both grouse and woodcock, and I have frequently assisted in bagging from six to ten woodcock in this small patch of birches and alders in the lower corner, while the hillside to the right among the witch hazel was always a famous spot for them.

One day here, in company with my friend Fred Eaton, there was a wild grouse that led us a weary chase over the cover two or three times. Finally he flew to the upper corner to the right, and while Eaton went up the road I followed the bird with the dog and obtained a nice point about 50yds. from the corner. When I signaled Eaton he mounted the wall, and as he straightened up I walked in and flushed the bird, which flew past him out into the open. In turning around Eaton tumbled down, the wall of course falling with it, but before he struck the ground I heard the crack of his gun and could hardly believe my eyes as I saw the bird collapse and come down like a stone. This was one of the most remarkable shots that I ever saw.

Taking the team, we drive east to the main road, where we take the right and continue on until we come to a road that turns squarely to the left and skirts a grove of good-sized trees. But twenty-five years ago this grove was nearly all saplings and a famous place for woodcock.

A short distance further and we come to a barn, where we leave the team and walk down the lane, past the houses, crossing the track at the head of the sawmill pond, and here we are in the "sawmill cover"—the most extensive as well as the best grounds in this vicinity. When I first knew this spot that forest of alders and birches was scarcely as high as my head, while that grove of birches above to the right was a cornfield, and that group of stately pines still further to the right was part of a dense thicket where you would scarcely find a tree that was 6in. through. These scattered hickory trees, now almost smothered with tall birches, were then in open pasture, surrounded, as you can still see, with a fringe of alders and birches several rods in width, where you was sure to find birds if any were to be found in this vicinity. Many famous bags have been gathered in here, and it was not at all rare to find from twenty to forty woodcock in this one cover.

One afternoon Sabin and I found forty-three birds here, and succeeded in persuading all but one of them to accompany us home. Mr. Ashmun and Uncle Aaron Howe a few years previous made a bag of fifty-six in one day. Mr. B. F. Bowles and myself killed here one morning forty birds, and as he was very anxious to beat the record made with Sabin we worked out the ground thoroughly and beat up the thicket on the hill further than we were justified in doing, so far as woodcock were concerned, but not another long-bill did we find. We bagged five grouse, however, and Mr. Bowles was in great glee, but when we joined Sabin and Mr. Ashmun, who had driven on to the "south ground," they counted out the grouse and decided that the score was a very good second.

The "south ground" lies on top of quite a hill, some mile and a half south of the sawmill cover, and is reached from here by turning back past the grove and turning to the left and keeping the main road until nearly there, when we turn short to the right to the top of the hill, when the road bears to the left, and a few rods further we hitch our team at a large house on the right. We then follow the road to the next turn, where we get over the fence and go straight ahead some twenty rods, and we are in a mixed cover of alders, birches, weeds and swamp that in the good old days afforded us lots of sport. Grouse were always plentiful here, and often we found woodcock in abundance. Working along on the right hand side, just at the brow of the hill, which slopes steeply down quite a distance to a dense swamp, we generally found grouse that nearly always flew to a line of swamp to the left, which extends through the whole length of the cover, thus giving us on our return a second chance at those that escaped. When we arrive at a fence nearly at the lower end we turn squarely to the left and work toward that tall elm tree, some fifty rods away.

Twenty feet from this tree, on the right hand as we approach it, is a beautiful spring, where we often took lunch.

One day Sabin, Mr. Bowles and I were here; Sabin seated with his back against the tree, Mr. Bowles to the left, while I sat on this stone near the spring. We had spread out our lunch and were enjoying ourselves when my eye caught a glimpse of a bunch of fur in the crotch of the tree about 50ft. from the ground, and I caught up my gun and quietly slipping in a charge of No. 4 let drive at the bunch and down came a coon, striking the ground close to Sabin, and in the death struggle floundering into his lap. Sabin, always cool and self-possessed, claimed that he was not disturbed in the least, and it was not until I saw him several times bring up his gun and let the bird go without a shot that I came to the conclusion that he was most decidedly rattled.

I may as well finish the coon story right here. Well, through much tribulation, we alternately toted that coon the whole length of the cover, and with a sigh of relief deposited him in the wagon, but when we arrived at the hotel that coon had unaccountably disappeared. As we had stopped to hunt two or three times on our way Mr. Bowles and I concluded that some one in want of meat had, with malice aforethought, deprived us of our hard-earned prize, but Sabin coolly asserted that we had not even seen a coon. Upon my next visit to Holland I was told of a wonderful coon dog that had just been sold to a party from Worcester, who paid big money for him, as he could go out hunting alone and kill and bring home his coon.

I have on two occasions visited all the grounds described in one day, but usually this was impossible, as when birds were plentiful the covers were more thoroughly worked out than when they were scarce. Often, too, we would vary our route and take in other covers, and it would be two and frequently three days before we made the entire round.

One favorite cover we often paid a visit to, after finishing "the birches," lies on the road to Wales. Taking the first road to the right after leaving this cover, and driving nearly to the top of the hill, we hitch our team at this barway on the left under the wild cherry tree, and crossing the road we climb the fence just beyond the cross fence and find ourselves in what is known as the "walnut sprouts." This forest of hickory trees, when I first came here, was a sparse thicket of birches and alders, and these trees were saplings, or sprouts, as such growths were called, scarcely one of them 15ft. in height.

This was one of Mr. Ashmun's favorite covers, and he used to tell of many glorious days here; but I never happened to strike it very rich, although we generally found a fair amount of birds. One day I came here with Mr. Ashmun, and as we neared the top of the hill we heard two or three shots at the upper end and soon others followed, showing us that some one was ahead of us. Driving on, we found the team of Mr. D. B. Wesson, who with Messrs. Bowles, Storrs and Sabin were in the cover. Judging by the shooting, they must have found hundreds of birds, for I never heard such a cannonading as they kept up all through the cover. The result, however, did not pan out so well as we anticipated, owing to the fact, as each one privately informed me when we met at the hotel in the evening, that the other three got rattled by the frequent rises, and, like the Irishman, they shot too promiscuously. They had a good showing of birds, however; but all agreed that they had not bagged more than one-half that were in there.

Across the road from this cover was a straggling growth of alders that ended just below the house by the spring, where the little brook begins, that frequently held two or three and often half a dozen birds.

One day Mr. Ashmun and I, after finishing the sprouts, beat out this cover, and sat down by the spring for a short rest. After a few minutes we saw the lady that lived in the house coming down the path for a pail of water, and in response to a hint from Mr. Ashmun I asked her why the spring was called the bogy spring.

With a merry laugh she bade us resume our seats, and turning the pail bottom up she sat down on it and told us a tale that without doubt would have taken high rank among the wild legends of the Ever-green Isle, had the principal actor been on his native heath.

"When I was a little girl," she began, "father brought home from Stafford an Irishman to help on the farm. Part of his chores was to fetch a pail or two of water from this spring night and morning, and I frequently accompanied him, as I was greatly amused with his queer brogue and curious ways. He had been here about two weeks when one night about sunset, as I was coming to the spring with him, we stopped by that rock a few rods above, while Mike sang to me a wild Irish song about a bogy that would walk, and a banshee that would screech and moan, causing a lady fair and her lover bold no end of trouble, ochone! I was sitting on the rock facing this way, and just as Mike was beginning the last line I saw Mr. Thompson, as he was coming from his wood lot, stop and kneel down at the spring to get a drink. Mike finished his song, and turned around just in time to see him rise out of the ground. 'The bogy! the bogy!' whispered Mike, with eyes starting from his head.

"Mr. Thompson lives half a mile east of here, and he turned to go home, disappearing behind the clump of alders, and at the same time frightening from the bushes a mink that ran directly toward us. This put the finishing touch to Mike's terror, and ejaculating, 'Holy mother! he's turned to a cat!' with a wild howl he broke for the house at the top of his speed, and taking the road back to Stafford, he was soon out of sight, and we never saw nor heard of him afterward, and ever since we have called it the bogy spring."

The Mr. Thompson mentioned above lived on a cross-road that joined the main road where we hitched our team at "the birches." Sometimes we drove down this road, but generally we drove from the hotel on the Brimfield road to the first turn to the left, and after driving a short distance one of us would get out and work the cover to the right while the other would take the team on to the end of this cover, and after working this out, finding generally several birds, we would drive to the top of the hill, where we take the left hand, and are soon at Mr. Thompson's house, where we hitched our team under the shed, and going to the house would spend a few minutes with the worthy couple talking over the prospect for game and invariably joining our friend in a glass of cider. Crossing the road to the alder run that ends just opposite the house, we worked it out to the upper end, generally finding several woodcock and often a grouse or two.

Late one afternoon Sabin and I drove here from "the birches" and entered the cover after sunset, bringing to bag seven birds, bringing down two of them after it was too dark to see unless the birds were well in the air. While returning to the team we heard the whistle of the wings of a bird coming into the cover, and stopping awhile we heard several others, one of which Sabin brought down, although I failed to get a glimpse of it. The next morning Sabin, although deaf as a post, claimed that the whistle of those wings had been in his ears all night, and as I had had considerable of the same experience we decided to drive straight to the place and put to the test the truth or falsity of the whisperings of *somnus*.

For once our dream came true, and I do not remember a more enjoyable hour among the woodcock than fell to our lot that beautiful October morning. In this small patch of alders we flushed nineteen birds, and every one was handsomely grassed at the first rise. Returning to the house, we laid our birds on the grass and Mrs. Thompson assisted us in smoothing out their plumage. After counting them she exclaimed, "A remarkable find and a wonderful score. Why! you have beaten Mr. Ashmun and Uncle Aaron Howe, who came here a few years ago and prided themselves no little upon killing eighteen, with only two misses."

SHADOW.

[TO BE CONCLUDED.]

A RAMBLE IN THE BIG HORN MOUNTAINS.

WE had crossed the summit of the Big Horn Mountains and were fast leaving behind the luxuriant vegetation of the eastern slope for the pale green of the sagebrush desert.

From a land of rich grasses and beautiful flowers and noble pine forests and numberless cold, fresh-water springs and streams we had passed, in the brief space of an hour, to a desolate waste of sagebrush and sand without water, except for a few widely separated and poisonous springs of alkali water.

On the eastern slope showers had been of almost daily occurrence; halfway down the western slope a cowboy told us it had not rained there in eight months.

But in exchange for the beauty and freshness of the eastern slope we had the weird grandeur of the Big Horn Basin. Nothing that I had ever seen in the mechanism of nature bore very much resemblance to this great basin. Here, at the southern boundary of the basin, the waters of the Wind River, meeting the opposition of the Owl Creek Mountains, have chiseled their way through—not gone round, as is usually the case. Again the same waters transferred to the Big Horn rivers and recruited by the melting snows from all the mountains slanting into the basin meet the opposition of the Big Horn Mountains, and what do they do? Go round? No! with the insistence which I have never before witnessed in anything except man, they have chiseled their way through, eating away the rock and soil to a depth of 5,000ft.

In just such contrast to the usual rules laid down by the Great Master Mechanic are all the decorations of the basin constructed. The hills are odd, too odd to describe. They bear about the same resemblance to the ordinary hills and mountains as the debris of a house wrecked by a cyclone bears to the house before the storm struck. A strange land indeed is the Big Horn Basin when viewed from the western slope of the mountains through the haze of a smoky September morning.

All forenoon we plowed our way downward through the desert sand. All forenoon we viewed the strange shapes of the corrugated and variegated hills; all forenoon yellow clouds of sand and white clouds of powdered gypsum and red clouds of powdered paint rock rose from beneath our wheels and drifted away on the slumbrous air. We had noisily admired the flowery parks and somber pines, and had laughed with the turbulent streams of the other side; here we silently wondered.

By noon the scorching heat of the sun and the irritation caused by alkali dust settling on our skin had begun to draw our attention from the wonders about us when we turned down into Medicine Lodge Cañon, with its rock-fretted stream and fresh, green foliage and clustered fruits and red banks of rosebuds—an oasis in the desert indeed. Here in the rock-bound avenue of loneliness we pitched our tents and prepared to enjoy a few days' surcease from toil of travel.

On Tongue River, near the summit, we had feasted on mountain grouse, the most delightful of all the grouse family. Here we feasted on mountain trout, the most delicious of the finny tribe.

After one day of trout fishing—which is an excellent pastime for women and children, but has not the attractions to hold a strong man in subjection—I shouldered a gun early in the morning for a day's ramble on the mountain side. Climbing out of the cañon on the right, I followed up the divide between Medicine Lodge Creek and the next gully on the right; though somewhat steep, the ascent was regular and the trail smooth, while the morning air was cool and bracing and stimulated to continued exertion, and I climbed steadily on till near noon, when I met a rancher on his rounds, who informed me I was eight miles from camp. I could see the tops of the pines that grew along the sides and in the bottom of Medicine Lodge Cañon near the upper end, and I walked down and seated myself on the verge of the wall to rest. The cañon was not deep here, and half a mile further up I could see its abrupt ending.

Ever since crossing the summit the atmosphere had been unduly cloudy, preventing anything like a satisfactory view of objects at a distance; but to-day the haze had dispersed, and the Big Horn Basin lay mapped out before me with surprising distinctness. I could trace the Big Horn River by its silver thread from where it laved the feet of the Owl Creek Mountains, sixty miles to the southwest of me, to where it was lost in the gloom of the Big Horn Cañon, a like distance to the northwest.

But what caught and held my wandering gaze was the snow-capped peaks and frowning gorges of the Continental divide far across to the west of me? What a magnificent distance it was away! How its thousand of snowy peaks glistened in the sun! How its northernmost, shadowed wall frowned, and how threatening were its jagged precipices and frowning cañons and gorges; and all of it so grandly far away. My eyes, after wandering over the queer shaped and colored hills and fragments of mountains and the silver-threaded network of streams in the basin, would return again and again to this great masterpiece. But they returned once too often, for at last I discovered that the Continental divide was moving to the north and also rising to higher altitudes, and then a gleam of blue sky beneath it revealed to me that I had been having "duck fit" after "duck fit" over a very ordinary summer cloud. As before stated, water is very scarce on that side of the range, and what with climbing and the heat of the noonday sun I began to feel the need of some and decided to climb down into the cañon and look for it.

I had discovered before leaving camp that the creek came out of the mountain only two miles above camp, but I hoped to find some spring where I could slake my thirst. Down under the pines, where the sun never penetrates, it was cool and the way was smooth; but the cañon was dry. Keeping on down its bottom, I continued my search. The scenery was grand and the walking good, and I soon began to leave the pines behind, while the side of the cañon assumed more of the perpendicular and towered higher and higher above me. At last a crackling sound drew my attention, and turning up a side draw I saw the coveted water dropping from an overhanging rock like rain falling from the eaves of a house. The crackling was caused by the drops falling on a large flat rock below; from there it ran in tiny streams to a depression in the rock, and formed a splendid basin of sparkling water. Satisfying the demands of nature from the pool, I cast about for a convenient place to scale the wall, but I soon discovered that if I scaled it at all it would be a desperate climb. But why scale the wall at all? The camp was in the cañon below, I could follow on down to it. This I decided to do.

For half a mile or so I got on very well, and then the way began to narrow and become more obstructed, while the walls towered ever higher and more insurmountable. From the top down was a thousand feet of perpendicular rock wall, and then the base sloped in to the center of the cañon, forming a letter V at the bottom. The point of the V was a dense tangle of trees, shrubs and vines, compelling me to climb along the steep sides. The cañon was narrow, and I calculated that should both walls fall inward at once their tops would meet at least 500ft. above me.

The tops of the walls were surmounted by all manner of fantastic shapes carved in sandstone by wind, water and the passing ages with their respective little hatchets. As the sun sank lower and lower and the shadows in the cañon became denser and denser, I became mindful of the fact that I was likely to spend the night down there. Yet I did not regret coming, for the grandeur of the place was a satisfactory tender for a night by a camp-fire with nothing to eat. At the thought of camping out I felt for my match safe only to find I had left it in camp. Anticipating a hard climb, I had left my vest in camp with the match safe in the pocket.

I must either reach camp or spend the night in scrambling over the rocks, for my underclothing was damp with perspiration and it would not do to lie down in the cold night air. The sun was not down yet, however, and I could not be more than four miles from camp, but the climbing was a slow process, and I might not reach it before darkness made it dangerous to proceed. About this time I was encouraged though by the roar of water below. I had been informed that it was only two miles above camp to where the water made its first appearance in the stream. I was then only a little over two miles from luxurious repose, with a good trail covering a mile and a half of that distance.

I noted a great many places as I passed where huge slabs of stones had broken from the face of the cliff and fallen hundreds of feet to the sloping base below, where it was ground to fragments and scattered down the slope. As I was clambering over one of these piles of crushed rock, steadying myself by placing my hand on the rocks on the upper side, I was brought up standing by the warning hiss of a rattlesnake. Looking sharply about, I soon located the old fellow, whose domain I had intruded upon, lying half coiled among the rocks somewhat above me and at a safe distance.

I had evidently disturbed him at his evening meal, for his jaws half inclosed a small animal, of which I saw numerous specimens in the mountains, which resembled a young rabbit and also had some resemblance to a rat.

I have since wondered if this animal was not the lagomys of Webster's Unabridged, though that is said to be a native of Siberia and upper India. Picking up a stone, I hurled it at my challenger, missing him of course, and as the stone came rattling back no less than three other notes of warning issued from the rocks about me. Reflecting that these fellows would have little chance to injure me or my kind in the future, I concluded not to kill them, but to go away from there, which I did as rapidly as the ground would permit.

I had scarcely got a safe distance from the temptation to kill those snakes when two mountain grouse fluttered from the rocks in front of me and went sailing down the cañon. Here at least was game that had some respect for me, and I sent a couple of loads of No. 7 shot after them. The birds had hardly collapsed in mid-air when the tremendous roar of the two shots rebounding from the precipice near which I was standing went crashing against the opposing wall, only to be hurled back with redoubled fury; like some fabled foe of Hercules, it seemed to gain strength at every contact with the rocks until the roar was appalling. In spite of my philosophy I winced at every recoil lest the walls give way and come tumbling about me. Standing still, I waited for the echo to spend its force, which it finally did by straying away down the cañon and losing itself in the distance.

Scarcely had the sound died ere another grouse rose from the same spot and skurried away, but he was safe, for, though I was not afraid of the grouse, I did not want to risk knocking down the mountains and spoiling the scenery again. Yet the agitation had not been great, for the clumps of feathers that marked the spot where each grouse had met his fate were still drifting near.

Soon after this I missed the roar of the water, and climbing down to the stream found that "the faithless thing was dry." This left me in doubt as to the distance yet to be traversed before reaching camp.

Following on down the dry bed of the stream, and clambering over boulders weighing all the way from 1lb. to many tons, I soon heard the roar of water again. Boiling up through the boulders, it rushed along for 100yds. or so and again disappeared. Stooping to get a drink from this short reach, I noted several trout from 10 to 12in. long dart away and hide among the stones. Some day in the future some adventurous trout fisher will explore this cañon with rod and fly and great will be his reward. Another thing I noticed, in a narrow spit of sand, was the huge cat-like tracks of a mountain lion. I began to think there were whole lots of things in this cañon I could get along without and hurried on.

Though it was deep twilight below, looking far aloft I could still see the line of light creeping higher and higher up the face of the cliff, which marked the descent of the evening sun. Fainter and fainter grew the light, until it rested only on a dome of rock which towered high above the rest, where it dallied for a minute with a strange red glow, twinkled and was gone. Then a few scattered stars flashed out in the narrow strip of sky above and night was over the land.

As I crept along through the darkness, stumbling over rocks and stones, and tearing through bramble bushes, I was again startled by a challenge. "Who! who! who!" Demanded a voice from the cliff above me. At first I was minded to answer "None of your business," but, as the challenge was taken up by the rocks and echoed and re-echoed with such earnest persistence, I became penitent and answered "It is only me."

From that time on the challenge was incessant, it came from above and from below, from before and behind, in tones of entreaty and of stern demand, in whispers and in roars, a never ceasing babble of who, who, who. I was evidently a stranger in that locality.

Just how the rest of the journey to camp was accomplished I cannot tell, as it was too dark for me to see. At one place, where I was pushing my way through a thick tangle of bushes, I stepped off a ledge of rock and landed in a net of grapevines a couple of feet below. Working a hole through the vines, I let myself down to another ledge. Another place I walked out on a ledge of rock, supposing I was going round the base of the cliff as usual, when I suddenly caught the gleam of water beneath; one more step and I had taken a plunge into the creek from a 20ft. elevation, but it seemed a foolish thing to do, and I called a halt.

I remember standing there and winding my watch. The lowering of the walls was the first sign of approaching camp, and then I came to the horses grazing on a little flat, and next came the white-walled village only a few rods away.

I had expected to find the camp in tears over my prolonged absence, but it was only snores—muffled, yet audible. I slipped into my tent and striking a match looked at my watch. It was ten minutes after 12.

After retiring I heard a faint who, who, who, from the outer air and I drowsily answered: "It is only me," and slept, and a red-letter day was done. E. P. Jaques.

Geneseo, Ill.

Pennsylvania's Game Commission.

Harrisburg, Pa., Dec. 7.—Commissions have been issued to the following gentlemen as Game Commissioners: William M. Kennedy, Allegheny; E. B. Westfall, Williamsport; James H. Worden, Harrisburg; C. K. Sober, Lewisburg; Charles H. Heebner, Philadelphia, and Major I. B. Stearns, Wilkes-Barre. They will no doubt take up the work at once and try and make some report on the condition of affairs in the State, as well as make some suggestions as to legislation, as the act requires, although they have but a short time in which to do it. There is, however, a good amount of data which they can make use of. F.

A THUNDERSTORM ON THE MUSKOKA LAKES.

Sept. 28, 18—.—The sun had sunk behind the western hills, bathing a tiny cloud that hung just over the horizon with a rich, ruddy hue. The soft evening light fell across the autumn-tinted woods, blending and giving added richness to their already indescribable beauty of varied color—color peculiar to Muskoka foliage in its lovely autumn garb. The roar of Bala Falls, with its ceaseless monotone, knowing neither day nor night, sleeping nor waking, alone seemed not to feel the touch of Mother Nature, as in the quiet of that evening hour she "touched each nodding bough to rest, and calmed each brood in their toubled nest." But like time, ever forward, ever onward, heeding neither that men may weep along its brink nor the silent stars that gaze serenely into its troubled, tossing waters, on it rolled tumultuous through the slumbering wood.

And just above its roar at this same hour the little Typsy stood proudly upon her keel once more, looking not a whit worse for her recent immersion, while the little group of toilers on the shore stood over her with no less pride and satisfaction in the result of their arduous labors in raising her from the gloomy depths into which she had been plunged so ingloriously a few hours before. A fire had been kindled under the boiler, and while it was fulfilling the twofold mission of drying the engine and making steam for the home trip, our party repaired to the hotel near by to enjoy a well-earned meal and recount the strange vicissitudes of that already eventful day. For since the early morning when we left home to bring back our little craft, rowing several miles and covering several more in that still more ordinary method of walking, common to rich as well as poor in that scarce broken country; then footsore and weary, obliged to call a farmer from his field to drive us at a quarter a head the remainder of the journey behind two jaded oxen, in the bottom of a springless wagon, jolting and jarring over the rocky, untraveled road—the philosophy of which progress is best described by an experience of Thoreau on a similar, only more so, excursion, where he says, "When the runners struck a rock 3 or 4ft. high the sled bounced back and upward at the same time; and as the horses never ceased pulling it came down on top of the rock, and so we got over." But the concussion we sustained made that drive linger long in our memories, and altogether our day had been a succession of events too numerous and trifling to detail, from the bagging of a few ducks, for which, lacking a dog, we were obliged to swim, to Squirt's successful beheading of a beer bottle with a revolver shot, in the absence of a corkscrew—but all of which added variety and interest, and even a shade of adventure, to the day's journey. But suffice it to say that when we reached our destination to our great delight our craft had been brought up safely from below the falls, where it had done service on that most picturesque Moon River, and now lay on its ways within a few feet of the water, in readiness to be borne out upon the bosom of that broader expanse on which it should henceforth sail.

But every pride has its fall, and so our little Typsy, exulting in an opening of wider usefulness as it looked out across the deep blue waters through which it soon should gayly plow its way, was doomed to like disaster. The order had been given, the blocks struck out from under the rollers, a flag floated lightly from the bow, the expectant crowd stood in readiness to cheer its departure; and amid it all she moved slowly, gracefully down the inclined plane till, just as she reached the water's edge, the unsecured ways tilted to a perpendicular, precipitating our boat until it stood at right angles to the surface below. Not for long, however, for her nose had already buried itself, and in less time than it takes to write it she had listed to port, filled and gone down into seventeen feet of water, which in another moment had closed over her, leaving not even the smokestack visible to mark her resting place. The waiting cheer of the spectators stifled itself into a dismal moan, and the laborers who had toiled all night in anxious hope now looked at each other in dull silence, except where one had found an outlet for his pent-up feelings in a string of oaths as long as our whole day's journey, to whom our "cook," with a gravity that became his humor, handed a lever with a laconic suggestion as to its greater utility in such an emergency—a suggestion ultimately acted upon and attended with such success that, after four hours of patient, steady application to such rude rude appliances as were at hand, the craft had regained the surface and its equilibrium, and was now standing there as gayly as before, its vanity but slightly modified.

The small, white clouds of steam that circled about her seemed to fill her with impatience to quit the scenes of her misfortune, and while we were still engaged with our evening meal her fast generating power had several times been forced to expend itself through the safety valve—"a very necessary attachment to boilers and men," as our philosophic cook pointed out, "but frequently omitted by nature in putting together the latter, hence the oft recurring explosions among them."

But our boat was not more impatient than we to start on our homeward journey, and detailing a couple of the crew to forage for firewood, which fortunately lay near to hand at the schoolhouse hard by, and for which I now take this first opportunity, on behalf of the party, publicly to thank the corporation—a little courtesy omitted at the time, chiefly owing to the absence of any representative of their interests—we stepped aboard, amid many good-byes, and quietly steamed away.

Twilight was deepening to night as we rode out through Bala Bay, and already the brighter stars were peeping through the coming darkness. Overhead Altair and Vega were shining with growing luster, and well up in the eastern sky the bigger stars in the constellations, Pegasus, Andromeda, and following the line northerly, Algol and Capello just above the northeastern hill, had already silently taken their places as vigils over the sleeping earth. Away in the western sky, behind the tiny cloud that a little while ago was bathed in sunset hues, a light flickered intermittently, as if from the dying embers of the sun; and except this glimmering light, nothing in that silent and serene sky suggested or portended the storm that was to follow while we sailed across that peaceful bay, where, bounding it on every side, the forest stood against the horizon grim and silent too, save a chirp here and there of some belated bird. Bala Park was passed, and Sandy Point, and still the darkness of the growing night alone marked the passing moments. Bu

now the little cloud in the west, emitting its phosphorescent light, began to extend along the horizon toward the northern sky. The lightning flashes, now more vivid, mingling with the darkness and making it more deep, added some to the difficulty of navigating, and the Kettles were still before us. But on we pressed, enjoying the ever changing scene around us and above us. For now the sky about the horizon seemed fringed from east to west, and north to south, with this surcharged cloud; now flashing in the east, now in the west, alternately—beacon lights along the far-off hills, signaling across the valley of night, they seemed.

And then, with a sigh of relief that even the weird beauty of the scene could not make one insensible to the danger of navigating on such a night, the Kettles were passed, and its great rock shoal lay behind us.

Mortimer's Point was reached, and still deeper grew the night. The lightning now flashed incessantly around the horizon, lighting up the shore where the tall pines stood out solemn and grim, or revealing the lonely islands that dotted the lake before us, giving to the scene a strange, weird and wild beauty.

Cooper's Point passed, and before us stretched the open lake, in which we must meet and battle with the furious storm which we saw to be imminent.

The quickly gathering clouds now filled the northern sky with a lowering, rolling, heavy mass of inky blackness, out of whose dark depths the fierce lightning flashed in ragged, irregular tongues of lurid flame; so bright were they that the shore for miles was illumined till every tree stood out as at noonday, while the darkness that followed was so deep in contrast that the ship's bow could not be discerned from the pilot window. A peal of distant approaching thunder once or twice followed these flaming forks; a sudden puff of wind and all was still again, in one of these momentary calms that always precede the worst storms, when the skirmishing lines have withdrawn or fallen back to reunite with the advancing army for the grand charge. It was not long coming—a flash of lightning, a crash of thunder, a raindrop or two, a gust of wind, and before the windows were fairly closed and our craft made tight the storm had burst.

And what a storm! One of nature's field nights. Fiery tongues leaped across the heavy sky; the thunder roared and crashed in its awful sublimity—these, the grand artillery forces, pouring forth their deadly volleys, until the very planet itself seemed ready to stagger before the terrible onslaughts, and with their tumult mingled the beating rain and the angry wind that in its fury now lashed the cruel waters into foam, tossing the crested waves high over our little craft, but through it all she plowed steadily on against the terrific odds. The lifeboat we had in tow had quickly swamped and was dragging through and under the water, retarding our already strained ship. But nothing daunted, our gallant Typsy pressed on, as if endeavoring to regain her lost prestige, and her saucy little puff! puff! through the exhaust contrasted strangely with the roar of the tempest without, an incongruity that did not escape the notice of our philosopher, who observed that it was "not unlike the walk of puny man through the great universe, with its unsolved problem of life and death and immortality; as unconscious of his proper relations to infinity, and with as little reverence for the truly great as this vain craft that cannot stop its noise, even amid the sublimity of a storm. Lord, teach man humility!" he added. We thought he had forgotten his words when a little later he broke into song, his deep, sonorous bass mingling with the thunder's deeper tone. But he assured us that the song was but the channel through which the emotions welling within him could find an outlet, and give relief to his bursting soul. Truly, our cook was no mean philosopher, for what other song is there, what other art worthy the name? And in song we passed the hour in that open lake before Horseshoe Island and the Indian River were reached, an hour of thrilling experience, in which I for one suffered an intensity of feeling such as is seldom one's good fortune or pleasure to enjoy. For who so dull as could fail to respond to the inspiration of so sublime a spectacle or to the strange witchery of such weird grandeur. No longer a battle, now that the first fears of uncertainty were over, but one of nature's grand pyrotechnic displays, illumining alike the mountain clouds that rolled majestically across the sky, the lonely far-off hilltops and the deep valleys that slumbered beneath, while the heaving waters around us were dotted here and there with a lonely wooded island that at the bidding of the lightning flash rose out of the impenetrable darkness and the darker depths, as if called forth by the magician's wand.

The storm had not moderated when we reached the river, and the darkness was still so great that we were altogether dependent on the lightning's gleam to discover to us the narrow channel, marked on either side by buoys, a difficult task enough in daylight on that tortuous, shallow river. Now a vivid flash, and a line of these white buoys stretched along the river like ghostly sentinels guarding the shore on each side; the next flash and the first of the line had shot past a window within a foot or two of the boat, its specter-like form aglow with the light of its own world. But never slackening for a moment, on we sped, and as much by luck as good generalship reached Port Carling in safety at midnight. The rain was still falling heavily as we pulled through those gloomy locks, and the wind and tempest had long since snuffed out the dim lamps that nightly hang there to guide the late mariner while the village sleeps on undisturbed. And so dark was it at this time that we were obliged to creep cautiously along the canal banks on our hands and knees to reach the gates.

This point passed, and the storm began to abate, the rain had ceased, and by the time we had entered Lake Rosseau for the homeward stretch we had left it fairly behind us and heard its indistinct rumbling far to the south.

The remaining five miles proved as peaceful as the other had been boisterous. The sky had broken in the north, and through the rifts the northern constellations were appearing and disappearing again, as the scattering clouds hurried along to overtake the storm and continue their night's frolic in some other part. And before we reached our harbor the stars shone out clearly in the morning sky. The slender crescent of the waning moon too rose peacefully in the east,

"And over the waters in silvery white
Pale moonbeams tread in a path of light."

And amid a quiet, even more profound than that in which we left Bala Bay a few hours before, we entered port, and were soon gladly sharing the warmth of a good log fire that awaited us. ISAIAH SCOTT.

Natural History.

THE WILLOW GROUSE.*

(*Tetrao saliceti*, TEMM.)

MALE, FEMALE AND YOUNG.

ALTHOUGH I have not seen this beautiful bird within the limits of the United States, I feel assured that it exists in the State of Maine as well as in the northern districts bordering on the great lakes. Theodore Lincoln, Esq., of Dennisville, in Maine, shot seven one day not many miles from that village; and the hunter who guided me to the breeding grounds of the Canada grouse assured me that he also knew where the "red-necked partridge" was to be found. The places which he described as frequented by them seemed to bear as near a resemblance to those in which I found the species in Labrador and Newfoundland as the difference of latitude and vegetation could admit. I have also seen several skins of individuals that were killed near Lake Michigan.

The willow grouse differs in its habits from the Canada grouse in several remarkable circumstances. In the first place neither myself nor any of my party ever found the former solitary or single. The males were always in the immediate vicinity of the nest while the females were sitting, and accompanied them and the young from the time the latter were hatched until they were full grown; and whenever we met them we observed that the males and the females manifested the strongest attachment toward each other as well as toward their young. In fact, so much was this the case that when a covey happened to come in our way the parents would fly directly toward us with so much boldness that some were actually killed on the wing with the rods of our guns as they flew about in the agonies of rage and despair, with all their feathers raised and ruffled. In the meantime the little ones dispersed and made off through the deep moss and tangled creeping plants with great rapidity, squatting and keeping close to the ground, when it became extremely difficult to find them. This is the only American species of grouse I am acquainted with that possesses these habits; in all others found in the United States the male not only leaves the female as soon as incubation has commenced, but both fly from man and urge their young to do the same from their earliest age.

The willow grouse, moreover, join their broods whenever an opportunity offers, and we found flocks of old and young in which the latter were of very different sizes. This species rarely if ever alights on bushes or trees after being fully grown, and appears to resort at all times by preference to the ground, living among the naked rocks of the open morasses.

The young birds do not acquire their full summer plumage before they are two years old. Many of these middle-aged birds, as I would call them, which our party procured early in the month of July, differed greatly from the older birds, which had their broods then quite small. They were much lighter in color, their tails were shorter, and they weighed less, but afforded much better eating. Some of them had young, but their broods were much smaller in point of number, seldom exceeding four or five, while the old birds frequently had a dozen or more.

The flight of the willow grouse resembles that of the red grouse of Scotland, being regular, swift and on occasion protracted to a very great distance. They have no whirring sound of their wings, even when put up by sudden surprise. Whenever we found a pair without young they were extremely shy and would fly from one hill to another often at a great distance. If pursued they would be seen standing erect and boldly watching our approach until we got to the distance of a few hundred yards from them, when they would run from the naked rocks into the moss, and there squat so close that unless one of the party happened to walk almost over them they remained unseen and could not be raised. When discovered and put up they were easily shot on account of the beautiful regularity of their flight. In rising from the ground they utter a loud and quickly repeated chuck, which is continued for 8 or 10yds.

Young birds shot in Newfoundland on Aug. 11 weighed 6¼oz. and were fully fledged. Their primaries were of a sullied white, but their legs were not closely covered with hair-like feathers, as in the old birds. Although this species breeds in the districts inhabited by the Canada grouse, it never enters the thickets to which the latter resorts, but always remains in the open grounds.

One day while in search of young wild geese in a large oozy and miry flat, covered with a floating bed of tangled herbage, we were much surprised at finding there several willow grouse. They were extremely shy and flew from one part of the marsh to another. We procured with great difficulty two, which proved to be barren females.

To give you an idea of the difficulties we had occasionally to encounter in our endeavors to procure birds in that country, it will suffice to say that one of us was so mired in the flat just mentioned that it was with extreme difficulty another of us succeeded in extricating him, to the great danger of being himself swamped, in which case we must all have perished had no aid arrived. We were completely smeared with black mud, and so fatigued that when we returned we found it impossible to proceed more than a few yards before we were forced to sit down on the dangerous sward, which at every step shook for a considerable space around, so that we were obliged to keep at a distance from each other and move many yards apart, constantly fearing that the least increase of weight would have burst the thin layer that supported us and sent us into a depth from which we could not have been extricated. But once out of the bog, we were delighted with the success of our enterprise, and as we refreshed ourselves from our scanty stores, when we had reached the rocky shores of the sea, we laughed heartily at what had happened, although only a few hours before it was considered a most serious accident.

As I am speaking of fowling in Labrador, allow me to relate an incident connected with the willow grouse. Among our crew was a sailor who was somewhat of a wag. He was a "man-of-war's-man," and had seen a good deal of service in our navy, an expert sailor, perhaps the best diver I have seen, always willing to work hard and always full of fun. This sailor and another had the rowing of our gig on an excursion after grouse and other wild birds. Thomas Lincoln and my son John Woodhouse managed the boat. The gig having landed on the main, the sailors, who had guns, went one way and the young travelers another. They all returned, as was previously agreed upon, at the same hour and produced the birds which they had procured. The sailor had none and was laughed at. While rowing toward the Ripley we heard the cries of birds as if in the air; the rowing ceased, but nothing could be seen, and we proceeded. Again the sounds of birds were distinctly heard, but again none could be seen, and what seemed strange was that they were heard only at each pull of the oars. The young men taxed the tar with producing the noises, as they saw him as if employed in doing so with his mouth; however, the thing still remained a mystery. Some time after we had got on board the provision basket was called for and was produced by Master Bill, who, grinning from ear to ear, drew out of it two fine old grouse and a whole covey of young ones, in all the exultation of one who had outwitted what he called his betters.

While at the harbor of Bras d'Or I was told by persons who had resided in the country for many years that during the winter when the snow covers the ground, and the grouse are obliged to scratch through it in order to get at the mosses and lichens, they are so abundant that a hundred or more can be shot in a day, and congregate in flocks of immense numbers, now and then mixed with the smaller species, called there the rock grouse, and which is the *Tetrao rupestris*. Their flesh is then salted for summer use. At that season they are of a pure white, except the tail, which retains its jetty blackness. I was further informed that their flesh is then dry and not to be compared with what it is in summer, when I found it tender and having an agreeable aromatic flavor.

The willow grouse breeds in Labrador about the beginning of June. The female conceals her nest under the creeping branches of the low firs. It consists of bits of dry twigs and mosses drawn into a form. The eggs are from five to fourteen, according to the age of the bird, and are marbled with irregular spots of reddish brown on a dull fawn color or rufous ground. They raise only one brood in the season.

The pair represented in the plate, with their young, were procured by my friend George Shattuck, Esq., of Boston, one of my party, who shot the first pair found by us in Labrador. They were in their full summer plumage. I think these birds, as well as the Canada grouse, have what I call a continued moult, young feathers being found upon them at all seasons.

* From Audubon's Ornithological Biography, to accompany the plate on page 483.

THE ERMINE.

ST. PAUL, Minn.—The conversation turned to ermine the other day and a well-posted fur man stated that they came only from Siberia and Russia, and also informed us they were pretty little white creatures, with many little black tails all over them. (He did not say whether they had nine tails or not, like some cats.) What I desire to know is in what way they differ from the ordinary weasel, which I suppose to be white in winter months.

GAH-GA-GA.

The ermine is common to Europe, Asia and America, and although it has been separated into many species, Dr. Coues sayes in his "Fur-Bearing Animals," page 111:

(1) The ermines of Europe, Asia and America are specifically identical.

(2) None of the supposed characters which have been relied upon to separate them have any existence in nature, except as peculiarities of individual specimens examined.

(3) The American ermines are of two forms according to size alone, which in the extremes stand widely apart, but which grade insensibly into each other.

These are the conclusions reached after examining a large number of specimens of ermine taken at various seasons in Great Britain, France, Germany, Sweden, Siberia and Kamchatka, together with an immense collection from all portions of North America inhabited by the animal. The fur commonly called ermine is the winter pelage of what we know as weasel, and what is known in England as the stoat (*Putorius erminea*). The animal is brown in summer and white in winter, the tip of the tail being always black. A vast deal has been written about the species, and we quote from Audubon and Bachman a few paragraphs which give some notion of its habits:

"Graceful in form, rapid in his movements, and of untiring industry, he is withal a brave and fearless little fellow; conscious of security within the windings of his retreat among the logs, or heap of stones, he permits us to approach him within a few feet, then suddenly withdraws his head; we remain still for a moment, and he once more returns to his post of observation, watching curiously our every motion, seeming willing to claim association so long as we abstain from becoming his persecutor.

"Yet with all these external attractions, this little weasel is fierce and bloodthirsty, possessing an intuitive propensity to destroy every animal and bird within its reach, some of which, such as the American rabbit, the ruffed grouse and the domestic fowl, are ten times its own size. It is a notorious and hated depredator of the poultry house, and we have known forty well-grown fowls to have been killed in one night by a single ermine. Satiated with the blood of probably a single fowl, the rest, like the flock slaughtered by the wolf in the sheepfold, were destroyed in obedience to a law of nature, an instinctive propensity to kill. We have traced the footsteps of this bloodsucking little animal on the snow pursuing the trail of the American rabbit, and although it could not overtake its prey by superior speed, yet the timid hare soon took refuge in the trunk of a tree, or in a hole dug by the marmot or skunk. Thither it was pursued by the ermine and destroyed, the skin and other remains at the mouth of the burrow bearing evidence of the fact. We observed an ermine, after having captured a hare of the above species, first behead it, and then drag the body some 20yds. over the fresh fallen snow, beneath which it was concealed and the snow lightly pressed down over it; the little prowler displaying thereby a habit of which we became aware for the first time on that occasion. To

avoid a dog that was in close pursuit, it mounted a tree and laid itself flat on a limb about 20ft. from the ground, from which it was finally shot. We have ascertained by successful experiments, repeated more than a hundred times, that the ermine can be employed in the manner of the ferret of Europe in driving our American rabbit from the burrow into which it has retreated. In one instance the ermine employed had been captured only a few days before, and its canine teeth were filed in order to prevent its destroying the rabbit; a cord was placed around its neck to secure its return. It pursued the hare through all the windings of its burrow, and forced it to the mouth, where it could be taken in a net or by the hand. In winter, after a snowstorm, the ruffed grouse has a habit of plunging into the loose snow, where it remains at times for one or two days. In this passive state the ermine sometimes detects and destroys it.

"Notwithstanding all these mischievous and destructive habits, it is doubtful whether the ermine is not rather a benefactor than an enemy to the farmer, ridding his granaries and fields of many depredators on the product of his labor that would devour ten times the value of the poultry and eggs which at long and uncertain intervals it occasionally destroys. A mission appears to have been assigned it by Providence to lessen the rapidly multiplying number of mice of various species, and the smaller rodentia.

"The white-footed mouse is destructive to the grains in the wheatfields and in the stacks, as well as the nurseries of fruit trees. Le Conte's pine mouse is injurious to the Irish and sweet potato crops, causing more to rot by nibbling holes in them than it consumes; and Wilson's meadow mouse lessens our annual product of hay by feeding on the grasses, and by its long and tortuous galleries among their roots.

"Whenever an ermine has taken up its residence, the mice in its vicinity for half a mile around have been found rapidly to diminish in number. Their active little enemy is able to force its thin, vermiform body into the burrows; it follows them to the end of their galleries, and destroys whole families. We have on several occasions, after a light fall of snow, followed the trail of this weasel through fields and meadows, and witnessed the immense destruction which it occasioned in a single night. It enters every hole under stumps, logs, stone heaps and fences, and evidences of its bloody deeds are seen in the mutilated remains of the mice scattered on the snow. The little chipping or ground squirrel, *Tamias lysteri* [*sc. striatus*], takes up its residence in the vicinity of the grain fields, and is known to carry off in its cheek pouches vast quantities of wheat and buckwheat to serve as winter stores. The ermine instinctively discovers these snug retreats, and in the space of a few minutes destroys a whole family of these beautiful little *Tamiæ;* without even resting awhile until it has consumed its now abundant food, its appetite craving for more blood, as if impelled by an irresistible destiny, it proceeds in search of other objects on which it may glut its insatiable, vampire-like thirst. The Norway rat and the common house mouse take possession of our barns, wheat stacks and granaries, and destroy vast quantities of grain. In some instances the farmer is reluctantly compelled to pay even more than a tithe in contributions toward the support of these pests. Let, however, an ermine find its way into these barns and granaries, and there take up its winter residence, and the havoc which is made among these rats and mice will soon be observable. The ermine pursues them to their furthest retreats, and in a few weeks the premises are entirely free from their depredations. We once placed a half domesticated ermine in an outhouse infested with rats, shutting up the holes on the outside to prevent their escape. The little animal soon commenced his work of destruction. The squeaking of the rats was heard throughout the day. In the evening it came out, licking its mouth, and seemed like a hound after a long chase, much fatigued. A board of the floor was raised to enable us to ascertain the result of our experiment, and an immense number of rats were observed, which, although they had been killed in different parts of the building, had been dragged together, forming a compact heap.

"The ermine is then of immense benefit to the farmer. We are of the opinion that it has been over-hated, and too indiscriminately persecuted. If detected in the poultry house, there is some excuse for destroying it, as, like the dog that has been caught in the sheepfold, it may return to commit further depredations; but when it has taken up its residence under stone heaps and fences, in his fields, or his barn, the farmer would consult his interest by suffering it to remain, as by thus inviting it to a home it will probably destroy more formidable enemies, relieve him from many petty annoyances, and save him many a bushel of grain."

We saw on one occasion a weasel in active pursuit of a half grown cotton-tail rabbit which crossed a dusty road in summer not far from where we were standing and stopped in the undergrowth only a few yards beyond us. In a very short time a tiny brown weasel emerged from the wood following on the track of the rabbit, but when it reached the dust it seemed to lose the track and doubled backward and forward looking for the scent. Unquestionably, however, if it had not been disturbed it would have made a circle across the road and struck the trail again, and would shortly have overtaken the rabbit. Our interference drove the weasel off on one side of the road and the rabbit further away on the other.

Ways of the Ruffed Grouse.

NEW YORK, Dec. 9.—*Editor Forest and Stream:* A word or two in corroboration of the observations of Mr. G. S. Ellis, in your issue of the 12th inst., in which he differs with Mr. B. Waters in his assertion that the ruffed grouse "ventures into the open only on such infrequent occasions as it is tempted to search for food, and then only in places seldom invaded by man, and where it fancies there is freedom from pursuit."

During a recent trip to Orange county, New York, where, by the way, ruffed grouse are now very scarce, I and good old Blarney scoured the country for miles and miles without even hearing the whir of a wing. Returning about 3 P. M., with only a single rabbit to my credit, I contemplated turning my hammerless into a tandem and sending Blarney to cuddle for the remainder of her days in the lap of a family of six affectionate daughters. I was about to emerge from a small patch of woods within a stone's throw of the farmhouse where I was stopping when I happened to look back and saw the dog making hot game. The next moment three grouse flushed from the very edge of the open, at about 20yds., and I was lucky enough to make a double. The third bird I marked down and nailed with the second barrel about ten minutes afterward. The second bird of the double dropped on the veranda of a club house, closed for the winter, where I afterward found it.

What I wish to emphasize are the facts that there are several summer club houses and cottages on this small wooded ridge, and that the birds were feeding where the farmers' youngsters play at leap-frog and chase their cur dogs for exercise. My limited experience has proved to me on other occasions also that these noble birds do not object to the smoke from a chimney; furthermore, the farmer avers (he is an Irishman with a set of "Galways" that would be a sore temptation to a covey of winter-tossed quail) that every winter some "patridges" roost in an abandoned cottage in this same corner. This statement is backed up by his wife, a Dutch woman who has never been known to smile except when extending her hand for the proffered "long green."

It may be that the birds are lured so near to the house by a glimpse of the whiskers aforesaid, but I leave this knotty question to be settled by a committee of expert ornithologists and barbers. PELLETS.

A "Double" Moose Antler.

THE accompanying sketch is a view of the under side of a moose's antler, and shows an attempt to produce a "double" set of points. The antler, a left hand one, is a

DOUBLE MOOSE ANTLER.

little over 2ft. long, the false points being the largest, 5in. long. It was picked up in the spring of 1895 by Charley Barker on the top of Black Peak, back of Riley Brook, on Tobique River, New Brunswick. T. A.

Game Bag and Gun.

WHERE TO GO.

ONE important, useful and considerable part of the FOREST AND STREAM's service to the sportsmen's community is the information given inquirers for shooting and fishing resorts. We make it our business to know where to send the sportsman for large or small game, or in quest of his favorite fish, and this knowledge is freely imparted on request.

On the other hand, we are constantly seeking information of this character for the benefit of our patrons, and we invite sportsmen, hotel proprietors and others to communicate to us whatever may be of advantage to the sportsman tourist.

THE BUCK AND THE MAN.

THE sun shone hotly, the atmosphere was hazy and sleepy, and the buzzing of bees and the sound of the brook a few rods away from seat plashing over the smooth stones and purling over the pebbles, all sang a sweet lullaby.

This watching for deer on a runway is a tiresome business at best, and if I closed my eyes it was only for a moment; it rested my eyes and my sight was better for it, at least so I reasoned. I sat with my back fitting comfortably into the hollow of a pine stump and watched and dozed.

A buck came out of the hardwood and stopped to drink at the brook. I raised my rifle to fire when the Buck turned quickly and spoke: "Gently, gently, young man. Hold your fire a moment, and when I have finished drinking we will have a word or two together." I lowered my rifle and waited for the Buck to drink.

He thrust his muzzle deep into the brook and his nose and mouth turned silver in the clear water. He drank, and after looking up and down the stream walked slowly up the shelving bank and nodding his antlered head in kingly fashion disposed himself at my feet.

I sat quietly on the log and waited for the Buck to begin.

Finally he broke the silence. "You are a hunter, more particularly a deer hunter to-day," said the Buck, "and I am a deer, a buck, and if you will pardon the seeming egotism, I am rather an unusually fine specimen of an extraordinarily beautiful and graceful race."

As he said this he looked complacently at his beautiful self and glanced carelessly at the shadows cast on the grass by his wide, spreading antlers."

"Yes," said I, "you certainly are as fine as any deer I have sh— seen," I hastened to correct.

"Your correction does not escape me," said the Buck, "but your appreciation of my beauty is no more acceptable because of the substitution of verbs. But to dwell on my charms was not the object of my visit, so we will dismiss these extraneous matters, if you please, and give our attention to matters of more importance. In the first place, let me say that the reason I trusted myself so implicitly with you, with all your ability and capacity for doing evil to me," glancing meaningly at my long rifle, "was because I recognized in you a hunter I know well and a sportsman, which is equivalent to my saying that you are a man of honor."

I acknowledged the compliment as gracefully as I might, and, forgetting the nature of my companion, proffered my flask.

But the Buck waved a deprecating forefoot in the air and said: "No—no thanks necessary. I am a painstaking deer, and where honor is due I pay it. As for your flask, I've no doubt it is good; but I prefer my corn on the ear."

The Buck winked a merry eye at me as he said this and smiled in a satisfied way at his little joke.

"But," resumed the Buck, "I came to discuss with you, as a man of some experience, a few of the questions which have been much discussed of late regarding the protection of my kind and the regulation of deer hunting by proper legislation.

"I am glad," said I, "of the opportunity, but of course our discussion will be a unilateral discourse with yourself as lecturer, for naturally from your standpoint you expect immunity, while I as a hunter would never be entirely reconciled to such a state of affairs."

"Not at all," said the Buck. "I acknowledge the unquestionable right of man to pursue and kill, with certain restrictions, the so-called lower animals, and use them for his own pleasure and profit; and I regard this divine law with the same composure with which you look upon your own mortality. The will of the Great Deer is not to be controverted, and his ways are inscrutable."

Certainly, thought I, this is a remarkable animal—a philosopher.

"Well," said I aloud, "I am glad you regard the matter in its proper light. It simplifies things so, and I am sure we will discuss these questions to our mutual advantage. You are, of course, familiar with the game laws as they now exist, and if you will begin I will show you how well I can listen. But hark! Is that not a dog?'

From high up on the mountain top came the cry of a running hound.

The Buck cast a contemptuous glance toward the sound and said:

"He's been in hearing, in my hearing, for fully five minutes. Of course, you humans can't hear as well as we wood folk; but if he's on my track I'm safe enough. I came through the Beaver Marsh and Horshoe Pond. Presently you will hear him stop."

We listened—I expectantly, the Buck languidly and with little concern.

The dog came steadily on.

I glanced at the Buck, but he betrayed not the slightest emotion.

"He has come through the marsh," I ventured.

"Yes," said the Buck easily. "I was mistaken in the dog. That is Sam Russell's Bluecoat, but I dare say even he will not come through Horseshoe."

As he spoke the baying ceased, and no sound came to our ears but the plashing of the water over the smooth stones in the brook and the lazy droning hum of the insects.

"As good a dog," offered the Buck, "as one would care to see or hear, but water has saved many a good deer before this day, though my hide might have been buckskin years ago if I had depended solely upon flight for deliverance."

As the Buck said this he bent his head and hooked at the stem of a birch treee beside him, tearing away the bark as if it had been peeled with a knife.

"Yes," said I, "a good dog; and let me advise you that hereafter when you hear him hooting on your track you want to streak it for big water directly, unless you have become tired of life."

"Indeed?" returned the Buck. "Thanks—but many a good dog has sung his own death song on my trail, and Bluecoat must not race me too often," and the old fellow lunged viciously at the birch tree and snapped the stem in two.

It required no great effort of the imagination to see him at bay, legs far apart, hoofs braced, eyes aflame and the hair upon his spine erect, striking and lunging at the hungry hounds circling around him.

He became calm immediately, and turning quickly asked, "Do you believe in hounding?"

"Inasmuch," I replied, "as I am now illustrating my belief in its efficacy as a venison-getting mode of hunting, it seems to me that I am precluded from arguing on that point. What do you think of it?"

"Now, see here," said the Buck, "don't evade the question in that way. I know you are a lawyer, but don't be bluffing me with your *prima facie* evidence and your *particeps criminis* and your *flagrante delictu*, and all that legal bosh. Do you or don't you believe in hounding? Come now."

"Well," said I, "I do and I don't. I'll explain that," I hastened to add as the Buck snorted angrily:

"Firstly, the deer are not plenty enough in the Adirondacks to make still-hunting a successful mode of hunting you fellows.

"Secondly, deer are plenty enough to make some mode of hunting allowable which requires less exertion and skill. Therefore we have hounding and jacking.

"I believe in hounding thus far—I believe that the law should allow fifteen days of hounding, but should attach a heavy penalty to the killing of any swimming deer. To my mind it is not unsportsmanlike to shoot at a deer as he comes loping through a runway. It requires good eyes and hands and nerves.

"But to kill a deer in the water from a boat brought up to within a few feet of the unfortunate animal is brutal and revolting and least of all unsportsmanlike. Succinctly stated you have my ideas on hounding."

"Concisely put," said the Buck, "and measurably plausible. As you say a deer is a small mark at thirty or forty rods loping through a runway, and it takes a good marksman and a good rifle to score under these conditions, the deer is generally a good odds-on favorite. There is room for argument, however, on the ground that the dog does the work and the shooter does nothing but sit still and shoot the best he knows how.

"The killing of deer in the water I consider brutal,

bloodthirsty slaughter, with no element of skill involved to give the performance the semblance of sportsmanship. Why, man alive, it was only a week ago that my youngest wife and her fawn were driven thirty miles, shot at on three runways, and finally, my wife deciding to risk taking our child into the deep water of the lake, were pursued by a man in a boat, shot at four times at a distance of 15 or 20ft., only escaping through the awkwardness of the hunter, a city sport, who overturned the boat in his excitement and had to swim for his life to the shore, where he sat shivering until a guide came along in a boat and took him back to camp, where he washed dishes for the remainder of his stay.

"What chance has a deer in the water? Tell me, will you?

"How many deer were killed in the Adirondacks last fall, and how many were killed last month, last week, yesterday, and how many are being killed to-day in the lakes, ponds and rivers of this great mountain country by red devils of hell, who row up to us in boats and kill us with gun, revolver, knife, axe, club, oar, anything that is handiest? How many, I say?" The old Buck had jumped to his feet in his frenzy and was pawing up the sod and stamping furiously.

"Don't sit there and stare at me, man! How many were murdered in the water last year? 'Hundreds,' do you say? 'Hundreds'—yes, and thousands—thousands, I say. Do you hear? And if it continues I prophesy extinction for us. Not in my time, but soon—soon."

The Buck trotted up and down for a minute or two, snorting, shaking his head and making that peculiar whistling noise we all know so well, and after a final snort came and lay down at my feet again.

I thought I would give the old fellow time to cool out, so I sat perfectly still and looked at the reflection of the buck's antlers in the polished blued steel just above the grip on my rifle. They were immense, and there were twelve prongs on one side and eleven on the other side.

In a few moments his sides stopped heaving, and he said, quietly enough:

"And jacking? What of that?"

"As to jacking," said I, "there is little to be said. If skill plays any part in this mode of hunting it is the skill of the paddler who sends the canoe on so quietly, and who knows when and where to strike. It is not the skill of the ruffian masked in the shadows of the night, who hunts kneeling in the bottom of the canoe, with a murderous shotgun in his hands. Any child can kill a deer in that way."

"Yes," said the Buck, "and many have been killed thus. My son Spike, the unfortunate fellow—he would have been three years old this fall—came down to the lake to drink—we were living on Otowana Lake at that time—and the poor fellow had but put his dry lips in the cool water when there came a blinding flash, a great noise, and—but I won't weary you with his sad story. They killed him. He was a promising boy."

A tear trickled down the brown cheek and sank into the dry earth.

I forbore speaking until he should have controlled himself, and then said as sympathetically as I could, "I am sorry we should have chosen a subject which is necessarily so painful to you, and I trust you will believe me when I say that I am deeply touched by the little you have told me of your son's tragic death at the hands of these mock sportsmen. I feel sure he would have been a credit to these noble woods and hills, and to you also."

"He was valedictorian of his class at Marcy Hall," said the Buck, "and he held the inter-woods championship at high jumping. I am an old buck and I have other sons, but Spike was my first-born. Well," with a deep sigh as though dismissing the harrowing memoirs, "you and I coincide as to jacking at any rate, and as to hounding we are both partially right. Of the two I would rather be hounded. But the key to all this is simple, the answer is plain, and it is—protection. Give us protection for three or four years, and I'll warrant the deer will be thick enough to insure success to the greenest of still-hunters. Protect us, I say, for five years," and here he stepped up and tapped me on the shoulder with his forefoot, "protect us, I say, for five years; yes, for three, or even—" what a strong forefoot that was, to be sure, and it seemed to take hold of me like a hand. "Why, Sam, what in the—stop, will you—you brute—ugh," as a quart of icy cold brook water went down my back, "can't you let a fellow alone? Confound it, man, I'll set that buck on you. Leggo, will you?"

"Buck?" said Sam's cheery voice. "I guess not; no buck here now. You are a pretty watcher. Didn't you hear Bluecoat? Come down here."

"I heard Bluecoat," said I with dignity, "and so did the Buck, but he said he'd stop at Horseshoe, and he did; and I wish you'd stop dragging me along in this manner."

"Come, wake up, wake up, old man," laughed Sam, "or maybe you'd like another bath. No? Here, what do you think of that? Oh, you are coming out of your torpor, eh?"

"Slashing old buck track, isn't it? And here's another track—dog track—that's Bluecoat, and you sound asleep all the time! Oh, the boys won't do a thing to you tonight. I'm afraid not!

"Old Bluecoat came right through the marsh, swam the Horseshoe [so the Buck was mistaken after all], and brought him right to your feet, and you slept calmly through it all.

"It's your loss," continued Sam, "and he must have had eight on a side."

"Twelve on one side," I started to say, but I didn't want another bath, so I kept silent.

And the funny part of it all is that it is all true—all but the dream. EDWARD SIDNEY RAWSON.

PORT RICHMOND, N. Y.

Ruffed Grouse.

MR. E. W. MESSENGER, of Boston, Mass., reports the partridge shooting in the vicinity of Wilton, N. H., unusually fine this season. Mr. Messenger recently made several trips to this neighborhood, hunting in company with his cousin, Mr. E. E. Low, of Wilton.

Last year a great many birds were snared, and one man is said to have cleared $400 from the sale of partridges taken in this way. The sportsmen, however, have succeeded in putting an end to the snaring, with the result of a great improvement in the game supply. J. B. B.

CHICAGO AND THE WEST.

Animals for the Zoo.

CHICAGO, Ill., Dec. 12.—On the evening of Dec. 8 Mr. E. Hofer, of Gardiner, Mont., arrived in Chicago with a shipment of animals for the National Zoölogical Gardens, at Washington, D. C., which he mentions in his communication of last week. Mr. Hofer had in the express car eight antelope, two black bears, one elk and four beaver, to say nothing of a bushy-tailed pack rat of the regulation Rocky Mountain thief brand. All the animals were in splendid condition and apparently standing the trip as well as could be expected, though they must have been well tired down. They are all this spring's animals except the beaver, one of which is a very large and old one, also a trifle belligerent, as he showed very plainly when asked to shake hands. The beaver were kept in a big store box, wired to prevent their gnawing out, and no tank was on hand for their convenience, as was the case in the earlier shipment of beaver made by Mr. Hofer. They had water poured over them at feeding times, and seemed to enjoy that. They will probably go through all right. Billy had along a lot of firewood for them to eat, they seeming to be very fond of fuel as food.

The antelope were packed in slatted crates, each just big enough to allow the animal to lie down or to stand up without turning around very comfortably. The crate for the elk, which was a cow of this year, was naturally a pretty big affair, and weighed something over 800lbs with the elk in it. All the ruminants were apparently happy and well fed, and each of them seemed to have adopted civilized habits, for immediately after dinner each one took a chew of gum and kept at it as industriously as a Halstead street cashier. When engaged in chewing gum an antelope has an odd, whimsical look about its face, such as we never see in a mounted head or in a picture of the animal. At the corner of an antelope's mouth there is a sort of bunch, where the hair sticks out prominently, and this, with the full and open eye, gives the creature a surprised sort of look. It is always the first duty of a taxidermist to take a flat iron and iron out this bunch of hair so it will not stick out and look untidy and rough. The nose of an antelope is soft and black and moist, and, though I suppose a good many people do not know it, the tongue and inside of the antelope's mouth is also jetty black. Of course everybody, that is to say, everybody but the artists who make pictures for the big magazines and illustrated weeklies, knows that the eye of an antelope is right up against his horn, and not halfway down his face, between the horn and the muzzle, as one famous artist on Western topics once depicted it, much to Billy Hofer's disgust. The tail of the antelope is rarely over 2 or 3ft. long, but artists do not always know that either. I admit that an antelope looks more spirited with a long, flowing tail, but it is not really legitimate. Billy told me that not long ago in an ambitious pictorial number of a publication, which shall be nameless, a certain artist painted some elk and gave the cows a good set of horns apiece. The artist said the horns didn't cost any more, since he had 'em already on, and at first this argument was near to being conclusive, because any fellow likes to get as much as he can for his money, especially in hard times; but finally, after the engraving was made and ready to print, some one told the head editor it wouldn't do, so they cut the horns off the cows in the plate, and you can see now where they did it. But they didn't cut off the tails, which remain hanging down about to the gambrel joints in the picture. An elk's tail is really about as long as your thumb, but the management of the illustrated edition decided that as they could get that 2 or 3ft. extra for nothing it would be bad business policy to sacrifice it, so they let it go at that. This was magnificent, though it wasn't natural history.

Of the two bears that Billy Hofer had along one was a very crusty fellow, and prone to take a section of overcoat whenever he got a chance. In the express car the antelope were piled up in one end, and the two bear crates were placed at one side, guarding the narrow passage to the rear of the car. Of course the visitors to the car who wanted to see the antelope would be obliged to walk in front of the bear cage, and as each one passed by the cross bear would take toll as seemed to him desirable, reaching out a horny paw and swiping anything that came by, from a silk dress to a genuine Irish frieze ulster. Both these bears were captured by soldiers near the Lake Hotel in the Yellowstone Park, who found the mother and cubs together near the hotel last spring. They set dogs on the old one and the cubs ran up a tree, from which they were ingloriously haled down to make a Washington holiday.

I am always glad to see Billy Hofer when he comes to Chicago, and always take him out to my ranch here, where he shows a vast disposition for wool blankets and wide open windows. I think a guest ought to own the house, but I don't think he ought to get up at 4 o'clock in the morning, which is more than half an hour before I ever usually get up, and kick about there being no hot water ready for him. I told Billy this, but he said he was so used to shaving in a geyser every morning that he couldn't get out of the habit.

A High Pressure Law.

The new Illinois game bill is what may be called a high pressure measure. It will ask a tax on the gun, a salaried warden system, a State license for non-residents, and a limited season for the sale of game. No Illinois game, not even ducks and snipe (heretofore not prohibited for sale at certain seasons), can be sold, and no foreign game can be sold after Jan. 1. The sportsmen say they would ask for prohibition of the sale of game altogether, but they are afraid they would not get it! That is to say, the immediate framers of the bill say so. I am disposed to think they might just as well throw in the clause for absolute prohibition of game marketing. They are quite as likely to get that as some of the other things they ask for, and stopping the sale of game is the only logical result these days for any scheme of game protection. The supposition of the attaining of some of the other things the new bill asks is enough to call to mind the words of the old song, "I Wonder if Dreams Come True."

Meantime, as mentioned earlier, the game dealers have formulated a little bill of their own. It is identical with that of the sportsmen except in the points where it is diametrically opposite. That is to say, it allows the sportsmen of Illinois (very good of the dealers, too) to do what they like with the game of Illinois, which does not amount to a picayune, but says that the sportsmen shall allow the dealers all the winter season up to March 1 for the sale of such game as they can procure outside the State of Illinois. This, being interpreted, means that the game dealers will be satisfied if they get everything they want, but ask the sportsmen to keep their hands off from anything the dealers do want. And the sportsmen, good, trustful men, are afraid to ask for a clause prohibiting the sale of game absolutely, for fear they won't get it.

The National Game, Bird and Fish Protective Association is behind some of the proposed additions to the Illinois statutes on fish and game, and it does not intend to rest there, but will follow the work to Congress, where it is confidently expected that Congressman White, of Chicago, and Senator Shelby M. Cullom, of Illinois, will favor the passage of an amendment to the Inter-State Commerce laws prohibiting the shipment of game from any State whose laws make such shipment illegal. This would be an excellent thing if it were accomplished. This would then be a better land. I was at a little festival of song the other evening, and a very good soprano sang a song called the Better Land, and the refrain of it was, "Not there, not there, my child." I am afraid we have not yet come to arrive there, as we say in Chicago.

No Mast this Year.

I am told that the Delta country of Mississippi, where the black bears were so numerous last year, has this year almost no mast at all, in consequence of which there are no bears to be found in all that country. Capt. Bobo is practically without an occupation, and expresses doubt whether he will ever again see the good old bear days which he has known so long in the past. It is supposed that the bears have gone to Arkansas or the hereafter.

Gates Ajar.

Some one whose name I do not know sends in a clipping from the St. Louis *Globe Democrat* in regard to these bears of the Mississippi Delta cane country, in which there is something of interest, especially that portion relating to the different varieties of bear known in the South. The now accepted "red bear" of Louisiana is mentioned explicitly. I have never heard Capt. Bobo speak of this red bear at all, but he has often killed the large bears mentioned, if they be indeed any different species. He says he has killed them weighing over 500lbs. On our hunt last winter we killed one, as mentioned at the time, which seemed very large, though we had no means of weighing it. It was a monstrous looking beast as it lay on the ground, and we took it to weigh 450lbs. at least. The skin, after tanning, measured 7ft. 2in. long. A man lying on the ground beside this bear would look like a pigmy. I do not remember that it had any white spot on the breast, however, and do not recall that the hunters in that country spoke of ever seeing a bear so marked. The correspondent of the paper mentioned writes entertainingly as follows:

"I do not know of anything more interesting than to watch a bear steal green corn. As hunters know, a bear will always come and go out of a field at the same place in the fence if not alarmed or disturbed. The cornfields in this country are very large, ranging from 600 to 1,000 acres. After climbing up on the fence and carefully reconnoitering the country as far as he can see, if nothing alarming is in sight the bear climbs down on the other side very much as an old lady would. He will begin then, next to the fence, taking two rows, breaking down the cornstalks right and left until he has eaten all of the juicy, milky ears that he wants. Then he leisurely retraces his steps, always climbing over the fence where he came in, and waddles to his den to take a nap. In the month of August, several years ago, the bears became such a nuisance on Mr. Richardson's Hushpuckany plantation that he was obliged to do something to save his corn crop. So he employed a man in his neighborhood, who understood the ways and customs of bears, to abate the nuisance if possible. He abated it to some extent by killing thirty bears in one month, and ten or twelve in September, when the corn became too hard to be longer tempting.

"There are in the further South three varieties or kinds of bear. First, there is the ordinary brown bear, common in the wilder sections of our country from the Canada border to the Gulf of Mexico; its usual weight is from 200 to 350lbs. Then there is in Louisiana, Mississippi and sometimes in the southern Arkansas canebrakes and swamps a big, perfectly black bear. It is generally marked by a white horseshoe on its breast. This bear will weigh from 400 to 680lbs. The writer saw one weighed on an accurate set of scales, made for weighing bales of cotton, to be found at all steamboat landings, which pulled down the beam at the 680 notch. It was killed in the great Atchafalaya swamp by an experienced hunter, who declared that this was not the ordinary bear, but of a different family. Third, and rarest of all Southern bears, is what all hunters call the red bear. This one is a long animal, nearly as slender as a panther and the color of a red steer. It can swim like an otter and outrun any pack of bear dogs that ever followed a trail. Most hunters have seen this bear, and differ about its family; but whether it and its congener, the big black bear, are simply varieties of the same species, changed in size and form by their environments, I am not naturalist enough to decide. The red bear lives only in the Yazoo swamp of Mississippi, and the big Atchafalaya swamp of Louisiana. The large black bear is common in the Louisiana lowlands back of the big cotton and sugar plantations, along the Mississippi River and its tributaries, in the States mentioned."

The scientific gates seem ajar now for the bear family, and we may have all the new sorts we want.

Where "Forest and Stream" Is Read.

Three weeks ago I had occasion to mention in these columns a bit of news taken from a letter handed me by Mr. William Werner, of this city, from Mr. E. H. Bisby, of Deer Park, Tex., which ran to the effect that Mr. Bisby knew where he could find a bevy of quail or so if he were pushed. To-day Mr. Werner hands me a second letter from Mr. Bisby, which states that he has "six or eight letters from men in different parts of the country" saying that they had seen it stated in FOREST AND STREAM that he could find quail, and asking him what arrangements could be made for a hunt. He expressed surprise that so brief a mention should produce such a swift result. None of these letters to him were written with my knowledge, and I cannot tell within 1,000,000 or so how many men

have gone to places mentioned in FOREST AND STREAM as good shooting countries, but undoubtedly the number is large. I am not sure that the State of Texas owes this paper any thanks, but the shooters do.

To reiterate, the game of the North is shot out, and the tide of shooting travel is turning to the South more rapidly than the South can dream. If it were merely the tide of sportsmen travel none would be more glad than this paper, I am sure, or more glad than the Texas men; but it is too true that such is not the case. A shooter is not necessarily a sportsman, and there are far too many shooters who, when they come upon the abundant opportunities of the Southern shooting, abuse the privileges which good fortune has brought to them. To reiterate, the men of Texas cannot take measures too swift and too strict to regulate the killing of their game. This remark I ask each of them to cut out and paste in his hat, for review five years from now. The Texas men do not need dread the sportsmen, but the shooters.

To further illustrate the carefulness with which this paper is read by those in search of game fields, a friend lately spoke to me of an incident which occurred to him a year ago at his home in a part of the South. He said that an old gentleman from Illinois came into his office and introduced himself as a reader of FOREST AND STREAM, and therefore acquainted with himself. He said he had read that there was some good trapping country down in there and he wanted to get into it. He received the best of directions, and I presume was made happy. That man said that he was not a market shooter and did not kill any game except for his personal use while in camp; all he wanted was to trap a little. He was on this basis treated handsomely by the Southern man whom he had looked up. This also was without my knowledge until recently.

Hospitality and Legality.

Last week I saw in another paper a wail from some men who had been caught by the county officers in a Mississippi county and fined for not having a county license. Both they and the paper editorially thought this was a very "inhospitable" thing for the officer to do. It is not quite clear why it should be thought inhospitable. The fact is that there are very many large camping parties who go into Mississippi and forthwith constitute themselves nuisances instead of sportsmen; yet it is the rarest thing that the law is enforced at all as it should be always. It does not make a Mississippi man feel real good to call him inhospitable, because he knows that isn't so in the first place, and in the next place knows that he has never enforced his own laws as rigorously against outsiders as against residents. The result of several little things like the above has been that this year many parts of Mississippi have a wall built around them against all non-resident shooters who do not have credentials from resident property owners. The men of that country think they have a trifling interest in their own game as well as others, and they intend to keep up the good old Southern ways, which so far have resulted in preserving the game, whereas those of the North have resulted in its destruction. I only hope they will make the wall high and hog-proof.

It may be said by some of my several friends that I appear to want to cut off all non-resident shooting whatever. I do. I would like to cut it all off for five years, and I would gladly lay my gun down in vaseline for that length of time, for then we would all have shooting without going a thousand miles from home and imposing on men who have a little game left at their homes, which latter they would like to go out and shoot occasionally for themselves. But since we cannot have any such measure passed, and since we all must hunt as non-residents nowadays if we get any shooting, I do think we all ought to be very considerate of how we shoot when we get where the local game is abundant. A good rule would be to just mentally reverse the case, and put ourselves in the places of the men who have the game in their country. How would we like it? How would it seem if 30,000, perhaps 50,000 guns—no one can tell how many the real number is—should come from the South into our Northern shooting country after our game—if we had any? How would the rule of inhospitality work then? Speaking of walls, I trow we would see a wall then as was a wall! Yet we all cheerfully agree that it is quite wrong for a Southern country to make it difficult for an unknown shooter to get into its preserves! I am satisfied that all the good people will agree with me that non-resident shooting ought to be made difficult, that every kind of shooting ought to be made more difficult, that no kind of shooting can be made too difficult in this country from this time on, either in the North or the South. The laws can not be made too hard or enforced too rigorously anywhere. That is to say if we really mean what we say about game protection. If we are only bluffing about it of course it doesn't make any difference. No matter how hard such laws might generally become, they would not prevent sportsmen from shooting, though they might prevent some shooters from shooting. I should call it a very pretty and Utopian state of affairs if no man, in any State, could as a non-resident shoot in any State without the voucher of a resident friend. This would cut off a good deal of market shooting, and would also stop a good many excessive bags. It would be a hardship for some and a boon to a good many others. And it would save the game. But we will never see any such Utopia. We will just go on in the good old way, each fellow trying to get all the other fellow has, and kicking because he kicks at that It is human nature to want a pair of suspenders thrown in with each pair of pants. Indeed, I am disposed, sore against my will—for I love my fellow man tenderly—to believe that it is some human nature to want the pants thrown in with the suspenders.

Personal.

It was away last fall, months ago, that mention was made of the serious illness of Mr. W. P. Mussey, who was taken with typhoid fever. Since then Mr. Mussey has been in bed a very sick man, and it is not likely that he will be back at his work for a few weeks yet. He has had a very bad time of it, and meantime so have his many friends.

Mr. J. L. Winston, of the Austin Powder Co., has been in the city a couple of days visiting w th Mr. E. S. Rice, agent of that firm. Mr. Winston is endeavoring to become acclimated here, prior to certain entanglements with John Watson's hard pigeons next Tuesday, in which he is to be assisted by Mr. George Roll, of this city.

Mr. W. H. Freiberg, of Chicago, is just back from a long trip to a good game country in Colorado, where he was floating on downy clouds of glory for about two months. He says he never did have such a trip. Game of all sorts was very abundant, and Mr. Freiberg got all the deer and elk he wanted.

When Mr. T. H. Keller, of the U. S. Cartridge Co., was in Chicago last week he did not give permission to print a bit of news which he confirms in a letter just at hand. On Jan. 1 Mr. Keller will leave the firm with which he has been pleasantly engaged for six years, and go into the employ of the Peters Cartridge Co. and the King Powder Co., of Cincinnati. This is matter of mutual felicitations for employer and employed. Mr. Keller is well known all over the country, and will bring friends to his new house, which has a great and growing business. The Cincinnati house has a strong combination with Mr. Lindsley and Mr. Keller both on hand, and everyone will wish them many happy days together. I hope Col. Bill Peabody and Col. Bob Burton and Col. Wilbur Dubois will call on—shall we say Col. Keller? It is very near Kentucky at Cincinnati—and duly take him across what raging flood is in that city yclept the Rhine, that being one of the journeys without which no one can claim a thorough acquaintance with the town on the Ohio, or a perfect understanding of the idiomatic expressions, "'Raus mit i'm," "Ach Himmel," "Jetzt macht's los," etc., etc.

Humane Society's Action.

Gypsy, the man-killing elephant of the Harris circus, an animal which has killed several keepers and which lately scared another keeper into a hurried resignation of his job, has gotten to be too much of an elephant for the owners, who have concluded to kill her. Arrangements have been made to electrocute Gypsy by means of a gigantic electric device, and announcement has been made that the killing of the elephant will be a public spectacle, which will be held at Tattersall's, and to which an admission price will be charged. Upon hearing of these plans for an exhibition, President John G. Shortall, of the Humane Society here, has expressed a determination to interfere in all ways possible. He cannot prevent the killing of the elephant, but he objects to its being made a public show. There is an odd involution to this question, but under it all is the fact that the American public of the better class cannot wish to countenance anything so openly Latin, old Roman or plainly heathenish as the spectacle of brute suffering at the hands of man. Moreover, there is no contest of any sort in this, no pitting of beast against beast, or beast against man. It is simply the experiment of killing a vast animal by an untried device. An elephant gun and a steady shot would seem better. As for the butchery, do those intending to witness the execution forget and overlook the slaughter houses at the stock yards, which we have always with us?

Mr Shortall has also forbidden the annual fox hunt of the Germania Club, which was to have come off this week, stating that he will cause to be prosecuted the officers of the club if a live fox is run. Last year the club ran a stuffed fox, *sauté*, with anise seeds and fine herbs, and to this Mr. Shortall has no objection. While one can agree with Mr. Shortall on the elephant question, it is not possible to coincide with him about that anise seed business. An anise seed fox is too effete for this country as yet. Either let us run a fox or sit at home and imagine we ran a fox; but let us not, having chased a fox *sauté*, imagine we have been fox hunting. Because we haven't. I think I have this thing straight, but maybe it was with the latter performance that Mr. Shortall intended to interfere. It is as well to be cautious.

Skunks.

Mr. Mel. Hart, a sportsman of Crown Point, Ind., who is very well known among Chicago shooters, has determined to go into the business of skunk farming, an industry which other men have undertaken before him, not always with success in every respect. Recently Mr. Hart found under his front porch a litter of foundling skunks, about thirteen of them, all left penniless and alone in the world, apparently, by a heartless parent. Mr. Hart took the infants into his family and gave them a home, and now as an idea that he can raise skunks with ease in any quantity. As the annual fleece of a skunk is worth about $1 to $2, there seems to be a good business in this. The trouble with skunks, as I am advised, has usually been that they resemble coyotes, and sound as though there were a good many more of them than there are. No doubt Mr. Hart has been in places where he felt confident he could have skinned a thousand skunks if he had only had his tools along, just like the man who listened at the side of a frog pond and contracted to ship two car loads of frogs' legs the next day; but it seems that these animals do not always live up to the expectations they raise.

Shooting Glasses.

Mr. Almer Coe, of this city, advertises shooting glasses for trap and field shooting—a very useful and needful thing too, at times, for eyesight is not a permanent blessing—and he came to do this in a curious way. Dr. Westcott, of this city, an oculist, wrote for FOREST AND STREAM a little mention of some of his friends that he had fitted out with spectacles, with a marked improvement in their scores. This mention was read by a gentleman away down in British Honduras, who wrote to me to learn Dr. Westcott's address and inclosed a pair of glasses which he wanted fixed up. Dr. Westcott took the work to Mr. Coe, who is an expert optician, and the latter quickly concluded that a paper which was read that far away from home must also be read at home, and would therefore bring him business. In all of which he was quite correct. Dr. Westcott says he had several other gentlemen come to him for shooting glasses after the appearance of his little article, all of whom spoke of having seen the mention in FOREST AND STREAM. It is singular how widely and how well the sportsmen's papers of the country are read, or at least how widely and well this one is.

End of the Season.

The Illinois shooting season is now over, the quail law closing date being Dec. 1. We can shoot nothing now in this State except the cottontail, of which there are thousands in many localities. Speaking of non-resident hunting, I wonder where the Chicago shooters would be if no non-resident shooting were possible. But then, all Chicago shooters are the kind of folk who are asked to come again and bring their friends; at least let us hope so. So long as residents do not object to non-residents, both are fortunate in meeting, and so long as non-residents act as sportsmen and not merely as shooters, the residents never do object. During the next sixty days some thousands of Chicago shooters will leave the city for sporting trips in other States of less rigorous climate and more abundant game. There is yet to be told the first incident of a real sportsman receiving a rebuff from a real sportsman in any of those other States; therefore the bright days of the shooting year are just at hand for a great many of our sportsmen.

The weather in this vicinity, including Illinois and Indiana, has been extremely mild so far this winter; indeed, we have hardly had any winter at all as yet. Game should do very well. The past season has been an exceptionally good one for game, and another one as good would give abundant shooting within easy reach of this city.

Anise Seed Quail.

In view of the growing scarcity of game birds, I suggest that we establish the sport of shooting anise seed quail.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

PENNSYLVANIA GAME INTERESTS.

HARRISBURG, Pa., Dec. 8.—*Editor Forest and Stream:* Dr. D. B. Warren, State Z ölogist, prefaces his report on the destruction of Pennsylvania game with the FOREST AND STREAM'S editorial, "A Platform Plank," and then says:

"Taking the most careful reports which I have been able to obtain from the grouse counties of this State, the result shows that 90 per cent. of all the game is killed by market hunters, and that they are shipped to the larger cities, and principally to New York. From one of these correspondents I quote:

"'I personally know of over 1,500 grouse being shipped from two stations on the D., L. & W. and W. B. & E. railroads to New York. I personally know of a restaurant keeper in New York who wrote to a market shooter in this vicinity asking him to ship young grouse to him with woodcock during the month of July.'

"Another correspondent writes: 'The consensus of opinion is for any law that will stop market hunting within a radius of twenty miles in this section. It is carefully estimated that the market hunters last season killed over 3,000 grouse, while the entire number of shooters who pursue the game for the pleasure of pursuit, say numbering fifty, did not exceed 200 birds.'

"Market hunting is not done by farmers or farmers' sons, but by the professional market shooter. He traverses inclosed grounds, respecting the rights of none, and even becoming impudent when there is an attempt to restrain him by the lawful owner of the property. I have the first instance to record of one contributing toward replenishing a depleted game supply or paying in any manner for his gunning privileges. To do this would destroy the profits of his vocation, and he treats with disdain any proposition of this nature. Instances are on record where birds placed by the true lover of such sports in the late fall, at an expense of from $5 to $6 per dozen, have been killed by the market hunter and sold for less than half this price before the season closed.

"From four counties in the central part of the State there were over $6,000 worth of quail released for propagation in the spring of 1894. I quote from the language of one prominent gentleman who had contributed liberally toward this fund: 'I contributed to such cause, expecting to enjoy some of its benefits, but I found that the market-hunter had preceded me, and for my expenditure and day's outing I had to be content with no game.

"A reasonable trespass act and the restriction of our game traffic so that it will include deer, wild turkeys, ruffed grouse, woodcock and quail would, I believe, meet the views of our land-owners and all those interested in preserving and increasing our game. None of the above are in any manner destructive to the farmers, and no fear need to be entertained that they will ever become that numerous.

"Bears, squirrels and rabbits are not game which can be defended, and to continue their sale would not be a menace to the game of our State. To many it might seem that the farmers and land-owners of our State would not be interested in the protection of game for which there was no commercial market. With the market-shooter's profits disposed of and he out of the business, the privileges may be readily sold to those who are willing to pay for them, as is illustrated in Schuylkill county, where farmers realize a handsome sum for these privileges.

"There is not a State of such importance as Pennsylvania in all other commercial or educational affairs that can record as many reported violations without arrest or conviction of game and fish laws as our own Commonwealth. Any individual in any manner connected with game and fish protective interests is besieged with letters of complaint from every county in the State. Letters in the hands of one gentleman naming violations are so bulky that to attempt a reproduction of them in this report would be out of the question.

"Pennsylvania's appropriation to the fish interest for the past ten years has been two hundred and four thousand dollars ($204,000), divided as follows: $155,000 for fish propagation, $5,000 for fish ways, $2,000 for hatching house, and $42,000 specifically for 'water bailiffs.' For the past six years the appropriations for this purpose have been $5,000 annually, and the act which appropriates this amount states specifically for 'water bailiffs.' Now this sum equals, if it does not exceed, the amount appropriated under a more modern system in the State of Michigan for the protection of both fish and game, and the claims of the State Fish and Game Warden of that State are that they lead all other States in effective fish and game protection, awarding to the system and its direct application, and not to the amount appropriated, the honor of the results obtained. From Jan. 1, 1895, to July 1, 1896, he reports 801 cases prosecuted. I have no data of our own State from which to make comparison.

"It is positively asserted by those who have given attention to the subject that the taking of fish illegally in the Susquehanna River from Clark's Ferry dam to the Maryland line is largely on the increase; one has but to traverse the stream from the points named to note its evidences openly exposed. Wing walls of all sizes and lengths will be encountered, and they were during the

month of September of this year to be numbered by the hundreds."

(Here Dr. Warren quotes a number of newspaper articles, showing that the fish laws are being violated in all parts of this State.)

He continues:

"This State has never deemed its game interests of value enough to have ever appropriated $1 toward their protection, and that the subject has been greatly neglected and misunderstood by those shaping the affairs of State there is no necessity of argument to prove. The writer is informed by one prominent in the subject of game protection, that the members of the State Sportsmen's Association are now securing statistics from each township in the State of the amount of game taken during this present gunning season.

"Violations of the game laws are perhaps as numerous as are those of our fish laws, but their protection is not intrusted to any one in particular. Recently, in company with Game Commissioner C. K. Sober, of Lewisburg, the writer was tramping along a mountain road south of Pardee, Union county, and in a distance of not over three-fourths of a mile we found fifteen snares set (evidently from their large size) for wild turkeys. We also, on the same day, found three brush turkey blinds.

"Ferrets are so generally used in the pursuit of rabbits in some of our northern border counties that they are dubbed by the hunters 'punching sticks,' and a reliable gentleman informs the writer that it had been estimated that there were 200 of them owned in Wyoming county for this purpose. Deer licks, turkey blinds, quail traps, dead-falls, box traps, snares and ferrets all play an important part in helping to deplete our rapidly decreasing game supply.

"In some quarters of our State quite a number of deer are taken out of season by hunters who watch for these animals at deer licks. The running of deer with dogs is also carried on to a considerable extent in several sections of the Commonwealth notwithstanding the fact that this is contrary to law."

William M. Kennedy, Allegheny City; C. K. Sober, Lewisburg; I. A Stearns, Wilkes-Barre; Charles Heebner, Philadelphia; E. B. Westfall, Williamsport, and James H. Worden, Harrisburg, the new State Game Commission, met here this afternoon for organization. Ex-Mayor Kennedy is president, and B. H. Warren, State Zöologist, was chosen temporary secretary.

The Commission took up the subject of needed legislation, and recommended the passage of three bills: Creating a universal game season to extend from Oct. 15 to Dec. 15; to prohibit the sale of deer, wild turkeys, pheasants and quail killed in this State; and to prohibit the transportation outside of the State of game shot here.

A committee, consisting of James Worden, Harrisburg; Charles Heebner, Philadelphia; and Dr. B. H. Warren, was appointed to draft bills on the above-named recommendations. The next meeting will be held in this city on Dec. 29.

GAME NOTES FROM NEW BRUNSWICK.

FREDERICTON, N. B., Dec. 12.—The partridge season in this Province expired on Dec. 1. The export of this bird is now forbidden by law, as also the sale or shooting for purpose of sale. Amateur gunners, however, are more numerous than in former years, and as modern firearms are coming more and more in use in the rural districts the birds fly faster and further than ever before. As long as New Brunswick retains its present magnificent heritage of virgin wilderness there is not much danger of the grouse becoming a thing of the past. In the cities and larger towns a considerable number were sold this season contrary to law.

Deer are multiplying so rapidly in this Province that, with reasonable protection in the winter months, they may in a few years be as plentiful as in Maine. Among the fortunate local marksmen are R. T. Mack, Will Chestnut, Serg. Walker, Private Garvey and the undersigned. Reports from the interior of the Province—from the Miramichi, Tobique, Nepisiquit and other regions already renowned for the presence of moose and caribou—indicate that deer are now plentiful where they have not been seen for a quarter of a century. It was only about three weeks ago that the veteran hunter and guide, Henry Braithwaite, who has killed more moose, caribou and bears in the last thirty years than he will ever be able to count up, shot his first deer near Little Sou'west Lake. It must have made Henry smile.

John Bodkin returned the other day from East Brook Plains with the venerable guide Joe Mitchell. Mr. Bodkin shot a bull caribou, the only one he saw. He states that forest fires have driven the game out of that section of country.

Arthur Pringle, of Wayerton, the well-known guide, has had excellent luck this fall. Messrs. Slack and Holmes, of Brookline, Mass., who went with him to the headwaters of the Nor'west, crowded the game law rather close with four moose and six caribou. The genial "Bob" Armstrong, of Newcastle, then tried his luck and secured two fine caribou and a bear. Mr. Turnbull, of Halifax, I believe, secured a small moose on the last day of his trip.

Will Chestnut returned on the 7th from a very enjoyable cruise with Henry Braithwaite. Will is going to tell FOREST AND STREAM all about it, so I will merely remark that he brought down a moose, a caribou and a deer. Will is the best amateur woodsman I know of, cheerful, energetic and observant.

Caribou, for some reason or other, have been ranging closer to the settlements than usual. A few weeks ago seven of them appeared on the bank of the Sou'west at Boiestown within rifle shot of Duffy's hotel. Since then another drove appeared and three of them were shot by Al. Mead on the highway road.

From the standpoint of the sportsman who wants big game the crying need of New Brunswick is reliable, experienced guides. There are plenty of hunters, but very few, so far as my observation goes, who know how to properly look after the comfort of the sportsman. As for the Indian guides, some of them are fairly good men, but the visitor will need to lock up his wet groceries in a burglar-proof safe. New Brunswick is now the best country in America for moose and caribou. It will certainly be invaded in the course of the next few years by an army of big-game hunters. The resident population will reap the benefit financially, but will not regard the invasion as an unmixed blessing. The untouched wilderness of New Brunswick, however, is so vast, and its game supply so great, that I do not think all the moose and caribou that are likely to be killed by sportsmanlike methods in the fall of the year for a long time to come will produce any scarcity of game. It is the crust-hunting by loggers, gummers and Indians out of season that calls loudly for the attention of our legislators.

Hunter Selick, who lives near Moncton, has sold two of his herd of domesticated moose, which have been shipped to Providence, R. I., to be placed in a park there. It is said he received $700 for the pair.

Albert Perkins returned the other day from the headwaters of the Tobique, where he was engaged with a surveying party. They shot several caribou with a .44-40 rifle, but when they put two bullets into a bear which they discovered devouring a caribou, the bear walked off in his usual health.

Fred and Tennyson Vanwart, of Hampstead, captured a deer on the ice on Dec. 7. Fred fired three shots without stopping the deer, whereupon Tennyson, having a pair of skates with him, put them on and gave chase on the glare ice. The deer gave his pursuer a hot race, but finally slipped and was held by Tennyson until Fred arrived and gave him a finishing shot.

Harry Atherton joined the charmed circle of the chosen ones yesterday by dropping a fine buck and doe while hunting on the Hanwell with his friend George Hoegg and your correspondent. Harry is our finest wing shot, and he downed both of these deer on the run with a .32-20 Winchester. FRANK H. RISTEEN.

BOSTON NOTES.

BOSTON, Dec. 12.—Boston deerslayers continue to be heard from. W. B. Wadsworth passed through Boston the other day with a handsome buck, shot on the Cupsuptic River in the neighborhood of Billy Soule's camps, where Mr. W. was stopping at the time. Carrabassett, Me., is contributing a good deal of big game to the city sportsmen this season. W. P. Corson, A. S. Martin and A. S. Cowles, with O. B. Wood, came out from Goldsmith's camps on Poplar Mountain recently with four deer. Dr. L. F. Criado, with his son, and H. P. Williams have each obtained buck deer. Dr. Wood shot his two deer this fall. He visited the Aroostook country. He tells a good story of a young hunter who was fond of shooting partridges with a small rifle. He was out from camp after such game, having a .22-caliber repeating rifle. Something jumped up from behind a big windfall. It was a buck caribou. The young fellow let him have one shot, and the animal jumped up again. As he was in the air the third shot met him. This time he was hard hit, and fell down dead. The caribou weighed between 300 and 400lbs.

I met a gentleman yesterday who says that he "has it pretty straight" from Game Commissioner Carlton that he is bound to do all in his power to stop the hunting of Maine's big game out of season, and by the rich, who do not mind the fines if they happen to get caught. "We shall ask the Legislature this winter to make the penalty for killing moose illegally absolute imprisonment—no fines about it. The rich poacher cares little for the fines if he can kill his moose and get the head. Absolute imprisonment will be likely to cast something of a gloom over the conduct of the poacher with a plenty of money." Mr. Carlton is in favor of shortening the season on moose to one month—November only. There is a good deal of sentiment in favor of opening a part of September for the killing of deer, taking off equally as much from the end of the season—December. Laws concerning the marketmen are also to be changed, possibly requiring them to have a license in order to deal in game, which license they will forfeit if they attempt to ship game illegally out of the State. "If caught violating the game laws they should be prohibited from doing further business." My informant also believes the Commission to be meditating upon the plan of forbidding the carrying of rifles into the State during the close season on big game. Citizens of the State must have licenses in order to be allowed to carry guns during the close time on game. A man or boy may have a gun in hand in order to shoot a bear or a hen hawk, but not to shoot deer or partridges.

Carefully watching, I have found several instances of deer arriving from Maine into the markets here. But so many hunters are selling their deer, and ordering them straight into the hands of the marketmen, by way of the American Express, that it is very difficult tracing game that is illegally killed and shipped. It is certain that no sportsman who goes into the Maine woods in any sort of deer section need come home without one, for there will be a number killed ready for him. He may buy one and forward it directly to some marketman, and the law is almost powerless to stop it. He may arrange to bring a deer to the Boston market for some guide or hunter he happens to meet on his trip; and it would not be easy for the wardens to detect anything illegal about the shipment. The American Express Co. has it in its power to aid the Commission greatly in enforcing the non-shipment-of-game law, but it would seem that the position of that company is to make the last dollar there is out of Maine game. The hunter who would honestly bring out his game is forced to put it into the hands of that company, which holds a complete monopoly of that class of transportation. The revenue from that source this year is a great one, and it would seem to be the least that that company could do would be to discourage illegal shipment of game. I am not certain as to the exact position of the American Express Co. in this matter, but prominent sportsmen and merchants tell me that everything offered for transportation is being received.

It seems that the Dr. Robbins moose, already mentioned in the FOREST AND STREAM, was really a monster. It was certainly the largest killed this year, and one of the largest ever taken. Dr. E. D Robbins and Thomas Dickson, his partner on the hunting expedition, were absent on the shoot about three weeks. Forty miles north of Oxbow, on the Bangor & Aroostook Railroad, they were about as far north as any hunters have penetrated thus far. The big moose was killed by two shots from Dr. Robbins's rifle. He measured, as he lay on the ground, 21 hands from his toes to the top of the shoulder. His length was 10ft. from the nose to the end of the hip. His antlers had a spread of 50in., with 13 prongs on one and 12 on the other. The guide estimated that he was from nine to twelve years old. The small moose was a beauty; clean and very black. Both males were with cows at the time they were shot. The cows put up their heads in blind astonishment, evidently, when their partners fell; but, getting the scent of the hunters, they were quickly off like the wind. SPECIAL.

Game Protection on the Eastern Shore.

Editor Forest and Stream:

It may be of interest to your many readers to be informed in regard to the game laws of Virginia. In but few cases do such laws apply to the entire State; instead, they are enacted to suit the different sections and to protect such game as may be found in such sections. Hence our game laws are more special than general.

Wild turkeys abound in the more western localities; so with deer. This game is amply protected, so that each of these sorts of game has largely increased within the last few years.

The act passed by our Legislature Jan. 27, 1896, prohibits the killing of quail anywhere in the State for two years from the passage of the act, under a penalty of $10 fine for each offense; having or being in possession of the birds being *prima facie* evidence of guilt. Rabbits cannot be shot between Nov. 15 and Jan. 15 of any year.

All egg-laying coast birds, the marsh hen, gull, striker, willet, etc., are well protected; the taking of their eggs being confined to very narrow limits during summer, while the killing in the case of the marsh hen and willet is greatly restricted, the destruction of the gull and striker being entirely so.

The Eastern Shore Game Association (this applies to the counties of Accomac and Northampton only) have done and are doing more for the protection of our sea coast waterfowl than has yet been done. The Association is an incorporated body, having full power to enact laws for the furtherance of the end in view, and which do not conflict with the constitution of the State. The fee required for membership is $2 for residents and $5 for non-residents, with an additional annual fee of $3. This fund is employed in payment of a regularly equipped force, who patrol our bays and narrows during the duck shooting season to make arrests in case of traps or lights or the shooting of birds during night, or the having in possession any arm that could not be shot from the shoulder without a rest. The Association received its charter under act of March 5, 1894, and even for so short a time we find our waters as to the duck family of birds decidedly more populous. If the increase continues our broad waters and narrows will afford the best field for duck shooting sport anywhere to be found along our coast.

Lighting, night shooting and trapping will very soon drive the game away. Under such conditions our game supply, especially of ducks, grew very scarce at one time, and but for timely measures would in but a few years have been entirely gone. T. G. E.

KELLER, Va., Dec. 7.

A Maryland Game Country.

STOCKTON, Worcester County, Md., Dec. 8.—The farmers in this section top and blade all their corn, then husk it from the standing stalks; as a result lots of shattered grains fall around each hill, and the ground where the corn is thrown in a pile is literally covered. The quail soon found this out and abandoned the stubbles and waste land for the cornfields; they run out from the woods and thickets, fill themselves in less than a half hour and then go back to the woods until evening. Our shooting here this season has all been done in the woods, and although we put up from six to fourteen coveys every day, the best bag yet in a morning has been fourteen birds to one gun. There is no pot-shooting in this; all depends on the stanchness of your dog and your skill in handling your gun. Nearly all who have tried it here express themselves better pleased with their good shooting than they would be with twice the number of birds killed in the open stubble.

Geese are very plentiful, are in splendid order and unusually large for young birds, weighing from 9 to 11½lbs. Brant are here in good numbers, but are decoying poorly; the bunches appear to be more than half old birds. They turn and circle around often a dozen times before giving you any chance at all, and by night your throat is all cracked up calling. We have had such a warm, calm fall that the redheads have not yet come to the shoals; they appear to be still in the fresh-water bays and rivers. Bluebills, whistlers and other small ducks are here in numbers and are making fair shooting.

I have never seen Cooper's hawk and the sharp-shinned hawk as plentiful as they have been here this season, and I think this is one reason the birds held so close to the thickets. I would not like to say how many have been killed since the season opened, for the number runs over 100 in this neighborhood alone, and still you can see them beating the edges of the woods and thickets.

There has been an unusual number of woodcock here this fall, but as yet no jacksnipe on the marshes.

O. D. FOULKS.

Hunter's Luck.

Editor Forest and Stream:

In your issue of the 21st ult. is a letter under the above heading signed by Jacobstaff and reciting what he considers a good joke on Dr. Levering—one of his hunting party—because he did not shoot at a supposed bear, as he thought it was the hunter's dog. All honor to Dr. Levering, and may he some day happen into our county and in my neighborhood, where I can show him how at least one hunter can appreciate him. Would that we had more like him. Four years ago at Lake Rosseau, in the Muskoka Lake district, I was hunting near some gentlemen from New York. They had Monteith's dog—everyone knew what a fine fellow he was. The New York Doctor was on guard, and the Doctor in the excitement shot the dog as he jumped over a log. This is a true case and can be vouched for. I have had the ground plowed up at my heels; I have had the shot whistle passing my head, and have hunted with the fool that carries a double-barreled shotgun on his shoulder, both barrels at full cock; and I will always feel thankful for the opportunity this letter gives me of paying a tribute to a careful man who will not be foolhardy for fear of being laughed at. There is too much of this quick shooting without being sure what you are shooting at. F. E. GALBRAITH.

HALDANE HILL, Ontario.

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

Congressmen and Ducks.

WASHINGTON, D. C., Dec. 12.—*Editor Forest and Stream:* I inclose you a clipping from the Washington *Star* of the 10th that I imagine will interest you somewhat. I of course refer to the last few lines. The game laws and game protection in the District of Columbia are in a sad state at present, as two arrests for violation have been made within the last few months, both of which were dismissed, and the decisions were such that it practically wipes all our game laws off the statute books. I have often examined quail here in our markets that were picked and ready for delivery and found that many show no sign whatever of having been shot, no shot marks being visible. Practically there is no game killed within the district, so that all violation of the game laws is for the illegal handling and selling, but as our police court decided in one of the above cases that the statute only applied to game killed here, it can be killed elsewhere, shipped here and sold at any and all times. It is a sad state of affairs, and I regret to say that I believe there is little or no hope of the sportsmen taking action to remedy matters. J. D.

The clipping referred to reads as follows: "The poultry and game market is also well stocked, although most of the game comes from a distance, for in this section there are but few birds. A great many ducks, however, are being killed down the river and on the Chesapeake. Canvasback ducks are about as scarce as anything in the line of game, and the supply is hardly equal to the demand. Since Congress convened they have been in great demand for big dinners. Mallards from the Chesapeake are finer than ever before, and are more plentiful. These ducks are fed on corn to some extent, and the corn is also used for baiting. Then, instead of being shot, they are caught in nets, so that when they reach here they are in splendid condition. Wild ducks of ordinary varieties are plentiful, and low prices rule."

Those Thanksgiving Turkeys.

GRAND VIEW, Tenn., Dec. 8.—We have been talking over those Thanksgiving turkeys of Mr. Hough's, and while sympathizing with him in his various disappointments, Antler took occasion to remark that Hough is not as smart a man as he had supposed. Said he: "Hough might have gone a little way outside the city, built a little fire, and roasted a turkey if he'd wanted to."

To this opinion, born of some four score years' experience in cooking all sorts of game under adverse conditions, I could only reply that it is not now as easy to find a suitable cooking place in that region as it was when, forty odd years ago, I wandered among the sand hills to the south of Lincoln Park.

I have missed reading one or two numbers of FOREST AND STREAM, but infer that something has been said about the correct pronunciation of Col. Fred Mather's name. I have known a number of Mathers in New England who always sounded the a as in "cat." Should it be pronounced as in "father"?

I may add that Mr. Hough would do well to state to the public just how his name is pronounced. I have more than once found it difficult to persuade people that it isn't "How," and I have heard it called "Hew." KELPIE.

We take the liberty of adding that the name appended weekly to our "Chicago and the West" budget is pronounced like the name of the hero of this story in the *Farmington Chronicle:* "Shepard Huff last week started out hunting. He had not gone far from the house before he started up a deer, and, as the track was plain in the snow, Mr. Huff followed along expecting to get a shot. He noticed every now and then that other deer kept coming into the first deer's track and following along, and before night twelve had fallen into line; so at dark, when he was obliged to give up the chase, there were no less than thirteen deer ahead of him."

Turkeys, Deer and Otter.

AVOCA, N. C., Nov. 20.—*Editor Forest and Stream:* I send you an account of a day's outing at Avoca. We crossed to the Bald Gray plantation, just opposite my house, and in a very short time started two deer. Wilafred killed a very large doe. The dogs started another deer, and at the same time ran into a flock of turkeys. Tom Webb got two shots at these and killed one with each barrel. He killed one as they flew up. A second lit in a pine tree directly over his head. This turkey was so alarmed at the dogs that Webb was enabled to move out so he could get an unobstructed aim.

We took a canoe to bring the doe home, and, coming down the creek, when less than 400yds. from the Avoca residence, we saw four large otter sporting in the water. Guns and a pair of hounds were in the bow of the boat, and before any one could get a gun the dogs sprang overboard and chased the otter into their den. While digging and scratching to get the otters out Mr. Warrenton saw another one coming across the creek. Paddled after it, and when he got near the otter dove and rose within range, and Warrenton's unerring aim killed him.

Pretty fair sport for a few hours and but little labor. We have four turkey wings, one deer skin and one otter hide. W. R. CAPEHART.

Florida Game and Fish.

GULF HAMMOCK HOUSE, Lerry County, Fla., Dec. 7.—W. L. Multeer, C. E. Owens, A. H. Deusler, Mr. Littlefield and D. Wert left here a few days ago highly pleased. They were here four days, and killed two very fine bucks and several turkeys. Two of these gentlemen preferred to fish. Mr. Owens caught over seventy black bass weighing from 2 to 7lbs. each.

Mr. J. S. Weeks and G. H. Barker left the house on a camp hunt; they were gone three days and came in with a fine deer, several ducks, squirrels and black and channel bass.

Turkeys are very plentiful this year, and fishing first class. C. B. WINGATE.

Curious Tourist—"What are you fishing for?" Farmer's Boy—"Fish?" Curious Tourist—"What do you use?" Farmer's Boy—"Bait." Curious Tourist—"How do they bite?" Farmer's Boy—"With their mouths."—*Exchange.*

Sea and River Fishing.

MEN I HAVE FISHED WITH.

XXV.—Amos Decker.

AMOS was a raw-boned six-footer, about fifty years old when I met him, bronzed with exposure, and tough as a pine knot. He had drifted ahead of civilization for over a quarter of a century, clearing timber in Michigan, breaking prairie in Illinois, taking up claims and selling out when the neighborhood became too thickly settled; one of those restless men that were always found on the best quarter section within a township awaiting a customer for his betterments. Unlike his class, he was a man of fair education, whose memory retained much of what had evidently been an extensive course of reading in his youth; but his associations had sadly impaired any grammatical rules he might once have known.

Amos may or may not have been a bachelor. He lived alone in a well-built log house on a bank of the Neosho, near where Burlington now stands; and it was not good form in Kansas in those days to be curious about the past of such men as you chanced to meet. What little I knew of his early life I have told and gathered from stories that he related in the intimacy of camp life. Warren and I had been down the Verdigris River as far as Independence, and then struck off northeast to the Neosho and up that stream. We were looking for land for several Eastern men who wanted to settle together if certain conditions of wood, water, etc., could be found on Government land, for they would not buy claims. When we got up as far as the cabin of Amos my pony was lame, and we stopped and asked if we could rest and see to our critters. We spoke enough of the Missouri language, which largely prevailed in that part—although occasionally mixed with and diluted by the vocabulary of Posey county, Ind.—to know that a horse was a "critter," and a cow was a "creetur."

After the usual question, "Whar ye from?" and the answer being satisfactory, he looked at my pony's foot and pulled out a cactus thorn that had somehow got in it, although no Indian pony would go near a bed of that plant. He said: "I wouldn't ride him any more to-day, stop over with me to-night and the pony 'll be better in the mawnin'." In the last sketch I referred to the troubles that disturbed the Territory of Kansas, and strangers were cautious, judging one to be "free State" or "pro-slavery" by his nativity. Amos probably sized us up long before we had him figured down, but it did not take long to decide that he was to be trusted, because he could pronounce his r's, that shibboleth of the man reared south of Mason and Dixon's line—in those days at least.

Warren and I had been camping and living on small game tempered with salt pork and the occasional purchase of corn bread, and when Amos suggested that if the water was not so muddy after the rain he would shoot a pike for dinner, Warren suggested catching one. Amos had no fish hooks, but we had a few and some lines. I watched him rig for skittering, and remarked that he had fished before.

"Yes," said he, "we used to ketch pike in the Wabash an' Massaseep by puttin' on a killy an' slingin 'em out."

I caught the word "killy" and said: "I s'pose it's a long time since you left New York."

"Never lived in New York," and he gave me a look of inquiry. "What made ye think that?"

"I meant New Jersey. They're close together and I made a mistake. I can always tell a man that comes from New Jersey, no matter how long he's been away from it."

"See here, stranger! I was a boy in New Jersey once, but you don't know it, you only guessed at it. You may be good at guessin', guess ag'in."

"Well, you lived down along the salt water, about Raritan Bay or Staten Island Sound. I only want to look into a man's eye to tell where he comes from, and didn't have to ask where you came from."

Then I mystified him with some old sleight-of-hand tricks: passed a half dollar through his hat, let him draw a card from the pack and then after putting it back with the rest told him to feel in his coat pocket and find it, and several such simple tricks which puzzled him.

Said he: "Look a-here, stranger, that's the best I ever seed. Oncet, on the old Massaseep, I seed a feller do sich tricks, but he had a show on a boat an' a stage, an' we wus so fur off we c'u'dn't see how he dun 'em; but I'll be durned ef you don't do 'em right here with my own keerds. Say, do 'em over ag'in, will ye? I want to see how ye do 'em. Say, stranger, ef you'll stay here with me I'll keep ye six months an' show ye the bes' claims about yere."

I declined to repeat the tricks; all great magicians resist such entreaties. I had puzzled this shrewd frontiersman by some simple things and didn't care to lose my prestige, just as you never wish to make a second rifle or pistol shot after a very lucky first one.

When we were alone Warren said: "Them tricks was all right; I don't know just how you do 'em, but that business of locating the old man in New Jersey is what bothers me, and it bothers him. How did you do it?"

"If I tell you will you keep it?"

"Betcher! Wouldn't tell him, but it's workin' on the old man an' it's workin' on me."

"Well, it's all based on a word. He called a little bait fish a 'killy,' and that name is one left by the Dutch settlers along the salt waters of New York and New Jersey, and is used in no other part of the country. You noticed that I guessed New York first, but corrected it on the second guessing."

Amos had turned his back to put some wood on the fire and I carelessly opened a book on a shelf and saw his name in it. Quickly closing it, I resumed conversation and afterward laboriously spelled out his name from the lines in his hand.

"Stranger," said he, slowly, "you ar' suttenly a gifted man. To look at yer no one would ever mistrust it, but I've read about how these things could be done, but never put no faith in it, but now I'm convinced. Stranger, put it thar!"

"Amos," said I, "I'm a greenhorn from the East, but I object to being called 'stranger' by every stranger that I meet. I'm no more a stranger to a man I never saw before than he is to me and I won't stand it. If you'll drop that word we'll be friends and go a-fishing. What d'ye say?"

Warren had caught some minnows in a little stream and we went down to the edge of the river to fish with some heavy pecan poles, which our host pronounced "pecawn;" this is a species of hickory which bears the nut of commerce and is very strong and elastic, but heavy. The water appeared to be so muddy that there seemed but little chance of a fish seeing our bait, but we kept casting and skittering until I got a rise that took the bait off the hook. This was encouraging. Then Amos got a strike that was a savage one; it pulled the line through the ring on the tip of his hickory switch and scorched his hand in checking the rush. We had no reels; I had probably seen them in Eastern stores, but had no knowledge of them in practical fishing. It was evident that Amos knew as much about fishing as I did, and that was considerable, I thought. He soon checked the fish and landed it, a pike of some kind that may have weighed 5lbs. Warren struck something, wet his foot and lost his line, because it was short and was not fastened to the butt.

"Betcher," said he, "that fish would weigh 50lbs. It was the biggest one I ever hooked. No man c'd 'a' stopped him. Did you see how he took that line out? Why, lightnin' 'ud 'a' been left away behind in that race."

Amos suggested that the pike would make our dinner and we let the minnows go and went up to his cabin. While he prepared dinner I looked after the ponies, which were staked out on the prairie; led them down to water and gave them some salt. I wonder if an Indian ever wasted salt on a pony? It's doubtful. About the only thing that I ever saw them give a pony freely was a club. My tough little fellow, which I had named "Jimsey," a sort of pet form of "Jim," had become greatly attached to me through the agency of salt and sugar. Warren came out and put a hobble on his pony and I turned mine loose. I urged him to do likewise, but he said:

"That's all right; Jimsey will stay here with Pete because he's hobbled, but, betcher, you let 'em both loose an' you'll never see 'em ag'in."

"Let Pete loose, an' if he goes away I'll give you my claim. The ponies will get better feed if they can range, and a stranger can't catch 'em. We're goin' to stop here all night, and if our ponies go off you can have my claim and its betterments."

"It's a go; Pete wouldn't fetch more'n $30, an' your claim, with house, well and ten acres of broken prairie all fenced is wuth more'n ten times that."

His pony was relieved from the hobble, and we went in to dinner. The pike had been boiled and had a dressing of drawn butter, a most unusual thing in that region of plain living and high thinking. But Amos had cows which are well enough in their way, but have a habit of giving milk as a raw material and leaving its manufacture into cheese and butter to other hands. The question was: Whose hands? If I had puzzled Amos with a few simple tricks of legerdemain, such as are published in many books on the subject, he presented the problem: "Who milked his cows and made the butter?" Of course he could do it, but he was often gone for weeks, and cows must be milked twice each day. He had butter, and that is all we knew.

After dinner and pipes Warren went out, and they reported that our ponies were not in sight. "Gone down in the timber to browse on the mulberry bark," said Amos. "I'll tell you what it is, you fellers make a mistake in thinking them animiles 'ud druther have corn shelled or on the cob than to browse. They'd druther git down in that bottom timber an' eat hazel brush an' young mulberry an inch thick 'an to have all the corn 'at you c'd set afore 'em. Let 'em go; they'll look out fer you ef you give 'em salt an' sugar, es Fred says he's done. Don't you worry."

Morning came and after breakfast we went to the edge of the woods; I gave the shrill whistle with the fingers and called my pony's name. Soon he answered, and both animals followed us back to the cabin. Here I will say that I am not a horseman and have no liking for horses. Few men like horses. They will tell you that they "like a good horse." That means that they like him while he is young and stylish, but when all that is past he may be sold to pull an ash cart. Out on such love! Compare it with the love that the sportsman has for his dog, that has worked the fields with him in heat and cold, his skin torn by briers in summer and his feet frozen in the winter's snows. Is the old dog sold into drudgery in his old days? "Not on your life!" as the phrase of the day goes. Therefore I do not believe that the average man loves the horse for more than he can get out of him. I have a regard for the horse as a most useful animal, just as I have a regard for a locomotive as a bit of useful machinery; but I think, with Charles Dickens, that the head of a horse, at its best, is not a handsome thing, admitting that some horses may have comparatively handsome heads by some modification of that long nose. I am wondering what Dickens would have thought of the head of a moose! There is no doubt but Mr. Moose sees some most delicate lines of beauty in the facial contour of Mrs. Moose, but we are not educated up to their standard, that's the trouble, and a moose is the homeliest animal that my eyes ever gazed upon, take head, body or legs, or in "the altogether."

Before we left the breakfast table Amos had arranged a buffalo hunt for the next week, and we agreed to go with him. His idea and that of his neighbors was to take ox teams and bring back loads of beef for present use and for salting for winter, as well as to get the skins for robes to use or to sell.

The week rolled around and our arms were cleaned and oiled, knives sharpened, the covered wagon packed with camping necessities and all ready to hitch the cattle to long before the train of ten wagons hove in sight. By the time they reached my cabin we had the ponies haltered and tied behind, and the two yoke of oxen hitched and ready to fall in the rear of the procession when it passed. We went off to the southwest and in a few miles struck a well-broken trail near the head of the Verdigris, which they had left some distance back to go out of the way to pick us up. We were out four nights before we reached the Arkansas River, some eighty miles from our place. The country was rolling prairie with timber along the frequent streams, and on the third day out I saw the first live buffalo, a herd of several hundred which pungled off like porpoises when we came in sight. I wondered why the men did not chase them, but learned that they were not going to kill a buffalo until there was a chance to

camp and go at it with some sort of system. Warren counted heads and said that the other ten wagons contained twenty-five men and with ours there were thirty ponies in the party. Amos seemed to be the leader and directed the movements. We camped near the mouth of a small stream on the north bank of the river; the wagons were arranged so as to form a corral to keep the live stock in at night to prevent a stampede by wolves or buffalo, but we had to enlarge the circle with logs. The oxen and ponies had been feeding while we were doing this and then we gathered them in for the night; three guards were appointed to keep watch, one at a time, for fear of accident that might stampede our stock in spite of the corral and leave us in bad shape. There was danger that some prowling band of Osages, Kaws or other Indians might do this, so an armed man patroled outside the corral while we slept.

It rained in the night, but the morning was fair, and leaving ten men to see that the stock did not wander and to keep camp we saddled our ponies and started to look for the game. To a question Amos replied: "No, we had our guard all picked afore we started, and we don't expect you boys to do any of it. Them ten men will take care o' things night an' day. I ast ye to come an' hunt, didn't I? Then what ye talkin' 'bout? There ain't even an ole bull in sight, but you can see where the herd went north toward the Smoky Hill Fork, an' mebbe gone on to the Saline or way up to Solomon Fork. But there's more—a heap more—an' if we don't strike 'em to-day why to-morrer's comin'. If it was dry ground we might see where there was a herd by the dust; there's an old bull now off by hisself, but we don't want him. There's nothin' good about him but his overcoat, an' that's on'y good for buckskin. Them old bulls get druv out by the young ones an' just herd by theirselves."

We went north to the divide that separates the waters flowing into the Arkansas from those of the Smoky Hill Fork of Kaw River, which feeds the Missouri as far north as Kansas City. The Kaw River is spelled "Kansas" on the maps, but nobody called it anything but Kaw, after the tribe of degraded Indians who lived along its waters. Why this was so may be classed in Lord Dundreary's catalogue of "things no fellow can find out." It was near noon when our ponies were hobbled and given a couple of hours to graze and drink, while we ate, smoked and talked. There had been no introductions, such things were superfluous in those days among such men, and we had scraped acquaintance and knew a few Johns, Jims, Bills and Joes. They were rough, ignorant men, frontier farmers, and as I was in that class we got along, but it was evident that Amos had exploited me as a magician, for they were curious about me after we made camp at night. They were satisfied that I was a Free State man, for that was the first thing that a man wished to satisfy himself on in those days; are you friend or foe?

This curiosity became too strong to be controlled, and Joe broke out with: "Amos says you can see through a pack of cards and tell how they will deal; is that so?"

"No; Amos says many things besides his prayers. Sometimes I make a guess at what cards a man holds, and if I guess anywhere near right he thinks it wonderful. Hand me that pack, and I'll make a guess on the hand you have after you have cut the cards."

This was a rash statement, for the pack was well worn and dirty, but my fame was at stake. Running them over in shuffling, I got the four aces and a king at the bottom of the pack, and then laid it on the blanket. "Now you cut the cards anywhere you like," said I, and he cut near the middle. Catching the eyes of the crowd, I put the "cut" back on top, and played the old trick of dealing from the end of the pack, giving him a card from the bottom and myself one from the top. When the deal was finished, I said: "It's hard to see through these cards, they're so dirty, but your hand beats mine. Keep 'em all together, don't spread 'em out; I can guess better when they're bunched. Let's see! I guess you've got four aces and a queen; no, it's a king, the king of spades, I think; it's a black one; no, it's the king of clubs."

He showed down the hand as I called it, and those simple men were astounded. Both Warren and Amos told me that the hand was dealt from the bottom, but they had seen more of such things than the others. The company of these men was no pleasure; they were men shrewd enough at a bargain, but children in everthing else; they had read nothing, could talk of nothing but their own uneventful lives. Yet it was necessary that something should be done to relieve the monotony of sitting around a campfire and listening to the talk of men who could not talk. Therefore, to relieve myself from the dreadful situation, ten times more lonesome than if no human being had been within 100 miles, I "opened my box of tricks," learned in the idle moments of schoolboy life, and amused myself and companions with the few simple bits of legerdemain which I could call to mind. Later in life many such situations have occurred, when if you wanted any fun you must make it yourself, and it is my mature opinion that such a crowd have so little humor that they don't appreciate anything except practical jokes or the wonders of the magician. The humorous story or the witty repartee is wasted on them as much as it would be on a Digger Indian. Yet that is the state of mind of over half of the people of the United States, taking them "by and large." It is safe to say that outside what may be called the educated classes few appreciate a joke unless it is in its roughest costume. Refine it, put it in evening dress, and it "is caviare to the general;" but the few who can and do enjoy it are those for whom it was intended. Jests are of so many kinds that some are offensive. Bacon, in his Essays, says: "As for jest, there be certain things which ought to be privileged from it, namely, religion, matters of state, great persons, any man's present business of importance, any case that deserveth pity." This definition is "funny"—to this generation.

It is funny because "matters of state" are the subject of political cartoons in almost every illustrated paper of to-day, and as for "great persons"—they are the fellows who get it! A young friend at my elbow, who is fully abreast of the current idioms of the day, says: "Yes, an' they git it frequent, right where Alice wears her pearls."

"Johnny," I asked, "what do you mean? What has Alice and her pearls—"

"Why, they get it in the neck! See? O, I forget, you wasn't alive last week. Say, that was a big scald on Senator ——— in last week's *Scalder*. Did you see it?"

This is the sort of interruption that comes to a man who writes of old times when his surroundings are not congenial. After removing Johnnie I tried to get back by a jump of forty years from the present to the day when the buffalo grazed from Oregon to Texas.

On our way back to camp we saw a few solitary bulls, and some time in the night there was an alarm that turned us all out with our rifles ready for action. One of the herders had gone off to the eastward and struck a small bunch of buffalo and had killed a calf. He had brought the dressed carcass and the skin back, and had stretched the latter between two trees just outside the camp, and some wolves had torn it down and were fighting over it. A few fire brands settled the dispute, and the torn skin was brought in the corral in the interest of harmony.

The next morning was rainy, but the ponies had their corn and we our buffalo veal, and off we went. In less than an hour we saw the whole prairie covered with buffalo, grazing and going south. From a knoll the entire earth seemed covered with them as far as we could see. There might have been a million, or a hundred million, or as many figures as you please to add to the guess. I tell you in sober truth, and I ask you to believe me, I don't know how many buffalo were in that herd. Warren said: "Betcher there's mor'n ten hundred millons!" You may take Warren's estimate or mine, as you prefer, or you may go there and try to count the tracks of that great herd, I don't care; but I will assert that—that—there was a big lot of buffalo out there in the open air of that Kansas prairie one day in the fall of 1858. That herd was too big for a few men on ponies to stampede, and we put in the spurs and got up alongside. Those on the outside took the alarm and pressed on without other effect than to cause the others next them to think they were pressing for better forage. Amos had told me to pick a barren cow if I could find one, a fat young cow that had no calf of five or six months old near her, and to keep a sharp eye in the rear and not get mixed in the herd, or there would be a dead man and a dead pony.

There was then the spice of danger in this hunt! It began to be more interesting. I had thought it would be sufficient to make the trip and study the types of men, see a herd of buffalo with its flankers and rear-guard of wolves ready to capture a weak straggler or a calf that strayed too far, but now that there was danger there was a promise of sport. Hotspur truly says:

"The blood more stirs
To rouse a lion than to start a hare."

Our party had stretched out over two miles on the flank of the herd, which was moving slowly in the mass, but more swiftly near the hunters, and an occasional shot was heard. My pony would not take me too near; he had evidently seen a herd of buffalo before, and I only feared for the rear. It was getting to be interesting, and after I had singled out my game and tried to get alongside it, with no other buffalo intervening, it was exciting.

Unconsciously I gave a whoop as the picked animal came in plain view, and the pony didn't need spur nor whip to quicken his pace to get alongside; he understood it all. Once alongside the galloping beast, a new difficulty appeared; she was at my right hand and I feared to twist in the saddle, not knowing how the pony would act, and I had never shot from my left shoulder. I did, however, shift the rifle to my left arm and fired. The pony never swerved and the huge beast dropped. The shot caused the animals near me to crowd away and I circled about and shot again as the animal was about to rise; a few struggles and I had killed a buffalo.

"Come on! kill some more," yelled Warren as he passed, seeking a fresh victim; but I had cooled down and was content to watch the herd as it turned off to the right up the river, looking more like a sea covered with rolling porpoises than anything I can liken it to. I sat on my pony gazing on the wonderful sight while my companions followed the herd and thought only of killing. To-day it seems like a dream. Where we rode beside that great herd the locomotive shrieks and a generation of men has been born who may occasionally plow up a bone or a horn that tells of an extinct race of great animals.

It was well along in the afternoon before all had gathered at the camp, and the rain still fell. The guards fed the ponies and we made a big fire to dry ourselves by, and by the time supper was over there was a rainbow in the east. Amos came over to our wagon and wanted to know how I liked buffalo hunting.

"Well, Amos," I replied, "it's a good deal like goin' into a barnyard an' shootin' cattle; just galloping alongside of a steer an' pluggin' him with lead until he drops. I'd a heap sight rather shoot woodcock."

"Woodcock! What's them? Them air big woodpeckers 'at drums on trees fur grubs? Why, they ain't good to eat an' it takes as much powder an' lead to kill one on 'em as it does to kill a buffler that weighs over a quarter of a ton. Wal, that's all right, you can shoot woodpeckers ef you like, but when I shoot I want to see something worth shooting at."

I hadn't the courage to explain what a woodcock was, it wouldn't have helped the matter in the least, nor the disposition to argue the case of sport *versus* meat; that would have been equally hopeless. So I said: "Won't the wolves spoil the skins and the meat to-night before we can save both in the morning?"

"Yes, some on 'em," said he, "but it's the best we could do, an' if we're short we'll kill some more. We allers kill enough for ourselves an' the wolves too, there's plenty of 'em."

After Amos left us Warren said: "Betcher didn't kill any more buffler 'an I did. Honest, now, how many?"

"One."

"Is that all? Why, what joo do all day? Betcher I killed half a dozen and put my mark on a lot more; I come out here for fun, I did, an' now the gang's goin' back as soon as they skin an' load up the meat."

There was no use in talking to this man. I began to feel myself out of touch with the rest, holding opinions which I did not care to expose to ridicule by expressing them, so I turned the talk in another direction. We could hear the wolves howl and fight as long as we heard anything, and when silence came morning came with it.

"Camp was broken, and the oxen were hitched up and the wagons scattered to do their work. Guards and all hands went to the labor of skinning, and from inquiry afterward I learned that nearly 100 buffalo had been killed by seventeen men! But they were not all choice beeves, and then only the forequarters with the hump rib were to be taken back, for those and the tongues were the choice parts. If time permitted, they would all be skinned and the wolves would put a polish on the bones.

I had been greatly impressed by that pigeon slaughter which Cooper relates in one of the "Leather Stocking" tales, where the people loaded a cannon and brought down hundreds at a shot, while Natty protested, killed one pigeon for his own use and went his way. That's a good thing for a boy to read; it had its effect on me all through life. It's the fashion to sneer at Cooper, and say that there never were any such Indians as his. That may be so, but it's the fault of the Indians. I like Cooper's Indians, but the real thing, with the dirt and vermin-laden blanket; "Faugh! an ounce of civet, good apothecary, to sweeten my imagination."

We will pass over the disgusting detail of skinning and loading up. Six skins fell to Warren and me, and several forequarters and tongues. That's all there is of our hunt. The party was a most uninteresting one, devoid of intelligence and consequently of humor. Amos and Warren were the only two whose company was endurable on this my first and only buffalo hunt. If my friend of later years, old Nessmuk, had been there he would have agreed with me, and in his fondness for parody might have said:

"Better fifty shots at woodcock
Than ten tons of buffalo."

I learned that the hide of a buffalo bull was not worth taking because the hair was thin or absent on the hindquarters, and that their beef was worthless; but that the fine robes came from the cows, and that the hump rib of a two-year-old heifer was a fine bit of beef.

On the wall of my den hangs a pair of buffalo horns saved from the slaughter of that day. Below them are a pair of snowshoes and the sword of an officer of the line. Sometimes an old man rests his eyes upon these relics until the present is forgotten; the rushing bison with their thundering tramp and grunting snort go by in countless herds, which somehow change into battalions of armed men with glistening bayonets and ragged colors, which afterward fade into the brown of the forest and the stillness only broken by the fall of the snowshoe, until he is aroused by a soft hand on his shoulder, and a soft voice by his side says: "Hadn't you better get ready for dinner? You've been asleep." FRED. MATHER.

PENNSYLVANIA ASSOCIATION.

PHILADELPHIA, Dec. 12.—The regular monthly meeting of the Pennsylvania Fish Protective Association was held Saturday evening, Dec. 12, at the rooms, 1020 Arch street, Philadelphia.

The Association has long had under consideration the subject of effecting State organization, in order to secure concurrent action in behalf of the fishery interests. It has fostered and assisted in the formation of local organizations of kindred character throughout the State with this object in view.

Those efforts have been most gratifying, until at this time there are sufficient local clubs to warrant the belief that this desirable object can be accomplished.

Two propositions were submitted: Club membership, and the advisability of issuing a call for a convention for the purpose of forming a State league.

The latter has its drawbacks and was once tried without success, in view of which it was finally decided that, as this Association was the oldest chartered organization of its kind in the State, covering the entire State in its work, all the purposes of a State league could be accomplished by the creation of club membership. Suitable amendments were adopted at the meeting.

The amendments provide for, first, active members, who alone shall own and control the assets of the Association; second, contributing members, who must reside outside of the city of Philadelphia and counties contiguous thereto, and who shall have all the rights and privileges of active members, save only any participation or ownership in the assets of the Association; third, corresponding members, who shall have a voice but no vote in the meetings of the Association; fourth, honorary members.

Sec. 2. "All applications for membership must be in writing and recommended by a member of the Association, who must be personally acquainted with the applicant and vouch for his or its good character; and every application for membership must give the name, residence and occupation of each individual, and the name and location of every club being a candidate.

Sec. 3. "The election of active and contributing members shall be by ballot at the next stated meeting after proposal, and three black balls will be deemed sufficient to cause the rejection of any candidate. A name, once rejected, cannot again be presented within six months thereafter, except by unanimous consent.

Sec. 4. "Any person or club, upon being elected, must pay the dues prescribed before being admitted to the privileges of membership.

Sec. 5. "Any duly organized club or association which may now or at any time hereafter be organized 'for the purposes named in Article I.' by at least five citizens of this Commonwealth, may be eligible to either or any of the memberships designated in Sec. 1 of this article, upon election in manner and form as is hereinbefore provided."

We are now ready for the whipping-in process and propose to draft lengthy circulars outlining the plans, copies of which will be sent broadcast through the State.

A resolution was adopted tendering the use of the rooms of the Association to the State Fish Commission in the event of their holding a meeting in this city at any time they may elect.

A special Committee on Legislation was appointed to keep in touch with all bills presented to the Legislature affecting the fishing interests, and urge the passage of all measures designed for their improvement, as follows: Dr. B. W. James, Howard A. Chase, B. L. Douredoure, Wm. E. Meehan and M. G. Sellers.

The members of the State Fish Commission were unanimously elected honorary members of the Association.

Communications advising the progress of local organizations in several counties of the State were read and congratulations extended.

A special committee was appointed to confer with the State Fish Commission in an effort to have placed in all the public schools of the State charts containing the colored plates of fishes, spawning season, etc., as contained in the report of Pennsylvania Commission.

We find much to do as a public educator; though we fought hard to establish a public aquarium in this city, we sometimes think New York stole our thunder; however, we are still at it. The above may lead up to it, and we are looking after the rising generation.

The nominations were as follows: President, Edwin Hagert; Vice Presidents: Dr. Bushrod W. James, Geo. T. Stokes, Wm. P. Thompson, Howard A. Chase (three to be chosen). Recording Sec'y, Marion G. Sellers; Corresponding Sec'y, J. P. Collins; Treasurers: Alfred Hand, Wm. S. Hergesheimer. Ex. Com. (nine to be chosen): Geo. T. Stokes, H. A. Chase, Wm. P. Thompson, Wm. H. Burkhardt, Dr. W. W. McClure, Wm. E. Meehan, Edw. A. Selliez, Robt. M. Mackay, Chas. H. Thompson, Alfred Hand, B. L. Douredoure, Wm. P. Ogelsby, S. E. Landis. Trustee three years), H. O. Wilbur.

M. G. SELLERS.

The Black Bass Record.

SPRING CITY, Tenn.—*Editor Forest and Stream:* While reading the advertisements in a recent issue of FOREST AND STREAM I found the following: "Seven and one half pound black bass, conceded by all to be the champion of America." Are we expected to believe this? Certainly larger fish have been caught here. JAS. L. HOYAL.

[This is not the black bass record. We shall print next week a list of recorded heavy fish, black bass among them.]

BENCH SHOWS.

1897.

Feb. 2 to 5.—New England Kennel Club's annual show, Boston.

FIELD TRIALS.

1897.

Jan. 11.—Tupela, Miss.—Continental Field Trial Club's quail trials. P. T. Madison, Sec'y.

Jan. 18.—West Point, Miss.—U. S. F. T. C. winter trials. W. B. Stafford, Sec'y, Trenton, Tenn.

Nov. 8.—Carlisle, Ind.—Union Field Trials Club second annual trials. P. T. Madison, Sec'y, Indianapolis, Ind.

Joan's Sense of Color.

AT work in my study this morning, I heard my dog Joan barking furiously in the back yard. I said to myself: "She is barking at a dog, and that dog is black." I thought that she was barking at a dog, because a dog is apt to fall on the haunches and bark directly at a man, while he (or she) is apt to move and bark about another dog; and I concluded that she was barking at a black dog, because the color black (or dark) has irritated her ever since I have had her. I do not know whether her dislike of black is the result of a prenatal influence nor whether she was frightened by some black thing or person in her puppydom. I do not know why Joan is irritated by black—I simply know the fact that she is. I became aware of this fact very soon ofter she came to me—a present from Dr. F. W. Kitchel—when she was about two months old. A pure African woman comes to the rectory regularly to do the washing. As soon as Joan saw this woman she ran away, her tail between her legs, yelping. When she had gotten to a safe distance she showed her irritation by barking with all her little might. I could not understand this at first, because I knew Mary Ann (the African woman's name) to be such a lover of dogs that she keeps a whole pack of them about her, to the disgust of many people who think that it costs her too much to keep them; forgetting that "man lives not by bread alone, but by every word that proceedeth out of the mouth of God;" and that her dogs may feed a part of Mary Ann which is more important than her body—a part that is not of the grave. I could not, I say, understand at first why Mary Ann was offensive to Joan. I thought that the dislike would pass; but it did not; it increased. Mary Ann made many overtures—she still makes them—but Joan seems now, after the lapse of many months, to actually hate her. We know when Mary Ann is coming by the ferocity of Joan's barking. I by accident discovered the secret of Joan's resentment of the propinquity of Mary Ann one day. A case, homemade from store boxes, had been placed in the dining-room and covered with some heavy material of so dark a red that in the gloaming it appears almost black. It was in the gloaming that Joan and I both first saw it. She stared at it in an affrighted way, her ears dropped, her tail went between her legs, and she slinked back of me against the wall. I saw at once that her spirits were ruffled by Many Ann because Mary Ann is black, and I must not forget to finish the story with which I started out. Joan is in an interesting condition, and I am somewhat anxious about her and about the coming generation.

My conclusion was right. When I dropped my pen and went into the back yard this morning I found that Joan was barking at a dog, and that that dog was completely black. I could not see a white or a light hair on his body. What does all this teach? Why, that the dog has the sense of color, and that he has the abstract notion of color, the notion apart from the thing that is of a certain color. To Joan are not only Mary Ann, the fabric covering the extemporized case, and the dog black (or dark), but to her black (or dark) is black (or dark); and whoever or whatever has an abstract idea belongs to the abstract, and it is the abstract that is eternal.

CHARLES JOSIAH ADAMS.

ROSSVILLE, S. I.

Irish Terrier Produce Stakes.

THE Irish Terrier Produce Stakes, under the auspices of the New England Kennel Club, will be decided at the coming Boston show, Feb. 2, 1897. Entries closed Jan. 1, 1896, and, as you will see by inclosed list, thirteen brood bitches are entered: Dr. William F. Kenney's (Providence) Norena; Morton E. Cobb's (Newton, Mass.) Reculver Biddy; Samuel D. Parker's (Readville, Mass.) Beechgrove Jesse II., Carleton Belle and Lady; Samuel A. Fletcher's (Milton, Mass.) Nora Desmond; O. W. Donner's (Milton, Mass.) Milton Droleen, Milton Droleen, Milton Dingle and Milton Spuds; Toon & Thomas's (Salem, Mass.) Endcliffe Nora and Endcliffe Peggy; Hempstead Farm's (Hempstead, L. I.) Lady Eva. All remittances for entrance fees, etc., should be sent to Mr. Samuel D. Parker, 50 State street, Boston (treasurer of Produce Stakes), on or before the date the entries close for the New England Kennel Club's thirteenth annual bench show in February next.

COMMITTEE IRISH TERRIER PRODUCE STAKES,
Per O. W. DONNER.

N. E. K. Club's Show.

MR. ALLEN CHAMBERLAIN, press agent of the New England Kennel Club, writes that some people seem to think that there is some mistake about the dates of the Boston dog show this year—Feb. 2, 3, 4, 5—but they alone are mistaken in this. Those are the correct dates, and the Mechanics Building will be the stand, as of yore. The fact is the New England Kennel Club proposes to hold its show this year (which, by the way, is its thirteenth annual exhibition) at a time of the year when people can go to it. If it is held late in the spring, outdoor recreation is found to be too attractive by most persons, but in midwinter everyone will want to go. Another advantage is that at the opening of the season (this will be the first show of the circuit) the dogs are fresher and show up better than after they have traveled over half the country. Owners desirous of entering dogs should address the committee in charge of the show at their office, 167 Tremont street. Entries will close on Jan. 16. Each year sees many and many a good dog left out because the owner waited just too long before sending in the entry.

POINTS AND FLUSHES.

We are indebted to Mr. Thos. Johnson, Winnipeg, for some most interesting photographs of shooting scenes in Manitoba, where the prairie chicken is in such bountiful numbers. In a most interesting letter the following is specially noteworthy as showing what patient and skillful training will accomplish in making the horse useful afield in an intelligent manner. He says: "I should like to have shown you to what perfection a horse can be trained for shooting purposes. I paid more attention and devoted more time and energy this season to training the gray mare you will note on the right side in the photograph than I did to my dogs. She was a runaway and had other vicious habits. To-day she will stop to point or back; move on with the gun; stop to signal, a raise of my arm; come on to the whistle; follow me at a respectful distance all over the prairie, and at the finish take me home at a three-minute gait. I now hope to have her mate trained next season to the same degree of perfection as is herself. To me training is a pleasure."

The New England Kennel Club's prize list of its thirteenth annual show is now ready for distribution, and can be obtained of the Bench Show Committee, 167 Tremont street, Boston. The judges are: Mr. Chas. H. Mason, of New York, bloodhounds, Great Danes, St. Bernards, mastiffs, bull dogs, bull terriers, Scottish terriers, beagles, Skyes, whippets; Mr. James Mortimer, of New York, collies, deerhounds, wolfhounds, Irish terriers, dachshunde, Bedlington terriers, Dandie Dinmonts; Mr. John Davidson, of Monroe, Mich., pointers, setters, greyhounds; Mr. German Hopkins, of New York, fox terriers, Black and Tan terriers, foxhounds; Mr. E. M. Oldham, of New York, spaniels; Mr. T. Farrar Rackham, of New York, all toy dogs. Boston terrier judge to be announced later. E. M. Oldham, superintendent.

In our advertising columns Arthur Lovell, Putney, Vt., offers hunting dogs. C. V. S. Rea, Hackettstown, N. J., offers trained setter. M., care FOREST AND STREAM, offers trained Irish setter. Geo. Douglas, Woodstock, Ont., offers cockers. Box 392, Cincinnati, offers trained pointer. Dr. Treacy Ford, Meade, S. D., offers greyhounds. H. T. Mosley, Chaplin, Conn., offers broken setter.

There was organized at Pittsburg, Pa., Dec. 8, the Pittsburg Fox Terrier Club, with a membership of twenty-one of the representative and professional men of Pittsburg and Allegheny. The following officers were elected: President, B. S. Horne; Vice-President, John M. Chaplin; Treasurer, Wm. E. Lettell; Secretary, C. B. Garrison.

Printed rules and regulations governing the first annual Irish Terrier Produce Stakes, and the amount and division of prizes, can be obtained by addressing Samuel D. Parker, 50 State street, Boston.

Mr. G. P. Finnigan, Smithville Flats, N. Y., writes us under date of Dec. 7, that he has withdrawn from the stud his English setter dog Border Chief.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address. Prepared Blanks sent free on application.

NAMES CLAIMED.

The Reham Kennels claim the names

Reham Red Brant, for red cocker spaniel dog, by Cherry—Brantford Bonita.

Little Suitangi, for black cocker spaniel dog, by champion Black Duke—Flossie Wilshire.

Little High Admiral, for black dog, same litter.

Reham's Little Jet, for black cocker spaniel bitch, by Cherry—Dinah C.

Wheeling.

Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is particularly desirable.

HERE AND THERE.

AN Australian manufacturer of cycling shoes advertises free accident insurance with every purchase of boots or shoes to the value of five shillings. The coupon which the wheelman receives guarantees him the amount of $5 per week for a period not exceeding ten weeks in case of total disablement by accident, or $500 to his heirs in case of death by accident.

That so much can be offered to secure trade to the value of $1.25 would indicate that cycling is an extremely safe sport as far as serious accidents are concerned.

On the Col du Chut a hotel keeper has devised a practical and extremely simple brake for use in coasting down the long and dangerous hills that are characteristic of his neighborhood, which he furnishes free of charge to his patrons. This is nothing more than a good sized fagot of wood attached to a cord 6ft. long. The cord is made fast to the saddle post of the bicycle and the friction of the fagot on the road is said to render the descent of the worst inclines perfectly safe and easy. A somewhat similar drag has been successfully used on the Pacific coast. In the latter case the boughs of trees were substituted. Such brakes have the advantage of not injuring the tires, but can, of course, only be used to advantage where the descent is unbroken.

A member of the L. A. W. described a game of hare and hounds on bicycles as played at Vevay, Switzerland, in which both men and women took part. A lady was always chosen one of the hares, and similarly it was found necessary to make the rule that among the hounds a woman should always lead, though not necessarily the same one throughout the course. This was to prevent riders with scorching proclivities from outstripping the pack.

For a ten-mile run the hares were given a start of ten minutes; for twelve miles, twelve minutes, etc. Each hare carried a bag of paper scent to scatter along the route, and at turns of the road it was allowable to scatter false scent to throw the hounds off.

The latest adaptation of the bicycle in France is in the strictly utilitarian direction of a fire extinguisher. The bicycle fire engine is made like a double tandem, with hose and a powerful pump placed between. The weight of the machine is about 140lbs., and it is propelled by four men. Once the scene of the fire is reached, the engine is made stationary by raising the wheels from the ground. The hose is connected and the pump adjusted, and then the firemen mount to their saddles again and pedal away to work the pump. It is said that four men working together in this way can throw a stream of water 75 or 100ft. into the air at the rate of 4,500 gallons an hour. Such engines would prove a boon to many rural and suburban communities in need of fire departments.

A gentleman in Lausanne, on the borders of Lake Geneva, tried to discourage cycling by scattering tacks along a road much used by wheelmen. His enterprise was momentarily successful, for three dozen riders in a road race had their wheels disabled as a result. Ordinarily the mischief-maker might have hoped to escape unpunished, but these racers were more than usually provoked, as their chances for winning were gone; so one and all they relentlessly sought out the ingenuous resident of Lausanne, and dragged him to a police court. Here the prisoner, who was a man of means, tried to escape by pleading it was only done for a joke; but in the presence of his thirty-six outraged victims the humor was not very apparent.

He was fined 2,200 francs for the damage done, and the summary justice which he received has proved a warning to tack throwers that will not soon be forgotten.

TIRE TALK.

'Way back in 1846 an Englishman named Thompson invented and patented the first pneumatic tire. His tire had an inner tube of soft rubber and an outer covering of leather. A few years later the leather sheath was replaced by rubber thickened in the tread, thus producing a tire similar to many in use at the present time.

His invention was regarded as of little consequence, and it remained for another man more than forty years later to practically utilize pneumatic tires in connection with the bicycle, and to reap the reward that resulted.

One objection that riders make to soft tires is that they are slow. Just why this should be so we have never seen satisfactorily settled. The reason that is commonly given is that the additional elasticity gained checks the momentum of the wheel and wastes a portion of the propelling force.

Such statements are contrary to fact and easily disproved, for if rigidity were an advantage the steel tires of racing sulkies would hardly have given place to the pneumatic tires now so universally in use.

In Paris pneumatic tires are in common use on cab wheels. It is stated that they not only have the advantage over iron or even solid rubber tires in that they lessen the jar and noise, but that they also decrease the traction power, a result due to their increased springiness.

On good roads they are said to be 38 per cent. more economical in use than tires of the ordinary type, and on the worst roads the saving is nearly 70 per cent.

Both wire and wooden spoked wheels are used, and the best results are obtained with a moderate air pressure of about 6.5lbs. to the square inch.

Worn out tires are not altogether worthless. They have a commercial valuation, though it is comparatively trifling. Junk dealers buy them, and rag dealers also take them when they are offered. They bring $100 by the ton, which means that the dealers pay about 5 cents a pound for them, or 15 to 20 cents for the single tire. Pure rubber is worth from 50 cents a pound up on the spot where it is grown, but tires have so much cotton and mineral matter in their composition that the amount of the commercial article that can be saved is not great.

Pneumatic tires have better gum in them than rubber shoes, and are worth more when they reach the grinding mill. The rubber is also better than that in the solid tires, and, weight for weight, the pneumatics are worth about twice as much. If you have an old bicycle, however, it is better to give it away than to try to realize anything on the tires.

Age Limit for Wheeling.

THE limit of age for cycling is a question which is calling for many opinions from the medical press. The *British Medical Journal* has this to say about it: "In the first place, no child under the age of seven years should be permitted to learn under any circumstances, and very great care must be taken that any boy or girl of that tender age becoming a rider is properly fitted with a suitable machine, and that the pedals, handle bar and saddle are so adjusted that he can sit properly upright and use his strength to the best advantage without distorting his body or injuring his growing tissues. The crank should be

short—4½in. are ample—and the gear low, and the 'reach' so short that when the child is sitting easily on the saddle he can place his heel on the pedal when at its lowest point. The handle bar must be raised to such an extent and the handles so brought around that they can be conveniently grasped when the forearm is nearly fully extended and the trunk erect. The saddle must be of proper size, and so adjusted that the peak does not cause any undue pressure; and, when all these preliminaries are fulfilled, the strictest supervision must be exercised to insure moderation as to the distances ridden and pace observed. All hill riding, except up a very slight incline, and all excessive speed should be forbidden, and the great test after a ride is the condition of the child the next day. If he eat well, sleep well, and is bright and lively, he has not done too much and is likely to reap benefit and suffer no harm from his exercise. When a person has been riding for some time and has regularly kept up his condition by constant practice, there is no reason why advancing years should compel him to give up his recreation and his exercise. There are scores of men who have passed the age of sixty years who are still capable of forty or fifty miles a day without fatigue, and the number of those who, though past the 'three score years and ten,' attribute their continued health to the regular use of their bicycle or tricycle is not inconsiderable. He would be a rash man who, without some very good and definite cause, ventured to debar his somewhat aged patients from an exercise which suited them and which is so adapted to persons who cannot walk much; for it must always be remembered that a man on a bicycle has not to carry his own weight, it is rolled on wheels for him, and the difference there must be in the exertion when a weight has both to be supported and propelled, and when it is only propelled on any kind of carriage, is apparent. An habitual rider, therefore, may be allowed to use his wheel as long as nature will allow him, and the more regularly he uses it within reason, the longer will nature allow him the use of it."

Yachting.

THE annual general meeting of the Yacht Racing Union of Long Island Sound will be held on Friday, Dec. 18, at 8 P M., at the Fifth Avenue Hotel, Parlor F. A full attendance of all club representatives is looked for, as important amendments to the racing rules are to be acted upon.

MR. J. R. MAXWELL, owner of Emerald, schooner, has decided to rebuild her in order to keep her in the racing with Colonia. To this end plans have been prepared by her designer, H C. Wintringham, for the removal of the entire keel and the lower strakes of the bottom plating, and the construction of a new keel nearly 4ft. deeper, increasing the draft from 10ft. to 14ft , the limit allowed by the new rules. This will, of course, necessitate a larger and entirely new rig to utilize the increased power derived from the lowering of the lead. The centerboard will, of course, be retained. This will be the second important alteration which has been made to the yacht, the fore body having been lengthened after her first season. The work will be done by T. S. Marvel, at Newburgh.

NEW YACHTS.

WITHIN the past week several new orders for steam craft have become known, one being for a new Marietta, No. III. of the name, for H. B. Moore, of New York, from designs by H. J. Gielow, designer of Marietta I. and Marietta II. The keel blocks for this yacht are now laid at the yard of John H. Robins & Co., Erie Basin, under the large shed erected last year to protect the steam yacht Sovereign while building. The new Marietta will be still larger than the older ones, 172ft. 6in. over all, 140ft. l.w.l., 18ft. beam. She will be of steel, with double bottom amidships, to be used for fresh-water tanks. Her machinery will include a four-cylinder triple expansion engine supplied by two water-tube boilers. The interior is carefully planned to give large and convenient rooms, with good ventilation, and the yacht will be finished with all the modern requisites, electric installation, complete plumbing throughout, etc.

In addition to the steam yacht already mentioned for Governeur Kortright, Gardner & Cox have two orders for larger craft. Mr. Kortright's yacht will be in many respects a novelty, being planned to meet his special requirements in a cruising craft for a summer home. She will carry a yawl rig, and her bow will be much the same as that of the modern sailing yacht, such as Queen Mab. She promises to be stylish and shipshape in appearance, and eminently comfortable and convenient. The two larger yachts—the owners of which are not yet known—will be 150 and 130ft. long. The 51-footer for Mr. Hoyt is now well under way at the shops of Wood & Son, City Island, who turned out such excellent work in Mr. Hoyt's 35-footer Norota. Gardner & Cox also have an order for a 70ft. racing length cutter.

The report is current that Howard Gould, owner of Niagara, will build this winter a large seagoing steam yacht for a cruise around the world, and the English papers state that James Gordon Bennett will replace Namouna by a very large steam yacht designed by Watson and built abroad.

C. S. Eaton, of Boston, owner of the notable knockabout Cock Robin, has just sold her to C. H. W. Foster, and will replace her with a Herreshoff 20-footer for the Seawanhaka races, to be handled by W. P. Fowle, so well known as the owner of the several successful Saracens some years since. Mr. Fowle has handled Cock Robin this year, and no small part of her success is due to him. The Herreshoffs also have an order for a knockabout for D. H. Percival, Jr., of Boston.

V. D. Bacon, of New York, has an order from a member of the Knickerbocker Y. C. for a design for a single-hand knockabout, to be 29ft. over all, 19ft. 6in. l.w.l., 8ft. 6in. beam, and 2ft. 6in. draft. She will be built at College Point. Thomas Clapham has sent to George T. Chester, of Buffalo, a design for a large sharpie, which will be built of steel at Buffalo. Mr. Clapham is at work on a yawl-rigged sharpie 36ft. over all for Mr. Kellogg, of Buffalo, and on a catboat for A. H. Cochran, of Yonkers.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

THE LAKE YACHT RACING UNION.

OUR recent publication of the rules of the new Yacht Racing Union of the Great Lakes, and our comments thereon, have brought the following letters:

Editor Forest and Stream:

In your issue of Dec. 5 you state that the Lake Yacht Racing Association adoped the British system of obtaining actual sail area for reasons which are not very clear. From very distinct recollections of the matter I am in a position to state that the change was made on account of the growing tendency to use bat's-wing and lug-sail rigs, which were never intended to be measured by the old Seawanhaka rule, and it was found impossible to twist or alter the rule so as to make it apply to them with fairness.

The reason of this was not far to seek. The Seawanhaka rule is based upon the assumption that the rig to be measured is approximately a triangle of which the topsail halliard sheave is the apex. To all such rigs it applies fairly enough, but very little ingenuity was required to devise a bat's-wing or lug-sail rig to which it would apply no better than a rule for measuring a triangle will apply to measuring a square.

As an instance of what was done under the old rule I recollect that Mr. Jarvis designed the 21-footer Thistledown to carry a battened lug of 540sq. ft. which measured only 450sq. ft. by the rule. It is quite evident that without some change the cutter rig would have been penalized so heavily that it would have been driven off the lake by this time. The British system of measuring sail area appeared a little complicated at first, but our yachtsmen soon got used to it. It is also to be noticed that a few changes were made in the existing British rule at the time of its adoption by the L. Y. R. A., such as the measurement to the extreme end of the gaff and boom instead of attempting to measure the head or foot of the sail when fully stretched.

Whatever theoretical objection may be made to this system, it has certainly worked very smoothly on Lake Ontario.

CLINTON, Ont., Dec. 5. WM. Q. PHILLIPS.

This explanation is probably the correct one. No one is better informed in the matter than our correspondent; and he is probably equally correct as to the practical operation of the Y. R. A. sail measurement on Lake Ontario. The Seawanhaka rule was never intended to measure the many varieties of small rigs: lug, lateen, gunter, etc.; nor has it been called on to do so in this country until a very recent date. Prior to the introduction of the 15ft. class in 1895, we remember but one instance of a racing yacht being fitted with other than the boom and gaff rig—the 25-footer Needle, built in 1891, and fitted, when she first came out, with the English "lug" as used on the Solent.

In its application to everything that can be termed a yacht as possessing some accommodation, and in distinction to the open sailing boat, the Seawanhaka rule is, we contend, superior to the Y. R. A. rule in that the measurements of the sail plan can be taken more easily, rapidly and certainly, and are capable of satisfactory verification in case of a dispute. When it comes to the 15 and 20-footers, with odd rigs of all kinds, the Seawanhaka method in its present form does not apply, and something more is necessary. This same difficulty has come very prominently to the front in arranging the terms for the new 20ft. class between the Royal St. Lawrence Y. C. and the Seawanhaka C. Y. C.

There are three possible solutions of the difficulty: First, to retain the Seawanhaka method for the great majority of yachts which are now fairly measured by it, with a special provision for the measuring of the odd rigs in the smaller classes by the Y. R. A. method; second the retention of the Seawanhaka method for rigs with gaff sails and the extension of the same principle of measuring as far as possible from the spars alone to cover the odd rigs; and, third, the substitution of the Y. R. A. method for all yachts. The first course is now recognized in the existing rules of most American clubs; the second has been taken in framing the rules for the Seawanhaka cup races in the 20ft. class; and the third course was followed several years since by the Lake Y. R. A. at the instance of the Royal Canadian Y. C., for the reason given by our correspondent.

As applied to Lake Ontario, the change has worked well in practice The fleet of racing yachts is small, very few new yachts are added each season, and few changes are made in existing yachts from year to year. The racing is confined very largely to the fleets of Toronto and Hamilton; the measurers are able to measure the sails under suitable conditions, in dry weather, and a measurement once taken is likely to stand for some seasons.

On the Atlantic coast the case is very different There are about New York alone scores of yachts to be measured each year. The work of measuring for a large club, always a voluntary one save for the comparatively small fees, demands much time and labor at best, and this would be greatly increased if it were necessary to wait for weather in order that all sails might be measured under the same conditions. However unimportant in the small classes, the question of the stretch of sails becomes far more of a factor in the case of the big schooners and cutters, and it is in these latter above all others that accuracy of both original measurement and verification are most important. In all classes from 30ft. upward nothing would be gained and much would be lost by a change from the Seawanhaka to the Y. R. A method.

In the present condition of yacht racing on the Great Lakes it may be a small matter which system is used; the conditions on Erie, Huron and Michigan are similar to those on Ontario, with even fewer yachts, and the Y. R. A. method can be used with good results There is, however, the future to be considered; we hope that before many years each of the five lakes may possess a strong racing fleet associated in the new Union and with interlake competitions. When that day comes the Seawanhaka method will, in our opinion, meet the necessities of the case far better than the one just adopted.

Then too there is another consideration: no good reason exists for two different methods of measurement within practically the same territory between the Lake fleet and the coast fleet; one of the two, the poorer if there be any difference, should be dropped and the other adopted. For the reasons already given we believe the Seawanhaka rule to be the better of the two, and therefore favor its use for all yachts above the 25ft. class, even though it should be finally demonstrated that the small classes can be better measured by a different rule.

Editor Forest and Stream:

In your remarks last week concerning the action of the proposed new Yacht Racing Union of the Great Lakes (which by the way has been dubbed by one irreverent sailor "The Society for the Suppression of Small Yachts"), referring to that section of the rules which is to restrict the area of midship section to a minimum coefficient of 35 per cent., you say: "With but four existing yachts below this limit, it is perfectly practical and for the present at least must prove beneficial in barring further additions of the fin-keel type." This statement might be more or less easy to indorse were there any considerable number of yachts of the size of Canada or even Vivia in commission or likely to be built; but when one remembers that it took six rich men, two Provinces of the Dominion of Canada, and all Mr. Jarvis's well-known energy, with the added fillip of a prospective international contest, to bring to life the only yacht above 32ft. r.l. built on this lake in two seasons, it does almost seem as if—on Lake Ontario at least—latitude and not restriction would be the thing suggested.

On the other hand, the spectacle that has been afforded to those who have attended the L. Y R. A. races for the two seasons that cover as well the whole period during which the 22ft. class (now to be abolished) has been officially recognized has been one in which quite two-thirds of all the starters have been of that class and the 27-footers; while of the residue probably half has been supplied by the class rating 32ft.

With these facts before them, many yachtsmen here are prone to think that it would be more to the interest of the new Union to face living issues, turn a little of their attention to the classes that will fill, and generally to descend from that lofty position of superiority so readily assumed by these bodies that finds itself so well and frequently expressed in the club dinner speeches of elderly gentlemen who love unctuously to refer to the small rater as "the little training ship from which our yachtsmen are developed"

If any such thought as this ever did suggest itself, it has certainly met its most effective negative in the proposal to confine the designer to an express minimum coefficient of a circumscribing parallelogram without any defined horizontal bounds, a rule that at once prohibits for the 27ft. and 22ft. classes (supposing the latter to exist) the only type in which speed and safety are combined.

How the FOREST AND STREAM can approve a rule that in its effect so completely traverses all that it has so steadily maintained for years can only be explained by assuming it to be mistaken in the premises, for surely never before was such a premium placed upon the sandbag type of boat.

What have the existing bulb-fins done to bring this thing upon us, Hiawatha? Koko? Isis of Oswego, the 22-footer which came the length of the Lake to race in Hamilton last year, and sailed home again with skipper and crew on board? What is the matter with the scores of boats from 36ft. to 24ft. r.l. that safely race thirty or forty times a season in the rough waters of the English Solent, fin-keels all, and their sisters likewise in American waters?

The effect of the bare possibility of such a rule being passed has in at least one case within the writer's knowledge been to turn aside the purpose of an interesting builder of a bulb-fin to meet Hiawatha, and it is said others are held in abevance pending the action of the Association or Union, whichever will succeed to the command.

It is to be hoped that something in the way of interchange of viewing between the parties most interested may be had before anything irrevocable is done. FIN (DE SIECLE).

TORONTO, Dec. 5.

Our correspondent brings up a number of points which may be, perhaps, best taken up *seriatim*. The objections raised by him to the new rules have been made by others as well.

It is because we recognize clearly the slow course of building on Lake Ontario, as pointed out by our correspondent, that we advocate what we believe to be a fair and reasonable restriction. The worst possible thing that can happen to lake yachting is the introduction of the fin-keel in the larger classes through the presence of that "latitude" which our correspondent calls for. There are few enough yachtsmen on Lake Ontario to-day who are both willing and able to keep up such yachts as Vreda, Zelma, Aggie and Yama, with good headroom and comfortable accommodation for the racing circuit of the Lake, or longer cruises at times to Lake Erie. There are still fewer, in fact none at all, who care to own a racing bulb-fin, with vastly inferior accommodation. Even Canada, not an extreme bulb-fin, was only built by a syndicate and for a special purpose. She found no purchaser when put up at auction recently, and as now arranged she is inferior to the older yachts in accommodation. To outbuild her, should the occasion arise, would mean the extreme type of bulb-fin, with still less accommodation, and of no use save for racing.

The 27 and 22ft. classes are to-day the most popular on the Lake, though neither is built up as it should be. As far as we are informed, the new Union and the Lake Y. R. A. have "faced living issues" in dealing with both classes according to the circumstances of each case. The 27ft. class, as now existing on the Lakes, permits a cabin yacht of fair accommodation, and large enough to cruise from lake to lake, as was done this year. The limit of 35 per cent. is the least that would protect this class from the introduction of such a racing fin-keel as would at once kill off all existing yachts and prevent the building of new ones. It is only necessary that one man should start in to sweep the Lake for a season with a bulb-keel in any class, either undergoing the discomforts of living in the confined quarters, or else putting up at hotels ashore, to put an end to the racing of wholesome boats in that class.

From the positive tone of our correspondent we hesitate before suggesting that possibly he is the one who is mistaken in his premises; but we were really unaware that the 22ft. class had been abolished on Lake Ontario. It does not appear in the list of classes of the Yacht Racing Union, possibly for the reason that it is too small for interlake racing, but it is specifically mentioned in the amended rules of the Lake Y. R. A., which will be acted on at the annual meeting on Dec. 19. Moreover, this class is very properly exempted from the 35 per cent. limitation, for the excellent reason that it is at best too small for other than local work and home racing, in spite of the fact that boats of the class have cruised the length of the Lake and back, as quoted by our correspondent. The class is rather small, with a l.w.l. length of about 19ft., to give cabin space and cruising accommodation without a serious loss of speed; a fact recognized in the new rules by leaving it free from a limitation intended to preserve internal space.

We fail to see how the limitation of the midship section has any effect whatever on the issue of keel and centerboard as it has stood on Lake Ontario for some years, the keel boat having entirely driven out the centerboard. Such a limitation in a different form, of a premium for excess of area above 35 per cent., would strongly favor the centerboard type; but in its present form it merely leaves matters as they long have been.

The bulb fins of the 22ft. class mentioned by our correspondent, Koko, Isis and, we believe, Hiawatha, are left as before, no change being made in the portion of the rules relating to them. The Solent boats instanced are admirable craft for a certain purpose; the toys of a set of wealthy yachtsmen and yachtswomen who never attempt to cruise in them; but race them within sight of their moorings, with a steam yacht in attendance if necessary. Such craft are in every way unsuited for the lakes, where fair accommodation and adaptability for general use through the season are prime requisites.

The course of improvement on the lakes had, up to last season, gone no further than a reasonable refinement of form and construction, as shown in Zelma and Yama. The safe and prudent limit was not only reached but exceeded in the construction this spring of Vencedor and Canada; and any attempt to outbuild either must result in the extinction of existing yachts and the surrender of the lakes to the bulb-fin racing machine, such as Dilemma, Niagara or Flatfish. The first to appreciate this fact and to act upon it are the very ones condemned by our correspondent. They have, in furtherance of what they believe to be the best interests of lake yachting, deliberately adopted a rule which excludes from the racing their own yacht, Canada, and leaves the field still open to the older and better yachts of the 42ft. class.

MEASUREMENT RULES.

In a discussion of the fundamental principles of the measurement question care is required in the definition and use of the terms "measurement rules" and "measurement formulæ," for the reason that, although such rules may have another form, those we have become accustomed to have usually taken the shape of a single formula having two distinct and unrelated functions one of them having no connection with measuring. Therefore the words "measurement rule" generally suggest some kind of a formula.

Before the sharp competition of racing had developed such a diversity of form in yachts, size was fairly enough represented by length, and yachts were classified and measured for time allowances by the length of the l.w.l. The growth of new forms under this rule disclosed the fact that size included other dimensions than l.w.l. length, and the attempt was made to make a fair rule for measuring all forms by taxing other dimensions, and the formula was invented having two or more factors. It was still a pure measurement formula; but a separate measurement rule for classification was used, viz., l.w.l. length. An increasing differentiation of form demonstrated the impossibility of making fair time allowances by the formula in use, and yachts were all built to the upper limit of their classes. The formula still failed to work, and it having become obvious that the number and coefficients of the factor of the measurement formula were the efficient causes of the diverse forms, nothing seemed easier than to limit the diversity of form by a proper arrangement and valuation of the factors of the formula. This was attempted, and the result was the building of a motley lot of unseaworthy racing machines and the total exclusion of cruisers and yachts of moderate form from racing.

This may not be historically accurate, but it will serve to illustrate the growth of the measurement formula and the present predicament.

It is also to be remembered that during this evolution of the measurement formula it was found desirable to abandon the original classification by l.w.l. length for one by corrected length, and this was done to counteract the tendency toward uniformity of type that had been the result of each successive formula, and in the interest of elasticity, as it was called, so as to give latitude for experiment in designing.

Up to the present time the whole development of measurement rules has been the successive patching up of the empirical conglomeration that has grown by accretion from the original formula of one term only—l.w.l. length—without questioning the philosophy of such procedure. Length on the waterline was once assumed, as a matter of course, to truly measure the size of a yacht for speed comparisons, and we still seem to have a superstitious veneration for that old notion.

Some of the lessons that may be learned from the history of measurement rules are:

(1) That it is probably useless to attempt to devise a formula of general application under which racing yachts and cruisers, differing widely in form, may race together on a fair basis. For such contests only empirical handicaps, based upon trial of the yachts, are likely to give satisfactory results. The formula lately suggested for this purpose by Mr. Irving Cox is ingenious and plausible, but its merit depends upon the accuracy of his estimates of the relative value of overhangs, draft, l.w.l. length and sail as speed factors, and when one undertakes to determine such values one is in danger of getting off soundings.

(2) That so-called elastic formulæ do not foster experiments which produce diversity of form, but instead furnish opportunity by the sacrifice of desirable qualities for exaggerating the features that will produce the highest speed under the least penalty. The products of such experiments will always be found clustered together near some of the extreme limits.

(3) That the effect of a new or amended formula of the kind now in use cannot be foreseen.

(4) That we cannot by such a formula control with any certainty the development of form along what we deem desirable lines.

(5) That by permitting any dimension to be enlarged to any extent by reducing others, such formulæ are admirably adapted to the development of extravagant and undesirable forms.

(6) The inefficiency of the old type of measurement formula prompts an inquiry into the logic of its underlying principles, and it is found to have little philosophic basis. Its proper function is to furnish a means of comparing the speed of yachts of different size; but its factors and their coefficients have been chosen with reference to an entirely different function, viz, that of influencing form. These factors (S excepted) have no certain quantitative and causal relation to speed; and a formula made in this manner cannot in the nature of things properly perform its functions of measuring speed.

From the foregoing point of view let us consider the excellent editorial on this subject in the FOREST AND STREAM of Nov. 28. It is there said:

(*a*) That it is necessary to "supplement the measurement formula proper by rigid restrictions on light construction," etc.

(*b*) That "coming to the formula itself * * * the function of a rule is to produce the best possible yacht."

(*c*) That "we do not yet understand how a satisfactory formula, permitting different types to race together on a fair basis, can be made on the plan which Sextant suggests" of "absolute restrictions."

The use here of the words "formula" and "rule" makes the criticism a little ambiguous, and illustrates the necessity of discrimination in their use as suggested at the outset. Obviously a formula in its strict sense cannot be made on the plan of fixing maximum and minimum limits to the principal dimensions of yachts, and was not suggested by the writer. It was recommended as the most efficient method of controlling form, and producing what the FOREST AND STREAM terms "the best possible yacht," and for no other purpose. As stated above, it is the opinion of the writer that yachts of different types cannot fairly race together under any formula, or under any plan, except that of arbitrary handicaps based upon actual performance.

(*d*) That "by means of absolute restrictions one stereotyped model—and that a very good one—may be produced, but there seems to be no elasticity or opportunity for experiment under such a system." The inference here seems to be that the old formulæ are elastic, that they furnish good opportunity for experiment, and for these reasons are preferable to absolute restrictions. Experience with them has shown that they do furnish a wide field for experimenting with ultra extravagant racing machines practically unfit for yachting, and it was assumed that this was a strong objection to such formulæ and not a meritorious feature. Experience further shows, as above suggested, that this so-called elasticity is really illusive, because this kind of formula has always produced a single type, as every formula and rule must—the fastest machine that can be built under the rule. Ingenuity cannot devise a single formula that will produce several types of yachts equally fast. If there be any real experimenting, as in the evolution of Glencairn, it is because the logic of the formula cannot at once be foreseen; and in such cases the successful form kills the others, leaving one type as the net product of the rule A designer with perfect insight would go straight to the logical product of the formula without this wasteful experimenting The plan of absolute restriction will certainly fix the limits within which experiment can be made, but it will be as elastic as any rule within those limits; and the field will be limited only by the wishes of those who make the rule.

(*e*) That "the result must inevitably be the production of one type, and," likely, "a bad one;" and six-beam cutters, sand-baggers, the "brute forties" and bulb-fins are cited by the editor as logical products of the system proposed.

It is agreed that one type would be produced. Whether good or bad would depend upon the passing fancies of those who fix the limits to the dimensions. If they should like the deep, narrow cutter, that would be the type. If they should prefer the skimming dish they would make a rule that would produce it. In short, they would get precisely what they want; and that is the chief merit of the scheme. Under the existing type of rule they vote for a mystery, and they get whatever monster the expert designer can best cheat the rule with, and get the highest speed without reference to any other qualities. This would seem to be the efficient cause of the evolution of the several extravagant types cited; and that they were not the ideals of the yachtsmen of the several periods, and that they would not have been deliberately chosen had the system of absolute restriction on design been in vogue at that time. That, however, is immaterial. They would have chosen the type they preferred and, if it happened to be one not popular at the present time, that does not seem to be any reason why we should not be permitted to choose a type that pleases us. Choosing a type does not prohibit experiment. It only confines experiment within known limits Does the FOREST AND STREAM believe in the expediency of allowing experiments to be carried into the furthest fields of freakdom? If it would put any limit to experimenting, what is the objection to stating those limits in terms that can be understood by everybody?

(*f*) It is finally objected that though the present system of measurement "has failed to bar the racing machine and to produce a desirable type of yacht," "we cannot see that anything more is to be expected from the system advocated by our correspondent, or even how his suggestions are to be put into practical shape." It would seem that no argument were needed to show that when one type of yacht is deemed to be more desirable than another, the preferred type would more surely result from a rule making absolute limits that define the type to a certainty than from a formula under which the dimensions have reciprocal relations only, and may be so arranged as to produce any conceivable type. If yachtsmen have no ideal type the proposed scheme is of no value, nor is any kind of measurement rule or formula except for classification and regulating time allowances. The making of any rule to influence form presupposes an ideal, and it is useless to attempt to make or amend rules until the ideal type has been definitely conceived. As to the possibility of putting the suggestions into practical shape, it would seem not very difficult to fix the maximum and minimum limits of the ideal yacht by compiling and comparing the ratios of the measured dimensions of the representative freaks of the fleet and of the boats regarded as wholesome in form. There certainly are no more intrinsic difficulties in the way than yachtsmen have gayly faced time and again in making formulæ of the $L + 1.2\,B. + \text{Girth} + \sqrt{S}$. kind.

There remains the matter of a measurement rule proper for classification or for determining time allowances if they are to be given. If nothing better can be devised, the present Seawanhaka formula will perhaps suffice, though it seems not to be made upon justifiable principles. It is the simplest and perhaps the best of all the formulæ that have been tried, though if one may judge of the printed accounts of the latest yachts, the tax on sail is considerably too small. The chief objection though to this formula is that it is a failure in its function of restricting the building of undesirable yachts If this function be attended to by separate regulations, as suggested, that objection disappears The logic of this formula as a device for measuring speed is, however, believed to be fertile ground for discussion; and it would give Sextant much pleasure if some one who thinks it a philosophical contrivance will demonstrate it in these columns. With a fleet of yachts reasonably similar in form it would seem that measurement by sail area alone would be a less objectionable method.

To sum up, it seems desirable to direct the skill and ingenuity of expert designers to the discovery of the speediest form within such limits as are consistent with other desirable qualities in yachts; and it is believed that this will be accomplished more certainly by directly establishing those limits than by any other means.

It is not a valid criticism upon the plan to assert that one cannot off-hand draw up a perfect schedule of such limits. A tolerably close approximation to it ought to be made in the first season, and the ideal would surely be further approached by subsequent amendments. Under the present plan we are every season departing further and further from the ideal. SEXTANT.

MY FIRST TRIP IN A HALF-RATER.

THE weather looked nasty, the papers had prophesied rain and wind, and the cold, gray sky, with some particularly oily-looking clouds, seemed to emphasize the warning. Half choked with dust, for the electric had to be taken, as the trains did not run conveniently, I arrived at the shop just in time to see Boat No 2, which I was to sail in, being pushed over the hump in the railway. At last, after much effort, she was started off like a man who is asked to "have something," and went shooting into the creek. That important ceremony having been successfully accomplished, a change into boat wear was the order of the day. A howl greeted the crew as he stepped out into the sunlight, that had for the time being consented to shine upon us, and showed to all the assembled multitude of small boyhood a startling racing cap in black and orange. Then came the stowing away. Two sets of oilers, a mackintosh, two suits of clothes, some half dozen bottles of light yellow beverage for the skipper, and some bananas and a box of "Huyler's" for the crew, with the usual assortment of small line always to be found in a small boat, completed the outfit. As the water was not over deep in the creek, the fin was left up (we had the lifting fin like that originally put into Scarecrow), and under jib we began our voyage.

In the meantime No. 1 had, with more valor than discretion, hoisted full sail, and was tearing up and down the creek, ripping up the surface of the water with her boom end every time a flaw struck her; and flaws were about what the wind was made of. As we passed a convenient wharf we sheered in and took advantage of a friendly pole to reeve off the topping-lifts, which had been forgotten; and here the crew had to shin that pole, while the skipper in perfect comfort turned in two reefs, and then we went away in pursuit of the boat ahead of us.

But you must hear about our mascot. As we were pushing off a friend threw us a dime he had just found on the bank for luck. That dime came straight for the crew, who, with dim recollections of some former baseball games many years ago, held out his hands to catch it. A convulsive clutch of the hands, and then an opening to see it, but it was not there. It had not dropped or we should have heard it. It was an anxious moment. Just then the crew felt something moving in his sleeve, and lo! into his hand dropped the dime safe and sound. As the skipper said afterward, he was not superstitious, but he wouldn't have felt comfortable if that dime had dropped overboard. To come back to business.

No. 1 had hove to and was getting in a reef, and we passed her, going along comfortably under our two. We had considerable start before she got under way again, and then we both settled down to work. Inch by inch she crawled up on us, until after we had shot through the oily streak that marks the sewer discharge at Moon Island she passed us just off the rocks, where "Joe, the Portuguese," had squatted. This was too much for human nature to bear, and so our reefs came out, all forgetful of what we would get when we rounded Point Allerton. We chased her till we got off Boston Light, and there, with a favorable puff, we slipped by and took the lead.

As we rounded the beacon and hauled in sheets for a close reach down the beach to Cohasset—our destination—we found that the wind had lightened considerably, although still heavy enough to put the lee rail well under in the heavier puffs. Here the first defect showed itself; in order to trim the boats properly the fin had to be placed as far forward as the slot would allow it, and now we found the boat carried such a weather helm that it was impossible to keep her on her course. Behind us we could see No 1 in the same predicament, and could see by the thin blue haze that surrounded her boat like a halo that they appreciated the situation. At last we shifted the fin aft and the skipper forward, and then the crew proceeded to steer the boat with the mainsheet, the tiller being safely jammed back of the weather washboard. This worked to a charm, except in the heaviest puffs, when even a generous amount of sheet would not keep her anywhere in the neighborhood of her course, and the jib had to be hauled to windward to prevent her flirting with the beach.

We were now safely ahead, and, barring accident, had the race. We reached Black Rock about two hours after leaving Neponset, and kept well outside of it; but No. 2, with the despair that comes to the last man, held bravely through inside, and gained a big slice on us, although not enough to win, and after some cross-tacking we passed Whitehead with a comfortable lead at 2:30, and after sounding several times with the fin were safely moored alongside the bank to await high tide. PARKER H. KEMBLE.

The Satanita-Valkyrie Collision.

WE reprint from the *Field* the following report of the important decision of the appeal of the owner of Satanita:

(Before the Lord Chancellor, Lord Watson, Lord Herschel, Lord Shand, Lord Davey and Lord Macnaghten, Nov. 16.)

The hearing of the appeal of Mr. A. D. Clarke, the owner of the yacht Satanita, against a decision of the Court of Appeal in the action raised against him by Lord Dunraven for £10,000 in consequence of the sinking of the yacht Valkyrie, during a regatta on the Clyde, in July, 1894.

After the opening statement of counsel,

Sir Robert Reed, for the appellant, contended that the rules of the Yacht Racing Association, which both gentlemen had signed, did not impose on the owner of a yacht at fault any heavier obligation for loss by collision than was provided for by the Merchant Shipping Act, namely, £8 per registered ton. Although the rule said "all damage," that meant all damage under the statute.

The Lord Chancellor: It may be a question whether the sailing rules did not add something to the statute.

Sir R. Reed said the yacht racing rules did add something to the ordinary sailing rules of navigation, but there would be liability in any case. The first question to be considered here was: What was the contract made between the parties? and the second question was: If there was a contravention of the contract, what was the meaning of it? There was no doubt at all that there was an obligation to the yacht club to comply with the sailing rules, but he thought that a great deal too much had been made in the judgment appealed from as to whether or not there was a contract between the different yachts. Of course one yacht was under an obligation to the others to observe the rules, but the real point was, what was the meaning of the rules in so far as damages were concerned. He might establish his point perfectly well by referring merely to the rules as they were before their lordships, but he proposed to examine the rules in full, because a yacht race was not exactly the same thing as ordinary vessels navigating the Channel. He wished to show that the object of the words which were so much referred to in the case meant that the parties agreed to pay any damages that might arise from the breach of the rules, but that might not arise from a breach of the ordinary rules of navigation. Rules 24 and 32 said that the owner of the defaulting yacht should pay all damages.

The Lord Chancellor: Does that not suggest that the framers of the rule had in their mind the limiting character of the statute, and therefore they put in the words "all damages."

Lord Herschel said it struck him that if the case was to be judged by the common law the words of the rule were useless.

Sir R. Reid admitted that in cases which did not come within the 56th section of the Shipping Act there would be no limit of liability.

Lord Herschel said it appeared to him that here they had a case in which the parties themselves created the liability.

Sir R Reid said there were certain duties no doubt on the part of one vessel toward another, but they were generally summarized under the words "proper navigation." In this case the rules agreed to embodied the statute regulations, and it could not be said that those rules got rid of the statute, so far as damages were concerned.

Lord Herschel said it appeared to him that there was a contract to that effect.

Sir R. Reid said the words "all damages" meant the payment of the money the particular vessel might be liable to according to the rules of the statute.

Lord Herschel: According to that the rule would mean nothing.

Sir R. Reid said that if it were true that apart from these rules there would be a limit of liability, then the words "all damages" were not applicable in the present case, and what was intended were damages as allowed by the law.

The Lord Chancellor: You exclude the contract.

Sir R. Reid could not admit that the words were inserted to get rid of the limitation contained in the statute.

The Lord Chancellor said it struck him that if the rule did not go beyond where it was put by Sir Robert the framers might as well have adopted the words of the statute itself, and expressly limited the damages to £8 per ton, instead of which they had departed from the words of the statute and used the words "all damages."

Sir R. Reid said that the rules were perhaps drawn by persons who were not very learned in the law.

The Lord Chancellor thought that Sir Robert would not be able to rely upon that assumption. (Laughter.)

Sir R Reid said that, in any case, he could not help thinking that if the framers of the rule intended to exclude the limitation of the statute they would have taken a little more pains to make clear what they were doing.

Mr. E. H. Pollard, who followed on the same side, thought their lordships were bound to take into consideration the fact that the owner had not the selection of his own steersman as a circumstance in favor of the limitation of liability. The steersman might commit any number of breaches of the rules. The risk was not one that could be insured against.

Lord Herschel said he was rather startled by that proposition, knowing something of the risks underwriters would take.

Mr. Pollard submitted that if there was to be a renunciation of the benefits of an Act of Parliament, the words to that effect ought to be clear and express.

At the conclusion of the case for the appellants their lordships adjourned the appeal till Thursday.

On Thursday, without calling on the other side, the Lord Chancellor gave judgment. Their lordships dismissed the appeal with costs, the Lord Chancellor remarking that one might as well value a race horse by the weight of its flesh as a racing yacht by its tonnage.

Seawanhaka C. Y. C.

THE new club house of the Seawanhaka Corinthian Y C. on Twenty-second street is becoming as popular with the members as the old one was a few years ago, and it promises to become an important factor in keeping alive the interest in yachting throughout the long winter season On Saturday last the house was thrown open to ladies for the first time, a reception being given from 4:30 to 7 P. M. The house was handsomely decorated with flags, and an orchestra was stationed in the lower hall. The prizes raced for during the past season were displayed in the parlors, and tea was served in the dining rooms. A large number of ladies availed themselves of the opportunity to inspect the new quarters.

The possession of a house has made work in plenty for the entertainment committee, and a very promising programme has already been arranged, which will be extended as the season advances.

On every Saturday night during the season the usual mess dinners will be served at exactly 7:30 o'clock, provided there are not less than eight names entered on the list by 12 o'clock the night previous. Lists will be found posted on the bulletin board for three weeks in advance. The charge for each member will be $1, which includes wine. The senior officer present will preside. Each member subscribing will have the privilege of inviting one guest (non-member) until there are eighteen names on the list, but the same person cannot be invited more than once in the season (Dec. 1 to May 1).

On every Saturday evening there will be familiar talks on timely topics, and the members are invited to come prepared to assist. Among the subjects that have been suggested to the committee are the following:

The literature of the sea. Nautical poetry and song. Common words and phrases derived from nautical expressions. Story teller's night. Sea yarns, etc. Exhibitions and descriptions of slides of yachts and yachting scenes. Water spouts and revolving storms illustrated by model experiments. Tidal evolution. Explanation of common phenomena within a keen yachtsman's observation—*e. g.*: Why clearing winds come from N. or N.W. Why winds are apparently heavier in winter than summer. Rain, fog, dust particles and their relations. Large versus small raindrops. Why rain knocks down a sea. Rainbows. Lunar rainbows. Ring around the moon. Sun dogs. Aurora. Why sunset is red. Colors in sunset. Violet afterglow. Apparent size of sun and moon at rising or setting. A simple explanation of the cause of tides. Why one side of the moon always faces the earth. St. Elmo's fire. Phosphorescence. Why the ocean is salt. Mildew of sails. Distances at sea. Mirages. Fog echoes. Silent nodes in fog sirens. Reinforcement of sound. Velocity of sound in air and water. Megaphone acoustics. Oil spots on water. Oil stilling waves Salt water and soap.

The topics thus far announced are: Dec 12—"Recent Experience in the New Materials for Sails." Dec. 19—"Atmospheric Moisture," phenomena connected with, such as humidity, vapor, mist, fog, clouds, rain, raindrops, rainbows, ring around the moon, sun dogs, snow, hail. Dec 26—"Winds," their cause, various kinds, density, effects, how to interpret changes in.

Arrangements have been made to form a class for instruction in practical navigation, with Captain Howard Patterson as instructor. The sessions will begin as soon as twenty names are entered and will be held at the club house on some one evening in each week, to be decided on by the members of the class. The tuition fee is $25, payable in advance. This covers the complete course, for which the regular charge for private lessons is $200

The course of study will include the mariner's compass and practical employment of same; also deviation of the compass and method of adjusting that instrument; charts and their construction, with a thorough exposition of chart sailing; dead reckoning; latitude by the sun and polar star and ex-meridian observations; longitude by A. M. and P. M solar observations, by sunrise and sunset calculations and by equal altitudes of the sun. Each member of the class will receive a navigator's diploma upon graduation. While the subjects named might seem to the uninitiated to require a knowledge of the higher mathematics, only the simple rules of addition, subtraction and division are involved In the event of a member missing a lesson or finding himself falling behind the others during the course, Captain Patterson has agreed to give him private lessons between meetings without charge. Members intending to join the class are requested to notify Mr. J. Frederic Tams as soon as possible at the club house in writing.

Uniform Racing Rules.

THE Boston *Globe* comments as follows on the possibility of the union of the Boston and New York associations under one common rule:

Pres. Clark, of the Y. R. A. of M., returned from his conference in New York with the representatives of the Yacht Racing Union of Long Island Sound, and of the New York Yacht Racing Association, much impressed with what they had to offer in the way of rules, but still with little hope that a satisfactory common ground could be found for a union of the three associations in view of the present wide variance in measurement matters and in classification. He, in common with many other yachtsmen, would also like to see a national association formed, but such formation is hindered by the same things which hinder an agreement by the associations as at present organized. The question was discussed in connection with the other matters, and with them will soon be laid by him before the executive committee of the Y. R. A., and an effort made to formulate a plan for at least such a partial agreement as would allow of a class in Boston waters identical with the 20ft. Seawanhaka class, in which international racing is likely for several years to come.

The problem before the executive committee will indeed be a difficult one to solve without adopting the "sail area and waterline" rule outright, together with the smaller crews which the rule carries with it. Such adoption would involve a complete overturn in existing yachts and their principles of design, and it may well be doubted if Eastern yachtsmen would be ready for it, even if the rule were the most desirable one now offered. The desirability of the rule is also open to question, and the arguments already made in these columns hold good in that connection until practice shall prove them to be wrong.

Waterline length for waterline length, the Boston boats, by reason of their larger crews, carry more canvas and should be faster than the New York boats. A limitation to a small crew tends inevitably toward the keel type, and this too would hardly be desired by Boston yachtsmen in view of the desirability of retaining the centerboard. The question is, however, still open to debate, and is likely to be discussed if the committee succeed in formulating some practical plan of agreement.

YACHTING NEWS NOTES.

Elbridge T. Gerry, pilot boat, of New York, has recently been purchased by Edgar Harding, of Boston, who will use her as a yacht.

Varuna, steam yacht, Eugene Higgins, sailed on Dec. 12 from New York for Bermuda, from which port she will continue on a long cruise to the Mediterranean and foreign ports.

The new Kingston Ice Y. C., of Kingston, Ont., has started in to promote this branch of yachting on fresh water, and its new trophy, the Walker international challenge cup, is nearly completed. Competition for this trophy is limited to the clubs of Lake Ontario, St. Lawrence River and the Bay of Quinte. Vice Com. A. H. Lee, of the club, has, however, sent a challenge to the Hudson River Ice Y. C. for the championship pennant of America, now held by Archibald Rogers.

The Interlake Y. A., of Lake Erie, held a meeting on Dec. 6 at Toledo, the representatives present being: F B. Hower, Buffalo Y. C.; E. W. Radder and Henry Worthington, Cleveland Y. C.; S. H. Jones, West End Y. C., Detroit; Henry Look, Citizens' Y. A., Detroit; Capt. Anderson, Sandusky Y. C., and Frank Frey and Henry Tracy of Toledo. Put-in-Bay's proxy was held by E. W. Radder. It was decided to join the Lake Y. R. U., and Messrs. Hower, Radder and Jones were elected as delegates. Some objections were made to the rules, and changes were proposed.

The annual meeting of the Lake Y. R. A., of Lake Ontario, will be held on Dec. 19 at Rochester. Proposals for joining the new Yacht Racing Union of the Great Lakes, and for amending the L. Y. R. A. rules to conform with those of the Union, will be passed upon.

Designer Arthur Binney is away on his wedding trip. His marriage to Miss Daisy Harvey, daughter of C. C. Harvey, and sister of Winthrop A. Harvey, of the Marblehead Corinthians, took place Wednesday, Dec. 2, at the home of the bride's parents in Roxbury. The wedding was a very quiet one, owing to a recent death in the bride's family. The newly married couple will make their home at 118 Highland street, Roxbury.—*Boston Globe.*

Douglas Dyrenforth has filed an application in the Circuit Court for a receiver for the fin-keel sloop yacht Siren, which was built at Racine beside the challenging yacht Vencedor. Siren was built for a syndicate of local yachtsmen, each of whom was to pay a proportionate assessment of his stock as necessity arose, and very early in the game some of the members fell behind in their payments Then other difficulties cropped up. Some of the members thought others were getting more than their share of fun out of the craft, and the result was a strained condition of affairs between the owners. Robert Hayes was selected as managing owner of the boat by reason of holding a larger number of shares than any one of the others, and he handled the financial end of things. Ildo Ramsdell, who was nominally captain of Siren, sold his interest and determined to build a new boat without any side partners. Others of the syndicate wanted to do likewise, but an amicable agreement as to terms could not be reached. Meanwhile Siren continued in commission and bills heared up, which were met largely. it is said by the managing owner and Douglas Dyrenforth. When the boat finally went out of commission she was sent up to Racine to lay up at the builder's yard, and the members tried to come to some settlement of their relative interests. Unable to agree on terms, Douglas Dyrenforth placed matters in the hands of ex-Judge L. C. Collins, who advised the application of a receiver, that the boat might be legally sold and her debts properly settled. As soon as the question of receivership is settled Siren will probably be offered for sale, and she may not return to these waters. Should Siren be sold out of the Columbia Y. C., it will make a radical change in the conditions under which several of the club trophies now held by that sloop must be sailed for next season. Not only must they be returned to the regatta committee to be placed in competition, but with Siren out of the way they will be virtually in the condition of trophies offered for the first time.—*Chicago Herald.*

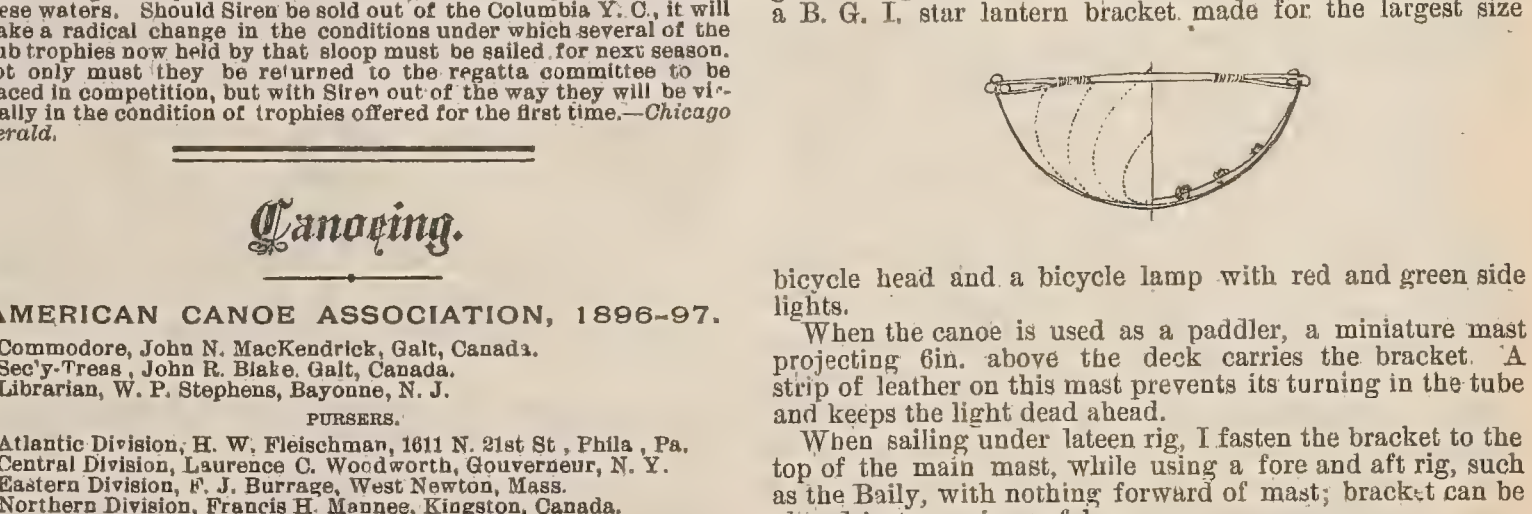
The Kootenai Canoe.

THE accompanying sketch was made, not from a full-sized canoe, but from a model which I saw in the Provincial Museum at Victoria, B C. It represents a type of canoe common on the waters of the Columbia River. It is made from a single sheet of spruce bark bent over a frame of tough wood. Not a nail is used in its construction, but the whole is tied with fiber.



The model seems particularly well made, and may therefore give one good idea of what the full-sized canoe is like. Its dimensions are 3ft. long over all by 9in. wide. Its curious style, the long, straight run on the keel, the pointed bow and stern running far under water and its great beam would make it a stable craft, but one that would not lift quickly on a wave or in a rapid. It seems as if a frame is made of two round pieces of tough wood, half the intended length of the canoe, bent around three thwarts or cross-bars. To this the edges of the bark are lashed, the bark being trimmed at bow and stern to the desired shape, and then bow and stern are sewed up, the edges of the bark being put between two sticks and the whole wound together.

The bark is then stiffened by a sort of lattice work composed of numerous round sticks for ribs, with similar long sticks laid on top lengthwise, and lashed at points of intersection These ribs do not extend all the way across, from gunwale to gunwale, consequently they must be held in place by several wide ribs proper, like those in ordinary birch canoe, which press the lattice framework more tightly against the bark. KOOTENAI CANOE.

A Canoe Light.

NEW YORK, May 14.—*Editor Forest and Stream:* Doing a good deal of canoeing on such a busy waterway as the Hudson, and almost half of it after dark, a lantern has been a pretty necessary part of my outfit. I hated to mar the mahogany decks by screwing a lantern attachment to them, and so, after much thought, tied a headlight driving lamp to the bow painter ring. The lamp gave a splendid light, but, tie it never so snugly, it would wabble in a manner calculated to beat the band, and a German band at that. And when it came to untying it in a hurry—well, I simply hug myself to think that such a performance is a thing of the past.

For I have hit upon a combination which I believe is good enough to tell to the rest of the fraternity. It is simply a B. G. I. star lantern bracket made for the largest size

bicycle head and a bicycle lamp with red and green side lights.

When the canoe is used as a paddler, a miniature mast projecting 6in. above the deck carries the bracket. A strip of leather on this mast prevents its turning in the tube and keeps the light dead ahead.

When sailing under lateen rig, I fasten the bracket to the top of the main mast, while using a fore and aft rig, such as the Baily, with nothing forward of mast; bracket can be placed just over jaws of boom.

The boathouse is a mile from home, and I always ride over on a wheel, and the same lantern does for both wheel and canoe.

Some of your readers may have thought of the scheme already, but if it prevents but one man from using the language which I did last summer I will feel that I have in part atoned for my offenses in that direction.

I find that by placing the light up high on mast my boat receives more respectful attention and more of the proper amount of way, especially from row boats, than it otherwise would. E. T. KEYSER.

Rochester C. C.

THE annual meeting of the Rochester C. C. was held at its rooms in the Granite Building, on Dec. 9. There was a large attendance and a very interesting meeting. The annual reports of the various committees showed that the affairs of the club were in a most prosperous condition. One of the features of the meeting was the annual review of the club's doings during the past year by the retiring captain, Al. T. Brown.

Officers for the ensuing year were elected as follows: Captain, Harry M. Stewart; Mate, C. Fred. Wolters; Purser, Chas. A. Bruff; Measurer, Herbert J. Wilson; Regatta Committee—Al. T. Brown, John W. Ely and T. H. Thompson.

The Board of Trustees is composed of the first five gentlemen.

On July 5 the club inaugurated a commissary department, and for the first time in its fourteen years of existence served meals to its members at the club house. Over 1,500 meals were served from the opening of the commissary department to the day of the annual meeting. The club house will be kept open all the year through in the future, and the steward and *chef* will be always in attendance. The membership is full—fifty active members and eight non-resident members.

The boys are preparing for the coming ice boat season, and the prospects are good for a lively boating season.

R. C. C.

Royal C. C.

THE Royal C. C. has taken a step in its life which has been its best wish during its thirty years of existence; it has now determined to build and maintain a club house of its own, with housing accommodation for canoes and yawls, foreshore private to itself, hauling-up slip and numerous other conveniences.

It is, however, as a matter of fact the first time that the club has had real or sufficient opportunity to venture on such a move; the various tenancies previously held by the club in respect to land, such as camp grounds, have been of such precarious nature that at no time was the executive in a position to advise the club to invest money in building, or even in substantial improvement of the lands used as camp grounds, and therefore the club was rightly satisfied in the enjoyment of such benefits as were obtainable by renting club room and boat housing accommodation from boat builders.

The new club house will be at the head of Teddington Reach, on the Thames, and conveniently near to the stations of Kingston and Hampton Wick. The Reach itself is one of the best sailing reaches of the Thames near London—that is, so far as above-lock reaches, somewhat hampered by trees, can be called sailing reaches; but Teddington Reach has certainly deep water and very little stream, except in heavy water times. We have sailed almost every fairly sailable square foot of its extent in a canoe yawl fitted with a bulb-fin, drawing 4ft. 6in. of water, and to within half a length off the banks we have never touched bottom; so, therefore, ordinary drafted canoes and yawls can leave their center-plates unattended so far as navigation is concerned.

Of course, in future days the oft-talked-of locks may be built lower down the river, even to or near Chelsea, but the river below Kew is already quite townified enough to make sailing a doubtful pleasure, and the club need not waste the valuable present time by putting off for an indefinite hazy future.

One great advantage gained to the club in the new position it is taking up is that of private foreshore, with facilities for hauling up canoes and yawls. It used to be with the "old masters" of canoeing, and it probably is also with the new, half the pleasure of the sport to be able to fiddle around and tinker at one's craft, both as to rigging and general condition. The novice, looking on while the senior worked, received his canoeing education on the best lines, and with far less cost to his pocket than is the case where the novice has to learn his business in trying to somehow repair damages or to rectify faults caused by his own inexperience. The foreshore dockyarding was no waste of time; it created friends and cruising companions, and it took the bitter edge off racing opponents and kept the spirit of friendly rivalry alive.

As a rule we do not attach much importance to "club house rumors" in regard to new craft or alterations of existing boats in relation to future racing, especially at so early a period before the coming season; but for what it may be worth, reports commonly agree that a new Yankee is to be brought from America by Mr. Howard to defend his hold on the challenge cup. On the other hand, we hear that Mr. Laws (of Prucas) is about to build a new canoe, we suppose in the racing class, of a modified sharpie model, with an extraordinarily long slide seat, and that the Dragon will be altered extensively both as to her "well" and center-plate, and she will be changed in rig from her present single lug to a "main and mizzen" rig; no doubt, from her previous record of diving and occasionally turning turtle she will be greatly improved by the change of rig. The "cruiser class" Vanessa, Mr. de Quincey's Linton Hope designed canoe, is to be cut down in freeboard as allowed now by the amended rule; she showed unnecessarily high sides last season, and will probably be much improved by the alteration.

Turk, the builder at Kingston-on Thames, is at work upon two canoes for this "cruiser class," which are going to be exhibited in the Yachting Exhibition at the Royal Aquarium, Westminster. One of these canoes is built and finished to sail as a sloop, with rudder under body, but liftable into a rudder trunk. She will have a bafter mainsail and roller foresail, and in all ways be in accord with the designs published in the *Field*.

The second boat, also to the same lines as to hull, is to be canoe rigged, with main and mizzen bafter sails; her rudder, of novel pattern, will be hung on her sternpost; her deck is flatter than the sloop's deck, and will take a different form of center plate. Neither of these canoes is fitted as yet to take a housing bulb center-plate, as they were intended to mount a plain center-plate for cruising or home sailing, and to take a lifting bulb keel of Nautilus pattern for racing. However it would not be a very difficult job to fit either boat for a housing weight center-plate.

Other rumors of building and altering are numerous, but too vague to be worth noticing at this time; but certainly there appears to be very early activity this season, and possibly the semi international character of the challenge cup races (the cup being held by an American) has aroused wider interest in canoe sailing for 1897.—*The Field.*

A Stray Shinplaster

Comes to us once in a while for a copy of "Game Laws in Brief;" but shinplasters nowadays are scarcer than Moose in New York; and 25 cents in postage stamps will do just as well.

Rifle Range and Gallery.

An Essay on Archery.

Editor Forest and Stream:

My contributions to the literature of firearms will afford sufficient evidence of my appreciation of the value of the rifle as a military weapon, and my conviction that it is the duty of every able-bodied man to become familiar with its use, and teach his sons (if he has any) not only to use it effectively, but to guard against danger from accident to himself or others. Few things have afforded me greater satisfaction than the evidence that has come to me from many sources that my words have had a widespread influence, and I cannot emphasize too strongly my continued faith in their truth.

I mention this as a preface to what I am about to say, lest it might be thought that in advocating the use of the bow as a military weapon I was recreant to my faith in the rifle. I only propose to show that it possesses some qualities which render it so valuable as an aid to the rifle that we cannot afford to dispense with it.

No one who is familiar with English history will need to be informed how largely she owes her present power to the skill of her ancient archers. If proof of it were required it could be abundantly furnished from the laws and literature relating to it. The earliest legal records contain stringent laws in regard to archery practice. Days were set apart for prize-shooting at the public butts, which were set up in every parish; and a law, as late as the reign of Henry VIII., provides that no man who had reached the age of twenty-one should be allowed to practice at these butts at a less range than 40 rods (220yds)., a distance that, till within a few years, has been considered a long shot for a rifle. It was the weapon on which men relied in war or the chase, and the tales, ballads and folklore of the day are filled with praise of the bow and the archers.

With the invention of firearms the bow was laid aside and its use has since been confined to the hands of children or of clubs, who practice only for exercise and amusement.

Whether it is wise thus to abandon it, whether it might not often be of essential service as a military weapon, are questions which are worthy of careful consideration, and my present object is to set forth some of the arguments that may be urged in its favor.

As a measure of economy no arguments are needed beyond a simple statement of facts.

The best bow need not cost more than a tenth part as much as the ordinary soldier's musket, and when we consider the enormous sums expended in arming the hundreds of thousands of men required for national defense we may well ask whether the money thus saved might not be more efficiently used.

Another most important consideration is the comparative weight of the two weapons. A bow of the best quality need not weigh over 1lb. The ordinary Springfield musket weighs 10lbs., a difference of 9lbs. for each man, or 454 tons for an army of 100,000! In view of the frequent occasions for forced marches when success depends upon celerity of movement, we can hardly estimate the importance of relieving even a portion of the troops of so great a burden, especially in a rough or mountainous country, where ambuscades may be advantageously resorted to.

The grand object in battle is, not to kill, but to disable as many individuals of the opposing force as possible. In every report of a battle we find that the number of wounded largely exceeds that of the killed. Now a man may receive a very serious wound from a bullet and yet be able to use his weapon effectively for some time after it. We often read of men receiving mere flesh wounds refusing to leave the field and persisting in fighting till exhausted by loss of blood. But no man could do so with an arrow sticking in any part of his person, and if it were barbed he would be completely *hors de combat* till he could find a surgeon to cut it out.

A good archer can easily drive an arrow through an inch board at 40 rods—a force quite sufficient to penetrate a man's body—and, bearing in mind all the facts I have stated, I ask: Can we afford (while such barbarism as war continues to exist among nations that claim to be civilized) to abandon the use of a weapon possessing such manifest advantages as the bow?

H. W. S. CLEVELAND.

CHICAGO, November.

Calumet Heights Riflemen.

CHICAGO, Ill., Dec. 5.—The scores given below were made to-day by members of the Calumet Heights Gun Club, the conditions being as usual: Class A, 200yds., off-hand, standard target, open sights allowed 2 points in a 10-shot match, 1 point in a 5-shot match. Scores:

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Dec. 22.—ALBANY, N. Y.—Tournament under the auspices of the West End Gun Club; sparrows. Horace B. Derby, Sec'y.

Dec. 22-23.—ELIZABETH, N. J.—Ninth bi-monthly tournament of the Elizabeth Gun Club. First day, targets; second day, live birds.

Dec. 25.—CHICAGO, Ill.—Carver-Grimm match for the cast-iron medal at Watson's Park.

Dec. 29-30.—UTICA, N. Y.—Tournament under the management of John W. Fulford. Live birds and targets.

1897.

Jan. 1.—NEWARK, N. J.—Sixteenth annual tournament and reception of the South Side Gun Club. W. R. Hobart, Sec'y.

Jan. 9-10.—PRESCOTT, Arizona.—Fourth annual tournament of the Arizona State Sportsmen's Association, under the auspices of the Prescott Gun Club. Roy Hill, Sec'y.

Jan. 14-15.—INDIANAPOLIS, Ind.—Tournament of the Limited Gun Club; sparrows. Royal Robinson, Sec'y.

Jan. 20-25.—SAN ANTONIO, Tex.—Second midwinter tournament, under the management of Oscar Guessaz. $200 added.

Feb. 27-March 11.—HOT SPRINGS, Ark.—The Arkansaw Traveler's first grand annual live bird tournament; $10,000 in purses and added moneys. Souvenir programmes ready Jan. 1. Address all communications to John J. Sumpter, Jr., Box 111, Hot Springs, Ark.

March 13-17.—BAYCHESTER, N. Y.—Second annual tournament of the Cobweb Gun Club; live birds and targets. Cobweb handicap at live birds, $500 guaranteed.

March 23-25.—NEW YORK CITY.—The Interstate Association's fifth annual Grand American Handicap at live birds.

April 14-16.—ATCHISON, Kan.—Airy Lou Hart's third manufacturers' amateur and fourteenth open-to-all tournament.

April 15-17.—SAN ANTONIO, Tex.—Tournament of the San Antonio Gun Club. Open to amateurs only. Willard T. Simpson, Chairman Ex. Com.

April 20-23.—LINCOLN, Neb.—Twenty-first annual tournament of the Nebraska State Sportsmen's Association. Added money later.

May 11-14.—OIL CITY, Pa.—Seventh annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Oil City Gun Club. Targets and live birds. Black powder barred. Special event: 25 live birds per man, $25, $1,000 guaranteed. Send entries to H. C. Reeser, Sec'y, Oil City, Pa.

May 17-22.—KANSAS CITY, Mo.—Annual tournament of the Missouri State Game and Fish Protective Association. Fred T. Durrant, Sec'y.

June (third week).—CLEVELAND, O.—Fourth annual tournament of the Chamberlin Cartridge and Target Company.

June 16-17.—FARGO, N. D.—Third annual tournament of the North Dakota Sportsmen's Association. Targets. W. W. Smith, Sec'y.

DRIVERS AND TWISTERS.

The Wayne Gun Club, of Nicetown, Philadelphia, Pa., has issued the following notice: "To Lovers of Trap Shooting: The Wayne Gun Club invites propositions for new membership and has reduced the initiation fee to $1 until Feb. 22, 1897. The monthly dues are 25 cents. Targets are charged to members at 1 cent each. The grounds are conveniently situated near Sixteenth and Cayuga streets, Nicetown, and are easy of access. The Germantown and Willow Grove trolleys pass close to them. The club is fully equipped with a nice club house and all necessary paraphernalia. The object of the club is to promote enjoyment at the trap and proficiency in marksmanship. It will hold a shoot on Christmas Day, to which all are invited. Shooting commences at 9 A. M. Propositions for membership can be addressed to D. Rockafeller, 1810 North Fifteenth street, Philadelphia, Pa.; or to A. G. Seistman, Nicetown, Philadelphia, Pa."

Writing from The Menger, San Antonio, Tex., under date of Dec. 3, A. W. du Bray, Parker Bros.' able representative in the Southern States, has this to say in regard to the coming Midwinter shoot in that city: "I would like you to mention in 'Drivers and Twisters' that the 'big three' here, Albert Steeves, J. M. George and Oscar Guessaz, are all three hard at work making preparation for the coming Midwinter, which commences Jan. 20. When these three men get their heads and shoulders together something has to give, so as they are in spike harness just now you may depend the entering wedge will be pushed along until all is cleared before them, and I verily believe the coming shoot will eclipse that of '96. I have heard so much general comment over my entire circuit regarding the last Midwinter that it is quite evident to me that every one who can will attend. There has never been a place where visiting sportsmen have had such a reception as awaited them here. The amount of added money was exceedingly liberal, but over and above all this the visitors were shown game of all varieties in such great abundance that I know, while relating to me his experience here, many a man has longed for January to come round again so he might revel in the sport, the recollections of which have haunted him ever since last January. Depend upon it, this will be a great big, wide-open shoot—so let everybody head down this way for the second Midwinter. The weather here is superb. It was a little cool for a day or two while the blizzard raged up North, but now the air is warm and pleasant, and the old Alamo and mission churches are basking in the sun."

J. W. Fulford, of Utica, N. Y., writes us under date of Dec. 14 as follows: "I will hold a two-days' shoot here, Dec. 29-30, at live birds and targets. The principal event on the second day (Dec. 30) will be a 20-bird handicap event, $15 entrance, handicaps from 26 to 32yds. I have written on this subject to many shooters in this section and have received very favorable replies. Among the number present will be a large delegation from Syracuse; Mr. L. V. Byer and party from Rochester; in other words, twenty-six shooters have stated that they will be present. Our management will trap the best birds ever furnished in this section." Mr. Fulford has chosen a good time for his tournament, and as there will be nothing to clash with it he ought to have a good attendance, particularly good if one-half of his promised shooters attend

Last Saturday we had the pleasure of meeting J. W. Hildreth, one of the W. R. A. Company's traveling representatives in the South, at the cup shoot on the grounds of the Bergen County Gun Club at Hackensack, N. J. In discussing the prospects of the shoot at San Antonio next January, Mr. Hildreth said that from what he could learn, and judging from the way shooters in the South had spoken about it, he was of the opinion that this coming shoot was going to eclipse that of 1896. His ideas on this point thoroughly coincide with those expressed by Mr. Du Bray in a letter which appears in this column. The Indianapolis delegation, including, of course, those shooters who stop off to take in the sparrow tournament, Jan. 14-15, will be a large one.

Dr. Williamson, of Milwaukee, Wis., has had lots of fun recently shooting tie races. In three out of four races with Dick Merrill, of that city, he has succeeded in tieing the score, winning the only contest in which a decision was arrived at. On Dec. 3 he shot another tie race, this time with George Deiter, the shooter who wrested the Du Pont trophy from Fred Gilbert last spring. This tie race was the more remarkable from the fact that it was a 200-bird race, each man scoring 176. Deiter did some wonderful work in his last 100 birds; after scoring only 81 out of his first 100 to Williamson's 88, he managed by some brilliant work to tie the score, making a run of 74 straight (actually 77, including the last three birds of his first 100) and finishing with 95 out of the second 100.

Mr. R. M. Welch, secretary of the Nebraska State Sportsmen's Association, writes that the twenty-first annual meeting and tournament of that Association will be held at Lincoln, Neb., April 20-23, 1897. At present he is unable to state just what inducements the Association will be able to hold out to the sportsmen of the country, but expects that it will add a sufficient amount of cash to draw to Lincoln a large gathering of shooters. The Nebraska Association's shoot follows right after Lou Erhardt's big shoot at Atchison, Kans., thus enabling shooters to attend both of these tournaments with very little additional expense.

The Elizabeth, N. J., Gun Club has issued its programme for the ninth bi-monthly tournament, to be held on its grounds Dec. 22-23. The programme calls for 175 targets, all of which are thrown at unknown angles with the exception of event No. 1, which is a 10-target event, known angles, and No. 6, 15 targets, expert rules, both barrels. On the second day (Dec. 23) live birds will be trapped, the main event being a 25-bird handicap event, $10 entrance, birds extra. In all events there will be three moneys if less than twelve entries; over twelve, four moneys.

Jan. 1, 1897, will see the U. S. C. Company's rosebud, Tom Keller, bursting forth into full bloom on the parent stock of King's Smokeless and the Peters Cartridge Company, as a representative of the two companies. It may seem somewhat strained to liken Tom Keller to a rosebud, but poets are always allowed a certain amount of license in their similes, etc.; and the above sentence is, we claim, a gem among trap-shooting poetical phrases. As a result of his connection with the above firms, Tom will be found on hand as usual at all the large tournaments during the coming season.

In our report of the great four-handed shoot at Trenton, N. J., on Dec. 3 we omitted to mention that Zwirlein provided all the birds for that match (400 of them) free of charge. We hasten to make good our omission, although Charlie Zwirlein himself has not said a word to us in regard to it, because we feel that such generous conduct deserves special mention. We wish for his sake, and also for the sake of the birds, that there had been more wind that day; 392 gathered (in and out of bounds) out of 400 shot at shows what the birds were up against.

Paul R. Litzke writes to us from Hot Springs, Ark., where he is the guest of John J. Sumpter, Jr., that "the last gale that swept this way from the West brought with it the announcement that Lou Erhardt, 'the only Airy-lou-hart,' would be doing business at Atchison, Kans., about the usual time, April 14-16. According to precedent he will again give the boys a new game. No plunder this time, but good hard cash—and a big roll at that."

Mr. A. W. Adams, a brother of Platt Adams, of our own city, has been elected to the presidency of the Cook County Trap-Shooters' League, an organization that is composed of all the important gun clubs in Chicago. The other officers of the league are: Vice-President, J. H. Amberg; Secretary, E. E. Fox; Treasurer, C. P. Richards; Directors, A. C. Paterson, M. J. Eich and Dr. C. W. Carson.

Remsen, of Brooklyn, N. Y., has carried off another cup, but this time his possession of it may be only temporary. He won the cup shot for on Saturday last at Hackensack, N. J., and holds it until the next contest in February, 1897. The cup has to be shot for six more times, the person winning it the greatest number of times out of the seven shoots becoming the owner of it.

The Bergen County Gun Club, of Hackensack, N. J., announces that it will hold an all-day shoot on New Year's Day, beginning at 10 A. M. The main event (for which entries close at the above hour) is a 30-target handicap race, entrance $2. The first prize is a Winchester repeating shotgun; second prize, $5, and third prize, $2.

The Cobweb Gun Club, of New York City, is going right ahead with the preparations for its second annual tournament to be held next March during the week of the Sportsmen's Exposition. The Cobweb Handicap at live birds, $500 guaranteed in the purse, will be sure to attract lots of shooters.

The sixteenth annual New Year's Day tournament of the South Side Gun Club, of Newark, N. J., is under the management of President R. Heber Breintnall, Secretary-Treasurer W. R. Hobart, and Manager I. H. Terrill. Shooting commences at 9:30, and all sweeps are optional.

If there's anything wrong with this column this week, blame Noel E. Money, Colin R. Wise, of Passaic, N. J., and sundry Jersey ruffed grouse for it. During three days in the mountains of Passaic and Bergen counties we saw more Drivers and Twisters than we could put together in three months. Some of them got away. Likewise one rabbit.

A reference to our advertising columns shows a change in the advertisement of the Peters Cartridge Company. We have received a specimen of the calendar referred to in its announcement, and can say that all the company claims for it is as stated.

Jack Winston has been putting in some good licks in the way of practice since his arrival in Chicago last week. To-day (Dec. 15), just as we are going to press, he is competing with George Roll for the Du Pont trophy.

Dr. Carver and Charlie Grimm are likely to meet at Watson's Park, Chicago, on Dec. 25. The contest is for the "cast-iron medal" won by George Kleinman originally, but forfeited later to Dr. Carver by that gentleman.

Another recruit to the ranks of the Interstate Association is the Lafin & Rand Powder Company. There are still a few outside the fold, but they won't remain there long.

Elmer Shaner is in the city, his breast pocket bulging with the voluminous report he is going to make at the Interstate Association's annual meeting this week.

The Arizona State Sportsmen's Association has postponed its tournament announced for Jan. 4-5 to Jan. 9-10.

DEC. 15. EDWARD BANKS.

On Long Island.

PARKWAY ROD AND GUN CLUB.

Dec. 9.—Nine members of the Parkway Rod and Gun Club journeyed to that club's grounds, Dave Van Wicklen's hotel, O'd Mill landing, for the purpose of taking part in the club's monthly shoot at live birds. The wind was blowing a whole gale across Jamaica Bay, sending the birds away from the traps at a gait that bothered most of the shooters. Henry J Bookman scored his 7 birds straight from the 28yd. mark, and won first place without a tie. The scores in this event were as below:

H J Bookman (28)	2212112—7	H Selover (26)	1110002—4
L Helgans (30)	2212201—6	J Wye (23)	1021001—4
J Bennett (30)	0112121—6	D S Van Wicklen (26)	0122100—4
J Woolley (28)	0022221—5	A Andrews (26)	1102012—4
H Bramwell (30)	1020101—4		

ERIE GUN CLUB.

Dec. 9.—The Erie Gun Club held its last shoot for the season of 1896 to-day. The members hold twelve live-bird shoots each year at Dexter Park, the competitions counting for the annual prizes offered by the club. Prior to to-day's contest the prizes in all the classes except the AA class had been decided. M. J Elsasser could not be beaten for the Class A prize, and the same might be said of H J. Blackley in Class B and C H. Luhrssen in Class C. The winner of to-day's contest in the Class AA was Charles Plate; as C. Detlefsen and H. Dohrmann had been tied for the prize in this class, the result of to-day's shoot left them still a tie. In the shoot-off for this trophy at 10 birds Detlefsen won easily with 7 out of 9, Dohrmann retiring with only 4 kills out of 8 shot at. Scores were:

Club shoot:

C Plate (AA, 28)	1111111—7	H Blackley (B, 27)	1011221—6
C Detlefsen (AA, 28)	2101202—5	F Gref (B, 27)	0201110—4
H Dohrmann (AA, 28)	2210200—4	W Roberts (B, 27)	0020102—3
C Mohrmann (A, 28)	1010100—3	J Schmidt (B, 27)	0001000—1
J F Schmaedeke (A, 28)	0000110—2	C H Luhrssen (C, 26)	2220220—5
B H Plate (B, 27)	2221121—7	J H Plate (C, 26)	1022022—5
H Janowsky (B, 27)	1221121—7		

UNKNOWN GUN CLUB.

Dec. 10.—The Unknown Gun Club met this afternoon for its monthly live-bird shoot. The highest scores in the club shoot, at 7 live birds, were made by James B. Voorhees and E. A. Vroome, both of whom scored all their birds. The best work of the afternoon was done by the veteran member of the club, Dr. Schwartz, who missed his first bird in the club race and then ran 26 straight in the sweeps, losing his 28th bird for the afternoon. Most of the sweepstake shooting was done by moonlight, so the Doctor's miss of that bird was excusable. Scores:

J B Voorhies (28)	2211112—7	R Smith (25)	2021220—5
E A Vroome (28)	1211222—7	T Porter (25)	0120211—5
W Sands (28)	2012222—6	A C Rankin (23)	102•222—5
Dr Schwartz (28)	0121211—6	G Selig (23)	0012122—5
H Boemmermann (26)	•122211—6	Aphurst (23)	12011•0—4
W J Skidmore (25)	1210122—6	B Jennings (27)	0210•20—3
Dr Moore (25)	0112102—5		

Other events, including the shoot-off for second and third moneys in the above events, were as below:

Shoot-off for second money, miss-and-out: Dr. Schwartz 10, W. Sands 9, H. Boemmermann 2, W. J. Skidmore 1.

Shoot-off for third money, miss-and-out: Dr. Moore 11, T. Potter 10, A. C. Rankin 1, R. Smith 1, G. Selig 0.

Sweepstake, 3 birds, $2 entrance, 2 moneys, class shooting, all 28yds.: Dr. Schwartz 3, Sands 3, Dr. Moore 3, Boemmermann 3, Jennings 2, Voorhies 1.

Shoot-off for first money, miss-and-out: Dr. Schwartz 2, Dr. Moore 1, Sands and Boemmerman withdrew.

Match, 3 birds: Dr. Schwartz (30) 3, Dr. Moore (25) 1.

Match, same conditions: Dr. Schwartz 2, Dr. Moore 1.

NEW UTRECHT GUN CLUB.

Dec. 12.—The records made by the members of the New Utrecht Gun Club, so far as wins for club badges and for the Hegeman prize go, have been completed to date by the secretary, Dr. G. E. Pool, and are given below. In the club shoot at live birds the Furguesons, father and son, lead in Class A and Class B respectively, each having five wins to his credit, Conny being tied with Gaughen; Dr. Parr and Frost are tied in Class C. The death of G. W. Coulston robbed the club of one of its best shots in Class A. On his day he was always a dangerous man; his three consecutive wins in January and February show what he could do. The records on live birds are as follows:

Date.	*Class A.*	*Class B.*	*Class C.*
Jan 11	W F Sykes	C Furgueson, Jr	M W Hall.
Jan 25	G W Coulston	J Gaughen	
Feb 8	G W Coulston	C Furgueson, Jr	
Feb 22	G W Coulston	F W Durvea	E A Parr.
March 14	Capt Money	J Gaughen	
March 28	T W Morfey	F W Duryea	E C Frost.
April 11	W G Clark	W D Gilman	E C Frost.
April 25	C Furgueson		
May 9	C Furgueson	J Gaughen	E A Parr.
May 23	T W Morfey	D C Bennett	
June 6	D Deacon	C Furgueson, Jr	C Cowperthwaite.
June 20	T W Morfey	J N Meyer	
Oct 3	C Furgueson	J E Jones	
Oct 17	C Furgueson	C Furgueson, Jr	
Nov 14	C Furgueson	C Furgueson, Jr	E A Parr.
Nov 28	C M Meyer	J Gaughen	
Dec 12	W F Sykes	J Gaughen	E C Frost.

In the target events Platt Adams looms up very prominently. He has already taken all interest away from any further contests for the Hegeman trophy, having practically won it, as none of his competitors can catch up to him. In Class A, for the club badges, he has five wins to his credit. Dr. Pool in Class B and Dr. O'Brien in Class C apparently monopolize the trophies. These records are as follows:

CLUB BADGES.

Date.	*Class A.*	*Class B.*	*Class C.*
Jan 4	D C Bennett	Dr Shepard	Dr O'Brien.
Feb 12	J Gaughen	Dr Pool	C Cowperthwaite.
March 7	J Gaughen	Dr Shepard	P A Hegeman.
March 21	C F Dudley	Dr Shepard	Dr O'Brien.
April 4	Capt Money		C Cowperthwaite.
May 2	D C Bennett		C Cowperthwaite.
May 16	J Gaughen	Dr Pool	J E Jones.
May 30	M Van Brunt	Dr Shepard	Dr O'Brien.
June 13		Dr Pool	Dr O'Brien.
June 27	P Adams	Dr Pool	Dr O'Brien.
July 11	P Adams	C Furgueson	Dr O'Brien.
July 25	A A Hegeman	Dr Pool	Dr O'Brien.
Aug 8	P Adams	Dr Pool	
Aug 22	D C Bennett		
Sept 5	P Adams	Dr Pool	Dr O'Brien.
Sept 12	Capt Money	Dr Pool	J E Jones.
Sept 26	Dr Littlefield	Dr Pool	Dr O'Brien.
Oct 10	D Deacon		C Cowperthwaite.
Oct 24	D Deacon		Dr O'Brien.
Nov 7	P Adams	Dr Pool	A Eddy.
Nov 21	J Gaughen		
Dec 5	M Van Brunt	Dr Pool

*The Hegeman Badge is shot for at 15 targets, known traps and angles; Class B men allowed 1 extra target, Class C men allowed 2 extra targets.

Dec. 12.—The monthly live-bird shoot of the New Utrecht Gun Club was held this afternoon at Dexter Park. Walter Sykes won in Class A without a competitor. In Class B Gaughen won, thus tieing Conny Furgueson for the annual prize in that class. Frost won in Class C, and is thus tied with E. A. Parr for the trophy in that class. The turnout of members at this shoot was somewhat disappointing. Scores:

W F Sykes (A, 28)	1•11110120—7	*F A Thompson (28)	1211232021—9
J Gaughen (B, 28)	1022212221—9	*C Jones (28)	01•11211•2—7

E G Frost (C, 27)	200211•032—6		

*Guests.

Thanksgiving Day at Tucson.

TUCSON, Ariz., Nov. 26.—Thanksgiving Day will long be remembered by the shooters of Arizona as the banner live-bird day, over 900 birds being trapped, thus necessitating the use of two sets of traps and twelve men to run them. The birds were an exceptionally strong lot, only three refusing to fly immediately upon the opening of the trap, and many of them seeming to start before it was opened. The traps were set on either side of the club house and a strong wind blew most of the day directly across the grounds.

The list of shooters was divided in two in each event, shooting one-half of the event on each set of traps, giving all an equal show. From start to finish everything ran in apple-pie order, Hallowell's experience while on the circuit last summer standing him in good stead as manager.

The interest of the day was centered in events 3, 4 and 5, as the highest score in those events entitled the successful shooter to a very handsome medal donated by our genial dealer here, Mr. K. L. Hart, a thorough sportsman and a clever shot. Although Hallowell had the burden of the management on his shoulders, he found spare time to kill 27 out of the 31 birds in the medal contest, and thus won it by the margin of one bird.

Among the visitors were Gilbert Ferguson, Prescott; J. H. Holmes, Lincoln Fowler, Fred Schofield, M. E Morin and B. M. Crawford, of Phœnix; Hon. M. A. Smith, Tombstone; M. B. Chubb, Los Angeles; P. H. Tyler, San Diego, and W. S. Cox, Chicago, representing King's Smokeless.

The shoot was appropriately rounded off by a banquet in the evening under the able supervision of Alex Rossi, whose *chef* was Joseph Soldini. Visitors and members alike voted it a great success. President Hallowell acted as toast-master and succeeded in eliciting many *bon mots* from those gathered around the board. Hon. M. A. Smith was especially happy in the choice of his remarks and was ably seconded by Hon James Finlay, R. M. Aldridge, Fred Schofield and others. All voted Tucson a thoroughbred town, both for tournaments and good times.

The following scores speak for themselves, and considering the quality of the birds are very creditable for the boys raised in this neck o' the woods.

	No. 1.	No. 2.	No. 3.
J Finley (28)	0001200—2	1001021011—7	0111011201101101—10

$15 added in No. 1, $20 in No. 2, and $25 in No. 3.

No. 4, 6 birds, $2, $10 added, 2 high guns: Dimick (27) and Hallowell (30) 6, L. Fowler (28) and Chubb (28) 5, Ferguson (30) and Meyer (30) 4, M. E. Morin (29), Scofield (30) and Heaton (27) 3.

No 5, 10 live birds, $3, $15 added, 4 moneys: Chubb (28) 9, Morin (29), Scofield (30), Dimick (27) and Hallowell (30) 8, Fowler (28) 7, Ferguson (30) 6.

No. 4 was known as the "old man's race," and was at 5 live birds per man, for the price of the birds. It had four entries and resulted as below: M. A. Smith 4, R. M. Aldridge and B. H. Crawford 3, Jas. Finley 2.

No. 7 was a miss and out, $2 entrance. The result was: Morin 8, North 7, Fowler 4, Finley and Scofield 3, Holmes, Estodillo and Aldridge 1, Chubb, Wilding, Hart, Ferguson, Meyer and Weber 0.

No. 8 was an extra at 10 live birds, $5 entrance, handicap rise, 4 moneys. It resulted thus: Gil. Ferguson (30) 10, Scofield (30), Hallowell (30) and Chubb (28) 9, J. H. Holmes (30), Aldridge (30), M. E. Morin (30), K. L. Hart (29), W. S. Cox (29), C. E. Heaton (27) and C. R. Meyer (30) 8, J. Finley (28), C. Dimick (27), L. Fowler (28), C. Weber (30) and F. Wilding (29) 7, H. H. Pease (26) 6

The summary of the medal shoot (Nos. 3, 4 and 5) shows: Hallowell 27 out of 30, Dimick and Chubb 26, Morin 24, Fowler 23, Scofield and Ferguson 22.

Below is a table showing the guns and loads of the shooters:

Name.	*Gun.*	*Powder.*	*Shell.*
Chubb	Parker	King's	Peters.
Morin	Burgess	Blue Ribbon	Blue Rival.
M A Smith	Parker	Blue Ribbon	Smokeless.
Crawford	Parker	Blue Ribbon	Smokeless.
Holmes	Smith	Du Pont	Smokeless.
Tyler	Smith	Blue Ribbon	Smokeless.
Ferguson	Francotte	Blue Ribbon and Du Pont.	Smokeless.
Scofield	Smith	Du Pont	Smokeless.
Fowler	Pieper	Gold Dust and Du Pont.	Acme and Sm'keless.
Cox	Parker	King's	Peters.
Hallowell	Smith	Blue Ribbon	Trap.
Hart	Smith	Blue Ribbon	Smokeless.
Jernigan	Smith	Blue Ribbon	Smokeless.
Wilding	Smith	Blue Ribbon	Smokeless.
Heaton	Smith	Blue Ribbon	Smokeless.
Rossi	Smith	Blue Ribbon	Smokeless.
Pease	Smith	Blue Ribbon	Smokeless.
Meyer	Parker	Blue Ribbon	Smokeless.
Weber	Remington	E. C.	Smokeless.
Dimick	Remington	Blue Ribbon	Smokeless.
Finley	Parker	Blue Ribbon	Smokeless.
Aldridge	Parker	E. C.	Trap.

NOTES OF THE SHOOT.

Morin is red hot with that left barrel of his "Burgess pump."

Fowler is going to use buckshot and black powder in his next tournament.

Dimick, who rung in as a simon pure amateur, shot a strong race.

Hon. Jas. Finley and R M. Aldridge, two old-time shooters, shot right through the day and were well up among the most favored.

Rossi, "the Italian bandit," started in to win the medal, but fell by the wayside.

Gil Ferguson did good work and made many friends by his gentlemanly behavior and sportsmanship.

Holmes and Scofield, two crackajacks from Phœnix, shot badly out of form.

Sunset Cox was doing lots of good missionary work for King's Smokeless.

U. M. C. Thomas should be proud of Tucson, all shooters but three using U. M. C. cases.

The shooting of Hon. M. A. Smith is worthy of mention. He was taught to shoot in the field only, and always calls "pull" with both hammers down. Considering this handicap, he made some kills that were "peaches."

Holmes, the territorial champion, won the leather medal, and in consequence had to buy a large hat.

TUCSON.

O. K. Gun Club, of Kansas City.

KANSAS CITY, Mo., Dec. 5.—Below are the records made by members of the O. K. Gun Club, of this city, during the season of 1896:

SILVER LAKE GUN CLUB.

Dec. 5.—The Silver Lake Gun Club held its first shoot of the winter season to-day on its grounds at Southwark. There was a good turnout of members, the directors of the club having decided to offer for competition three silver cups which will be shot for in a series of thirteen shoots. Each contestant to be eligible for either of the cups must take part in ten of the thirteen shoots. A sliding scale handicap has been adopted, each man starting in with a certain allowance of misses as breaks. The high score in any competition counts as 3 points; second highest scores count as 2 points, and third highest scores count 1 point. Those who make the highest scores in any one shoot lose one miss as a break from their handicap; in the next contest second and third remain as they were, while those who were unplaced each receive an additional miss as a break. The following are the scores made in two shoots decided to date:

	No. 1				No. 2.			
	Broke.	Handicap.	Total.	Points.	Broke.	Handicap.	Total.	Points.
Woodsteger	16	4	20	1	..	..	..	..

WILLIAMS DEFEATS STERLING.

Dec. 7.—Harry Williams, of Camden, N. J., and Harry Sterling, of Stockton, N. J., shot a race to-day at Stockton, Williams defeating his opponent with ease. The conditions of the match were: 50 live birds per man, 21yds. rise, gun below the elbow, 80yds. boundary, Rhode Island rules, $100 a side. Wm. Sands was referee, J. K Starr acting as official scorer. The birds were a poor lot, and better scores should have been made by both shooters. Williams shot a 12-gauge gun, Sterling using his 10-gauge. At the end of the 26th round Sterling led by one bird; he then lost 6 straight, while his antagonist killed his 6, thus getting a lead of 5 that practically won him the match, his lead being 4 birds when the match was finished. Scores:

FLORISTS' GUN CLB.

Dec. 8.—The Florists' Gun Club shot two club matches on their grounds at Wissinoming to-day. The first was the nineteenth match for the Donaldson handicap medal. This was won by A. B. Cartledge with the score of 22 out of 29. There will be seven more matches to determine the ownership of the medal, the highest number of wins in twenty-six contests to become the final owner. The wins to date are: George Craig 4, C. D. Ball 3, Ed Reid 2, John Burton 2, Geo Anderson 2, A. B. Cartledge 2, W. K. Park 1, W. K. Harris 1, J. W. Colflesh 1, Thos. Cartledge 1.

The second contest was for the W-A (Laflin & Rand) silver trophy and was won by W. K. Park, who hit 38 out of 50. The conditions for the W-A trophy were: 25 targets, known angles, handicap allowance, and 25 targets, unknown angles, without handicap; each contestant using at least twenty-five shells loaded with W-A smokeless. With one exception the scores are very much below the average, the greater number of lost birds being scored when the special powder was used, and was probably due to improperly loaded shells.

The scores made in the Donaldson handicap match were used in making up the total for the W-A trophy and are the first half of the scores given below:

W K Park (25)	1000010110110110110111	—16
	1101111111101111111110111	—22—38

*Did not shoot their handicap allowances in the Donaldson contest.

Cook County League.

CHICAGO, Ill., Dec. 8.—The annual meeting of the Cook County League was held at the Sherman House, this city, yesterday evening, Dec. 7, President T. P Hicks in the chair, Mr. E. E Fox acting as secretary *pro tem.* The following members and delegates were present: T. P. Hicks and C. P. Richards, Garfield Club; W. P. Cutler and R. W. Rexford, Garden City Club; O. von Lengerke and Dr. C. W. Corson, Eureka Club; E. E. Fox, F. G. Barnard, J. P. Goettel and M. J. Lowery, of Cicero Club; A. C. Patterson, of Calumet Heights Club. The first order of business was the reading of the minutes of the last annual meeting and those of the several meetings of the governing board. The treasurer's report showed the flattering balance on hand of $167.47.

Dr. Carson wished to amend some features of the classification rules, and Mr. Rexford wished to institute a new class—Class D—for future contests of the League. This involving an amendment to the by-laws finally took the form of a notice served by Mr. Rexford that at the next meeting of the League he would ask that Section 1 of the by-laws be so amended as to create a fourth class or Class D, and so that three from Class B and three from Class C could combine and form a B and C class team, so long as their combined averages did not exceed the percentage of either class.

It was decided to be the sense of the meeting that no team or individual should be eligible for more than one prize during the season.

Mr. Patterson served notice to so amend Section 2 of the by-laws that the contests of the League shall hereafter begin at 1 P. M. instead of at 2 P. M., as heretofore. This will be desirable, as it has always been late when the club contests were finished, and the start has not always been made promptly at the hour set.

Ridge Gun Club handed in its withdrawal from the League, which was accepted, this club not having a large enough membership to send a team.

The secretary was advised to send notices to members, looking to early meeting for the purpose of shooting off such undecided ties as still remain in the season contests.

Dr. Carson served notice that he would ask addition to the by-laws of a section on providing for a paid manager and official scorer for the future League contests—another very good movement. It was suggested with great justice that Mr. F. E. Coppernoll would make an excellent manager and Mr. C. H Hitchcock an equally good scorer. The governing board will probably select these gentlemen.

Election of officers was held with the following result: Mr. A. W. Adams, of Eureka Club, President; Mr. John H. Amberg, of Garden City Club, Vice-President; Mr. E. E. Fox, of Cicero Club, Secretary Mr. C. P. Richards, of Garfield Club, Treasurer; Messrs. A. C. Patterson, of Calumet Heights Club, M. J. Eich, of Douglas Club, and Dr. C. W. Carson, of Eureka Club, members of the governing board. Adjournment followed.

In New Jersey.

AT BUNN'S GROUNDS.

Nov. 26.—The following scores were made to-day at Bunn's grounds on very fast birds. The first three events were at 10 birds, $5, class shooting. In addition to these events two miss-and-outs, $2 entrance, were also shot, with the following result:

No. 1: Morfey and Hopper 3, Morgan 2, Doty 1, Christie and Smith 0.

No. 2: Morgan 3, Morfey and Hopper 2, Smith and Doty 0.

The scores in the three events at 10 birds were:

	No. 1.	No. 2.	No. 3.
T W Morfey	0222102201—7	2220201100—6	2202222200—7

*De Wolf	11111110011111111011111111011111111111111111001111	—44

*E Collins shot along for the birds, making the high score. De Wolf also shot another string of 50 targets, scoring a total of 83 out of his 100.

The tie between Huck and Palmer was shot off at 20 targets per man, Huck allowing Palmer 2 extra targets. The shoot-off resulted in another tie on 17 each. They then shot off at 10 targets, Palmer receiving 1 extra target as an allowance. Huck won the cup by breaking 8 out of 10 to Palmer's 7 out of 11. The shoot-off was decided in a light that was scarcely good enough to see a target leave the traps.

Other sweeps, all at unknown angles, were shot as follows:

Events:	1	2	3	4	Events:	1	2	3	4

Other events were as follows:

No. 1: Bell 8, Johnson 7, Banta and Warren 5, Post 4, Gardner 3.

No. 2: Gardner 5, Banta 4, Jackson 5.

No. 3: Banta 9, Warner and Jackson 8, Post 6.

THE ENDEAVORS DEFEAT THE BERGEN COUNTY MEN.

Dec. 9.—The Endeavor Gun Club defeated the Bergen County Gun Club, of Hackensack, to-day, on the grounds of the former at Marion, N. J. The weather was very unfavorable for good shooting, there being a high wind blowing across the traps. Louis Piercy, the boy member of the Endeavor Gun Club, did some excellent work, breaking 29 out of 30 in the team race. To-day's contest decided the series between these two clubs, the Endeavors making the record two straight. Scores:

Endeavor Gun Club.

Nos. 1, 2 and 6 were at known angles; Nos. 3, 5, 9 and 10 at unknown angles; No. 4, reversed order; Nos. 7 and 8 at 5 pairs.

H. E. WINANS, Sec'y.

REMSEN WON AT HACKENSACK.

Dec. 12.—The contest for the *Recreation* cup at Hackensack, N. J., took place to-day under the auspices of the Bergen County Gun Club of that place. There were only ten entries a number remarkably small when one considers the generous conditions under which the trophy is offered for competition. Of those ten entries only eight completed their scores. J. S. S. Remsen, of Brooklyn, N. Y., winning the first shoot for the cup by a margin of 3 targets from his nearest opponent, Edwards, also of Brooklyn, who secured $5 for running into second place. Ed Taylor, of Laflin & Rand, was third, and received back the amount of his entrance fee, $2. In addition to these prizes there was an optional sweepstake of 75 cents on each string of 25 targets, which added considerably to the interest of the shoot. The conditions were 100 targets per man, 50 being shot at known traps and angles, and the other 50 at known traps, unknown angles.

The scores were ridiculouely low, 82 winning the first contest for the cup. (This cup has to be shot for seven times, once every two months, the man winning it the greatest number of times out of the seven becoming the ultimate owner. Thus Remsen starts in with one win to his credit.) It is rather a mystery what caused the low scores. Nobody could make a good score, Remsen's 23 in the first 25 being the best effort; his three next strings were 19, 19 and 21. Neaf Apgar could do no better than 71, a total that disgusted him and amazed everybody else. The secret of the trouble seemed to be the poor background and hard-breaking targets, the number of "dusted birds" being far above the average. The targets also were thrown low and far, but there was very little wind to bother the shooters. The scores in the 100 target race were as follows:

J S S Remsen	11111101111111111011111111110111011011101111101111011—42

RAVELRIGG.

Another Tie Race at Milwaukee.

MILWAUKEE, Wis., Dec. 3.—This city is getting rather famous in the trap-shooting world, by reason of the numerous tie races that have been shot here lately. Dick Merrill and Dr. Williamson have been responsible for three of them, while to-day Dr. Williamson and George Deiter added another to the list. This was a 200-bird match, J. A. Bush looking after Deiter's interests, while Merrill handled his late opponent, Dr. Williamson.

In the first half of the match Deiter shot poorly, and seemed unable to do anything with the birds. The score at the end of the first 100 stood 88 to 81 in favor of Dr. Williamson. Then an adjournment was had for lunch, and the interval seemed to brace up Deiter, who went in and ran 74 straight out of the second 100, his straight run being 77 all told. Out of the last 26 birds he lost 5, completing the match with a total of 176, scoring 95 out of his last 100. Dr. Williamson did not go to pieces as a result of Deiter's long run, but kept shooting away at a regular gait and finished with 176 also, scoring 88 out of each 100. His double-figure runs were: 20, 19, 19, 14, 12, 12, 10, 10. Deiter's runs were: 77, 14, 12, 10. The scores were:

Dr. Williamson	22211111111222222220•112•—28
	121112122••01•11501102122—19

Quail from the Trap.

NOT very long ago we were told that quail had been shot from the trap at Morristown, N. J., and were much surprised to learn that several local shooters had taken part in the shoot. When the affair was reported to us by one of the participants, we expressed our opinion of such a "sport." It seems that we are by no means isolated in our position on the matter. The following extracts from Pittsburg, Pa., newspapers explain themselves:

No. 1 is from the *Daily News* of December 8 and reads thus: "William French, H. Harper, George Ziegler and S. Brown, of Butler, Pa., were in Pittsburg this morning and announced that on next Monday they would hold a quail shoot at Butler. They claim to have 500 of these delectable birds to trap, and invite all of the Pittsburg wing shots to take aim at them. The question has been raised as to the legality of the gentlemen named in disposing of quail in this manner, and many Pittsburg shooters claim that it is unlawful to do so. Before going to Butler on this intent they will consult an attorney as to their right to so end the existence of these birds."

No. 2, from the *Commercial Gazette*, is as follows: "That proposed quail contest at Butler caused a great deal of talk among local shooters yesterday, and not a man could be found who indorsed the affair. There was an unanimity of opinion in denouncing it as being unsportsmanlike and decidedly unfair. Elmer Shaner, who is perhaps the best posted shooter in the State, was quite indignant yesterday, and said he was glad that the shoot was not to be held by any recognized club, but by a few parties who ought to have better sense. If the shoot was by a club he would at once take action toward having it expelled from the State Association. So far as he knew, there was no law to prevent such a shoot, but he felt certain that no true sportsman would participate in such a contest, as they would lay themselves open to be called pot-hunters. He was certain that none of the local shooters would participate in the contest, and from what he knew of Butler county shooters he felt that they would do everything in their power to prevent its taking place."

Later news from Pittsburg is contained in the following dispatch from Butler, Pa., Dec. 12, to the Pittsburg *Leader*: "The live quail shoot which was to have been held here on Monday by the Butler Gun Club has been called off, owing to the opposition of Pittsburg sporting men. The members of the club thought a live quail shoot would be all right, and it met with the approval of all the sportsmen they had consulted. It was the intention to get 600 quail and turn 100 loose, and it was expected that a couple of hundred would escape from the marksmen, thus stocking the surrounding country with birds. They did not expect any opposition, but since it has come they have decided to call the shoot off, which is a matter of regret to a majority of the sporting people of the vicinity."

Cartridge Loading Machines in Court.

THE Peters Cartridge Company, of Cincinnati, O., sends us the following account of the ending of its nine years of legal warfare against the Standard Cartridge Company, of Chicago:

"The United States Circuit Court of Appeals has just decided the case of the Peters Cartridge Co., of Cincinnati, against the Standard Cartridge Co., of Chicago, in favor of the Peters Company. The Standard Co., which now has an existence only in the courts, was composed of several of the leading powder companies, and boasted of having $30 000,000 at its command. A certain machinist, who had assisted in building the Peters cartridge machines, adopted their inventions and proceeded to build machines which the Standard Co. operated, although warned that these machines were gross infringements upon the rights of the Peters Cartridge Co. Going into the Patent Office, it sought to have set aside the various patents and pending applications of the latter company, and secured for itself a number of exceedingly expensive interference suits, every one of which was decided in favor of the Peters Cartridge Company. Not satisfied with this, it carried two of the suits into the United States Court That referring to the 'Round Table Machine' was dismissed at complainants' cost in the U. S circuit court. The 'Endless Chain' case was fought from one court to another, much additional testimony being taken, but all the decisions were in favor of the Peters Cartridge Company. The judge of the circuit said in delivering his opinion 'That the attempt to appropriate the invention was fraudulent.' The judges of the Appellate Court reaffirmed this. Long, tedious and expensive litigation of almost nine years has thus ended. About 5,000 printed pages of testimony were taken. This leaves the Peters Cartridge Co. sole owner of these two types of successful shell-loading machines."

Trap Around Pittsburg.

NORTHSIDE GUN CLUB.

Dec. 8.—There was quite a good attendance at the grounds of the Northside Gun Club this afternoon. Six events, all 15 targets each, were shot during the afternoon, the following scores being made:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6
Moyer	11	8	6	7	10	11	Zuemmer	..	13	10	13	10	11
McClaran	9	8	7	5	11	9	Major	..	3	5	11	9	8
Kinzer	5	7	..	5	6	7	Bollen	..	8	10	12	10	11
Mack	8	8	7	8	8	9	Young Flicker	..	5	8	7	7	..
Jones	4	5	5	8	5	7	Jiles	..	3	..	4	..	..
Shaner	14	10	12	13	11	13	Cullen	..	..	4	7	8	10
Thomas	11	12	11	7	8	11	Stewart	..	..	..	3	8	7
Smith	6	7	8	8	8	10	Daub	..	..	..	..	10	..
Budd	..	10	11	..	..	..							

ALLEGHENY CITY ROD AND GUN CLUB.

Dec. 3.—At the weekly shoot of the Allegheny City Rod and Gun Club, held to-day at Thomas Farm, Capt. Hulings won the club badge with 24 out of 25 targets. Scores:

Hulings 24, Jos. Fuchs 23, John Fugger and John Gerber 21, Henry Noll 20, J. G. Eckerman and H. T. Thomas 19, J. Meyer 17, F. L. Ober 15, Mike Glitch 13. M. GLITCH, Sec'y A. C. R. and G. C.

In another portion of these columns we have made a note about "Quail from the Trap." The stand taken by the sportsmen of Pittsburg, Pa., against such an unsportsmanlike proceeding cannot be too highly commended. This is not the first time we have heard of quail being shot from traps, but we hope it will be the last. If you want to shoot Bob White, go after him into the stubbles and woods with a dog and gun; when you place him in your pocket then you have not committed murder. It was you and your dog against the quail, heavy odds maybe, but it was not a massacre.

New Jersey trap shooters ought to take a brace and get to work reorganizing the State Sportsmen's Association. New Jersey shooters ought also to see to it that some radical changes are made in the game laws of that State. The open season on ruffed grouse ends on Dec. 10, yet hunters can scour the woods until Jan. 1 in search of quail and rabbits! The State Association could do something to help in rectifying such manifest errors.

Answers to Correspondents.

No notice taken of anonymous communications

T. H. E., East Boston.—The *Youth's Companion* story about frog farming has an air of fiction, and is not to be taken as demonstrating the actuality or practicability of frog farming.

A. E. E., Lodi, O.—Your description is rather vague, but we imagine that your bird is a loon (*Urinator*), perhaps *U. septentrionelis*, the red-throated diver. Did you note anything special about the position of legs?

SANDUS, Sandusky, O.—1. Will a 28in. shotgun barrel give as good results at the trap as a 30in. barrel? 2. Can you cover the target quicker with the 28in. barrel? Ans.—1. With smokeless powder, yes; with black powder, no. 2. Yes.

J. H., Belire, Br. Honduras.—If I ordered a 38 55 Winchester rifle, would it come with a "cast off" in the stock for a right-armed shooter, or are the stocks without cast off. Being a left-armed shooter, should I state this in ordering a rifle? Of course, if the stocks are always furnished straight then it would not be necessary. Ans.—Stocks are always furnished without cast off.

C. J. A., New York.—Are there any Great Dane kennels? If so, will you kindly give me their addresses? Also what is the natural disposition of Great Danes? Ans.—There are a number of Great Dane kennels in this country, but most of them seem indifferent about their addresses being made known. The Great Dane is mild in disposition, though courageous. They are rarely vicious in temper.

C. L. J., London, Ont.—My pointer pup is apparently in good health but for a slight cough, which affects him only when first let out of his kennel. Then he appears to have some slight obstruction in his throat and coughs a few times till he succeeds in coughing it up. He is kept in a shed about 10×12, and supplied with plenty of good dry straw; has plenty water, and is fed mostly on porridge made of shots and corn meal. My old setter is similarly affected, but much more so, as he is seldom without more or less of a cough, and has had it for some two or three years, more or less. What would you recommend? Ans. Apply tincture of iodine around throat daily till skin becomes sore, then stop. Give following mixture:

Tr. camph. opii	ʒ v
Vin. ipecac	ʒ ii
Morph. sulph	grs. iii
Syr. simpl	ʒ ii
Aq @	ʒ vi

Give one teaspoonful three times a day. Older dog should have mixture oftener—four or five times a day.

FOREST AND STREAM OFFICE

346 Broadway

NEW YORK LIFE BUILDING

Present Entrance on Leonard Street

ENLARGE THE YELLOWSTONE PARK.

A GOOD many years ago the FOREST AND STREAM suggested that the Jackson's Hole country south of the Yellowstone National Park ought to be added to that reservation, and recently the subject was brought up again by one of our Montana correspondents. This enlargement of the reservation is clearly something that ought to take place, and as soon as possible. It would add much to the attractiveness of the Park, for here may be found some of the grandest scenery in Wyoming—deep rivers, broad lakes, and snow-clad mountains as yet unscaled. Here are Jackson's Lake, the Three Tetons, and many other tall peaks and beautiful valleys of a wonderful region; places without number where one may camp and travel undisturbed, and may imagine himself to be living again the life of the real wilderness. Moreover, this is the home of the game, of moose, elk, deer, antelope—perhaps even of buffalo, and is especially interesting as being the winter range of some of these species.

This region is one of great elevation, of heavy winter snowfall, and as yet is almost without permanent settlers. Its principal use at present is for summer hay ranches for the Mormons, who live lower down on Snake River, and who come there early in the summer to cut the grass that grows on the Snake River bottoms and on the flats about Jackson's Lake, and for hotels from which hunting parties, desiring to kill game along the southern borders of the Yellowstone Park, may start out on their trips. On either side from Snake River rise the wide, sage-covered benches of the river's flood plain, a few years since the feeding ground of herds of antelope. In the ravines which run down from the mountains there were many mule deer, and in the pine forests of the foothills, and among the quaking aspen groves of the higher land, the elk used to band up in September and the clear bugling of the bulls echoed along the mountains. Down close to the lake, or in the willowy swamps of the high land, there are still some moose, though their numbers are few by comparison with what they were in years gone by.

To the west rises the superb range of the Tetons, seeming like a wall which overhangs Jackson's Lake and the river valley; away to the east the land rises more gradually to pine crested foothills, then to higher bald plateaus, and then still further away to loftier mountains, with here and there a peak, until at length the stupendous heights are reached, out from which pours the mighty stream of the main Yellowstone.

Truly this is a region worthy to be preserved in its native wildness, a region valueless for settlement, but priceless as a park and summer wandering place for the tourist who loves nature and her solitudes. As a resort for game, it is perhaps unequaled on this continent, and joined to the Yellowstone Park as it stands to-day and to the adjacent forest reservation it will make a game preserve that can nowhere be equaled.

It is hardly to be conceived that anyone will object to the setting aside of this region as an addition to the territory of the Yellowstone Park. If such objectors shall be found it will be among the settlers adjacent to the region, or temporarily occupying it. The haymakers may declare that their claims should not be interfered with, and the men who occupy buildings there in the summer and who take out hunting parties may grumble, and say that their business is being interfered with; but in a matter where the interests of the whole nation are involved the objections of these people are not worth considering. The greatest good of the greatest number must be the guide for legislation.

When our correspondent brought this subject up again, we urged that he try to interest in it members of Congress from districts immediately about the Park, and to induce them to move actively in the matter. This has been done. Senator Carter, of Montana, is understood to have drawn a bill providing for the setting apart from settlement of a tract about fifty miles square, to include the Jackson's Hole country, and it is said that the Senators of Montana and Idaho all indorse the bill. Of course, for such a bill the support of the Wyoming Senators is greatly needed, since all the land to be withdrawn from settlement will be taken from within the borders of this State.

It is a cheering sign that the Senators from States bordering on the National Park are beginning to take an active interest in that reservation. Heretofore it has been the Senators from other and distant States who have chiefly concerned themselves with this national pleasure ground, while those whose districts it lies in or near have been careless of its interests It is to be hoped that the present movement presages better things for the future.

FRED MATHER.

IT is a pleasure to present to-day one who is known so well. If in the face any one shall fail to recognize those features which have been pictured in fancy, he may know nevertheless that it is an excellent portrait of Mr. Mather, taken on Aug. 2, 1893, that being his sixtieth birthday.

The author of "Men I Have Fished With" was born into this fishing world Aug. 2, 1833, in the little village of Greenbush, opposite Albany, on the Hudson. He has said that as a boy he loved shooting and fishing so well and hated school so much that he now wonders how he learned anything. However this may be, we are all agreed that he was destined to win large acquisitions of the philosophy of life and to master the art of felicitous discourse—witness the series of chapters to which his Christmas story belongs.

In 1854 Mr. Mather went to Wisconsin, where, as he has already told in our columns, three years were spent in hunting and trapping; thence he drifted to Kansas, and then his friends gathered at Old Port's to give him a Christmas welcome home. In response to the call for troops in 1862 he enlisted in the army as private and served until the close of the war. Our choice of a portrait for the FOREST AND STREAM happened to be that one which shows him in uniform and with service insignia which will tell their own story.

Mr. Mather took an active interest in fishculture at an early stage of its development in this country. In 1868 he bought a farm in western New York and began trout breeding, and was called on to hatch shad for the United States on several rivers. He was sent to Germany four times on fishcultural business, the last time in charge of the fishcultural branch of the American exhibit at the International Fisheries Exposition in Berlin. He hatched the first sea bass and took the first grayling eggs. In 1883 he took charge of the New York State hatchery on Long Island, where he remained until last spring, when he moved to Brooklyn. He urged the stocking of the Hudson with salmon and did it; discovered how scallops breed and that lobsters spawn only once in two years. He founded the American Fisheries Society and is an honorary member of all foreign fishery societies.

As a writer on fish and fishing Mr. Mather has been known to FOREST AND STREAM readers since its first number in 1873. For several years he was the editor of our angling columns. Always delightful as a story teller, he has never written anything in happier vein than these chapters of personal sketches of companions of field and stream. The heroes of his tales are to be counted fortunate in their historian; and yet more fortunate are the thousands whose privilege it is to read the reminiscences chronicled, and so often to find in them each for himself something of the experiences, the fortunes and the friendships of his own life.

AN INCIDENT OF CHRISTMAS EVE, 1586.

IN the black letter of Hakluyt, in the narrative of "The admirable and prosperous Voyage of the Worshipful Mr. Thomas Cavendish, of Trimley, in the County of Suffolk, Esquire, into the South Sea, and from thence round about the circumference of the whole earth, begun in the year of our Lord 1586 and finished 1588," it is written that on the 16th day of December, 1586, the fleet of three ships fell in with the Coast of America, and on the 17th, in the afternoon, entered into a harbor which they called, after the name of the Admiral's ship, Port Desire, an appel lation which if you will look on the map of South America, you will find to have remained until this day. Here in Port Desire was found a wonderful great store of seals. These seals, the old chronicle reads, "were of a wonderful great bigness, huge and monstrous of shape, and for the forepart of their bodies cannot be compared to anything better than to a lion; their head and neck and fore parts of their bodies are full of rough hair; their young are marvellous good meat, and being boiled or roasted are hardly to be known from lamb or mutton." Seal hunting in those early times was very much like seal hunting in Alaska today; it was simply a matter of clubs. "The old ones," the narrative records, "be of such bigness and force that it is as much as four men are able to do to kill one of them with great cowle-staves: and he must be beaten down with striking on the head of him, for his body is of that bigness that four men could never kill him, but only on the head."

Here at Port Desire the crews careened and trimmed their ships, the Desire, the Content and the Hugh Gallant; and laid in a great store of seal and of penguins, for these fowl afforded a favorite food supply for the voyagers of those times. While thus engaged, on Dec. 24, being Christmas Eve, the Hakluyt story tells us:

"A man and a boy of the Rear-Admiral went some forty score from our ships unto a very fair green valley at the foot of the mountains, where was a little pit or well, which our men had digged and made some two or three days before to get fresh water. Therefore this man and boy came thither to wash their linen, and being in washing at the said well, there were great store of Indians which were come down and found the said man and boy in washing. These Indians being divided on each side of the rocks, shot at them with their arrows and hurt them both, but they fled presently, being about fifty or threescore, though our General followed them with but sixteen or twenty men. The man's name that was hurt was John Garge, the boy's name was Lutch. The man was shot in through the knee, the boy in the shoulder, either of them having very sore wounds. Their arrows are made of little canes, and their heads are of a flint stone set into the cane very artificially. They seldom or never see any Christians; they are wild as ever was a buck or any other wild beast, for we followed them and they ran from us as if it had been the wildest thing in the world. We took the measure of one of their feet, and it was 18 inches long."

In the famous voyages of De Bry, published at Frankfort-on-the-Main in 1593, the adventures of the voyagers and explorers of the world are set out in engravings now counted among the most cherished possessions of the book collector. From one of the volumes owned by the FOREST AND STREAM, we have copied out for this Christmas of 1896 the quaint picture of the misadventure which befell the sealers at Port Desire on that Christmas Eve of 1586. The artist on the spot has left us a graphic delineation of the incident; if any shall object that his drawing is in its perspective not up to the standard of to day, be it remembered that a proper appreciation of perspective is something many a well-meaning individual lacks even in this year of grace.

CHECKMATED?

OF all the game birds, none approach the ruffed grouse in cunning devices to avoid its pursuer, and courageous dash in their execution. It is a versatile strategist, whether afoot or awing, often evading the most skillful shot and always taxing the highest capabilities of the dog to baffle its wiles and evade its vigilance so that a point may be secured; or, failing that, a flush within range of the shooter, a not infrequent occurrence in ruffed grouse shooting.

Our full-page illustration of a shooting scene in the haunts of the ruffed grouse is from the deft brush of Prof. Edm. H. Osthaus, whose skill with brush and pencil in the portrayal of the wholesome sports of field and forest has more than a national fame. The spirited sketch pictures the juncture when the dog has at last brought the bird to take refuge in concealment, checkmated, perhaps; and the shooter, keyed up to the highest nervous tension, is ready for the bird's roar of wings, and the lightning dash for cover, with the accompanying trick of putting its line of flight so that a tree, rock, fence or wall is between it and its pursuer, thus defeating many times what seemed almost a success for the gun, and making the checkmate always doubtful; for this resourceful bird is never governed by set rules—what in appearance seems to be a certain checkmate may be turned at the last moment into a dashing evasion and brilliant escape. Prof. Osthaus most happily catches the spirit of the theme in the *ensemble* of wild, secluded haunts, crafty dog and skillful sportsman.

WILLIAM LYMAN.

WE regret to record the death of William Lyman, in th city, Sunday, Dec. 20. Mr. Lyman was gifted with inventive genius of decided versatility. Among his invention were the bow-facing rowing gear, an important improvement of the clothes-wringer, and the several rifle and gun sights which have made his name familiar to the sportsmen of America and Europe. He possessed a rare fund of quaint humor which never failed to charm his friends, of whom the circle was wide, with their friendships growing closer as the years went by. Mr. Lyman was in his forty-third year,

CHARLEY REYNOLDS.*

TWENTY years ago this last summer the Custer fight took place on the banks of the Little Big Horn River, in Montana. Many brave men lost ther lives on that June 26, and the news of that fight carried sorrow into many homes in the land.

The story of the Custer battle has often been told, but the accounts of one part of it are largely guesswork. I have heard the story many times from Indians, half-breeds and white men, but I do not now wish to refer to it further than to speak of one of the men who died there, who was good, brave and a true friend of mine. This was Charley Reynolds, for several years Gen. Custer's chief of scouts.

Measured by years, my knowledge of Charley was not long. Measured by intimacy of intercourse, our friendship was very close. I first met him in June, 1874, and for three months thereafter we were together every day, and often all day. Parting soon after the return of the Black Hills expedition to Fort Abraham Lincoln, we did not see each other again until the next summer, though frequent letters were exchanged between us. The next year Charley accompanied me on a reconnoissance from Fort Lincoln up the Missouri River to Carroll, and thence across the country to Fort Ellis, Mont., through the Yellowstone Park, back to the Judith River; from the mouth of the Judith down the Missouri in a Mackinaw boat to Carroll, and thence down the river again to Bismarck. In the spring of 1876 Gen. Custer telegraphed to me at New Haven, where I then resided, inviting me to accompany him on the expedition of that year. He requested me, if I could come, to report at Fort Lincoln on May 30. Private affairs detained me in the East, so that I could not reach Fort Lincoln before June 30, and I was obliged to forego the trip. If I had been able to go, Charley and I would have met again, and we might have fought side by side in the Reno Creek Valley.

During the two expeditions of '74 and '75 Charley and I were together much of the time. From some reason or other, from our first meeting we liked each other, and the liking grew as we came to know one another better and better. During the trip of 1875 we rode and hunted together all the time, messed together and slept together. It was chiefly during this trip that I received from him such confidences as gave me some idea of his early life and of the place of his birth. It can readily be understood that I never asked him any questions about himself. This I have long greatly regretted, because I have no doubt he would willingly have told me the whole story of his life, and this knowledge, if I had had it, might have been a comfort to some of his relations.

At the time of our trip to the Black Hills Charley was thirty-one years old. From statements made to me, and from casual remarks made from time to time, I know that he was born in western Kentucky, somewhere within 100 miles of Memphis, Tenn. His father was a gentleman, well to do, and fond of outdoor sports, among other things a great deer hunter, following his hounds on horseback over the rough mountains near his home. He had been a slave owner. When Charley was a little fellow about twelve or fourteen years old he was sent away to boarding school, to Indianapolis, Ind. An uncle of his lived in that city. His stay there was not long. He was homesick, and was, as he imagined, unjustly treated by the principal of the school, and before long he ran away. He did not dare to go home nor to his uncle, but determined to depend on himself for support, and started west on foot.

Just how it came about I do not know, but in some way he joined an emigrant train going across the plains, and traveled with it to what is now Denver, where the train disbanded, and he was thrown on his own resources. He had a little money, given him perhaps for his services while crossing the plains, and this enabled him to buy a little pistol and to support himself for a short time. Before very long, however, his money gave out. There was no opportunity for him to get anything to do in Denver, and he started to walk further into the mountains to see if he could get employment somewhere. He was now about fifteen or sixteen years old.

He walked for a day and a half into the hills without eating anything, and began to get pretty hungry and pretty desperate. One evening he came to a little cabin, and made up his mind that here he would eat. He entered and drew his little pistol from his holster, and, pointing it at the man who was getting supper there, ordered him to give him something to eat at once. The little old man looked at him with a queer smile, but said nothing, and set food before him, and Charley put his pistol down by the side of the plate and burst out crying. The old fellow spoke kindly and pleasantly to him, and after Charley had eaten drew from him his story. He kept the boy with him all that winter and through the following year, taught him much about hunting, trapping and mountain life, and purchased for him a little rifle. Very likely Charley would have remained with him for a long time, but the next summer the old man died and the boy was thrown adrift again. However, his experiences had taught him something about taking care of himself, and thereafter he was never in great straits.

In the later 60s Charlie was on the Missouri hunting and trapping, and from about 1868 to 1872 Fort Berthold was his headquarters, and the Missouri between that and Bismarck and the Little Missouri River were his chief hunting and trapping grounds. He was a remarkable shot with a rifle and a good trapper. His success in hunting, he told me, came largely from the fact that he strove to learn in every possible way—by reading and by observation in the field—the ways of the animals that he hunted. The Rees, Mandans and village Gros Ventres of the Berthold Agency believed that he possessed some special medicine, which, when used, induced the animals to come to him. On one or two occasions they talked of killing him because his success in hunting was so great. They were especially exercised about some natural history books that he used to read, and believed the pictures in these books exerted some influence on the deer, elk, antelope and buffalo. Peter Beauchamp, a half-breed Ree, now or recently living at Berthold, has told me within a few years something of the way in which these Indians regarded Charley. Peter was for a number of months hired by Charley to keep camp for him, look after stock, and so on.

Almost immediately after Gen. Custer assumed command at Fort Lincoln he heard of Reynolds and of his remarkable qualifications as scout and hunter, and in a very short time he succeeded in securing his services as chief of scouts at the post.

Charley accompanied the Sturgis expedition to the Yellowstone in 1873, and it was in 1874, on the Black Hills expedition, that I had the opportunity of learning something of his great knowledge of the habits of animals, the Indians and generally of prairie life.

CHARLEY REYNOLDS.

From some cause or other we were detained at Lincoln for nearly thirty days after the date which was originally set for the expedition's departure, and during these days I hunted much with Charley and he was at my quarters daily.

During this time there came to the post, without any letters, a Frenchman who stated that he was a scientific man and wished to accompany the expedition. Gen. Custer explained to him that he could not be taken along except by order of Gen. Sheridan, and the man when he heard this became very much excited and declared that he would go to the Black Hills anyhow. About noon the next day it developed that the man had started from Fort Lincoln soon after daylight, and had walked up over the bluffs in a southwesterly direction. The country was bad, for Indians sometimes rode up to the edge of the bluffs above the post, and no one supposed that the man could go twenty miles without being picked up by some wandering war party. However, Charley saddled up, found the trail of the man who had gone afoot, set off and overtook him nearly thirty miles from the post. He was apparently crazy, was walking rapidly in a southwesterly direction, talking to himself in an unknown tongue and gesticulating violently. He refused to stop when Charley overtook him, and in fact probably did not understand a word that Reynolds said, any more than Charley understood him. However, after a long wrangle Charley induced the man to turn about with him, and, mounting him on his own horse, walked beside him, and reached the post about daylight the following day. The man was put in the hospital under guard and before long was sent East. Anyone who knows anything about tracking will understand that to follow the trail of a man on foot for twenty or twenty-five miles is not an easy matter.

I think we were camped not far from the southern border of the Black Hills when Gen. Custer told Reynolds to prepare to go into Fort Laramie with dispatches. The distance, if I recollect right, was 150 miles, and the way led through a country that swarmed with Indians, who were constantly passing back and forth between two agencies. When I heard that Charley was going to make this ride I was extremely anxious to make it with him, believing that there was some danger in it; and knowing that two or three men could very likely go through where one could not. Charley was anxious to have Capt. North and myself go along; but we were unfortunately very badly off for horses, as the feed had been very poor and all the stock was wretchedly thin and weak. In fact, many horses gave out entirely and had to be shot. Charley's horse was not fit to make the ride, being a slow, heavy troop horse—though in good condition—and the animals ridden by Capt. North and myself were even less serviceable. I spoke to Gen. Custer about the trip, and he was at first extremely reluctant to have more than one man venture on it, on the ground of its danger. I explained to him my point of view, and brought him to agree that the trip might be more safely made by three men than by one. However, Capt. North and myself were unable to secure horses that were at all fit for the ride. Charley managed to obtain a condemned Government horse which belonged to a wagon master, but it was so vicious that he could not ride it. Charley, however, rode it for a day or two and succeeded in measurably taming it. It was a tough and wiry beast.

Charley set out alone for Fort Laramie, and ultimately reached there after having been exposed to great dangers from the Indians, and having suffered much from thirst. He rode at night, and lay by in brush and timber during the day, and failing to find water, both he and his horse suffered acutely toward the end of the ride. It was curious and interesting to hear Charley tell how this wild and vicious brute, while they were hiding during the day in the underbrush, often came up to him as he lay on the ground and pushed him with his nose, trying to induce him to get up and go on. Charley's throat and tongue became so swollen from thirst that he could not close his mouth.

When the expedition reached Fort Lincoln again Charley was there, having come around by railroad after delivering his dispatches at Fort Laramie. On the Black Hills trip I saw him make some remarkable shots at antelope and white-tailed deer, which were extremely abundant. In fact, he and Capt. North, who were two of the best rifle shots that I have ever seen, did shooting on this expedition that I never expect to see equaled in the field.

The enlisted men of the command had the utmost reverence for Reynolds's knowledge of prairie craft, and the highest possible belief in his skill with the rifle. This was amusingly shown by a little incident which happened one day after the expedition had crossed the Little Missouri River, and was near the Black Hills. With Charley and Capt. North I happened to be riding with headquarters, about four or five miles ahead of the column. Signal smokes and fresh trails of small traveling parties of Indians had been seen the day before and that morning, and Gen. Custer had given orders that there was to be no straggling by the enlisted men, and that none of them were to be given permission to hunt. All must keep with the command. The scouts were the only men who had any business to be away from the column.

As we rode up on the crest of a little prairie swell, which overlooked a broad flat, we saw, 600 or 800yds. off, a soldier creeping up toward some feeding antelope, and almost at the same moment he saw us, and straightening up stood looking at us. Gen. Custer told his orderly to call the hunter in, and the orderly rode out a little way and waved his hat, and then rode his horse in a circle, but the hunter did not move toward us. Instead he rather acted as if he wanted to go the other way.

After a moment Gen. Custer turned impatiently and said to Charley, "Reynolds, can't you bring that man in?"

"I guess so, if you want him, General," said Charley, spurring to the front and preparing to dismount.

"That's it," said the General. "Shoot at him."

Reynolds brought the rifle to his shoulder, pointed it at the man and fired, and after two or three seconds the man fell to the ground. "Great Scott! he has hit him!" exclaimed half a dozen men. In a moment, however, the man sprang to his feet and ran toward us as hard as he could, never stopping until, breathless and spent by his exertions, he was quite close to us. The General ordered a couple of men detailed to disarm the straggler, take him to the rear and put him under arrest.

That night the man was showing in camp a place on his head where a lock of hair was missing, which he declared had been cut away by Charley's bullet. And it was believed by many of the soldiers that Charley had intentionally shot so as to cut away this lock of hair. Charley laughed when he heard of this statement, and said to me that he had held above and to one side of the man, and that it was impossible that his bullet should have passed nearer to him than 100ft. "But I have no doubt he heard the ball sing," he added, "and they sometimes sing pretty loud." At all events the man came, and "came a-runnin'."

In 1875 our little party took steamer at Bismarck, and after many days of journeying over the sand bars of the Missouri we reached Carroll, a town which a few years later, undermined by the swift current, dropped into the Muddy River. From here we traveled west and southwest, through country now full of settlements, but then traversed only by buffalo, antelope, casual war parties of Indians, and now and then a wolfer or a hunter. Among other things that we had on the trip was plenty of hunting. The camp was never out of meat. We saw the then unknown wonders of the Yellowstone Park, and were out ninety days.

On our return journey Charley, Ned Ludlow and I took a little mackinaw boat at Claggett's, at the mouth of the Judith, and went down the river to meet the land party at Carroll. The country on both sides of the river was full of hostile Indians. They were crossing frequently, and in almost every bottom that we came to we saw recently built sweat houses and places where camps had been during the summer.

I remember very distinctly one remark of Charley's as we camped one night on a sand bar in the river. It was cold autumn weather and we were short of bedding, and the youngest man in the party proposed that we should build a fire to sleep by, but Charley vetoed the proposition. He said: "I don't mind being killed, but I should hate to have some fellow come along here next summer and see my skull and bones lying here by the fire, and have him kick the skull along the ground and say, 'I wonder what that infernal fool expected when he built that fire and lay down by it in such a country as this?'"

In those days this was a game country. There were

* Stories of an Heroic Age—III.

plenty of buffalo, besides smaller game, and we might have loaded a steamboat with meat if we had wanted to and had had the steamboat. As it was, we killed an elk, a sheep and two blacktail deer, and then stopped hunting because the boat was loaded within an inch or two of the water.

The trip down the river from Carroll to Bismarck was a short one, and that fall I parted with Charlie never to see him again. The last letter I received from him was written just before his trip of 1876, which proved so disastrous.

Charley Reynolds was respected and admired by General Custer and his officers, as well as by the officers' wives. How earnest and sincere this appreciation was is indicated by the tribute paid him by Mrs. Elizabeth B. Custer in her book entitled "Boots and Saddles":

"The one whose past we would have liked best to know was a man most valued by my husband. All the important scoutings and most difficult missions, where secrecy was required, were intrusted to him. We had no certain knowledge whether or not he had any family or friends elsewhere, for he never spoke of them. He acknowledged once, in a brief moment of confidence, that he was a gentleman by birth. Startled, perhaps, by the look of curiosity that even a friend's face showed, he turned the conversation and said, 'Oh, but what's the use to refer to it now?' We did not know whether Charley Reynolds was his real name or one that he had assumed. Soon after we reached Dakota the General began to employ him as a scout. He remained with him much of the time, until he fell in the battle of the Little Big Horn My husband had such genuine admiration for him that I soon learned to listen to everything pertaining to his life with marked interest. He was so shy that he hardly raised his eyes when I extended my hand at the General's introduction. He did not assume the picturesque dress, long hair and belt full of weapons that are characteristic of the scout. His manner was perfectly simple and straightforward, and he could not be induced to talk of himself. He had large, dark-blue eyes and a frank face. Year after year he braved the awful winters of Dakota alone. I have known him to start out from Fort Lincoln when even our officers, accustomed as they were to hardships, were forbidden to go. He had been the best shot and most successful hunter in the territory for fifteen years. * * *

"The year that the regiment explored the Black Hills, Charley Reynolds undertook to carry dispatches through to Fort Laramie, over 150 miles distant. He had only his compass to guide him, for there was not even a trail. The country was infested with Indians, and he could travel only at night. During the day he hid his horse as well as he could in the underbrush and lay down in the long grass. In spite of these precautions, he was sometimes so exposed that he could hear the voices of the Indians passing near. He often crossed Indian trails on his journey. The last nights of his march he was compelled to walk, as his horse was exhausted, and he found no water for hours. * * * His lips became so parched and his throat so swollen that he could not close his mouth. In this condition he reached Fort Laramie and delivered his dispatches. It was from the people of that post that the General heard of his narrow escape. He came quietly back to his post at Fort Lincoln, and only confessed to his dangers when closely questioned by the General long afterward. When I think how gloriously he fell, fighting for his country, with all the valor and fidelity of one of her officers, my eyes fill with tears; for he lies there on the battle-field, unwept, unhonored and unsung. Had he worn all the insignia of the high rank and the decorations of an adoring country, he could not have led a braver life or died a more heroic death; and yet he is chronicled as 'only a scout.'"

There was talk among the officers of the 7th Cavalry in 1874 of obtaining for Charley Reynolds a commission in the regular army, and this could very likely have been done, as strong influence could have been brought to bear on the President to secure the appointment. When the news of this movement came to Charley's ears, however, he very quietly asked that the matter be dropped, saying that he would not accept a commission if it were offered him. His reasons for this decision, though never publicly stated, were, in my opinion, good ones at the time.

On that 26th day of June, 1876, when so many of the 7th Cavalry rode down into the Valley of the Shadow of Death, Charley Reynolds was attached to Reno's command, and with it charged down from the bluffs into the bottom, across Reno Creek, and quite up to the edge of the Sioux camp. Then, as will be remembered, Reno halted his command and went into a piece of timber. The story of what took place just afterward has been told me by more than one witness of the scene. With Reno's command were a dozen or fifteen scouts—Charley Reynolds, Bloody Knife, the Ree; Isaiah, the negro; Fred Girard, the Ree interpreter; Billy Jackson, the Piegan half-breed; George Herendeen, and others.

Reno ordered the retreat. The soldiers started with more or less order, but the fire was terrible, and in a moment they became panic-stricken and crowded toward the ford. A body of 500 Indians was charging toward them down the valley. Charley called out to the scouts, "Here, boys, let us try to stop these Indians and give the soldiers a chance to cross." The scouts stayed behind and turned, shooting into the charging mass, a dozen men against 500, the Indians came on like a whirlwind and struck. The soldiers crowded at the ford, they were killed like sheep as they struggled to get across. They made no defense. They were butchered with bullets, arrows, lances and clubs, or knocked off their horses with gun barrels. "It was like killing buffalo," a Cheyenne who was in the charge has since said to me. Bloody Knife had shaken hands with two or three of the men nearest to him, saying, "This is my last day. I see the sun now for the last time." He rushed out among the Sioux, killed two of them, and in a moment was himself killed, fighting bravely to the last. Isaiah was knocked over by a ball. Billy Jackson and Girard had retreated into the timber; they were not noticed by the Indians, whose attention was directed entirely to the struggling mass of soldiers.

Charley's horse had been killed at once. He shot an Indian who was charging toward him on a buckskin pony, and as the Indian did not at once fall off he shot the horse, and Indian and pony rolled over together almost at his feet. He fired again, and then again. Bullets and arrows were flying thick. Suddenly Charley seemed to be hit in half a dozen places. He fell, raised himself on his elbow and fired another shot—his last. Then he sank back.

Charley Reynolds's most striking characteristic was his quietness. I never heard him swear. I never saw him angry with man or beast. I think I never saw him provoked except on one occasion, when an Indian named Goose persuaded Gen. Custer to go three or four days' march out of his way to visit a wonderful cave. The wonderful cave turned out to be a wretched little cleft cut out by the water in a sandstone butte. It was perhaps 75ft. deep, and often barely wide enough for a man to squeeze himself in sideways. On this occasion Charley did express his dissatisfaction. Notwithstanding his reserve he could and did talk, and talk well, but only when he had something to say.

His quiet, self-contained manner, his gentleness, his bravery, and his wonderful knowledge of all that pertained to the hunting and war of his day, made Charley Reynolds a man to be remarked by all who came in contact with him. He was emphatically a gentle man, a brave soldier, a true friend. GEORGE BIRD GRINNELL.

THE BARON AND THE WOLVES.

Chapter I.

"PLEASE, your Honor, young Siegrol is in the courtyard with a wolf's head."

It was Kraff the huntsman who spoke, and Von Sivernoff, turning his eyes for a moment from his morning cup of chocolate, said:

"Well, what of it?"

"Please, sir, he asks for the bounty."

"What have I to do with that? Let him take it to the mayor," said the Baron, resuming his paper.

"May it please your Honor, it was killed in the Schlagerot."

The Baron's eye grew dark. There had long been a bitter feud between himself and the mayor or governor of the district as to the ownership of the wild tract of forest and fen that was known as the Schlagerot, and to have sent one of his own serfs to the mayor with a wolf killed in the disputed territory would have been to forego his claim.

"There, give him that and bring in the head," said the Baron, throwing down a gold piece.

Presently the huntsman returned with the head on a tray.

"Cancel it."

The huntsman proceeded to cut off the nose and ears, then throwing them in the blazing fire was leaving the room with the "cancelled" head, when the Baron remarked:

"It's a big fellow; how did the lad manage to kill it?"

"Please, sir, it was old Siegrol that killed it, not the lad."

"Then why didn't he come with it?"

"It seems, sir, that the wolf nearly killed him first."

"H'm," said the Baron, "that makes two already this winter."

"Three, sir! There was Golowin's widow and Siegrol's little brother."

"H'm," said the Baron placidly, and again addressed himself to his paper and chocolate. A few minutes later, when he turned to order more toast, he saw that old Kraff was back again, and was standing and looking uneasily at him.

"Well, what is it?"

"So please, your Honor," began the trembling huntsman, "they have killed your second hunting mare!"

"What!"

The poor huntsman repeated the statement that the wolves had killed the mare in the field on this side of the Schlagerot, and the Baron broke out into a truly baronial rage. When the first blast of mere ejaculation was over he proceeded to demand the fullest information.

"What was the horse-herd about? Who was he? He shall pay dearly for this."

"Please, sir, it was old Siegrol, and that's how he lost his life."

"Serves him right, the old fool, he has just escaped a knouting by dying in time. And why haven't you kept the wolves down in this neighborhood?"

"Please, sir," said Kraff, bowing low, "we have done our utmost, and have, as you know, killed quite a number during the year."

"I know I've had to pay bounties enough, and still they seem to thrive under it," said the Baron with fierce sarcasm; "and if they are so bad now in the first of December, what will they be in February? Another year I'll try a new plan; instead of a bounty on each wolf's head, I'll knout every man who does not kill his wolf before the year is out."

"May it please your Honor, old Siegrol was availing himself of your permission to trap in the Schlagerot. He had made already over twenty springles* for wolves and believed that he would catch many in them before springtime."

"Pish!" said the Baron, "who ever heard of a wolf going in a springle trap?"

"He was very good at it, sir, and it took three men to bend down his springing trees."

"By Saint Peter and the first Von Sivernoff, I'll set his family free if ever they catch anything bigger than a rabbit. Why hasn't he caught a dozen already if he is so expert?"

"Your Honor will remember that it is but a few days since your permission was given to trap there, and of course no wolf will venture near a trap till after a new fall of snow has hidden all traces.'

But the Baron, finding himself worsted by his servant abruptly and properly ended the dialogue, for the huntsman's statements were perfectly true. The Baron, in his anxiety to show his authority over the Schlagerot, had allowed—which really meant ordered—old Siegrol to trap in it—a thing he would never have dreamed of permitting in his own, undisputed, ancestral preserves, so that it was really a confession of the weakness of his claim.

Though inclined to be fat, he was when fully aroused as energetic as he was choloric; so he ordered the huntsman to prepare for one of those wolf hunts which are occasionally reported from Russia. The scene is well known: the sleigh full of armed hunters, the live pig squealing in the sleigh and the piece of bloody pork trailing behind as a lure to the gathering and famishing pack.

It is a method that is better known in story books than in fact, for it is only on rare occasions that it is successful. The combination of circumstances requisite is, in brief, a large wolf population in the district and a prolonged time of deep snow and scarcity of food, so that the wolves are sure to be ravenous with hunger.

But now it was early in the winter, and the wolves, though numerous, were far from starving. They did indeed follow the Baron's squealing pig, but at a safe distance, and only for a short time, so that the hunt passed without the death of a single wolf, and the second day with the drag was no more successful than the first.

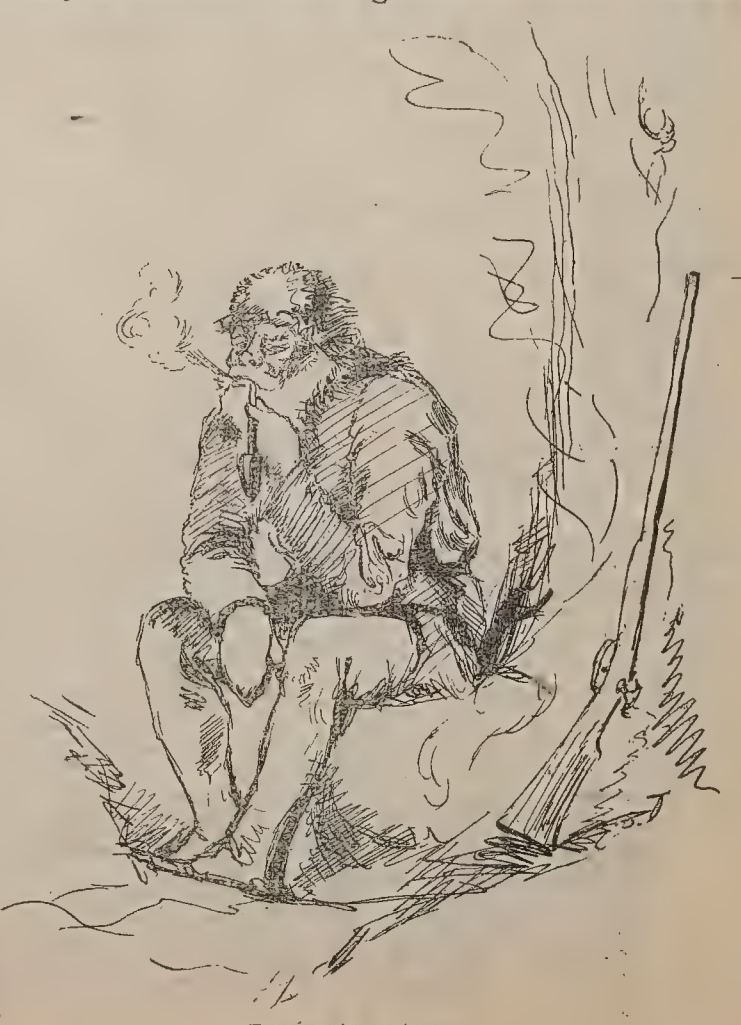
On the third day, as they were driving homeward about dark, one or two dusky forms were descried following the sleigh track far behind, but they would not come near enough to give a chance for a successful shot. At length, continuing a train of disparaging remarks—for he was obliged to discharge some one under the circumstances—the Baron said:

"I suppose you would be afraid to get up that tree while we drive on, then shoot at the brutes as they pass under you?"

It was a mean, unkind sneer, for never in his life had old Kraff shown any lack of courage; it was the last straw too, and he sullenly growled, "I'm not afraid of anything in churchyard or woods," and seizing his gun he jumped into the snow.

There was just a faint accent on the "I," and the allusion to the churchyard was a home shot, for the Baron's weak side was superstition. He had many years ago been terribly frightened by a supposed ghost, and though

HAD BEEN FRIGHTENED BY A GHOST.



his college chums had chaffed him no little about it, this was the first time that one of his own dependants had dared to make the slightest allusion to the subject.

He scarcely knew what to say he was so furious, yet to have shown it would have been to confess that he recognized the thrust. So he stifled his rage, and the horses bounded off again through the woods. Turning on a circuit, the sleigh full of hunters came twenty minutes later on their old track to the huntsman's post, and they found him, as any one acquainted with wolfish nature would have expected, calmly sitting on a root, alone and undisturbed.

He had found the tree not easy to climb, so did not attempt it; and the wolves—as he knew they would—disappeared for good the moment they saw him leave the sleigh. He neither saw nor heard them again.

Not a word passed between him and the Baron, but everyone felt instinctively that it was a great victory for old Kraff.

That night the Baron set about drowning the memory of his defeat, and, as was usual with him in such times, he found much solace in dilating on the matchless prowess of the illustrious house that he represented. He was especially fond of relating the exploits of the first Von Sivernoff, Petro, after whom he himself was named. This first of the baronial line was said to have cut down twenty Swedes with his own good sword on the field of

THERE SAT KRAFF.

*A springle trap is a combination of a bent tree and a snare. Any animal getting into the snare and giving a slight pull releases the tree and is at once thrown high in the air and so retained till the trapper removes it.]

Riga in 1690, and had in consequence been ennobled by the Czar, Peter the Great. And when his valet, always eager to please, ventured to follow an allusion to the Kraff incident by a remark to the effect that "the old fool would never have dared to attempt it in March, when the snow was deep and the wolves ravenous," it had the effect of giving a new and definite shape to the Baron's thoughts. He was still smarting under the remembrance of his moral defeat, and as the brandy overpowered his reason his ideas became strangely mixed, and incoherent visions of the glory of his ancestors, strange resemblances between Swedes and wolves, a burning desire to distinguish himself, and above all a wild craving to do something that would effectively set old Kraff in the shade, took riotous possession of his brain, and finally resulted in his taking the following vow:

"By St. Peter, and by the spirit of the immortal Petro von Sivernoff (he usually swore simply by St. Agnes when he was sober, as he had less compunction in breaking a vow to a female saint), he would within ten days of the next heavy snowfall go forth alone, clad in the armor and armed only with the broadsword of said ancestor, and show the world (that is, old Kraff and the neighbors) that the Von Sivernoffs were made of as good stuff as ever they were."

And he pictured himself knee-deep in bloody wolf corpses, laying about with his "good sword."

Another round of brandy and his courage rose so high

BRANDY AND COURAGE.

that he sent for old Kraff, who had been in bed some hours, and repeated his bold vow to that worthy. Then, with a view to staggering him yet more, he "wished to St. Peter that it could only be in the morning."

Next morning—well, it was a different matter, and the nobleman began to think that perhaps he had been a little bit foolish the night before. He even began to ask himself if it would not be the part of a really brave man to back out. He was more than half inclined to do so when a remark from old Kraff set him a-boiling once more.

It was beginning to snow, and Kraff remarked in a respectful, matter-of-fact tone, "Please, your Honor, there is a loose rivet in the first Von Sivernoff's left gauntlet. Had it not better be seen to?"

The Baron sullenly gave the order, and no more was said. But as the snowfall amounted to almost nothing, the subject was again in abeyance.

A week later, however, a heavy storm set in. The ordinary cold gray clouds of winter seem replaced or swamped by a lower, denser firmament, of that strange, portentous hue that has been called the "priming dress,' and one of those storms that the word "blizzard" only can describe swept over the land. For two days and two nights it continued, and when the third day dawned clear and nearly calm it revealed a great change in the landscape; numberless trees had been broken off, not a few buildings were dismantled, almost all hedges and low erections had disappeared from sight, and over things and around everything was the deep and omnipresent snow. This of course meant that all the flocks and herds would be gathered into stables and yards, where they would be fed and protected from wild beasts. And that meant great bands of roving, desperate wolves.

Four days passed, then a week, and nothing was said. "Was it really a heavy snowstorm?" His vow said "within ten days of the next *heavy* snow." "Who was to say that it was a heavy snow?"

That afternoon the Abbé of St. Katrina made a passing call.

Among other similar topics of conversation, he told of having found in the woods a trap sprung and in it a tuft of hair.

This he brought with him, and old Kraff was sent for to determine the animal to which it had belonged.

The recent storm was of course a fruitful subject of talk.

"Such a terrible storm!"

The Baron made no rejoinder to this remark, but old Kraff, deferentially standing, said, "Yes, your Grace, I never knew a worse in forty years."

"They say it is bringing the wolves down out of the mountains in unusual numbers," said the Abbé.

As the Baron still made no reply, Kraff added:

"No doubt of it, he would be a brave man that would trail a pork bait on foot through the Schlagerot this night."

The huntsman was careful to avoid his master's eye, but his care was needless; the Baron was glaring at the fire, and Kraff, when he was dismissed, felt in his bosom a glow of gratified revenge.

There was no way out of it now; the ancestor's armor was in perfect repair, and, with the assistance of sundry pieces that belonged to much earlier epochs, constituted a complete panoply.

Next morning, therefore, the Baron, having propped up his native courage with a plentiful supply of the Dutch article, clothed himself in the afore-mentioned composite harness, and was driven forth in the sleigh with Kraff and a strong posse of his servants.

Chapter II.

The little pig was set merrily squealing and the pork leg plowed through the soft snow or bounded over the roots as the horses dashed at speed into the Schlagerot. The Baron had nothing to say to anyone, but helped himself frequently and copiously from the brandy flask, "To keep him from catching cold," he told himself. Before they had covered ten miles he found his courage mounting, as became a descendant of the first Von Sivernoff; nor was it dashed by seeing in the distance behind them a number of grizzly forms galloping along silently in the snow, running exactly in the track of the sleigh, apparently to avoid the deep snow on either side; sometimes disappearing around a turn of the road or against the gray forest as they careered over a rising ground, and again coming out in dark relief against the snow—but still following the trail. On dashed the sleigh through the disputed land of forest and fen, the Baron turning at intervals to shake his fist at the ever-increasing pack and to inform them that "their days were numbered."

THE LITTLE PIG WAS SET MERRILY SQUEALING.

When at length the hunters regained the home side of the Schlagerot, the wolves to the number of thirty or forty were galloping along a few hundred yards behind the sleigh. They were not yet bold enough to make an attack, but from time to time the band was reinforced, and each fresh addition to their numbers gave them more courage. In ten minutes more the sleigh would have been out of the Schlagerot, and the scutcheon of the Von Sivernoffs would have been eternally smirched, for now or never was the hero's opportunity. But the blood of the race was boiling in his veins—in fact he was fairly spoiling for the fight. He took a final pull at the "Nordhauser" and a last look to his complex harness, drew the "good sword of his ancestor," and, as soon as the sleigh was partially stopped, tumbled awkwardly into the snow.

"Call for me in an hour," said he, in the calm, matter-of-fact tone of a city caller ordering his carriage. He had prepared this very phrase the night before—and he flattered himself that it not only sounded very calm and self-possessed, but also it contained a deft shot at old Kraff, who at most could not claim to have faced the wolves that day for more than twenty minutes.

In half a minute the sleigh was out of sight around a turn of the road. In a minute more Sivernoff found himself on the field of battle—alone and surrounded by forty or fifty great, grizzly, hungry wolves. He had chosen for his stand a sort of bay, with a huge rock behind and some trees as flankers, and before he had time to fully realize his position and the rashness of his extraordinary enterprise the wolves closed in on him. As soon as they saw the odd-looking animal that he seemed, they broke out into their full hunting cry and galloped forward, while the Baron, grasping his sword with both hands *a l'ancêtre*, stood ready to meet his foes. On they came, but not straight at him, as they should if story books are to be believed, but like a great pack of dogs they swerved, growling and yelping. After circling irregularly and individually about him, looking for a chance to attack with advantage, they gathered snarling in the front of the Baron's position.

He was so thoroughly uncomfortable and embarrassed by his unwonted accoutrements that he judged it better to act entirely on the defensive; though, with the true instinct of his race, he longed to "rush upon his foes and slay them *en masse*."

"Come on, you miserable cowards," he shouted and waved his sword above his head.

But the wolves kept well out of his reach, though they dashed about and made short rushes, till the doughty Baron, emboldened by their cowardice and impatient for blood, made a dash forward and contrived to wound a wolf that in retreating had fallen over a comrade. His yelp of pain was his own death knell, for his companions, aroused by the scent of blood, tore him in pieces, and devoured him at once. Then bolder than before they rushed at the Baron, who chopped and hacked vigorously with the ancestral blade and killed three before the pack could retreat; for the fact that there was but a single point of approach made the hindmost wolves a continual hindrance to the foremost, and the Baron, though not a little blown by his exertions, shouted in triumph as he saw this fresh slaughter of his foes

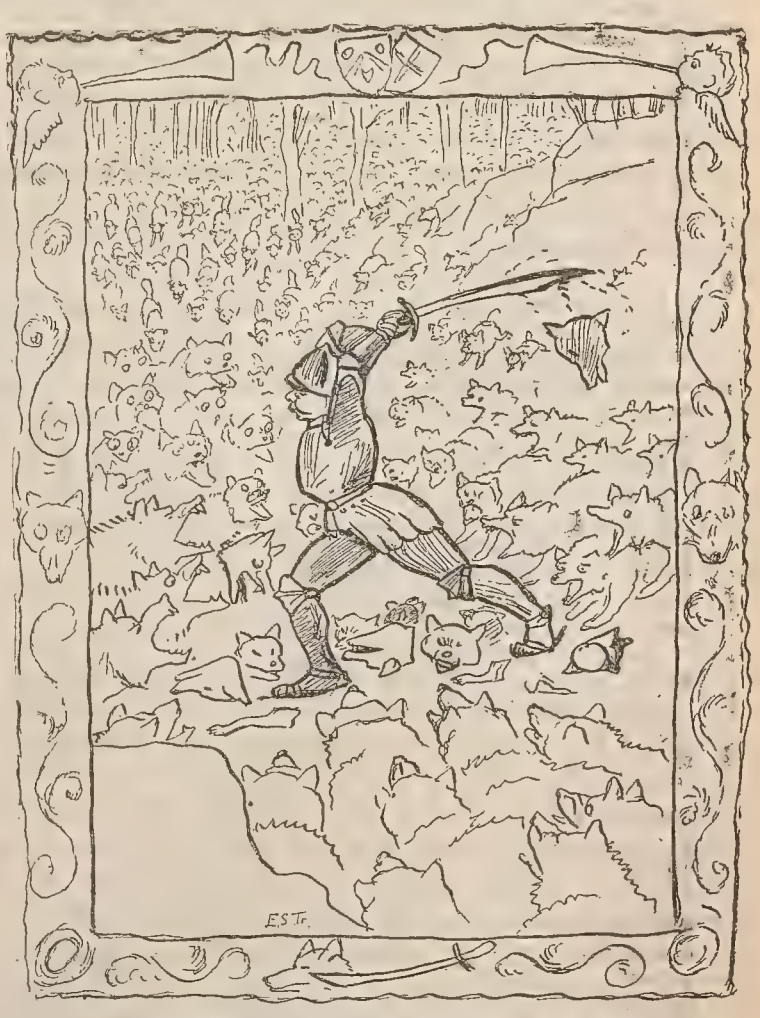
Now it will be remembered that the first of the Sivernoffs, in his celebrated "Letters to a Victorious General," of which every man of quality possesses a copy, lays down as an invariable rule that the conqueror must follow up closely and completely rout a defeated enemy, and the present representative of the race with true soldierly instinct endeavored to carry out the ancestral injunction and charged on the retreating pack that he had so gloriously repulsed. But alas for him! his foot caught in a hidden root, and down he went into the snow.

Of course the wolves took advantage of his fall—in a moment they were upon him and no doubt received the greatest surprise of their lives, for their teeth slipped over the hard steel breastplate and grated on the Crusader helmet, with about as much effect as a baby's toothless gums on an able-bodied lobster.

The Baron was at first much frightened, but managed to throw off his assailants and regain his feet. He shouted as loudly as he could, struck out with feet and fists to repel his foes, and then endeavored to recover the ancestral sword which lay nearly buried in the snow. But one of the wolves darted suddenly and seized the outstretched arm at the wrist. He was at once bowled over by a blow from the Baron's mailed fist of the other arm, but such was the force of his chop that, though of course he could not penetrate the armor, he dented it in so that it pressed deeply into the Baron's flesh, causing so much pain when he tried to use the arm that he was practically one-handed.

This was such a serious calamity that Von Sivernoff was greatly disheartened, and when at length after a second close encounter he found that the Bourbon armor which clad his left leg was coming loose he began to wish that his "carriage" would return for him.

He was not only one-armed now, but was becoming exhausted, and he failed to wound a single wolf when



SEIZED BY AN UNSEEN POWER.

next they assaulted, and finally as he laid about him the heavy sword slipped from his nerveless grasp and fell in the deep snow some distance off.

In the assault which followed he was thrown down, and had much ado to keep the wolves from biting off his fingers, which were protected by the armor on the outside only; and when at length he regained his position between the great trees he found that not only was he quite exhausted, but the whole of the Bourbon armament of his left leg was threatening to drop off.

The situation was becoming serious, and he saw clearly that unless he could manage to get to and up a low-leaning tree that stood some yards away he would certainly be killed. He braced himself for the final rush and succeeded in beating off his assailants till he reached the tree, but the moment he tried to climb he was seized by a dozen pairs of powerful jaws and dragged to earth, and, horror of horrors, the leather fastening treacherously giving way, the entire armor of his left leg was pulled off by one of the wolves.

The poor little Baron now believed himself lost, but he

THE COMMEMORATIVE TAPESTRY NOW HANGING IN THE GREAT HALL OF SIVERNOFF CASTLE.

kicked out desperately with his right leg, on which the trusty Middle English protection remained intact, and worked round to the other side of the tree, where a bent sapling seemed to promise shelter for his back while he made the best of his hopeless fight; and as he reached out and braced himself against it in preparation for the next, perhaps the final assault, he suddenly felt his arm miraculously seized by some unseen power which jerked him 20ft. up in the air and held him dangling about 15ft. above the snow, with the astonished wolves in a circle

below, unable to understand the sudden and extraordinary change in the situation. It was easily explained: the Baron was caught in one of the springle traps that old Siegrol had set for the wolves themselves.

He had but little difficulty in exchanging his pendant position for a sitting pose in a fork of the springing tree, and thence regarded his baffled assailants that still, with gleaming eyes, continued to glare at him from below.

"Ah! you cowardly brutes, if only I could get at you!" he gasped, and shook his fist again and again.

But fortunately for him he could not get at them, and as he gradually regained his breath he also began to cool off, and the icy wind of winter, creeping through the iron harness to his very bones, began to expose him to a new source of danger, when suddenly the wolves, turning their heads to the eastward, jumped up and whined.

Then at length the Baron heard the bells of the horses, and a few minutes later his "carriage" arrived, and with a grand discharge of firearms his retainers scattered in flight the rest of the wolves.

The Baron was helped down out of the tree. He received with great dignity and ill-concealed satisfaction the adulatory congratulations of his vassals, utterly ignored the now diminished Kraff, and then, with the remains of as many wolves as possible, was driven in triumph back to his castle, where to the end of his days he never tired of relating the heroic exploit of his "single-handed and victorious encounter with over 1,000 wolves." From which story, by the way, the unimportant detail relating to Siegrol's springle very early disappeared altogether.

NOTE.—Strange to tell, old Siegrol recovered; and stranger still, the Baron, for reasons which he never announced, probably in fulfillment of a vow, set him and his family free, and they are now living on a little farm of their own near Roemershof.—SCRIBE.

ERNEST SETON THOMPSON.

A CHRISTMAS WITH OLD PORT.

IT was not a bottle of "crusty Oporto," that celebrated promoter of gout, that made this particular Christmas a day to be remembered; but the "Old Port" was none other than my dear old friend Porter Tyler, who figures as No. IV. of this series; the same old bachelor, market gunner and trapper of Greenbush, N. Y., whom I had left something over five years before to seek sport in the West.

It was the old story: A boy had spurned the parental roof and longed for adventure; had found it and came back under the ancestral shingles. Many weeks before this I had gone the rounds of old friends and shaken hands, but I was not in physical shape to engage in our usual sports of winter. The freshly turned prairie sod with its decaying vegetation had left more than what some of the Kansas settlers called "a leetle tech o' ager." But one day the mail at West Albany brought the following:

"GREENBUSH, Dec. 18, 1859.—*You old Jayhawker:* Old Port will serve a coon with all the trimmings one week from to-night, the same being Christmas. He will get up this dinner in honor of your return to civilization. A few of your old-time friends will be there—not many, for there is only one coon; but what they lack in numbers they will make up in quality. Tobi Teller has seen the list and pronounced it "a small party, but intensely respectable." Jim Lansing said, "Port has killed the fatted coon, the calf has returned." Don't fail to be with us, for Old Port will not be able to skin a muskrat in a month if you disappoint him. It isn't often he gets a coon about here, and yesterday he brought one in and said: "This is just the thing to get up a dinner for Fred;" so never mind your liver nor your ague, but come. Let me know at once, but don't refuse.

MARTIN MILLER.

Dr. Jones said that if I wished to shake off the accumulated malaria of years I must be very careful in the matter of diet, and that a roast coon might do a lot of things which I can't now recall, but to which I gave respectful attention. There is no possible use in employing a doctor unless you put yourself in his hands and obey his orders. That is merely common sense. Yet I went to the dinner. How true it is that "all the good things have been said," and that when we read a good book it seems as if the author had somehow forestalled our thoughts before we got to the point of writing them. Honore de Balzac said: "I can resist anything but temptation." I had often acted on this saying, but could never have formulated it. I acted on it in the case of this invitation. Away with Dr. Jones and his hygienic treatment of a disordered liver! Was I to become a slave to a disgruntled gland? Never! "Enslave a man and you destroy his ambition, his enterprise, has capacity."

Climbing the hill which is now Mechanic street, but then was known as the road between the woods, the cottage where that modern Natty Bumpo lived was entered and there was waiting Gen. Martin Miller (whom I wrote up in sketch No. XI.). Said he: "Port will want to know that you are here, and I'll go tell him; I've sent down for old Billy Bishop to come up here and help serve the dinner, for we want Port to sit down and keep down."

While Gen. Miller—Mat we called him, for we were not too stiff in our intercourse—was gone in came Billy Bishop (who formed sketch No. II, in July last). The old fellow shook hands and said: "I don'd like to get this hill up by Fred Aiken's ole spook house when der nide coom, but by der day he was all ride." Then in came Tobias Teller, a bachelor of some fifty summers and no one knew how many hard winters, who lived down on the banks of the classic stream which we called the Popskinny, the spelling of which has been argued in these pages. He was a delightful old fellow, with a flavor of cognac and madeira about him that mellowed the atmosphere in his vicinity; he was called Tobi among his intimates. His worthy nephew (my army comrade), Col. David A. Teller, now in Europe, resembles him in many respects, especially in being a bachelor. Then came Low Dearstyne, pilot and captain of the railroad ferry; his name was Lawrence, but the Albany Dutch shortened it to Low; please rhyme this with "now," and not with the negative. The Irish call the name Larrence, and abbreviate to Larry, and as the old Dutch have gone this explanation may be necessary: Larry is Irish and Low is Dutch for Lawrence. Then came Jim Lansing, a man of about forty-five, who kept a hotel at Clinton Heights, but had been a hotel man in several places. He also was from one of the old Dutch families.

The dinner came on. There was no printed nor written menu, but, as I remember it, the feed was in this order:

MENU (FROM MEMORY).

Soup de snapping turtle.

Coutlettes de snapper, braisee.

POISSON.

Brook pike au naturel. Pommes de terre.

RELEVÉ.

Roast coon, entire. Motto: "Whole hog or none."
Sweet potatoes.

ENTRÉES.

Grouse au Port Tyler.

ENTREMETS

Mat Miller's cheese.
Punch.

As master of ceremonies Gen. Miller took his share of the good things without flinching, and destroyed a goodly portion of the succulent coon and wrecked a grouse so that no anatomist could have identified the remnants; and when the punch came on he arose and remarked: "There doesn't seem much to be said after this grand gorge that our host has got up in honor of the wayward youth who went to the great West with 'Excelsior' as his motto, and has returned like the Biblical hero from herding with swine to the paternal mansion, without the motto on the linen which fluttered in the rear, and looked for all the world like a 'letter in the post office.' As he is a Shakespearian scholar, I can say to you in the words of the melancholy Jaques: 'Bid him welcome. This is the motley-minded gentleman that I have so often met in the forest.' Let us pledge, standing: The return of the calf—I mean the return of the prodigal."

Tobi turned his off eye in my direction, and Low Dearstyne nudged me to get up. Never had I spoken at a dinner in a formal manner. Miller's quotation from "As You Like It" suggested another saying of Jaques's, beginning, "I met a fool in the forest," but it was evident that it was very inappropriate; but, as I got up in a bewildered way, I somehow blundered through some thanks, and finished by saying: "Somewhere between the lids of the volume that Mat quotes you will find these words, 'I hold your dainties cheap, sir, and your welcome dear.'"*

Old Port's Yarn.

General Miller then called on Port to rise and tell how he came by the coon which we had eaten. The old man would not get up, but said:

"Y' see, it was this way. I was off, over beyond, away back of Teller's, an' a-makin' toward the hell-hole to pick up a few pa'tridges, 'cause Mat and Tobi said they wanted to have Fred come over here on Christmas. As I watched the snow, I see what looked like a funny track. The snow was soft an' it had been a-thawin', an' the surface was all spotted with fallin' leaves and dropping snow; but there was a kind o' regularity in these marks that made me look closer, an' sez I to myself, sez I, that's some kind of an animile that's been a-runnin here, an' I don't know what it is. It was a long track, as near like what a baby could make if it walked through the snow; for there was a heel to it and it wasn't a bit like the tracks of dogs, foxes, cats, minks or other animals that can be read on sight; but I was bound to know what the thing was. I had no dog, I never hunt with a dog if I can help it, and after tracking it a few miles I found the thing in a tree and shot it. When it came down, I knew by the bushy-ringed tail what it was. It's the only coon that I ever heard of being killed around Greenbush, and that's all there is about it. My father, who lived up in Vermont, used to tell of a hunter who had no bullet for his Queen Anne musket, and rammed down a peach-pit on top of the powder and shot at a deer, but thought he missed. Three years later he saw a commotion in the bushes and fired into it, and killed a big buck which had a peach tree growing out of his back; and the hunter not only got a great lot of venison, but took home three bushels of peaches."

Tobi Teller said: "I rise to a question of privilege. This story of the deer and the peaches appears in the sagas of the Norsemen, and is coeval with the sun myths, with the story of the man who cut off the dog's tail, ate the meat and gave the dog the bone. It is just as good, however, as the day it was told by the lamented Baron Munchausen, and I would be the last man to take a shaving off it. But, as every man must contribute his mite of unwritten history, I will ask General Martin Miller to tell our guest what has happened in Greenbush since he left us to seek fame and fortune in the wild West half a dozen years ago."

Mat Miller's Story.

The General looked the party over as he arose and said: "In this quiet village there is little change from year to year, and the only thing which I can recall that might interest you is the stealing of Mrs. Parson's geese. You all know that this old lady, who lived down on Columbia street, raised great numbers of geese and derived quite a revenue from the sale of feathers and dressed birds. A neighbor, on a back street, used to help dress these fowls; his name was Gordonier; you all knew him, and he stuttered awfully. When he was drunk he didn't stutter, and so we knew just what his spiritual condition was. When there was a revival in the church there was no penitent louder than old Gordonier, nor one so ready to backslide when the revival was over.

"One morning, when the early birds of Greenbush had gathered about the two barrooms which guarded the approach to the Albany ferry, for their morning bitters, old Gordonier entered. Said he: 'D-d-d ye hear the n-n-news?'

"'No,' said John Pulver, 'what is it?'

"'S-s-s-som'body s-s-stole all Mrs. P-p-parsons'es g-g-geese. It co-co-couldn't ha' been me, for I was in S-s-s-schenectady.'

"Then he crossed to the other barroom and the crowd followed him, and he told the same story, winding up with: 'It c-c-c-couldn't 'a' b-b-been me, for I was in S-s-s-schenectady.' Afterward he went down to Ike Fryer's bar and the story was retold. John Pearl had heard the yarn three times and went off and told Pop Huyler. Pop thought a minute and said: 'Let's go 'round to old Gordonier's house and see if he's got the geese.' So they went and knocked on the door, and when the ole woman opened it Pop said: 'Good morning, Mrs. Gordonier, we just bought a couple o' geese of the ole man an' he sent us around here for 'em.' The ole woman hesitated a moment and then said: 'All right; just wait here a second and I'll bring 'em to you; we didn't raise but a few this year an' I didn't think he'd sell any.' She was very deaf and didn't hear the men follow her into the house, but as she pulled a couple of geese from under the bed John Pearl raised the curtain and he and Pop Huyler saw a great pile of geese, and John remarked that she had a great many. 'Land sakes,' said she, 'you don't call half a dozen many, do ye? Why, they're jest thrown in there on top of a pile o' 'taters an' that makes 'em loom up.'

"They took the two geese up to Mrs. Parsons, who had just discovered her loss, and told her where she would find the rest of the stolen geese, and then found Gordonier, who by this time had absorbed so many ante-breakfast nips that he stuttered very little

"The old man, long and lank, was leaning against the bar as they entered, and said: 'It's too bad, but I dunno who done it.'

"'You're sure you didn't get any of 'em?' asked Pop.

"'Sure? How c'u'd I when I was in S-s-s-schenectady all night? Just came in on the train.'

"'All right, but we found the geese under your bed, and you've got to go down with us to Squire Hogeboom's until Mrs Parsons makes a complaint; come along!'

"He begged and protested, said that some of the boys had put the geese under his bed, if there were any geese there, and the excitement loosened his stuttering valve, which the nips had cemented down, and away they went to the Squire's; but on reaching the corner he broke away and ran to the dock and jumped off, with a crowd at his heels. John Sranahan jumped into a boat and fished him out. Mrs. Parsons refused to make a charge, but the old fellow picked and returned to her thirty-nine geese. When Pop Huyler met him and asked: 'When have you been over to S-s-s-schenectady,' the old man replied: 'I on'y w-w-wish I'd a d-d-died the day I j-j-jumped the d-d dock off.'

"There was a time, not over a dozen years ago, when if Bate Hayden's troughs for feeding horses were all found on top the little schoolhouse there was a suspicion that our guest had a hand in it, but as he has been absent a number of years he can prove an alibi, like Old Gordonier, and say he was in S-s-s-schenectady."

Billy Bishop, who had been waiting on the table during the dinner and was now serving the punch with frequent regularity, remarked: "Der ole Gordonier was a ole hicocric, so he was."

"Now, Billy," said Tobi, "you are a little jealous because he got several jobs of hog-killing that you wanted. There are worse men than old Gordonier."

"Yes," replied Billy, "dere's meny wus as ole Gordonier; dey keep 'em chained, but."

The master of ceremonies looked at Mr. Teller.

Tobias Teller's Story.

"You all knew Bill Fairchild, big-hearted, generous Bill, who'd give the shirt off his back to any one who needed it. Well, one Sunday morning in May a poor clam peddler's horse drew his wagon to the ferry with its owner lying flat on the load. It was early, and people looked and remarked that the man was drunk and passed on. Col. Mike Bryan wanted some clams and came out and selected what he wished and tried to arouse the man, and found that he was dead. Some one happened to know him and also knew where he lived, and sent for his wife. In about an hour she came over from Albany, and about that time Bill dropped down that way. She was bemoaning her fate and the fact that no clams had been sold. The fact was, the man had intended to reach some of the river towns before Monday morning and peddle his stock on the homestretch, but had died from some cause, and the old horse, finding no controlling hand on the lines, had turned around somewhere and started for home with his load and his dead master on its top. The crowd stood around idly looking at the dead man and the sorrowing woman, who really hadn't money enough to pay ferriage for the horse and wagon, when Bill pushed through and learned the situation.

"The man had been taken into Charley Bradbury's livery stable, and with only a word to the wife Bill mounted the wagon and started down street singing that old song, but in better voice than it was usually sung:

> 'Here's clams, prime clams I have to-day;
> They're fat and fresh from Rockaway;
> They're good for to roast, they're good for to fry,
> And they're good for to make a clam pot-pie.'

"The church-going people looked, and some thought Bill must be drunk, for everybody knew him; but if people didn't come out he knocked at the doors and told them all about the case, and before noon he was back, all sold out. He asked the woman how much the load ought to bring, and she said it had cost $6 and at retail prices ought to bring $15.

"'Well,' said Bill, 'I don't know much about selling clams, and here's all I've got for 'em,' and he emptied a lot of silver and bills in her lap and went out. The pile counted out nearly $40, and it was suspected that Bill had put in all that was left of his month's salary from the railroad. When we asked Bill about it he would curl his lip and say:

"'I'm a good clam peddler an' can get the prices. Clams, ma'am? Johnny, open the lady a nice fat one. Fresh? Yes, m'm. See 'em kick. I think they spoiled a good clam peddler when they made me a bookkeeper. Yes, sis, they're fresh; how many?'

"'How do you sell 'em?'

"'Thirty cents a peck.'

"'Mother says she'll give twenty-five.'

"'Tell your mother to go to heaven. Does she think I stole 'en? Whoa! back, Jake! Here's another customer. Yes'm, just up by lightning express from Rockaway; caught last night. Ah, see how the juice runs out of his shell, thinking how you'll enjoy him.'"

"Poor Bill! When he was burned to death trying to rescue the books from the office of the Boston & Albany Railroad when the station burned at East Albany, and an appeal was made in behalf of his widow, the board of directors said, 'He did no more than his duty.'

"It is true that corporations have no souls, but Bill Fairchild had one, and when I think of his sacrifice for the widow of an unknown clam peddler and his heroic sacrifice of his life for a soulless corporation I recognize the hero. Gentlemen: To the memory of Bill Fairchild!"

We had all known the reckless dare-devil, Bill, who in

* The above is from an old memorandum, but the quotation is found to be from "The Comedy of Errors," Act III., Scene 1, and has been corrected for the benefit of those very exact customers who will not allow a fellow to quote from memory and miss even a punctuation point.

a good cause would cry "clams!" in a quiet village on a Sunday morning, and whose tragic death was fresh in the memory of all present; so when the next speaker began telling of him we were surprised. Gen. Miller had selected his victim, and we heard

Low Dearstyne's Story.

"Talking about Bill Fairchild reminds me of a winter night when my boat had been frozen up for months and the ice in the Hudson had begun to get tender in spots. No teams had crossed the river for a fortnight, and where the foot passengers crossed there were boards placed in the most dangerous spots. Although there was a man in charge of the boat, who slept on board, I kept watch of the river to see that everything was safe. We usually wintered the boat in the Albany basin, but this time she was moored in the canal between the two big freight houses of the B. & A. R. R.

"On this particular night there was a heavy fog in which a man could easily get lost, and the ice was getting weaker every hour. I had looked in at the railroad office and found Bill at work on his books, and sat down by the stove. After a while he looked up and remarked: 'It's a bad night on the ice. Some people crossed the river just before dark, but you wouldn't get me on it. No, sir! I wouldn't try to cross that river for a thousand dollars.'

"'Listen!' said I. 'What was that?'

"'Somebody singing,' suggested he.

"A wail came from the river, distinctly this time, for the night was still. Bill grabbed a lantern and we rushed out on the dock. The feeble light did not show an object 10ft. away, but we heard a splash and a groan, apparently not far out in the river.

"'Hang on," cried Bill; 'I'll be with you soon," and in spite of protest he dashed down the slope by Dandaraw's, where people took the ice to cross. He shouted, and soon I heard this dialogue:

"'Oh, Lord! Help me out! I'm a respectable colored man and live over in Nigger Hollow, an' my name's Stephen Baker. Oh, do please send some one quick.'

"Then Bill said: 'You're respectable, are you? What did you say your name was?'

"'It's Stephen Baker, an' I'm a respectable colored man. Oh, do send some one quick, for I'll drown sure.'

"'Are you Steve Baker that stole Sim Diamond's chickens?'

"'No, Lord, no! I never took no chickens; it was my brother Jim. Oh, come quick!'

"'What you got hold of?'

"'A board. Oh, do come!'

"All the while Bill was looking for the edge of the hole and taking off his clothes. In he went and towed the board and the darky to the sound ice, but both were too chilled to get out. I had alarmed the men in Dandaraw's bar, and they pushed out boards and rescued both men. Bill had an attack of pneumonia and rheumatism and lost a month's work. And that's the kind of man Bill Fairchild was, and you all know how he died."

As I write this, thirty-seven years later, Whittier's verse comes to mind:

"Dream not helm and harness,
The sign of valor true;
Peace hath higher tests of manhood
Than battle ever knew."

When Low had finished Billy Bishop said: "Yes, Pill Fairchild vos a goot fayler; we should trink punch mit him." And

"They drank to one saint more."

Gen. Mat arose and suggested that a representative Jayhawker from Bleeding Kansas was anxious and willing to tell something about the human fruit which the trees bore in that sanguinary region, or perhaps a story of Ossawotamie Brown, who had been hanged to a tree in Virginia some three weeks before, would be acceptable.

The Lost Hat.

I had expected to be called on, and had laid out what I thought to be a good story, but Miller's remarks sent the whole thing out of mind. I was nervous and self-conscious to a degree, and so with some remarks about the newspapers having told the whole Kansas story, and perhaps a little more, I said:

"Our host Porter, would, I know, rather hear of my hunting and trapping experiences than about jayhawking, as they call it, so I will tell him how I lost a hat on a hunting trip. It was not a valuable hat; just one of the kind that you see in rural villages—a hat that under no conditions could ever have been a new one. You know the kind, they were never created by man, but have the air of having always existed. If I cared to paraphrase Byron I would say:

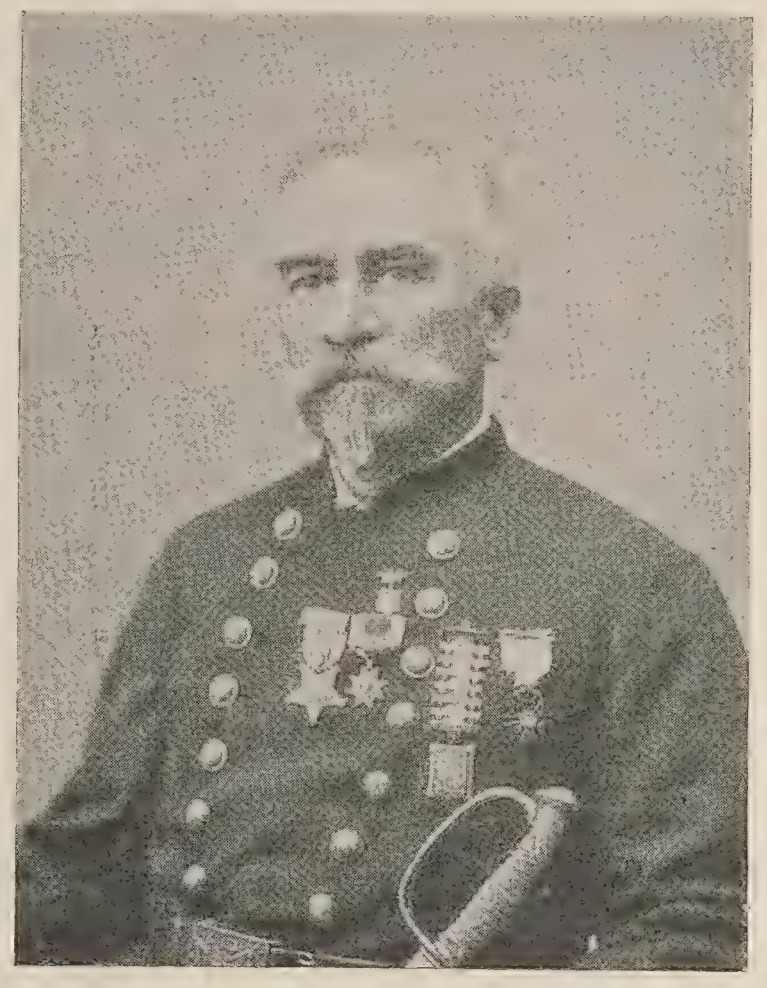
'I had a hat which was not all a hat,
Part of the brim was gone, etc.'

"These details are necessary when you tell about a hat, for its shape, texture and color are all that comprise individuality in a hat. Its texture was felt, and its shape was not like the shiny 'nail keg' which adorns the brow of a Member of Assembly when he comes to Albany; its color, if it had any, is beyond my power to describe. The sun had toyed with its hues until it had attained that delicate shade of old-mown hay seen on the chin whiskers of the member from Squeedunk.

"That's the best description I can give of the hat. It was a rare day in autumn; you know how the hills and the maples looked; I won't go into that because I didn't lose them; they get around every year.

"I had a new turkey call, a sort of small box with a thin cover that said 'keouk' when you tickled it, and the turkeys were wild in Michigan, wilder than deer, and an old gobbler that had been shot at once or twice took no chances. I found a place to lie in the leaves behind a huge pine log; laid my rifle handy and at intervals worked the new call. After awhile a distant gobble was heard. More call and nearer gobble, and I began to feel very good. Soon a fine gobbler came in sight, strutting and feeling his way. I had learned not to overdo the calling trick and kept silent as he advanced. I wanted to get him to come within 30yds. and then try to take him in the head or neck, and then utilize him for a dinner; so I watched under a limb that I had laid on top of the log. He was probably 50yds. away and my heart was pumping more than was really necessary, when I dropped the call and began to scratch leaves like a hen turkey looking for beech nuts, and shoved my hat up on a stick to represent a turkey's back when ——! Lightning couldn't have been quicker! Something hit that hat and cut my head. Feel the scar! The fact was that I had called up a turkey gobbler and a wildcat or catamount at the same time, and fooled 'em both. I didn't get the turkey and I didn't get the hat. It can't be lost, for science says that nothing is lost, it only changes its form. Content with that assurance, I know that my hat is still somewhere in this universe; perhaps a portion of it has been taken up, as it decomposed, by the roots of trees and plants, and so it lives in other lives, or like

'Imperious Cæsar, dead and turned to clay,
May stop a hole to keep the wind away.'



"But my hat was gone, taken without so much as 'by your leave,' and I only regret that I have neither the hide of the catamount nor the fragments of the hat to decorate my den. I can only say with Pope:

'A heap of dust alone remains of thee,
'Tis all thou art, and all the proud shall be.'

Billy Bishop by this time was beginning to feel very numerous, although Port had tried to keep the punch under his own eye, for Porter was a man who seldom looked upon the wine when it was rosy; but Billy paid no attention to the color of it, the white schnapps of Holland was as welcome to Billy as any. He wasn't anywhere near being "over his head," but just felt his oats, and wanted to talk.

Billy Bishop's Adventure.

"I'll yust tole you 'bout de hell-hole w'at Port had gone by for pa'tridges. John Pulver he always tell 'bout it, an' how spooks set 'round de edge in de dark of de moon an' work all kinds o' harm to people who come by der hole.

FRED MATHER.

I was a-choppin' in Glen Van Rensselaer's when I dinks I co by Mr. Teller's for my ole axe to split de trees, an' it was so warm I lie down by myself to rest, an' I fall asleep by a nice shady place. W'en I wake it was all dark an' I see a light down in a deep hole, an' den some stumps he roll up f'um der hole an' dey all get me around. Den I knowed dat was de hell-hole w'at John Pulver telled aboud. Was I schared? Vell, you bet you was some schared too ven you find yourself in de mittel von some stumps an' dey all choin hants an' tance you aboud like some chilld'n w'en dey sing 'Ring arount Rosy.'

"Pooty soon dey stop, an' one big stump he say, 'Billy Bishop, did you got some schnapps? If you got some, yust put der pottle on my head an' go home.' I find der pottle in my coat an' I put him on dat stump, an' by Chimminy, dey open der ring an' I nefer stop runnin' till I reach Ike Fryer's tafern. Dey can all chop around dot hell-hole, but I know when I got a blenty."

Jim Lansing's Story.

"Gentlemen," said Jim, "I think that if Billy's bottle had not been so near empty he would not have seen so many stumps all dancing in one set. Just what might have happened if Billy had finished the bottle and had none to leave for the spooks will never be known; but that remarkable hole has a great many stories clustered about it. Men who call themselves geologists say it is only a 'sink,' but there is a foundation for the dread which some people have of it.

"During the Revolutionary War a portion of the American army were in barracks on what is now the McCulloch farm, just opposite my place on Clinton Heights. Almost every night the sentinel on the post at the southeast corner of the encampment, just in the edge of the woods, deserted. It was singular that all the desertions were from that one post, and 'most all the men were soldiers with good records. The officers were puzzled and the men had all kinds of theories about it. My grandfather was a private in one of the regiments stationed there, and he, like the others, was perplexed by the singular state of affairs. This is what he told us boys in later years.

"It came grandfather's turn to be detailed for guard duty. A sentinel had deserted from that post the night before, and grandfather went to his captain and asked to be put on the same post. Said he, 'Captain, I don't believe all these men deserted. Some of 'em were as good men as can be found in the army, and wouldn't desert any more than you or I would. If you'll get me assigned to that post I'd like it.'

"'How's this, Jim?' said the captain, for grandfather's name was Jim, same as mine, 'surely you don't want to desert like the rest, do ye?'

"'Cap'n,' said my grandfather, 'they didn't desert. There's —— and ——,' naming two of his chums, 'they've gone and I want to know where. Put me on that post on the relief that goes on past midnight, and if there's anything to find out I'll find it.'

"When he went to his post after midnight he picked his flint and put fresh powder in the pan of his musket, and made up his mind that no matter about the rules against making an alarm, he would shoot the first thing that came near him. A coon whisked close by, but he could not see to shoot it. A hog feeding on beech nuts grunted satisfaction occasionally and soon came in sight. When it came within 20ft. grandfather fired and an Indian rose and yelled. When the corporal of the guard came there was a dead Indian and a hog skin. That told the story. Searching parties were sent out and found a hole in which the bodies of ten soldiers lay. Its bottom could only be reached by jumping into a tree and descending. Six Indians were encamped in the hole, but they never got out alive. It's no wonder that the place has a bad name."

"Jim," said Tobi, "I read that story in my school history when I was a boy."

"That proves it," said Jim, "but no matter where you read it, my grandfather was the man who killed the Indian in the hog skin that had murdered all the sentinels on that post by the corner of the woods."

Tobi Teller rose to a point of order and remarked: "As there is a peep of daylight coming through the shutters, I now move that we adjourn."

A feeling of sadness comes over me when I recall the fact that all these old friends are dead; but, in fact, most of the men I have fished with have gone over to the majority, and while in this train of thought up comes the old verse:

And Jennie is wed and Annie is dead,
And Alice she fled in the auld lang syne;
And I sit here at sixty year,
Dipping my nose in the Gascon wine.

FRED MATHER.

An Albany correspondent sends us this:

Editor Forest and Stream:

Several correspondents have written to you asking for stories of the man who writes stories of other fellows because they are so fortunate as to have fished with him. Here is one of his unpublished yarns. He was to give his celebrated war lecture, "How Things Looked at the Front" in Masonic Hall, New York, for Lafayette Post, G. A. R., and as the entertainment was given by the Daughters of the Post, they ran things woman-fashion, without consultation, and had advertised the lecturer as "Col. Fred Mather," and so he was introduced to the audience.

His modesty evidently embarrassed him, and we wondered what he hesitated about, until he broke out with: "The posters and comrade —— have promoted me to be a colonel and I sincerely thank them for the recognition that Governor Seymour neglected to make. It reminds me that as a student of natural history I was once observing a flock of turkeys feeding in a Southern field. A vile carrion bird of the vulture tribe hovered over them and finally alighted and approached the patriarchal leader of the flock and said: 'Good morning, brother.' The old gobbler indignantly replied: 'You vile carrion bird! How dare you call me brother? You are nothing but a buzzard!' The stranger meekly replied: 'It is true, I am nothing but a buzzard, but then I would call your attention to the fact that I am turkey by brevet.' So," said Major Fred, "by the grace of the Daughters of Lafayette Post, I shall be colonel by brevet, for this evening at least."

The story saved the day—or the evening—and he had the audience with him to the close. AN OLD COMRADE.

DEER STALKING.

RANGELEY LAKES, December, 1896.—I wish I could do justice to the subject of deer stalking, but it has so many aspects, varying so in effect upon the appreciation and receptiveness of the stalker, that it is not likely that one's own views may be fully shared by another. Still, I can believe that with many the enjoyment does not wholly consist in the killing of deer, although it is the primary object, but as in fishing for trout, the auxiliaries are the attractive feature.

For my own part, as the killer of many, many thousands of trout, extending over the greater part of half a century, and over annual seasons of months, I will confess that I am more tender about the heart than formerly, and feel a pity for the trout which I did not experience in earlier years.

I may say the same of deer killing, which was the first pursuit I followed for months in my youthful days in the valleys and mountains of California in 1852.

A friend of mine while in advance of myself, while we were out a few days ago after deer, brought down in two shots, right and left, two young deer which ran almost upon us. They were yearlings, a buck and a doe, weighing scarcely 100lbs. each. It was the work of a moment. Shot through in vital spots, they gasped and died in a few moments. More beautiful creatures in the animal kingdom it would be difficult to find. As we watched the life departing from their large lustrous eyes, so fringed with raven lashes, our flush of success was mingled with pity and sorrow. There was a look of innocent tenderness and would-be friendly inclination in those young faces which has many times since wedged in among my thoughts.

Whatever season it may be, the Maine forests are lovely, and it is difficult to say when they are the most so. One might say in the early spring, when the buds of the deciduous trees are expanding and the ferns and brakes unfolding, or when full-fledged, or in the decadence, when the autumnal tints appear, or in winter, when garnished with wreaths of snow.

The period of falling leaves is exceptionally charming. As the leaves fall they exude the various odors of their belonging, so that one with closed eyes may tell the character of the prevailing trees. I have often thought of the pleasure I should take if I were blind in walking among the localities I am familiar with, when the pleasant recognition of well-known trees would guide my steps.

In my taste the late fall and first half of the winter disputes with any other season, and I am not sure if I do not prefer the rough and changing time of winter at the lakes, with its accompaniments to any other. At least the sum-

mer is too short and the scene must lap over. Tell me not of orange groves and flowers, and vines with clinging clusters, but of the winter forest in its kaleidoscopic beauty, and of the lakes in their broad mantles of ice and snow. The singing of the wind around the tree tops or about the gables and the whirling flakes have more charm for my accustomed sight and ear than the cooing of the dove in midsummer bower.

There is a wholesomeness and vitality about the Maine forests in winter which is not found elsewhere. The cold, the ice, the snow, the changing rough weather, invite to the robust recreations of skating, ice-boating, tobogganing and snowshoeing. They heighten the comforts of indoors. Restful sleep, appetite and digestion, and blazing birchwood fires solve the question "Is life worth living?"

There are scarcely any Maine forests, however tangled they may appear, which do not possess pleasant and accessible reaches of park-like valleys and hillsides, or rounded ridges of hardwood growth or pine, allowing comfortable traveling for the stalker. Possessed with the unerring compass and a tolerable familiarity with the region marks, he advances upon the proposed line, which may include some miles of circuit. There must be an object in all efforts to give zest, whether we walk, drive, sail, bike or shoot; somewhere to go, something to realize. So with the deer stalker his primary object is to get deer, and it matters little in one sense if he succeeds or not, and the latter is generally the case. But if he is of an appreciative cast, the surroundings are inhabited with charming life and enjoyment.

Most stalkers will concede that at no time of the year are their rambles more agreeable than when the ground is half carpeted with the yellow, brown and crimson leaves which advent the opening of the hunting season.

The deer are now found more in the open growth, and with the cooler weather ravage about extensively. It is the approach of the mating season, and frequent are the saplings with scarred bark, caused by the whetting of antlers preparatory to rival encounters. Here and there are bare spots and scattered deadwood which have been pawed in the impatient spirit of combat.

The deer, timid as supposed, is possessed of an indomitable and persistent courage in conflict with its own kind, and will fight to the extremity of weakness and even death before yielding. I have witnessed a number of scenes this season, when the trampled ground and broken shrubs indicated desperate encounters. One spot a few miles from the lake, and as lately observed as Dec. 11, indicated a meeting of particular ferocity. I had tracked a large buck through 8in. of snow. The buck had evidently found several others in conflict, and being a free lance, and at a free fight, had immediately engaged. The snow was completely crushed and tumbled over an area somewhat larger than an ordinary circus ring, and it was decidedly apparent that a stag circus of unusual magnitude had occurred without the supervision of a ring master, or the encouraging plaudits of spectators. I counted five departing trails, and the performance had probably terminated several hours in advance of my arrival. Probably one by one the vanquished had departed, until the acknowledged champion held the field. Such seems to have been the case, as the trails were diverging. One champion exhibited the hasty and ludicrous method of his exit by leaping over a broken tree 6ft. in height, when a projecting fracture had creased his body the whole length in passing, leaving a bountiful handful of hair and fragmentary cuticle in evidence. This might be accounted a feeling instance of the P. P. C. order of etiquette with the cervus family. The trampled area was flecked with enough hirsute scrapings to fill a good-sized pillow, with occasional spatterings of scarlet coloring.

It is very rare that a buck, however large and savage, will charge a stalker without provocation, but occasionally in the mating season when wounded they will charge. I had an encounter of this kind in 1859 on my second visit to this region, from which I escaped with scarcely a scratch, killing a buck which dressed up 230lbs. with a single heart thrust of my hunting knife. It was in 18in. of snow. In a thicket I came suddenly upon a large buck I had been tracking, which I slightly wounded with a hasty shot. In a flash he turned upon me. It was before the day of repeating rifles. I had barely time to drop my rifle and step aside and draw my hunting knife when I was borne down into the snow by the weight of the descending buck, which I caught about the neck, and as he rose drove my knife to the hilt in his chest at the junction of the throat, severing his windpipe and splitting his heart. Death was instantaneous. I had a difficulty in withdrawing myself quickly enough to escape the red torrent of lifeblood which gushed forth.

With the fall of snow the deer stalker finds new delight. With the luxury of well stockinged and moccasined feet he goes forth to new realms of enchantment. The atmosphere is of buoyant and stimulating energy. The arboreal and shrub life are invested with crystallizations of dazzling purity, each one being a marvel beyond the art of man. The consciousness of being alone in a wide expanse of forest, beyond habitations and the sound of human voice, is in itself for the nonce a sensation of relief.

The reaches of pine groves, and of beech, and of maple all interspersed with birch, the loveliest tree of northern climes, are inspiring. They say: "Come and explore me. We have waited long and you came not. Now you shall bear witness to our grandeur and solitude, and have contemplation. See in us the prototypes of your own race, how we rise and fall. We flourish in prosperity and topple in misfortune. We stand apart some, rugged and gnarled as some of your own kind, defying the wintry blast, but others are nurtured in protection. Some are comely and others scarred. See in us your own history to start forth and bear and die. Your sun of light is ours, and the sky to all, and the air you breathe is our life. Yonder broad stump is the monument of a patriarch of old. There were giants in those days, but none now, for they have been taken to rib your homes and deck your ocean messengers."

At the hour of noon the stalker rests before a dead and broken pine which with match and birch peelings is soon in blaze. His simple luncheon becomes a precious blessing, and may be followed by the incense of fragrant pipe.

What more shall be required to fill the day's cup of happiness than the comfort of the home fire at night and the panacea of nature's most enjoyable fatigue?

J. Parker Whitney.

The Forest and Stream is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

NAMING THE BOY.

"Naow, Bub, he come here, an' le' me comb his hair," said Huldah Lovel, seating herself in a rocking chair and settling restfully against the high back, holding a comb in one hand and a brush in the other, wherewith she tapped lightly on the polished arms to further attract the attention of her three-year-old son. He was so busily engaged in the construction of a corn-cob house that he only heard as in a dream his mother's call, till it was more imperatively repeated, and his father, sitting astride a pod-auger on a wooden-bottomed chair, shelling seed corn into a washtub, tossed a cob lightly against the child's back and said with cheerful brevity:

"Come, hyper, Bub."

Then the little boy began to rise reluctantly, slowly getting his chubby legs under him, and while yet on all fours protesting:

"Bub don't want him hair comb. Pull, it do."

"Why, yes he does, Bub, tew, wanter hev his hair all slick," said Aunt Jerusha Peggs, removing her eyes from the stocking she was narrowing, and regarding him with smiling benignity over the rims of her spectacles. "It looks ju' like a maouse nes' made aouten corn silks, naow. He do' wanter hev the mice think it's their'n, I know he don't."

"Course he don't, an' mother won't pull," Huldah assured him, adding "not no mor'n she c'n help! My sakes! Bub," she exclaimed, as she drew him toward her and cast a despairing glance on his tangled flaxen poll. "It's jest a mess o' witch knots." The boy shut his eyes and set his milk teeth with heroic resolution.

"Bub, Bub, Bub!" Sam repeated with disgusted emphasis as he detached another of the ears from the braid of their own husks and began crunching off the kernels on the auger. "By the gre't horn spoon! that boy'll grow up nothin' but Bub fust we know. He's got tu be named, that's sartin."

"I know it," Huldah sighed, pulling at a snarled lock of finest flax. "We've got tu, I know, but baow be we a-goin' tu?"

The pain of the present infliction, painful in spite of the careful, motherly hand, and the mysterious terrors of that which impended were too much for the child's fortitude to withstand, and he lifted up his voice in a protest that ascended to a piteous wail.

"Me don't want be name. It hurt I."

His mother laughed at his absurd fear, and his father, rasping a red seed ear savagely on the auger, wondered "Why in tunket he wa'n't named afore he knew it."

But Aunt Jerusha cried out in her tenderest voice:

"There! there! he sha'n't be named nothin' 'at 'll hurt him, dear heart. Why, don't he know 'at ev'rybody an' ev'rything hes tu hev a name? Why, there's the ol' haoun' dawg, his name's Drive; and the ol' rhuster, he's ol' Red; and' there's the hens, ol' Cropple-craown an' ol' High Head, an' Double-cackle, an' Rose-comb an' Goose Face; and there's the caows, Ol' Calerco an' Young Calerco, an' Spot and Line Back, an' I d' know what all; and the oxen, Broad an' Bright. My land! he wants to hev a name as much as a dumb critter."

The little boy stopped crying to listen, and in the interval of silence the familiar, imperative thump of Gran'ther Hill's staff resounded on the threshold, and as his thin shadow partially darkened the open doorway his dry, cracked voice entered before him.

"Lord a'mighty, Huldy Pur'nt'n! be you a-skelpin' that 'ere young un? If ye be, you'd better take the boocher knife an' du it decent, Injun fashion, 'stid o' rakin' on't off wi' a ketchel."

"No, not ezackly, Cap'n Hill. Come right in an' sed daown," said Huldah cordially, as she hastily beat up the cushion of an easy chair for the visitor.

"Yes, you be tew. You needn't tell me," turning his attention to Huldah and the boy after bestowing a "Hope I see ye well" on Aunt Jerusha and a nod on Sam. "I hearn the poppoose holler, an' I seen you at it, a-sawin' an' a-clawin', reg'lar squaw fashi'n. Come here, Bub, an' le' me show yer marm haow." The child trudged over to the grim veteran, as if assured that no worse could befall him at his hands than he was now suffering. "Ju' look at that, will ye?" Gran'ther Hill chuckled. "Thet 'ere boy's got disarnment. Any o' aour folks would ha' told ye 'at they'd ruther be handled by Injins than squaws. Take a holt o' a han'f'l o' hair julluck that, an'—quk—" he gathered the hair of the child's crown and using his forefinger as a knife he made the motion of scalping, accompanying it with a sound made in his cheek. "Oh! I seen the divils du it, an' I seen jes' sech hair as this 'ere a-hangin' on poles over the' wigwams. Blast 'em!"

"Oh," Huldah shuddered, "ain't it awful? No, Cap'n Hill, we was talkin' 'baout namin' of him, an' it scairt him."

"Wal, it hain't no wonder, if you're a-goin' tu give him sech infarnal names some folks hes, an' as many on 'em. By the Lord Harry! I'd as l'ives be shot an' skelped tew as tu hev some on 'em fired at me, an' piled a-top on me. You le'me take him daown tu the brook, an' I'll babtize him wi' one good solid name 'at he needn't be 'shamed on—Seth er Remember er Peleg er Ethan mebby, arter Warner er Baker er Sunderlan' er Allen. I'd name him arter myself if it wa'n't for me an' Jozeff's boy bein' raound an' gittin' mixed up wi' him. Josier Lovel 'd saound almighty well."

"So it would, Cap'n Hill," said Sam, "an' he might be praoud on 't. But I never hed no gre't idee o' givin' gre't folkses names tu child'n that like 's not 'll turn aout mighty small pertaters. I guess we'd better name him arter some o' aour own folks."

"You needn't be afeard o' him. He's a mighty good un, consid'rin'. Don't ye name him Prosper, though, for the shif'lessest man I ever see was named Prosper; ner Noble, ner no sech. But you'll make a mess on't anyway. Me an' Huldy 'll 'tend tu namin' on him."

Aunt Jerusha laid her knitting in her lap and assisted meditation with slow sniffs at a pinch of snuff before she said, "Wal, I alluss thought it was a pooty good way tu git a name tu jest open the Bible an' pick the fust one you come tu."

"Good Lord!" cried Gran'ther Hill, "some on 'em 'ould kill a young 'un o' his age. They must ha' b'en tough ol' critters tu ha' kerried sech names as some on em."

"They was good folks," said Aunt Jerusha, resuming her knitting.

"They was, hey? Haow du you know they was? Was you 'quainted wi' 'em? Wha'd you know 'baout 'em? You can't tell nothin' 'baout folks by what you hearn tell on 'em. You got tu live wi' 'em. They won't stan' it. Come, Huldy, what be we a-goin' tu name the young 'un? You do' want 'im strung on tu a name longer 'n he is, du ye?"

"I allers thought I sh'd like tu give him the name o' some o' aour folks; but Sam's is the only one 'at I like, an' Sam he won't hev it that," Huldah answered, drawing the boy to her knee again and caressing his elf locks in abstraction.

"No, sir," said her husband; "one Sam in the fam'ly 's enough. Your Sams don't never 'maount tu much anyway."

"You don't never want tu say that afore anybody 'at fit tu Plattsburgh," cried Uncle Lisha, appearing at the inner door of the shop, wherein till now he had been an unseen listener; "aour ol' bear fightin' V'mont gin'al's name was Samwel."

"An' so was yer gran'sir's, Sam," Gran'ther Hill supplemented, "an' he was consid'able of a man, I tell ye. He killed a painter oncte—plugged him right twixt the eyes as slick as ever ye see."

"I should like to name him Timothy," said Sam; "it 'ould please father wonderful."

"Please yer Aunt Isaac!" said the veteran contemptuously. "Why don't ye name him H'ardsgrass? It allers makes me think on 't. He hain't green. Red Top 'ould come as nigh, for he's light complected."

"His hair hain't one particle o' red in 't, Cap'n Hill," Huldah protested with earnestness as she fondly stroked the child's hair, and said in a softer tone, "I'd ruther hev him named Samwel 'an anything else."

"It'll du better 'n Timerthy," Gran'ther Hill conceded.

"It's a good name an' good men has bore it," Uncle Lisha cordially assented, and added, with an affectionate glance at Sam, "an' one does yet."

"An' he'll be little Sam till he's taller 'n I be, er it'll be young Sam an' ol' Sam," said Sam, impatiently tossing away a naked cob and breaking another ear from the braid. "Le's call him Timothy an' be done with it."

"Me do' want er be gran'pa," the child whimpered shrilly.

"Shet yer head," Gran'ther Hill whistled hoarsely, glowering upon the boy. "You hain't no more to say 'baout it 'an if you was gittin' a spankin'. If you're a good boy an' keep yer head shet you won't be nob'dy's gran'pa for forty year." And having comforted the scared child with this assurance, he addressed the parents: "You might call him Tom, arter aour ol' Gov'ner Chittenden. He was a clear quill an' could see furder wi' his one eye 'an most could wi' tew. An' it's a chunky name."

"If we was goin' aout o' the fam'ly I sh'd like Lisher best of any," and Huldah looked toward Aunt Jerusha for support.

The old woman gave a little gasp of surprise and pleasure and smiled serenely upon both mother and child, but before she could speak her approval Uncle Lisha shouted, "Good airth an' seas! don't ye du it. It's hopesin he'll make a better man 'an his ol' Uncle Lisher."

"If he makes half as good a one, I shall be glad," said Sam heartily.

"Lisher's good 'nough," said Gran'ther Hill. "Good Lord, anything's better'n these new-fangled Don Cairloses an' Pederos an' Ju Anns an' the divil knows what all. I cal'late they name the childern arter their Merryner rams. When I was raised they—" he stopped short and turned with nervous haste from the window through which he was gazing reflectively over the greening May landscape. "Good land! le's name him quick an' not tortur' him no longer! Here's a silver dollar o' my last pension money, an' we'll toss it up for a name. What 'll ye say? Quick. Thunder an' guns, why don't ye speak?"

"I do' know but it's as good 's any way," Sam said after a minute's hesitation; "go ahead, if Huldy's willin'."

"Why, yes, if it'll only be Samwel," said she, laughing nervously.

"All right," cried the old man, "heads, it's Tim; tails, it's Sam. Here, Lisher, you tos't, and tos't fair."

"It's tew bad a-chancin' of the precious creatur's name that way," Aunt Jerusha protested.

"Go 'long wi' your nonsense, Jerushy Peggs. 'Tain't no more chance 'an your way."

"But the hand o' the Lord 'ould be in that," she declared.

"Let her fly," the veteran commanded, and Unce Lisha, poising the coin on his thumb, flipped it to the ceiling. As it fell all gathered eagerly around it.

"It's heads," Sam shouted triumphantly.

"Stan' back," Gran'ther Hill commanded, "nob'dy picks it up only you, Lisher."

Uncle Lisha adjusted his spectacles, and got down on all fours to inspect the piece. "Wal, it is heads," he declared.

"An' his name is Timerthy," continued Gran'ther Hill. "Ary one was good 'nough, an' I don't care, so long 's he's got one on 'em sure."

"Oh dear, it's too bad," Huldah groaned, "I did want to hev his name Samwel so."

"Wal, if you feel so bad 'baout it, you c'n call him Sam an' I c'n call him Tim. Timothy Samwel. Haow'll that du?" Sam cried.

"Yes, yes, all right, on'y settle on 't quick," cried Gran'ther Hill excitedly. "Will ye hev it that way, say, quick?"

"We c'n both call him Bub just the same, only that won't be his name," Sam urged, and Huldah consented.

"There, by the Lord Harry he's named," the old ranger shouted exultantly, and shook his staff at the window, "an' the' can't nob'dy help it naow! His gran'marm 's a-comin, an' if she'd got here time 'nough, jest as like not she'd ha' named him Eunice in spite on us."

Mrs. Purington's heavy step and labored breathing were now heard at the back door, where she presently entered and stood a moment curiously surveying the now silent group.

"Wal," she asked with cheerful severity, "be you a-hevin' a Quaker meetin'? If I'd ha' knowed I was comin' tu one, I'd ha' fetched Joel Bartlett an' Jemimy along."

"Why, no, mother, not ezackly," Huldah answered, rising and offering her chair to the visitor, while the brush and comb spilled from her lap with a loud clatter. Then when no one else would speak, she continued with some hesitation: "We be'n a-namin' Bub."

Mrs. Purington strove to arrest her descent into the chair, but knees and elbows slowly gave way and she sank into it with a gasping sigh. Then, drawing in material for another sigh, she regarded her daughter with open-eyed, gaping incredulity.

"Yes," said Huldah, in a spirited voice, "we named him Timothy Samwel, an' I say it's a real nice name, don't you, mother?"

"It's an almighty good name," Gran'ther Hill cried, emphasizing the confirmation with a thump of his staff, "on'y there's twicte too much on 't."

"An' you've be'n an' named that child," sighed Mrs. Purington, "an' not said one word on 't to the on'y gran'ma he's got or ever likely tu hev, an' not knowin' 'at the' ever 'll be another boy tu name! Not me nor one o' my folks mentioned in it oncte, nor yet a Pur'nt'n, which I sh'ld think you'd all be 'shamed o' yourselves a-comin' in incouragin' sech duin's, but you hain't, not one on ye." She cast a watery glare upon the whole company, but resolutely withheld her tears while she hurriedly groped in her deep pocket for her handkerchief and bottle of hartshorn.

"That 'ere's tarnal harnsome seed corn you're shellin'," Gran'ther Hill remarked; "twelve rowed, hain't it?" Sam nodded an affirmative.

"Talkin' 'baout seed corn at sech a time, when an immortal soul's b'en gi'n a name!" Mrs. Purington exclaimed in a voice smothered by emotion and her handkerchief. "An' sech a name! Timerthy Sammywel Lovel! Not a Pur'nt'n nor a Borden mentioned! Jest clear Lovel!"

"Wal, Lovel's his name," said Sam.

"An' his natur', I hope, makin' my manners tu his mother," Gran'ther Hill added. "You take this 'ere dollar, Lovel, an' punch a hole in't an' hev the boy wear it raound his neck, for tu make him remember his name."

"He'd ortu forgit it, Timerthy Sammywel! If that hain't a name!"

"You keep a-sayin' on't over long 'nough an' you'll git wonted to't," Gran'ther Hill chuckled maliciously.

"Me git wonted to't! I won't never call him it, you see 'f I du."

"Call him Samerthy Timuwel if it'll make it seem any better tu ye. I da' say his father 'n' mother won't care so long's it's all hove in," Gran'ther said, but Mrs. Purington treated this suggestion with the silent contempt its triviality merited.

"I don't see what makes you so sot ag'in it, mother," said Huldah, "we couldn't let him go on so forever, him two year ol', goin' on three, an' folks a-saying we couldn't find no name good enough."

"Yes, an' if you'd waited half an haour it wouldn't ha' killed nob'dy, an' I'd ha' fetched you a name 'at 'ould saound somehaow when he gits tu be a minister er a darkter, er goes to the leegislatur', an' 'ould look somehaow in the paper an' on his twumstun when he gits merried an' when he dies. You needn't ask me, for I won't tell ye. I'm goin' tu save it for Sis ag'in she merries an' hes children, which I hope she won't never." Mrs. Purington searched for her pocket with her left hand and with the other returned the handkerchief and smelling bottle to its depths with rapidly repeated thrusts, then drew back her feet and grasped the arms of her chair with deliberate intention of arising, but she was stopped by the sudden roar of Uncle Lisha.

"Good airth an' seas! what be you a-makin' sech a rumpus 'baout a young un's name for? If he's a good boy his name'll be good, an' if he's a bad boy George Washin't'n wouldn't saound good wi' him a bearin' on't. We hain't much more'n worms anyways, an' it hain't but precious leetle 'caount what names we hev while we're squirmin' 'raound here. The' hain't one name in ten thaousand but'll be forgot a hundered years f'm na on, an' folks 'at sees 'em scratched on gre't stuns 'll wonder why anyb'dy bothered tu du it more'n they will who we was or what we done. 'Baout all names is good for is to tell us f'm one 'nother, so don't fret your gizzard 'baout the boy's name, Eunice Pur'n't'n."

Mrs. Purington arose ponderously and went over to the window overlooking the garden, where Timothy Lovel was kneeling on a board carefully sowing the beds. After some moments of critical scrutiny of the work, with the rim of her deep bonnet held against the panes, she said in a tone of resignation:

"Huldy, your rhubud's for'arder 'n aourn, an' I guess I'll go an' git a han'fle tu make him some sass. He's dretf'l fond on 't."

"Yes, du, mother," cried Huldah, "an' I'll go with you. Bub, don't he want tu go 'long tew?'

"I guess I might as well go wi' the women folks an' Bub," Aunt Jerusha said, winding the yarn carefully around the needles and sticking them into the ball of yarn before she laid her work aside. Then she followed into the garden.

"Wal, there!" Sam said in mingled amusement and vexation, "Bub he is yet an' Bub I guess he'll be till he gits over it in the nat'ral way."

"By the Lord Harry he's named, an' the' can't nob'dy on-name him naow," Gran'ther Hill declared. "I didn't keer a primin' o' paowder what name you gin him, so you gin it, but I swear I don't b'lieve in one pusson, an' she a woman, a-bossin' all the fun'als an' namin' all the young uns in Danvis, an' I'll cut her corners whenever I can. An' naow if you've got some cider as good for the time o' year as it gin'ally is, I'll m'isten my mortial clay, for barrin' your mother-in-law's weepin' this hes be'n an almighty dry chris'nin'."

ROWLAND E. ROBINSON.

FERRISBURGH, Vt.

Florida Tarpon.

ST. JAMES CITY, Fla., Dec. 13.—*Editor Forest and Stream:* Fishermen may be interested to learn that the fishing for tarpon seems good here now. No doubt it is good all about here. There has so far been no severe weather, and there is an abundance of all kinds of fish.

Thinking there might be a show for tarpon, I tried it in Matlacha Pass Friday and saw a good many, but either was not there on the right tide or not in the right spot. The next day again tried it in the "first pool," and almost at the first cast hooked one, and had at the same time a shark or saw-fish on the other rod—we always use two rods. Had to cut off the shark, fearing that the lines would foul. I landed the tarpon, which was 6ft. long and 32in. girth, in ten minutes. Then going back to the same place, the first cast hooked another; and though a small one he was far more gamy, and took me fifteen minutes to get to gaff. Saw plenty more, but got no more. Until we get a cold norther there seems no reason why we cannot get tarpon at this season.

CHAS. A. DEAN.

A CAMP GHOST STORY.

ASHLAND, Wis.—"Well, Ernest, we will have to stop."

"Yes, think we will," he replied, in his French-Canadian jargon. "We will skin those horses alive if we keep on."

We had left camp long before daylight on our return trip, and after striking the main road had found it frozen so that the horses and mules at every step broke through and the sharp ice cut their legs like a knife. I determined to turn around and go back to camp and wait until it either froze hard enough to bear our team, or the road had thawed enough to melt the ice which had formed. We pried up the wagon until the wheels were clear, unhitched the horses and mules, turned them around and let them pick their way back at the edge of the road. About one-half mile from where we abandoned the wagon we came to the river which we had crossed in the morning almost dry shod, but which upon our approach we found bank full and running like a millrace. Ernest said: "Them fellows lift the dam last night."

"Yes. There will be no more crossing until the river freezes over solid."

"Well, what will we do now!"

"Stay here. Here is a hovel which we can fix for the horses. There is hay on the meadow; we have oats on the wagon, so that fixes them. We have pork and flour and blankets, and we can inclose one corner of the old camp; besides we can shoot partridges and maybe a deer, and that fixes us. I don't care if it keeps this way for a month."

Somehow my plan did not seem to strike Ernest as I thought it would. Ordinarily the manner of life we would be forced to live until such time as the road should become passable would have been, of all conditions, to his entire satisfaction. But during the whole day, in all of our preparations, fixing hovel and camp, and packing hay and provisions, he was silent and morose, seeming to have a burden upon his mind. I expected to learn what it was when our day's work was done, and I was not disappointed. Stretched out before the fire at night, I said to him, "Ernest, what is the matter? You don't seem to like this place. I think it is a dandy. I saw a couple of partridges in the birches down by the river just at sunset, and to-morrow night I will go down and get them. We will rig up a raft, and you can get across the river to camp, get some tea and coffee and sugar, and we will live like kings."

"I know that," he said. "The horse and mule they all right, this camp good enough, but you don't know this place have the hant. You not hear about that, I tell you.

"About five years ago old Mose Smith he owned this camp, and all the timber along the river for a long ways. He always drive horse with lots bells, and we can always tell when Mose come. We hear the bells in the evening when he drive up from down the river. Little while after the Christmas Mose he die. About a week afterward we hear them bells, and the boys they say, 'Somebody come with Mose horse,' and we all go out in the chip yard and we hear the bells again, but we don't see no horse, no cutter; then somebody say, 'That Mose's ghost.' The boys they get scare, and some of them go away that winter. We heard the bells every little while, and right in the middle of the summer people who camp here say that old Mose's ghost he drive up here in the yard every night."

"Well, Ernest, you have told me a very nice story and talked me almost to sleep. I don't believe any ghost will trouble us to-night; so good night."

Ernest did not reply, but sat smoking and gazing intently into the fire. I was sound asleep. Some one was shaking me by the shoulder. Getting hardly awake, I heard Ernest say: "Wake up! That ghost he come now; listen now you hear the bells."

Wide awake, I sat upright and listened intently. All I could hear was the wind, which had risen during the night and whistled and moaned around the old camp and hovel and hay shed beyond. Suddenly as it rose in violence there sounded in the distance what seemed to be a string of sleigh bells; faint and far at first, the sound seemed to grow nearer and louder and then die out gradually almost at the camp door. "Well," I said, "those are nice bells, Ernest. Old Mose must have had an ear for music; his ghost has at any rate. Let's go out and ask the old gent in. Light the lantern. Maybe Old Mose don't need any light, but I can't see an inch before my nose."

"Oh, no! We don't go out!"

"Yes, come on, I say. If you don't want to go I'll go alone. We have plenty to eat; maybe the ghost is hungry; maybe cold; we will bring him in, feed him and warm him," and out I went, bearing the lighted lantern, into the chip yard. Nothing was visible, but as we stood gazing into the direction whence the sound had come, the wind rising again in a powerful gust, we heard the bells again, this time apparently nearer, the sound seeming to die out in the hay shed.

Ernest had followed rather than stay in camp alone.

"Your ghost has gone to put up his horse," I said. "We will go help, maybe his fingers are cold, and some help in unhitching will not come amiss."

We stood again just at the entrance of the hay shed. Again the wind rose and again sounded the bells, this time the sound starting low, but seemingly nearer—*dingle, dingle, dingle-dongle dingle, dingle, dingle, dingle.*

"Ha, ha!" I said, "he must be pretty close here. I think I have found your ghost, and he is neither cold nor hungry; but he is a welcome guest nevertheless. Here is a frying-pan with a long handle which will come in very handy, and here is a piece of chain which we will find useful. Watch now and listen."

I brought Ernest up and held the lantern high, so that the light fell full upon the articles named and described. A gust of wind howled around the corner of the camp and came sweeping through the hay shed. The frying-pan swung out, was caught flatways by the wind and swung back, striking the chain, and at each successive stroke it went *dingle-dongle, dingle-dongle,* and as the wind passed it settled again into place, *dongle, dongle, dongle.*

"Well, Ernest, what do you think of your ghost now?"

"I remember now. I was cookee, and the cook say one day, 'Ernest, take this old frying-pan, hang him up somewhere outside, we don't need him any more now; the boss he buy a new one last night and I hang him by that chain. By gosh! I never saw so funny t'ing like that."

"Well, we will go to bed now. Bring along the frying-pan and to-morrow night we will have some partridge in it."

"Yes, you bet; we no afraid for ghost now."

G. W. M.

HOLLAND.—III.

[*Continued from page 485.*]

AFTER working this cover it was the orthodox course to follow the fence to the road, which we crossed, and descending a steep sidehill entered the "happy valley" at its lower end. In those days this was indeed an ideal sportsman's paradise. As you can see, there are several swampy thickets that look very inviting, while that old orchard, grown up to alders and witch hazel, is perfectly fascinating, and as your footsteps press its carpet of evergreen grass and delicate ferns your pulse bounds with an exciting thrill and you involuntarily tighten your grasp upon your gun, well knowing that scores of birds must tarry in so sweet a spot. Both woodcock and grouse were always here in goodly numbers, but the cream of the whole valley was to be found just above and beyond the orchard on that gentle slope, covered with birches, interspersed with alders in the several little runs that wind their course through the belt of birches from the hill above. This was indeed a favored spot; stately grouse came from the hill above and, charmed with the beautiful surroundings, tarried long in the enchanting home, while the shy woodcock flitted from the rich feeding grounds in the meadow below to repose through the day in the shade of the white-armed birches he loves so well. Once, when here in company with Mr. Ashmun and Mr. Bowles, I started a rabbit just at the edge of the birches, and as he went past Mr. Bowles let drive at him, but the rabbit kept on and ran into a brace of woodcock that were lying close together. As they topped the birches Mr. Bowles brought one down in fine style, and, forgetting all about his shot at the rabbit, he drew a bead on the other one just as Mr. Ashmun fired and killed it. This was rather funny, but the laugh came in when Mr. Bowles, turning to me with beaming countenance, exclaimed, "That is the first double I've had this season;" then to watch the change in his features as remembrance of that shot at the rabbit flashed upon his brain was better than all the rest.

After working out this slope to the fence we turn to the left and beat the cover until we come to the road; then we turn toward the house, occasionally finding a stray woodcock in the scattered clumps of alders, and several times we have found one or two snipe near the little brook. This picturesque valley was dearly loved by Mr. Ashmun, and it was pronounced by him to be the gem of the whole group, and I am free to say that I more than half agree with him, notwithstanding the manifold attractions of other delightful resorts, around which cluster memories of rarest sport enjoyed in the bygone days.

Our usual route from here was to follow the old road to "the birches," from there to "the walnut sprouts," and if we had time we drove on down the hill to the churchyard belonging to and quite near the little village of Wales. This was known as the "graveyard cover," but aside from the border of birches near the pond there was little to indicate the presence of woodcock, yet notwithstanding its uninviting appearance it was a famous place for them, and we frequently found here from eight to fifteen birds, often flushing four or five from the bare top of that little knoll, and nearly always finding two or three in the far corner near the fence, and usually two or three were to be found in the birch thicket near the pond. Once when here with Mr. Ashmun we started a large bevy of quail in these birches, which scattered among the low brush on the hillside across the road, where we followed them and had some capital sport, bringing to bag sixteen fine birds, all old males. These birds were undoubtedly the sole survivors of numerous bevies that had been decimated by the severe winters that very nearly destroyed the quail throughout a large section of country. Previous to my first visit to Holland they had been very plentiful, but the extremely cold winters and heavy snows in '58 and '59 nearly exterminated them, and although Mr. Bowles and I restocked the grounds with a good supply of birds from Virginia and Ohio, there have been but few found here since.

Across the pond there is a large extent of very good cover, or rather a succession of covers, where we often had excellent sport, both with grouse and woodcock. The hillside south of the pond, then covered with a straggling growth of birches, was at times a famous place for woodcock, while just beyond the hill to the right is a charming bit of ground, known as the "schoolhouse cover," that was a sure place for three or four woodcock; and often we had a lucky hit at the grouse, bringing to bag at one time no less than fifteen of these royal birds in this small patch of cover. It was on this occasion that Mr. Ashmun covered himself with glory by handsomely grassing three birds in as many seconds with his Roper gun—a four-shot repeating single barrel.

Mr. Ashmun's favorite bird was the woodcock, and he was not a lover of the grouse, always finding fault with them when found, as he expressed it, intruding on woodcock ground; but after we had smoothed the plumage of our fifteen birds, and laid them side by side on the flat rock by the spring, he gazed upon them awhile with glistening eyes, then turning to me he exclaimed: "I have often called you crazy on the grouse question, but I begin to see that there is method in your madness, and it will take but little more sport like this to make me also a 'partridge crank.'"

The grounds that I have attempted to describe take in, with the exception of a few unimportant nooks and corners, all the covers lying to the west of the reservoir, a long, narrow, artificial lake with rather picturesque scenery at its upper end; the chosen home of the pickerel, which were caught in such numbers that even I am skeptical of the record jotted down so long ago, and shall therefore decline to reproduce it here. Our usual route in working through the covers upon the east side was to take the road that crosses the stream a few yards below the reservoir dam, and, following it past the long unworked "lead mine" across the little brook, a little beyond which the road turns short to the left and winds through a good-looking birch cover. Hitching our team to that old apple tree on the right near the fence, we cross the

road and the open meadow; passing just to the right of that strip of timber, we get over the fence at the barway and are in the celebrated "Jackson cover." In front of us is an extensive, rather steep sidehill, covered with a dense growth of birches, interspersed with alder runs, and all through the whole is a fancy lot of briars that only mortal terror or prospect of sport would prompt a sane mortal to face. At the foot of the slope, nestled in the deep valley, are the bright waters of Lead Mine Pond, a small but beautiful sheet of crystal, from whose depths may still be coaxed fat and almost golden colored pickerel that are actually good to eat, which is more than can be truthfully said of many of their kin from other waters. You must pardon this digression, as I cannot forbear a tribute to the gamy qualities and toothsome excellence of these beautiful denizens of this beautiful sheet of water.

In the cool depths of the alder runs, and all through the growth of birches, woodcock loved to lirger, and many famous bags were made here. Mr. Ashmun told me that once when here with Uncle Aaron Howe, just after a heavy storm, they found upwards of seventy-five birds, and, added he, "if we had not both of us got rattled we would have beaten your record; but notwithstanding our wretched performance, we succeeded in counting out fifty-eight." Messrs. Bowles and Sabin once scored forty-three here, and I have upon several occasions assisted in bringing to bag upwards of thirty birds. Grouse were generally fairly abundant here, but it was often impossible to find a wing-broken bird, as they would make for the brier thickets, and succeed in escaping from the most courageous dog. Once when here we flushed a wild bird several times that invariably flew in a half circle to the left instead of keeping a straight course, as is the almost invariable habit of the grouse. Finally we succeeded in bringing it down, and upon examination we found that the left wing had been broken and the bones had lapped over each other and grown firmly together, making a strong job, but leaving the wing nearly 2in. shorter than its mate, which accounted for the erratic flight that had puzzled us. Upon our return to the team, for three or four years we were invariably waylaid by a half-bred bull dog owned by Mr. Jackson, who lived in the house just above. This dog had a most portentous bark, and a growl that was decidedly suggestive of aggressive unpleasantness, as, with bristling hair and upraised tail, he prowled around us, swearing at our dogs and evidently bent upon their destruction; but we kept them close to heel, and nearly always succeeded in getting them safely through the threatened trouble. Once when Mr. Wesson was there the brute came out before the cover was reached, and seizing poor Andy gave him a terrific shaking before he could be released. I have often heard Mr. Wesson recount the incidents of that day. The cover was literally alive with woodcock, and although the dog could do no work he and his companion walked up the birds and brought to bag a number nearly up to the top score. This was the last time that we were molested by that dog. How he came to his end I do not know, but I heard it whispered that some one had heard a scrimmage at the edge of the cover at once followed by a single shot, and it was the belief that at this time the bark of the worthless brute was wafted to the other shore. Whoever it was, I can confidently assure him that sportsmen who frequented the place, and sundry parties who had occasion to travel that road would unanimously have given him a vote of thanks for his well timed shot. SHADOW.

[TO BE CONCLUDED.]

Natural History.

WOODLAND BIRD NOTES.—V.

At Christmas-Tide.

BY EDWIN IRVINE HAINES.

"The whole world is a Christmas tree,
And stars its many candles be,
Oh! sing a carol joyfully,
The year's great feast in keeping."

WHATEVER the calendar may say about winter coming in on the first of this month (or, more correctly, the 21st), our feelings do not cross the winter line until the first heavy snowstorm. No matter how cold it may be, or how many light snowstorms or flurries we may have, it is not until we wake up some morning to find deep snow on the ground that we realize that winter has her cold grip on us again. The weather has been very mild this year (until this recent cold snap), enticing many of our migrants to remain with us, while the cold weather is driving many boreal birds southward, as example the incursion of goshawks into Connecticut. Winter is like the old Norse poetry, "ragged and jagged, and barbarously grand." There is a certain fascination in the unique and austere realities of this bleak and forbidding season, and from a naturalist's point of view the well-known words of Shakespeare are apropos—"Now is the winter of our discontent." Until one stands in the depths of the woods in midwinter one does appreciate how rare and peculiarly impressive is the sense of absolute silence—the soundless, deathly quiet in earth and air, only broken at long intervals by the cawing of some distant crow, the hammering of a woodpecker upon some far-off tree, the sudden merriment of the chickadee, or the melancholy *see-e-eep* of the brown creeper, as he laboriously climbs a tree near by; but it is gone in an instant—the sound engulfed in an ocean of frozen silence.

There is a potency in the sense of utter desolation in the soundless forest on a winter day that is hardly surpassed by any display of nature's most tremendous energies. Nothing seems more aptly to symbolize the spirit of winter in its gloom, isolation and grandeur than the lone sea-gull pursuing its magnificent flight over the turbulent waters before a darkly gathering storm. The bleak, wild scenes of winter life, such as the driving snowstorm, the somber landscape, the noiseless passage of a hawk amid the trees, the cutting, icy wind that sways the leafless boughs with dismal creak amid

"Bare, ruined choirs, where late the sweet birds sang;

the moaning pines, the cold light of day, and the still colder and quickly gathering darkness; these, and all other ghostly things that contribute to nature's annual burial, form an incomparable background on which to project the tone and temper of all other seasons of the year; the joy of spring, the luxuriance of summer, and the glory of autumn. The peculiarity of the weather this year, however, has shown some strange features in bird life. The bluejays are still here (New Rochelle) in large numbers, causing the woods to resound with their unearthly yells, and causing us to think of warmer days when we get a glimpse at their brightly-hued plumage. Now and then large flocks of robins pass by, and frequently the sweet *tru ally* of the bluebirds falls on our ears. Cedar waxwings are numerous in the pine forests, and large flocks of pine finches and redpolls are often observed in the same places. As late as Dec. 1 I have seen ruby-crowned kinglets; these little birds are migrants, that is, so books tells us, but now it is time that all migratory birds were South long ago; therefore the late occurrence of these birds here in December, and the statements of Dr. C. C. Abbot, who writes he has seen them as late as Christmas and New Year's in southern New Jersey and Delaware, lead us to question whether these birds are migrants or winter residents. Mr. Frank Chapman told me the latest fall record of the ruby-crowned kinglet was Nov. 24, 1886, therefore my record is the latest so far; but as Mr. Abbot only observes birds, and I was so unlucky as not to secure the kinglet, and the old saying that "a bird in the hand is worth two in the bush" holds good among the scientific ornithologists of to-day, the record is not worth much (to them) I have found them with the golden-crowned kinglet summering upon the slopes of the northwestern Catskill Mountains at a distance of only 175 miles from New York city, at an elevation of 1,400ft.—Stamford, Delaware county, N. Y. (see January *Osprey*).

As everyone knows, the kinglets are closely allied, the golden-crown being a winter resident and the ruby a migrant. There was a theory among older naturalists that these two kinglets were associated in their ways and in their range of nesting, but because the golden-crown was found summering only in the Northern States, and the ruby-crown far north of them, this theory was rather given up; but the occurrence of these two kinglets so far South in summer would tend to revive it. The golden-crown kinglet is a well-known and familiar winter bird with us, and a very companionable little fellow he is. Though preferring evergreens, he is satisfied with shrubbery of any kind, and will cheerfully pick his way through tangled vines, all the while singing, or trying to, which is just as well; for the simple sound shows what a cheerful heart the kinglet has. While studying him this summer I had abundant opportunities to hear his love song: a lisping sort of warble, beginning like that of *Dendroica striata* (black-poll warbler) and winding up with a few sprightly notes similar to those of *Dendroica virens* (black-throated green warbler), and is sung very strong and clear for so small a bird. The golden-crown is very abundant this year at New Rochelle, while last year it was very scarce. Though companionable as they are, I do not like to see them so abundant, for this bird is not a fair-weather creature. The winters of 1892–93 were a proof of this; they were very cold and stormy, with much snow, and the kinglets were very abundant and did not seem to mind the cold in the least.

Leaving the kinglet, let us glance at another bird, almost as small as they are, and who is as interesting and almost as abundant at this season. In the "frozen North," where he is said to nest, he is called limmershin, but to us he is better known as winter wren. This little mite is always found either in tangled thickets or along stone walls, where he is so fond of dodging in and out. He is an active little fellow, never still a moment, and always on the go, uttering his mouse-like chirp all the while. But little limmershin is an entirely different sort of chap when he is in his summer home; though said to breed in Canada and Labrador, he is an abundant summer resident of the northwestern Catskill Mountains. I found it in the northern part of Ulster county, and pretty well distributed in Delaware county. These birds are not often found in valleys, but prefer the higher valleys to the highest mountain tops; even the lofty summit of Slide Mountain, Ulster county (4,500ft.), is not too distant for its tiny wings. It habits the roaring mountain brooks, where his beautiful melody always tells his presence before you see him. And what a singer this wren is, though his song is peculiar. The notes tremble over each other in the true wren manner, and the strain comes to an end so suddenly that you are likely to think that the bird has been interrupted; in the middle is a long indrawn note similar to one of the canary's. His habits and manners are very much like those of the water ousel in the far West.

Of all our winter birds the most abundant and best known is the slate-colored junco or snowbird. If you wish to know the habits of this bird all you have to do is to go into a field if you live in the country or into Central Park if in the city, and you are sure to see some, when you can easily watch them. At the end of April they begin to go North to their summer home, which is said to be from the Northern States northward. It is, however, the most abundant and universally distributed bird of the Catskills in summer. It is met with everywhere. In the valleys it may be observed along the roadsides or even hopping about in the village streets as numerously as the English sparrows do in the city, while it is also found in woodland glades and penetrates the mountain forests to the highest altitudes, breeding universally throughout its range. I found it abundant on the summit of Mount Utsayantha (3,800ft. elevation), near Stamford, where I secured two specimens, with a nest and three eggs, July 7, 1896. The nest was situated in a small evergreen bush near a spring; it was made of leaves and straw outside, while within it was lined with black horsehair, which gave it a very pretty appearance. Its song resembles the chippy's, but is louder and sweeter.

The hairy woodpeckers are abundant on Hunter's Island, near New Rochelle, this year, though I have not heard or seen them in any of the woods on the main land. This woodpecker is a "rare and irregular" winter visitant in this part of New York State, though in the western part it is quite abundant. Its note is a peculiar harsh rattle which resembles that of the kingfisher, and can be heard at a great distance. Several times I have seen a species of "snipe" on the beaches of Hunter's Island which I suspect is the purple sandpiper (*Tringa maritima*) On Long Island this sandpiper is a rare but regular winter resident, and as this sandpiper is the only one here in winter it was probably this bird that I saw. On different occasions while on the island I have seen several small sparrows in the salt grass on the beaches, near the water, who tried to keep from sight as much as possible. It was only single individuals I saw until Dec. 13, when I flushed a large flock of them. They scattered and disappeared from sight at once, which is so characteristic of the seaside sparrow, but the latter is only a summer resident here, therefore I knew at once that these birds were his winter cousin, called by naturalists the Ipswich sparrow.

The starlings are numerous all over Pelham Bay Park, and also upon the neighboring islands. During the warm spell we had the early part of this month I was coming home one evening past Pelham Manor, when I heard a bird in full song, which struck me as remarkable for this time of year. I at first thought it came from a neighboring house, but found my mistake when I saw a bird about the size of a robin fly up into a tree and carefully regard me. I thought at first it was a shrike, for its plumage was dingy white above and ashy beneath. As I approached near, it flew into a bush and twitched its tail about like a catbird, and broke forth once more into its entrancing song. And a catbird it was, or rather before he fell from grace, but on account of its wonderful mimicking powers naturalists call him the mockingbird. But what brought him to this locality in December? He is a thorough Southern species. It is quite the thing to explain his occasional appearance in winter by calling him and escaped caged bird.

I have observed mockingbirds here in three consecutive winters, once in the middle of January after a heavy snowstorm during very cold weather; and there are numerous records for Central Park by different authorities. Now, though mockingbirds are favorites as cage birds, there are not so many of them in captivity or so many escape that two, three or more should be observed every winter near New York city. I am convinced, no matter what skeptics say to the contrary, that in the present instance such a sup-

THE COYOTE.

From Forest and Stream Animal Series. Drawn by E. S. Thompson.

position is an injustice to the bird and to myself, and without a doubt this particular specimen wandered up from the South entirely of its own volition and lingered about the Park for my special benefit—a sort of Christmas present a little previous in the delivery. And thus you see from this short sketch of winter bird life that "every cloud has a silver lining," and though in these closing days of the old year the tide is out and the sky is cold and dark, that after a brief period of "frost and storm and cloudiness" the soft, reviving glow of spring will overspread the sky and the southern ocean will send back its waves—waves of thrushes, finches, warblers and the rest—birds of woodland, shore and sea; many of them doubly welcome as old friends, with here and there a stranger in the throng to give the zest of novelty; and as courier of all the host, like a benediction of dying winter on the head of spring, hope's special messenger, the song sparrow.

Poplar Place, New Rochelle, N. Y., Dec. 17.

ABOUT WOLVES AND COYOTES.

In the Western country there is a very large class of people who take an active interest in wolves, and it seems worth while that whatever each one of us knows about them should be put on record. In the West in buffalo times no one ever heard of a wolf's doing any harm to anyone except now and then to chew rawhide ropes and harness, but as the buffalo were driven from one and another section of the country these animals began to prey on the domestic stock which grazed upon the pastures formerly occupied by the wild ruminants.

As wolves began to be troublesome, people who had heard of the old-time industry of wolfing took to poisoning them, since, as a rule, they are much too smart to be trapped and too wary to be shot. Pretty soon, however, the wolves became so sharp that they would not take a poisoned bait, or if they did take it, for some reason or other the poison failed to work. At all events, the carcasses were not found. Colts, calves and larger animals were, and still are, killed in great numbers on the Western ranges, and, of course, sheep are also killed—usually, it is said, merely for fun, as the big wolves seldom eat the mutton.

Few people have any idea how powerful an animal the gray wolf is. He may not stand much taller than a good-sized setter dog, but he is longer and heavier, and is made of a sort of combination of wire and rawhide which never tires and can get over the ground very rapidly.

After a time, when poisoning seemed to prove ineffective, a good many people in the West got greyhounds, Russian wolfhounds, stag hounds and other dogs, with which they tried to kill off the wolves on their ranges. No doubt many wolves have been killed by this means, certainly many coyotes have, but it does not prove effective. In a level country, where the going is good, dogs can overtake and kill wolves, but they must be powerful animals, must be regularly trained to the work, and there must be two or three of them to each wolf. I heard not long ago of a man who started two wolfhounds after six gray wolves. Of course, it is impossible to imagine what he expected the dogs to do. They overtook the wolves with little difficulty, and then these turned on the dogs and ate them up. In a rough mountain country dogs are of little use, because they become footsore and hurt themselves and can no longer overtake the wolves. Thus the problem for the stockman seems one not easily to be solved.

There are some men who still believe in poisoning. Such a man a year or two ago told me that one of his men had driven thirty-one miles from the rauch to the railroad, and dragging a fresh beef hide and throwing out baits, found along the road on his return a day or two later twenty-eight wolves and coyotes. Others believe in dogs, and faithfully ride after them or hire some one else to do so. Others still arrange traps and snares. A cruel trap, but one which is said to be effective with coyotes, is to hang a gang of large and heavy fish-hooks attached to a wire line from the branch of a tree or a spring pole. The hooks, baited with meat, are held so high above the ground that the animal must rise on its hindlegs to grasp the bait, and when he does so the yielding branch or spring pole holds him—for awhile. A few people know how to trap wolves, but the number caught in this way cannot be large.

It is said that ranges where wolves are persistently chased, or where a few have been successfully trapped, will, after a short time, be absolutely deserted by the remaining wolves, who migrate to some other section of the country where they are less disturbed. I heard this autumn of a place in Wyoming called the Settlements which had been troubled for a year or two by wolves. At length one of the men devoted some time to trapping them, and succeeded in catching three, and shortly afterward the wolves disappeared from the neighborhood, and immediately another region about thirty miles west, where there had before been none, began to be troubled by them. Here they did much harm, killing in a couple of months, besides many range cattle, twenty-one cows and calves immediately about the settlers' houses, animals that were kept for milk.

The wisdom of the coyote is proverbial. An example of this happened not long ago on the ranch. We have a yellow sheep dog named Shep who very much delights in chasing coyotes, jack rabbits or antelope. He never catches any of these creatures, but he always chases them, and after he has run himself down comes back with lolling tongue and mortified air. The coyotes often come up within 150 or 200yds. of the house during the day, and whenever the dog sees them he chases them out of sight. If they do not take the trouble to run fast for him, he overtakes them and there is a fight. At night the coyotes come immediately up to the door, and can be heard all about the house and buildings, and at this time the dog is kept busy chasing them.

Not very long ago the coyotes appeared to have made up their minds that they wanted to get rid of this dog. About 9 o'clock at night one of them came to the kitchen door and howled. The dog rushed out after him and the coyote ran away, looking over his shoulder. He ran down toward one of the corrals and around behind the blacksmith's shop into the garden, and the dog followed him at the top of his speed. Behind the blacksmith's shop and waiting for the dog were six or seven other coyotes, who at once pitched into the pursuer and proceeded to worry him. The noise of the fight led Billy C. to seize his gun and rush out there, and he saw this snarling, writhing mass of animals on the ground. He could not shoot for fear of killing the dog, but at his yells the coyotes scattered and disappeared. He was only just in time to save Shep, who was badly cut up. Since that time Shep's interest in coyotes has somewhat lessened. He will chase a single one with his old vigor, but if a second appears he returns to the house.

A few weeks ago, while riding out to look at a bunch of cattle, I saw as I rode, going over a little hill near the house, a coyote down in the next valley, and with the coyote was a badger. I had no gun, and the coyote seemed to know it, for he paid no attention to me, but appeared to be playing with the badger. He would prance around it, make a feint of biting it, and then run off a little way, the badger immediately running after him. This he did until the badger had gone 60 or 70yds., when I got so near the two that the badger saw me and ran into a hole and the coyote trotted off 40 or 50yds. and lay down. I did not comprehend just what was going on, but it was evident either that the two animals were playing together or else that the wolf was teasing the badger. Afterward, in speaking of the matter to Billy, he gave me his theory concerning it. He had several times seen a game of this description, and his idea was that the coyote was teasing the badger and making it angry. It is well known that the badger is troubled with a natural shortness of temper, and will fight, as the saying is, "at the drop of a hat." The coyote's device was to make the badger so angry that it would follow him, and to lead it along until a second coyote was met with, when the two would attack the badger, kill it and eat it. The explanation seems to me a plausible one.

Last summer, while we were haying, an interesting example of a natural pointer was seen not far from the house. The loaded hay wagon was coming back from one of the meadows when a coyote was seen 40 or 50yds. from the road apparently on a dead point. He was standing absolutely still, his nose and tail straight out in a line, and one forefoot lifted from the ground. Just before him there was a very slight rise of ground, but the men who were riding on top of the load of hay could see over this, and saw that he was pointing a prairie dog which was feeding near its hole, just on the other side of the elevation. They were so interested in the sight that they stopped the wagon and watched. Every little while the prairie dog would sit up and look about, and when he did this the coyote would stand absolutely without motion. When the dog dropped down on all four feet and began to feed the coyote would very slowly and stealthily creep up a few feet nearer This thing went on for some minutes, the dog not seeming to notice the coyote, which at the last must have been in plain sight. The last time the dog dropped down to feed, the coyote made a swift rush, covering 12 or 15ft., picked the little animal up, and then for the first time noticing the hay wagon stood for a moment with his prey hanging across his mouth and then trotted slowly off up the hill.

These coyotes are as impudent and unconcerned as possible when you don't happen to have a gun with you. Last autumn I saw them lie down within thirty or forty steps of me just to wait until I had passed by, and, as I said, at night they come up all around the house. They seem to kill a good many colts, especially the young and weak ones, and I suppose that the way they do it is to go in bands, and while some tease the mare others jump in and kill the colt. The habit of relieving each other in chasing antelope and jack rabbits is, of course, well known. Last winter Billy reported to me that he saw two of them on a big piece of ice bothering a big wolf. The ice was slippery and they could get started and could turn much more quickly than their larger cousin. One of them would go in front of him and annoy him while the other ran past him from behind and nipped him as it went by. Then the big wolf would try to turn and chase the little one, but he would slip, and before he fairly got started would get a nip from the other. So they worried

THE WOLF.

From Forest and Stream Animal Series. Drawn by E. S. Thompson.

this old fellow for quite a little while, and were still at it when Billy went out of sight.

I have said something about the power of the big wolves, and it is well known that a couple of them can pull down a two-year-old heifer without trouble. The reason I know this is because I have seen them do it. A couple of wolves had a bunch of stock rounded up in a valley, and were just walking about and holding them there, when suddenly one of the wolves made a plunge into the cattle. A foolish young two-year-old dashed out of the band and the other wolf had her cut off the moment she separated from the bunch. Then both wolves made a dash at her, caught her by the hindlegs, spread her apart and killed her, I think, in ten seconds.

For many years I have been looking for an authentic case where a Western wolf attacked a human being. I think I have found one now in the daughter of old Jim Baker, who still lives down in Colorado, on Snake River. The occurrence happened about fifteen years ago, and the attack was made not because the wolf was hungry, but because he was cross. The young girl, then eighteen years old, was going out just at dusk to drive in some milk cows, when she saw sitting just above the trail on the hillside a gray wolf. She called at it, and when it did not move picked up a stone and threw it. The animal came jumping down the hill, caught her by the shoulder, threw her down and tore her badly on the legs and arms. She screamed, and her brother, who happened to be near by, ran up with his gun and killed the wolf. This was a young wolf barely fully grown, and his act it would be hard to explain. The woman still bears the scars of the encounter.

In books about Indians it is commonly stated that wolves mate with Indian dogs, and it is certainly true that the old-fashioned Indian dog often had a very wolfish look about him. Such crossing may take place by accident or possibly by design of the Indians, as stated by some travelers; but though I have been much in Indian camps, for a good many years past, I never saw anything to lead me to believe that the Indians themselves tried to bring this about.

That wolves and dogs will cross is certain. Twenty years ago at a ranch just west of the head of the D smal River, in Nebraska, there was a big black dog which was the father of seven pups by an old gray wolf. These pups and their mother were notorious through all the country there for the cattle which they killed, and they were often seen doing it. If I recollect aright three of the pups looked like gray wolves and four like the black dog. All of this interesting family save one were at length shot by Capt. L. H. North, the manager of the Cody & North cattle ranch.

There is a lot of interesting matter to be written about wolves and coyotes, and a beginning has hardly yet been made at it. If every one who has any notes on this subject would write them out and put them on record there would soon be material for an interesting and not very small book. G. B. G.

The Ermines.

In our remarks last week upon the ermines, we quoted Coues's "Fur Bearing Animals" and Audubon's "Quadrupeds," neither of which is very modern, the first having been published nearly twenty years ago and the latter being twice as old. Of course, since the publication of these volumes much work on North American mammals has been done, and much has been said as to the specific relations of all the weasels. The latest contributions to this subject are a paper entitled "A Review of the Weasels of Eastern North America," by Mr. Outram K. Bangs, published in the Proceedings of the Biological Society of Washington, and one by Dr. C. Hart Merriam entitled "A Synopsis of the Weasels of North America," published by the Agricultural Department as No. 11 of the North American Fauna.

Dr. Merriam regards the ermine (*Putorius erminea*) as distinct from the American forms of weasel, though closely related to a subarctic form (*P. arcticus*, Mer.). Strictly then the term ermine should be applied only to one species of weasel, and that an Old World form, but there are in America many weasels which turn white in winter.

The quotation from Audubon's "Quadrupeds," given last week in these columns, probably refers to *P. noveboracensis*.

Winter Bluebirds in Connecticut.

HAMDEN, Conn., Dec. 14.—The occasions are very rare when it is possible to pick wild flowers from the hillside in Connecticut on Dec. 13; yet I inclose a small blossomed plant picked by myself to-day while I was hunting for snares on the West Rock range. Not only did I pick this flower, but I saw bluebirds and lots of them; in fact, it is nothing unusual to find these generally accepted harbingers of spring in this vicinity all the year round. Well do I remember hearing a bluebird sing just two years ago this month; and the thermometer was hugging zero pretty close at the time too. A friend and I were crossing a lot on which there was a clump of small cedars; our surprise can be better imagined than told when our ears were greeted by a bluebird's warble; we had seen them many times at that time of year, but the warble was a genuine surprise. WILLIAM H. AVIS.

Tennessee Birds.

GRAND VIEW, Dec. 16.—I was in error in supposing that the migrant birds had passed this point on their southward journey.

On Dec. 9 a large flock of robins passed, some hundreds, probably, in number, and on the 11th I saw one meadow lark.

There are many small birds, which seem to be mostly finches, twittering in the bushes, and I am told that they remain all winter.

We have seen no snow on the mountain tops as yet, though in Georgia, and more than 100 miles to the south, they have had too much for comfort.

Antler says that when the robins come northward in the spring they move in a body. KELPIE.

An Invaluable Substitute.

INCLOSED please find draft for $4, for which please keep the FOREST AND STREAM coming to my address. I have had it just one year, and for one interested in sporting life, and is so tied down to business life as not to be able to enjoy the reality, it is an invaluable substitute.

CHAS. HAYWARD.

Game Bag and Gun.

WHERE TO GO.

ONE important, useful and considerable part of the FOREST AND STREAM'S service to the sportsmen's community is the information given inquirers for shooting and fishing resorts. We make it our business to know where to send the sportsman for large or small game, or in quest of his favorite fish, and this knowledge is freely imparted on request.

On the other hand, we are constantly seeking information of this character for the benefit of our patrons, and we invite sportsmen, hotel proprietors and others to communicate to us whatever may be of advantage to the sportsman tourist.

CHICAGO AND THE WEST.

Another Bill.

CHICAGO, Dec. 19.—The Illinois State Sportsmen's Association met Monday of this week and agreed to appoint a committee for the drafting of a bill to be presented at the next session of the Legislature. This is entirely distinct from the bill mentioned in earlier issues as the Baird bill. There will be desirable features in each bill, and it is to be hoped that the sportsmen of the State will secure some of the benefits which would arise from the adoption of such desirable portions. It is all in the air yet, for we have not yet heard from South Water street, whose pull is mightier than the sword.

Personal.

Mr. Charles Hallock, the Nestor of sporting journalism, made a very pleasant call at this office to-day. Mr. Hallock looks hale and hearty, and no older than he was ten years ago, probably not so old, as he has had so many enjoyable experiences in his many wanderings among the wild places of the continent, all of which are evergreen in tendency.

Mr. S A. Tucker, the well-known agent of the well-known Parker gun, is in the city this week for several days.

Mr. W. P. Mussey, long sick at home of typhoid fever and mentioned last week as apt to be confined in bed for some days yet, surprised and delighted his many friends by appearing at his place of business day before yesterday for a short time, the first time he has been down town since October last. He is looking pulled down, but says he will soon be all right again.

Mr. A. S Clark, of Haddam, Conn., called this week, and I was glad to see him. He is an old-time FOREST AND STREAM reader, and has shot in different parts of the West and South, in country of which we could speak of mutual knowledge. Mr. Clark says I am not as good looking a man as he hoped I was, from reading my stuff, "unsight, unseen." A number of people have told me that, and I am beginning to think there is something in it.

Wild Pigeons.

Mr. William Knight, freight agent of the U. P. R. R. here, is just back from a quail trip in Missouri and Arkansas. He brings the unusual news that he and his friends saw a large flock of real wild pigeons, and he killed two of them, bringing them home for mounting.

National Association.

The annual meeting of the National Game, Bird and Fish Protective Association will be held at Kalamazoo, Mich., Feb. 10, 1897. Mr. A. L. Lakee, secretary, asks that all who can possibly attend do so, and all such are requested to notify him at Kalamazoo of their intention, so that proper arrangements may be made for the accommodation of all and for the holding of a good meeting.

Dakota Game.

Mr. George E. Bowers, State game warden of North Dakota, writes me from Fargo that he has this fall had very good duck and goose shooting, and helped make bags as big as any one should ask. Moreover, he has just returned from a deer hunt on the Missouri River, in which his party of four got fourteen deer in ten days. Mr. Bowers asks me to come out for another hunt with the Fargo boys, and this I am going to do some day. He says that he did not meet the Merrill boys on their trip in Dakota, but was lucky enough to meet the W. B. Mershon party from Saginaw, Mich., and found them a splendid lot of men, "the kind it does one good to meet." Mr. Bowers is now about ready with his annual report, and we shall then hear about the non-resident law.

Mr. Clint Smith, one of my Fargo hunting friends, is now East on a visit, and I expect to see him here in Chicago before long. E. HOUGH.

BLACK RIVER ASSOCIATION.

Editor Forest and Stream:

The annual meeting of the Black River Fish and Game Protective Association was held this afternoon, President George G. Chassell, of Holland Patent, presiding. Secretary W. E Wolcott, of Utica, presented his annual report, which was as follows:

This Association, from the time of its organization eight years ago, has unfalteringly and untiringly labored in the interests of Adirondack forest protection and preservation, and earnestly advocated the early acquirement by the State of the entire wilderness region. Petitions urging the Legislature to take decisive action in the matter were printed at the expense of the Association, widely circulated, and thousands of signatures thereto obtained from different parts of the State. We have also published and circulated, in sheet and pamphlet form, at our own expense at various times, a vast amount of information concerning the Adirondacks and the necessity for caring for the forests.

Delegates have been sent to New York city to express our views before the State Forest Commission, to Albany to promote the desired legislation, and regularly to the annual meetings of the New York State Association for the Protection of Fish, Game and Forest, held in Syracuse. The latter Association has repeatedly signified its approbation concerning our work in behalf of forest preservation and heartily seconded our efforts.

In view of the active part which the Black River Association has taken in this matter, it is but natural that we should feel highly gratified at the marked and increasing evidences of the growth of public sentiment in favor of the policy we have so long and enthusiastically advocated. One of the most encouraging evidences that has been noted was given this fall when the electors of this State were called upon to express by popular vote their wishes in regard to a proposed constitutional amendment. The Constitution of the State of New York, as revised two years ago, contains the following:

Art. VII., Sec. 7.—The lands of the State, now owned or hereafter acquired, constituting the forest preserve as now fixed by law, shall be forever kept as wild forest lands. They shall not be leased, sold or exchanged, or be taken by any corporation, public or private; nor shall the timber thereon be sold, removed or destroyed.

The revised constitution, including the above section, was adopted by a majority of about 100,000 This fall, at the general election, a proposed constitutional amendment was submitted, which, if it had been adopted, would have had the effect of virtually nullifying the section just quoted. Fortunately, however, public sentiment was ripe to meet the issue and people stamped with disapproval the proposition which meant destruction to the forests, burying it under an adverse majority of 700,000.

Surely the friends of the Adirondacks have great cause to rejoice at this magnificent victory, but they should not feel that it justifies them in resting on their laurels. While it furnishes indisputable evidence that the masses of the people are in sympathy with the cause, the fact remains that some few must continue to act as champions, or things will go by default. It is not only essential to make sure that the ground already won is retained, but continued aggressive measures will be required if, as is desired, the State secures title to the entire wilderness within the limits of the forest preserve. The action which has thus far been taken has done much toward guarding against the acquisition of Adirondack lands by unscrupulous men, acting either as individuals or in behalf of lumber companies or railroads, but there should be no relaxation of vigilance, and any attempt to deprive the commonwealth of its birthright should be forestalled. Further than this, all friends of the forest should persist in urging the importance of immediate action by the State looking toward the speedy acquirement of the Adirondack region, and should use their influence with members of the Legislature with this end in view.

Your secretary attended the annual meeting of the State Association for the Protection of Fish, Game and Forest held in Syracuse last winter. Delegates were present from twenty-two clubs, representing a membership of 4,800, and great interest was manifested in the proceedings. Your secretary offered resolutions approving the action of the State authorities in purchasing 75 000 acres of land within the forest preserve, and requesting the Legislature and Forest Commissioners to acquire additional lands there as rapidly as possible. The resolutions were unanimously adopted. Several proposed amendments to the game laws were considered, among them those suggested by the Black River Association. It was decided wise to amend Section 40 of the game laws so as to make the open season for deer from Sept. 1 to Oct. 31. The convention also voted to amend Section 44 so as to prohibit all floating or jacking or hunting with dogs, and so that no dogs for hunting deer should be allowed in the Adirondack preserve. Unfortunately the Legislature did not see fit to indorse all of the recommendations of the State Association, and it is particularly regretted that the amendment to the section last mentioned was among those not approved. Instead of abolishing hounding, the season for running deer with dogs was limited to the first fifteen days in October. Judging from the criticisms which have been made by sportsmen, hotel men and guides alike in the Adirondacks, this change has proved a dismal failure as a protective measure, and the belief that hounding should be absolutely prohibited for a few years at least has a very largely increased number of advocates. Competent judges say that the shortening of the dogging season had disastrous effects this year. By bringing nearly all the hunters into the woods at the same time it gave the deer little chance for escape. All desirable runways and watch points were covered by sportsmen during the two weeks, and there was scarcely a deer track which was not picked up by a dog. In this way, while the deer found their accustomed paths exceedingly dangerous, they were nevertheless kept almost constantly on the move, and those that escaped with their lives owed their good fortune more to the carelessness or inexperience of sportsmen than to anything else. It is also true that the shortening of the season seriously injured the business of Adirondack hotel men and guides. It was a noticeable fact that hunters who had heretofore spent from one to four weeks in the woods during the deer shooting season this year remained only long enough to get their venison.

The recommendation of this Association that the season for partridges, woodcock and squirrels open Sept. 1 and close Nov. 15 met with some opposition from sportsmen who want to hunt late in November and in December; but it was deemed wise to shorten the season two weeks on the first end. Last winter the Black River Association made application for 200,000 brook trout fry from the State fish hatchery on the Fulton Chain, but we were only able to obtain 40,000. These were shipped to us in April, and were taken in charge by the members of the committee appointed for the purpose and carefully distributed in Oneida county streams.

The report of the secretary was adopted. The treasury of the Association was reported to be in a very satisfactory condition.

Resolutions were adopted declaring it to be the sense of the Black River Association that the season for killing deer should open Sept. 1 and close Nov. 15; that floating or jacking and hounding deer should be absolutely prohibited; that the open season for partridges, woodcock and squirrels should be from Sept. 15 to Nov. 15 inclusive; that the sale of speckled trout and game killed in this State should be prohibited.

The following was also adopted:

Whereas, This Association has knowledge of frequent and flagrant violations of the game laws in the country about the headwaters of Black River and the west branch of the West Canada Creek, and

Whereas, We have no information that a State game protector has visited that section within the last three years, therefore

Resolved, That it is the sense of this Association that a protector should be appointed who will give special attention to the enforcement of the fish and game laws in this region.

Officers for the ensuing year were elected as follows: President, John W. Hicks; Vice-President, S. R. Fuller; Secretary, W. E Wolcott; Treasurer, H. A. Pride; Directors: G. G. Chassell, S. R. Fuller, W. E. Wolcott, William P. Dodge, H. A. Pride, B. H. Kent, Benjamin Sanders; delegate to the annual convention of the New York State Association for the Protection of Fish, Game and Forest, to be held in Syracuse Jan. 14, W. E. Wolcott.

The secretary was authorized to make application to the State Fish, Game and Forest Commissioners for 200,000 brook trout fry to stock waters in the territory in which the club is particularly interested. PORTSA.

UTICA, N. Y., Dec. 12.

ROD AND GUN CLUB OF MASSACHUSETTS.

The annual meeting of the club was held on Thursday, Dec. 3, at Young's Hotel, Boston, Vice President John Fottler, Jr., chairman. After reading of the records the treasurer presented as his report:

Disbursements.

Books and stationery	$10 35
Typewriting and bulletins	25 17
Rooms for meetings	9 00
Mileage books for warden	60 00
Wages of warden, Aug. 24 to Nov. 30	210 00
Postage	9 46
Swearing in warden as deputy	2 00
Badge for warden	1 50
Edition of game laws	10 50
	$337 98

Receipts.

Annual dues	$820 00
Deduct expenses as above	337 98
Cash on hand	$482 02

The secretary then presented his report. Our first year of existence has been prosperous and very encouraging. On Dec. 16, 1895, was sent out the call which resulted in forming the Rod and Gun Club. At the meeting following, Dec. 20, the outlook was so promising that we decided to associate, and on Jan. 3 and Jan. 17 our

organization was completed. We then waited, gathering strength, till April 7, and later, on Aug. 14, when your directors believed it safe to begin work without risk of moving prematurely and a suitable man for warden had been found.

Our club has since that time made itself felt in its work for sportsmen, as has not been done in Massachusetts by any club at any previous time—a statement not to be disproved. Bulletins sent members have told a story of our work, but the story has not been half told.

We started with twenty-one members; we have to-day ninety-one.

One member, Elliott B. Mayo, has died. The club in him lost a friend. Two members have resigned. A subscription has been received from a friend who did not wish to be enrolled as a member.

Of our work done, the North Easton case was believed to be the first in the State where conviction has been made for snaring game. We went one further in our next case, not only convicting for birds, but also for setting snares. We hope in the future to show there is more in the fish and game laws than "reading matter."

Our warden, Mr. William E. Quiggle, has done all that could be done. Our work is begun; our resources are ample for future work; our money has been prudently spent. We ought to have, however, another warden.

Report of warden (inclosed) was presented.

BOSTON, Dec. 3.—The last bulletin closed with Oct. 12, and our warden has since had all one person could attend to. He has also been successful in a very difficult and discouraging case, involving much hardship and requiring most of the pluck usually given to one man. The sportsmen of Orange, Warwick, Wendell and Northfield may owe what little sport they may have next year largely to the Rod and Gun Club. Over twenty-five miles of snares were found, estimated to number over 2,000 snares, one line alone being six miles long. There were shipped daily an average of 25 to 30 birds.

Your warden reports:

Oct. 13 to 17—Mansfield and Foxboro; not a snare tended since last visit. 19—Went to Orange. 20—Hunting snares. 21—Rain. 22—Found about 1 dozen snares. 24—Moved to Warwick; found about 75 snares. 26—Sent skeleton to Boston; found new line of snares. 28—Found new line of snares and 1 snared partridge. 31—Rain past 3 days; more snares found; moved to Wendell.

Nov. 1—Snares found toward Northfield. 2—New snares found toward Northfield; 2 partridges in snares. 6—Rain past 2 days; found 2 partridges and 1 rabbit in snares; traced snares as far as Northfield Mountain; now tending 4 lines of snares. 10—Saw him setting snares. 11 to 14—Now watching 5 partridges, 2 rabbits and 1 squirrel in snares; zero weather. 15—Case given away. 18—Have laid by the snares 5 days and he has not visited any. 21—Snowstorm; thermometer almost to zero. 23—Went to Greenfield, swore out warrant and Deputy Sheriff Fowler arrested Harvey Hunter, of Orange. 24—Attended court at Orange before Judge Dana; Hunter found found guilty on 4 counts—for setting snares, for snaring 2 partridges, for snaring 3 partridges, for snaring 2 rabbits; fined $20 and costs on first count; the other 3 held in suspense under promise to obey the law. 25—Came home.

Applications for membership were: William Laurence, Francis Skinner, Jr., William Brewster, Jr., W. B. P. Weeks, Oliver Ames, Andrew G. Weeks, Jr., Benjamin H. Dorr, W. A. McLeod, R. B. Blodgett, Dr. M. H. Richardson.

These bring our membership to 101. (Under the by-laws any objection on the part of members should be made within ten days.)

The following officers were elected for 1897: President, William Minot; Vice-Presidents: Edward Brooks, C. P. Curtis, Jr., J. Fottler, Jr.; Secretary, Henry J. Thayer; Treasurer, William N. Lockwood; Membership Committee: J. P. Reynolds, Jr., Edw. M. Weld, William C. Thairlwall. HENRY J. THAYER, Sec'y.

MAINE GAME INTERESTS.

AUGUSTA, Me., Dec. 12.—*Editor Forest and Stream:* Chairman Carleton, of the Inland Fish and Game Commission, has just issued a codification of the fish and game laws, with important amendments, which the coming Legislature will be asked to consider. These amendments are asked after a most careful and personal investigation on his part during the past year in the fish and game country. He has given them out this early that all parties interested in this question, which is of such vital importance to Maine, may be heard through the press and private correspondence, with a view that all those interested in the enforcement of the fish and game laws may have time to study them, and agree upon what is desirable in advance of the meeting of the Legislature. If his amendments are not entirely satisfactory, he desires changes that will bring about a united support of all interested in this matter. The following are some of the important changes that may be of interest to those outside the State who come here to enjoy the fish and game privileges:

A reduction from 25 to 15lbs. of trout and salmon that may be caught in one day, or transported at any one time.

Making close time on landlocked salmon and trout commence Sept 15 all over the State.

The bounty on bears is recommended to be repealed.

Absolute imprisonment of not less than thirty nor more than ninety days for the illegal hunting or killing of moose and caribou. Perpetual close time on cow and calf moose, and the month of November in which to hunt bull moose. In the transportation of moose full evidence attached of the sex of the bull moose shall accompany it during transportation.

Guides are required to be licensed, as well as keepers of hunting lodges, camps, etc.

Dogs are not to be taken to or kept in these places without special permit from the Commissioners.

The number of partridges and woodcock that can be killed or had in possession at one time would be fifteen, and open season would begin Sept. 15 and close Dec. 1.

CUSHNOC.

BOSTON, Mass., Dec. 19.—The annual report of the Maine Fish and Game Commissioners has just been handed to the Governor, though not quite ready for general distribution. More moose have been killed this year than ever before, and the Commissioners say that to preserve the species from extinction more stringent laws must be enacted and enforced for their protection. Hunters go into the woods in August and September, in the "calling season," and kill the game. They dare not bring out the heads, but leave them to be forwarded by the guides in legal open season. The rest of the animal is left to rot. At least 10,000 deer have been killed in Maine this year, but the supply seems to be kept up. Deer are now found in every county in the State. The caribou seem to be fast disappearing, and soon will be entirely extinct, unless legislation and enforcement gives them better protection. The report says that Jock Darling estimates that there are in the State 150,000 deer, 12,000 moose and 10,000 caribou. The Commissioners think that 25 per cent. of this number would in each case be much nearer the truth.

Ten thousand persons visited the Rangeley region this year, and 50,000 in all came to Maine to hunt and fish. More than $5,000,000 was left in the State by these visitors. The people of the State cannot afford to jeopardize this revenue by allowing the game to be forever destroyed and the fishing to subside. The report goes on to say that there has been a larger run of trout and landlocked salmon into the streams to spawn than ever before. Then it gives an account of what is being done in restocking the lakes and ponds with these fish. Forty-three lakes and ponds were stocked with five-months-old landlocked salmon in October. The report is excellent reading for everybody interested in the protection and propagation of fish and game. SPECIAL.

Sea and River Fishing.

SMELTING.

"HINGHAM SMELT." Seeing this sign in the window of a market one day reminds me of a trip which I took smelt fishing. Shall I tell you about it?

My friends, Charles and Eugene, had made all the arrangements. I was to meet them at the wharf in Boston, to take one of the Nantasket boats. I was there on time and found Charles, but Eugene did not show up. His business said no. Much to our regret we left him, for he had boasted of how many fish he could catch and the many ways in which he was going to do us up. I am not fully convinced yet that it was business which kept him. It might have been fear that he would get beaten. These smelt fishermen are foxy, and Eugene will bear watching. Charles got some shrimp for bait, and we went on board the steamer Mayflower bound for Bayside.

We are off; and what a beautiful panorama opens before us. Here comes a little bustling tug with a large four-master in tow, loaded to the rail. See how easily the little fellow guides her in and out among the vessels at anchor, with an ear-splitting screech to some vessel in front, and then the quick, sharp puff, puff, puff, as they go along down the bay.

The old Mayflower slowly steams along as if she would say: "Oh, I don't mind these little chaps. We are going fishing." As we go along the islands in the harbor come into view, and we leave them again, with the memory of their beauty still lingering with us. Surely a beautiful sail. Charles calls my attention to a very fond couple; they wander around the boat for a time and at last find seats in the rear of the paddle boxes; as I look he has one arm around her and is looking very innocently at an old lady beside them. If she will only look the other way. Our attention is called to Nip's Mate and the old lady looks with the rest. It is his chance, and Willie snatches a kiss and then resumes his innocent look, while the guns on Fort Warren frown down upon us as if we were to blame.

As we pass Deer Island Charles tells me in a very quiet tone that if I don't mend my ways I may do a turn there breaking rocks. The old Venetian, or what is left of her, we sight on the port bow, and can't help thinking of this once beautiful vessel now so ignominiously laid low and the water which she spurned so often now flowing in and out of her hull, which the elements and man are fast reducing to the scrap heap.

Arriving at the wharf, we board the electrics for Bayside. We are soon there, and after being welcomed by Mrs. S. we get into our fishing togs as fast as possible, for Charles is impatient to show us his yacht. I will not say that Charles is an old sea-dog, but he feels like one when I go aboard the Wenonah. She is a beauty, and he may well be proud of her. I had hoped to get a sail with Capt. Charles and Mate Eugene, but I shall not say anything more about Eugene. I broke one of his rods later, but you will not tell him. We took the small boat Nannie with two rods each and shrimp for bait, and here is where I had my second experience in smelting. The first time was with a friend; we used small minnows for bait. I put one on the hook and after fishing for a time I asked, "Isn't that rather large for a bait?" "That's a smelt," said my friend. "Well, I am done," said I, and taking the rod over my shoulder, fish and all, I started for home, disgusted with such fishing.

I was a little bit suspicious when I started with Charles, but he soon tied to the H. Y. C. buoy and it was not long before he had smelt in earnest. He has a beautiful bite. His rod bends nearly double. "That's a dandy, Charles. Don't lose him." He does not answer, but landing him in the boat he takes the hook from his mouth. I hear a soft muttering and the "smelt" is dashed against the seat and flies off into the water, food for gulls. "Pollock," in a low tone, is all I hear. "Charles, why don't you swear? You acted it!" "Oh, you catch smelt, that is what you are here for," and as he says this I pull in two. "Double game, Charles." Can't help doing this. Oh, if Eugene were only here. We fish about two hours and find that we have six dozen nice ones. We shall try it again in the morning, so, after making things snug on the Wenonah, we go to the house.

I doubt if any of the party will forget that night very soon. Charles had started a fire in the fireplace, but for some reason the smoke came into the room. It got so thick we could not see from one end to the other; then Charles said: "Let's turn in before we get lost." We went up-stairs, voting Charles not much of a success as a fireman.

I was awakened in the morning by the low, hoarse tones of a whistle down the bay. It would sound three times, and then from afar off would come the short, sharp toot, toot, toot, of a tugboat in answer. Going to my window, I saw the bright beacon, Boston Light, sending its rays over the water—a bright, silent guide through the night to the vessel whose whistle had awakened me. With what pleasure the men who go down to the sea in ships must hail this sentinel when coming into this coast in a thick snowstorm! How they must watch for it, and how the eye must brighten when they can make out its faint glimmer through the storm. Shine on, silent light, and may your bright beams cheer the sailor on his watch and guide him safely into port.

Charles is calling to breakfast, after which we try the fish again, and find on fishing about two hours we have nine dozen. Now for a sail. We get sail on the Wenonah, and with a good wind we cruise around the bay, going near enough to Hough Neck to see friends on the shore. Then taking our course for Hull, with wind on our quarter we fairly flew through the water. Another turn around Rainsford Island, and then for Bayside. The Wenonah takes a sea now and then and throws it over us as she heels to the breeze, and there is a smother of foam under her bow as she flies along. A fine sail indeed, a beautiful day, a nice boat, a good fellow in Capt. Charles, and what more could you ask. Nothing. That is what I said, but do I hear you say, "Take Eugene the next time?" Yes, that is what we shall do. I managed to crowd a lot of fun into the short time that I had, and am now waiting for Charles to set the time to go again.

Fifteen dozen smelt, and Hingham smelt too.

F. E. WOODWARD.

New Jersey Coast Fishing.

ASBURY PARK, N. J., Dec. 16.—The New Jersey coast has had her first taste of winter fishing. Never has there been such a run of cod, ling and whiting as this season has produced. Nature apparently has exerted herself to furnish to the people in fresh supply what the pounds deny them in the salted article; and in consideration of the stringency of the times it has proven a boon to thousands of poor families, while to the angler it has been a season of positive delight. The extraordinary weather has been so greatly to his benefit that nearly every day and night the past four weeks our piers have been crowded with the enthusiastic.

The capture of the codfish with rod and reel has in it the element of novelty, inasmuch as they have never before been taken from our piers on the beach. While they are in no sense a game fish, still I have recently taken some 6 and 8lb. fish which gave me fair sport. They take the sand lant or sand eel readily, but apparently much prefer the clam bait. When hooked with light tackle they stay well to the bottom, and make quite strong runs to the right or left, but have none of the dash of the striped bass, bluefish or weakfish.

The whiting, commonly called frostfish and winter weakfish, are with us in incredible numbers, and their capture some days amounts to a veritable slaughter. When taken with light tackle they are decidedly game and furnish most excellent sport. I use a black bass bait-rod and a Mills rubber and german silver black bass reel, with nine-thread linen line, to which I fasten a 4 0 ringed Carlisle hook, fitted with a section of very light wire and small sinkers. The whiting is a voracious feeder, and has formidable teeth, which play havoc with gut snells. With the foregoing rig the sport is of high grade. As they strike the hook sharply, I have frequently had them leap clear of the water four or five times in succession, following each leap with a deep plunge. They average in weight from ¾ to 1½lbs., although 2 to 2½lb. specimens are not at all rare. I had the good fortune to kill the largest one I have yet seen, weighing exactly 3lbs.

As to the ling, however, few songs can be sung in his praise; there is no fight in him. When hooked he performs a series of grotesque tumbles in the water, and goes home with the angler to be transformed into fish cakes, which if properly prepared are of a most toothsome degree. LEONARD HULIT.

JUDGING AT FIELD TRIALS.

As the passing years with their annual field trial events have added constantly to the knowledge and experience of field trial judges, reporters, handlers and last, but most important, owners, it has become more and more apparent that field experiences alone are imperfect qualifications for good judging. There is a sharp and recognized distinction between following a dog for the purpose of killing birds over him and following him for the purpose of determining how his qualities compare with those of some other dog or dogs, whether they are better or worse, or what they are intrinsically in themselves.

There is many a good shooter who can thoroughly understand and profit by the use of a pointer or setter's point, but who cannot describe the dog's field quality in detail, nor wherein one manner of working on birds is better or worse than another.

The field trial judge should have a perfect theoretical knowledge of what constitutes all degrees of field quality, each in itself and its value compared with all others. Further, he should have a practical experience, so that he can recognize true quality from imitation quality in every detail of the competition, and also a ready appreciation of relative values. It may seem far-fetched to mention the possibility of a judge being deceived by imitation quality, but some parts of the competition require close scrutiny on the part of an expert to determine whether a dog is really meritorious or a sham. For instance, two dogs may be ranging about alike in respect to speed and area of ground covered, yet one dog may not be using his nose at all, though running with all the appearance of a good ranger but from effort the result of superabundant energy. He runs simply because he is in good spirits.

Again, more dogs will range well with a companion

which will lead them out. They like company and an appearance of rivalry. Such dogs may make an accidental find and may do good work on birds when such are found, but owing to heedlessness and a lack of concentration, they are on their own merits poor finders. To be able to interpret all such details comes only from close observation and experience.

As nearly all field trials employ three judges—an unnecessary number when thoroughly seasoned experts are engaged, as two are amply sufficient—the third judge should be a new man if possible, so that the club be training and graduating new material; for with the two disciplined experts, the third man, whether he be competent or incompetent, will have no material effect in the results; if he be competent he but emphasizes their judgment, and if he be incompetent they decide against him. Still, such is a most excellent course for the education of judges, without prejudice to the equity of the trials.

The mere matter of deciding which is the better of two or more dogs is but a part of the duties of a judge nowadays. He should be perfectly familiar with the grounds, so for each heat he can lay out a course that, while giving the dogs a full opportunity to display their quality, will avoid pocketing the company and throwing judges, handlers and dogs back through the spectators' horses, or pulling about on erratic courses, breaking up the ranging by running the dogs in short lines here and there, and irritating and separating the handlers by continual ordering from one place to another. One dog is mostly always in hand better than the other when the course is changed, so that his handler, hurrying to be at work in the new direction, is ahead before his competitor can start; thus there is a disorganized competition.

In laying out the course for the handlers to work their dogs, the judges must also keep in mind a rendezvous for the wagons, so that the heat will end near them and the next brace be turned down without delay. All these matters are now managed with a precision by expert judges which a few years ago would not seem possible. Every detail comes harmoniously in proper sequence.

A course being laid out, it should be followed with a reasonable consistency; that is to say, the judges should only depart from it when circumstances of real importance make it necessary. The mere fact of a handler crying out "Point, judges," and then breaking away in a run, should not stampede them from their course. The days when a handler could break away, shouting "Point, judges!" and carry the judges after him at a gallop, are gone by.

Nor should the judges gallop out after a dog which is ranging; first, because if the dog sees them he will range further away still; second, it is undignified; third, if the dog works correctly he will work to his handler, be his range wide or close, hence the spectacular riding is unnecessary aside from showing brave horsemanship. A few years ago the furious riding was quite common. When a dog is really lost it is another matter.

A firm, good-tempered management of the handlers and a strict observance of fairness will win their respect, and if the judges will not themselves stampede there will be no hustling on the part of the handlers. When the latter learn that the judges will not gallop to points, they go in a more orderly manner themselves. A dog which will not hold his point till his handler can walk up to him has little claim to winning if he has any competition worthy the name.

If a handler cannot keep his dog on a course laid out for him by the judges, it is his own loss, for it would be unreasonable to expect them to follow a course laid out by the dog, though such unreasonable concession has been made in trials of years ago. It is different now.

Lastly, the judges should know when they have competition enough to decide the stakes, for generally up to a certain point everything works to a certain climax, and if this is passed the whole situation is changed. The relative standing of many dogs is broken by the accident of circumstance and an anti-climax follows. The judges may know which are the best dogs, but they may have run them to a standstill, while others, though inferior by accidental advantages, such as better time of day, better parts of grounds and better opportunities on birds, may be making the best final showing. It is a most embarrassing position for the judges when part of the competitors are run to a standstill while others, less deserving and fresher from unavoidable advantage, seem to be able to go on with the competition, and the last work in most instances is more impressive on the spectators than is the first.

THE IRISH SETTER AS A FIELD DOG, PAST AND PRESENT.—II.

Little Valley, N. Y.—*Editor Forest and Stream:* In my observation of the modern Irish setter I found that many of them were soft-hearted, poor in nose and with little or no bird sense. By soft-heartedness I mean that they would not stand hard work, were averse to taking heavy cover and were prone to potter about. By bird sense I mean that they had no judgment in handling game, would either nose about footsenting the game and flush it or point in a half-hearted manner, or were rattled in the presence of game. To a practical sportsman there are no more serious faults than these. He wants a dog with plenty of endurance—one that is continually searching for game; one that will hunt all sorts of cover in all sorts of weather.

A shooter may kill game over a dog that will hunt, but never over one that will not. To eradicate these faults, it is the duty of breeders to so mate their dogs as to produce results the opposite of these. I am well aware that this is perhaps a long undertaking, but it can be done with a proper understanding of the case and a concerted movement on the part of practical breeders. The dog is a most lovable one in disposition, and, properly bred and trained, is all a sportsman could wish as a field dog.

In the year 1886 I purchased of Mr. Max Wenzel the Irish setter bitch Gypsy Maid. She was by ch. Tim—Florid. Mr. Wenzel wrote me that Florid was a fine one on game and had a strong cross of Rodman's Dash blood in her veins. Of Tim he wrote that, though he had never been properly broken while young, he still possessed all the essential qualities of a good field dog. I afterward found these statements to be true from a personal observation.

Gypsy Maid in color was a light red, and by no means was she a show dog. She had a splendid body and good legs and feet. In disposition she was much like her sire. She was full of hunt, and could stand any amount of hard work, and was useful and hard headed. She was broken by me on grouse and woodcock, and in her second season was a good one on these birds. She, however, was not a pleasant dog to shoot over unless kept constantly in training, her disposition being such that when taken out only occasionally she was most difficult to control. I have entered thus minutely into her disposition to show that it is one of the most essential things to know about if good results are to be expected in breeding.

I bred her on two occasions to champion Chief. Of her first litter three were bench show winners as puppies, and while they made fairly good field dogs, they were nothing out of the ordinary. She was afterward bred to Redfern with splendid results. The litter produced Nugget, the winner of the Irish Setter Derby in 1891, and other equally good field dogs. Unfortunately, before she could be again bred to Redfern she died, thus ending any chance of producing a second Nugget or perpetuating a good cross for field work. Redfern, the subject of this sketch, and of which a portrait is herewith published, was by Sarsfield—Queen Bee. He also was light in color, with no white, was compactly made, with splendid body, legs and feet. He had a very intelligent head and splendid eye. In disposition he was the very opposite of Gypsy Maid. He was very even-tempered, very level-headed, never excitable, and was possessed of splendid judgment; but as a puppy he was extremely timid, and was very gun-shy, but, as is usually the case with gun-shy dogs, he possessed a remarkably fine nose.

MR. A. M. VALENTINE'S REDFERN (17,012).

I broke him on ruffed grouse and woodcock, and he was very fine on these birds. He handled grouse with great judgment, and as long as I owned him they were his stronghold. I afterward hunted him in the South on quail, and it took a good one to beat him on these birds. While not a fast dog, he would maintain a good, swinging gallop, and remain so constantly at his work that I have seen him get the better of dogs many times faster than he. As will be seen by his photo, he was far above the average Irish setter in style on point. In motion he carried a high head, with a high and merry tail action. These are both rare things in the Irish setter and are two points to breed them up to. Dr. H. B. Anderson.

NATURAL QUALITIES AND CLASS.

It requires a long experience for most men to grasp the merit of field trial competition in its full breadth and import. Their measure of merit, perhaps unconsciously dominant in their minds in making their judgments, is the number of shots at birds which could be obtained from each dog. The important field matter, pointing, is permitted to dominate all the competition, and not a few men base all their conclusions upon it. Of course, pointing is an important part of the competition, but it is not all of it. There are other qualities which are equally important with it and which must be equally considered if just judgments are to be rendered.

The act of pointing can be performed well by many dogs which will not venture 20yds. from their handlers; but their powers of finding are so inferior that for practical use they are next to worthless. Nevertheless in competition with good finding dogs, such dogs may make a good showing in respect to the number of points made, and the superficial judge or spectator may give them credit for a good performance when really their showing was built on the work of their competitors.

As to number of points made in a field trial, the matter of more or less of them made by one dog or another is most times a matter of favoring opportunities. Grounds, cover, more birds in one section than in another, wind, temperature, morning and midday hours, are constantly changing conditions, so that no fixed rule is worth a fig so far as it may serve to guide the judges to a correct decision. Their general knowledge of the work and the principles of the competition can alone serve them. One dog, be he ever so good, cannot possibly make a good showing of point work in quantity in an area where there are few birds, though his more favored competitor in another and better area may make a good showing. And yet the matter of a few points more or less in times past seem to have misled judges in estimating the dog's merits. Many more instances could be advanced to show how misleading are points taken alone as the data for the awards. The dog's real ability should govern.

That there existed such a distinction between point work alone and the individual merit of the dogs' work respectively was recognized years ago, but unfortunately the term used to indicate it was misleading in its implication, that is to say, the distinction was made between point work and natural quality. The latter, even by experienced men, was misunderstood, and was thought to denote the qualities of the wild, imperfectly broken dog, and not a few such appeared in the trials.

In theory the idea was correct enough, since it included both the dog's natural and acquired qualities; but the expression "natural quality," as commonly understood, was erroneous as applied to field trials. Instead, it should have been the *class* of dog and work.

By judging a dog on the class of his work a much better and more accurate judgment is possible, and the term is not misleading to anyone, even to those who know of trials only indirectly.

A dog of a certain class will repeat his performance, or so near it that the judges' estimate of him will be palpably correct. He will show his class of work nearly every time he runs. A dog judged by a few good points on birds, points made under peculiarly favoring opportunities, as will happen now and then, does not necessarily repeat his performance. This was recently and thoroughly demonstrated at the U. S. F. T. C. trials at Newton this year in the case of a certain dog which had done some good point work, yet whose general performance—his class work—showed but meager ability, nothing meritorious in it that he could repeat with certainty; the result was that he went on record as a winner in one competition and a humiliating failure in another, though the class of his work was alike at all times.

Instead of the misunderstood term "natural qualities," which notwithstanding its implication was intended to denote *class* as applied to the dog, the better way would be to recognize the class of a dog's competition and judge him accordingly. No mere consideration of a few details alone can take the place of the judges' general knowledge. The term class recognizes all the dog's capabilities, natural and acquired, and also his material performance in the competition, so that these data are the true, since they include all. Such judging will bring out dogs which can show an even class of work one heat with another and one dog with another.

So far as making by rule the field trial conditions alike for each dog, or even approximately so, it is visionary. It cannot be done. It is a physical impossibility. Topography, number of birds, their humor one hour or day with another, their abundance in one section of grounds and scarcity in another, temperature, cover, weather, wind, etc., are factors so diverse and unmanageable that the judges can only govern themselves according to circumstances as they find them, doing their best to intelligently shape the competition on the best basis of equity. The man who endeavors to compass it all by rule is one who has an imperfect knowledge of the matter.

American Dachshund Club.

At the sixth meeting of the club the financial report was accepted. The club will offer for the coming A. K. C. shows the Venlow challenge cup, the Klein's breeders' trophy, $5 for best American bred dog in open class, $5 for best American bred bitch in open class. In addition, the present members raised a handsome purse for other specials to be offered in Boston, New York, Chicago and St. Louis. New members were accepted: James L. Little, Jr., Cambridge, Mass; Chas H. Noble and Geo. M. Bryan, Toronto, Canada; Jacob Grimm, New York.

A. Froembling, Secretary.

N. E. K. Club.

Editor Forest and Stream:

Inclosed please find corrected list of judges of the New England Kennel Club's show, Feb. 2–5, 1897; also please state in your next issue that parties wishing their dogs cared for in interim between Boston and New York shows can make special rates with the manager of the New England Kennel Club's boarding kennels, at Braintree, Mass., situated a few miles out of Boston, by writing to him and making early application. Those taking advantage of this offer will be given special rates on cars from Braintree to New York. There will be published very shortly the full list of special prizes, which we are pleased to say are coming in in goodly numbers. Kennel prizes of $15 each will be offered in the following breeds and under the following conditions:

A Kennel to consist of three dogs entered and owned by one exhibitor; but no Kennel prize will be awarded unless there are two competitors for it: Bloodhounds, mastiffs, St. Bernards, Great Danes, deerhounds, greyhounds, Russian wolfhounds, foxhounds, pointers, English, Irish and Gordon setters, spaniels over 28 pounds, cockers, beagles, collies, poodles, bull dogs, bull terriers, Boston terriers, smooth and wired haired fox terriers, Scottish terriers, Irish terriers and pugs.

E. M. Oldham, Supt.

National Beagle Club of America.

An executive committee meeting of the National Beagle Club was held Monday, Dec. 14, at the American Club. Members present were: Messrs H. F. Schellhass, J. W. Appleton, John Bateman, A. Wright Post, George Laick, N. A. Baldwin and George W. Rogers.

Ernest W. Hazelhurst, of Sing Sing, N. Y., was elected to membership.

Voted that specials be presented at the Westminster Kennel Club show and New England Kennel Club show. A bronze medal to the best beagle in the show, also $10 to the best beagle other than the challenge classes, provided that the judges be selected from the club's official list. Open to members of the National Beagle Club only.

The matter of selecting grounds for holding next trials was discussed. A committee will be appointed to look up suitable grounds.

Meeting adjourned.

G. W. Rogers, Sec'y.

The Alabama Field Trials Club.

This club announced its first trials to be held at Madison, Ala., on Feb. 8. It will run a Derby and an All-Aged Stake, both on sweepstake plan, 50, 25 and 15 per cent. to the winners of first, second and third respectively. Dogs to be eligible must be the property of amateurs who are residents of Alabama, and winners of first in any Derby or All-Aged Stake of a recognized trial, prior to Feb. 8, '97, or whose owner or handler may have handled for money in any public trials, are barred. The judges are Messrs W. B. Stafford and Gus Albes, Decatur, Ala. H. K. Milner, Secretary, Birmingham, Ala.

Brunswick Fur Club.

THE eighth annual winter meet of the Brunswick Fur Club will be held at Brunswick, Me., during the week of Jan. 10, 1897.

The annual meeting will be held on Monday evening, Jan. 11, at the Tontine Hotel.

Mr. R D. Perry offers a handsome prize for the best hunting story told during the meet. Foxes are plentiful and all sportsmen are cordially invited to be present and to bring their best hounds. BRADFORD S. TURPIN, Sec'y.

POINTS AND FLUSHES.

Corrections in the judges' assignments at Boston show, as mentioned in FOREST AND STREAM last week, are as follows: Mr. Charles H Mason judges poodles and miscellaneous classes; Mr. James Mortimer judges Boston terriers, Old English sheep dogs, French bull dogs and Bassets; Mr. John Davidson judges Chesapeake Bay dogs; Mr. T. Farrar Rackham judges pugs These are in addition to the classes mentioned last week as being assigned to the judgss.

Mr James Taylor died at his home, Dunhurst, Rockdale, England, on Dec. 5, aged fifty years. He was eminent and popular in the canine world as exhibitor, judge and journalist through a long term of years, he being identified with the canine fancy from his youth till his life ended.

Wheeling.

Winter Cycling.

THE first snow, as a rule, puts an end to the bicycling season, and though wheels may be brought out on pleasant days for short spins, the majority of riders are content to store them away till the advent of warm weather again. There are some cyclists, however, who will ride all through the winter, and who rarely miss a day even when the snow is on the ground In Hartford, Springfield and other New England cities that are blessed with good streets and numerous trolley lines it is no uncommon thing to see wheelmen closely following the electric street sweepers while the snow is still falling, and when the depth is not greater than 2in. they seem to get along nicely. They appear to have no difficulty in keeping ahead of the trolley cars on such days.

Winter weather certainly would not be chosen for cycling, and in the country when the roads are frozen it is out of the question; but under certain limitations the sport may be enjoyed by people who live in or about cities. The heavy traffic soon wears the rough edge off the dirt roads, and macadam or asphalt are good at any time except when covered with water.

The rider need not encumber himself with much extra clothing, provided his hands and ears are well protected, for the exercise is warming and there is danger in becoming overheated. If the day is not too windy, and if ordinary precautions against chill are observed, winter cycling is equal to summer cycling. True, its scope is more limited, and one is deprived of the pleasure of country runs; but on the other hand there is more snap and life in the air, and its exhilarating effects are doubled. It is a pity that winter cycling is not more popular.

The Art of Riding.

SOME able-bodied persons lose the benefits and pleasures of cycling because they think themselves incapable of learning to ride. They class bicycle riding on a par with tight-rope walking, and say that the nice delicacy of balance necessary to maintain a bicycle in a perpendicular position is quite beyond their capacity to acquire.

Yet these people have already mastered a much more complex feat of balancing, beside which bicycle riding sinks into insignificance.

A being who has learned to walk erect on two legs should find no difficulty in controlling a bicycle, for in walking he has three sets of joints to manage—at thigh, knee and ankle—while in bicycle riding he has only one, in the steering mechanism.

A man when walking can fall over in any direction, subject to the laws of gravity, as is amply demonstrated when he steps on a banana skin, but the bicycle rider has only to guard against going over sideways.

Bicycle riding is walking sitting down. Any one can learn to ride.

Yachting.

ABOUT the time that the FOREST AND STREAM is on its way through the printing presses on Tuesday night, the New York Y. C. will be busy with one of the most important questions outside of international racing which has ever come before it. The subject, which is of very recent origin, having only within three weeks been mooted among New York yachtsmen, is fully recounted in the call for a special meeting issued by Commodore Brown, at the request of Messrs. Dickinson, Maxwell and Postley, to consider the following motion:

That a committee of five, one of whom shall be the Commodore, be appointed by the chair, with power to call a convention of delegates from such yacht clubs in America as they may elect, for the purpose of considering the advisability of organizing a yacht racing league, the object of which league shall be to establish uniform cooperation on measurement, classification and racing rules; the promotion of yacht building; the encouragement and elevation of the sport, and the preservation of yachting history and racing records. And that this committee have power to enter this club in such league, said entrance to become complete and operative upon this club's ratification thereof by subsequent constitutional amendment.

The rapid growth of local organizations and of harmonious intercourse between different organizations points out as inevitable the ultimate formation of a national association of yachtsmen. While it is but fitting that the larger and older clubs, the New York Y. C above all others, should lead in such an enterprise, the attitude of these clubs thus far has in most cases been distinctly hostile to the work of union and organization begun by smaller clubs in various localities. The strength and importance of the new movement has been fully appreciated by many of the members of the New York Y C,, and the proposed national league is an effort to place the club where it should be, not only in deference to its present position and responsibilities as the greatest of American yacht clubs, but because the work which is certain to be done in any event can be done far more speedily and effectually under its leadership than in the face of its opposition, passive or active.

The details of the scheme as already arranged promise an organization that will be of inestimable benefit to yachting throughout the entire country, the plan as outlined being most liberal and comprehensive. Although it will meet with some strong opposition on Tuesday night, we hope to be able to announce with our first number of the new year that what the FOREST AND STREAM has so long labored for is at least in a fair way to become an accomplished fact.

SHORTLY before midnight on Dec 18, 1896, in one of the parlors of the Fifth Avenue Hotel, New York, there passed away quietly and peacefully a historic feature of American yachting. Though the end was in no way sudden or unexpected, no friend was near to cheer the final moments, and alone among a heartless and indifferent throng the American sandbagger dumped its bags overboard for the last time, and gave up a struggle that has long been hopeless Among the number present, probably every one of whom learned his yachting on the weather rail with his lap full of sandbags, not one raised a voice in behalf of his old ally, and the motion to amend the rule was passed as a matter of course by a unanimous vote

We do not propose to write the obituary of the sandbagger; we have in the past written too many obituaries of its victims. Granted that it was at one time a necessity, and that those who survived to graduate from its severe curriculum have been a credit to it as a teacher of sailor men, the harm that has been done to American yachting by the long and close adherence to sandbag models and sandbag methods, to say nothing of the direst loss of life, is even yet felt in yachting. The least we can say by way of epitaph is to quote the words of "the noble lord high executioner," "It *never* will be missed."

The Lake Yacht Racing Union.

Editor Forest and Stream:

In reference to the remarks in my letter of Dec 5, which were intended to bear upon the action of the Union of the Great Lakes in leaving out the 22ft. class, will you allow me to explain that up to the date of my last letter I shared the general impression that the rules of the Union were also to govern the local associations. Since then, though the document is dated Nov 27, the proposed rules for the L. Y. R. A. have been sent out, and if adopted to day at Rochester, the 22-footer will still be recognized—at home—but when the others seek for glory abroad it must stay, and I suppose attend to the ladies. Perhaps this is right, but it is gall and wormwood to the men who sail them thus to be told that they are not fit to take equal chances in a passage with the 27-footers in the bit of weather sometimes to be met with during a summer cruise.

Now, Mr. Editor, I am not looking for a controversy, or I should tackle some one easier; but there are a couple of things in your comments which without a little further light I cannot, to my regret, see eye to eye with you. You say you fail to see what effect a limitation of the coefficient to 35 per cent. as proposed can have on the issue between keel and centerboard, the former having, under present conditions, driven out the latter. Assuming that this remark includes the 27ft. class, it becomes necessary to consider the type of centerboard driven out. The knotty point with me is: Supposing it to be settled (as you admit) that a 35 per cent. keel will have less speed than a modern bulb-fin, and supposing (as many believe) that it is a mooted question as to whether the bulb-fin or an enlarged and perhaps modified Glencairn is the faster up to this size, what chance has the decent jog trotting 35 per cent. cutter, the fin being barred, against the centerboard at half the money? For speed we must have when races are to be won.

Your last paragraph with regard to the barring of Canada also floors me somewhat, for I cannot anywhere in the rules find anything to keep her out; but if, in the face of a rule that is practically a deed of gift to her of all she enters for, her owners have voluntarily withdrawn her from the racing, they are certainly to be credited with a spirit of self-abnegation such as one seldom hears of even among yachtsmen. FIN (DE SIECLE).

TORONTO, Dec. 19.

We have not yet heard the result of the meeting of the L. Y. R. A., but the proposal was to except the 22ft class from the limitation of midship section, in other words, to admit the bulb fin. The new Y. R U rules will, if adopted, govern on all the lakes; the local rules, as in the proposed L Y R A. changes, being altered to conform to them; but there is no reason why some latitude may not be allowed in classes too small for interlake work, though we should prefer to see all classes included by the Union

As to the 22ft. class, we cannot understand our correspondent's ground of complaint; the class is open to fin-keels, and if they choose to incur the labor and risk they can follow the races from lake to lake; no doubt some provision will be made for the class, if owners desire, in interlake events At the same time the class is entirely too small for an interlake circuit.

We are not fully informed as to the 27-footer Hiawatha mentioned by our correspondent last week, but we understand that she is the old centerboard boat Maud B., with a wooden fin and iron shoe bolted on; if she represents the vested interests of the fin type in the 27ft. class, the proposed limitation can work small injustice to such interests.

The "decent jog-trotting cutter" of our correspondent may at the same time be a very fast and up-to-date yacht; in fact Zelma, five years old, is entirely too good for such a designation. We do not consider that the Glencairn type is a possibility in the 27ft. class, even with modifications, and we can see nothing in her success that bears on the keel-centerboard question in lake racing in the 27ft, and larger classes. This is merely a matter of opinion, and perhaps worth no more than the counter opinion of our correspondent; but there is little risk of the lakes being swept by a big Glencairn next season. If it has come to the question of extreme speed on the lakes, then the individual yachtsmen who have built up the sport on Lake Ontario must give up racing and content themselves, as so many old yachtsmen of New York and Boston do, by going off on steamboats to watch duels between syndicate fin keels.

We have been informed on good authority that Canada cannot race in her class under the proposed new rules, and the rules themselves would indicate that this is the case.

THE SEAWANHAKA CUP.

THE Seawanhaka Corinthian Y. C., after a conference with Messrs. Duggan and Hamilton, of the Royal St. Lawrence Y. C., two weeks since, as already reported, has finally completed the conditions for the races of 1897, and has published them as follows. As the trial races for the selection of a defender will be open to all American yachts, the conditions are of far more than local interest, and we publish them in full.

The Seawanhaka International challenge cup for small yachts has passed into the custody of the Royal St Lawrence Y. C., of Montreal, Canada, the match therefor having been won by Glencairn against El Heire at Oyster Bay in July last.

The Seawanhaka Corinthian Y. C. has challenged for a match in the season of 1897, and the challenge has been accepted for the 20ft. class, Seawanhaka measurement; the match will be sailed in August next on the waters of Lake St. Louis, near Montreal.

The Seawanhaka Club in this effort to regain the cup earnestly invites from other yacht clubs of the United States the coöperation which for the last two seasons has been so generously extended to its defense, and therefore proposes to hold open trial races for the purpose of selecting its representative yacht on July 12, 13 and 14, 1897.

For the information of any who may be interested in the subject, and especially for the guidance of those who may contemplate making entries in the trial races, the race committee announce the following general conditions governing the cup, which are extracts from the declaration of trust executed by the Seawanhaka Club, and the following general regulations for the control of the match, which have been agreed upon with the challenged club.

CONDITIONS GOVERNING THE CUP.

ARTICLE I.—The cup shall be known as the "Seawanhaka International Challenge Cup for Small Yachts," and shall be preserved as a perpetual challenge cup for friendly competition between foreign countries. The term "foreign," as used in this instrument, shall be so construed as to permit contests for the cup between any country and its colonies and dependencies and between such colonies or dependencies themselves.

ARTICLE II.—Any organized yacht club in good standing of any country, foreign to the country of the yacht club in whose custody the cup may be, shall always have the right to challenge for the cup and to sail a match therefor, provided that such challenge shall be made and such match be sailed in accordance with the terms and provisions of this instrument.

ARTICLE III.—Matches for the cup shall be limited to yachts, propelled by sails only, whose racing measurement or size shall not exceed the maximum limit of the so called "Twenty-five Foot Racing Length Class" or fall below the minimum limit of the so-called "Fifteen-Foot Racing Length Class" of the Seawanhaka Club, as such classification exists at the date of this instrument, or whose racing measurement or size, according to the rules of the club having at the time of challenge the custody of the cup, falls within limits of size substantially corresponding to the limits above specified.

ARTICLE IV.—All matches shall be sailed between a single yacht on behalf of the challenging club and a single yacht on behalf of the challenged club. Neither club shall be required to name its representative yacht in advance of the races, but the match shall be sailed to a conclusion between the yachts selected for or sailing the first race thereof, and no substitution of one yacht for another shall be permitted after the preparatory signal of the first race has been given.

ARTICLE V.—A match shall be constituted of not less than three nor more than five races, and shall be awarded to the club whose representative yacht shall win a majority of such races.

ARTICLE VI.—The representative yacnts of the challenging and challenged clubs must be constructed in the respective countries of such clubs. Centerboards or plates or sliding keels shall always be permitted in construction and no restriction shall be placed upon their use. All ballast must be fixed.

ARTICLE X.—The helmsmen sailing the representative yachts in the match must be amateurs and must be residents of the countries of their respective clubs. The challenging and challenged clubs must name in writing, each to the other, or to their respective representatives, at least twenty four hours before the day appointed for the first race the helmsmen who will sail their representative yachts, and such helmsmen shall sail such yachts in all the races of the match unless prevented by illness, or other substantial cause, in which event substitutes will be allowed.

ARTICLE XI.—The challenging and the challenged clubs may by mutual agreement fix and decide all the terms and conditions of the match, whether relating to dates, courses, rules of measurement, sailing regulations, notices or any other matter whatsoever pertaining to the match or preliminary thereto, and may also by mutual agreement waive for such match such of the provisions of this instrument as would otherwise govern the match or the preliminaries thereof; provided, however, that the limit of the racing length or the size of the competing yachts shall in no event exceed the maximum limit as established by this instrument in Article III. thereof, unless the consent in writing of the Seawanhaka Club to so increasing such limit shall first have been obtained.

GENERAL REGULATIONS GOVERNING THE MATCH FOR 1897.

I. The courses shall consist of a triangular course and a course to windward or leeward and return. Each leg of the triangular course shall be 2 nautical miles in length and shall be sailed over twice, making a total of 12 miles. The course to windward or leeward and return shall be 2 nautical miles to each leg and shall be sailed over three times, making a total of 12 miles.

II. The start shall be a one-gun flying start, with a preparatory signal.

III. The races shall be sailed without time allowance.

IV. Yacnts must not exceed 20ft. racing length (S C. Y. C. measurement).

The formula for determining racing length under S. C. Y. C. rules is as follows:

$$\frac{\text{L.W.L.} + \sqrt{\text{Sail area}}}{2} = \text{Racing Length.}$$

V. A yacht's draft of hull or keel shall not exceed 5ft., and with the centerboard down shall not exceed 6ft. Draft shall be determined when yachts are in trim for measurement. Centerboards shall be so constructed that they can be wholly housed without leaving any projection below the hull or keel.

VI. Yachts shall be measured without crew on board, but instead thereof a dead weight of 4 0lbs. shall be carried amidships, substantially at the center of buoyancy, during measurement.

VII. Shifting ballast shall not be allowed. (Weighted centerboards shall be considered as fixed ballast.)

VIII. No outrigger or other mechanical device for carrying live ballast outboard shall be allowed

IX. The factor of sail area, used in determining racing length, shall be ascertained by adding to the actual area of the mainsail, computed from its exact dimensions, the area of the fore triangle. The hoist of the mainsail when measured shall be plainly marked on the mast, and its outer points on the boom and gaff or other spars used to set the sail, and the sail shall not be set beyond these limiting points The fore triangle shall be determined by the following points: (1) The point of intersection of the forestay with the line of the forward side of the mast. (2) The point of intersection of the forestay with the bowsprit or hull. (3) The point of intersection of the forward side of the mast with the line of the deck.

Any jib, when set, must not extend beyond the upper and forward points above defined.

Sails shall be limited to mainsail, jibs and spinaker. The total area of the mainsail and fore triangle shall not exceed 500sq. ft. The area of the mainsail alone shall not exceed 80 per cent. of the total area. The area of the spinaker, measured as a triangle whose base is the length of the spinaker boom measured from its outer end, when set, to the center of the mast, and whose perpendicular is the distance from the deck a the foreside of the mast to the spinaker halyard block, shall not exceed twice the area of the fore triangle.

X. The spinaker boom when used in carrying sail shall not be lashed to the bowsprit or stemhead.

XI. The helmsman and crew shall be amateurs, and the total number of persons on board shall be limited to three.

TRIAL RACES.

The race committee also announce the following programme for the trial races, subject to change, of which due announcement will be made:

TO BE HELD AT OYSTER BAY, JULY 12, 13 AND 14, 1897.

Courses.—(1.) The course for the first and third trial races shall be triangular and shall be as follows:

(2.) The course for the second trial race shall be a course to windward or leeward and return.

Triangular Course.—From a line between Center Island Buoy off the entrance to Oyster Bay, Long Island Sound, and the committee steamer anchored S.E of the same.

E. by N. ½N.—Two miles around a mark bearing a red ball, leaving it on the port hand.

N.W.—Two miles around a mark bearing a red ball, leaving it on the port hand.

S. by W. ½W.—Two miles to the finish line between Center Island Buoy and the committee steamer anchored N.W. of the same.

Course to be sailed over twice; total distance 12 nautical miles.

On the second round yachts will leave Center Island Buoy on the port hand.

Note.—The race committee may, in its discretion, direct the course to be sailed in the reverse direction, leaving buoy and marks on the starboard hand, and the signal for such reversal of course will be the anchoring of the committee steamer at the start to the N.W. of Center Island Buoy. In his case the committee steamer will be anchored S.E of Center Island Buoy at the finish.

Windward and Leeward Course.—From a line between Center Island Buoy and the committee steamer around a mark bearing a red ball, leaving it on the starboard hand; distance 2 miles and return; course to be sailed over three times; total distance 12 nautical miles. The direction will be signaled by the general yacht signal code from the committee steamer at least 15 minutes before the preparatory signal.

Start and Signals.—The start will be a one-gun flying start with a

preparatory signal, and will be made at 12 o'clock noon across a line between Center Island Buoy and the committee steamer.

First Signal. Preparatory. (Whistle 15 seconds long.) The club burgee on the committee steamer will be lowered and a blue peter hoisted.

There will be an interval of 5 minutes between the first and second signals.

Second Signal. Start. (Whistle 15 seconds long.) The blue peter will be lowered and a red ball hoisted.

Note.—Attention is called to the fact that the flags and balls constitute the signals, the whistles merely calling attention thereto.

Special Conditions.—(1) The yacht selected to defend the cup shall be the one which, in the judgment of the race committee, shall be the best adapted therefor, and not necessarily the winner of a majority of the trial races. Additional races may be ordered by the committee between such contestants as they may select.

(2) The owner of each yacht entering for the trial races must on or before July 10, 1897, furnish to the secretary of the committee the racing measurement of his yacht, certified by the measurer of the Seawanhaka Club.

(3) Each yacht must carry a racing number (which may be obtained at the club house on the morning of the first race) fastened securely on both sides of the mainsail.

(4) In the event of a race being postponed or ordered resailed, it will be sailed at as early a date as may be practicable.

Entries.—All entries for the trial races must be made by the clubs to which the owners of the respective yachts entered belong. Clubs intending to make entries are requested to notify the secretary of the race committee, and will be furnished with printed or written blanks, upon or in accordance with which entries must be made, and at the request and upon the responsibility of any club entering a yacht to compete in the trial races, all the privileges of the club house at Oyster Bay will be extended to the owners and amateur crew of the yacht so entered during the period occupied by the said races, upon the same terms as to members of the club.

OLIVER E CROMWELL, Chairman,
64 Leonard street, N. Y.
CHARLES W. WETMORE,
30 Broad street, N. Y.
WALTER C. KERR,
26 Cortlandt street, N. Y. } Race Committee.
D. LEROY DRESSER,
55 White street, N. Y.
CHARLES A. SHERMAN, Sec'y,
64 Leonard street, N. Y.

Although apparently simple enough, the details of the above agreement were only arranged after much correspondence and a personal conference that covered an entire evening and nearly all of the following day. The two parties—the Royal St. Lawrence Y. C. and the Seawanhaka Corinthian Y. C.—were from the outset entirely in accord on the main points, which makes it all the more remarkable that the details should have proved so difficult. Both parties recognized that it was to their mutual advantage to set certain limits to sail and draft, and thus limit the opportunities for outbuilding, and also that certain details of the agreement of the previous year demanded amendment; but on the part of the Seawanhaka Corinthian Y. C. it was hampered considerably by its intimate relations with the Sound Y. R. U., sailing under the same rules. As the rules of the Y R. U. govern nineteen different classes of all sizes, it was impossible to incorporate with them the special restrictions desired by the two clubs; and at the same time there were serious objections to making of the 20ft. a special class such as has just been abolished. Whether or no this end has been attained in the above conditions may be an open question, but no other solution seemed possible except to sail under the Y. R. U. rules, letter for letter, which neither party desired.

The main points of difficulty were the failure of the Seawanhaka rule to measure fairly all sorts of canoe rigs, and the absence of a maximum limit of sail in the class. The draft limit, as finally agreed upon, is the same as that of the Larchmont Y. C. as far as it goes, but it goes much further in recognizing the patent distinction between keel and centerboard craft. The limit of draft for keel boats, fin or otherwise, is 5ft, but in addition it is provided that a centerboard boat, with a board that may be housed in the trunk, may draw 6ft. with board down. This prevents the obvious makeshift of a movable bulb-fin, passing nominally as a centerboard and dropping to any depth desired; and it also prevents the use of a centerboard housing in a deep fin. It allows a reasonable draft to the legitimate fixed fin boat and also to the prevailing type of centerboard boat of shoal hull and fitted with the Hope board. It is still possible to use a weighted board, but it must be fitted to house fairly within the trunk, and thus cannot carry a lead bulb

The limitation of the sail area to 500sq ft. prevents what was otherwise inevitable, an enlarged Glencairn with a sail plan as large as the old 25-footers, 625sq.ft. The attempts to measure the actual sail in the 15ft. class for the past two years were no more satisfactory than the regular Seawanhaka method; the compromise finally reached after much discussion was that the head sails shall be measured as a triangle between the mast, deck and forestay, and the mainsail shall be measured between points plainly marked on the spars, beyond which the sail shall not be stretched. This fixes three important dimensions, foot, luff and head, definitely; and leaves only the distance from clew to throat as a variable, depending on the lift of the after end of the boom. The limitation of the mainsail to 80 per cent. of the total prevents the cat rig seen on some of the 15 footers, with a mere excuse for a jib.

The measurement of the spinaker is better than that of last year, being far more positive and definite; but in making the change one point was overlooked, and the result is that the allowance of spinaker is absurdly liberal. The restriction concerning the lashing of the spinaker boom is not sufficiently explicit, and may fail to attain its end. It was intended to prevent the carrying of the spinaker boom as a bowsprit, and the spinaker or balloon jib when on the wind. After a good deal of discussion and many unsatisfactory propositions, the matter was left in its present shape, which obviously does not directly prohibit such a misuse of the spinaker as was so often seen last year.

One important point is that the yachts shall be manned by amateurs in the cup races, though one professional is allowed on deck, as in the Y. R. U. rules, in all other races.

It will be possible, in the regular racing of the 20ft. class on the Sound, if not in the trial races, to build a boat under the Y. R. U. rules which will carry more than 500sq.ft. of sail and draw more than 6ft. of water with board down; but it is to be hoped that no such experiments will be attempted, but that all designers may rest content with the liberal limits of the cup conditions.

New York C. C.

AT its annual meeting on Dec. 10 the New York Canoe Club elected the following officers: President, Louis Bouny; Purser, Fr. Read; Secretary, J. C. Mowbray; Captain, C. B. Vaux; Mate, R. De Ferd Baylay. Trustees: F. C Moore, L. L. Coudert; Officers: David Rait, Jr., S P. McGourkey, W. Carmalt.

The club will celebrate its twenty-fifth anniversary by a dinner on Dec. 31, 7 P. M, at 518 West Fifty eighth street, New York,

YACHT RACING UNION OF LONG ISLAND SOUND.

THE annual general meeting of the Yacht Racing Union of Long Island Sound was held on Dec. 18 at the Fifth Avenue Hotel, the following delegates being present:

Indian Harbor Y. C., George E. Gartland, Frank Bowne Jones; Corinthian Fleet of New Rochelle, J. D. Sparkman, E. T. Birdsall; Hempstead Harbor Y. C, Ward Dickson; Huntington Y. C., H. H. Gordon; New Rochelle Y. C., C. P. Towle; Knickerbocker Y. C., O. H. Chellborg; Park City Y. C., R S. Bassett; Harlem Y. C., T. C. Allen; Seawanhaka Corinthian Y. C, W. C. Kerr, C. A. Sherman; Huguenot Y C., T. Fleming Day, E. Burton Hart, Jr.; Sea Cliff Y. C., Le Grand L Clark; Horseshoe Harbor Y. C., G. G. Fry and F. E. Towle, Jr.; Douglaston Y. C., W. G. Newman

In the absence of President Cromwell Mr. Kerr was elected chairman. The report of the Council and its recommendations were read, after which the proposed amendments to the rules were taken up and passed upon, being finally adopted.

The general recommendations of the Council are as follows:

1. That in future no special classes be recognized.

During the past few seasons it has been demonstrated that the building up of special classes has detracted from building in the regular classes, and as each special class has been built to different and conflicting rules and restrictions the complication arising therefrom has been annoying and confusing to both regatta committees and owners. The Council believes it necessary that some special action be taken to discourage the building of any more special classes. If some action of this kind be not taken there would seem to be no limit to the number of classes that may be built either under the auspices of different clubs or promoted by individuals. It also seems necessary that there be a reduction in the number of classes, as the entries have been very much divided, and the placing of the special classes with the boats built for the regular classes will conduce to this result. There are some conditions and restrictions which are common to all the special classes, and it is proposed, inasmuch as these regulations have proved both popular and satisfactory, that they be incorporated in the regular rules; and if this is done it is believed that there will be little temptation to build outside of the regular classes in the future. The placing of the 34-raters in the 36ft. racing length class; the 30-footers in the regular 30ft. class; the 21-footers in the 25ft. class; the one-raters in the 20ft. class, and the half-raters in the 15ft. class, will have the effect, it is believed, in reviving the interest in all the small classes of sloops, and creating a nucleus for the building up of some of the classes during the coming season.

2. That the distinction between "cabin" and "open" yachts be gradually eliminated.

One of the bugbears of racing committees and racing men has been the difficulty of drawing a line between cabin and open yachts. As a matter of fact, the cabin and open classes naturally lap at the 25ft. classes; that is to say, there are few open boats now racing above 25ft., and few cabin boats under 20ft. In English waters there is practically no distinction between cabin and open yachts, and the Council believes that in time the same conditions will prevail here. It is hardly thought advisable, however, to bring this result about immediately; but as a step toward this end it is recommended, where clubs give races for relative classes of both cabin and open yachts, that for the coming season they be requested not to offer prizes for any class of open yachts over 25ft., or any classes of cabin yachts under 20ft. This action will also have the desirable result of further reducing the number of classes.

3. That one-gun starts be generally adopted.

The popularity and practicability of the one-gun start has been so fully demonstrated that the Council believes it is safe in making the recommendation that this mode of starting be generally adopted. It is one of the rules governing the starting in the special classes, and if fleets are started in small divisions, or each class separately, there can be no objection to its use. The one-gun start, especially in connection with the gradual elimination of time allowance, it is believed, will have the effect of closer and more interesting racing; it will relieve the regatta committees of a certain amount of work in recording and almost all uncertainty as to correct timing; it will promote sharper helmsmanship; and it will be more gratifying to the spectators of a race, for the reason that it makes it unnecessary to figure the elapsed and corrected time in order to ascertain the winners, as the first boat home in a class is necessarily the winner of the race.

4. That, in addition to Saturdays, Wednesdays be recognized as regular race days.

The experiment of holding two or more races on the same day during the past season can hardly be considered successful, and on account of the number of races that the different clubs desire to hold each season, there are not a sufficient number of Saturdays to enable the allotment of a separate day for each race, and some other week day should also be recognized as a race day. As a matter of fact, during the past season the week-day races seem to have filled as well as the Saturday races, and there would seem to be no particular advantage in maintaining Saturday as the only race day in the week.

5. That all races on the Sound be started at the same hour (noon).

There has been a good deal of complaint among racing men during the past season on the ground that there was an uncertainty as to what time of day the different races were to be started; and also that a number of the clubs delayed the start after the announced time. It is believed that if it is generally known that all races are to be started at the same hour there will be less delay in starting, and owners will be more inclined than heretofore to have their yachts promptly at the starting line.

It is suggested that the starting hour be not later than noon, and that all races be started promptly, provided the weather conditions allow.

If it be necessary to postpone the time of starting, it is recommended that postponements be of a half-hour's duration, as it is a convenience to helmsmen to know that races will be started on the even hour or half hour.

The above recommendations hardly call for comment, as they are self-explanatory, and the necessity for the proposed changes has been universally recognized during the past season, as shown partly by the fact that in a very full discussion no objections were advanced. The suggestion that all races be started at noon brought out a proposal for limiting the time of postponement to some hour, such as 2 P. M., and also one to make the starting hour 11:30 A. M.; but after discussion both points were dropped. The other paper presented by the Council, the Report on the Proposed Amendments, was of a similar nature; it will, perhaps, be best to give its various paragraphs separately, in connection with the amendments to which they apply.

Amendments as Passed.

RULE II.

Measurement.

Add to Section 2.—All yachts in the 30ft. and lower classes shall be measured for l.w.l. length with the same number of persons on board as are allowed for crew in the yacht's class, and whose average weight shall not be less than 150lbs., or, at the option of the measurer, with a dead weight placed on board equivalent thereto.

Recommendation: It is the opinion of the Council that the usual practice of measurers, of taking the l.w.l. length of yachts without the crew aboard, is contrary to the spirit of the existing rule, which rule expressly states that the l.w.l. length shall be measured with the yacht in *racing trim*, and also provides that any persons who are on board when the measurement is being taken shall be stationed amidships. A yacht cannot be considered to be actually in racing trim unless she has on board the same weight as when she is raced; therefore, if a yacht is measured without the crew aboard she is not of the same measurement (except she be a plumb stem and stern boat) as when she is competing in a race. Besides this, requiring yachts to be measured with crew or an equivalent weight aboard will have a tendency to discourage the building of freaks, especially in the smaller classes. The Council has therefore framed this addenda to the rule so that there will be no longer any discretion left to the measurer as to whether he shall measure a yacht with crew aboard or not *in classes of 30ft. and under.*

We have italicised the final words because they were not in the original report, the Council being very strongly in favor of applying this restriction to every racing yacht. When the yachts which race for the America's cup, to say nothing of the smaller international trophy which has so interested yachtsmen for the past two years, are measured with crew aboard by the consent of all parties, and when this method of measurement is generally recognized as the correct one, both in theory and practice, for these and all the smaller racing yachts, there is no possible reason why it should not be applied to the comparatively smaller number of larger yachts. At the time these amendments were framed, early in the fall, and the report drawn up, it was hoped that the rule could be thus amended to include all yachts. When at a subsequent date, however, the amendments to the rules of the Larchmont and New York clubs were presented and acted upon, they made no provision for measurement with crew aboard. The Larchmont Y. C. agreed to adopt the restriction in the smaller classes, and the question remained whether the Y. R. U. would accept such a compromise or fight the matter in living up to its convictions. On this point, as on several others, the final judgment, both of the Council as well as the representatives, was that such a fight, no matter which side might win, could only do harm to yacht racing in its present condition. A man must be utterly blind, both to all that has happened within the past two years, and to the unassailable logic of events, if he does not see that the measurement with crew aboard, and also the visible marking of the waterline in racing trim, must come speedily and certainly, just as the one-gun start, the abolition of time allowance, the classification by racing length and other impossibilities are now accomplished facts, and delay in this matter can only do harm to racing owners.

There was no discussion of this point at the meeting, all present having accepted the conclusion to keep in line with the two outside clubs for the present. Two points, however, were very thoroughly discussed, that of live weight or dead weight and that of the position of such weight. Both present some difficulties in practice. It is recognized that in anything not over 30ft. the trim may be affected by such a movement of the crew as would hardly be perceptible, and on the other hand that the work of measuring would be greatly facilitated if measurer and owner could mutually agree on the use of the requisite number of men of average weight in place of handling iron or lead weights. The original amendment was altered to leave the use of live or dead weight to the discretion of the measurer, the weight to be placed approximately about the center of buoyancy. Even this latter restriction does not settle the position of weight beyond all possibility of evasion by a freak boat; in fact, it is hardly possible to cover all contingencies by any rule.

SUBSTITUTE FOR RULE III.

Classification.

1. All yachts shall be classified by racing length, and shall be divided into classes as follows:

SCHOONERS,

First Class—A—All over 95ft.
95ft. Class—B—Not over 95ft. and over 85ft.
85ft. Class—C—Not over 85ft. and over 75ft.
75ft. Class—D—Not over 75ft. and over 65ft.
65ft. Class—F—Not over 65ft.

SLOOPS, CUTTERS AND YAWLS.

First Class—G—All over 70ft.
70ft. Class—H—Not over 70ft. and over 60ft.
60ft. Class—J—Not over 60ft. and over 51ft.
51ft. Class—K—Not over 51ft. and over 43ft.
43ft. Class—L—Not over 43ft. and over 36ft.
36ft. Class—M—Not over 36ft. and over 30ft.
30ft. Class—N—Not over 30ft. and over 25ft.
25ft. Class—P—Not over 25ft. and over 20ft.
20ft. Class—Q—Not over 20ft. and over 15ft.
15ft. Class—R—Not over 15ft.

CATBOATS.

30ft. Class—S—Not over 30ft. and over 25ft.
25ft. Class—T—Not over 25ft. and over 20ft.
20ft. Class—V—Not over 20ft. and over 15ft.
15ft. Class—W—Not over 15ft.

Open yachts shall not be classed with cabin yachts.

3. Yachts launched prior to Nov. 1, 1896, not exceeding the limit of any class 30ft. or under by more than .5 of a foot, and that have not been increased in sail area measurement since that date, shall sail in such class.

Recommendation: In reducing the number of classes it was thought desirable to eliminate the 30ft. class of sloops, cutters and yawls. Doing this will make it necessary to reletter all the classes, and the classification as it will then stand will embrace exactly nineteen classes. There being nineteen flags in the international code, it was thought appropriate that the code letters be used in designating the classes in future, and this system has already been adopted. The classification as formerly defined was not perhaps as explicit as it might have been, and it is believed that the new arrangement, as submitted, will be more satisfactory.

The provision for allowing existing yachts not exceeding the class length by over a fraction of a foot to still remain in their respective classes will be made necessary through the adoption of the rule for measuring with crew aboard, so that the existing boats which are close to the class limits may be kept in their regular classes.

The establishment of classes for open boat sailing with fixed ballast has had the result of killing the interest in the shiftable ballast classes. As a matter of fact, sandbag racing on the Sound is practically dead, but a small percentage of the entries in the regattas of the last year having been in the shiftable ballast classes. The elimination of these classes will help toward the desirable result of reducing the number of classes, and will dispense with an undesirable type of yacht. Of course there is no reason why clubs desiring to give races for these classes cannot do so, provided they announce in their circulars the suspension of the ballast rule for certain classes.

This classification is not materially different from that thus far used by the Y. R. U. In this, the one matter above all others in which uniformity is indispensable, arrangements have been made informally between the Council and the Larchmont and New York clubs to preserve absolute uniformity. The classification as it now stands is greatly superior to any preceding one; the only criticism that we would make is that there are still too many paper classes, in spite of the reduction and simplification. It would be still better in our opinion if some agreement could be made among all clubs to offer no prizes for new yachts in the 65ft. and 85ft. schooner classes, and the 43ft. and 60ft. single-stick classes. These four classes are now practically dead, there being but half a dozen old yachts in the four classes to-day, and these would be hopelessly outbuilt by any new yacht. The suppression of these classes must tend to strengthen others of far more importance, the Colonia-Emerald class, the Amorita-Quissetta class, and the two new classes of 1897, 51ft. and 70ft. There are few enough boats in each of these classes at best, and in the interests of racing the clubs cannot do better than to exert a certain compulsion on owners intending to build, in order that they may build to strengthen existing classes rather than merely to win pots from some old boats in classes in which there are no new ones. The use of the code flags and letters to designate the different classes, an ingenious idea originating with the Council, is likely to be generally adopted.

SUBSTITUTE FOR RULE IV.

Time Allowance.

Time allowance shall be calculated on racing length according to the appended table, but yachts launched after Nov. 1, 1896, except in the first class of schooners and the first class of sloops, cutters and yawls, shall not be entitled to time allowance in their classes, and no yacht that has been increased in measurement for the purpose of sailing in a class above that in which she sailed prior to that date shall receive time allowance from other yachts in that class.

Recommendation: Although the present class limits have been firmly established for over two years, there seems to have been some inclination to build below the limit for the sake of securing time allowance. It is thought that there is sufficient choice of sizes for owners to select from, so that there can be no reason for building a racing yacht to anything but the class limit, and the doing away of time allowance in the new boats will, it is believed, effect this result. No table of time allowance has proven satisfactory and fair for all velocities of wind, and hence the gradual elimination of time allowance is desirable. In dispensing with time allowance the liability to error which now exists in calculating the allowance, and the uncertainty as to the winning of a race until the corrected times are figured, will be removed, and the results will be obviously more satisfactory.

In this connection, Delegate Thomas Fleming Day, Huguenot Y. C., offered the adoption of the following amendment:

ADD TO RULE IV.

Allowance for time will be abolished in all classes after season of 1897.

This amendment, though favored by some, was considered rather too radical, and was not adopted. It would, if passed, have made little practical difference, as there will be very few old boats under the class limits which will have any chance at all in the racing of 1898. The owners of these boats are likely, before that time, to be fully convinced of the futility of racing even with time allowance against the boats of the coming and the following years, and to drop out voluntarily without being compelled to by the rule.

The abolition of time allowance and the compulsory building to the top of a class is one of the most important advances made in yachting for many years.

RULE V.

Allowance for Rig.

Change 94 per cent. to 93 per cent.

Recommendation: Allowance for yawl rig is corrected, the 94 per cent. being theoretically incorrect.

RULE VII.

Entries.

Add to Section 1: Add "Entries must also state whether yacht was launched prior to Nov. 1, 1896."

Strike out Section 3.

This is made necessary by Sec. 3 of Rule III. and the final section of the rule limiting draft. The abolition of Sec. 3 in this rule prevents a yacht without a competitor from going up a class, and must be considered in connection with Rule XXX., giving a sail-over prize for such a yacht.

RULE IX.

Sails.

Add to Section 1, paragraph 2, "and club topsail."

Add to Section 1, paragraph 3, "and in the first 70ft. and 60ft. classes club topsail also."

Recommendation: The adoption of this addenda to the rule will have the effect of allowing yachts in the larger classes to carry club topsails, which they do as a matter of practice, the rule being usually suspended for these classes.

This change puts the Y. R. U. rules in harmony with the rules of those clubs in which the three largest yachts figure most prominently, and it will meet the approval of the owners of these craft.

SUBSTITUTE FOR RULE X.

Boats and Life Buoys.

Section 1. Yachts in the first, 95ft. and 85ft. classes of schooners, and in the first class of sloops, cutters and yawls, shall carry on deck a serviceable round-bottomed boat, measuring not less than 14ft. in length, with oars and row-locks or thole pins lashed in; in the 75ft. and 65ft. classes of schooners, and in the 70ft. class of sloops, cutters and yawls, a boat as above not less than 12ft. in length, and in the 60ft. class a boat as above not less than 10ft. in length.

Recommendation: Slight changes have been made to conform to the cutting out of the 80ft. classes.

RULE XI.

Fittings, Water and Ballast.

Add to Section 1. "Galley fixtures and fittings shall be kept on board in their proper places. All yachts must carry one serviceable anchor and cable on board."

Recommendation: It is suggested that this change be made in the present rule to prevent the practice of removing fittings that should be carried on all yachts in the larger classes.

SUBSTITUTE FOR RULE XII.

Crews.

1. The total number of persons on board a yacht shall not exceed the allowance in the following schedule:

SCHOONERS.

First Class—One person to every 21t. of r.l. or fraction thereof.
90ft. Class—35 persons.
85ft. Class—30 persons.
75ft. Class—25 persons.
65ft. Class—20 persons.

SLOOPS, CUTTERS AND YAWLS.

First Class—3 persons to every 5ft. of r.l. or fraction thereof.
70ft. Class—20 persons.
60ft. Class—15 persons.
51ft Class—12 persons.
43ft. Class— 9 persons.
36ft. Class— 7 persons.
30ft. Class— 5 persons.
25ft. Class— 4 persons.
20ft. Class— 3 persons.
15ft. Class— 2 persons.

Section 3. Except in the schooner classes, and in the first, 70ft. and 60ft. classes of sloops, cutters and yawls, each yacht must be steered by an amateur, and must be manned by amateurs, except that any yacht may carry and use her regular professional crew, but yachts in classes 30ft. and under shall not carry more than one professional.

Recommendation: Experience seems to have proved that the allotment of crews for yachts of the different classes allows too many men for some of the smaller classes, and not enough men for the larger. The scheme of regulating the number of men for each class is based upon allowing only a sufficient number of men to work the yacht, thus preventing any crew being carried for the purpose of ballast.

The complaint has also been made that there is a distinction in Corinthian races between the regulations covering crew in cabin and open boats, cabin boats having been allowed to carry their regular crew and open boats being compelled to sail with full Corinthian crew. Although the Council is not in favor of modifying the Corinthian restrictions any more than is necessary, still, as it is a matter of practice that racing yachts, even in the smallest classes, usually have at least one paid hand, it is believed that if yachts in the 30, 25, 20 and 15ft. classes be allowed to carry one professional, provided he does not steer, it would be an advantage, as yachts are sometimes prevented from competing on account of being short of amateur crew.

The allotment of men as above is uniform with the Larchmont and New York clubs. On discussion, the amendment as first printed was altered by dropping the first three words of Section 3, "In Corinthian races." The effect of this is that, whereas it has been necessary in the past to state that a race would be sailed under Corithian regulations, if such were the case, it now goes as a matter of course that all races of the Union are Corinthian races unless a specific announcement to the contrary is made. The difference is merely one of practice. This brought up a discussion which was continued under another head, the definition of Corinthianism, later on in the evening. A further change was made after a short discussion, the words "the owner or other" being omitted to make the rule read "steered by an amateur." The change is merely clerical.

SUBSTITUTE FOR RULE XVI.

Private Signals and Numbers.

Each yacht shall carry the owner's private signal at the main peak, and display her racing number above the reef points, at an equal distance from the luff and leach, on both sides of the mainsail.

Recommendation: Permitting the placing of racing numbers on any part of the mainsail above the reef points is most annoying to regatta committees, as sometimes the numbers are fastened so near the luff that they are barely discernible. It is thought best that it should be clearly defined where the number shall be placed upon the sail.

RULE XIX.

Starting and Finishing Signals.

Strike out Section 1 and substitute:

The starting signals shall be as follows: The blue peter hoisted as a preparatory signal, and lowered at the expiration of five minutes.

A red ball hoisted for the start of the first division, comprising Classes A, B, C, D and G.

A white ball for the start of the second division, comprising Classes F, H and J.

A blue ball for the start of the third division, comprising Classes K, L and M.

A ball of red and white for the start of the fourth division, comprising Classes N and S.

A ball of white and blue for the start of the fifth division, comprising Classes P and T.

A ball of blue and red for the start of the sixth division, comprising Classes Q, R, V and W.

Each starting ball shall be dropped at the expiration of starting interval.

Five minutes shall elapse between the start of each division.

The club burgee shall be hoisted at the expiration of the starting interval of the last division.

Recommendation: On account of the necessity for starting in small divisions or by classes, it is necessary that additional starting signals be provided for. It is believed that the six signals as named will be sufficient.

RULE XXVII.

Section 2. Change word "windward" to read "leeward."

This is a correction of a clerical error in the last revision of the rules. The general custom in this country is for the leeward yacht to give way.

RULE XXX.

Prizes.

New Section 1. Prizes shall be awarded in all classes in which one or more yachts sail the course. Should a yacht sail alone in her class she shall be entitled to a "sail-over" prize of one-half the value of the regular prize.

Recommendation: It has been the custom only in the larger clubs to award sail-over prizes for yachts not having competitors in their classes; but it is believed that in reducing the number of classes it will be no hardship for any club to award prizes in all classes in which one or more yachts start. Doing this will enable us to dispense with the rule allowing a yacht alone in her class to sail in the next class above. This rule is objectionable for a number of reasons. It may not be known up to a short time before the start of the race whether a class will fill or not, and it is inconvenient and often impracticable for a committee to notify the yachts in a class that a yacht in a lower class will be a competitor; consequently the yachts sailing in the class that has filled are likely to have no knowledge that they are competing with any but yachts regularly in their classes. Besides, it is left discretionary with the owner whether the yacht will go up a class or not, and unless he announces to the committee that such is his intention, there may be a misunderstanding about the result of the race. Besides this, owners of yachts often seriously object to being compelled to compete against a yacht in a smaller class. There is also another objection to the rule on the score that time allowance will always have to be a factor in class racing unless a yacht sailing in the class above her own assumes the maximum length of such class, or sails without time allowance. Assuming a mean or minimum length will always entitle a yacht going up a class to time allowance from the yachts built to the limit of the class.

The above explanation of the Council covers the ground very completely; assuming that something must be done for the solitary owner in any class who comes to the line for a race, probably from a distance and at some inconvenience, the old plan of allowing him to go up a class is objectionable in that it has often opened a way to trickery of a very questionable kind, it is usually satisfactory neither to him nor the owners in the larger class, and it helps to retain the principle of allowing time for difference of size. Two great points of modern racing are the fixing of each yacht in one class, in which alone she shall race, and the elimination of time allowance. The exception in these points due to the old rule is in every way objectionable, and far outweighs the heaviest arguments that can be advanced against prizes, presumably of half value, for sail-overs.

RULE XXII.

Shortening or Reversing Courses.

New Section 2. Should the regatta committee deem it desirable on account of the direction of the wind to order the course sailed in a reverse direction from that specified in the instructions, flag "B," hoisted over the blue peter (the preparatory signal), shall be the signal for so doing.

Recommendation: The existing rules omit naming a signal to indicate that the course is to be sailed in a reverse direction, and this addenda should be added to cover the point.

RULE XXIX.

Disqualification.

Section 5. Strike out the words "or within ten days thereafter."

Recommendation: A yacht is now allowed ten days after a race in which to file a certificate of measurement with the regatta committee before being disqualified. The Council believes that no yacht should be allowed to start in a race unless she has been measured for racing length. No good reason has ever been advanced for allowing a yacht to compete without being measured, and it is believed that if it is thoroughly understood that a yacht cannot start unless she holds an official certificate of measurement, there will be less laxity in this matter than heretofore. It has been the practice with some regatta committees to allow yachts to compete that have not been measured rather than to refuse the entry. Owners knowing this have neglected or delayed having their yachts measured, and as there is no more important matter than the recording of a yacht's racing length, both for classification and time allowance, it is believed that this step is necessary to attain the desired results

---

Within the past two years the race committee of the Larchmont Y. C. has tried the rather novel experiment of living up to the letter of all rules and regulations, especially as to measurement, date of entry, etc., provided they have been previously announced and generally understood. The result has been that though a few owners have felt themselves injured by a technical ruling on the letter of rules previously disregarded, the majority of racing men have profited, entries being made and measurements filed in good season. It would seem that the time has come in all clubs when the old slipshod, go-as-you-please methods that, while in part necessitated by the lack of entries, at the same time acted to hurt racing, must give place to exact and positive regulations enforced to the letter. Such a course is best in the end for all parties, owners as well as committees.

NEW RULE.

Limit of Draft.

The maximum draft of any yacht, exclusive of centerboard, when in racing trim, shall not exceed that specified for her class in the following table, except as hereinafter mentioned- but these limits shall not apply to any yacht launched prior to Nov. 1, 1896, when racing in the class in which she was raced prior to that time. This exemption, however, shall not be so construed as to permit the increase of the draft of such a vessel beyond that allowed for her class.

SCHOONERS.

First Class—No draft limit.
95ft. Class—14ft. draft.
85ft. Class—13ft. draft.
75ft. Class—12ft. draft.
65ft. Class—11ft. draft.

SLOOPS, CUTTERS AND YAWLS.

First Class—No draft limit.
70ft. Class—13ft. draft.
60ft. Class—11.5ft. draft.
51ft. Class—10.25ft. draft.
43ft. Class—9ft draft.
36ft. Class—8ft. draft.
30ft. Class—7ft. draft.
25ft. Class—6ft. draft.
20ft. Class—5ft. draft.
15ft. Class—4ft. draft.

CATBOATS.

30ft. Class—7ft. draft.
25ft. Class—6ft. draft.
20ft. Class—5ft. draft.
15ft. Class—4ft draft.

Should a yacht's draft exceed that specified for a given class, the amount of excess shall, in computing her measurement for racing length, be multiplied by 2 and added to the length of the l.w.l., provided, however, that in no case shall this excess be more than 10 per cent. of the draft specified for the respective class. On all yachts launched after Nov. 1, 1896, there shall be placed upon the hull, and immediately over the point of greatest draft, a metal plate or other distinct mark. Such mark shall be placed above the l.w.l., and within 6in. of it, and the owner shall furnish to the regatta committee, if required, a certificate of the vessel's draft to such mark, signed by himself, the designer or the builder of the yacht.

Recommendation: For some time past it has been the opinion of the yachting world that there should be some restriction placed upon the building of extreme types. This has resulted in the New York Y. C. adopting arbitrary limits of draft that yachts in the different classes shall not exceed, with the purpose that this limitation will have the effect of preventing the building of deeper hulls than are now in existence. The Council is of the opinion that some rule should be adopted that will encourage a more wholesome type of yacht than is now being built for racing purposes, but it hardly thinks that this rule will have that effect. At the same time, as the limits are so liberal in the classes of single-masted vessels and yawls, it can see no objection to their adoption by the Union, as the rule will probably not preclude the building of keel vessels in preference to centerboards for racing purposes. The limits named for the schooner classes will probably prevent any more keel schooners being built for maximum speed. As uniformity of rules is most desirable at the present time, the Council believes that it would be advisable to adopt this rule and have it given a fair trial. It is to be hoped that before another season is over some formula will be evolved that will be acceptable to all the clubs and that will have the effect of promoting the building of more serviceable yachts.

This rule was but recently framed by the Larchmont Y. C., and adopted by it and the New York Y. C. as well. After being presented to the meeting it was laid on the table until the communication relating to the proposed national yachting league had been read and discussed, when it was taken up for discussion. The opinions of the representatives were strongly against the rule, on the grounds that it was inadequate, and not calculated to effect its nominal end. Two considerations were advanced for it; first, that being already in effect in two large clubs, its defects or advantages would be to a certain extent tested whether or no the Y. R. U. accepted it; and second, that should the proposed league prove practicable, there would then be an opportunity for a careful consideration of the whole matter. The disposition of the meeting, as in other matters, was plainly on the side of uniformity and harmony, even with those clubs which do not recognize the Y. R. U; and the sentiment generally expressed was that less harm might come from the rule itself as the conditions now are than from its summary rejection. On a vote the rule was unanimously adopted.

DEFINITIONS.

Sloops and Cutters.

A yacht to be considered a sloop or cutter shall not have more than 80 per cent. of the sail area aft of the main mast.

Recommendation: On account of the present tendency to reduce the area of head rigs in the smaller classes of sloops, it is sometimes perplexing to determine whether a yacht should be classed as a sloop or a catboat. This definition is proposed for the purpose of positively distinguishing between the two rigs.

The following was offered at the meeting by Mr. Thomas Fleming Day, Huguenot Y. C.:

AMEND DEFINITION, PAGE 21.

Corinthianism.

Corinthianism in yachting is that attribute which represents participation for sport as distinct from gain, and which also involves the acquirement of nautical experience through the love of sport, rather than through necessity or the hope of gain. It is consistent with the motive higher than mercenary found in the ranks of officers of the navy, licensed officers of the commercial marine, naval architects, yacht builders, sailmakers and riggers, notwithstanding that they secure a livelihood by following those professions and trades. No man who loves the sport should be refused admittance to its contests because he has become skilled in handling through experience and knowledge gained while in pursuit of a dignified and honest calling. In this respect the following general definition is given:

No person who has accepted remuneration for services rendered in handling or serving on a yacht, or who is a professional in any other sport, shall be considered a Corinthian yachtsman.

This amendment affects materially a very important point, and as we understand the rules, it could not be adopted, not having been advertised in the notice of the meeting. This point, however, was not raised, as after discussion it was decided to leave the matter to the incoming Council. Mr. Day made a strong argument for the amendment and it was discussed at some length, bringing out various opinions. If passed it would reverse almost entirely the present ruling, as it admits as Corinthians all who have never received pay for sailing on a yacht. This opens a very wide door to men who through their regular avocations are in positions to acquire exceptional skill, such as the *bona fide* Corinthian, engaged in business apart from the water, can only hope to attain by years of sailing in the comparatively limited time he can devote to the sport.

In the course of a rather animated discussion of the question since the definition of the Union was first made public, there has been a tendency to represent it as casting a certain reflection upon those associated with the various yachting trades, and as attempting to set up certain social distinctions. As far as we are aware, there has been no such intention; the main idea has been that the great majority of the members of the clubs which form the Union are unquestionably Corinthians, business men with but a limited amount of leisure to devote to yachting and still less to yacht racing. If it is a question between the interests of this large class and the very small class of men engaged in yacht building and similar pursuits who desire to sail in yacht races, then the smaller number should give way to the greater. It is all very well to talk about the advantages to the young Corinthian of learning through the opportunity to try his skill in racing against the old hands, but it is simply an impossibility for the young man who looks after his boat of an evening and races her on his Saturday half holiday to compete with the man who can jump into his boat at any time through the week for a rub up against some other craft.

At the same time, so far as we are concerned, we are in favor of a distinct policy on the part of the Union of holding a reasonable number of races throughout the season in which the professionals may be allowed; giving them every chance to try their handiwork and to bring out its best points to their own satisfaction, perhaps after the amateur sailor has failed. There is no need to shut out the professional or to treat him as in any way less of a yachtsman or a different sort of yachtsman from the Corinthian; at the same time, the latter has certain interests that must be recognized by a line of demarcation between the two.

After the amendments were disposed of the question of dates was taken up. The territory of the Union, from Hell Gate to Race Rock, has been divided into two districts: the Eastern, including the Yale Corinthian and Park City of New Haven, the Norwalk, Bridgeport and Shelter Island clubs; and the Western, including all the clubs west of Norwalk. The Eastern District was left to arrange its own dates, subject to the approval of the Council; the dates for the Western District were arranged as follows:

Monday, May 31: Harlem Y. C.
Saturday, June 5: Knickerbocker Y. C.
Saturday, June 12: Douglaston Y. C.
Saturday, June 26: Seawanhaka Corinthian Y. C.
Saturday, July 3: New Rochelle Y. C.
Tuesday, July 6: American Y. C.
Wednesday, July 7: Corinthian Fleet.
Saturday, July 10: Riverside Y. C.
Wednesday, July 28: Stamford Y. C.
Saturday, July 31: Sea Cliff Y. C.
Saturday, Aug. 7: Indian Harbor Y. C.
Saturday, Aug. 14: Hempstead Harbor Y. C.
Saturday, Aug. 21: Horseshoe Harbor Y. C.
Saturday, Aug. 28: Huntington Y. C.
Saturday, Sept. 4: Huguenot Y. C.

The racing circuit will last from June 26 to July 6 inclusive, and will include the following:

Saturday, June 26: Seawanhaka Corinthian Y. C.
Monday, June 28: Stamford Y. C.
Tuesday, June 29: Indian Harbor Y. C.
Wednesday, June 30: Corinthian Fleet special.
Thursday, July 1: Horseshoe Harbor Y. C. special.
Friday, July 2: Sea Cliff Y. C. special.
Saturday, July 3: New Rochelle Y. C. annual.
Tuesday, July 6: American Y. C. annual.

Messrs. Towle, Gordon and Sherman were appointed a nominating committee for the new Council, and after retiring reported the following ticket, which was elected: Oliver E. Cromwell, E. B. Hart, Jr., C. P. Tower, C. T. Pierce, O. H. Chellborg, F. E. Towle, Jr, and Frank Browne Jones.

The circular of the New York Y. C. relating to the formation of a national league of yachtsmen was read and very favorably received, the following resolution being passed after discussion:

Resolved, That the Yacht Racing Union of Long Island Sound indorses the movement to form a national association to govern yacht racing in America.

The meeting adjourned at 11:45 P. M., having been in session since 8 P. M.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Dec. 25.—CHICAGO, Ill.—Carver-Grimm match for the cast-iron medal at Watson's Park.

Dec. 29-30.—UTICA, N. Y.—Tournament under the management of John W. Fulford. Live birds and targets.

1897.

Jan. 1.—NEWARK, N. J.—Sixteenth annual tournament and reception of the South Side Gun Club. W. R. Hobart, Sec'y.

Jan. 1.—BUFFALO, N. Y.—Tournament of the Audubon Gun Club. Targets.

Jan. 1.—TOWANDA, Pa.—Tournament of the Towanda Rod and Gun Club. Live birds and targets. M. F. Dittrich, Sec'y.

Jan. 9-10.—PRESCOTT, Arizona.—Fourth annual tournament of the Arizona State Sportsmen's Association, under the auspices of the Prescott Gun Club. Roy Hill, Sec'y.

Jan 11-14.—BUFFALO, N. Y.—Audubon Park first annual midwinter tournament. First three days, targets; last day, live birds.

Jan. 12-14.—Clover and Pope's midwinter tournament at Massassauga Point. Live birds and targets. Added money and merchandise prizes. For programmes address Seth Clover or A. P. Pope, Erie, Pa.

Jan. 14-15.—INDIANAPOLIS, Ind.—Tournament of the Limited Gun Club; sparrows. Royal Robinson, Sec'y.

Jan. 26-30.—SAN ANTONIO, Tex.—Second midwinter tournament, under the management of Oscar Guessaz. $2,000 added.

Feb. 27-March 11.—HOT SPRINGS, Ark.—The Arkansaw Traveler's first grand annual live bird tournament; $10,000 in purses and added moneys. Souvenir programmes ready Jan. 1. Address all communications to John J. Sumpter, Jr., Box 111, Hot Springs, Ark.

March 13-17.—BAYCHESTER, N. Y.—Second annual tournament of the Cobweb Gun Club; live birds and targets. Cobweb handicap at live birds, $500 guaranteed.

March 23-25.—NEW YORK CITY.—The Interstate Association's fifth annual Grand American Handicap at live birds.

April 14-16.—ATCHISON, Kan.—Airy Lou Hart's third manufacturers' amateur and fourteenth open-to-all tournament.

April 15-17.—SAN ANTONIO, Tex.—Tournament of the San Antonio Gun Club. Open to amateurs only. Willard T. Simpson, Chairman Ex. Com.

April 20-23.—LINCOLN, Neb.—Twenty-first annual tournament of the Nebraska State Sportsmen's Association. Added money later.

May 17-22.—KANSAS CITY, Mo.—Annual tournament of the Missouri State Game and Fish Protective Association. Fred T. Durrant, Sec'y.

June (third week).—CLEVELAND, O.—Fourth annual tournament of the Chamberlin Cartridge and Target Company

June 16-17.—FARGO, N. D.—Third annual tournament of the North Dakota Sportsmen's Association. Targets. W W Smith, Sec'y

June 22-25.—OIL CITY, Pa.—Seventh annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Oil City Gun Club. Targets and live birds. Black powder barred. Special event: 25 live birds per man, $25, $1,000 guaranteed. Send entries to H. C. Reeser, Sec'y, Oil City, Pa.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The Limited Gun Club, of Indianapolis, Ind., has issued the programme for its "winter sparrow tournament," Jan. 14-15. The special feature in this programme that will be of interest is the following in regard to special rates to San Antonio's Midwinter shoot: "The primary object of this meeting is to offer a convenient rendezvous for the shooters from the Eastern and Middle States who are going to the Midwinter tournament at San Antonio, and to give them the benefit of reduced party rates and the comforts of a special car from here. For a party of not less than eighteen, with special Pullman sleeper going, but not returning, the round trip rate is $53 10, and for one way $33 05. For party of ten or more, without special car, round trip $46 10; one way $23 05. To this latter rate there should be added $9 for berth each way if desired. To proceed intelligently with our plans and preparations, we must be informed how many will attend our shoot, and how many of them will go from here to San Antonio. You are therefore urged to advise the secretary of your intentions at as early a date as possible." Shells for the Indianapolis shoot should be shipped to Gus Habich, 62 West Market street, Indianapolis, Ind. Write to Royal Robinson, secretary of the Limited Gun Club, for programme.

The North Texas Gun Club League met at Waxahachie, Ellis county, in that State, on Dec. 9. The Dallas *News* of Dec 10 has a lengthy write-up of the shoot, showing the interest taken in shooting matters in that portion of the country. Shooters of the wintery North, accustomed as they are to ham sandwiches and pumpkin pie for lunch will smack their lips at the *menu* provided for members of the North Texas Gun Club League as set forth in the *News* of the above date: "At 1 o'clock Jim Davis announced that dinner was ready. The dinner consisted of gumbo, bread, barbecued pork, veal and mutton, pickles, etc." A list of personal items in the same article contained the following about our friend Du Bray, which is worth repetition: "A. W. du Bray, of New York representing the Parker Gun Company, was invited to attend the shoot with the League. He is not a bad shot." As there is no mention of any scores made at the shoot, it is only fair to presume that Du Bray made a straight on the "barbecued pork, veal and mutton, pickles, etc." (Since writing the above we have received a copy of the scores made at Waxahachie, and find that Du Bray made several straights, as above.)

The Audubon Gun Club, of Buffalo, N. Y., announces a capital programme, open to all, for its New Year's Day shoot. The programme was arranged, we understand, at the request of several of the local gun clubs. The special feature of the shoot will be the team contest for 3-men teams, 15 targets per man, members of same team to be members of same club, entrance $3 per team, targets included at one cent each, 5 moneys, the purse being divided on the Rose system, with ratio points of 6, 5, 4, 3 and 2. Winning team to take cup and first money. Ties shot off at 10 targets per man. The programme contains nine other events at "popular prices;" two 10-target events, 50 cents entrance; one 10 target event, 75 cents; four 15-target events, 75 cents; two 20-target events, $1. In all these sweeps the purse will be divided into four moneys on the Rose system, with ratio points of 4, 3, 2 and 1. All targets thrown at one cent each. The Audubon boys evidently believe as we do: At tournaments such as this, winnings and losings should be minimized. At the club's regular weekly shoot on Jan. 2 the same programme of sweeps will be carried out. This practically makes a two days' shoot. On New Year's Day shooting commences at 9 A. M. sharp.

The annual meeting of the Interstate Association was held Dec. 17 with a full muster roll of members on hand. The business transacted is given in detail elsewhere, as well as the manager's report. The statistical data referred to by the manager in that report were given in full in our issue of Nov. 28. The most pleasing thing about the whole meeting was the long list of applications for tournaments in 1897 read by the manager, the length of the list being a striking proof of the esteem in which the Association is held by the trap-shooting world. It will be noticed that Portland, Me., and Burlington, Vt., are anxious to have the Interstate with them again next year, their tournaments this season having evidently been entirely satisfactory. In all probability the plan of action for 1897 will be somewhat similar to that for 1896, three months in the South and then three months in the East. During that time eight target tournaments will be given during the season of 1897 in place of the regulation six tournaments in past years.

Jack Winston had an easy victory over George Roll in the contest for the Du Pont trophy at Watson's Park, Tuesday, Dec 15. The score of 91 to 84 shows that Winston was in wonderful form, or else that Roll was unable to locate his birds. Before Winston started for Chicago he told us that he had heard that the Chicago people were going to run him out of the Windy City by reason of weight of money and number of matches offered him. "Just watch me," said Winston, "I'll be running, but it'll be after the other fellows." It is a curious fact, but nevertheless it's true, once let it be known that some good shot is going to Chicago, and we at once hear of any quantity of money waiting to cover his challenge or to challenge him with. Yet the mountain in such heavy travail nearly always brings forth some little mouse!

On Dec. 15, the same day that Winston and Roll were settling their little controversy at Watson's Park as to who should possess the Du Pont trophy, Dr. Williamson and George Deiter, of Milwaukee, Wis., were busily engaged shooting off their tie of 176 out of 200 recorded on Dec. 3. The match on Dec 15 was also at 200 birds, but the scores on that occasion were something phenomenal, Williamson scoring 191 out of his 200 to 188 by Deiter. This is probably a record score for the number of birds shot at. The nearest approach to anything of the kind was the score in the Murphy-Morfey at the Hollywood grounds on Aug. 26 of this year; Murphy on that occasion scored 188 to Morfey's 180. It should, however, be remembered that the boundary at Hollywood is only about 18yds. from the end traps, and that the birds were a selected lot trapped and handled by Gilbert, of Philadelphia.

The Clover-Pope tournament at live birds and targets, mentioned in "Drivers and Twisters" of our issue of Dec. 12, will take place at Massassauga Point, Erie City, Pa., Jan. 12-14 according to a communication on this matter received from Seth Clover and A. P. Pope. Added money and merchandise prizes, in addition to a flow of humorous sayings from Mr. Clover, will be the attractions. It would seem advisable that some arrangement be quickly come to between these gentlemen and the management of the Audubon Park shooting grounds, Buffalo, N. Y., with a view to avoiding a clashing of dates. As matters stand, both tournaments are set for the same dates.

E. D Fulford has challenged Jim Elliott for the Kansas City *Star* cup and $100 a side. The challenge was made with a proviso that the holder, Elliott, should not require the challenger to go to Kansas City or any Western point to shoot the match. Jim showed his courtesy and his willingness to let anybody have a go at the cup by accepting Fulford's challenge, posting his forfeit, and naming Dexter Park and Dec 31 as the place and date for the meeting. The match will be well worth seeing, as we understand, and special efforts will be made to secure good birds, and both men are shooting a great gait. Witness their scores at Trenton on Dec. 3, made on Zwirlein's birds.

Pleasure Bay, N. J., had a little picnic last week at the Elkwood Park grounds. On Dec. 15 Walter R. Patten, of that place, easily defeated Phil Daly, Jr., in a 50-bird race, Daly conceding his opponent 4yds. handicap. Patten won by 8 birds, as shown in the score of the match, given elsewhere. On Dec. 17 Charles Woolley, also of Pleasure Bay, met and defeated Al Ivins in a 50-bird race, the latter being a strong favorite in the betting. Ivins stood at 30yds., Woolley at 28yds. Each scored 22 out of the first 25, and then kept on even terms, in and out, until Ivins let his 47th bird get away, Woolley landing a winner with 44 to 43.

The announcement of the San Antonio Midwinter shoot now reads: "Jan. 26-30.—Second Texas Midwinter tournament. Targets and magautraps. $2 000 added. Under the management of J. M. George, Albert Steves and O. C. Guessaz, at San Pedro Springs' grounds. Open to the world."

Mr. C. O. Gardner, secretary of the Bergen County Gun Club, of Hackensack, N. J., advises us that Mr. Thomas Bell has resigned as president of that organization, and that Mr. George P. Griffiths has been elected as his successor, Mr. E. G. Horton taking Mr. Griffiths's position of captain to the club.

The Oil City (Pa.) Gun Club, the organization under which the Pennsylvania State Sportsmen's Association's annual tournament will be held, has made a wise move in changing its dates from May 11-14 to the fourth week in June, the week immediately following the Cleveland tournament. This change will enable the shooters to take in the Cleveland shoot and then have only a jump of 132 miles to Oil City. If an interesting open-to-all programme is prepared, in addition to State events, Oil City can expect a good delegation of outsiders under the new conditions as to dates.

John L. Winston is certainly making the figures of 1, 4 and 7 well known in the trap-shooting world. While he was East he had a more than ordinarily successful career; but he has started right in at Chicago in such a manner that it seems highly improbable he'll be "run out of Chicago" under a month at the earliest. His match with Fred Gilbert and his other matches with Dr. Carver will make it a busy week for him. The terms of his match with Gilbert are interesting: 100 targets, expert rule, and 100 live birds; total sum to count.

The match between Carver and Grimm for the cast-iron medal will be one of the most interesting features of the closing days of 1896. Although Charlie Grimm has not been doing much shooting in public of late, letters from him that we have been shown by the parties written to disclose the fact that he feels in good trim and has every confidence of coming out on top. His victory would unquestionably be a very popular one, as "Moonface, the squaw man," the second member of the famous Indian squad, makes and keeps new friends at every tournament he attends.

Mr. David Brown, president of the West Newburgh Gun and Rifle Association, of Newburgh, N. Y., writes that his club claims dates in 1897 as follows: Annual spring tournament, May 5-7; annual fall tournament, Oct. 6-8. The tournaments are open to all, nobody barred; $50 will be given as average money to the three men making the best records on targets in all programme events, the money being divided 50, 30 and 20 per cent. At each tournament targets will be shot at on the first two days, live birds on the last day. The Rose system of dividing purses will be used.

On Saturday afternoon, Dec. 26 there will be a three-men team contest on the grounds of the Maplewood Gun Club. The members of each team must reside in the same city, town or village. The conditions otherwise will be: 50 empires per man, 25 at known angles and 25 unknown angles. The contest will be for a trophy donated by Mr. J. Warren Smith, president of the Maplewood Gun Club. Another feature of the day's sport will be a three-men team race between teams representing the home club and the Union Gun Club, of Springfield, N. J.

At the time of going to press nothing is settled as to where the Grand American Handicap is to be held next March. The competitors for the greatest live-bird event of the year are Elkwood Park and Messrs. Zwirlein & Ashfalk, who want to bring off the shoot on one of the race tracks in the immediate vicinity of Elizabeth, N. J., about forty minutes from New York city. The matter is in the hands of the Classification and Tournament Committee, and that body meets Wednesday of this week, Dec. 23.

"The Audubon Park First Annual Midwinter Tournament" is the title of a shoot to be held at Audubon Park, Buffalo, N. Y., Jan. 11-14, 1897. The first three days will be devoted to target events, live birds being trapped on the last day, Jan. 14. We are told that three sets of bluerock traps will be used, and that the live birds will be shot on the grounds on which the Dean Richmond trophy was shot for last June. Programmes for the tournament will be issued shortly.

Toronto trap-shooters have organized a new club under the name of the Rosedale Gun Club. The first shoot took place on Saturday, Dec. 19, on the Lacrosse grounds at Rosedale; live birds and targets were used. The club's officers are: Mr. H. M. Pellatt, President; Mr. J. B. Miller, Treasurer; Mr. A. R. Stell, Secretary; with Messrs. D. L. Van Flack and D. S. Barclay as a committee of management.

In a team race at the Riverton Gun Club's grounds on Saturday last, Dec 19, some excellent scores were made. The teams were George Work and Dolan versus Fred Hoey and C. A. Macalester. The scores were: Work 95, Dolan 83 –total 178; Hoey 96, Macalester 89—total 185. Messrs. Hoey and Work used Sanuitze powder while making the above great aggregate of 191 out of 200 shot at.

On Wednesday, Dec. 30, a tournament will be held on the grounds of the Boston Shooting Association, Wellington, Mass. The Boston Shooting Association, Worcester Sportsmen's Club and other State organizations will contest for the *Shooting and Fishing* trophy during the afternoon. Shooting commences at 9.45 A. M., a full day's sport being assured to all who attend. Mr. Orrin R. Dickey will, of course, manage the shoot.

The New Utrecht Gun Club will hold its regular shoot for the Holiday cup on Jan. 1 on the grounds at Dexter Park. Sweeps will be shot both before and after the cup shoot and will be open to all members of clubs that shoot at Dexter Park. Shooting commences at 10 A. M.

The Elizabeth, N. J., Gun Club's tournament, Dec. 22-23, and the West End Gun Club, of Albany, N. Y., tournament at sparrows on Dec. 22, will afford shooters in and near New York all the shooting they will want before the holidays arrive.

It has been found impossible to get out the programme for the Hot Springs live-bird tournament, Feb. 27-March 11, any earlier than Jan. 10. Paul R. Litzke writes us that the programme will be a dandy and well worth waiting for.

The second contest for the *Recreation* cup will be held at Hackensack, N. J., on the grounds of the Bergen County Gun Club, Wednesday, Feb. 10.

The Rod and Gun Club, of Towanda, Pa., informs us through its secretary, M. F. Dittrich, that it will hold a tournament at live birds and targets on New Year's Day.

The Boiling Springs Gun Club, of Rutherford, N. J., will hold its annual merchandise shoot on Christmas Day.

DEC. 22. EDWARD BANKS.

The Next Contest for the Du Pont Trophy.

MOSHER'S CHALLENGE RECOGNIZED.

Just before Winston stepped to the score to kill his last bird in the match with George Roll for the Du Pont trophy on December 15, he turned from the score and said to the representative of FOREST AND STREAM, in the presence of those who were standing around: "I wish to put up in the hands of FOREST AND STREAM $25 forfeit to bind the challenge of George A. Mosher, of Syracuse, N. Y."

The posting of a forfeit to bind a match on behalf of another with one's self naturally called forth some rather strong criticism, and laid the groundwork for some suspicion that Mr. Winston was trying to block the game for anybody else. So far from doing so, however, Mr. Winston was merely carrying out a request made to him by Mr. Mosher in course of some conversation between the two while in New York.

In this connection we give a telegram from President Lent, of the Austin Powder Co., to Mr. Winston:

"CLEVELAND, O., Dec. 16, 1896.—John L. Winston, Gore's Hotel, Chicago: Rice wires, 'Have you challenge Mosher, Syracuse, to Winston? Answer quick.' We reply, 'Yes, we possess the defy embodied in letter to Winston conditional on his defeating Roll, mailing forfeit to follow advice of success. A. LENT.'"

A letter written to Mr. Hough by Mr. Mosher, Syracuse, Dec. 17, says: "When Mr. Winston was East a month or so ago shooting matches, I told him that if he won from Roll I would challenge him for the cup, but that I did not care to challenge the winner of the contest. I am anxious to shoot Winston a match for that trophy, and expect a letter from him to-day advising just what he has done."

From the above telegram from the Austin Powder Co. and from Mr. Mosher's letter, it will be seen that Mr. Winston in posting the forfeit was only performing a duty imposed upon him by a friend who wanted to have a go at him if he (Winston) was successful in defeating the then holder of the cup.

Unfortunately, in posting the forfeit to bind the challenge, Mr. Mosher had overlooked one of the rules binding all challenges for the trophy. That rule reads: "E. I. du Pont de Nemours & Co. to be notified by challenger when challenge is sent, and they to name the referee for the match."

Of course, until Messrs. Du Pont had received such required notification from Mr. Mosher, the challenging party, they could take no official cognizance of the challenge, and it was for some days in doubt as to whether the challenge would go. The following telegram, sent by Messrs. E. I. du Pont de Nemours & Co. shows, however, that the givers of the trophy have viewed the matter from a sportsmanlike standpoint and have allowed Mr. Mosher's challenge to stand:

"Advise nothing be done to cause ill feeling. While Mosher-Winston challenge is not altogether in form, forfeit has passed. We would rather submit than to have controversy. Plain understanding may be had next time."

The money is up in the hands of FOREST AND STREAM, but the original intention to shoot at Cleveland cannot be carried out.

CANNOT SHOOT AT CLEVELAND.

The next race for the Du Pont trophy cannot be shot at Cleveland, for already the S. P. C. A. has arisen in arms against the proposition, and declared that the match shall not be shot there. Mr. Winston when seen to-day said that he would take the contest to Charlie Zwirlein's grounds at Yardville, N. J., and that the race would be shot in February, probably well on toward the end of the sixty days' limit, and after his return from the Texas Midwinter tournament. He originally intended to shoot at Cleveland, Jan. 15, as he would then be that far West on his way South.

On Long Island.

NEW UTRECHT GUN CLUB.

Dec. 9.—The New Utrecht Gun Club held its final target shoot for the season of 1896 this afternoon on its target grounds at Dyker Meadow. The small attendance may be directly attributed to the condition off affairs as regards club prizes. In Class A alone was there any chance of a close finish, Platt Adams having five wins to his credit, and J. Gaughen four; no one else was near enough to either of the above shooters to make it interesting. Event No. 1 was the shoot for club badges, and in this event only three Class A men entered: Gaughen, Adams and A. J. Smith. The latter was shooting a 20-gauge gun and could not do much owing to the high wind, retiring at the end of the 6th round. Gaughen won easily, Platt Adams also being unable to locate the targets on account of the high wind. Gaughen and Adams were thus tied for the Class A badge and had to shoot off at 25 targets each. The tie was won by Adams, who broke 21 to Gaughen's 20, the latter losing his 25th target. It is only fair to Gaughen, in considering his five wins for this badge, to state that his business interests absolutely prevent him from taking part in any of the shoots during the summer. Class B prize goes to Dr. Pool, the secretary of the club, with eleven wins. Dr. O'Brien winning the Class C medal with ten victories. Mr. Adams is thus the winner of two badges: the club Class A badge and the Hegeman badge, a very elegant piece of jewelry. Mr. Adams won the Hegeman badge with eight wins out of nineteen contests. Scores to-day were:

Events:	1	2	3	4	5	6	7	8	Events:	1	2	3	4	5	6	7	8
Targets:	25	25	10	10	10	10	10	10	Targets:	25	25	10	10	10	10	10	10

Nos. 1, 2, 3 and 4 were at known traps and known angles; Nos. 5 and 6 at unknown angles; Nos. 7 and 8 at 5 pairs.

ROCKAWAY PARK GUN CLUB.

Dec. 14.—Several members of the Rockaway Park Gun Club took part in the club's regular monthly shoot held to-day at Rockaway Park. The targets are thrown hard and low on these grounds, hence the scores, although by no means poor, are not as high as one would expect from the caliber of the shooters present. Event No. 2 was at 10 pairs; No. 12 at 15 singles, unknown angles, and 5 pairs. All the rest were at unknown angles. In addition to the scores in the table given below, several miss-and-outs were also shot, about 1,500 targets being thrown from the traps during the day:

Events:	1	2	3	4	5	6	7	8	9	10	11	12
Targets:	15	20	15	10	50	15	10	15	10	15	10	25

* Had 5 targets added to their totals in event 5.

CRESCENT ATHLETIC CLUB, OF BROOKLYN.

Dec. 19.—Several members of the Crescent Athletic Club, of Brooklyn, had a shoot this afternoon at the club's grounds, Bay Ridge. Five 25-target events were shot, the first three being at known traps and angles; the last two being at expert rule. Scores were:

Events:	1	2	3	4	5	Events:	1	2	3	4	5
J S S Remsen	21	..	24	18	17	L C Hopkins	10	14	..	..

In New Jersey.

BOILING SPRINGS GUN CLUB.

Dec. 13.—This was not a regular day at the Boiling Springs grounds, but a few members of the club put in an appearance for the purpose of having a little practice at targets. The scores made were as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
Targets:	10	10	10	10	10	10	10	10	10	20	10	25	25	10	10
Adams	8	9	7	6	8	7	9	8	8	11	4	19	22	6	8
Hegeman	8	7	5	6	8	8	8	7	9	14	..	..	..	6	..
Berg	4	6	..	..	5	4	8	7	4	14	..	..	..	..	..
Gray	..	..	..	..	7	6	10	10	7	17	7	23	11	8	9
James	..	..	..	..	..	7	5	7	7	11	5	..	..	6	..

All the above events were shot at unknown angles with the exception of No. 11, 5 pairs, and No. 14, expert rule.

Dec. 19.—A few members of the Boiling Springs Gun Club put in an appearance at the traps at Rutherford this afternoon. It was not a regular shoot, but hardly a Saturday afternoon passes during the year but what a little shooting takes place on these grounds. To-day's work was purely for practice. Six events were shot at unknown angles, three at expert rule, one man up, and three at 5 pairs. The glare caused by the bright sunlight on the snow was the only thing that affected the scores at all, although at times the wind blew strongly across the meadows. The scores made were:

Events:	1	5	6	7	*8	*9	Events:	1	5	6	7	*8	*9
Targets:	25	15	10	10	15	15	Targets:	25	15	10	10	15	15
Edwards	21	11	10	10	11	13	Baron	14	8	8	10	12	
Bernard	16	13	7	9	12	11	Harding	10	7	8	12	10	
Herrington	18	12	7	7	14	14							

* In Nos. 8 and 9 Edwards shot from scratch, the others each shooting at one extra target.

Three events, Nos. 2, 3 and 4, were shot at expert rules. Scores being as follows:

	No. 2.	No. 3.	No. 4.
Edwards	1101101110—7	0111111101—8	1011101111—8

AT ELKWOOD PARK.

Dec. 15.—Phil Daly, Jr., and W. R. Patten, of Pleasure Bay, N. J., shot a live-bird race to-day on the new grounds at Elkwood Park. The conditions were 50 live birds per man, Daly conceding his opponent 4yds. handicap. The result was somewhat of a surprise, Patten being an easy winner with the comparatively low score of 38. Daly could do no better than score 30 out of his 50. A strong northeast wind was blowing, making the shooting hard. Scores were:

W R Patten (26)	1221022210222122012112202—21
	0002102220231211100120221—17—38
P Daly, Jr (30)	2000200002022012022211102—14
	0122222220002102222222000—16—30

Two 10-bird matches were also shot by Wooley and Patten, each winning a match. In the first Wooley stood at 28yds., Patten at 26yds.; in the second Wooley went back 2yds. to 30yds., Patten again standing at 26yds. Each won a match. Scores:

	No. 1.	No. 2.
C Wooley (28)	2110122112—9	2002020021—5
W R Patten (26)	0220020200—4	3200211220—7

Joplin Gun Club.

JOPLIN, Mo., Dec. 10—Below are the scores made at our club shoot held to-day, the contest being one of our regular weekly medal shoots, 100 targets, unknown angles, handicap allowance of extra targets. Scores:

E. Webster (115) 96, W. G. Sergeant (100) 92, Taylor Cox (100) 91, C. M. Sumner (105) 90, H. T. Leeman (105) 86. W. G. SERGEANT.

Carver versus Winston.

CHICAGO, Ill., Dec. 21.—*Special to Forest and Stream:* Dr. Carver and John L. Winston shot two more 50-bird matches at Watson's Park to-day. Dr. Carver won them both, the scores in the matches standing as follows: First match—Carver 46, Winston 44. Second match—Carver 48, Winston 41. The weather was cold, with a light wind blowing. The birds were a good lot. E. HOUGH.

The Interstate Association's Annual Meeting.

MEETING OF THE STOCKHOLDERS.

THE annual meeting of the stockholders of the Interstate Association was held at Taylor's Hotel, Jersey City, N. J., Dec. 17. The Association having been incorporated under the laws of the State of New Jersey, it is always necessary that its annual meeting be held within the borders of that State. There was a capital attendance at the meeting, the firm of Parker Bros., of Meriden, Conn., being the only member of the Association that was unrepresented.

Paul North, the representative of the Cleveland Target Co., took the chair in the absence of the president, Mr. Chas. Tatham, of Tatham & Bros. Mr. Elmer E. Shaner, manager of the Association, acted as assistant secretary. The calling of the roll was the first business. The following is a list of those present and the firms represented by them: Cleveland Target Co., Paul North; Laflin & Rand Powder Co., Ed Taylor; Hazard Powder Co., J. L. Lequin; E. C. Powder Co., Noel E Money; Winchester Repeating Arms Co., Irby Bennett; Du Pont Powder Co., E. S. Lentilhon; Union Metallic Cartridge Co., J. A. H. Dressel; by proxy, Tatham & Bros., Von Lengerke & Detmold, and Leroy Shot and Lead Co. The honorary members were represented as follows: *American Field*, Major J. M Taylor; *Shooting and Fishing*, Jacob Pentz; Forest and Stream Pub. Co., Edward Banks.

After the reading of the minutes of the last annual meeting, held Dec. 17, 1895, on motion by Mr. Lequin, seconded by Mr. Bennett, Messrs. Laflin & Rand and E. I. Du Pont de Nemours & Co. were admitted to membership in the Association.

The manager's report was then read by Mr. Shaner, as follows:

THE MANAGER'S REPORT.

To the President, Officers and Members of the Interstate Association:

GENTLEMEN—I herewith submit the following report of the transactions of the manager's office for the season of 1896.

I fear it would be rather wearisome were I to read the entire statistical data in connection with the year's work, and therefore I have hereunto annexed a copy of the "Review of Tournaments," which contains all such information clearly and fully outlined.

The work accomplished and the success attained during the year now closing is far in advance of that of any preceding season in the history of the Association. When we consider the fact that tournaments were generally given at points where interest in the sport was lagging, and where the method of conducting an up-to-date tournament was practically unknown, it is readily apparent that many obstacles had to be overcome before success was assured. Therefore the outcome of the season's work is highly encouraging in every sense of the word.

At a meeting of the classification and tournament committee, held shortly after the last annual meeting, it was decided to devote the first part of the season of 1896 to the South, and the latter part to the New England States of Maine, New Hampshire and Vermont. No difficulty was encountered in making arrangements for tournaments in the Southern territory, and in Maine and Vermont; but it was found impracticable to arrange for one in the State of New Hampshire. The statistical data contained in the "Review of Tournaments" shows conclusively that the tournament committee has no reason to regret its selection of the points named.

GRAND AMERICAN HANDICAP OF 1896.

The season opened with the Grand American Handicap, held at Elkwood Park, near Long Branch, N. J. While it was the greatest live-bird event ever held in America, eclipsing all previous events of this charactor, it was most seriously marred by a very severe snowstorm, which set in after all arrangements had been made for the opening of the tournament. When the storm abated, the night previous to the day advertised for the opening, snow over a foot deep covered the ground, thus necessitating a great amount of extra and unlooked-for labor prior to the commencement of the shooting. The storm injured a most perfectly equipped and arranged tournament, for which the Association is justly deserving of credit. The leading factor in the success of the tournament was to my mind the methods adopted for dividing the purse in the main event, whereby a great number of contestants participated in the division of the money. I would strongly advocate a continuance of the same method, with a slight amendment thereto, at future Grand American Handicaps.

TARGET TOURNAMENTS.

The inanimate target season opened with the tournament given at Charleston, S. C. It is pleasing to note that the Association's work throughout the South is engaging the attention of many of the local sportsmen, and that several radical changes which have been made for the betterment and advancement of their interests are due to the well-directed efforts of our organization.

The Charleston tournament was largely attended by trap-shooters from far and near, and it served to awaken a renewed interest throughout that entire section of the South.

The next tournament was given at Birmingham, Ala. A modern tournament had never been given at Birmingham prior to the time of this one, and naturally great enthusiasm was manifested, which resulted in quite a number of new beginners taking part. This was very encouraging, and it would appear that the aims and objects of the Interstate Association will not be neglected in that section. A continuous rain during the two days' shooting no doubt materially interfered with the greater success of the tournament.

The Association then moved its paraphernalia to Natchez, Miss. There was a time when Natchez was noted as one of the most prominent trap-shooting centers in the South, and many a big event was held there under the auspices of the celebrated Gaillard Sporting Club, but during the past few years comparatively no interest was manifested in the sport by those who in former years were the prime promoters. The Interstate tournament served to rekindle the old-time love of the sport, and numerous devotees congregated from different points to strive for supremacy, as they did in days of yore. The results were eminently satisfactory from every point of view. This tournament marked the close of that part of the season devoted to the Southern territory.

Portland, Me., was the city selected for the opening tournament in the New England States. The results came in the nature of an agreeable surprise, it proving to be the banner target tournament of the season. A better point could not well have been named, as the number of new beginners participating and the interest manifested was greater than at any previous tournament given during the season. The benefits accruing from this tournament were of such a nature as would guarantee the success of future ventures that may be made in that direction.

The second New England tournament was given at Burlington, Vt., and, similar to the preceding one, was a decided success. The stimulus given to trap shooting at this point was of that permanent and lasting character which assures results that must eventually redound to the benefit of our organization.

Finding it impracticable to arrange for a tournament in New Hampshire, it was decided to close the season at Marion, N. J. This city being in such close proximity to the metsopolis, it was not to be expected that many new beginners would put in an appearance, and consequently the tournament was attended mainly by the "old guard."

The foregoing review of the season's work must not be taken as a complete measure of our accomplishments, for we have improved, directly and indirectly, the conditions of many gun clubs other than those under whose auspices we gave tournaments.

THE SEASON OF 1897.

The possibilities for accomplishing a great amount of good in our particular line have never been better than at the present day; therefore every effort should be made to increase the scope of the Association's work during the season of 1897. As such a course could not well be pursued with the present limited membership, I believe the present time to be the proper one to present our aims and objects to manufacturers outside of the Association whom we are desirous of becoming subscribers thereto. Should such a movement meet with success, the result would be a broader, grander, greater and more liberal system of organization. By placing our principles and accomplishments before those manufacturers, the resultant effects cannot but prove beneficial, even though no increasement of membership is experienced.

GRAND AMERICAN HANDICAP OF 1897.

I would recommend that all details pertaining to the Grand American Handicap of 1897 be given due consideration, and that a committee be appointed to take charge of the matter with full power to act. It would appear to me, from the numerous complaints and suggestion received from participants in our previous handicaps, that it is almost imperative that the place selected for holding same be easy of access and in close proximity to New York city. In view of our experience of last year, I would advise that the Association refrain from handling birds at future handicaps unless it be found that other and satisfactory arrangements cannot be made It has been demonstrated beyond cavil that the dividing of small live-bird events in accordance with class shooting does not meet with approval; therefore I would suggest that the programme for the Grand American Handicap tournament of 1897 consist entirely of high gun events.

TARGET TOURNAMENTS FOR 1897.

I am in receipt of numerous communications requesting our co operation next season. This condition of affairs is extremely gratifying, and is something entirely different from existing conditions at the close of former seasons. It is also conclusive proof that the aims and objects of the Association are being better understood by sportsmen generally, and the natural result follows, viz.: A greater demand for our assistance. Noting the number of inquiries received, and also noting that during the season of 1896 we were compelled to refuse, for obvious reasons, many applications for tournaments, which if complied with would no doubt have inured greatly to the benefit of our organization, it would seem politic to consider well the advisability of giving a larger number of tournaments during the coming season than heretofore.

MINOR MATTERS.

The permitting of clubs to select such handicap, method or system of dividing purses as they deemed most advantageous for their particular tournament gave general satisfaction, and I would advocate a continuance of this rule.

The impediments of the Association is stored at Pittsburg, covered by insurance, and, with the exception of a few slight repairs needed, is in first-class condition.

CONCLUSION.

The thanks of the Association are due to the sportsmen's journals for their generous and hearty support throughout the past season. They have ever been ready and willing to aid and advance our interests through all legitimate means at their command.

In closing this report I desire to express my gratitude to the officers and members for the uniformly kind and courteous treatment accorded me and for valuable assistance rendered.

Very respectfully submitted,
ELMER E. SHANER, Manager.

The report, on motion of Mr. Bennett, seconded by Mr. Taylor, was accepted as read.

A communication from the San Antonio, Texas, Gun Club was referred to the classification and tournament committee.

The treasurer's report was read and ordered to be placed in full on the minutes of this meeting.

ELECTION OF THE BOARD OF DIRECTORS.

The next business before the stockholders' meeting was the election of directors for the ensuing year. On motion of Mr. Lequin, seconded by Mr. Bennett, Mr. Dressel was directed to present the names of seven persons for election as directors. In accordance with the above motion, Mr. Dressel proposed, seconded by Mr. Lequin, that the following gentlemen be elected as directors for the year 1897: Messrs. Lentilhon, Bennett, Dressel, J. von Lengerke, Noel E. Money, Paul North and J. L. Lequin.

The above were declared duly elected and the meeting of the stockholders then adjourned.

MEETING OF THE BOARD OF DIRECTORS.

On motion of Mr. Dressel, seconded by Mr. Lequin, Mr. North was elected chairman of the meeting, Mr. Shaner being again chosen as assistant secretary. The minutes of the previous meeting of Dec. 17, 1895, were read and approved without alteration.

Then came the election of officers for 1897. The following were elected: President, J. A. H. Dressel; Vice-President, Irby Bennett; Secretary-Treasurer, John L. Lequin.

Committees were appointed as follows:

Executive Committee: Messrs. Dressel, Noel E. Money and Ed. Taylor.

Classification and Tournament Committee: Messrs. Irby Bennett, Justus von Lengerke, Noel E. Money, Paul North and J. E. Lequin.

Club Organization Committee: Messrs. Chas. Tatham, O. D. Delano, E. S. Lentilhon, J. L. Lequin and A. W. du Bray.

By a unanimous vote, accompanied by a hearty vote of thanks, Mr. Elmer Shaner was elected manager of the Association at a considerably increased salary, the increase in the salary being made to express more fully the appreciation of Mr. Shaner's efforts in behalf of the Association during the years in which he has acted as its manager.

Mr. Lequin then made a motion, which was seconded by Mr. Bennett, that a committee be appointed to wait upon manufacturers and dealers of sporting goods not connected with the Association, for the purpose of acquainting them more fully with the objects and aims of the Association. The committee was appointed as follows: Messrs. N. E. Money, J. A. H. Dressel, Bennett and Lequin.

NUMEROUS APPLICATIONS FOR TOURNAMENTS.

In the course of some desultory conversation, Mr. Lentilhon spoke in behalf of Baltimore as applicant for a tournament next year. Mr. Money also asked that the claims of Lewiston, Me., be given due consideration by the Classification and Tournament Committee. Mr. Shaner, addressing the chair, read the following long list of applications for tournaments received to date: Baltimore, Md.; Monroe, La.; Pueblo, Col.; Montpelier, Vt.; Lewiston, Me.; Meadville, Pa.; Portland, Me.; Rochester, N. Y.; Boston, Mass.; Burlington, Vt.; New Haven, Conn. Mr. Shaner said that the length of this list, considering that it was but the close of the season, was something unprecedented in the annals of the Interstate Association, and showed most conclusively and satisfactorily that the good work of the Association was being better appreciated from year to year. All the above applications were referred to the Classification and Tournament Committee.

A hearty vote of thanks was then accorded the retiring secretary-treasurer, Mr. J. A. H. Dressel, the motion to that effect being made by Mr. Bennett and seconded by Mr. Money, both gentlemen referring in very complimentary terms to the amount of work done by the gentleman named in behalf of the Interstate Association.

On motion of Mr. North (President Dressel now occupying the chair), seconded by Mr. Money, all the details in regard to the choice of grounds, etc., connected with the Grand American Handicap of 1897 were left to the Classification and Tournament Committee. It was also decided to guarantee $1,000 in the Grand American Handicap, adding all surplus, as in the past. The division of the moneys was left to the same committee, the understanding being that the division should be on the same lines as this year, a system that proved decidedly satisfactory judging from the increased number of entries.

THE HANDICAP COMMITTEE.

Mr. North, seconded by Mr. Money, moved to appoint as handicap committee Messrs. Jacob Pentz, J. M. Taylor, Edward Banks, Will K. Park and Elmer E Shaner. On motion of Mr. Money, seconded by Mr. Bennett, a request was made that nobody other than the members of the handicap committee be allowed in the room while that committee was performing its duty, unless by special request of the committee. Mr. Money also offered as a motion, seconded by Mr. North, that the committee be empowered to handicap by half yards wherever they may see fit so to do

Mr. North then offered the Association the use of two magautraps, free of charge, at all its target tournaments during the coming season.

The offer was accepted with thanks, and meeting then adjourned.

Trap Around Albany.

WEST END GUN CLUB.

ALBANY, N. Y., Dec. 10.—The shoot to-day on the grounds of the West End Gun Club, of this city, was attended by five members of the club. Some very good scores were made, the two Sanders, Henry and John, breaking respectively 95 and 93 out of 100. Harry H Valentine broke 91. Samuel Goggin was fourth with 79, W. H. Hallenbeck withdrawing at the end of the 75th round. Scores were as follows:

H B Sanders..0111111111111111111111101111111111111111111111111110—47

SWEEPSTAKES AT RIVERSIDE

Dec. 12.—The grounds of the old Greenbush Gun Club at Riverside were once more the scene of some live-bird shooting, several experts with the gun meeting there to-day for the purpose of trying their hands at pigeons. Among those who took part were: Messrs. Arnold, Camden and Page, of Albany; Perkins, Betts and Goggin, of Troy; Ovid Mather, of Greenbush, and M. F Roberts, of Rupert, Vt. Messrs. Thomas H Greer and John Greer, of Albany, acted as referee and cashier respectively. The weather was fairly good, though the sky was cloudy; yet there was no wind to make things really uncomfortable for either shooters or spectators. The scores made in the various events are given below, the first six events being $1 miss-and-outs:

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.	No. 6.
Perkins	111	11112	21111	1	2•	0
Arnold	223	•	11121	1	2110	11•
Roberts	12•	11211	1222•	1	2111	111
Page	•	0	.....	..	....	...
Betts	0	21121	11110	0	1212	210
Knowles	.....	.....	.....	0	110	0
Camden	.....	.....	.....	0	....	...

Sweeps were shot as follows:

	No. 7, 10 birds, $5.	No. 8, same.	No. 9, 5 birds, $3.
Goggin	1111211111—10	0100120 w	.....
Roberts	211•0•221•— 6	1111•00111—7	.....
Arnold	1111020•11— 7	1011201211—8	10111—4
Perkins	20•2201021— 6	0••0110• w	11111—5
Mather	.....	.....	11110—4
Day	.....	.....	0•011—2

No. 10 could not be finished, as the supply of birds gave out. Perkins had 4 out of 5, Arnold 4 straight, and Mather 2 out of 4.

The Proposed New Rules for Trap-Shooting.

THE proposed new rules for trap-shooting (targets), published in our issue of Dec. 12, have attracted a great deal of attention, and we have received many extremely friendly criticisms and suggestions well worthy of consideration.

It was not supposed for one instant that the proposed rules would meet everybody's views, and for that reason we asked suggestions and queries regarding the same. The proposal to limit the weight of guns is evidently a sticker, and this point will have to be carefully considered. The bulk of opinion, however, at present is on the side of "weight of guns unlimited." Many people want to bar 10-gauge guns altogether, but while such legislation might do here in the East, 10-gauge guns are by no means extinct at trap-shooting tournaments in far Western points.

The question as to what would be fair to the shooter in double-target shooting when the shooter has a missfire with the second shell, or when he has broken his first target only to find that his second is an imperfect one, is something that has much to be said on both sides. The ruling that leaves the least room for trickery is what we want to get at.

Mr. Will K. Park, in *Sporting Life* of Dec. 19, closes an exhaustive review of the proposed rules with the following paragraph:

"It now remains for the Sportsmen's Association to revise the set of rules now in use or use those revised by Mr. Banks, provided they are found to be correct and 'up-to-date' in every particular. There may be some changes needed and a few trap-shooters may be able to pick flaws or suggest changes that would suit them better, but we believe the Sportsmen's Association are the proper ones to select and prepare for the trap-shooters of this country a set of rules that will cover everything in trap shooting. Rules for live-bird shooting should be revised, and then be issued in book form for the benefit of gun clubs and trap-shooters."

We entirely agree with Mr. Park that the Sportsmen's Association, an organization which we believe has the interests of the sportsmen of this country at heart, and which already numbers among its members many well-known and practical trap-shooters, is the proper body to promulgate a national set of rules. At the time of drawing up our revision of rules for trap-shooters we had no idea that the Association intended taking up this important matter. Having become aware of that fact, we have offered to the Association a draft of our proposed new rules, with a view to aiding its committee (not yet appointed) in its work. All correspondence on doubtful points will also be at the service of this committee. FOREST AND STREAM believes firmly in the principle of the greatest good for the greatest number, and is willing to sink its own interests in this matter for the benefit of the shooters of this country if such action is necessary.

Revised rules for live-bird shooting, referred to by Mr. Park, are now in type, but owing to the crowded state of FOREST AND STREAM'S columns we are unable to give them to the public just at present.

Philadelphia Trap-Shooters.

KEYSTONE SHOOTING LEAGUE.

PHILADELPHIA, Pa., Dec. 12.—Several members of the Keystone Shooting League were present at the club's grounds, Holmesburg Junction, this afternoon. A series of four 25-target events, expert rules, were shot, with the following results, W. H. Wolstencroft scoring 81 out of his 100. Scores were:

Events:	1	2	3	4	Events:	1	2	3	4
Targets:	25	25	25	25	Targets:	25	25	25	25
Henry	19	21	17	21	Johnson	..	19	19	..
Longenecker	17	17	20	16	Rothacker	..	12	..	..
W H Holstencroft	20	22	22	17	Landis	..	..	..	18
Ridge	17	..	..	15	Shallcross	..	..	..	15
Jas Wolstencroft	17	..	..	..	Wilson	..	..	..	16
Leaming	..	18	..	..	Anthony	..	..	..	19

Two miss-and-outs, $2 entrance, were also decided, with the following results:

No. 1: Landis, Rowcroft and J. Wolstencroft 6; Rothacker 3, Johnson and W. H. Wolstoncroft 2; Murphy 1, Felix 0.

No. 2: Rothacker and Jas. Wolstencroft 5; Landis 4, Rowcroft 3.

The following match was also shot to-day on the grounds of the Keystone Shooting League. The conditions were: 25 live birds, $50 a side, 30yds. rise, 50yds. boundary:

Scores of Pittsburg Shooters.

HERRON HILL GUN CLUB.

PITTSBURG, Pa., Dec. 12.—The new set of traps just installed at the grounds of the Herron Hill Gun Club, of this city, at a cost of $300, were given a trial to-day. Two 10-bird events were shot, as well as a miss-and-out. The miss-and-out was won by C. A. May and Anson with 4 straight. The scores in the 10-bird events were as below:

	No. 1.	No. 2.
Strong	2210211021— 8	2212111121—10
McPherson	1222212222—10	2020022001— 5

Forest	1002102200— 5	2122121121—10

HAZELWOOD GUN CLUB.

Dec. 12.—Bill McCrickart had a good lot of birds on hand to-day for the shoot at the Hazelwood Gun Club's grounds. The chief event on the programme was a 25-bird race between Ewing and Crossland, both standing at 30yds. The men were evenly matched, and the race resulted in a tie with 20 kills each. Ewing lost his 2d, 3d, 5th, 7th and 15th birds; Crossland lost his 2d, 5th, 10th, 11th and 18th birds. In the three sweeps that followed the scores were kept without the use of the figure 2. John C. Messner acted throughout as referee. Scores were:

	No. 1.	No. 2.	No. 3.
Crossland	1111011111—9	1110101111—8	.....
Bessemer	1111111011—9	.....	.....

Lake Side Rod and Gun Club.

BURLINGTON, Vt., Dec. 16.—A special shoot of the Lake Side Rod and Gun Club was held at the club's grounds this afternoon. The main event was a 50-target handicap for one of Laflin & Rand's silver kegs of the firm's W-A powder. The weather was extremely cold, the thermometer registering only eight degrees above zero, while the northwest wind came across Lake Champlain at a gait of about forty miles an hour, and played tag with the targets and the whiskers of the shooters to such an extent that good scores were an impossibility. Messrs. Ellsworth and Pease, members of the Cambridge, Vt., Gun Club, were guests of the club to-day, Mr. Ellsworth tieing the winning score for the keg, which became the possession of E. E. Morgan, the scratch man of the club members. In addition to shooting along with the boys, Mr. Ellsworth donated a box of cigars as a second prize in the trophy contest; this prize was won by Dr. H. E. Colvin. The scores in detail are given below:

Morgan (50)...01011110111111100010010100111101101011011110100101—31

J. S. DENNING, Sec'y.

Trap at Chicago.

147 VS. ROLL.

CHICAGO, Ill., Dec. 18.—Times have been a trifle lively in shooting circles at Chicago this week, though so far only one match has been shot, that for the Du Pont championship trophy, Dec. 12, between 147 (J. L. Winston) and George Roll, of Chicago, winner of the trophy in the last contest before the present one. An event of this kind, especially when it occurs after the close of the Tammany trap-shooting season, is sure to excite more than local interest. It is probable that over 200 shooters assembled at Burnside to witness this race, and that is a very large crowd for a Chicago shoot. Among those present from outside were Charlie Grimm and Fred Gilbert, from Iowa. Chicago trap clubs were well represented, especially, of course, the Blue Island Club, of which Mr. Roll is a member, and there were a number of shooters in from adjacent shooting towns. All in all it looked a bit like old times in Chicago, and the talk of the shooters among themselves after the close of the race made a general whoop la reminiscent of the palmier days in this city. Challenges were thicker than razors at a darky wedding, and champions, oh! dear.

The race for the trophy was a very pretty one in some respects, though not close enough to afford the interest it might otherwise have held. For the past ten days Mr Winston has been in the form of his life, and the knowing ones could see no one else as winner in this contest. Yet it is without doubt true that Mr. Roll was the local favorite, many shooters remembering the long runs on pigeons he has made within the last year, and joining in the confident belief of Mr. Jake Rehm, Mr. Roll's discoverer and backer, that Mr. Roll is the coming pigeon shot of this section. In practice at the grounds for the past few days, Mr. Roll has been doing good work, being well tried out with Dr Carver and other good ones, and has acquitted himself as well as could be asked. The work of sweeps and practice matches, however, has before now deceived many a shooter or observer of shooters, and when the time of the actual match came it was seen what a vast gulf intervenes between such shooting and match shooting against an old campaigner such as the one Mr. Roll was to meet. Mr Roll was out of the match at the first ten birds, and at the 50 turn all interest in the event was over, from a sporting standpoint.

Mr. Roll shot a Smith gun, as did Mr. Winston, but while the weapon of the latter was a grand one, that of Mr. Roll has been by some means shot out or injured so that it did not hold the load together as well as it should. Mr. Roll wished to purchase another gun for this race, but was advised not to change until afterward. Two or three times he appeared to cover and jar a bird well out in the field, which Mr. Winston's gun might have cut down. Throughout the race, however, Mr. Roll comported himself as a gentlemanly and able shooter, who shot a good race and is yet to shoot a great many better. There is only one way in which he can get experience and that is by shooting matches. This he has not yet had time to do.

Mr. Winston was as usual absolutely confident of himself. Winner of 12 out of his last 14 matches, engaged in the sort of employment he likes and in the best physical health he has enjoyed for years, he would on Tuesday last have been an awkward man for any one to beat. When Mr. Duryea beat Mr Winston here last summer the latter weighed only 140 pounds. He now weighs 164, and it was the comment of many who saw him at the score that they had never seen him looking better. He never shot a better race in his life than this one, nor did any one ever see a cleaner or more gentlemanly race shot between two men. Mr. Roll sat down back of the score after each shot by his handler, who threw an overcoat over his shoulder. Mr. Winston stood up at the rail near the gate and never sat down once during the match, nor spoke a word to any one. Mr. Roll wore the usual shooter's jersey and Mr. Winston was clad in a blue jacket worn over a warm buckskin shirt.

Prior to the shoot, and soon after his arrival in town, Mr. Winston walked up to a card hanging in the club house at Watson's Park and marked down a long figure 7. This he explained by saying that he had left Cleveland on car No. 7, in lower berth No 7, that he shot load No. 147, and was going to beat George Roll by just 7 birds. Whether Mr. Winston is the seventh son of a seventh son or not one does not know, but in this case he seemed to have the gift of prophecy. At the 50 turn George Watson, who sat by the writer, offered to make any sort of a wager that Mr. Winston would win by just 7 birds. There are two ciphers in the last 5 birds of Mr. Winston's scores, at least one of which might not have been there had he been crowded. His longest run was 38. In Mr. Winston's shooting it was readily apparent that he has entirely changed his style of shooting since leaving Chicago last summer. He is very much quicker on with his first and faster with his second. Yet that he was not guilty of mechanical shooting was shown in the deliberate care he used on side shots and incomers where he had plenty of time. His practice on rattling good birds at Zwirlein's has been of service, yet it has not taught him to forget the one-bird-at-a-time rule of his earlier shooting.

The birds used in this match were a good lot, only 4 being flagged out of 200, and they flew well and strongly, though they were not as hard as they would have been on the same grounds had there been a little wind and a bit of sunshine to liven them up. The day was dull and raw, not very cold and not a regulation pigeon day for this park.

Mr. Roll was unfortunate enough to lose his first two birds over the line, and at the 10th bird was 4 behind. At the 11th bird he was 5 behind, and thence the gap was never closed. At the first 25 turn Mr. Roll was shooting steadily. At the 50 hole he was less steady. At the 75 hole he was doing his best work, and making his longest run. Mr. Roll was liberally applauded at his good kills by friends who evidently wished him to win. When Mr. Winston lost his 48th bird, which was hit twice and turned both times, but went out, some thoughtless person called out "Go on! go on!" as hoping that the bird would go out. John Watson, who was referee, promptly reproved that sort of thing, and said he wanted no more of it.

The retrieving was done by three dogs. Mr. Winston's 45th bird was hit light, and the dog drove it over the line. His 53d was nearly out when caught and saved by the dog. His 76th was well out when hit and turned coming in; seeing that it would fall to the ground, Winston held his fire until it had fallen, the nature of the operation showing very clearly the coolness and deliberation with which he was shooting. His 87th bird was hit light and carelessly, but his 88th, feathered lightly by the first barrel, went over, accompanied by a look of surprise on the shooter's face. His 92d bird was killed very far out in the deep field, and his 95th, a very high and far bird, flying strongly, fell at easily 50yds from the score, calling out applause for Mr. Winston for almost the first time.

Mr. Roll's 47th bird was a hard one, and went out minus some of its feathers. His 49th and 50th birds both got over the line. His 72d wabbled up almost to the dead line, but fell just inside. His 75th was a screaming good kill. He lost his 79th, a low, fast bird, which was not centered with the first barrel. When Mr. Winston lost his 88th bird, it was a big white bird, which was only feathered lightly. When Mr. Roll shot his 88th bird he got the same colored bird which flew in precisely the same direction, was shot in precisely the same way and also lost. His 89th bird was a fast driver, hit very lightly, if at all.

When Mr. Roll came to shoot his 96th bird there occurred a peculiar and unique circumstance, one which never before happened to John Watson's knowledge on his grounds, one which has never been seen by any shooter so far as known, and one not covered by any shooting rules. There is a light 2ft. wire fence used as a boundary line on these grounds, and the bird, which was hit hard, lit directly on this fence, where it perched unsteadily and then fell off on the inside. The dog was sent after the bird, which then rose and flew out, and was of course lost. Mr. Winston asked the referee what would have been the result had the bird been gathered, and Mr. Watson replied that he should have scored it a dead bird, as he considered the wire boundary no fence at all, but simply a boundary line agreed upon by all.

As stated, both shooters used L. C. Smith guns, with Du Pont powder, of course, each shooting 3½drs. Mr. Winston used Winchester Leader shells, and Mr. Roll U. M. C. Trap shells. The following are the scores of the race:

147 VS. CARVER.

DEC. 19.—We had a shooting match here to-day, and it wasn't a tie. As reported in matter sent yesterday evening, Dr. Carver finally agreed to make good his proposition to Winston to shoot him six races at live birds, 50 birds each race, for $50 a side, and to bet him $100 to $47 that Winston would not win one of the six. Winston would accept no explanation of a personal sort, but said to Dr. Carver in the presence of another, "You will either make your refusal to shoot as public as your challenge to shoot, or you will have to make good your own proposal and go to the score with me. It's either shoot or apologize publicly." This stirred up Dr. Carver and he showed the true sort of manhood and grit by saying, with emphasis:

"I'm going to California soon, and I'll walk the whole way before I'll apologize or retract. I'll shoot you as I said I would."

This sort of talk is a lot better than newspaper bluffing, and it is the sort which will make friends for a man, whether he wins or loses. The result of it was that Winston did not go home, but was on hand this morning, apparently happy, though still saying he knew he had a hard game ahead this time. Winston's cold was better, and he appeared fresher and stronger than he did yesterday. Dr. Carver, big and powerful, as fine built a man as stands in America to-day, seemed, as he always does, full of strength and vigor. He was by all odds a favorite, as many Chicago men believe he is invincible, but only about a couple of dozen men were assembled at the grounds to see the match, it not being generally known that the shoot was to come off.

FIRST MATCH.

The day was a peculiar one, brightish, though a little overcast, the sun peeping out now and then. The wind was very light, its direction being that of a left-quartering incomer, or slightly to the left of the shooters' faces as they stood at the score. The weather was chilly and raw, but not severely cold, light snow falling during the morning. It was not a hard pigeon day at all, and the birds did not average absolutely so hard as they are often seen here, though they were fresh and strong, some of them screamers, and all prompt to start except 4 out of the 200. The number of incomers was unusually large. The luck of the birds, if any such thing can exist in a 100-bird race with King automatic traps, seemed distinctly to favor Winston, at least on several times, when he caught an incomer against a hard driver for his opponent. Yet it was the incomers which troubled Dr. Carver, the left-quartering incomer being practically his hoodoo and throwing him out of the close thing the race might otherwise have been. Dr. Carver shot with all his ease and elegance, and Winston with the added snap and speed he brings back with him from his trip East. Winston is a better pigeon shot to-day than he ever was in his life, and better than a good many of his friends thought before seeing him this fall. He was very cool and careful with his incomers and let none get away; his lost birds being swift outgoers for the most part, two of which did not seem to be touched at all. Yet it should not be thought he was dull at the hard ones, for a few looks at some of his long stops would have disabused anybody of that impression very soon. He is better at fast drivers than he ever was, but uses time when he has time to spare. On one twisting incomer especially, his 20th bird, he showed great skill, waiting a seemingly interminable time for the wild twister to steady down as it came in, and then cutting it in two almost at the line.

As the men stood at the line, some difference was noticeable in their conduct. Dr. Carver walked up and down behind Winston all the time nervously and commented on the race. Winston stood still at the gate, never sitting down, and talked very little, only answering his opponent a few times, and with no animosity at all. He complained once, with possible sarcasm, that the talk of his opponent had made him miss a bird; and once he said, after killing a hard one, "How's that?" replying to the wish of his rival that he might at last get a "decent bird to shoot at." Carver's first bird was a sharp driver, and Winston's a soft incomer. "There's a contrast," said Carver, and he repeated it in a grieved tone when the same thing happened at the second bird. As the race progressed, however, it became quieter, and the men seemed to commend or criticise each other in a more friendly way, though Carver continued to complain about his hard luck, and his poor shooting occasionally. Winston sawed wood and said little, and the race was a pleasant one to watch and report.

It should be understood again that the race in each case was at only 50 birds, though the two races were shot without intermission. Winston asked time at the close of the first match to go in and get a cup of coffee, but Carver wanted to go on, so Winston drank his coffee at the score. It began to spit snow at the beginning of the second race and the wind was just a trifle fresher. When Dr. Carver killed one or two stiff ones he said: "That's the sort of birds that show whether you can shoot or not," and Winston naïvely replied he would like to shoot him on 200 of that sort. Had the wind been in the opposite direction it is possible neither score would have been so high.

In the first match Carver's 7th bird was hit full, but got over. His 13th and 16th were both narrow squeaks, wabbling almost over before dropping. His 37th bird was a corker, and so was the next, though it went higher. His 42d got away unhurt apparently. He seemed just a shade slower at times than Winston, and so some of his drivers seemed very hard to stop, though at these it seemed the big 'un could not miss. It was the incomers that were hard for him. His 26th bird was hit hard as it came in, but wabbled over the line and fell stone dead. He crimped his next 5 handsomely, and then got another backhanded incomer, which also wabbled over, and 7 birds further on he lost yet another left-hand incomer, thus coming rapidly back to Winston, whom he led at the 25 turn by 2 birds, and who meantime had been pounding along with only one more miss. In the first 20 birds it was said by a spectator, "Jack'll never catch Carver again in this race," but at the 40 hole Winston led by 1 bird, and each dropping a bird after that, Winston went out winner with this lead. Winston's 10th bird was seemingly not touched. His 14th was a corker, and so was his 17th, which he lost. His 42d was a hard one, but was scored. His 45th seemed not hit, and his 48th was killed after a very long wait for the fire. His 49th was a strong bird and slow to drop, but was scored.

Winston shot an L. C. Smith gun, with his load 147 A, Austin Smokeless, in Winchester Leader shells. Dr. Carver shot a Cashmore gun, with 8¼in. U. M. C. Trap shells. He declined to state what powder he was using. His empty shells had the smell of a faint banana flavor. The following is the score, 50 live birds, $50, A. S. A. rules:

SECOND MATCH.

The first race was a very pretty one, and all who had come out to see it felt very well repaid. Winston especially had cause for gratification, because at the very first race of the six he had won his side bet, taking down $100 at once, and also his stakes of $50. He felt himself "vindicated," as he expressed it, and remarked that he did not care if he lost the next five races. But he did not shoot as though he meant this literally. On the other hand, he spoiled the prettiness of the contest by walking far ahead of his competitor and beating him out by 5 birds in the 50. Carver lost his very first bird in this race, and was able to score only 21 out of his first 25, Winston meantime assuming a form which made him a "lead pipe" for winner of this race also. He finished the race with his teeth chattering with cold, the weather now having turned a trifle more raw if possible. The birds were, if anything, better in this race.

Carver's 5th and 6th birds were screamers both of them, and so was his 7th, over which a most peculiar circumstance happened. The bird was a very fast and strong one, was knocked down far out in the field straight beyond No. 3 trap, where the dog started for it. Carver stood and was talking about the hard luck he had had in drawing tough birds, and was receiving congratulations upon stopping such a vicious one, when the bird got up and flew directly in over the dead line, and so was lost. It passed within a few feet of the men at the score, and could almost have been caught had it been noticed in time. When Winston missed his 9th Carver said laughingly, "You can't kill good ones," to which Jack replied that he knew he couldn't. Winston's 12th, 15th and 17th birds were all wicked ones and needed fast and good work, and the same should be said of Carver's 18th and 21st. Winston killed his 22d almost at his feet. His 23d was a snake to the right, where he missed it. "Oh!" said Jack, and then held his fire, as the bird swiftly doubled and went back where it came from. After a long wait he cut it down. At the next bird almost this same thing was done again. His 25th was a long driver, and his 26th was saved only by luck at the wire. Carver had a nasty one in his 28th, but on his 32d he got the only bird which had to be flagged for him. "Thank the Lord," said he, "I've got one of them Kansas City birds. Scare him up and see me kill him," which was done. Carver's 33d was another instance of hard luck. He hit it full with the first, and it was nearly down when the second came, which seemed to scare it, the bird rallying and going on out. The birds here were beginning to average pretty tough ones. Winston's 33d, a high white bird, was hit well, but wabbled over; and this happened also with Carver's 37th, a bob-tailed white bird. Winston's 38th was spatted twice in a second, and none too soon and hard, for it was ugly. His 41st was a strong one, and wabbled over the line. Carver's 42d was a grand kill, a far and high driver going sharp, and he was applauded by Winston for it. Carver caught another of his hoodoos on his 44th, an incomer which twisted around to left and over; and he missed his last bird, a worming driver which was shaken up, but not severely. Carver never got within two birds of Winston at all in this race, and while it was pleasant to see two such shots at work, the race itself was not close enough to be eventful. The men shook hands at the close of the race and joked about it. Carver seemed disappointed, and felt that he was not up to his place. Winston still insisted that he did not feel sure about the next races, which are to be shot Monday, but thought Carver would be harder to beat then than he was to-day. Winston thinks Carver a hard man to beat, and spoke very highly of his gameness in agreeing to shoot him the six races as offered. In this one is not quite clear, as in all good sporting ethics a man is supposed to do his thinking before he makes his challenge; and no challenge would ever be printed in a careful paper unless made as *bona fide*, and with forfeit accompanying. The following is the score of the second match:

Trap score type—Copyright 1896 by Forest and Stream Publishing Co.

Dec. 19.—At the close of the races with Carver to-day, Saturday, Winston met Fred Gilbert, and again took up the matter of the combination race, targets and birds. This time Winston offered to concede to Gilbert the order in which the races should be shot. The men will shoot next Thursday at John Watson's roof garden, 100 live birds, A. S. A. rules, and 100 targets, expert rules, for $50 a side, total scores to count.

It is likely there will be a race on with the winner of the Cast Iron badge if the latter will agree to shoot soon. Winston goes home for Christmas, but will return soon if necessary.

When Mr Louis Duryea, of New York, was here about three weeks ago he deputized Mr. R. B. Organ to see Dr. Carver, and to tell him that if he cared to come East this winter he could be assured of five races, for $500 to $10,000 a side. Dr. Carver says he will be in New York probably in April, and will shoot three races for $1,000 a side unless something unforeseen should arise to prevent. He is going to Europe in the spring.

Among the airy trifles which have come to naught are two more propositions caught flying about in the air this week. The irrepressible Winston, who has made so much circus in Chicago this week, offered to shoot a four-ply race, majority of scores to count, he to shoot Bingham and Carver one day and Gilbert and Grimm the next, one against the four; $100 a race, 100 birds. This is not so odd as the race Abe Kleinman offers Oswald von Lengerke, which is that they shall shoot at 50 birds for $25 a side, Mr. Kleinman to stand at 30yds., Mr. Von Lengerke to stand at 10yds. and use a field gun, open bored; the race not to come off till a good southeast wind shall blow! This wind would make the birds run incomers, and so would prevent the shooter at the 10yd. mark from having more than 10yds. swing, as he would not dare shoot back of where he stood, lest he should shoot into the crowd.

Yet another odd bit of gossip comes up. Some ten years ago, at one of the old Illinois State shoots, Abe Kleinman and Roll Organ tied for a diamond medal known as the Charles Wilcox medal, which was for highest score in some event not now fresh in memory. This tie has never been shot off, and yesterday Abe asked Roll if he was willing to shoot it. At last they agreed to buy it and not shoot it, and it was decided to give or take $20 for the odd half interest. Mr. Kleinman bought out Mr. Organ and now owns the medal.

If things keep up this way we will make a shooting town out of Chicago again before long. E. HOUGH.

1206 BOYCE BUILDING, Chicago.

More Scores from Watson's Park.

CHICAGO, Ill., Dec. 14.—J. L. Winston, Dr. Carver and George Roll had some practice on live birds to-day. Winston shot at 65 birds, scoring 57; Carver scored 26 out of 30; Roll 35 out of 45.

Dec. 15.—Winston shot at some practice birds to-day in addition to his match with Roll for the Du Pont trophy. He scored 68 out of 81 shot at. Dr. Carver shot at 25, making a straight score. Other sweeps shot were:

No. 1.

George Roll	2212212112 —10	Fred Gilbert	2001222111— 8
S A Tucker	1211221111—10	M White	2121012011— 8
E Bingham	2212112022— 9	E S Rice	1021202101— 7

No. 2 was at the same number of birds (10 per man); there were seven entries, and out of the 70 birds shot at only five got away. Score:

Dr Carver	1221212212—10	Dr Shaw	1212112101— 9
Fred Gilbert	2122122112—10	R Kuss	1201221212— 9
E Steck	1221211212—10	Searles	1100221122— 8
T P Hicks	1122021121 9		

Dec. 16.—J. L. Winston was on hand again to-day, and shot at 80 birds, scoring 26. C. S. Wilcox shot at 20, scoring 18.

The Audubon Gun Club, of this city, held its shoot to-day, the club event being a 15-bird event, handicap rise, and allowance of misses as kills. As will be noticed, C. S. Wilcox and Dr. Frothingham could not break their tie, although they shot at 60 birds each. Scores:

Dr Frothingham (29)	122222122122221—15+1—15
C S Wilcox (28)	101202111122211—13+2—15
F Lord (28)	101212011211120—12+2—14
J H Amberg (28)	021111121101101—12+2—14
J M Gillespie (30)	1000200210211 10— 8+3—11
Dr Carver*	2022221222112222 —14

* No distance given.

First tie on 15:

Dr Frothingham	122222221222112—15+1—15
C S Wilcox	120122121222101—13+2—15

Second tie:

Frothingham	122110122211210—13+1—14
Wilcox	121202211111020—12+2—14

Third tie:*

Frothingham	222102111211121—14+1—15
Wilcox	201211011211212—13+2—15

* Tie will be decided on Dec. 22.

Dec. 19.—To-day Winston shot two races with Dr. Carver; this, of course, brought together a fair crowd and some practice shooting was the result. Below are the scores:

J E Isgrigg	0120111112122112221121211012 11 —27
Eddie Bingham	0222202022222022222120111 —19
Eddie Bingham	2222222222222202222222202 —28
Dr Carver	2211220102211222011122212101111211 2—31
Goodrich	0012110121111210 —11
F Lord	1121112201212 10 —13
147	2222222222 —10
J H Amberg	0021112121 — 8
Gilbert	2112021212 — 9
R R Laird	2011020002 — 5

Clem shot at 5 birds, scoring them all; Hicks scored 4 out of 5.

RAVELRIGG.

PUBLISHERS' DEPARTMENT.

Fishing Tackle.

MESSRS. G. LITTLE & Co., 63 Haymarket, London S.W., England, make the very liberal offer of sending sportsmen, free of charge, a copy of their catalogue of fishing tackle and anglers' specialties. This is a compact little volume of 110 pages, and is full of meat from the fisherman's standpoint.—*Adv.*

Guns and Powder.

THE Hunter Arms Co., Fulton, N. Y., are out with a new edition of their art catalogue descriptive of L. C. Smith guns, which will be sent to sportsmen mentioning FOREST AND STREAM. The catalogue contains, among other facts of interest, directions for loading the various nitro powders.—*Adv.*

The Result of a Kennel Special.

SPRINGFIELD, Vt., Dec. 11.—Stop our ad. of beagle bitch in whelp, as I have sold her. Be sure and stop it in next issue, as I don't want to answer so many letters when she is sold. W. W. BROWN.
